Alexandra Chastain	2/27/2018	Website	Hello, I am writing to express my opposition to my to the Houston-Dallas High Speed Rail project. My families property located at [...], this project would cut my families property in half. This would disturb and inhibit out families beef cattle and my families production. The proposed plan would cut through my families house and two barns causing them to be destroyed thus causing more economic damage to my family as we would need build new ones. Not to mention the noisy and pollution that this rail way would cause would further hurt the surrounding community including my families farm. I also would like to mention how absurd it is that a foreign company's project could gain eminent domain for a project hardly anyone wants.	Refer to ED-2, FP-1, LU-7, LU-11, NR-6, TR-10, WW-1. The referenced property is located on Segment 3A of the Preferred Alternative and the rail would be constructed on embankment at this location. Due to proposed impacts from the project and associated road modifications, the referenced property would be entirely acquired due to displacement of a primary structure.
Clint Chastain	2/25/2018	Website	I am writing to express my deep opposition to the proposed Houston-Dallas High Speed Rail project. My property is situated at [...]The project, as currently proposed, would have catastrophic environmental and financial impacts on myself, my family and the State of Texas. The proposed rail corridor would split my property in two, leaving me, my family, my beef cattle, and the native Texas wildlife with no straight-forward, easy access to the two halves. Not even rain water would be able to freely run off into Chamber's Creek! Even worse, it appears that most of my western pasture-land would decimated by new roadways, overpasses and runoff impoundment pounds. In fact, as I understand it, even my two tractor barns and my very house itself would be seized and demolished to make way for a new access road bringing vehicular traffic south to a proposed cross-over, because - again - the rail line splits Navarro county itself in two and drastically impedes normal east-west human movement. And despite the arrogant, dismissive language in the FRA brochures, there simply is no readily available 'replacement' acreage to make up the damage this unnecessary private venture would inflict upon my family and the State of Texas. Finally,	Refer to ED-2, FP-1, LU-7, LU-11, NR-6, TR-10, WW-1. The referenced property is located on Segment 3A of the Preferred Alternative and the rail would be constructed on embankment at this location. Due to proposed impacts from the project and associated road modifications, the referenced property would be entirely acquired due to displacement of a primary structure.

			the taking of private property for the benefit and profit of another non-public concern, even when technically allowed by Law, is absolutely, morally unconscionable.	
Miranda Chastain	2/27/2018	Website	<p>I am writing to express opposition to the High Speed Rail project between Dallas and Houston.</p> <p>My family's property is located at [...]. The project would have horrible environmental and financial impacts on my family and the surrounding environment. The proposed railway would split my family's property in two, leaving my family, my family's beef cattle, and the wildlife with no easy access to the two halves.</p> <p>What's more, most of the western pasture land belonging to my family would be completely overrun by new roads and overpasses. In addition, my family's two tractor barns and house would have to be destroyed to make room for a new access road bringing car traffic south to a cross-over, because the rail way splits Navarro county in two and gets in the way of regular east to west traffic.</p> <p>There is no way to reconcile the property if this bullet train goes through. Neither half of the property would be useful to the full capacity my family currently uses it for if this happens.</p> <p>Finally, I find the seizure of private property for the benefit of a private company to be abhorrent and loathsome.</p>	<p>Refer to ED-2.</p> <p>This property is impacted by Segment 3B. County Road 1300 would be rebuilt over the Project. Due to the displacement of a primary structure (in this case, a residence), the Final EIS categorized this property as an acquisition. For more information about the acquisition process outlined in the Final EIS, see Section 3.13.3, Land Use, Methodology. Further, the preferred Alternative, as outlined in the Final EIS Executive Summary, is Alternative A, which does not include Segment 3B.</p>
Sue Chastain	2/25/2018	Website	<p>Hello, I strongly oppose the High-Speed Rail Project between Houston and Dallas. This project would not only adversely affect me, it would negatively impact my family and our way of life for ever. Our property is located at 8108 NW country Road 1300. As proposed, the train would run directly through two of our prime pastures (including our house pasture). However much the FRA states that the railway would not be noisy or affect the wildlife and production animals; I have in fact, personally, ridden the bullet train in Japan and can state, it is very noisy and windy. The fact that both our barns and house would have to be demolished to make way for the rail and the new roadways will obviously adversely affect me and my family. It will, in fact, decrease our production land by at least 50%, e would have to build a new house and new barns. Even if we were compensated fairly for this- would it be enough to construct replacement buildings? There is not even another good location for a house on our property which would give us the privacy we enjoy now and still allow for agricultural use. I find it inconceivable that it is acceptable to take away people's homes and livelihood for a private financial venture. To add insult to injury, it is not even an American company. I request that this entire project be re-evaluated, without consideration for private investors potential gains, but instead for the actual harm it will do to regular American citizens.</p>	<p>Refer to ED-1, ED-2 and NR-1.</p>
Erika Chavez	2/6/2018	Email	<p>We live in the White Oak Falls Subdivision on Kirkland Woods Drive. We attended the public hearing held at Woodard Elementary on 2/5 but to be honest, we left after 45 min because we didn't feel this was beneficial.</p> <p>I'd like to know how the high speed train will affect my home. How many feet are people allowed to live close to the viaduct?</p> <p>Segment 5 does not necessarily cut through my property when looking at the map but it does cut through the homes across the street.</p> <p>We are trying to understand what this means for our family and our home. Will we see a wall where our neighbors homes used to be? Will large trees/vegetation be planted?</p> <p>What kind of safety will be put around the area since we have 2 girls (ages 4 and 10) and 2 small dogs?</p> <p>I highlighted (7532) to show you where our home is. I also noticed on the map that homes are labeled with 7K numbers. Does this mean these homes are affected by the train?</p> <p>Based on your past experience with similar projects could you give us some insight as to what we can expect. We'd greatly appreciate any input and look forward to your response.</p>	<p>Refer to SS-2 and SS-13.</p> <p>There are currently no regulations that dictate how close a residential structure can be to the track. Through the analysis of potential land acquisition, noted in Section 3.13.3, Land Use Methodology, primary structures including homes and businesses that were located within 50 feet of the edge of the limits of disturbance were identified as potential acquisitions. Individual landowner needs, in this case clearance and/or compensation, will be determined through consultation between TCRR and the impacted landowner. This specific location would likely suffer adverse visual impacts due to the close proximity to the Project. Specific mitigation measures have not yet been identified but will be negotiated between TCRR and landowners. Examples of potential mitigation measures can be found in Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation. This specific neighborhood has been identified in AS-MM#1 to be included as part of the design process in order to determine visual impact mitigation strategies. Additionally, specific mitigation measures which may block some views of the Project include, AS-MM#2, AS-MM#3, AS-MM#4, and AS-MM#5. Additionally, noise walls may be used to minimize impacts where it has been determined noise impacts will occur. The walls could be treated with vegetation to soften the look of the noise mitigation. If there are no noise impacts, trees or vegetation could be planted to limit the views of the Project. Please refer to Section 3.4.4, Noise and Vibration, Affected Environment for impacts related to noise. The properties</p>

				(homes) labeled with 7K numbers are within 1,000 feet of the edge of the limits of disturbance. In this map, the limits of disturbance (the edge of the Project are marked with the green line. The home at 7532 would not be directly impacted by the Project, but the homes across the street and three houses west (7553), would lose access and would likely be acquired.
Arif Chawalwala	2/17/2018	Website	I would love to see a high speed train service between Dallas and Houston and support this project strongly.	Comment noted.
Joseph Cheavens	2/21/2018	Website	I strongly favor the construction of this project. I travel frequently between Houston and Dallas, and this would be a huge benefit. My only criticism is on the choice of the Houston terminal, which I think should be located downtown. The 610/290 location is one of the most congested traffic areas of Houston, and I believe the vast majority of riders would prefer to leave from and arrive at downtown Houston.	Refer to GN-6, GN-7 and TR-4.
Zachary Cheesman	2/1/2018	Email	We will not allow any projects to go through our property at [...] We will protect our property any means necessary....	Comment noted.
George Chen	2/3/2018	Website	I would like to lodge a complaint about this entire project. This entire project feels like TCP is selling snake oil. I would like to know how the FRA and TCP come up with 7.2 million riders. TX Dot and other independent experts are less at most way less than half of the 7.2 million. How can a project of this magnitude be even look at or allowed to be considered to be built on false data to begin with. Just doesn't make sense. The General public needs to be allowed to see all the supporting evidence of how the ridership number was created. We can not afford another expensive boondoggle that requires taxpayers bailout. So I can lose my land, lose great value in my private property, and end up having to pay increased tax to bailout is simply wrong. You can not let this project move forward any based on erroneous data. No Build.	Refer to BA-6, GN-2, GN-3 and NE-1.
George Chen	2/3/2018	Website	The DEIS does not contain any information on ridership and or revenue study. How can you release this impact study for people to review without any of that information. It feels like the general public and landowners are getting taken advantage of. We are fed lies and we landowners are the one who will suffer the most. At least tell us the truth about the project and not lie to us. Because this project from day one was based on overestimated figures on ridership and cost to build or maintain, The Federal government has a duty to protect its citizens against these matters. The FRA is like leading the way on this project and there needs to be accountability. Do not allow this to progress. Do not build this thing.	Refer to GN-2 and NE-1.
George Chen	2/3/2018	Website	This whole project will be a disaster for the state of Texas. The feasibility of this project simply not logical. You will never have the ridership for this project to work. Meanwhile, the threat of eminent domain to take private property for a failed project CAN NOT HAPPEN. If you ask transportation experts, they all say the same thing, this project will fail and require a bailout of Taxpayers money. With a one way ticket price of approximate \$175 each way, ask yourself would you even take your own family on a weekend trip? Probably not. Meanwhile your going to devalue or take my private property. The time and area is not right for a project like this. Do not allow this project to move forward. No Build.	Refer to ED-1, GN-2, NE-1, SC-3 and VA-1.
George Chen	2/3/2018	Website	This Dallas to Houston HSR project can not be built. It will have detrimental affects on water drainage and can possibly increase the possibility of flooding in areas. No matter how engineers design and build these projects, you can not predict the flow of water and how water drains over a large area. Sections of the train for example will pass over the Spring Creek Watershed where the tracks of the HSR will pass over 5 creeks. Spring Creek during Harvey and in other heavy rain falls has been increasingly overflowing more and more commonly. Any project that affects water drainage on the ground level is going to have some affect on water drainage for the general public. A lot of homes and areas that used to not flood are starting to flood now. I don't think the FRA has taken enough consideration on what impact environmentally this project will have on flooding and drainage. The FRA needs to consider the NO BUILD option.	Refer to BA-6, FP-1, SS-17, WW-1, WW-2 and WW-8.
George Chen	2/5/2018	Handwritten	I strongly oppose this project. This project will not get enough ridership to be feasible. With over projected figures of ridership and underestimation of cost this project will fail and require a bail out. Eventually, this project with an estimated ticket price of \$150-200 one way, will not be affordable to the general public. Only the wealthy can use this HSR. This project will also be a detriment to the rural way of life, splitting property and affecting anything from first-responders to school routes. The amount of land and right away needed has been way underestimated and the thought of even using eminent domain is absurd. Texan's property rights is an important issue here in Texas. The threat of taking property for a profit venture owned by a foreign gout/bank is flat out wrong. This project, if built, will desicrate our beautiful lands forever. Ranches have been in family possession for many generations and the thought of taking people's land or devaluation of property is wrong. There will be issues of animal migration of the Katy Conservatory in Waller and drainage issues as well. This project cannot move forward as more people oppose this than want it. NO BUILD is the only option!	Refer to ED-1, ED-2, GN-2, GN-4, LU-9, LU-11, LU-14, NE-1, NR-5, NR-6, RF-4, SC-7, SS-23, TR-6 and VA-1.
George Chen	2/6/2018	Handwritten	I support the No Build alternative for so many reasons. This project will infringe on Texas property rights. How can a private for profit, company have the use of eminent domain? Private property rights are sacred here in Texas. The project's ridership and cost are way off. This project will not have the ridership needed to be profitable. All transportation experts have shown ridership to be less than half projected. This	Refer to ED-1, EU-2, GN-1, GN-4, NE-1, NE-9, PI-1, PN-3 and SS-23. The zone for potential vibration damage to structures is not likely to extend beyond the operational corridor, as explained in Section

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			project will fail and fail horribly. The DEIS is majorly flawed and doesn't have the transparency for everyone to make an informed decision. There are numerous safety issues not addressed, i.e. pipeline etc. where there is no room for a train or vibration of the train. This project is after federal loans (tax payers money) so there are many false truths in this DEIS. This project will adversely affect the public safety as first responders will be delayed under the construction phase and if it ever gets operational loss of life cannot be tolerated. It will put berms throughout this state. This project has no need as ridership is way overstated. I support the No Build.	3.4.5, Noise and Vibration, Environmental Consequences. Berms will only be used when the train is operating on embankment, which is approximately 31 percent of the alignment. Refer to Appendix F, TCRR Final Conceptual Engineering Design Report and Appendix G, TCRR Final Conceptual Engineering Plans and Details.
George Chen	2/6/2018	Handwritten	The FRA has not adhered to the NEPA regulations when examining this route of the HSR HC-4 line. The FRA has not coordinated any with local county government in the draft EIS. There are numerous public safety issues that are not addressed. With a project of this magnitude everything has to be thoroughly examined. With the possible use and threat of using eminent domain we need to make sure every aspect of this project is examined. The thought of the possibility of taking someone's private property and not thoroughly considering every aspect from need and purpose to feasibility to environmental impact is absolutely imperative. This project can not be allowed to proceed forward until every party is satisfied. NO BUILD	Refer to ED-1, GN-2, NE-1, NE-9, PI-1, PN-3 and SS-1.
George Chen	2/6/2018	Handwritten	The FRA can not let this project get off the ground until all public safety issues have been examined. The HSR tracks pass by 580 ft from a Natural Gas Pipeline Compressor Station in Waller County. This station does emit Natural gas on a daily basis. So what would happen if you emit natural gas into the open air and there is high voltage source nearby. These public safety concerns have not been fully addressed. You can not allow this project to move forward. This project can not be built.	Refer to EU-2 and EU-7.
George Chen	2/6/2018	Handwritten	This project has no need or purpose in the slate of Texas. As the transportation experts have all reported that this project will not make any money and WILL fail. If built this project will end up costing Taxpayers up to 500 million per year. Why won't TCP share any of their ridership information with the public? For something of this magnitude and the project taking Texan's land with the use of eminent domain, we have the right to see everything they have as for projected ridership so we can make a better decision. As for now, experts have calculated that there will not be enough ridership to cover operating cost and repaying federal loans. The only option for this project is NO BUILD.	Refer to GN-2, GN-4 and GN-5.
George Chen	2/6/2018	Handwritten	This project has no need or purpose in the slate of Texas. As the transportation experts have all reported that this project will not make any money and WILL fail. If built this project will end up costing Taxpayers up to 500 million per year. Why won't TCP share any of their ridership information with the public? For something of this magnitude and the project taking Texan's land with the use of eminent domain, we have the right to see everything they have as for projected ridership so we can make a better decision. As for now, experts have calculated that there will not be enough ridership to cover operating cost and repaying federal loans. The only option for this project is NO BUILD.	Refer to BA-6, ED-1, GN-2, GN-4, NE-1 and PN-3.
George Chen	2/10/2018	Website	I oppose this high speed rail project. This project DEIS does not address the issue of the impact of quality of my life and any family that lives close to the rail line. I own 100 acres right next to the path of the train. I am gravely concerned of the noise and vibration impact on my family. In the rural areas there is absolutely no noise. When this train passes 68 times a day it will most definately sound "louder" in an area that is normally quiet vs running down a highway where there is already ambient noise. I already can not sleep at night and I am afraid that the noise will lead to health problems not only for me but for my family. The vibration of train will definately cause problems with animal migrations. Animals are probably more sensitive to vibration than we are. I do not want my horses to suffer ill effects of both noise and vibration from this train. I support the NO BUILD alternative.	Refer to NR-1 and NV-1.
George Chen	2/16/2018	Website	I am strongly opposed to this project on the basis that this private company TCR is and has bullied Texans to do illegal surveying. If some of the surveys were illegally obtained then the information in the DEIS can not be allowed. TCR is not forthcoming with true information. Lots of misinformation given to support their cause without any transparency or proof. This project can not be allowed to move forward. It is bad for Texas. No Build is the only solution.	Refer to NE-8.
George Chen	2/16/2018	Website	This project should not move forward. Grimes county is rich in Historical sites. There are numerous sites not even in the historical registry. All of these sites must be checked out before this can move forward at all. An Army Corp of Engineers Section 4 Permit has revealed four archaeological sites and two pre-historical sites considered for the inclusion in the National Register of Historical Places. It would be a travesty to not even consider our history of Texas. Please do not let any of this move forward. Do not Build this project. It will not work in Texas and this will end up destroying our precious and scenic land.	Refer to CR-9.
George Chen	2/17/2018	Website	This project needs to be terminated. I first want to see data from TCR about how they came up with the Ridership and Economic Feasibility. I believe they manipulated the data to make the numbers work. If they are going to have to take or damage my property, I want to decide for myself that this project is even beneficial for the public. Until they make the information public, this DEIS is based on faulty information. All independent transportation experts have said that this project will fail. Why can't the FRA see that and take the steps to not allow this to go forward. This project will not be self sufficient now or ever in the future. NO BUILD is the only option. FRA has intelligent people too. Wake up and look at the data!	Refer to BA-6, GN-2, GN-3 and NE-1.
George Chen	2/27/2018	Email	I ask for your help to protect our private property rights as a Texan and stop this HSR project as it will ultimately fail and will require Tax Subsidies. This project will desecrate our beautiful land, diminish land values, and disrupt our peaceful rural way of life for generations to	Refer to ED-1, ED-2, GN-2, GN-4, GN-6, LU-11, NE-1, NE-9, NR-2, NR-6, PN-3, SC-19, SS-9, SS-23, TC-4, TR-8 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>come. As well, the HSR will create numerous problems with wildlife migration and managed working ranches that provide food etc. for the public. Another negative impact it will have will be how it will impede our public safety and all first responders. With the HSR, what is now the most direct route may not be, and first responders would have to reroute in order to respond to emergencies. That's the last thing someone having an emergency needs--a delay in the arrival of assistance. Every second is critical when it comes to these kinds of situations. Precious lives could be lost--mothers, fathers, brothers, sisters, children, even beloved pets and livestock would be at risk. That is absolutely unacceptable. When my parents emigrated to this country, they had absolutely nothing. They worked very hard to give us a better life. My parents are in their mid-seventies and are both still working today, while many people their age are enjoying retirement. What my parents have taught me is a strong work ethic and the value of saving for your future. I am 47 years old and have worked as hard as I can all my life. I have managed to save approximately one million dollars for my family's future and retirement. We bought 100 acres of land and a home, not just for my family and I to enjoy, but also somewhere peaceful that my parents could spend their golden years when they do decide to retire. That was our vision, our dream. Now, however, that dream is in jeopardy. Our property is right next to the proposed route of this High Speed Train. The house is literally a hundred yards away. I have used up all of my hard earned money in an effort to do something good for my family. This project will have a tremendous detrimental effect on our property and our mental state of health. It has already taken a toll on our mental and physical well-being just worrying about this matter. Adding insult to injury, half of our subdivision will be wiped out. The thought of using Eminent Domain to take privately owned property for a PRIVATE FOR PROFIT company is absolutely crazy and downright infuriating. Where are our rights as a Texas property owner? Private property rights in Texas is one of the highest priorities we have. Our Texas Property Bill of Rights will be trampled on. This company is NOT a railroad and has never operated a railroad, yet they claim to have the authority to take my land? I am not against progress. We all know that almost all HSR in the world has to be subsidized by the government as only two in the world are marginally profitable. This is Texas, where everyone has a vehicle and we live by the car/truck mentality. We are not Japan or France where the population is much denser, the area is smaller, and most people don't own a vehicle. While the concept of HSR sounds great, HSR will absolutely not work here in Texas as discussed by numerous transportation experts. We do not have the public transportation infrastructure in place, and it doesn't alleviate the traffic problems in the Houston or Dallas areas. This does not benefit anyone in the middle rural areas, yet it is these individuals and families who will suffer the most and sacrifice most dearly. This train will only fracture the tranquility and peacefulness of our rural lifestyle and desecrate our beautiful lands. Other U.S. cities have pulled the plug on HSR because they realize that it simply won't work and profits cannot even cover operating costs. Look at the mess the State of California is facing. This enormous and expensive boondoggle is headed for cancellation. We should learn from these examples and not create one in our own state. We were all told that this trip from city to city would only take 90 minutes. With now adding an extra stop, mandatory TSA style safety screenings now needed, the ticket price comparable to an airplane ticket, a car rental or someone to pick you up and drop you off, travel time will definitely be much more than the initial 90 minutes. I ask, what are the benefits of taking the HSR train over flying? None! This project will not meet the required ridership to maintain operating cost and servicing their debt. And, when they do default, who is left to hold the bag? Taxpayers! Please consider all of the negative impacts that far outweigh the positives and do not allow this project to be built. Thank you for your time and consideration.</p>	
George Chen	3/3/2018	Website	<p>There is absolutely no need for this project and the threat of using eminent domain to take property from tax paying citizens is wrong. Especially if this project is for profit. What happens if this project is not profitable? Do not let this project carry forward until they can prove that this project is sustainable. NO BUILD.</p>	Refer to ED-1, NE-1 and PN-3.
George Chen	3/3/2018	Website	<p>I know there are numerous faults that the DEIS has not yet covered. According to the NEPA process the Federal government need to adhere to strict rules and cover all environmental impact items. According to the American Stewards of Liberty there are multiple items not addressed within this DEIS. This final environmental impact can not be allowed to be issued until all aspects of impact has been addressed. You can not build this project!</p>	Refer to GN-3, NE-1 and NE-9.
George Chen	3/5/2018	Website	<p>Where is the study in the DEIS that shows that this project is economically feasible. Other projects all have economic and ridership studies. Why has TCP not released any information about this project being economic viable. TCP has not been very truthful about any of the information for this project. They want to take my property and negatively impact the rest of my property but they won't supply any information for the public to see how they came up with the numbers. I want this project to be stopped immediately. No Build for this project.</p>	Refer to BA-6, GN-2, NE-1 and PN-4.
George Chen	3/5/2018	Website	<p>I can't believe that the FRA has even gone this far with the project. There seems to be a lot of miss information that has been given to the public about this project. I think that TCP needs to be held accountable to release information to the public and be more transparent. This project will cut our neighborhood in half. Half of the lots will be severely impacted, the other half is also severely impacted but we have no recourse. The train will run less than 20ft-50ft from our private road at grade. I can't imagine driving and having the train scream by as your</p>	Refer to LU-7, NE-1 and NE-9.

George Chen	3/5/2018	Handwritten	This project is bad for Texas. This project will never make money to pay for operating cost. Our 100 ac Ranch and access will be severely Impacted. Our entire Neighborhood will be Severly Impacted. This project & just the threat of use of E [sic] Domain is simply wrong. What happened to our property rights. this project is not for the greater good the train will never get the Ridership needed to be successftl. If this projects fails not only dose it negatively effect our land we end up paying for it thru tax seriously. Simply Wrong! Numerous items were not addressed in the DEIS No economic viability or Ridership studies were in the DEIS for the general public to Revies Numerous Safety problems with pipelines etc needs to be examined. First responders will be impacted! going after Federal Loans IS tax payers money, when they TCR is saying its Privately Funded. More land is Now needed and cost are underestimated for the construction. We demand the truth if our property is going to be Sacficed DO NOT Build this. It will only put a scar down the Heart ofTexas! NO BUILD	Refer to BA-6, ED-1, ED-2, GN-2, GN-4, LU-14, NE-1, PH-3 and SS-23.
George Chen	3/7/2018	Website	I want to comment on the last FRA meeting on March 5th, 2018. This meeting in my opinion was created or pushed on by TCP as a meeting to specifically lodge positive comments. I don't know if there were incentives for these people or groups to make their comments. All of the other 10 meetings were already held and I can say after attending a few almost all comments were in opposition for the project. It just seems like the same tactics this unethical company (TCP) is always doing. It just seems like the saying goes something fishy is going on. I don't think this is ethical and the FRA needs to be impartial to this matter. I still support the NO BUILD alternative as this will never work in Texas.	Refer to PI-11.
George Chen	3/8/2018	Website	There is a news article in the Houston Chronicle today about the way overestimation of ridership by TCP. The Acela Express although not a bullet train but services the north east corridor only moves 3.4 million riders and TCP says that between Houston to Dallas there will be 7.2 million riders is way way beyond optimistic. Even our own TX DOT says it will have about 2.5 million riders at most. This company who can throw numbers out like that and expect the public and FRA to believe them is simply wrong. The FRA has its own experts and there is no way that the ridership numbers make sense. From that all other data is wrong and can not be used. TCP is lying to the public and the FRA. We need to stop this project and NO BUILD this project.	Refer to AQ-7, BA-6 and GN-2.
George Chen	3/8/2018	Website	How can a private, for profit company formed and has never operated a train, never owned any trains or tracks, being self claimed as a railroad, have the power of eminent domain? Almost like me and a friend deciding to declare ourselves a railroad and we just magically have the power of eminent domain? The courts in Houston have ruled that TCP does NOT have that power and could not survey as they wish. The FRA should understand that see that is not right. You can not believe this company and trust their intentions. We have rights as private property landowners thru the state of Texas. NO BUILD.	Refer to ED-1.
George Chen	3/8/2018	Website	This whole project is weighing very heavily on my family as it will take half of my neighborhood and the access to our neighborhood will be rerouted and we would be driving within 20-30 feet from the train. That is absolutely unacceptable. This project is not a good idea for Texas. It will never make enough money to self sustain and I can promise you cost to build will be underestimated. NO BUILD. Cancel this project.	Refer to GN-4, NE-1, PN-3, TR-8 and TR-10.
George Chen	3/9/2018	Website	FRA, please do not allow this project to ruin Texas. This project has not been represented truthfully from day 1. I believe TCP has mislead this general public on numerous numerous occasions. TCP has even misled the FRA in the ridership numbers and construction cost to make this project seem to work on paper but in reality this project will never work. I will not sacrifice my private property for a project that is based on lies and deceit. This project is not for the greater good and is forced on the backs of rural landowners. This project must not be allowed to built. NO Build!	Refer to BA-6, GN-2, NE-1 and PN-3.
George Chen	3/9/2018	Website	I hope the FRA is really listening to the concerns of the public and not just checking a box to say they held the public meetings. Please really listen to the concerns of the public and think about what TCP is trying to do and how they are doing it. If most of the citizens of Texas do not want this project, please do not allow it to continue and rule it as a NO BUILD project. This project is not right for Texas as the Texas legislation has made laws that local tax payers money will not be used at all. TCP is trying to circumvent the state level to build this project. It is simply not right and will not work in Texas. Please Cancel this project. NO BUILD.	Refer to PI-1.

George Chen	3/9/2018	Website	Originally TCP said that they needed 3000 acres. Now the figure is up to 8000 acres. How is that possible that they need more than double than originally estimated. If the land figures are that off how many other items are they way off on? Ridership is WAY over estimated so is the cost of the entire project. Until they can get their facts straight we have to hold off on this project and bring back the NO BUILD option.	Refer to BA-3, BA-6, GN-2, GN-4, LU-9, LU-14 and NE-1.
George Chen	3/9/2018	Website	This project will ruin my gated community. Half of the acreage lots will be gone and the rest of of left in the gated community will be left with the noise issues and having to see this train everyday. We chose to retire out in the county and live peacefully. Now this train is right next to my. We have spent our entire life savings on this property and home. We are in jeopardy and can not afford to start over somewhere else. Plus no one will want to buy my property now and if you give the green light to build we will never be able to sell the land that runs right next to the train. We are opposed to this for personal reasons, but there are numerous reasons why this project will fail and fail horribly. NO BUILD.	Refer to VA-1.
George Chen	3/9/2018	Website	Only the people in Houston and Dallas may want this train. Everyone in between does not and will suffer because of it. IF YOU MUST BUILD IT, why don't they build it down I45 and give the project a greater chance to succeed. If its on I45 you can have more possibilities to create stops where needed. Car travelers can see the train going by and maybe it will let then to decide to try is. Kevin Brady is opposed to the route (the utility corridor) and has stated that he will do what he can as chairman of the ways and means committee to write legislation to not allow this project to be funded. If you put it on I45 I think there would be less opposition and Kevin Brady would be on board. NO BUILD on the utility corridor.	Refer to BA-9, GN-4 and SC-19.
George Chen	3/9/2018	Website	It seems like this there is a lot of politics involved with this Train. If the local politicians listen to their constituents then this train must not be built. All local government in our rural counties are standing up and listening to their constituents. It's time for the Federal politicians to listen and stand up for their supporters. We do not want this train in Texas because we know it won't work. The reason foundation (a pro rail group) has examined this project and the findings is that it will fail horribly, so horribly that HSR may not ever be given a chance again in Texas. Don't do it. NO BUILD	Refer to BA-6, GN-3 and NE-1.
George Chen	3/9/2018	Website	This project makes no sense in the Grand State of Texas. Many transportation experts have all agreed that this HSR will not make any money despit the claims of TCP. When this project does fail who is going to take the blame for allowing this montrosity of a project. I ultimately blame the FRA for allowing this to actually happen. This private company does not have the power of eminent domain and can not be allowed to bully their way thru Texas landowners private property. How can someone claim that they are a railroad not having any trains or ever operated a train get this authority. This can not be allowed to happen. Please do not allow this project to move forward. This can't be built. It will waste a lot of taxpayers money at the end.	Refer to ED-1 and NE-1.
George and Dorothy Chen	2/6/2018	Handwritten	<p>I ask for your help to protect our private property rights as a Texan and stop this HSR project as it will ultimately fail and will require Tax Subsidies. This project will desecrate our beautiful land, diminish land values, and disrupt our peaceful rural way of life for generations to come. As well, the HSR will create numerous problems with wildlife migration and managed working ranches that provide food etc. for the public. Another negative impact it will have will be how it will impede our public safety and all first responders. With the HSR, what is now the most direct route may not be, and first responders would have to reroute in order to respond to emergencies. That's the last thing someone having an emergency needs—a delay in the arrival of assistance. Every second is critical when it comes to these kinds of situations. Precious lives could be lost—mothers, fathers, brothers, sisters, children, even beloved pets and livestock would be at risk. That is absolutely unacceptable.</p> <p>When my parents emigrated to this country, they had absolutely nothing. They worked very hard to give us a better life. My parents are in their mid-seventies and are both still working today, while many people their age are enjoying retirement. What my parents have taught me is a strong work ethic and the value of saving for your future. I am 47 years old and have worked as hard as I can all my life. I have managed to save approximately one million dollars for my family's future and retirement. We bought 100 acres of land and a home, not just for my family and I to enjoy, but also somewhere peaceful that my parents could spend their golden years when they do decide to retire. That was our vision, our dream. Now, however, that dream is in jeopardy. Our property is right next to the proposed route of this High Speed Train. The house is literally a hundred yards away. I have used up all of my hard earned money in an effort to do something good for my family. This project will have a tremendous detrimental effect on our property and our mental state of health. It has already taken a toll on our mental and physical well-being just worrying about this matter. Adding insult to injury, half of our subdivision will be wiped out. The thought of using Eminent Domain to take privately owned property for a PRIVATE FOR PROFIT company is absolutely crazy and downright infuriating. Where are our rights as a Texas property owner? Private property rights in Texas is one of the highest priorities we have. Our Texas Property Bill of Rights will be trampled on. This company is NOT a railroad and has never operated a railroad, yet they claim to have the authority to take my land?</p> <p>I am not against progress. We all know that almost all HSR in the world has to be subsidized by the government as only two in the world are marginally profitable. This is Texas, where everyone has a vehicle and we live by the car/truck mentality. We are not Japan or France where</p>	Refer to ED-1, GN-2, GN-4, GN-6, NE-1, NR-6, PI-1, PN-3, SS-9, SS-23 and VA-1.

			the population is much denser, the area is smaller, and most people don't own a vehicle. While the concept of HSR sounds great. HSR will absolutely not work here in Texas as discussed by numerous transportation experts. We do not have the public transportation infrastructure in place, and it doesn't alleviate the traffic problems in the Houston or Dallas areas. This does not benefit anyone in the middle rural areas, yet it is these individuals and families who will suffer the most and sacrifice most dearly. This train will only fracture the tranquility and peacefulness of our rural lifestyle and desecrate our beautiful lands- Other U.S. cities have pulled the plug on HSR because they realize that it simply won't work and profits cannot even cover operating costs. Look at the mess the State of California is facing. This enormous and expensive boondoggle is headed for cancellation. We should learn from these examples and not create one in our own state. We were all told that this trip from city to city would only take 90 minutes. With now adding an extra stop, mandatory TSA style safety screenings now needed, the ticket price comparable to an airplane ticket, a car rental or someone to pick you up and drop you off, travel time will definitely be much more than the initial 90 minutes. I ask, what are the benefits of taking the HSR train over flying? None! This project will not meet the required ridership to maintain operating cost and servicing their debt. And, when they do default, who is left to hold the bag? Taxpayers! Please consider all of the negative impacts that far outweigh the positives and do not allow this project to be built.	
George and Dorothy Chen	2/27/2018	Email	I am a concerned citizen of Grimes County. There are so many negative impacts of this project it far outweighs the positive ones. This project will absolutely not work in the state of Texas. Many independent transportation experts have spoken about the lack of ridership and underestimation of construction costs. Any logical person can see that this project will never make enough money to cover operational cost now or in the far future. Just the simple threat of of a private for profit company being able to use eminent domain to take my private property goes against the very fabric of Texas property rights. This project is not for the greater good. It targets only the wealthy travelers from Houston or Dallas while all of us rural residents absorb all of the negative impacts of this project. This project will fracture our rural lifestyles and desecrate our beautiful lands. Texas Central is going after government loans which is taxpayers monies. They have so many inconsistencies from the beginning as if they trying to deceive the public. What infuriates me is that they want to take my land for a project that will not make any money to sustain itself and when it doesn't work, I have to pay for a project that has completely devalued my 100 acre ranch. This project can not be allowed to move forward. There is simply not enough demand to support a project like this now or far into the future. Please do not this project to move forward. There are way more negative Impacts than positive ones. Anyone with a logical mind can see this. Please put the No Build alternative back on the table, as the No Build alternative is what needs to be considered. Thank you.	Refer to BA-6, ED-1, GN-2, GN-4, NE-1 and NE-9.
Thomas Chen	3/8/2018	Email	Any large infrastructure project will have huge impact on our environment. This High Speed Rail between Houston and Dallas is noexception. But sometimes we will compromise to a certain degree for a "greater good" as long as the compromise is not detrimental for the environment. I am against this project because I believe it will negatively impact our environment without serving any "greater good". Transportation between Houston and Dallas has been served by roadsand by air adequately for decades and will be for the foreseeable future. High speed rail will only be served as an additional option, not a must have option. The private and for profit company that drives this project made alot of claims that are questionable at best. I understand that is the politics of moving the project forward. They simply need to minimize anything negative and maximize the positive so to sway public opinions and get politicians on board with them. Like many other "great" projects in recent memory, this one also promise "greater good" and will be short on delivery. At the end tax payers will be paying the price for many years to come while the environment will continue to suffer. I am a concerned citizen living in Houston Texas. I believe the project will not be profitable and will fail. I appreciate the chance to voice my honest opinion to you.	Comment noted.
Cub Scout Pack 425	2/28/2018	Website	The Morgan Ranch, whose property would be crossed by this project, has generously hosted our Cub Scouts and enabled them to complete outdoor requirements for rank advancement. We are concerned that the routing of the High Speed Rail will reduce the amount of safe space available to us for future Cub Scout activities. Having this safe space available for camping and outdoor activities has been extremely valuable to our program and encourage you to consider a route that does not have this adverse impact on our use. Thank you for your consideration.	Refer to LU-5.
Karen Cheung	2/16/2018	Website	It's time that HOUSTON be competitive and match mass transit in other large cities.	Comment noted.
Children's Medical Center	2/27/2018	Website	I am strongly opposed to the train destroying a cultural, economical, historical, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5.
Ebere Chimezie	1/16/2018	Email	This is long overdue and is needed for residents of Texas. Let's get going and start building.	Comment noted.

Klaude Chin	2/21/2018	Website	Hi, I am a resident of Houston, TX and I strongly support high speed rail from Dallas to Houston. Houston has always been on the cutting edge of engineering innovation and private business enterprise. This project combines the best of both worlds. Houston and Dallas/Ft Worth are the 4th and 5th largest cities in the US. These cities also boast big economies of the US. Although Dallas is years and miles ahead of Houston, this project will be the push Houston needs to build upon its light rail system. Texas has the chance to be the first to usher high speed rail to the US. It's the perfect terrain for high speed rail...it's flat, long enough distance, and with few turns. I am excited for the prospect of a multi-modal grand central terminal in Houston in the mold of Grand Central Station and DC's Union Station. This project will be more than a mode of transit. It will be a tourist destination in and of itself. Tourists from out of the country or out of state may want to visit Dallas's JFK Memorial and the Dallas World Aquarium on Monday. Then they may want to visit Houston's NASA and the Museum of Fine Arts on Tuesday. This high speed rail project will make that trip possible while seeing all the beauty of Texas's countryside. This project will bring tourists, businesses and possibly a Summer Olympics here to Texas. The possibility for expansion into Austin and San Antonio will make this a comprehensive high speed rail system. Texas has the chance to get this right and we cannot miss out on this opportunity. The train is leaving the station and we must all get on board.	Comment noted.
Klaude Chin	2/24/2018	Website	The progress of mass transit for the people of Houston and Dallas can't be held hostage by the few who live along the proposed route. Now Congressman Kevin Brady from the Woodlands is looking to stop this project despite passing all of the federal hurdles including a bill was passed by the state legislature that guarantee that no taxpayer will pay for this project. Texas Central has accepted it because that was the plan anyway. The opposition to high speed rail has absolutely nothing to do with the cost, taxes, or private property rights. Private land has been acquired by eminent domain for a long time for highway projects, beautifying projects, shopping malls without any any pushback from politicians and land owners. The opposition to high speed rail has everything to do with culture wars. Even though private business enterprise is a Texas thing, many feel that passenger trains are not a Texas thing. They feel it takes away from their rural character. From what I understand, a high percentage of the rail sit atop elevated viaducts, much like a highway. How is this taking away from a farmers "rural character"? If anything, it's a way of integrating both urban and rural characters for the greater good of Texas.	Comment noted.
Cheryl Chodaniecky	3/9/2018	Website	Please see my comments in my attached letter. March 9, 2018 Kevin Wright Environmental Protection Specialist Federal Railroad Administration 1200 New Jersey Ave. SE, MS-20 Washington, D.C. 20590 Dear Mr. Wright, I want to start by saying I am 100% against this project. I have attended meetings on this project over the past several years and frankly, I am shocked this is still being addressed. They are not a railroad company and do not have authority for eminent domain. That aside, government officials should not be making this decision for residents of the counties that will be negatively impacted by this project. This needs to be put to a vote by the people affected by this – not the cities of Houston and Dallas. When I attended the public form on February 5th at Woodard Elementary School I found out that my home is within 1 mile from the proposed tracks at Telge and Hempstead Hwy. I also found out that my farm in Hockley is within 3 miles of the proposed tracks. Enough is enough. What gives you the right to destroy my livelihood and my property values? Texas is an energy state. Our livelihood comes from our oil and gas industry. We love our wide-open spaces and beautiful land. We love getting in our own vehicles and driving where we want to go. It's called FREEDOM. I found these stats on the number of just Ford trucks in Texas on the The Motley Fool's site (a trusted source): https://www.fool.com/investing/general/2014/08/17/the-5-critical-states-where-ford-sells-themost-f.aspx Do you really think Texans are going to park their trucks and get on a train to Dallas? Come down here and live for even a month and then tell me you believe that will happen. In Houston very few Texans will even take a bus to work even though Metro has Park n Rides strategically placed throughout the city. Our roads are still congested. If we are willing to sit in our cars for an hour to go 25 miles up the road we are willing to sit in our cars for 3 hours to drive to Dallas. According to google maps, the proposed train station in Dallas is 241 miles from my home, or 3.36 minutes. Also according to google maps, the proposed train station in Houston is 17 miles from my home – in the wrong direction of Dallas. I make that drive every morning to go to work. The average time of that drive during the day is 45 to 60 minutes. I could already be past Huntsville by time I even got to the station in Houston. Then I would still have to park, and pay for parking, go through security, check my luggage and get on the train. How is that going to save me time? Now on to some facts. In order to falsely promote the tax advantages of the rail, TRCC said a round-trip ticket would cost about \$400, thus the cities of Dallas and Houston would benefit from the tax on the high ticket prices. When TRCC was asked about the ticket prices from the public, they said it would not cost \$400 round-trip because they know any sane person would not pay \$400 per person for a trip to Dallas when you can put up to 8 people in a vehicle drive it on a tank and a half of gas. Ball parking high, let's estimate the gas to cost \$100. Compare that to train fare at \$400 x 8 = \$3200. Driving would be a \$3100 savings. Now let's look at it for a family 4. \$400 x 4 = \$1600. Still absurd. Let's look a husband and wife with no kids. \$400 x 2 = \$800. A \$700 savings my driving. For a single person there would be a \$300 savings. Please identify to me who is going to use this train. This project is not like building a mall that when it fails you can just tear it down and move on. This project will have a negative impact on thousands of lives, both economic and environmentally. It will destroy our beautiful countryside. It will destroy the views for thousands of Texans who enjoy the comfort of their backyards looking up at the beautiful night sky only to see a train passing through it. Once this project fails, and I have no doubt it will, who	Refer to AS-1, ED-1, GN-2, GN-4, LU-14, NE-1, PI-1, SC-3 and VA-1.

			will be comfortable coming to Texas to explore, and other Americans will be able to visit two of Texas' unique areas without a needed car. The aviation industry will benefit, as visitors will fly to one major airport and leave from another. This is a huge win for Texas, and a necessary step to transition us into a world-class destination.	
Callan Christensen	3/8/2018	Website	Hello We have the chance to turn the page and begin the next chapter in Texas' transportation infrastructure. We are in a unique position to set the standard for long distance bullet train use in the US. Texas is in the perfect position to make this work, and we can't let this opportunity whizz by! It is time to show the rest of the U.S and the world that Texas is looking towards the future of mass transportation and this is the first step into a brighter tomorrow! I support the Texas Bullet Train and it is time to build it! Thanks, Callan	Comment noted.
Mike Christensen	2/7/2018	Website	As an expert in intercity transportation, I feel this project is easiest, most cost effective, and least destructive way to add transportation capacity between Houston and Dallas. It would be far more costly in terms of both funding and environmental degradation for Texas to continue on the current path of adding more lanes to freeways and adding more runways to airports.	Comment noted.
Donna Christy	2/10/2018	Website	For the love of God, do not put that train down 290 ! We already have flooding from other ill thought out plans . I bet your house is not within a 1/2 mile of that train ! I will do whatever I have t odo to prevent this from happenign to our quiet little area.	Refer to FP-1, FP-4 and SS-16.
Peter Churchman	1/31/2018	Oral	Hello, my name is Peter Churchman. I'm a Libertarian running for the seventeenth district of Texas. I strongly support -- or don't support this bill. Sorry about that, don't shoot me. I can't support the use of eminent domain. I don't know how the executives at TCR can go home and sleep at night knowing that they are trying to take legally owned land from property owners by theft, essentially. The owner of the land is the one who should be setting the price for the land and they should have the decision whether to sell or not to sell. It doesn't work right when the buyer of the land decides how much land, how much they're gonna pay for the land, and yet the owner has to settle up. It's thievery. Also this rail project is trying to get federal loans. They haven't applied for any yet but they will. Our nation is \$20 trillion in debt and in ten years we'll be over \$30 trillion in debt. We do not have the money to loan this company if they have -- get a loan they will not be able to repay it because it is a failed business model. Not one single high-speed rail on the planet has ever turned a profit. When it fails, the government will subsidize it forever. We can't afford things like this that hurt people in the middle. It will benefit Dallas and Houston, but all of the counties that it runs through, it will not. I have a question for the FRA: How much money has the TCR donated to county and municipal and state and federal campaign donations to get favorable legislation to secure federal loans and end up with government subsidies when this fails? Also how much have they contributed to the political action committees for those same candidates? I don't see how anyone can vote for this unless they were paid off. I really think we have to get money out of politics and I think TCR is guilty of giving our politicians money and continuing to fill up a swamp with swamp dwellers in Washington. Thank y'all.	Refer to ED-1, ED-2, GN-4, NE-1 and SC-19.
Peter Churchman	1/31/2018	Oral	Hello, my name is Peter Churchman. I'm a Libertarian running for the seventeenth district of Texas. I strongly support -- or don't support this bill. Sorry about that, don't shoot me. I can't support the use of eminent domain. I don't know how the executives at TCR can go home and sleep at night knowing that they are trying to take legally owned land from property owners by theft, essentially. The owner of the land is the one who should be setting the price for the land and they should have the decision whether to sell or not to sell. It doesn't work right when the buyer of the land decides how much land, how much they're gonna pay for the land, and yet the owner has to settle up. It's thievery. Also this rail project is trying to get federal loans. They haven't applied for any yet but they will. Our nation is \$20 trillion in debt and in ten years we'll be over \$30 trillion in debt. We do not have the money to loan this company if they have -- get a loan they will not be able to repay it because it is a failed business model. Not one single high-speed rail on the planet has ever turned a profit. When it fails, the government will subsidize it forever. We can't afford things like this that hurt people in the middle. It will benefit Dallas and Houston, but all of the counties that it runs through, it will not. I have a question for the FRA: How much money has the TCR donated to county and municipal and state and federal campaign donations to get favorable legislation to secure federal loans and end up with government subsidies when this fails? Also how much have they contributed to the political action committees for those same candidates? I don't see how anyone can vote for this unless they were paid off. I really think we have to get money out of politics and I think TCR is guilty of giving our politicians money and continuing to fill up a swamp with swamp dwellers in Washington. Thank y'all.	Refer to ED-1, ED-2, GN-4, NE-10 and SC-19.
Gail Cieszkiewicz	3/4/2018	Website	I live near the Northwest Mall end site. I feel that no one has listened to what impact the train will have on neighbors near there. Once people get off the train, how will they get transportation to where the want to go? Say downtown? I think little has been done to determine the traffic impact to get downtown, or elsewhere. We all know what Houston bus systems are like. You might get to Dallas in 90 minutes, with another 30 to get downtown. Why is this getting shoved down our throats? You obviously know the distaste you have created, but not the chaos that will ensue with traffic.	Refer to GN-9, TR-4 and TR-5.
Concerned Citizen	2/7/2018	Website	Your not coming through Waller County I can tell you that much. Better work on another route and find people who care about your project. We don't. Put the SOB in your back yard	Comment noted.
Meredith Clarage	1/25/2018	Website	I support high speed rail in Texas such as a route between Dallas-Houston, as well as routes between other cities such as Houston-Austin-San Antonio-Dallas.	Comment noted.

Benjamin Clark	2/7/2018	Website	<p>On Tuesday Feb 6 2018 I stood in a Navasota junior high school were ALL in attendance raised there hand in support of the NO BUILD of the high speed train. But I'm sure that will be ignored just like the rights land owners have are being ignored. From my standpoint its very foolish for anyone to believe that 240 miles of high speed train track will be built in PROJECTED 4 years. It takes 10 years to build 5 miles of highway on 290 and yet they didn't have to lie and threaten anyone to take that land like Texas central has done to land owners in all the counties that it needs land in. It will take at least 4 years to build the train stations and the needed infrastructure around those stations and no telling how long for the rail. there website is full of projections, hopes, expects and so on to describe there view of how things will go during construction, and yet none of it is practical or realistic.</p> <p>The environmental damage that will be caused by the train if it is built will be PERMANENT,yes permanent damage to the people it will affect that Texas Central have already lied to and threatened saying they have eminent domain. Permanent damage to the wildlife within at least 2 miles of the rail(whitetail deer, bobcats, all species of birds and the list goes on). Damage from water erosion caused not only by the rail if it is built but also during the construction. Has anyone even considered the environmental affects if this project takes just 2 years longer then the projected 4 years of construction. If the the FRA is taking Texas Central at there word then BEWARE there more then likely lying to you as well. What about the additional pollution(light, noise, air)caused by an additional 2 or 4 years of construction(more then likely longer then that). What if this company goes bankrupt, I'm sure they will make it a TO BIG TO FAIL PROJECT were the innocent citizens who have already had there land taken from them will now have to pay to bail it out.</p> <p>Its so interesting on Texas Central website that they talk about the 4 counties already in air quality non attainment statues:harris, waller, ellis and Dallas. And yet building a train station in Grimes county were everyone in the area would have to travel to is supposed to make our air quality better. That station if built will cause more air, light an noise pollution then Grimes county has ever had.</p> <p>And yet this will make traffic congestion worse in Grimes county. and Central Texas claims the train is quiet. you must be joking right, any thing moving over 200 mph is going to be loud. What happened to common sense.</p> <p>I ask, how many on those involved in Texas Central or the FRA live in the country were there is the beautiful country side to enjoy, were the sound outside is from nature and wildlife. I can only imagine its a very limited number if any, and if thats the case how can any of you be able to properly calculate the environmental impact that such a train would cause in the the daily lives of every individual effected by such a project.</p> <p>Thank you for reading my comments and I hope you have a quiet and peaceful day, like all those who live in the country have everyday.</p>	<p>Refer to ED-2, NE-1, NE-2, SG-1, TC-6, TR-1, TR-2, VA-2, WW-1 and WW-2.</p> <p>For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p> <p>The construction emissions air quality analysis included potential pollutant emissions calculated over a representative four-year period, from 2018 to 2021. It is important to note that calculated construction emissions would be valid over any four-year construction time frame. Construction-related activities included all major construction activities shown in Section 3.2.3, Air Quality, Methodology of the EIS. As discussed in Section 3.2.6, Air Quality, Avoidance, Minimization and Mitigation construction of the Build Alternatives would increase local and regional emissions of particulate matter (fugitive dust) and pollutant emissions from fuel combustion. However, construction emissions would be temporary and transient in nature occurring only in active construction areas. The short-term emissions increase during the construction period would be reduced through Best Management Practice (BMP) mitigation measures as discussed in Section 3.2.6.2, Air Quality, Mitigation Measures. As a result, short-term and localized air quality impacts would not be significant. Construction and operation of track and the Grimes County station would not significantly contribute to air, light, or noise pollution as any construction-related impacts would be temporary and would not be significant. Potential light and noise impacts from the station during operational activities would be minor and any impacts to adjacent properties would be mitigated by distance.</p>
Glenn Clark	2/5/2018	Website	<p>Build this already! Fantastic project to advance Texas further, propelling the Houston to Dallas super-economy to further visibility on the global marketplace. And best thing about it, is that this project is privately funded. Brilliant project design to enhance economic development around the station nodes. This is not the first time nor the last time eminent domain will be used to advance the infrastructure and economic interests of the majority public--reservoirs, large auto factories, airports, etc. FRA, please do not let a few dissenters negatively impact the ability of a Texas business to continue to make Texas bigger and better! Again, build this now; build this for the future of an even more integrated, Houston-Dallas mega-economy.</p>	<p>Comment noted.</p>
Mike Clark	1/30/2018	Email	<p>I'm interested in keeping up with the progress on the bullet train please.</p>	<p>Refer to PI-1.</p>
Mike Clark	2/5/2018	Handwritten	<p>We do not want your train. Please leave Ponzi scheme.</p>	<p>Comment noted.</p>
Roger Clark	2/7/2018	Website	<p>The Dallas-Houston High Speed Rail project is important to all America--not just Texas. It will be an example for future HSR routes connecting metropolitan centers. We can't continue to try to solve the automobile congestion by adding lanes to our highways. Our airline terminals are operating at capacity. Railroads use a minimum of real estate. They create economic development.</p>	<p>Comment noted.</p>
Steven Clark	3/5/2018	Website	<p>I am very much FOR the project. This project is very important to the Texas economy, and is estimated to generate over \$36 billion dollars for the state and impacted counties over the 25 years for which the estimate was produced.</p>	<p>Comment noted.</p>
Steven Clark	3/5/2018	Website	<p>I am FOR the project. I am a fifth generation Texas, and native Houstonian. This project will provide an important, safe, and sustainable transportation alternative for travel between Houston and Dallas.</p>	<p>Comment noted.</p>

Steven Clark	3/5/2018	Website	I am FOR the project. This important project will provide over 10,000 full-time jobs per year during the construction period, and 1,000 permanent jobs upon completion. These jobs are not centered in Houston or Dallas, but across the alignment of the railway, in some areas where good jobs are very hard to find. These are skilled trades, non-skilled labor, and highly technical, so cover the full spectrum of our population's capabilities. We need this project.	Comment noted.
Steven Clark	3/5/2018	Website	I am FOR the project. This project will benefit all travelers, even air travelers by motivating Southwest Airlines to utilize their valuable equipment and gate space on longer-haul flights, and letting the railway take on the travelers between Houston and Dallas. Long-haul flights are more sustainable than short haul flights and make better utilization of travelers' airport time. It takes just as long at the airport to arrive, park, pass security and board an airplane for a short flight, as it does a long flight. I would prefer to reserve that time for the long-haul flights.	Comment noted.
Steven Clark	3/5/2018	Website	I am FOR the project. I have attended meetings where people say the project is guaranteed to fail. This is complete nonsense. The investors are smart people who would not invest their money in a business that they thought would fail. No sensible business person does this. If the project, as it is built, does fail financially, it is still technically sound, and other investors would purchase the assets at a discount that would allow it to be a profitable business. This is what has happened to a number of infrastructure projects, such as Channel Tunnel, Eurostar, and a number of international highway concessions. The projects are still there serving the people the way they were built to do.	Comment noted.
Harold Clarke	2/16/2018	Website	This is a great 21st century infrastructure project for Texas and the USA. The economy the environment will both benefit significantly by building this rail system. Modern rail transportation is long overdue in the US. There is no downside to this project.	Comment noted.
Kathy Clarke	3/9/2018	Website	HSR is less than 1% funded yet Texas Central seems to be attempting to move forward. Why is this? How do you propose to fund it?	Refer to GN-4.
Kathy Clarke	3/9/2018	Website	Why are you doing business with a Japanese Co. that uses 50 year old technology? I am a proud Texan and I am against the High Speed Rail!	Refer to BA-4 and TC-2.
Kathy Clarke	3/9/2018	Website	My Great Granfather was a soldier in the Cuvil War and is buried in Ten Mile Cemetery. In the proposed path of the HSR How is it legal to exhume a veterans grave? Especially a Veteran that fought in the Civil War? I am a proud 4th generation Texan and I AM AGAINST THE HIGH SPEED RAIL!	Refer to CR-8.
Kathy Clarke	3/9/2018	Website	When The High Speed Rail ends up bankrupt who will be responsible for paying for this project? I am against the High Speed Rail!	Refer to NE-1, NE-9 and SS-5.
Kathy Clarke	3/9/2018	Website	Why are you willing to go into business with a Japanese company that is in debt by 70%? How is that good business practices? This shows a complete lack of sound judgement. I am against the high speed rail.	Refer to GN-4 and NE-1.
Jason & Amy Clary	NA	Website	My land is priceless to me.	Comment noted.
Robert Clayborn	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Tom Clear	2/10/2018	Website	Texas deserves the first bullet train in the Western Hemisphere. What starts here, changes the world!	Comment noted.
Joel Clemmer	2/7/2018	Website	The Dallas-Houston High Speed Rail project would be a model for the country to follow. The current administration's emphasis on infrastructure and on private investment is a perfect match to this project. If successful, other regions will follow Texas's lead.	Comment noted.
Ron Clemons	3/9/2018	Email	Ref proposed Texas high speed passenger line Dallas-Houston. As a 33 year employee (retired) of the BNSF Rwy. I am against this proposed line because it is being sold to Texas as a profitable proposal that will not require any tax monies. These type trains work, but they ARE NOT profitable anywhere in the world with very few exceptions. Somebody needs to check with California on the estimated construction cost. I have no problem with the concept, just don't lie to the taxpayers...for once.	Refer to GN-4 and NE-1.
Shenita Cleveland	1/29/2018	Oral	Hi there and good evening. My name is I 'm sorry. I am Shenita Cleveland from Cedar Hill, Texas, and I'm here as a small minority owner of business and I 'm also here as a supporter for the high--speed rail project and I '11 tell you why. Because I'm a witness. See Texas Central partners has already started reaching out to the community, and even to the minority to get us involved, inviting us out to educate us, and they are participating in our events around the city, including the greater Dallas Council, you know that has the best interest of North Texas (Inaudible) and, I \u0230 n your witness that they have included us and agarn , that's exactly what we need. And I tell their story wherever I	Comment noted.

			go because they already have showed to me that they can take it, but they're not taking it, and they' re here wanting the public's involvement and hearing your concerns . And I hope the Risingers will join us at point and get on board and I 'm very excited for the opportunity that this will for the small business community to help us grow our capacity as I am confident that they will and intend to even though they don't have to .	
Shenita Cleveland	2/16/2018	Website	I'm onboard! The Dallas region will be greatly impacted in a positive way. There will be jobs created, and will allow small businesses to become medium size businesses. It is a win win for Dallas and Houston!	Comment noted.
Cynthia Cline	3/9/2018	Website	I am all for the train, especially due to environmental reasons and for the fact that getting to an airport to fly to Dallas is very hard from where I live. However, I live less than 450 feet from the proposed project which is impacting my subdivision in a big way (White Oak Falls). Besides being worried about increased flooding (as in the 2016 tax day flood) since they want part of a detention pond (and it floods in the streets behind me near that detention pond), I am concerned that the project will make my house more likely to flood. Also, I am concerned about the increased noise and vibrations (and potential damage to my home). I have used a sound meter and the noise hasn't even exceeded 58 decibels (even with the USPS truck, freeway traffic, a hospital close by or the freight train etc). I have never exceeded 58 decibels. This project will raised the noise level way beyond what is okay. And over time, vibrations will upset the foundation of my cheaply made DR Horton home. Also, the open green space with visibility of trees that I enjoy will be compromised by the construction of this product. Then there is the decreased value of my home not to mention there is no stop near where we live so we have homes that are going to drop in value that we can't sell. Construction is another issue for our neighborhood to content with. This project also will be near the playground where our kid play and the picnic table. Our greenspace and open outside is compromised. Again, I live approximately 450 feet from the proposed track. I think anyone under 750 feet near the tracks will be very upset with this project and wonder about the issues I do.	Refer to AS-1, FP-1 NV-1, NV-5, VA-1 and WW-2. The route near the White Oak Falls subdivision is parallel to Highway 290 and on viaduct. As noted in Mitigation Measure LU-MM#1 Temporary Conversion Section 3.13.6.1, Land Use, Compliance Measures and Permitting , TCRR shall return temporarily impacted land to its pre-Project condition following the completion of construction activities in that area.
Jim Cline	2/28/2018	Website	I fully support the implementation of TCR high speed rail.	Comment noted.
John Clinton	2/21/2018	Website	I am opposed to the current planned location of the high speed track going right through Morgan Legacy Farms which would in essence totally destroy a beautiful and thriving family Ranch that is know for its generosity, beauty and family memories. The Ranch has hosted many charitable events, weddings and family functions. Really seems unnecessary to destroy so much nature and history when it can easily be avoided.	Refer to LU-5.
John Clinton	2/22/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. I am also concerned that migratory waters will be destroyed when they can be saved simply by re routing the train. This beautiful historical property sill be destroyed with the current plan.	Refer to FP-1, LU-5, WW-1 and WW-2.
John Clinton	2/23/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. I am not opposed to progress but when progress destroys a beautiful historical property such as the Morgan Legacy Ranch which is used to benefit Frist responders and their families, I have many issues with shat being referred to as progress.	Refer to LU-5.
John Clinton	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. By destroying The Morgan Legacy Farm you are also endangering many native animals and destroyiing their natural habitats that are located all throughout this natural setting!	Refer to LU-5.
John Clinton	3/8/2018	Website	As a Texas small business owner, I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. I have serious concerns about the proposed route in portions of Navarro County. I understand that overall the southern most route proposed may be the most appropriate as compared to the other two proposed routes. However, I believe the portion which travels south of 3194, not along the utility easement as suggested in the middle route, would create significant adverse environmental, economic and cultural history problems. The proposed route parallels a county route which would require a large berm blocking access to property south of 3194. This would also create maintenance, water shed and inclement weather problems in my opinion. The proposed route could also block expansion of 3194 and future development along 3194. The proposed route intersects a three-way intersection requiring significant engineering and rerouting of county roads and the access roads to surrounding properties. Given the topography of the area surrounding CR 709 and 3194 the train would both be significantly below grade and then rapidly elevated creating watershed issues, access issues, and cosmetically detractive issues. Ifthe proposed route was blended in this small area with the already vetted middle route, both the train and tall high tension power lines would run parallel thus creating less environmental and esthetic impact. It seems much more appropriate to run the train next to a high voltage power grid already existing rather than run more high towers. If this small move is made the train would cross	Refer to FP-1, LU-5, WW-1 and WW-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>709 at an already existing utility easement and would not adversely affect the three way intersection and would not limit CR 3194. Ongoing road maintenance would be simplified and watershed improved.</p> <p>My final and major concern is that the proposed route would destroy a highly developed economic, charitable and cultural Navarro County Ranch. Listed on tax roles as Morgan Legacy Farms. If the proposed route is utilized the rail project would cause the destruction of two of the homes on the ranch, the destruction of one of the first (if not the first) rodeo arenas ever built in Navarro County. Access to the horse barns, parking and Lodge would be lost rendering the ranch unusable for it's primary purpose. Just in the last 5 years the ranch has been visited by over 900 guests as a charitable property. Churches, Girl Scouts, Boy Scouts, Military Personnel, Police, Fire and various city leaders as well as disadvantaged children from natural disasters. There is no other property like this facility located in Navarro County and perhaps within 100 miles. To destroy this icon rather than move the train route slightly north on an existing utility easement would create irreparable losses and damage to the county and those who benefit from the property.</p> <p>Sincerely, John Clinton Contract Labor Solutions</p>	
Julie Clinton	2/21/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. If there is any possibility of saving natural wetlands and reducing the impact on this historic and very beneficial asset, it should be taken. To route the train through this property would have very negative implications. The property and current owners have hosted hundreds (at no cost) of guests that have benefited greatly from being able to experience this great Texas ranch. Even more children, first responders, charities, and community services can benefit in the future. With any progress and betterment we should make all efforts to be in harmony with our history, while moving into the future. There are much better options than routing this train through a beautiful, beneficial natural and historic state asset of Morgan Legacy Farm.	Refer to LU-5.
Julie Clinton	2/22/2018	Website	I would like to express my objections to the High Speed Rail train being routed directly through the ranch property known as Morgan Legacy Farm, near FM 709 and 3194. This family-owned property is an important part of the Navarro County rural history. It is a location for waterfowl migration and wildlife to remain in their natural born territory. Destroying this area and the serious negative impacts I feel are very unnecessary, given the location more North, running parallel with the existing power lines. Why ruin a Texas treasure when a better location with less damaging affects is available? We Texans are losing enough of our historic rural sites, this progressive transportation should do whatever possible to preserve the historic and natural presence.	Refer to LU-5, NR-2 and NR-6.
Julie Clinton	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5, NR-2 and WW-1.
Julie Clinton	2/25/2018	Website	I would like to express my serious concerns for the plan in Navarro County for the high speed rail. Specifically the Morgan Legacy Farm located near FM 709 and 3194. I am concerned about losing migratory waters and natural habitats for the wildlife that is abundant on this property.	Refer to LU-5, NR-2, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Julie Clinton	3/5/2018	Website	I don't agree with the location of the high speed rail going through the ranch property known as Morgan Legacy Farm in Navarro County. I believe the negative impact on the environment is too great and there is a better route for the rail along the current utility lines instead.	Refer to LU-5.

I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property. The loss of habitat for wildlife and watershed concerns are too great.	Refer to FP-1, LU-5, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Julie Clinton	3/8/2018	Website	As a Texas small business owner, I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. I have serious concerns about the proposed route in portions of Navarro County. I understand that overall the southern most route proposed may be the most appropriate as compared to the other two proposed routes. However, I believe the portion which travels south of 3194, not along the utility easement as suggested in the middle route, would create significant adverse environmental, economic and cultural history problems. The proposed route parallels a county route which would require a large berm blocking access to property south of 3194. This would also create maintenance, water shed and inclement weather problems in my opinion. The proposed route could also block expansion of 3194 and future development along 3194. The proposed route intersects a three-way intersection requiring significant engineering and rerouting of county roads and the access roads to surrounding properties. Given the topography of the area surrounding CR 709 and 3194 the train would both be significantly below grade and then rapidly elevated creating watershed issues, access issues, and cosmetically detractive issues. If the proposed route was blended in this small area with the already vetted middle route, both the train and tall high tension power lines would run parallel thus creating less environmental and esthetic impact. It seems much more appropriate to run the train next to a high voltage power grid already existing rather than run more high towers. If this small move is made the train would cross 709 at an already existing utility easement and would not adversely affect the three way intersection and would not limit CR 3194. Ongoing road maintenance would be simplified and watershed improved. My final and major concern is that the proposed route would destroy a highly developed economic, charitable and cultural Navarro County Ranch. Listed on tax roles as Morgan Legacy Farms. If the proposed route is utilized the rail project would cause the destruction of two of the homes on the ranch, the destruction of one of the first (if not the first) rodeo arenas ever built in Navarro County. Access to the horse barns, parking and Lodge would be lost rendering the ranch unusable for it's primary purpose. Just in the last 5 years the ranch has been visited by over 900 guests as a charitable property. Churches, Girl Scouts, Boy Scouts, Military Personnel, Police, Fire and various city leaders as well as	Refer to FP-1, LU-5, WW-1 and WW-2.

			disadvantaged children from natural disasters. There is no other property like this facility located in Navarro County and perhaps within 100 miles. To destroy this icon rather than move the train route slightly north on an existing utility easement would create irreparable losses and damage to the county and those who benefit from the property. Sincerely, Julie Clinton Contract Labor Solutions	
Coalition of Texans with Disabilities (CTD)	3/6/2018	Website	The Coalition of Texans with Disabilities (CTD), a statewide cross-disability organization, is extremely interested and strongly supports accessible transportation options, including the Texas High-Speed Rail project. Opportunities to shift an industry paradigm don't often come yet can significantly impact the economic environment for people with disabilities. As the Federal Railroad Administration (FRA) moves forward with its review and approval of this project, it is vital that they take into consideration the needs of Texans with disabilities. Why should accessibility be a top priority of the FRA and Texas leaders in the debate over high-speed trains? Simply put, creating transportation equity that is safer and for some their only future option to travel; would allow all Texans greater access to employment, education, and upward economic mobility. Genuinely accessible transportation options will help our communities, support independent living, and, yes, empower more taxpayers to support public structures and address our state's needs. People with disabilities are the adult demographic group least likely to have a driver's license or own a car. Moreover, CTD has heard many negative accounts related to the two most common long-distance carriers: airplanes and long-distance buses. Damages to wheelchairs and other mobility equipment, dysfunctional lifts, no access to accessible restrooms while in route, and inadequate assistance while loading and unloading causing many injuries have continued to be barriers that people with disabilities face when traveling. This High-Speed Rail project has substantial accessibility advantages over the current alternatives. First, they will begin with a blank slate-an opportunity to design from the ground up with principles of universal design. That means the whole experience is accessible: booking a ticket, navigating the station, freely and independently embarking and disembarking the train, not being separated from one's wheelchair or mobility device, freely navigating the train car, and accessing the restrooms without assistance while in transit. That is game-changing. We believe there is a place for our changing transportation options here in Texas and around the country. As the transportation paradigm shifts, and new technologies like transportation network companies, the development of autonomous vehicles and projects like the Texas Bullet Train grow, we have an opportunity to make the most accessible barrier-free system available to every Texans. The Coalition of Texans with Disabilities fully supports the Texas Bullet Train and creating a safer more accessible transportation option for Texans with disabilities.	Comment noted.
Brent Cochran	NA	Website	The Dallas to Houston High-Speed Rail abuses the privilege of eminent domain by taking personal property for private profit. Most people call that stealing. This is like AT&T Stadium where local public authorities allowed Jerry Jones to condemn, claim, and repurpose others' private property for his profit. Why would you want travel down that anti-Texan road again? Even if it is allowed by law, it is wrong. Eminent domain should only be used for public good. This train is not in the public good. Send it down current rail right of ways, not over farm land. Please stop this now as it has been stopped before. Do not punish Texans for the financial benefit of others.	Refer to BA-9, ED-1 and PN-3.
Dean Cochran	2/22/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Garrett Cockrill	3/8/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. Garrett Cockrill	3/9/2018	Website	I have been informed that the FRA would like to build a high speed rail through the Morgan Legacy Farms and I have serious concerns about the proposed location and the effects it will have on those who frequent the location, but also on the wildlife that it supports. I have visited Morgan Legacy Farms on multiple occasions and each trip has been an unforgettable experience. The ranch provides a tranquil space for relaxation and rejuvenating friendships. The support and camaraderie in relationships I have built through time fishing or shooting guns at the practice range is irreplaceable. The memories I have fishing in the pond to see who has the biggest catch, grilling steaks and roasting marshmallows by the fire pit and even going to see the garden and the livestock are forever ingrained with gratitude for those that welcomed us onto their property. I was even fortunate enough to bring my 11 month-old son to Morgan Legacy Farms along with my wife. We showed him the cows, horses and let our dogs run wild on the property. It's amazing what joy even a toddler gets out of being out in the wide open space. The generosity that Morgan Legacy Farms shows by allowing my family to visit at no charge combined with the very convenient location outside of the DFW Metroplex will not be found elsewhere. I fear that if the ranch is destroyed with the placement of the high speed rail the wildlife and tranquil environment will suffer immensely. It is my understanding that the proposed route cuts through Morgan Legacy Farms and essentially destroys the most used areas. I propose to move the route slightly North, above the ranch and near existing power lines. This route saves the most frequented ranch areas and its amenities, giving me access to continue building these lasting friendships and relaxing to improve my mental health at minimal cost. The Morgan Legacy Farms is an irreplaceable oasis for so many people, my family and I included. I strongly encourage you to consider changing the proposed route of the high speed rail to that location north of the ranch, near the power lines, as the benefit strongly outweighs the cost to those associated with Morgan Legacy Farms.	Refer to LU-5.

Nell Coffee	2/6/2018	Oral	Okay. Hello, everyone. I'm Nell Coffee. I am not from Waller County; I'm from Harris County. Please don't throw anything at me. There are people in Harris County that really have problems with this train. I am one of them. I live on the 290 corridor in Jersey Village. We actually are a little city there next to where Beltway 8 hits the Sam Houston Tollway. And yes, there are many concerns about this train. And we've	Refer to NV-1 and NV-7.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>already heard some very severe; we're going to hear a lot more, I know. We all have a personal problem with the train, and I do, too. But I want to focus on three things: Sound, vibration, and safety. And even though my house and there are a big part of Jersey Village is less than a quarter-mile from this train. And I did get better answers tonight than we did at the last meeting last night from the engineers. They really knew a lot, so I was able to determine some things. And yes, that train will be 46 feet in the air, and sound even TXDOT, as as they are they do a sound study at 290, just for the building of 290. Our entire street is already above 65 decibels. That's you need to be below 65 to be in a habitable house. So we're hoping they are going to build a sound wall. That is their plan. They have determined that they would do that. And I think one of the biggest problems with dealing with a train is we have to rely on a lot of trust; because according to the Draft EIS, they said they did not identify any locations for needed sound barriers or building sound insulation as part of their preliminary movement. There are neighborhoods on 290 that are closer than us. Even TXDOT did a sound study. All right. But the thing I want to address that was different was the schools. Because Cy-Fair ISD, this train will impact the seven schools and thousands of students. But none more than Cy-Falls High School that will sit 500 feet from that train. This is a high school of 3500 students, 300 staff members, all right. Sound? Okay? Activities outdoors? I mean, there's tons of athletic activities outdoors. Now, according to the Draft EIS, they said there is no severe vibrational concerns within 275 feet. That's good. This is the most important one. Okay. What is "severe"? Is that earthquake, tumbling down, crumbling? I mean, they are only 500 feet away. All right. Safety? I checked tonight. The engineer said, 205 miles an hour, 500 feet in the air. It's a safe train. Schools are safe until something happens. This is a safe train, but it's 50-year-old technology. They -- surely, they did not have used trains. That's nice to know. Okay. But Japan, I asked, "So what do they use now?" Something similar. Well, you know, a cell phone receives calls, a corded phone, a dial phone receives calls. They're not similar. So what is Japan using today and what are we going to have? Again --</p>	
Nel Coffey	2/5/2018	Oral	<p>Okay. Hello. Hello. I am Nel Coffey. I am one of the ones from Harris County. I'm a city dweller, but born and raised in Texas. I understand the rural land from my family not being taken by railroad today, but I know if it were how terrible it would be for them. If you're a true Texan, you understand that land, no matter how large it is, you know, you bleed that dirt. I mean, it is so special to you. Well, our land, I just only own a small place off 290 in Jersey Village, and most of the things that I was concerned with have already been stated, but the thing that I did want to get Jersey Village out there because Jersey Village is a city right near Beltway 8; you know, the Sam Houston Tollway and 290, in that corner, and I don't think anybody at these tables knows that. Okay? And we are municipality. I mean, we have a government entity. I think most of the people in Harris County don't know the details. The devil is always in the details. I have grandchildren in Dallas. I drive to Dallas a lot. Okay? I see the trucks. I see the cars. You know, I know what 45 is. At first I was very excited; Oh, wow! This will be great; 90 minutes. The devil is in the details. It's not great. It's not great. It's not great with the house that I own in Jersey Village, because I'm not even going to be a quarter mile from that train. Okay? My entire street, Seattle Street, is only going to be a quarter mile from the train. Just on the other side of 290, we're the first street there in Jersey Village. They can't tell me tonight how high that train is going to be. In the beginning meetings they said it would go over Beltway 8 flyover. That's it. I mean, I know a quarter mile in my day was 440 yards. Right? Okay. 400 meters, I mean, that's very high. They're going to have to dig very deep to put two trains on these skyscraper-type pedestals. So yes, I'm worried about the way it looks. I'm also worried about the sound, because a real sound abatement, not some computer model, not some speculation that they've talked about the different tables I've been to, was actually taken because of the 290 road, highway, mess, whatever it is--okay?--to get it fixed. The decibel level is already too high. It's above 65 decibels. Okay? That is decibel level it should be to have a livable condition. Okay? So we're already on that border. Now, they haven't built the wall higher, as I said they are going to, so we're waiting for TxDOT and everybody to do that. But we're looking at two high-speed trains that, according to the people in this room, don't make any noise. It's just not fathomable. This just isn't working, which I think everyone knows. But even the ones in Harris County are concerned because it is going to impact all of us. We need transit, but we need transit to move around inside Harris County. One last thing. No one has said this part. This train technology is at least 50 years old. That means we should still be using phones that have cords. And my first computer was an Apple IIe, and I guess that's what we should be using now. I mean, there are hyperloops being developed out there. We should not be looking at a 50-year-old train that is going to destroy land and people's lives. Thank you.</p>	<p>Refer to AS-1, BA-4, NV-1, LU-11 and TC-2. The viaduct height would be approximately 55 feet about existing grade at the intersection of FM 529 and the proposed project on the south side of U.S. 290.</p>
Jon and Beverly Cogdill	1/30/2018	Letter	<p>My wife and I own a small ranch in Normangee, Texas that is part of Leon County. We have spent a lot of time, money and hard work into making it our retirement dream. The high-speed rail preferred route will run right through the middle of our property making the improvemnets, houses, barns and livestock tank virtually worthless. It is so refreshing to be in a quiet place in Texas where you see deer, flocks of cardinals, hawks, possums, armadillos, hogs, and racoons on a daily basis. The proposed rail system will not only destroy my property and all its improvements but it will change the face of rural Texas forever and run off all the beautiful wildlife that roams my property. I feel bad for the real cattle ranchers that use the land for their livelihood and have had their property in their family for many years going back to the 1800's. It does not take a lot of math analysis to determine that this project that ranges in estimates of \$10-20 billion is destined to failure. The ridership projections are absurd as TCR has said tickets will be similar to plane tickets. The only ones that win on this deal are the developers that are aligning themselves with Japanese technology, Japanese financing and Japanese operators to take rancher's and farmer's</p>	<p>Refer to ED-2, GN-2, GN-4, LU-11, NE-1, NR-5, PN-3 and SC-3.</p>

			<p>property under the guise of Private Enterprise so they can make millions in developement fees and then ride off into the sunset without risking their personal fortunes. Tax payers then pay for the defaulted loans and are forced to operate the rail infrastructure that was doomed to failure at the onset. That is not what owning land in Texas is all about. I am a Houstonian and what Harris County and the Federal Government need to do is to put money into repairing the obsolete drainage system in Houston and put money into a master plan to build a transit system to effectively move Houstonians and visitors through the city. We don't need a High-Speed Rail boondoggle that is doomed to failure and will be nothing more than a Disney ride that tax payers will pay for decades ahead. My wife and I pray that there are legislators in the State and Federal government that care about people and really want to help places like Houston solve real issues. We have to fix the issues within our cities first. Then, find ways to improve transportation between systems through existing easements. How about improving the existing railways and becomeing more efficient in moving freight by rail between cities and keeping trucks off the interstate? Do not partner with those that wish to make themselves money and destroy the face of Texas.</p>	
Jane Watkins Cohen Ph.D.	3/7/2018	Email	<p>DallasHoustonHSR The High-Speed Bullet Train (HSR) from Dallas to Houston is not environmentally efficient nor economical and is potentially harmful to crop production. The vibration caused by 68 trains daily may interrupt pollination of crops on lands within 275 feet of the rails. Pollinators are already declining, so adding additional problems for crop production is not environmentally or economically safe. My Great Grandparents came to Texas and farmed that land in 1877. The family farm is in production today. Levi and Elizabeth Sewell are buried in Cryer Creek's Grange Hall Cemetery. Property taxes statewide will be increased and inflict harm on the Texas economy to subsidize this \$20 billion boondoggle. The proposed High Speed Rail (HSR) is an economic catastrophe in the making for all of the counties between Dallas and Houston. This is a clear case of government out of control. Navarro County runs the risk of having the economy negatively impacted by more than 20 percent due to this project. Farms, ranches, school districts, and emergency service districts would be split and require a significant cost to the counties to maintain current levels Of services. This financial impact is driven by the combination of increased taxes and reduced tax revenues from the loss of cross-county economic freedom. Just because farm land is less expensive than urban area land does not automatically mean that is an appropriate location for HSR. Navarro County will be torn in half by the construction of the High Speed Rail project. Texas will lose more than prime farmland, with Ellis County (study done there, but similar to Navarro County) losing nearly 20 million yards Of earthen materials taken locally for the rail line's berm. Because Texas laws allow two miles on either side of the line for acquiring all the dirt, sand, gravel and water, a four-mile-wide path of environmental destruction will take my family's historic farm, as well as scar Texas the entire way from Houston to Dallas. The HSR scheme, a high risk, ground-up construction. The Texas project will need taxpayers' assistance, because this train would need sizable subsidies to operate. "It was the most innately financeable corridor," said Robert Eckels, president of the Texas Central Railway. Texas also has a history of embracing the private sector for infrastructure projects, particularly toll roads. I'm concerned about the long term cost. In Texas, it will not be able to sustain itself, despite what its promoters may say. Texas' urban centers have a history of low public transportation use, despite expanding light-rail networks in its largest cities. And they are very car-oriented, without any significant intercity rail traffic. This HSR uses fossil-fuel-powered engine or the electricity that powers other Shinkansen lines, including the proposed Texas Central Railway. The best-known of those projects, a privately financed, 41-mile stretch of State Highway 130 in Austin that sports an 85 mph speed limit, the fastest in the country, technically defaulted on its debt in July, according to Moody/ s Investors 128 Service. Texas Central isn't planning to take any public subsidies, the company is not ruling out federal tax-exempt financing opportunities available to other large infrastructure projects. Richard Arena, a transportation and infrastructure consultant Who sits on the board Of the U.S. High Speed Rail Association, said he believes Texas Central's project could become the first truly high-speed rail system in the country, but he has concerns about the project's financing. In particular, he's not clear how the Dallas-Houston line will manage to earn enough revenue to pay off the interest on the billions of dollars' worth of bonds that will likely have to be issued to fund the construction. Such financial challenges are why some public subsidies are the norm for public rail systems, he said. "I still have skepticism of where the funding is going to come long-term," Arena said. A private firm attempted to build a high-speed rail line in Texas back in the late 1980s with two European-backed firms competing to win a state franchise to connect the so-called Texas triangle of Houston, Dallas, Austin and San Antonio. The company gave up on the project after failing to come up with enough capital.</p>	Refer to ED-1, GN-4, LU-11, NE-1, SC-6, SC-19, SC-22, SS-23, TR-8 and VA-1.

			The crowning insult is the use of eminent domain to steal patriotic Americans' property for the benefit of a Japanese corporation that is using a front company, Texas Railroad Company, for the sake of this project. This is not only wrong but it violates President Trump's commitment that all infrastructure projects be U. S. corporation projects. Limit the availability of any federal funds for the HSR project to keep this project from advancing. I am against the HSR project.

Carl Cole	3/8/2018	Website	Train me	Comment noted.
Donna Cole	3/9/2018	Website	Yes, I support the Dallas to Houston High Speed Rail project as I believe it is important for Texas to get behind an environmentally safe effective statewide transportation. The reasons are vast: reduce the carbon foot print of individual vehicles on the road, improve driver safety, reduce the negative impact/maintenance on highways. The future of the State of Texas rests on visionaries who understand long term economic improvement and growth. With more than 60% of the train being elevated the train would provide a safe environment and following already designated right-aways makes for a mutually beneficial enhancement. Thank you. Donna F. Cole	Comment noted.
Hale Cole	NA	Website	The train would destroy our pasture. With no grass we will be forced to sell our cattle and go out of business. It also goes through the new Union Baptist Church.	Refer to ED-2, LU-11 and SC-9.
Helen Cole	3/6/2018	Letter	The train would destroy our pasture. With no greass we will be forced to sell our cattle and go out of business. It also goes through the new Union Baptist Church. I AM OPPOSED TO HIGH SPEED RAIL! Keep Texas Central OUT of Madison County!	Comment noted.
Stephanie Cole	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

			<p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
Susn Cole	1/25/2018	Website	The bullet train would be a wonderful addition to assist in reducing the transportation problems we have in the big cities It has my vote 110%.	Comment noted.
Bill Coleman	3/9/2018	Email	I am Mayor Pro-Tem of a small Central Texas City. I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion, because it's good for Texas!	Comment noted.
Charles Coleman	2/5/2018	Handwritten	<p>The Project Draft Environment Impact Statement is flawed; by many missing and environmental documented studies and conclusions, of environmental federal state laws in force as of 2018 regarding any proposed railroad, as well as sound construction engineering method governed by federal and state laws as of 2018 regarding any proposed railroad construction. Charles Coleman	2/5/2018	Oral	I spent 22 years putting my place together, lots of money and lots of time and this damn thing is going to be three miles away. This is a terrible idea. It's the stupidest thing in the world. All they're trying to do is tear everything up. And the federal government gets into it, they're going to do like they do everything else; they're going to screw it up. That gentleman right there has spent a lot of time in the service and we appreciate everything he does. My son is ex military also. This thing doesn't make any sense. It's not going to service anybody. I already had to get easement for the power line, transmission line (inaudible) as fast as they can because they're trying to switch them. They expect everything to go away. Anyway, I'm definitely against it and I guess everybody else feels the same way. I appreciate it. Thank you.	Comment noted.
Toya Coleman	2/16/2018	Website	The transportation future of Texas is at hand. I fully support this venture. I live in Houston and travel to Dallas often. THIS train would improve my travel options. We are in desperate need of a more progressive transport system here.	Comment noted.
Thomas Collard	2/5/2018	Oral	Hey guy, I'm not used to talking in front of a lot of people so bear with me. I think it's real sad what y'all are going to do to these people. I'm a commissioner in Madison County and I think it sucks what you all are going to do. You are going to destroy so many people's lives, it's horrible. The high speed rail in California is a perfect example of why we don't need this. Seven years behind schedule and billions of dollars over budget. Exactly why we don't need it here. I don't have a whole lot to say but I will say this he County has passed a resolution to stop this and we will stand behind it as hard and fight for it as best we can. Thank you.	Comment noted.
Jeff Collins	2/24/2018	Website	The Build Alternatives, the DEIS shows tables of High, Medium and Low potential negative Impacts to ER response times and summarize with the statement, "Impacts to ER Times would not be anticipated to be Significant". The FRA also says if the ER times do not increase by more than 10%, hat issue at that location is not the place of focus when looking for mitigation steps? Tell the FRA "This Project is NOT WORTH One Single Loss of Life due to ANY increase in ER Times as a result of this HSR Project. No build option should be chosen.	Refer to SS-23.
Jeff Collins	2/25/2018	Website	I fully support this project as it is needed to ensure our region and state can keep up with the future growth and to ensure our quality of life is improved while providing a safer way to travel along its route. This project will benefit where I now live in the Cy Fair area, but also in my property in Grimes County near the Brazos Station. Having elderly family in Dallas, this will allow them to visit us often since they no longer drive and avoid flying. The EIS addresses all items along the route and I recommend approval so we can get this train built as soon as possible.	Comment noted.
Jeff Collins	3/5/2018	Oral	Hello. I'm Jeff Collins. I'm the other co-chair of the Transportation Advocacy Group of the Houston region. I'm also a co-chair of the Cy-Fair Chamber of Commerce Transportation and Governmental Affairs Committee. But I tonight, rm here as an individual who owns property near Roans Prairie in Grimes County close to the Brazos stop for this project, and also live in the Cy-Fair area: of which this project goes right through. And I feel like the Draft EIS has adequately addressed all potential impacts to the natural and human environment as required by the NEPA process: and I fully support the continued development of this vital project for the future of this region and our state. The Houston region is expected to add million people over the next 30: 35 years, so safe alternative transportation systems like the high-speed rail project are needed to sustain our life quality as this growth occurs. The date of November 7th, 2000, that is the last day in Texas that we have not had a fatality on our roads in Texas. Let's say 17-and-a-half years times 365 times multiple facilities and different things So any project that takes people off our roads and puts them in a safe transportation mode such as a high-speed train, I'm all in of it Last comment: I also support the location of the Houston station at Northwest Mall area. Thank you.	Comment noted.
William Glenn Collins	1/31/2018	Oral	My name is Glenn Collins, or William G. Collins. I live at [...] located between Teague and Mexia. I own approximately 765 acres of land that I've worked and paid for. Currently the railroad is scheduled to be right across the farm to market road from my property. I feel that it has a significant impact on the value of my property. That's currently--even the announcement of this railroad has diminished--I don't even know if I could sell my property at this time. In addition, my house is located at one end of the property off --about a thousand foot off FM 2777. Currently Texas Central is --I understand Texas Central is negotiating approximately 100 acres there for a terminal or a maintenance facility.	Refer to VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			This may or may not be true. But I feel like this would-- you know, the noise, lights, all this is going to impact my property. I have deer, wild game, like hogs, that we enjoy hunting, and I feel that's going to take that away from us. And the main issue is just that we are going to be compensated for diminishing value in our property or being able to sell the property for homesites such as that, if we choose to. And that concludes my statement.	
Jessica Colon	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. J.B. Colwell	2/27/2018	Handwritten	Where is fairness and justice in this country when a foreign country (business) can come into our country and take our land? Some of this land has been handed down from generation to generation. I guess this means nothing to city people. If one lives in Houston and rides a train to Dallas,, how will he or she get to their destination which might be miles from the train station? What will the cost of the ticket be? What will the cost of a cab or taxi be to get to their destination? This idea of the high speed train is so unfair to the rural landowners who will benefit nothing except heartache, noise and disruption of life--even the livestock's peace will be disrupted. Do not let this deal happen! When this high speed train goes broke, the rural and city taxpayers will be left with the bill and the rural people will have lost their land for nothing. Noise, land robbery, disruption! These are the things the high speed train will bring to rural people.	Refer to ED-1, GN-4, GN-6, NE-1, NE-9, NR-1, NV-1, SC-3 and SC-19.
Amely Comly	2/6/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A HISTORICAL MINORITY POPULATION COUNTY) The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 million property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decrease valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EJ-1 and VA-1.
Amely Comly	2/6/2018	Website	FEASIBILITY OF PROPOSED HIGH SPEED RAIL A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the cost to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere...	Refer to GN-3.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON THE CITY OF WALLER	Refer to BA-8, ED-2, LU-4, PI-1, TR-6 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interest, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "...we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options."</p> <p>Waller Towne Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference center, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying out residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordinating meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	
Amely Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason:</p> <p>IMPACT ON THE CITY OF WALLER</p> <p>The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interest, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "...we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options."</p> <p>Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference center, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This</p>	Refer to BA-8, LU-4 and PI-1.

			would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying out residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25,2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and developmet opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordinating meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: On its website Texas Central Railways claims that it is a "railroad". Earlier information I printed out from TCR's website States: "TCR will not be the constructor of the railroad" "TCR will not be the owner, developer, implementer nor operator of the railroad" "Following the completion of the environmental impact study, TCR anticipates that privately funded development entities will assume responsibility for project's construction and the selection of an operator to manage the operation of the railway." Based on the quotes above from TCR documents: How can TCR claim to be a "railroad"? How can the FRA buy into the "player to be named later" ploy, particularly after the Reason Foundation report made fun of TCR's ridership figures, conversion figures, construction costs and the overall feesibility of this project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, GN-3, NE-1 and NE-2.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: The original Utility Corridor Route followed the Utility Corridor all the way to Texas Highway 290. Late in 2015 that route was changed to have the rouse veer off the Utility Corridor to the southwest after it crossed the Grimes/Waller county line. Many people are of the opinion the route change was the result of significant "investment" or "contribution" by a developer along the original Utility Corridor route. Does the FRA condone bribery as an acceptable route selection methodology? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-5 and BA-8.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: It is evident to me that the FRA, AECOM, other FRA contractors and consultants, seven other cooperating Federal Agencies and their contractors and consultants have produced and issued the bulk of the Draft Environmental Impact Study and have expended Federal funds on behalf of the "privately funded" Texas Central Railways/Texas Central Partners. Would any other "privately funded" project have a Draft EIS prepared for them by the Federal Government? I doubt it. Does the FRA intend to seek reimbursement from TCR for all Federal Funds expended on their behalf to producing and issuing the Draft EIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and NE-5.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACTS ON HISTORICAL SITES At the coordination meeting with TXDOT on about Februuy 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultrral resources within Waller County and the location where rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform archeological survey, which produced the "Kickapoo Archeological Survey Rqort of 2010." For this report, the developer was required to obtain an Army Corps Of Engineers Section 4 Permit. This report revealed four sites and two sites considered for inclusion in the National Register of Historical Places-Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "Old timers,"and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that from in the town Of (now Houston) and went northwest through Mr. Jones' lard These are all historical sites that should not be destroyed by the HSR	Refer to CR-2 and CR-9.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2, RF-2 and WW-2.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five will cross the track of the HSR. This watershed will be directly impacted by the track depending how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, SS-17, WW-1 and WW-8.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON ECONOMIC DEVELOPMENT The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-8.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding built a new tower and the proposed train route falls directly top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2 and WW-6.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON KATY PRAIRIE CONSERVANCY Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to RF-4, NR-2, WW-1. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACTS ON QUALITY OF LIFE Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and of back, there will be loss of disposable income for the increase in travel time because will not want to live within five to ten miles of train track causing them to spend time driving longer distances. Mr. T. J. Johnson, President of the County Advocacy Group, estimates quality of life spent driving behind the wheel of their be reduced by 5,000 man-hours per year for residents in Waller County and cost additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1, NV-1, TR-6 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Amely Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Economic Impact On Property Values And Tax Base Of Waller County (A Historical Minority Population County) The proposed alignment of HSR will run through a portion of Waller County that is currently experienced a high rate of and residential development. As a result, areas that could be impacted are areas that have and should continue to see high increases in property values due to positive development taking place in these areas, including high-end residential. This project will create obsolescence that will negatively impact the property values in Waller County. Bankers and heavily discount property values in situations like this, which destroys the market value all properties. Because Of this loss in value; it will decrease and will cause WISD to lose \$3.6 million annual revenue, 1.8 million will be lost to the Municipal Management District discussed in NO. 2 above, City of Waller will lose 1.3 million and property tax collected by the county appraiser will be reduced between 279,000 to \$1.6 million annually from developments that will be ruined by the train through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department Of Transportation as a result of coordination meetings, and FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to EJ-1, LU-4, SC-19 and VA-1.
Amely Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON HEWLETT PACKARD DATA CENTER One more impact will be the Hewlett Packard Data Center facility, which houses 1,500 that will be within 1,000 feet of the HC-4 route. When notified of tr route, HP 's mamganent team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... the route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, we wmald have choice, but to vigorously oppose this proposed route." This issue was trought to die attention of die FRA by the Texas Department of Transportation a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to SC-11.
Amely Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Impact On Waller Harris Emergency Services District No 200 The Waller Harris Emergency Services District No. 200 (ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will notbe able to handle this type of emergency. This will place an undue burden on the District. To datte there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to SS-12, SS-18, SS-23 and SS-26.
Amely Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: FRA FAILED TO COORDINATE WITH LOCAL GOVERNMENT Despite two written requests dated 14, 2014 and July 6, 2015 from the County Sub-Regional Plaming Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments be evaluated the draft EIS" as FRA stated it would do on Page 24 Of the Scoping Report that released by the FRA in April Of 2015. The WCSRPC is a sub-regional planning commission formed the purposes Of planning future development Of our community and is comprised of officials from several municipalities in County, in addition to Waller County itself and two of its school districts. Without this coordination there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. FRA has also erred in identify WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department</p>	Refer to PI-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			of Transportation as a result of meetings, and the FRA has failed to address these impacts in the Draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: FEASIBILITY OF PROPOSED HIGH SPEED RAIL A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated, "We truly hope that high-speed rail because a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feignbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere... I propose that the only viable alternative would be that the NO BUILD option be chosen in the Final Environmental Impact Statement.	Refer to AQ-7, GN-2, GN-3, GN-4, NE-1 and SC-22.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The Houston to Dallas High Speed Rail Project affects me as a taxpayer because I believe it is not "financially sustainable and that I, as a taxpayer, will end up bailing it out. The Draft EIS states that High Speed Rail must be financially sustainable. So reconcile this. From the Draft EIS and the "ultimate configuration of the project": 6 each 600 passenger trains per hour each way during peak hours 4 each 400 passenger tranins per hour each way during off peak hours Peak vs Off Peak not defined Operating hours 5:30 am to 11:30 pm. 18 hours Seven days per week Case 1 based on: 12 hours peak and 6 off peak Peak, 12 trains X 12 hours X 400 seats = 57600 seats Off Peak, 8 trains X 6 Hours X 400 seats = 19200 seats Total seats per day = 76800 80% occupancy = 61440 passengers Passengers per year = 22,425,600 Case 2 based on: 6 hours peak and 12 off peak Peak, 12 trains x 6 hours x 400 seats = 28800 seats Off peak 8 trains x 12 hours x 400 seats = 38400 seats Total seats per day = 67200 80% occupancy - 53760 passengers Passengers per year = 19,622,400 Assuming that Texas Central Rail should be operating at "the ultimate configuration of the project" by 2035 please explain the difference between the passengers per year figures above and the Reason Foundation's for 2035 of: 1,401491 To get close to this number the trains in Case 2 would have to run at under 6% occupancy. This does not equate to "financially sustainable". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to GN-2, GN-3, GN-4 and NE-1.
Amely Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Viability of Saddle Creek Forest Saddle Creek Forest is not mentioned in the Drat EIS, one of our privately roads, Plantation Drive, is. The High Speed Ran route cuts off the eastern end of our community. It will send 12 trains per hour through our community at 200 MPH and at 95 decibels with each train. The Draft EIS does not address whether a gated community with privately maintained roads. bridges, drainages, lakes, parks, and recreational facilities will be "financially sustainable" after High Speed Rail essentially makes 20% of it uninhabitable. If Saddle Creek Forest is not *financially sustainable"then I will be deprived of the security, the stability Of a well governed Property Owners Association and other amenities that caused me to pay 8 to 10 times the going acreage rates for the properties I built a home on. I will demand a significant decrease in my assessed value that will affect tax revenues to Waller and Grimes Counties and Waller ISD. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-3 and LU-4.
Amely Comly	2/6/2018	Email	Dr Mr. Wright I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMACT ON THE CITY OF WALLER The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth stategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interest, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities resulting in a much less efficient usage of land and resources. Goodman	Refer to ED-2 and LU-4.

			Manufacturing has stated their position on the HSR route HC-4 this way:"...we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Towne Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's developement strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conferance center, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying out residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25,2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and developmet opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordinatng meetings, and the FRA has failed to address these impacts in the draft EIS.	
Amely Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: I started reviewing the Draft EIS several weeks ago. I have not seen or found detailed descriptions of how County and State road intersections are being crossed, how long, if at all, the intersecting road will be closed or whether the road will be closed permanently. Since the FRA has refused to coordinate with local governments and local planning commissions in violation of NEPA, please provide detailed descriptions of crossings at road intersections, duration of road closures at intersections and permanent road closures at intersections. Please also provide a list of County and State roads that may be closed for construction use only. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmetnal Impact Statement.	Refer to PI-1, TR-6 and TR-8.
Amely Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY Saddle Creek Forest, Plantation Forest Oak Hallow, Remington Forest and Six Pines -- all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy and viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-3, LU-4 and RF-1.
Amely Comly	2/6/2018	Email	IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY Saddle Creek Forest, Plantation Forest Oak Hallow, Remington Forest and Six Pines -- all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property.	Refer to LU-3 and VA-1.
Amely Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON KICKAPOO PRESERVE Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-4.
Amely Comly	2/6/2018	Email	The proposed alignment will run through a large portion ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention Of the FRA by the Texas Department of Transportation and the FRA has failed to address these impacts in draft EIS.	Refer to SC-5 and SC-8.
Amely Comly	2/6/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: VISABILTY OF SADDLE CREEK FOREST Saddle Creek Forest is not mentioned in the Draft EIS, but one of our privately maintained roads, Plantation Drive, is. The High Speed Rail	Refer to BA-6, LU-3, RF-1, SC-12 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			route cuts off the eastern end of our community. It will send 12 trains per hour through our community at 200 MPH and at 95 decibels with each passing train. The Draft EIS does not address whether a gated community, with privately maintained road, bridges, drainages, lakes parks, and recreational facilities will be "financially sustainable" then I will be deprived of the security, the stability of a well governed Property Owners Association and other amenities that caused me to pay 8 to 10 times the going average rates for the properties I built a home on. I will demand a significant decrease in my assessed value that will affect tax revenue to Waller and Grimes Counties and to Waller ISD. I proposed that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Amely Comly	2/9/2018	Website	Page 301 I am lodging an objection to the high speed rail line between Houston and Dallas for the following reason: On its website Texas Central Railways claims that it is a "railroad" Earlier information I printed out from TCR's website states: "TCR will not be the constmctor of the railroad" "TCR will not be the owner, developer, implementer nor operator of the railroad. " "Following the completion of the environmental impact study, TCR anticipates that privately funded development entities will assume responsibility for project's constmction and the selection of an operator to manage the operation of the railway. " Based on the quotes from TCR documents: How can TCR claim to be a "railroad"? How can FRA buy into the "player to be named later" ploy: particularly after the Reason Foundation report made fun of TCR's ridership figures, conversion figures: constmction costs and the cnerall feasibility of this project? I propose that the only viable would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to GN-2, GN-3 and NE-1.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: I started reviewing the Draft EIS several weeks ago. I have not seen or found detailed descriptions of how County and State road intersections are being crossed, how long, if at all, the intersecting road will be closed or whether the road will be closed permanently. Since the FRA has refused to coordinate with local governments and local planning commissions in violation of NEPA, please provide detailed descriptions of crossings at road intersections, duration of road closures at intersections and permanent road closures at intersections. Please also provide a list of County and State roads that may be closed for construction use only. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to PI-1, TR-6 and TR-8.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The original Utility Corridor Route followed the Utility Corridor all the way to Texas Highway 290. Late in 2015 that route was changed to have the route veer off the Utility Corridor to the southwest after it crossed the Grimes/Waller county line. Many people are of the opinion the route change was the result of a significant "investment", or "contribution" by a developer along the original Utility Corridor route. Does the FRA condone bribery as an acceptable route selection methodology?	Refer to BA-5 and BA-8.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: It is evident to me that the FRA, AECOM, other FRA contractors and consultants, seven other cooperating Federal Agencies and their contractors and consultants have produced and issued the bulk of the Draft Environmental Impact Study and have expended Federal funds on behalf of the "privately funded" Texas Central Railways/Texas Central Partners. Would any other "privately funded" project have a Draft EIS prepared for them by the Federal Government? I doubt it. Does the FRA Intend to seek reimbursement from Texas Central Railways/Texas Central Partners for all Federal Funds expended on their behalf for producing and issuing the Draft EIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the Environmental Impact Statement.	Refer to GN-4, NE-1 and NE-5.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON PUBLIC SAFETY At the coordination meeting between WCSRPC and TXDOT on February 9,2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahatchie and Katy Texas. The Pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental of natural gas: May 24,2007 - 18,000 lbs released, May 30,2007 - 20,000 lbs released, and June 11,2007 - unknown quantity On August 9,2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential	Refer to EU-2, EU-6, SS-1, SS-18 and SS-19.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident?</p> <p>This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	
Amely Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason:</p> <p>IMPACTS ON HISTORICAL SITES</p> <p>At the coordination meeting with TXDOT on or about February 9,2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery.</p> <p>When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April,2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of " old timers" and all the historical sites on the Kickapoo Preserve.</p> <p>These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to CR-2 and CR-9.
Amely Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason:</p> <p>IMPACT ON WATERFOWL AND HUNTING</p> <p>Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to NR-1, NR-2, RF-2 and WW-2.
Amely Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason:</p> <p>IMPACT ON FLOODING AND DRAINAGE</p> <p>Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to FP-1, SS-17, WW-1 and WW-8.
Amely Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason:</p> <p>IMPACT ON ECONOMIC DEVELOPMENT</p> <p>The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordinating meetings, and the FRA has failed.</p> <p>I proposed that the only alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to SC-13.

Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroy the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-3, RF-1, SC-12 and VA-1.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON KICKAPOO PRESERVE Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and others that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I proposed that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-4.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON KATY PRAIRIE CONSERVANCY Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-2, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON QUALITY OF LIFE Quality of life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, There will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr T.J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the TEXas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1, ED-2, NV-1 and VA-1.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of	Refer to SC-5.

			Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I proposed that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's managemnet team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-11.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 The Waller Harris Emergency Services District No 200 (ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad calorem taxation and any diminution of value due to the HSR will cause tax increase to cover expenses and budgets. Each fire department cost \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact	Refer to SS-12, SS-18, SS-23 and SS-26.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: FRA FAILED TO COORDINAT WITH LOCAL GOVERNMENT Despite two written request dated November 14,2014 and July 6,2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to indentifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purpose of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in indentify th WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Comment noted.
Amely Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: The Houston to Dallas High Speed Rail Project affects me as a Taxpayer because I believe it is not "Financially Sustainable" and that I, as a taxpayer, will end up bailing it out. The Draft EIS states that High Speed Rail must be "Financially Sustainable". So reconcile this. From the Draft EIS and "the ultimate configuration of the Project". 6 each 400 passenger trains per hour each way during peak hours 4 each 400 passenger trains per hour each way during off peak hours Peak vs Off Peak not defined Operating hours 5:30 am to 11:30pm. 18 hours seven days per week Case 1 based on: 12 hours peak and 6 Off Peak	Refer to BA-6, GN-2, GN-3, GN-4 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Peak, 12 trains X 12 hours X 400 seats = 57,600 seats Off Peak 8 train X 6 hours X 400 seats = 19,200 seats Total Seats per day 76,800 80% Occupancy 61,440 passengers Passengers per year 22,425.600</p> <p>Case 2 based on: 6 Hours Peak and 12 Off Peak Peak, 12 trains X 6 Hours X 400 seats = 28,800 seats Off Peak 8 trains X 12 Hours X 400 = 38,400 seats Total Seats per day 67,200 80% Occupancy 53,7600 passengers Passengers per year 19,622.400</p> <p>Assuming that Texas Central Rail should be operating at "the ultimate configuration of the Project" by 2035 please explain the difference between the Passengers per year figures above and the Reason Foundation's for 2035 of: 1,401,491 To get close to this number the trains in Case 2 would have to run at under 6% occupancy. This does not equate to "financially sustainable". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	
Frank Comly	2/5/2018	Email	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMACT ON THE CITY OF WALLER The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interest, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "...we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Towne Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference center, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying out residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25,2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordinating meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to ED-2 and LU-4.
Frank Comly	2/5/2018	Email	<p>Dear Mr. Wright, I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being</p>	Refer to SC-5.

			impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Frank Comly	2/5/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HCA Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2- 4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: , we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS	Refer to LU-4.
Frank Comly	2/5/2018	Email	FEASIBILITY OF PROPOSED HIGH SPEED RAIL A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated, "We truly hope that high-speed rail become a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feignbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere... I propose that the only viable alternative would be that the NO BUILD option be chosen in the Final Environmental Impact Statement.	Refer to GN-3.
Frank Comly	2/5/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: FRA FAILED TO COORDINATE WITH LOCAL GOVERNMENT Despite two written request dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to indentifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purpose of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in indentify th WCSRPC as a "public stakeholder" and not a political subdivision	Refer to PI-1.

			of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Frank Comly	2/5/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 The Waller Harris Emergency Services District No 200 (ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad calorem taxation and any diminution of value due to the HSR will cause tax increase to cover expenses and budgets. Each fire department cost \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SS-12, SS-18, SS-23 and SS-26.
Frank Comly	2/5/2018	Email	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The report stated: "We truly hope that high-speed rail becomes a reality in the US and we would prefer that it be developed and implemented by the private sector. However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed US high speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not build a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere... I propose that the only viable alternative would be that the NO BUILD option be chosen in the final EIS.	Refer to GN-3.
Frank Comly	2/5/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-5.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The original utility corridor route followed the utility corridor all the way to Texas Highway 290. Late in 2015 that route was changed to have the route veer off the utility corridor to the southwest after it crossed the Grimes/Waller county line. Many people are of the opinion the route change was the result of a significant "investment", or "contribution" by a developer along the original utility corridor route. Does the FRA condone bribery as an acceptable route selection methodology? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, BA-7, BA-8 and NE-1.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: It is evident to me that the FRA, AECOM, other FRA contractors and consultants, seven other cooperating Federal Agencies and their contractors and consultants have produced and issued the bulk of the Draft Environmental Impact Study and have expended Federal funds on behalf of the "privately funded" Texas Central Railways/Texas Central Partners. Would any other "privately funded" project have a Draft EIS prepared for them by the Federal Government? I doubt it. Does the FRA intend to seek reimbursement from Texas Central Railways/Texas Central Partners for all Federal Funds expended on their behalf for producing and issuing the Draft EIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and NE-5.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The Houston to Dallas High Speed Rail Project affects me as a taxpayer because I believe it is not "financially sustainable and that I, as a taxpayer, will end up bailing it out.	Refer to GN-3 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>The Draft EIS states that High Speed Rail must be financially sustainable. So reconcile this. From the Draft EIS and the "ultimate configuration of the project": 6 each 600 passenger trains per hour each way during peak hours 4 each 400 passenger trains per hour each way during off peak hours Peak vs Off Peak not defined Operating hours 5:30 am to 11:30 pm. 18 hours Seven days per week Case 1 based on: 12 hours peak and 6 off peak Peak, 12 trains X 12 hours X 400 seats = 57600 seats Off Peak, 8 trains X 6 Hours X 400 seats = 19200 seats Total seats per day = 76800 80% occupancy = 61440 passengers Passengers per year = 22,425,600 Case 2 based on: 6 hours peak and 12 off peak Peak, 12 trains x 6 hours x 400 seats = 28800 seats Off peak 8 trains x 12 hours x 400 seats = 38400 seats Total seats per day = 67200 80% occupancy = 53760 passengers Passengers per year = 19,622,400 Assuming that Texas Central Rail should be operating at "the ultimate configuration of the project" by 2035 please explain the difference between the passengers per year figures above and the Reason Foundation's for 2035 of: 1,401,491 To get close to this number the trains in Case 2 would have to run at under 6% occupancy. This does not equate to "financially sustainable". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	
Frank Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Viability of Saddle Creek Forest Saddle Creek Forest is not mentioned in the Draft EIS, one of our privately roads, Plantation Drive, is. The High Speed Rail route cuts off the eastern end of our community. It will send 12 trains per hour through our community at 200 MPH and at 95 decibels with each train. The Draft EIS does not address whether a gated community with privately maintained roads, bridges, drainages, lakes, parks, and recreational facilities will be "financially sustainable" after High Speed Rail essentially makes 20% of it uninhabitable. If Saddle Creek Forest is not "financially sustainable" then I will be deprived of the security, the stability Of a well governed Property Owners Association and other amenities that caused me to pay 8 to 10 times the going acreage rates for the properties I built a home on. I will demand a significant decrease in my assessed value that will affect tax revenues to Waller and Grimes Counties and Waller ISD. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to VA-1 and LU-3.
Frank Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: FRA FAILED TO COORDINATE WITH LOCAL GOVERNMENT Despite two written requests dated 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as FRA stated it would do on Page 24 Of the Scoping Report that released by the FRA in April Of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes Of planning future development Of our community and is comprised of officials from several municipalities in County, in addition to Waller County itself and two of its school districts. Without this coordination there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. FRA has also erred in identifying WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of meetings, and the FRA has failed to address these impacts in the Draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to PI-1.
Frank Comly	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Economic Impact On Property Values And Tax Base Of Waller County (A Historical Minority Population County) The proposed alignment of HSR will run through a portion of Waller County that is currently experiencing a high rate of residential development. As a result, areas that could be impacted are areas that have and should continue to see high increases in property values due to positive development taking place in these areas, including high-end residential. This project will create obsolescence that will negatively impact the property values in Waller County. Bankers heavily discount property values in situations like this, which destroys the market value of all properties. Because Of this loss in value; it will decrease and will cause WISD to lose \$3.6 million annual revenue, 1.8 million will be lost to the Municipal Management District discussed in NO. 2 above, City of Waller will lose 1.3 million and property tax collected by the county appraiser will be reduced between 279,000 to \$1.6 million annually from developments that will be ruined by the train through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department Of Transportation as a result of coordination meetings, and FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.

Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Local Environmental Impact include the Spring Creek Watershed where five cross the track of the HSR. This watershed will be directly impacted by the train and track depending how it's built. Tropical Allison, the Tax Day the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow through the watershed, the area will experience major flooding and damage to property if the track is properly studied and engineered. This issue was brought to the attention of the FRA by the Teas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the Final Environmental Impact Statement.	Refer to FP-1, WW-1, WW-2 and WW-8.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the of the FRA by die Texas Department Of Transportation as a result of coordination and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: I started reviewing the Draft EIS several weeks ago. I have not seen or found detailed descriptions of how County and State road intersections are being crossed, how long, if at all, the intersecting road will be closed or whether the road will be closed permanently. Since the FRA has refused to coordinate with local governments and local planning commissions in violation of NEPA, please provide detailed descriptions of crossings at road intersections, duration of road closures at intersections and permanent road closures at intersections. Please also provide a list of County and State roads that may be closed for construction use only. I propose that the only viable alternative would be that the NO BUILD option be chosen In the final Environmental Impact Statement	Refer to PI-1, TR-6 and TR-8.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five will cross the track Of the HSR. This watershed will be directly	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.

			impacted by the track depending how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention Of the FRA by the Texas Department Of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in die draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON G&W Water G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding built a new tower and the proposed train route falls directly top of it. This issue was brought to the attention ff the FRA by the Texas Department Of Transportation as a result of coordination meetings, FRA has faded to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACTS ON HISTORICAL SITES At the coordination meeting with TXDOT on about Februuy 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultral resources within Waller County and the location where rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform archeological survey, which produced the "Kickapoo Archeological Survey Rqort of 2010." For this report, the developer was required to obtain an Army Corps Of Engineers Section 4 Permit. This report revealed four sites and two sites considered for inclusion in the National Register of Historical Places-Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "Old timers,"and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that from in the town Of (now Houston) and went northwest through Mr. Jones' lard These are all historical sites that should not be destroyed by the HSR All ofthis information was provided. All Of this information was brought to the attention of the FRA by the Texas Department of Transportatim as a result of coordination meetings, and the FRA has to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to CR-2 and CR-9.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1500 servers that will be within 1000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... however... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by TxDOT as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-11.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-5.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON KICKAPOO PRESERVE Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and others that are for	Refer to SC-12.

			sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON KATY PRAIRIE CONSERVANCY Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to RF-4, NR-2 and WW-9. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and oanas for the following reason: FAA FAILED TO PERFORM A PROGAMMATIC ANALYSIS FOR THE EIS The Federal Rail Administration (FAA) has Improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project Identified In the Corridor Alternatives Analysis Technical Report (August 2015). Doing so Is the only way that the FAA can fulfill Its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. Â§ 1501.2(c)). This Issue was brought to the attention of the FAA by the Texas Department of Transportation as a result of coordination meetings, and the FAA has failed to address these Impacts In the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen In the final Environmental Impact Statement.	Refer to BA-6, BA-7, BA-8, BA-9, BA-10, LU-4, NE-1, PN-3 and PI-1.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACTS ON QUALITY OF LIFE Quality' Of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated Depending on location and of back, there will be loss of disposable income for the increase in travel time because will not want to live within five to ten miles of train track causing them to spend time driving longer distances. Mr. T. J. Johnson, President of the County Advocacy Group, estimates quality of life spent driving behind the wheel of their be reduced by 5,000 man-hours per year for residents in Waller County and cost additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a of coordination meetings and the FRA has failed address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1, NV-1, NV-5, TR-6 and TR-8.
Frank Comly	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines -- all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all not cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD be chosen in the final Environmental Impact Statement.	Refer to LU-3, RF-1 and VA-1.
Frank Comly	2/6/2018	Email	The proposed alignment will impact all future roads and thoroughfares through the northern portion Of the County. Dozens of roads planned, but none will be able to be completed if the train cuts through stifling all future economic development in that are This issue was brought to the attentim of the FRA by Texas Department Of Transportation as a result of meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1 and TR-8.
Frank Comly	2/6/2018	Email	At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch I'.and Tom Gleason discussed historical locations and objects and cultural resources within and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to I' Texas in the 1830's to early 1840's. 			County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over the old inn and Stage Coach site and cemetery. When the Kickapoo Preserve was established they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stagecoach routes, written historic interviews of "old timers," and all historical sites in the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided.	
Frank Comly	2/6/2018	Email	Dear Mr. Wright I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route. However, the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that this is the case, then we would have no choice but to vigorously oppose the proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-11.
Frank Comly	2/6/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: IMPACT ON KICKAPOO PRESERVE Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-4 and SC-12.
Frank Comly	2/6/2018	Email	Quality Of Life issues include living within noise and vibration distance, as well as, sight, particularly if the train track is elevated Depending on location and height of track, there will be loss Of disposable income for the increase in travel time because people will not want to live within five to ten miles Of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President Of the Waller County Advocacy Group, estimates quality Of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost additional loss Of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I ONLY be tW BULD be final Environmental	Refer to AS-1, NV-1, NV-5, TR-6 and TR-8.
Frank Comly	2/6/2018	Email	IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY Saddle Creek Forest, Plantation Forest Oak Hollow, Remington Forest and Six Pines -- all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property.	Refer to LU-3 and VA-1.
Frank Comly	2/6/2018	Email	IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY Saddle Creek Forest, Plantation Forest Oak Hollow, Remington Forest and Six Pines -- all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property.	Refer to LU-3 and VA-1.
Frank Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: On its website Texas Central Railways claims that it is a "railroad". Earlier information I printed out from TCR's website states: "TCR will not be the constructor of the railroad" "TCR will not be the owner, developer, implementer nor operator of the railroad." Following the completion or the environmental Impact study, TCR anticipates that privately funded development entities will assume responsibility for project's construction and the selection of an operator to manage the operation of the railway." Based on the quotes above from TCR documents: How can TCR claim to be a "railroad"?	Refer to GN-3 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			How can the FRA buy into the "player be named later" ploy, particularly after The Reason Foundation report made fun of TCR's ridership figures, conversion figures construction costs and the overall feasibility of the project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Frank Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The original Utility Corridor Route followed the Utility Corridor all the way to Texas Highway 290. Late In 2015 that route was changed to have the route veer off the Utility Corridor to the southwest after it crossed the Grimes/Waller county line. Many people are of the opinion the route change was the result of a significant "Investment, or "contribution" by a developer along the original Utility Corridor route. Does the FRA condone bribery as an acceptable route selection methodology?	Refer to BA-5 and BA-8.
Frank Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: It is evident to me that the FRA, AECOM, other FRA contractors and consultants, seven other cooperating Federal Agencies and their contractors and consultants have produced and issued the bulk of the Draft Environmental Impact Study and have expended Federal funds on behalf of the "privately funded" Texas Central Railways/Texas Central Partners. Would any other "privately funded" project have a Draft EIS prepared for them by the Federal Government? I doubt it. Does the FRA intend to seek reimbursement from Texas Central Railways/ Texas Central Partners for all Federal Funds expended on their behalf for producing and issuing the Draft EIS?	Refer to NE-5.
Frank Comly	2/6/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The Houston to Dallas High Speed Rail Project affects me as a taxpayer because I believe it is not "financially sustainable and that I, as a taxpayer, will end up bailing it out. The Draft EIS states that High Speed Rail must be financially sustainable. So reconcile this. From the Draft EIS and the "ultimate configuration of the project": 6 each 600 passenger trains per hour each way during peak hours 4 each 400 passenger trains per hour each way during off peak hours Peak vs Off Peak not defined Operating hours 5:30 am to 11:30 pm. 18 hours Seven days per week Case 1 based on: 12 hours peak and 6 off peak Peak, 12 trains X 12 hours X 400 seats = 57600 seats Off Peak, 8 trains X 6 Hours X 400 seats = 19200 seats Total seats per day = 76800 80% occupancy = 61440 passengers Passengers per year = 22,425,600 Case 2 based on: 6 hours peak and 12 off peak Peak, 12 trains x 6 hours x 400 seats = 28800 seats Off peak 8 trains x 12 hours x 400 seats = 38400 seats Total seats per day = 67200 80% occupancy - 53760 passengers Passengers per year = 19,622,400 Assuming that Texas Central Rail should be operating at "the ultimate configuration of the project" by 2035 please explain the difference between the passengers per year figures above and the Reason Foundation's for 2035 of: 1,401,491 To get close to this number the trains in Case 2 would have to run at under 6% occupancy. This does not equate to "financially sustainable". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to GN-2, GN-3, GN-4 and NE-1.
Frank Comly	2/6/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: It is evident to me that the FRA, AECOM, other FRA contractors and consultants, seven other cooperating Federal Agencies and their contractors and consultants have produced and issued the bulk of the Draft Environmental Impact Study and have expended Federal funds on behalf of the "privately funded" Texas Central Railways/Texas Central Partners. 			roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option should be chosen in the final Environmental Impact Statement.	
Frank Comly	2/6/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2, RF-2 and WW-2.
Frank Comly	2/6/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route. " This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-11.
Frank Comly	2/6/2018	Email	Dear Mr. Wright, I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON KICKAPOO PRESERVE Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-4.
Frank Comly	2/6/2018	Website	I started reviewing the Draft EIS several weeks ago. I have not seen or found detailed descriptions of how County and State road intersections are being crossed, how long, if at all, the intersecting road will be closed or whether the road will be closed permanently. Since the FRA has refused to coordinate with local governments and local planning commissions in violation of NEPA, please provide detailed descriptions of crossings at road intersections, duration of road closures at intersections and permanent road closures at intersections. Please also provide a list of County and State roads that may be closed for construction use only.	Refer to PI-1, TR-6 and TR-8.
Frank Comly	2/6/2018	Website	I started reviewing the Draft EIS several weeks ago. Frank Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A HISTORICAL MINORITY POPULATION COUNTY) The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in	Refer to EJ-1 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No.2 above, the City Waller will lose \$1.3 million and property tax collection by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a Result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	
Frank Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reasons: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO.2 The Waller Harris Emergency Services District No.200 ("ESD") provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department cost \$4.5 million for the building and staffing. An ambulance cost \$300,000 and staff is needed 24/7 for 365 days. New Fire stations and emergency services will be needed should the HSR divide the district. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to SS-12, SS-18, SS-23 and SS-26.
Frank Comly	2/9/2018	Website	<p>FEASIBILITY OF PROPOSED HIGH SPEED RAIL A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the cost to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere...</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to GN-3.
Frank Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Frank Comly	2/9/2018	Website	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the</p>	Refer to EU-2.

			Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Frank Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: IMPACTS ON HISTORICAL SITES At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the locations and objects and cultural resources within Waller County and the locations where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic sites considered for inclusion in the National Register of Historical Places. Mr Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the Environmental Impact Statement.	Refer to CR-2 and CR-9.
Frank Comly	2/9/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: FRA FAILED TO PERFORM A PROGRAMMATIC ANALYSIS FOR THE EIS The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four corridors (BNSF, UPRR, I-45, Utility) that met the "proposed and Need" of the project identified in the Corridor Alternative Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. 1501.2 (c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, BA-5, BA-6, BA-8, BA-9, BA-10 and NE-1.
Frank Comly	2/6/2018	Handwritten	The Federal Rail Administration (FAA) has Improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project Identified In the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FAA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. § 1501.2(c)). This Issue was brought to the attention of the FAA by the Texas Department of Transportation as a result of coordination meetings, and the FAA has failed to address these Impacts In the draft EIS.	Refer to BA-5.
Guest Comments	3/1/2018	Website	I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5, WW-1 and WW-2.

Dora Compis	3/9/2018	Website	I think you have way over estimated the usage this train is going to get. This is not the East Coast. Texans love their cars & trucks. Why would I drive to the train station in Houston, pay to park my car, ride the train to Dallas which will cost much more than a tank of gas to get there, then pay to rent a car in Dallas. All this for a long weekend or a business trip? I don't think so. I wouldn't be able to stop at Bucee's or Corsicana Russell Stover outlet. As a public, I don't feel we have been informed about the laws and changes that are going to happen. I've heard things like the rail will take 2 miles wide property strip of land. That even though the train won't stop in your county, the county will have to pay to maintain the access roads, but yet you can't use them. My Dad & his family are buried in Oxford Cemetery and my Mother and her family are buried in Ten Mile Cemetery. I was told that both cemeteries would be relocated. Texas is going to build the train, but then Japan will own it and run it. Really? This whole thing sounds shady like someone is trying to make a lot of money by screwing the little guy	Refer to CR-1, GN-2, GN-4, GN-5, GN-7, LU-14, PN-3 and TR-7.
James Compis	2/5/2018	Oral	I am James Compis and I am totally against this rail coming through and I married in the family here and i€s going to affect our lancl lfs not through our land but it's pretty close. I had a spot in Oxford Cemetery and this thing is going to go right over that. But even if it didn't go cnerhead, this is a land grab and I agree with everything everyone's been saying here tonight These people really need to listen to us; we don't need rail here. It's going to be a big bust just like Metro rail is in Houston: ifyou've ever ridden on that. The thing is empty. That's not the way people operate; that's not the way they travel. And if they travel, they travel with friends or meet friends along the way uth their personal possessions. Don't take our land. It's going to be a big bust and you're just going to destroy it: you're going to destroy a lot of people lives and stuff like that. So please heecl Thank you.	Refer to CR-1.
Jon Compis	3/9/2018	Email	<p>I would like to thank you again for the time you spent with me last Monday at the meeting on Texas Central. I had told you I wanted to send you a presentation that outlines my concerns with this project. I have decided that since it was not finished and unpublished, I will send you a list of question from the presentation instead. I know that many of the questions do not pertain to the EIS, but I am sending them anyway. I am hoping that you would be kind enough to answer those question with information on; at what point in this process these issues will be addressed and to whom or what agency I would direct the particular question (to the best of your knowledge). This would bevery helpful to me in the near future. Also, I will notify you by email when I publish the presentation(s). Thank You for your kindness and interest, Jon Compis</p> <p>I am concerned about how the Texas Central's Bullet Train project will impact our regional flooding problem. How will the ground preparation along TC's ROW affect flooding in our region? What effect will the on grade separated berms have on flooding in our region? Will the land (ROW) that the viaduct structures are built upon (which support the elevated bullet train) be a raised foundation (higher than the adjacent land)? If so, how does TC's raised foundation design handle rain water runoff and will it block or hinder the natural drainage flow of rainwater across the landscape? Can the approximately 50 feet wide by 70 miles long ROW (strip of land) between the Northwest Mall Site and Roans Prairie also be engineered for flood control? Can detention ponds be built along TC's ROW, such as within the adjacent highvoltage transmission line ROW (HVTLROW) or along the Hempstead corridor? Even though TC will be building their bullet train on a strip of land (ROW) that is approximately 50 feet wide should they adhere to the same flood control regulations that apply to developers, such as in Harris County? Or, will TC's project be grandfathered as respects to flood control and we miss out on a flood control opportunity? Will TC's route interfere with HCFCD's or any other proposed floodcontrol solutions for the Cypress Creek Overflow problem? (Search for: HCFCD's 2015 "Cypress Creek Overflow Management Plan"). I am concerned about how the Texas Central's Bullet Train project will impact Katy Prairie Conservancy land (see: katyprairie.org/bullettrain). Even though TC's ROW brushes the northern edge of the Katy Prairie Conservancy property, how will it impact this sensitive wildlife area? Can TC design the section of the bullet train that passed the Katy Prairie Conservancy property in a way that would reduce sound and vibrations? I am concerned about how the Texas Central's design will affect future mass transit in the Houston Metro. Will TC's design allow for future commuter rail or light rail crossing its path between the Houston Termination Station and the Brazos Valley Station? Will TC's design allow for the Houston Termination Station and the Brazos Valley Station sites to host future commuter rail and light rail stations? I think that the Roans Prairie location for the Brazos Valley Station is not the best suited location for TxDOT's current and future highway</p>	<p>Refer to FP-1, TR-2, TR-5, WW-1 and WW-2. Hydrology, hydraulics, and drainage, including detention basins, are discussed in TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F, Section 13. The project will abide by and comply with all floodplain and floodplain management regulations including the National Flood Insurance Act, Department of Transportation Order 5650.2, Executive Order 11988, Executive Order 13690 and obtaining a floodplain development permit. Design of the Project would account for existing flood management plans.</p>

			network in the region. SH 105 is a better choice for future growth. How will the Houston Termination Station and the Brazos Valley Station affect local traffic? Can the surface roadways and highways feeding in/out of the area handle the increased traffic that will come with the station(s)?	
Jon Compis	3/9/2018	Email	I think that the Roans Prairie location for the Brazos Valley Station is not the best suited location for TxDOT's current and future highway network in the region. SH 105 is a better choice for future growth.	Refer to GN-7.
Tom Compson	2/22/2018	Website	I support the proposed TCR project, with the important proviso that convenient, reliable, frequent transit connections, preferably light rail, be created between the proposed Houston terminus at or near the Northwest Mall and key business centers, including Downtown (and the Amtrak station located there), Uptown/Galleria and the Energy Corridor. Texans need and deserve high speed rail as an economic, safe, reliable alternative to driving and flying between major regional urban centers on increasingly congested highways and airlines. TCR will provide a critical passenger rail link between the two largest, fastest growing urban areas in Texas and can also integrate with Amtrak's national passenger rail network at each end. Transit is needed both for this integration as well as avoiding additional traffic burden on already overloaded highway systems in each city. Thank you for providing this opportunity to comment.	Refer to GN-6, GN-8, TR-3 and TR-4.
Kristen Comuzzi	2/17/2018	Website	I am firmly in support of this fantastic, progressive and long overdue mode of transportation-YES! to the high speed ELECTRIC train! Having lived in New York and abroad and travel frequently to cities where train travel is the preferred form of travel I can state emphatically- this is a momentous game changer for the state. Aside from train travel being an incredible, relaxing, efficient way to travel- it is great for the economy and GREAT for the environment. This electric (non polluting) train will pull countless numbers of vehicles that contribute to pollution-off the road in an area with poor air quality. My only comment is I would hope they invest in WIND energy to power the electricity- WIND energy from the great state of Texas- now that- is a WIN on all counts!	Comment noted.
Michael Condron	2/7/2018	Website	This project should NOT be approved and I will continue to voice my opinion here and with our elected officials. It's going to be too expensive for most, too much of a hassle for business people and a nuisance for a ton of people with houses nearby. It'll also add to the ongoing construction along 290 that never seems to end. Let's focus our resources and land on public transportation within our city. This project will be a huge mistake that will end up costing us taxpayers money. You'll kill any growth in the Cypress area.	Refer to GN-2, GN-4, NE-1, SC-3, TR-6 and VA-1. The proposed alignment through Cypress, TX is recommended as a grade separated corridor, entirely on viaduct along the existing SH 290 corridor. The Project's elevation would mitigate long-term impacts to traffic movement or infrastructure extension, and therefore would not physically restrict economic growth in the area.
Linda Coney	2/21/2018	Website	Please!!!!	Comment noted.
Roxanne Conrad	2/16/2018	Website	We NEED this train! Reliable travel between Dallas and Houston is a huge win for the state and will make our business community more efficient and profitable. I frequently travel between Fort Worth and Houston, and flying takes as much time as driving; it also means being unable to work effectively due to the transportation mode. High speed trains allow fast, efficient travel and much better work environments for businesspeople. The environmental impact of this will be reduced road traffic, which is a win for everyone ... and less crowding in the skies, too. Thank you for considering. Roxanne Conrad	Comment noted.
Matthew Converse	2/5/2018	Handwritten	This project is one of the most poorly thought out construction projects I have witnessed and that says a lot considering I live in Houston. There is zero benefit to Texans. TCR even said this will do nothing to assist our mass exodus problem except cause more road block. TCR has constantly lied to and threatened people to obtain surveys and positive remarks. They sunk so low to give away toy trains to get positive feedback. This DEIS is an absolute joke and is not lost on the general public. How piss poorly is it written? There is no time saved on travel and few to none will pay \$200 for a one way ticket, flying is cheaper. Who is going to pay for the road detours and construction, extra EMS and fire department personnel. Most counties in rural areas are far too poor for this. The list continues of how awful this project is and how detrimental it will be to Texan's way of life.	Refer to GN-1, PN-3, NE-1, NE-8, NE-9, PI-4, SC-3, SC-19, SS-18, SS-23 and SS-26. All roadway modifications required for the Project would be included in the Project's capital cost, to be paid by TCRR.
Roger Converse	2/7/2018	Website	This should be the first of many such High-Speed Train projects! Texas needs this to provide modern transportation for it's citizens! America will hopefully follow. This is a much better option that flight for many reasons. How about the need to conserve fuel and Air?	Comment noted.
Mare Coody	NA	Website	We are against the HS Rail. Do not build	Comment noted.
Heather Cook	3/5/2018	Oral	My name is Heather Cook, and I'm here on behalf of the Office of Congressman Ted Poe. Thank you, TCR, and to the FRA for scheduling this meeting. We appreciate it for this area. Congressman Ted Poe, who represents the 2nd Congressional District of Texas, would like to express his support for the Texas Bullet Train project and urge the FRA to expedite its review and approval. Congressman Poe is equally supportive of Northwest Mall location for the southern passenger station that's identified in the DEIS statement. Northwest Mall, which is in the 2nd Congressional District, is an ideal place to build a new transportation hub for travelers heading north to the Brazos Valley or to North Texas. It is near the junction of Highway 290 and Loop 610 in an underserved and underdeveloped part of the city. A project of this magnitude would be an economic driver for this area for generations, create new jobs, developments, and likely increasing property values. The station would	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
			have auxiliary benefits for constituents in other parts of town as well. It would help reduce traffic congestion on I-45, taking more automobiles off the road. In fact, the DEIS states the bullet train could take as many as 14,000 cars per day off of I-45, saving more than 81 million gallons of gas per year. This is an especially poignant point when you consider that Harris and Waller Counties are already air quality non-attainment status. There's simply not enough concrete to build enough highway lanes to keep up with all this growth. Another reason why Congressman Poe supports the Bullet Train its safety record. The Shinkansen bullet trains in Japan have moved more than 10 billion people in 53 years with zero fatalities. Unfortunately, highway fatalities along the I-45 corridor are much higher. Congressman Poe believes this project is a viable opportunity to relieve congestion along the route and to provide a safe and reliable alternative to I-45. Additionally, in Harris County, the train would be elevated and the train would be moving past any point in about 4 seconds. Finally, Congressman Poe supports the Texas Bullet Train because it will be a job creator today, tomorrow, and for decades to come. As has been mentioned, current projections show that the project could create 10,000 jobs during construction, and about 1,500 permanent jobs when operations begin. The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200 percent between Dallas and Houston by 2035, and current state and local transportation plans do not adequately address this growing population concern. This is exactly the kind of project Texas needs, and that's why Congressman Poe urges the FRA to expedite its review and approval process so that we can keep Texas moving into the future. Thank you.	
Kaila Cook	2/5/2018	Handwritten	We do not want this train running through our home places. There's no need! Too much cost and destruction of property! How dare you think that destroying our homes and ranches is okay! We have rights too!	Refer to ED-2, GN-4 and PN-3.
Kathy Cook	2/6/2018	Website	3.16 Safety and Security" Federal Security Directives RAILPAX-04-01/ RAILPAX-04-02 TSA issued Security Directives which require passenger rail systems to implement certain security measures to address potential terrorist threats and establish a consistent baseline of protective measures. Specifically, RAILPAX-04-01 requires rail transportation operators to report potential threats and security concerns to law enforcement and the TSA, to designate a primary and alternate security coordinator, and to provide vulnerability assessments to the TSA, among other requirements." EIS states they have to report potential threats to the TSA but does it require TSA screenings of passengers? What measures will be in place to prevent terrorist's acts? The potential for a bomb being on the train and exploding in a station or anywhere along the route is a big threat to loss of lives. I was told at a meeting in 2017 by a TCR rep that TSA screening would not be part of the boarding process for the HSR.	Refer to SS-6 and SS-9.
Richard Coonce	2/16/2018	Website	Very interested in the progress of this project.	Refer to PI-1.
Justin Cooper	3/9/2018	Website	Having lived in Europe and Japan for more than 9 years during a 30 year military/diplomatic career, I highly support the advancement of high speed rail in Texas. The Dallas - Houston corridor will provide unlimited economic benefits for communities between the two metro centers.	Comment noted.
Margy Cooper	1/31/2018	Email	My biggest concern is for first responders being able to get to wrecks, fires, etc. and farmers being able to get to their animals. There is absolutely no benefit to anyone in Navarro county.	Refer to LU-11, SC-19 and SS-23.
Ken Cope	1/26/2018	Email	EIS ES4 Comments: FRA has taken the TCR statements about the need and purpose of the project as being fact, without adequate scrutiny. Growth projections, congestion, traffic capacities and financial projections are all presented from a biased perspective of "Selling". Texas is not Japan. Parameters the work in Japan will not work in Texas. This project is NOT "Financially Sustainable" and significant taxpayer underwriting will be required. Unfortunately, the FRA has failed to provide the proper level of financial oversight for the American public and Texans. All "data" provided by TCR must be verified by outside, independent sources.	Refer to GN-2 and NE-1.
Ken Cope	1/29/2018	Oral	My name is Ken Cope, and I'm also candidate to be your congressman for this community. I wish I could give you a Texas welcome, but most of the people here tonight do not feel that the FRA is welcome in this part of Central Texas. The FRA, TxDOT, and Council of Governments unfortunately think that they know the needs of Texas in our communities better than our own elected officials. Our federal, state, and local elected officials oppose this project, yet here you are tonight attempting to force this unviable burden on a state that does not want it. This is a perfect example of our government out of control. Our citizens have risen in opposition to this project because they know it will destroy their homes, their communities, and their ways of life. The Declaration of Independence assures all Americans life, liberty, and the pursuit of happiness. We Texans have fought to protect these rights and we stand ready to do it again. Despite communicating our opposition at every opportunity, the FRA has not listened. Tonight we will voice our opposition again. I sincerely hope that you'll listen this time. A look at the EIS shows that the FRA has been working to benefit a foreign corporation to bring an old technology to American soil at any cost. The FRA just can't put enough lipstick on this pig to sell it to the Texans. And I would like to correct you. You made an opening statement that this was going to be built in Texas. It will not, sir. These products, these train cars, will be built in Japan and transported here in pieces to be reconstructed. The FRA appears to have accepted the TCR's incomplete and misrepresented financial and operational projections without question. There appears to be a rush to judgment. Ridership projections are unrealistic, creating overstated financial results and	Refer to GN-2, NE-1, PI-1, PI-7, SC-19 and SS-8. As described in SS-CM#4 under Section 3.16.6, Avoidance, Minimization and Mitigation , TCRR would prepare threat and vulnerability assessments as part of its required Hazards Analysis. Threat and vulnerability assessments establish provisions for the deterrence, detection, and response to criminal and terrorist acts, including cyber-terrorism, for rail facilities and system operations.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Texas has said no, but you haven't listened. Will you listen tonight? And by the way, I have been working this for four years. I am not a newcomer to fighting and opposing the high speed rail, and I will do it in Washington as your representative. Thank you.	Refer to ED-1, EU-3, EU-4, GN-1, GN-2, GN-4, NE-1, NR-3, NR-4, PI-1, PI-7, PN-3, SS-7, SS-8, TC-2 and TC-6.
Ken Cope	1/31/2018	Oral	Good evening, my name is Ken Cope and I'm a candidate for Congress for Tarrant, Ellis and, Navarro County. I'm not new to this fight, I've been fighting high-speed rail for over 40 years now, and I do not appreciate that we have to be here tonight to submit this information to an agency that I do not believe is possible to be hated more than the IRS, the BLM, and the EPA. But the FRA has just risen to the top of the list. Tonight I want to talk about the problem that the FRA has in reconciling the data with TCR. When you look at the EIS there's so many inconsistencies. I now have 80 subjects with 5 questions a piece that I will be submitting individually for the FRA to respond to. Examples of those are, first of all, how much of the train cars will be manufactured as made in America? How much of it and by whom will they be built in the United States of America? How did the FRA establish that the TCR ridership projections were accurate and feasible? What is the detail of this analysis and how much of it was based upon the TCR data? Why hasn't the FRA incorporated independent economic analysis that reflects the negative 20 percent plus to all of the counties between Dallas and Harris? What negative impacts has the FRA incorporated into this analysis? If any, what are they and how much were these values determined? How were they determined? What did the FRA coordinate and how did they coordinate with the county level of governments to determine what these financial impacts are? The EIS states that there's 60 percent of this project will be by a viaduct, the EIS also states that the entire system will be enclosed. True viaducts allow for the traversing under the viaduct. However, a fully-enclosed system negates the benefits of viaducts, so which is it? Viaducts or is it enclosed completely? If both, then why is the TCR attempting to sell Texans with photos of viaducts without a fenced-in enclosure? How can the FRA present a draft security statement for the EIS that's based upon data that hasn't been updated since 2004, and also it was out of the University of Maryland as opposed to something that reflects the values of interests and concerns that we've just heard from the sheriff of this county of Texas values. I have quite a few others but most of them are gonna be a little long. I think it's incumbent -- I want to encourage everyone to go through the EIS, be specific in your questions and force the FRA to respond in detail. There is a long-term mission here. Don't know that you're gonna be able to stop it because federal eminent domain is still a possibility. Read the statement by the service transportation board	Refer to BA-4, ED-1, GN-2, NE-1, PI-1, SC-4, SC-20, SS-1, SS-2, SS-8 and TC-6.

			and you'll understand what I'm saying. The opportunity for you to be on the record, make your statements be heard. Your voice, if I'm elected, will be heard even though I will not be representing this county. God bless you and God bless Texas.	
Ken Cope	2/15/2018	Website	1. Who owns the EIS, is it the FRA or TCR? How much did the FRA rely upon information provided by TCR? What information did the FRA generate for the EIS?	Refer to GN-2, NE-1 and NE-8.
Ken Cope	2/15/2018	Website	2. Has the TCR or TCRR made any false or misleading claims to date? If so, what are they? If TCR is found to have presented false or misleading information to the FRA as part of their application with the sole purpose of obtaining permits and, or, federal funding, what are the penalties for TCR and their respective executives? Have they made any to date? What are the legal consequences for the Japanese (Foreign Corporation)?	Refer to NE-1 and PI-4.
Ken Cope	3/9/2018	Website	1. Has the TCR or TCRR made any false or misleading claims to date? If so, what are they? If TCR is found to have presented false or misleading information to the FRA as part of their application with the sole purpose of obtaining permits and, or, federal funding, what are the penalties for TCR and their respective executives? Have they made any to date? What are the legal consequences for the Japanese (Foreign Corporation)?	Refer to NE-1 and PI-4.
Ken Cope	3/9/2018	Website	2. What are the responsibilities of FRA employees to report misleading and incorrect information presented by the TCR? To whom are they required to report this information? What incorrect or misleading information have FRA employees reported to date?	Refer to GN-1, NE-1 and NE-8.
Ken Cope	3/9/2018	Website	3. What is the final decision process for the EIS? Who is the final decision maker for the EIS? What is the EIS decision timeline of events from now until August 2019?	Refer to NE-2.
Ken Cope	3/9/2018	Website	4. Is TCR exempt from any American law because it is majority owned by a foreign Japanese corporation? If so, what exemptions will the TCR enjoy?	Refer to NE-1 and NE-6.
Ken Cope	3/9/2018	Website	5. How does the TCR structure shield the Japanese from product liability claims? Catastrophic claims? How are Texans being protected from the Japanese washing their hands of financial losses and insurance claims?	Refer to NE-1, SS-5 and SS-21.
Ken Cope	3/9/2018	Website	6. What are the political action committees organized by the Japanese, TCR, TCRR? Who have these organizations made contributions to, when and how much?	Refer to NE-1 and NE-10.
Ken Cope	3/9/2018	Website	7. Are the federal grants subject to Congressional oversight? Have the federal funds been appropriated for these grants? How and When? What federal appropriation(s) have approved the funding of these grants?	Refer to GN-4.
Ken Cope	3/9/2018	Website	8.1. The FRA energy assessment indicates that ERCOT has a 13% reserve capacity that can be used by TCR. If ERCOT has a 13% reserve, then how is it the Texas is experiencing so many "Brown Outs" during both Winter and Summer months? The EIS states that additional energy resources will be required, and on-line, by 2029. Who will pay and how much will the added capacity requirements cost? How much of the added capacity will be dedicated to this project? Texas uses coal fired plants, so how much greenhouse gases will be generated by these plants in order to support this project? If nuclear power plants are the source of future energy, when will new plants be available and at what cost? How will FRA/TCR bridge the energy requirement gap between first operations and the FRA projected on-line date of 2029? Where will the TCR be placed in the priority for energy during brown out periods and why?	Refer to AQ-1, EU-3 and EU-4.
Ken Cope	3/9/2018	Website	9.1. What is the net effect of the increased property tax revenues for Ellis County when offset by the negative impacts of lost sales tax revenue from local business, farmers and ranchers?	Refer to SC-14 and SC-15. The economic analysis described in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Build Alternatives , assesses potential tax revenue impacts for five defined economic analysis areas. See Section 3.14.3, Socioeconomics and Community Facilities, Methodology . Economic activity is not confined to jurisdictional boundaries and, as such, this analysis does not include county-specific impacts.
Ken Cope	3/9/2018	Website	10. Who in the federal Department of Transportation will be the final decision maker for each federal grant that TCR/TCRR is applying? When are these grants projected to be awarded? What is the application and decision process and timeline for these grants? How does the timing of these grants relate to the proposed construction time table for this project? What are the values of these federal grants? What are the "matching" fund requirements of the private TCR/TCRR before construction begins? What federal requirements will be in effect to ensure that the private funds are deposited before the construction can begin?	Refer to GN-4.
Ken Cope	3/9/2018	Website	11. What are the legal consequences and liabilities of FRA employees that fail to fulfill their respective fiduciary responsibilities for American citizens?	Refer to NE-1.
Ken Cope	3/9/2018	Website	12. What is the organizational structure of TCR? What is the ownership structure of TCR? How much financial funding has the Japanese provided to TCR to date? What is the total level of financial support that the Japanese is committed to providing to this project and when?	Refer to GN-4 and NE-1.

Submitted By	Date Submitted	Submission Type	Comment	Response
Ken Cope	3/9/2018	Website	14. 1. What prohibitions are in place that preclude FRA employees from working for the any entity that is involved in this project? How long must a FRA employee that leaves the FRA employment wait before taking a position with any entity that is involved in this project? Please explain any specifics that Texas citizens should be aware of.	Refer to NE-1.
Ken Cope	3/9/2018	Website	15. 1. How can the FRA present a draft security statement in the EIS that is based upon data that hasn't been updated since 2014? Why hasn't this evaluation been updated with the current threat assessment?	Refer to SS-8.
Ken Cope	3/9/2018	Website	16. 1. Where did the FRA establish that the TCR ridership projections were accurate and feasible? What is the detail of this analysis and how much was based upon TCR provided data? Why has this detail information been made available to the public and Texans?	Refer to GN-2.
Ken Cope	3/9/2018	Website	17.1. Why hasn't the FRA, or TCR, performed any coordination with local government officials about TCR's security or emergency reaction plans? How can the FRA approve a plan that it and/or TCR has failed to coordinate? What evidence has TCR provided that detail coordination has been completed? How much will the added levels of local emergency responders be reimbursed for the increased levels of required support? Who will be paying for these costs?	Refer to PI-1, SS-18, SS-23 and SS-26.
Ken Cope	3/9/2018	Website	18. Why hasn't the TCR, or FRA, briefed local school districts about the impacts of FRA preferred route A on each of the communities between Dallas and Harris counties? How much will the local school districts have to pay for the re-organizing of school districts driven by proposed road re-routing and closures?	Refer to SC-6.
Ken Cope	3/9/2018	Website	19.1. This project is being sold as a "Public" project. When will TCR release the basis of their financial projections, ridership, funding sources, risks, opportunities, return on investment analysis, etc.? Who will this information be provided to for independent validation? Why hasn't this been done sooner?	Refer to GN-2, GN-4 and NE-1.
Ken Cope	3/9/2018	Website	20. 1. Why hasn't the FRA incorporated independent economic analysis that reflect a negative 20%+ impact to all the counties between Dallas and Harris? What negative economic impacts has the FRA incorporated into their analysis? If any, what are they and how was these values determined? Who did the FRA coordinate with at the county levels to obtain the financial impacts in the local communities?	Refer to SC-20.
Ken Cope	3/9/2018	Website	21. 1. The FRA preferred route A appears to violate federal law by impacting habitat of endangered species. Why hasn't the FRA addressed these missing endangered species? These include bald eagles and black panthers.	Refer to NR-3. Black panthers do not occur in the United States. The Florida panther, a sub species of the mountain lion (<i>Puma concolor</i>) is considered endangered but only occurs in Florida and is spotted. "Black Panther" typically refers to a color morph of the jaguar (<i>Panthera onca</i>). They comprise a small percentage of the Jaguar population, generally restricted to South America, and have never been documented within the United States. Spotted jaguars once occupied much of Texas but have been extirpated from the state since the 1940s. The last jaguar known in Texas was shot and killed in 1948 near Kingsville. There are only a few individual jaguars known to exist north of the Mexican border, discovered recently in southern Arizona. None are known to occur in Texas (Schmidly and Bradley's "The Mammals of Texas" copyright 2016 by the Texas Parks and Wildlife Department). USFWS is a cooperating agency on the project and FRA is coordinating with them to determine impacts and appropriate mitigation.
Ken Cope	3/9/2018	Website	22.1. Use of eminent domain will generate landowner lawsuits that would not have occurred except for this project. How much with TCR fund to support the local governments who will be required to pay for legal services for landowners? When will this funding be provided to the local governments and how?	Refer to ED-1, ED-2 and ED-5.
Ken Cope	3/9/2018	Website	24. 1. The EIS says that 60% of this project will be viaduct. The EIS also states that the entire system will be enclosed. True viaducts allow for trans versing under the viaduct; however, a fully enclosed system negates any benefits of the viaducts. Which is it? Viaducts, or fully enclosed? If both, then why is TCR attempting to sell Texans with photos of viaducts without the enclosure fencing?	Refer to TC-7 and TR-8.
Ken Cope	3/9/2018	Website	25.1. The TCR has publicly stated that it will not need government funds. The FRA EIS says that federal grants will be pursued by TCR. Which is it? If federal funds are being pursued, how much funds are being requested and why? What is the true level of financial investment from the Japanese? How much of the Japanese investing pool is from the Japanese government? What is the projected financial benefit to the Japanese if the national high speed rail plan is implemented?	Refer to GN-4 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Ken Cope	3/9/2018	Website	26. 1. Where will the HSR trains (Cars) be manufactured? How will they come into the United States and where will the final assembly be located? Who will perform the final assembly and what are their contractual arrangements with TCR and the Japanese? Are any of the manufacturing processes subject to import or export restrictions, and why, or why not?	Refer to TC-6.
Ken Cope	3/9/2018	Website	27. 1. What are the materials used to manufacture the trains and are they subject to technology restrictions? If so, which ones? If not, then why not? Are any "rare earth" materials being used and if so, what country are they coming from? How much and what country is providing any titanium? Aluminum? Steel?	Refer to TC-6.
Ken Cope	3/9/2018	Website	28.1. How much of the trains will be "Made in America"? Explain the breakdown of countries involved in the production of the trains and the rail networks in the United States.	Refer to TC-6.
Ken Cope	3/9/2018	Website	29. What intellectual property rights are being reserved by the Japanese and why?	Refer to NE-1 and NE-10.
Ken Cope	3/9/2018	Website	30.1. How many trains will be required from day 1 through full capacity?	Refer to TC-4.
Ken Cope	3/9/2018	Website	31. 1. What are the minimum quality standards of the steel used to manufacture the rails that will be used on the railway? What is the source of this steel?	Refer to TC-6.
Ken Cope	3/9/2018	Website	33. 1. What backup electrical resources will be installed and where will they be located? What will trigger their usage?	As indicated in TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F, a secondary power source would be required during traction power outages and maintenance hours. This secondary power source would be provided from a local utility source, likely to be a pole-mounted transformer on a local 15kV utility line.
Ken Cope	3/9/2018	Website	34.1. Can the TCR still obtain federal eminent domain authority? If so, how? Who would have to approve federal eminent domain? What is the connection with the Oklahoma - Texas High Speed Rail plan? Who from the FRA approved the Oklahoma - Texas high speed rail plan and what is their involvement in the approval process of the Dallas-Houston High Speed Rail Plan? What is the "unnamed" civilian rail company that is referenced in the Oklahoma - Texas high speed rail plan and why are they unnamed? Is any portion of the Oklahoma - Texas high speed rail plan being planned, designed or built by any entity owned by either the Japanese or the TCR? If so, what is it and how much is it worth?	Refer to ED-1 and NE-1. FRA has a regulatory responsibility to evaluate the Project as proposed by TCRR which is a Dallas to Houston alignment. As part of this evaluation, FRA analyzes the indirect or cumulative impacts of other planned, programmed or reasonably foreseeable projects in Chapter 4.0, Indirect and Cumulative Impacts , of the EIS. This analysis includes FRA's and TxDOT's Texas-Oklahoma Passenger Rail Study (TOPRS) of passenger rail options, including conventional rail, higher speed rail, and high speed rail. The 2017 Tier I Record of Decision (ROD) formally identified seven Selected Alternatives to serve as the framework for future investment in new and improved conventional and high-speed passenger rail service in three regions between Oklahoma City and South Texas. The ROD did not grant approval for construction, but selected alternatives for specific geographic sections along the corridor, to be carried forward in a more detailed, Project-Level EIS in the future. A Dallas to Houston geographic region was not assessed by TOPRS.
Ken Cope	3/9/2018	Website	36.. 1. How much will the Japanese and TCR place in a "performance bond" to protect the citizens of Texas through full construction?	Refer to GN-4.
Ken Cope	3/9/2018	Website	37. 1. What are the financial arrangements of insurance and warranties the TCR will be required to maintain and protect the citizens of Texas from the risk of failures?	Refer to GN-5, SS-5 and SS-21.
Ken Cope	3/9/2018	Website	38. 1. Texas is considering additional taxes on railroads that travel in excess of 125 MPH to protect its citizens from unexpected costs that are not covered in the TCR plan. What affect will an additional 25% sales tax on every ticket have on the viability of this project? Please explain the FRA's involvement in establishing the project's financial viability.	Refer to NE-1 and SC-3.
Ken Cope	3/9/2018	Website	39. Electrical power lines will be required to be "relocated". What is the financial costs of these relocations by county? Who will be required to pay for these relocations? Will these costs flow through to the citizens of Texas? How much are the financially projected costs for this activity and who prepared the estimate projections? What is their relationship(s) with the TCR, FRA, the Japanese, Financial Lending Institutions?	Refer to EU-2, EU-5 and GN-4.
Ken Cope	3/9/2018	Website	40.1. Plumbing and Water lines will be required to be "relocated". What is the financial costs of these relocations by county? Who will be required to pay for these relocations? Will these costs flow through to the citizens of Texas? Who prepared these financial projections and what are their relationships with the TCR, the FRA, the Japanese and the financial lending institutions?	Refer to EU-2 and GN-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Ken Cope	3/9/2018	Website	41.1. Fiber optics and communication lines will be required to be "relocated". What is the financial costs of these relocations by county? Who will be required to pay for these relocations? Will these costs flow through to the citizens of Texas? Who prepared these financial cost projections and what are their relationships with the TCR, the FRA, the Japanese and the financial lending institutions?	Refer to EU-2 and GN-4.
Ken Cope	3/9/2018	Website	42.1. What is the minimum composition ingredients (materials) of the railroad roadway base? What are the sources of these materials? How much is required for the construction of the roadway base? How much of this will be acquired through eminent domain? Please explain.	Refer to SG-4.
Ken Cope	3/9/2018	Website	43.1. What kind of water retention structures will be built along the railway? Where will these be constructed (identify whether it will be on the northbound or southbound sides of the railway)? Please explain how Tarrant County water sources located along the preferred routes will be protected from silt and other debris during the construction period. What is the projected costs of alternate water sources for Tarrant County? Who prepared these projections and what are their relationships with the TCR, the FRA, the North Texas Council of Governments, TxDOT, the Japanese and financial lending institutions?	Refer to WW-1 and WW-2. Project Footprint Mapbook, Appendix D identifies water detention structures. Based on TCRR final design, there has been no need identified to obtain alternate water sources.
Ken Cope	3/9/2018	Website	44.1. What international manufacturing quality standards is the train manufacturer certified to perform? What is the quality record of the train manufacturer? Will the Federal Aviation Administration standards apply and if so, which ones and why, or why not?	Refer to SS-4 and TC-6. No FAA safety standard are applicable for this rail project.
Ken Cope	3/9/2018	Website	45. Why did the FRA present aerial maps of proposed routes that are outdated? Who prepared these maps? How did the FRA validate the impacts of the preferred route A against these aerial maps? Did the FRA contact land owners and if so, who did they contact? If not, then why not? Road re-Routes and closures do not appear to correspond with information presented by the local residents.	Refer to GN-1, NE-8 and TR-8.
Ken Cope	3/9/2018	Website	46.1. How did FRA validate the road closures, by county? How did the FRA validate TXDOT data to aerial overviews of the proposed routes? Why did the FRA not conduct 100% helicopter surveys and impact analysis of each proposed route? If the FRA did, where are the results of these inspections?	Refer to GN-1 and TR-8. FRA did not conduct a helicopter survey of each proposed roadway crossing. A helicopter survey is not required in order to identify potential impacts of the Project.
Ken Cope	3/9/2018	Website	48. 1. How will the FRA remedy over/under pass design characteristics (14') that do not meet the needs of the farm & ranching equipment requirements of the local residents?	Refer to TR-8.
Ken Cope	3/9/2018	Website	48. 1. A. How will the FRA remedy over/under pass design characteristics (14') that do not meet the needs of the farm & ranching equipment requirements of the local residents? Also, who will have to pay for modifications? How much? Who determines the cost? What is their relationship with the TCR, FRA, TXDOT, NCTCOG, etc.?	Refer to TR-7 and TR-8.
Ken Cope	3/9/2018	Website	49.1. The executive summary states that the "No Build" alternative does not meet the criteria of the "purpose" of the study. This means this option is not a possible outcome of this EIS. Why has the FRA already ruled out an alternative that rural Texas favors? This means the FRA has a predetermined decision to build the high speed rail regardless of social or financial impacts? If this is no so, please explain how the FRA has remained neutral and objective in this process.	Refer to BA-6.
Ken Cope	3/9/2018	Website	50.1. What design alternatives to the N700 Japanese rail system has the FRA investigated and weighed in this EIS? Why have all newer technologies been ruled out of this EIS? What DARPA alternative plans would potentially meet the criteria of the "Purpose" of this EIS and why have they been ruled out?	Refer to BA-4.
Ken Cope	3/9/2018	Website	51.1. With 53-Year-old technology and designs, how is the N700 designed? Via paper drawings or by computer generated design tools? If computer generated design tools, which ones and what software versions are the current designs controlled? If by paper drawings, who in the FRA has reviewed these documents and what are their professional qualifications in doing the assessment? Who will control the design and changes of the rail cars and railway tracks going forward? Please explain the "configuration management" protections for Texans and Americans using these trains. What oversight will the FRA retain after their record of decision is approved and how this transtions into full operation?	Refer to NE-2, TC-2 and TC-6. The United States does not currently have high-speed rail that utilizes the Tokaido Shinkansen technology. The trains are currently manufactured in Japan using materials from Hitachi, Kawasaki Heavy Industries, Kinki Sharyo, and Nippon Sharyo. The manufacturing processes would meet current trade restrictions and standards that are in place between Japan and the United States. FRA's Office of Safety will evaluate the technology to assess the safety of its operations within the U.S. This assessment from the Office of Safety will inform FRA's Rule of Particular Applicability or other regulatory action, which FRA must take in order to operate the Shinkansen technology in the U.S. TCRR must maintain compliance with all FRA safety requirements applicable to the system's operation. If TCRR fails to comply, then TCRR would be subject to the full range of possible enforcement actions available to FRA.
Ken Cope	3/9/2018	Website	52. Are the N700 trains currently being manufactured in Japan? If not, then when was the last one manufactured? Where? What is their manufacturing history and how many have they produced annually for the last five years? Will the Japanese be required to re-tool their factories to manufacture the trains for Texas? If so, why and how much capitalization funding must they perform to achieve these	Refer to TC-2 and TC-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			manufacturing requirements? What is the timeline for these modifications and how does this relate to the TCR operational commitments? How much of the re-tooling capitalization is being paid for by U. S. Companies or the U. S. Government? Please explain.	
Ken Cope	3/9/2018	Website	52 A.1. When did the FRA observe the manufacturing process? Who represented the FRA and what manufacturing experience did these individual possess?	Refer to SS-4 and TC-6.
Ken Cope	3/9/2018	Website	53.1. What manufacturing oversight will the FRA possess of the Japanese manufacturing operations? Is there an organization similar to the Federal Aviation Administration (FAA) which will have international safety, quality and operational control of this project? If so, then who and explain their roles & responsibilities. If not, then why not and how will the FRA guarantee the safety of Texans?	Refer to BA-4, NE-1, and TC-6.
Ken Cope	3/9/2018	Website	54.1. What will be the minimum financial reserve requirements that will be placed upon the TCR? How was this figure determined? If none, then why not? As a foreign held corporation, TCR must be required to maintain federally mandated financial reserves and quarterly independent audits must be required. Who will be performing these independent audit? If no one, then please explain why generally accepted accounting standards are not being applied to this project.	Refer to GN-4.
Ken Cope	3/9/2018	Website	55.1. As a "private" project for "PUBLIC" use, what are the projected profit margins of the TCR and how will they be monitored going forward? As a public project, this private foreign entity should be required to meet corporation requirements for publicly traded corporations. If not, then why not? Why are generally accepted accounting standards not being applied to this project? How is the FRA meeting its fiduciary responsibilities for the American public?	Refer to GN-4 and NE-1.
Ken Cope	3/9/2018	Website	56.1. What level of automated manufacturing techniques is currently in operation for the manufacture of the N700? What are these automated tools and how are they used to control the quality of the N700 products? Are the same precision requirements in place as with the Federal Aviation Administrations and if not, then why not? Please explain the manufacturing tolerances that will be used on this project and what is the source of their engineering approval / oversight.	Refer to TC-6.
Ken Cope	3/9/2018	Website	57.1. What is the vehicle density of Japan versus the vehicle density of Texas? How was this information used in the FRA investigation of the TCR ridership projections?	Refer to GN-2.
Ken Cope	3/9/2018	Website	58.1. How does maglev technology design, construction and operational costs compare to that of this EIS proposal? Why hasn't the FRA performed this comparison? If they did, what are the results of their study?	Refer to BA-4 and NE-1.
Ken Cope	3/9/2018	Website	59.1. How does "loop" technology design construction, security and operational costs compare to that of this proposal? Why hasn't the FRA performed this comparison? If they did, what are the results of their study?	Refer to BA-4 and NE-1.
Ken Cope	3/9/2018	Website	60.1. How much financial assistance, conception to date, has been provided by Texas Department of Transportation for this project? To whom have they provided this support?	Refer to GN-4.
Ken Cope	3/9/2018	Website	61, 1. How much financial assistance, conception to date, has been provided by Councils of Governments (For each individual Texas COG) for this project? How much was federal funds? How were proceeds derived from Texas toll roads? Which toll roads provided funds to support the COG study and marketing activities?	Refer to GN-4.
Ken Cope	3/9/2018	Website	62,1. How much of this project will meet the criteria of a "public private partnership" (P3)? If any, what are the terms and conditions of the proposed P3 agreement? What are the proposed financial distribution of the respective parties?	Refer to GN-4.
Ken Cope	3/9/2018	Website	63.1. With federal funds comes federal procurement and acquisition rules. What federal mandates will be placed on this project for hiring Americans, veterans, small business, women owed business, minority owned business, unions, etc.? If none, then why not? How much of this project (including engineering, train manufacturing, train kitting and railway construction will be performed by Japaneses employees? Please explain each category. How much of this project will be performed by local U. S. employees? Please explain each category? How much of the TCR management will remain as U. S. employees and what will their positions of responsibility be throughout the project?	Refer to GN-4, NE-1 and SC-22.
Ken Cope	3/9/2018	Website	64.1. How will the American's Disabilities Act be enforced in the design, construction and operation of this railroad? Are any of these requirements being waived? If so, which ones and why? Do these exemptions provide the Japanese with a competitive advantage in the American marketplace? Why and how?	Refer to EH-1.
Ken Cope	3/9/2018	Website	65. 1. When the FRA released the draft EIS for public comment it provided the following page and form for public comment: https://www.fra.dot.gov/Page/P0779 It was noted that this was a government address. Why has the FRA shifted the input page to a Non-Government ISP? http://dallashoustonhsr.commentinput.com/?id=TXHSR1 Who owns the ISP and controls the public input form? How is the FRA maintaining its objectivity using a NON-FRA location to capture these vitally important public comments? How are the comments protected from TCR corruption?	Due to the anticipated number of comments, FRA chose to implement a comment management tool to facilitate the comment collection process. This tool was made available to public hearing attendees via laptops and was accessed from individual computers via the FRA Project website. All comments received through the tool are stored in a secure database. TCRR does not have access to this database. FRA offered this online comment submission capability to expand the number of ways in which public comments could be

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				submitted, thus making it possible for anyone wishing to submit a comment to find the method that worked best for them.
Ken Cope	3/9/2018	Website	66. Texas is currently experiencing electrical energy shortages throughout the year. Who at ERCOT has reviewed and approved the TCR's projected energy requirements from 2019 through 2040? What additional resources has ERCOT planned for specifically for ALL Texas "High Speed Rail" (Oklahoma - Texas Line plus the Dallas- Houston Line)? What is the projected costs of these improvements and how will these be paid for? What studies has ERCOT provided to the FRA that show this project is operationally and financially viable for the citizens of Texas? Please provide these studies for public review.	Refer to EU-2 and EU-4.
Ken Cope	3/9/2018	Website	67. What coordination has been conducted between the Surface Transportation Board (STB) and the FRA about Texas High Speed Rail? This includes all Texas lines. It also includes specific discussions about "Federal Eminent Domain" authority. Are these discussion subject to "open meeting laws"? If not, then why not? Are the records of the discussions open to the public for review? If so, please explain the process for a citizen to review these records and obtain copies. Will the STB grant the TCR "federal eminent domain" based upon the already approved Oklahoma - Texas high speed rail line plan? If yes, please explain. If no, then why not?	Refer to ED-1.
Ken Cope	3/9/2018	Website	68. Has the FRA performed a combined impact assessment of the approved "Oklahoma - Texas" high speed rail plans with the "Dallas - Houston" high speed rail plans? If yes, what are the financial, social and governmental risks and how are they negated? If no, then why not since the FRA is approving both EIS documents? Please explain how the FRA has remained an objective party in this process.	Refer to NE-1. FRA has a regulatory responsibility to evaluate the Project as proposed by TCRR which is a Dallas to Houston alignment. As part of this evaluation, FRA analyzes the indirect or cumulative impacts of other planned, programmed or reasonably foreseeable projects in Chapter 4.0, Indirect and Cumulative Impacts , of the EIS. This analysis includes FRA's and TxDOT's Texas-Oklahoma Passenger Rail Study (TOPRS) of passenger rail options, including: conventional rail, higher speed rail, and high speed rail. The 2017 Tier I Record of Decision (ROD) formally identified seven Selected Alternative to serve as the framework for future investment in new and improved conventional and high-speed passenger rail service in three regions between Oklahoma City and South Texas. The ROD did not grant approval for construction, but selected alternatives for specific geographic sections along the corridor, to be carried forward in a more detailed, Project-Level EIS in the future. A Dallas to Houston geographic region was not assessed by TOPRS.
Ken Cope	NA	Website	69. Has the FRA performed a combined impact assessment of the approved "Oklahoma - Texas" high speed rail plans with the "Dallas - Houston" high speed rail plans on Tarrant and Ellis Counties of Texas? If yes, what are the financial, social and governmental risks and how are they negated? If no, then why not since the FRA is approving both EIS documents? Please explain how the FRA has remained an objective party in this process. Specifically, Ellis County will now have two high speed rail lines dissecting its county boundaries resulting in three new geographic entities. How has the FRA assessed this combined impact on this county? Tarrant County will experience a similar fate with new lines through Fort Worth to Arlington and Hillsboro. Then an additional new line from Arlington, over Mansfield on its way to Hillsboro. How has the FRA assessed these impacts on the Dallas - Houston HSR proposal? Please explain.	FRA has a regulatory responsibility to evaluate the Project as proposed by TCRR which is a Dallas to Houston alignment. As part of this evaluation, FRA analyzes the indirect or cumulative impacts of other planned, programmed or reasonably foreseeable projects in Chapter 4.0, Indirect and Cumulative Impacts , of the EIS. This analysis includes FRA's and TxDOT's Texas-Oklahoma Passenger Rail Study (TOPRS) of passenger rail options, including: conventional rail, higher speed rail, and high speed rail. The 2017 Tier I Record of Decision (ROD) formally identified seven Selected Alternative to serve as the framework for future investment in new and improved conventional and high-speed passenger rail service in three regions between Oklahoma City and South Texas. The ROD did not grant approval for construction, but selected alternatives for specific geographic sections along the corridor, to be carried forward in a more detailed, Project-Level EIS in the future. A Dallas to Houston geographic region was not assessed by TOPRS.
Ken Cope	NA	Website	70. How will the joining of three separate HSR lines from Fort Worth, Arlington and Dallas in Hillsboro, Texas be accomplished? How will these traffic draws and competing resource requirements further impact Ellis and Navarro Counties which are part of the the Dallas - Houston HSR project. If this assessment has not been completed, then how can the FRA approve the Dallas - Houston HSR project without understanding	Refer to BA-1 and NE-9.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			the complete devastation these projects will be causing on these counties? Please explain the FRA rationale for going forward with projects without weighing all of the facts bearing on their decision(s).	
Ken Cope	NA	Website	71. What communication has the FRA had with the State of Texas on this project? Has Texas approved any portion of this, or other HSR projects within Texas, within its boundaries? If yes, what Texas organization did the approving and what & when were these approvals obtained? Are the Councils of Governments considered a Texas organization OR a Federal Government organization and why? What approvals will the TCR still require from the State of Texas before they can begin eminent domain condemnation or construction and when will these have to occur?	Refer to ED-1, NE-6, PI-1 and SS-5.
Ken Cope	NA	Website	72. How will the FRA and Surface Transportation Board be impacted by the approval of a national high speed rail network? Will the organization grow and if so, what are the projections of this growth? Staffing levels? Funding? New Regulatory divisions? With this possible growth potential in these government organizations, how can these organizations remain "objective" in their assessments and approvals of these projects?	Refer to NE-1.
Ken Cope	3/9/2018	Website	35. 1. What is the maximum downward force of a fully loaded train traveling at 205 MPH?	Refer to NE-1, BA-4, TC-6 and TR-8.
Ray Corn	3/9/2018	Website	Hello all, I believe this a very important project for Texas. We should have built twenty years ago. Anyone that has traveled or lived where there is mass transit train service available will tell you the benefits are tremendous. Please proceed and make this a cost effective project and expedite the completion. Thanks in Advance	Comment noted.
Rebecca Coronado	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Zoilo Cortes	3/8/2018	Website	#buildthistrain Texas Central train line Dallas-Houston!	Comment noted.
Adrienne Cortez	2/28/2018	Website	I am OPPOSED to the proposed train route slicing through the important community and environmental asset known as MORGAN LEGACY FARM located near FM 709 and 3194. The proposed routing would eliminate several of the existing and fully operational structures on the site, seriously undermining if not destroying the ranch's ability to function. Most alarming, because of the site's elevation, it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. I believe moving the train alignment to the north of the ranch, paralleling the existing power lines, would minimize environmental degradation and save a unique, irreplaceable property.	Refer to LU-5, WW-1 and WW-2.
Adrienne Cortez	3/2/2018	Email	I am OPPOSED to the proposed alignment cutting through the property referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Please consider realigning the train route so that it is combined with the existing power lines into a single, less disruptive corridor.	Refer to LU-5.
Adrienne Cortez	3/9/2018	Website	I am OPPOSED to the proposed alignment cutting through the property referred to as Morgan Legacy Farm located near FM 709 and 3194. Edward Costello	2/7/2018	Website	I thoroughly support the proposed Texas HSR project. It will help the environment, business, and allow families to visit one another more easily. It will also form a part of what I hope will be a national network of passenger rail options.	Comment noted.
Chris Cotter	2/16/2018	Website	I support the HSR project. It will benefit me by providing an alternative transportation mode to get to Dallas from Houston. I also think the project will be very good for the Texas economy.	Comment noted.
Sylvia Coulson	1/11/2018	Email	I am opposed because there are no stops in our community. We would have all the inconveniences with none of the benefits.	Refer to SC-19 and GN-7.
Sylvia Coulson	1/11/2018	Email	I am opposed because a company that is 80% foreign owned will have Eminent Domain rights over our property.	Refer to ED-1.
Sylvia Coulson	1/14/2018	Email	I am opposed to the construction of a high speed rail between Houston and Dallas. The project has been evaluated by four or five sources and found to be economically unfeasible. Construction cost over-runs will be the tip of the iceberg for a venture which will not draw enough commuters to pay for itself, much less become profitable.	Refer to GN-2, GN-3, GN-4 and NE-1.
Sylvia Coulson	2/2/2018	Email	How do you justify the inflated ridership you claim? How will the train have 10 times the current flights between Houston and Dallas? Even if no one flew and all rode this train, you would still need a lot more riders. Who will pay when this fails to happen?	Refer to GN-2 and NE-1.
Sylvia Coulson	2/2/2018	Website	How will you replace the multiple wildlife habitats that the railroad would destroy simply by being there?	For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Sylvia Coulson	2/4/2018	Website	There have been 3 major rail accidents in the past 3 months. How are you going to prevent accidents in this proposed rail system? Flying is much safer.	Refer to SS-12 and SS-13.
Sylvia Coulson	3/2/2018	Website	Is TCR exempt from any American law because it is majority owned by a foreign Japanese corporation? If so, what exemptions will the TCR enjoy?	Refer to NE-1, NE-2 and NE-6.
Sylvia Coulson	3/2/2018	Website	What are the political action committees organized by the Japanese, TCR, TCRR? Who have these organizations made contributions to, when and how much?	Refer to NE-1.
Sylvia Coulson	3/2/2018	Website	Are the federal grants subject to Congressional oversight? Have the federal funds been appropriated for these grants? How and When? What federal appropriation(s) have approved the funding of these grants?	Refer to GN-4 and NE-1.
Sylvia Coulson	3/2/2018	Website	What is the net effect of the increased property tax revenues for Ellis County when offset by the negative impacts of lost sales tax revenue from local business, farmers and ranchers?	Refer to SC-19, SC-21 and VA-1.
Sylvia Coulson	3/2/2018	Website	Who in the federal Department of Transportation will be the final decision maker for each federal grant that TCR/TCRR is applying? When are these grants projected to be awarded? What is the application and decision process and timeline for these grants? How does the timing of these grants relate to the proposed construction time table for this project? What are the values of these federal grants? What are the "matching" fund requirements of the private TCR/TCRR before construction begins? What federal requirements will be in effect to ensure that the private funds are deposited before the construction can begin?	Refer to GN-4.
Lorie Coupland	2/16/2018	Website	I can't not wait for this train to happen. I have friends and family in Houston area and the train would not only be Efficient cost wise it would be a pleasure to have that available. Cannot wait for this to be completed so exciting	Comment noted.
Carrie Courley	2/6/2018	Oral	Although I am not directly impacted by the high-speed rail, it will be close, and I just think that it's a waste of money when we could use commuter rails. I think of all that money that could be used for our major Texas metro areas that really don't have a metro rail, a commuter rail, which would save energy and time for people that work in downtown Dallas or downtown Houston, Austin and we could have commuter rails in all the major areas with the money they're spending on this and we don't have any commuter rails. So I think it's a boondoggle.	Refer to PN-3.

Cheryl Cowart	2/21/2018	Website	The environmental impact for this project has not even been addressed. It may be good for the people in Houston and Dallas, but ALL the people in between is whom it will effect the most. And the money for the project has not been addressed to show the full effect of the impact to the tax payer or land owners. The impact to the livestock holders, land owners, Tax payers, and everybody else that is not mentioned in any reports from either Texas Central or the FRA. If you are for the people, then be for the people. This will have a drastic monetary burden on the tax payers and all involved. there is no way this train will make enough money to re-coop what was spent on building it, or operating it. I would like to see a realistic financial analysis of how this will not effect the tax payers when it goes under. Also, a report as to which road closures and where. And if this has not been thought up, then it is time to address it now.	Refer to NE-1, NE-9 and TR-8.
Michael Cowett	2/16/2018	Website	I would like to see the Texas Bullet Train be built.	Comment noted.
Rebecca Cowle	2/15/2018	Website	The Texas Bullet Train is good for Texas! I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the review and approval of the project. It is a landmark mass transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving between the two regions. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transponation technology, the Shinkanscn system, which has had zero crashes or fatalities in 53 years of operation in Japan. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational - at least 25% of them in rural counties along the route. It will be an economic boon for all counties along the route. As an electric train, this system will also be the best environmental alternative for traveling between the two regions as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies, and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion between North Texas and Houston -- because it's good for Texas!	Comment noted.
Todd Cowle	2/19/2018	Website	This project is a no brainer. Driving to Houston is awful experience. I would go to Houston frequently if the train was an option.	Comment noted.
Adam Cox	1/30/2018	Email	I am hugely supportive of this rail line. Will be an absolute game changer on visiting Houston, both for business and fun. Everyone I know has been excited about this for years and frankly wondering why it has taken so long. Please, build the rail!	Comment noted.
James Cox	3/5/2018	Website	MR. COX: James Cox. I just want to say that I'm a country guy. I've lived in the country most of my life, but I have worked around the world and Gulf Coast and border to border of this nation. I've built things that most people wouldn't even dream of in construction. But I always lived in the country. I always came home to a home in the country. What they'll see is now we're pitting the country against cities. We have -- I retired and gone back to the country that I love, but it looks like that I won't be able to live there until my wife and I are taken home to heaven, as we had hoped to do. If the Texas Central goes through and puts this train in, it's going to interrupt and put a deep gully down through the center of Texas. If you build a berm of dirt three feet high, you got to pull the dirt from someplace. And these low elevations down here, you're going to have a berm sitting up in the middle, and then you've got water all the way around it, and the two -- two miles on either side of this train is going to be just emaciated because it's -- you're ripping up the dirt to help put this thing through. Eminent domain is what they're talking about taking our land with. Eminent domain is supposedly a the most people is done. Well, that would be right, because there's more people in Dallas and Houston than there is in the other counties that are in between, but I wonder what the people that are putting this through would think if we came in and did a rail line on their backyards and front yards and started running cattle on it. That's the same thing. It's the better good. If they don't look, they're going to take Texas and turn it into Japan, and there won't be any major cattle companies, there won't be any major wheat farms and oat farms and rice paddies in this country. We've got to -- you got to -- what is feeding these major cities? Where they get their milk from is not out of the bottle. Where they get their beef from is not out of their refrigerator. We got to somehow come to an agreement on how to continue to save the property we have and the farm land and the ranch land and still have cities that can expand and do their thing. We can't keep trying to divide this country like we divided our nation, and it's -- it's doing the same thing to us. And if you put this thing through, it doesn't have to make money on this leg. But if you put one through going someplace like over to San Antone, you're going to use the same train that's got a monopoly on connections, and no other train company, to hook up to their -- this is a proprietary train system. We've invested most of our life savings in the property that we have now, and we're within the 2-mile limit of the train in Grimes County. And if they take that against us, the two of us can't build another home and put in what we've got. We can't find what we have there again. It took us a year and a half to find what we have now. We're both on our second marriages. We both lost our partners before, and we're trying to	Refer to BA-2, ED-1, LU-2, LU-11 and LU-14.

James Cox	3/5/2018	Oral	<p>And it's going to take more than two miles in either direction. And where are you going to get the power from? Obama shut down the coal power at the power plants just about, took them all out and we haven't got that much windmill hot air tonight. We don't have enough solar power to take over what these power plants do. They haven't put new power plants in Texas in over 15 years. We're loaded with power. Texas has its own grid. It is not connected anywhere else in the country. Yet there's always the Federal Electric Commission information about getting. It's amazing to me somebody would put out a document and tell you that you're not supposed to read it medical bill. Don't read it, vote on it, and then you can read it.</p>	Refer to EU-4.
Jim Cox	2/6/2018	Oral	<p>Good evening. My name is Jim Cox, and I am against the high-speed rail. I'm an engineer by education. I'm retired. Farmer, rancher. I'm here to tell you that I've seen these high-speed rails in person overseas, I've been overseas, I've worked around the world many times. I did major projects overseas. One of the things I'm concerned about is that the EPA has put up many obstacles for power plants and the addition of power plants. We're losing our power and we haven't built anymore power plants. Where's the power going to come for this thing? Where are you going to get this? Now, the EPA has got the power plants down so that you can't use coal anymore, or any other fuels. So we're now going to have to rely upon solar? Wind power? There's not enough of that available. That's going to take away from us. And talking about the berms that they're going to use at about 40 percent of the rail, that's going to take dirt from about two miles outside where this thing is going. And you're going to have what? Motes on either side of it? They're going to buy this dirt from the neighbors, the people that live close to it, is what I understand, so I don't believe that that's going to work out too well for the environment, as you people have called it. The trains are going to be from Japan. Are the rails going to be from Japan? Are the tiles going to be from Japan? Is the labor going to be from Japan, too? I know that they built a bridge in California, and China got the contract and they brought over their own help. Is that going to happen here? That is a little bit -- it's ironic, but I just want to put it out there. The EPA and the FRA have considered the environment in this report. What about the human aspect? You know, you take this land from all these people that have lived on it for many, many years, and they're growing their crops and they're growing cows for food, so you're going to take it away from them? Are you going to buy that. In the</p>	Refer to EU-4, LU-10, LU-11, LU-14, NE-1, NE-9 and SG-4.

			city, are you going to take and start putting cows in the city? No, it's not. You're not going to work an environment around just the animals and so forth. You got to look at the people, too. So I'll cut short since this is three minutes, and tell you again, do not put this rail out here.	
Shirley Cox	3/5/2018	Website	First of all, I want to state that I am not against the future transportation growth or options for that. However, I am 100 percent against this project as it is now. One of the things that was addressed was an example of the system in Japan. We're not Japan. We do not live the same. We have all different needs. And it's not 200 miles an hour from point A to point B there. They're varied in their speeds; I do know that. In Houston, they talk about the economic value, and that's what they're focusing on, the economic value that it's bringing to Houston. Another issue that they discussed was no security. I have a real problem with no security on any mass transit, be it airplane, be it anything, because that would be scary to ride with absolutely no -- in this day and time. The transportation problems that they have in Houston will not be alleviated on an A-to-B transportation thing. Within the city, it will switch problems from one point to another. It will impact environmentally a lot with flood control, and all that already is an issue for Houston. That's not addressed in their project specs. The costs for these young men to ride from a Houston college -- from one college to another we're talking about, they can't do that. The cost would be prohibitive. If they can't afford to fly from Houston to Dallas now, it's going to be the same price to take the train from Houston to Dallas, so that issue is impossible for younger people that are groping with this. One of the gentlemen spoke about their parents or grandparents giving up their land for water. Absolutely, that is water, that is our livelihood. That's our -- what we have to have. They're choosing taking land that is for food, livestock, farm products, and getting rid of that for transportation. My recommendation would be, use the existing systems that we already have for transportation and go those routes, go above the freeways, whatever they need to do, but don't take their food for transportation.	Refer to BA-5, BA-8, BA-9, BA-10, FP-1, LU-2, LU-11, FP-4, PN-3, SC-3, SS-6, SS-9 and TC-3.

My recommendation would be, use the existing systems that we already have for transportation and go those routes, go above the freeways, whatever they need to do, but don't take their food for transportation.	Refer to BA-8, FP-1, LU-2, SS-6, SS-9, TC-3 and WW-2. The majority of the Project is on viaduct (elevated).
Christopher Cozby	2/16/2018	Website	I agree with the proposed high-speed line being built above or below grade so land will not have to be taken from landowners for public use, and the idea of a connection to another proposed high-speed rail line to Arlington and Fort Worth by NCTCOG makes this line from Dallas to Houston very important; as well as to free up traffic on IH-45 so TXDOT can widen the IH-45 corridor as a future road improvement project.	Refer to BA-1 and TR-8.
Ben Crabb	3/9/2018	Website	After much reflection and investigation of the many pros and cons of building this new high-speed rail project between Dallas and Houston, Texas I do now fully support the project. I support the concept that this project will be developed with funding and financing being the ultimate responsibility of a private corporation. I support the proposal that the terminal station in Houston will be located at the North West Mall site. The relatively small footprint of this project will result in significantly less environmental impact than any alternative project which would help alleviate the current and ever growing congestion on the Dallas to Houston I-45 freeway. I urge the FRA to handle the final EIS review and approval process and issue the final Record of Decision as quickly as possible so this project may move forward in a most expeditious manner.	Comment noted.
Ben Crabb	NA	Website	Dear Officials, Texas is the perfect place to plant the seed to grow high-speed rail in the United States. The new high-speed economy created by this project will be a game changer for workers, vendors, contractors and other companies and small businesses all along the route. The fact that it is fully investor-owned means it will provide a great benefit for not only passengers, but all taxpayers. The Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. For instance, it states that the Train will create more than 10,000 direct jobs per year during construction and about 1,500 jobs permanently when operational -- at least 25% of which will be in rural counties along the route. It will contribute more than \$2.5 billion in taxes over its first 25 years to counties along the route and increase property assessment values within a half-mile of the proposed stations by between \$71.4 million and \$161.1 million. We want more travel	Comment noted.

			options between Texas' two economic hubs and this project fills delivers and gives all travelers the freedom to choose a safer, more reliable and cleaner way to move across Texas. I welcome this new innovative industry and I urge the FRA to expedite its review and approval because it's good for business, good for the economy and good for Texas.	
Jennifer Craddick	1/12/2018	Email	The proposed HSR will negatively impact my family in many ways. If the train is built, it will be necessary to close certain roads. This will have very negative consequences for our Emergency Services: Fire Departments, Police Departments and Ambulances when there are dire emergencies. When it takes our Emergency Services longer to get to each call, they can't service as many emergencies. This will have a domino effect in that, more stations will have to be built, more personnel will have to be hired, causing another expense to the taxpayers of Texas for a unneeded, unwarranted, train. The purpose for this train is unsubstantiated. The only feasible option a No Build option.	Refer to SS-23 and SS-26.
Jennifer Craddick	1/12/2018	Email	The HSR is negative for my family and the implications of the problems it will cause are far-reaching. You have stated that "impacts to emergency response times are not anticipated to increase." You haven't done the research or thought out the fact that when you close roads and split counties in half, there is NO WAY that emergency response times would be able to stay the same or even close when you cut their routes to getting to the emergencies. This project is not necessary for Texas. The need for it is non-existent and unproven. The only viable option is a No Build option.	Refer to PN-3, TR-8 and SS-23.
Jennifer Craddick	1/12/2018	Email	The proposed HSR will NOT benefit my family in a positive way and will have negative implications for us. If the train is built, the services that we have in Grimes County will be diminished as a result of the train. Not only will our tax dollars be stretched in order to maintain properties around the train and roads to and from it, our Emergency Services will be affected, affecting my family in the event of an emergency. I am not in favor of the train being built, as no real need or purpose has been presented. The only option for the people of Texas is a No Build option.	Refer to PN-3, SS-23 and SS-26.
Jennifer Craddick	1/12/2018	Email	If the proposed HSR is built, it will have a negative impact on my family. I live in Grimes County, which has a very low tax rate. If this train is built, the tax base for Grimes County and all other counties that will include a portion of this train will have a higher tax base. I am not in favor of this train being built and the no build option is the only option that makes sense for Grimes County and the entire State of Texas.	Refer to SC-19.
Jennifer Craddick	1/12/2018	Website	I want to have my comments included in the decision for the HSR being proposed. It will have negative implications for my family and the citizens of Waller and Grimes Counties. There is a pipeline that is on your proposed route for the train Basic chemistry tells you that when you have gas being vented through the pipeline mixed with electricity for the train, you could have a massive explosion, killing people, animals, and destroying anything in its immediate proximity. This could be an extremely dangerous situation for a train that is not needed, nor has the purpose been shown for such a project. The only feasible option here is a No Build.	Refer to EU-2, EU-8, PN-3 and SS-19.
Jennifer Craddick	1/12/2018	Website	This HSR and the impact that it will have for my family is negative. There will have to be new bridges that would have to be built in order to make certain roads passable. Not only would it be a huge inconvenience to go 40 miles out of the way to get to a destination, it would also be costly as a tax paying citizen of Waller, Texas.	Refer to TR-6, TR-7 and TR-8.
Jennifer Craddick	1/12/2018	Website	Regarding the High Speed Rail that has been proposed, I want to let you know that it will negatively impact me and my family. There is already an issue, as we have seen in recent years, with the flooding in this part of Texas when there are strong storms. My home was very close to flooding when Hurricane Harvey hit. If this train were to be built, the affects on flooding alone would be detrimental. There is no true need or purpose for this train and I am against it being built. I vote for a NO BUILD OPTION.	Refer to FP-1, PN-3, SS-17, WW-1 and WW-2.
Jennifer Craddick	1/12/2018	Email	The HSR that you are wanting to build in Texas will have a negative effect on my family and our way of life. If you have been in the Houston area much, then you know how many roads are already under construction, the delays it causes with traffic, and the accidents that happen as a result of the daily, ever changing roads. If you build this train, the roads will be destroyed due to the construction materials constantly going to the construction site. After the roads are torn up, my family continues to be negatively impacted by the tax dollars that will have to be spent to repair each and every one of these roads. The only feasible, reasonable option is a No Build option.	Prior to construction, TCRR shall coordinate with individual landowners regarding compensation for temporary use or permanent take of land. TCRR and the affected landowner shall negotiate the compensation and/or terms on a case-by-case basis. Should an agreement not be reached between TCRR and the affected landowner, compensation shall be determined through eminent domain by an administrative judge in accordance with applicable state laws (4 TAC § 21and 10 TAC § Chapter 2206, Subchapter E).
Sharon Cradic	3/9/2018	Website	I know of no one that thinks this is a good deal. This includes disgruntled landowners and farmers that have had their property taken over for this boondoggle. Frankly, WHO wants a quick trip to Dallas from Houston and vice versa? NO ONE except the investors in this project. Kill it!	Refer to GN-2.
Timothy Craig	3/7/2018	Website	I think that this project is a really good idea. It does not cause big problems and in the future will have a big positive impact on both cities emissions and will improve land use.	Comment noted.
Bill Cranfill	3/4/2018	Website	I am writing today in regard to the Dallas to Houston High-Speed Rail Project. I am adamantly opposed to this project. It will have a detrimental impact to my livestock operation. I see no positive impact that it will have on Navarro County as a whole. I am concerned about the sound of the train for my livestock as well as my family. I am concerned about the loss of grazing land for cattle and sheep as well as the loss of water access for my animals. This project would basically shut down my ranching operation. We enjoy many other	Refer to GN-1, LU-11, NE-1, NE-8, NR-1, NR-2, NV-1, PN-3 and SC-19.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>forms of wildlife such as monarch butterfly and geese migration and these would also be disrupted.</p> <p>This project would lower the value of my house and property to a point that it would be impossible for my family to relocate even if necessary. But as I have worked this land all my life as well as four generations before me, I do not have the desire to do that. I plan to pass my land on to my family completely intact.</p> <p>I have given no permission for a survey of our property, yet I was told at a meeting that the environmental impact study is complete. How can this be unless there was trespassing on my property?</p> <p>If my land has not been properly surveyed, this study would be null and void and the project should not be able to proceed. If there was trespassing and they were thus dishonest with me, how can this company be trusted?</p> <p>This project is not welcome, wanted, or needed. You cannot allow hardworking American citizens to be displaced to cater to a small upper echelon that would actually ride the train. I hope you will see the folly in this project and take your project elsewhere.</p> <p>Sincerely, Bill Cranfill</p>	
Donna Cranfill	3/4/2018	Website	<p>I am writing today in regard to the Dallas to Houston High-Speed Rail Project. I am adamantly opposed to this project. It will have a detrimental impact to my livestock operation. I see no positive impact that it will have on Navarro County as a whole.</p> <p>I am concerned about the sound of the train for my livestock as well as my family. I am concerned about the loss of grazing land for cattle and sheep as well as the loss of water access for my animals. This project would basically shut down my ranching operation. We enjoy many other forms of wildlife such as monarch butterfly and geese migration and these would also be disrupted.</p> <p>This project would lower the value of my house and property to a point that it would be impossible for my family to relocate even if necessary. But as I have worked this land all my life as well as four generations before me, I do not have the desire to do that. I plan to pass my land on to my family completely intact.</p> <p>I have given no permission for a survey of our property, yet I was told at a meeting that the environmental impact study is complete. How can this be unless there was trespassing on my property?</p> <p>If my land has not been properly surveyed, this study would be null and void and the project should not be able to proceed. If there was trespassing and they were thus dishonest with me, how can this company be trusted?</p> <p>This project is not welcome, wanted, or needed. You cannot allow hardworking American citizens to be displaced to cater to a small upper echelon that would actually ride the train. I hope you will see the folly in this project and take your project elsewhere.</p> <p>Sincerely, Donna Cranfill</p>	Refer to GN-1, LU-11, NE-1, NE-8, NR-1, NR-2, NV-1, PN-3 and SC-19.
Deborah Crawshaw	2/11/2018	Website	<p>This is the south, we want to drive. Why would a person take a bullet train to Dallas from a location on the already traffic-jammed 290? Also, one would have to pay for transportation once one traveled to Dallas. Most businesses in Dallas, similar to Houston have moved to the suburbs, i.e Energy Corridor in Houston on Katy Freeway. The other huge issue (s) is the beautiful mansions, ranches, and farms this HS Rail will destroy. Texas is always pro-business, and anti-families and property, some of these properties have been in families for generations. The GOP is behind this joke of an expensive (very expensive) waste of money and time. The only folks, that are benefiting from this issue is the folks lining their deep pockets.</p>	Refer to PN-3 and SC-19.
Javier Crespo	2/6/2018	Website	<p>I'm just curious as to why Waco isn't being considered as a stop for the train on the way to Dallas? Being from Waco the 3 1/2 hour visit to see my parents are racking up the mileage on my car. Also how many people will the train seat?</p>	Refer to BA-8, GN-7 and TC-4. As defined in Section 2.2.1, Alternatives Considered, Technology , the total 8-car train would carry up to 400 seated passengers.
John Crew	2/28/2018	Website	<p>This will be an economic development driver for North Texas!</p>	Comment noted.
Bob Crider	1/31/2018	Oral	<p>Hello. My name is Bob Crider. I have property that's impacted by this, and I'm just -- this being a draft, I just wanted to ask these folks up here if they could delete a photograph that's in Chapter 1.3? I think it's -- Excuse me. It's Figure 1.3 in Chapter 1. It shows congestion in - at 610 on I-45, and I don't think that picture has any bearing on the problem with the present transit route of the bullet train.</p>	Figure 1-3: Congestion on IH-45 in Houston north of IH-610 , was an illustration of congestion along IH-45 in reference to planned TxDOT projects that would not significantly decrease congestion with the increase in projected travel demands as detailed in Section 3.11, Transportation , in the Final EIS. This figure has been updated to depict a more rural section of IH-45
Cox Crider	2/27/2018	Website	<p>I am concerned about the lack of coordination with law enforcement and emergency management in the affected counties.</p> <p>I am concerned about the amount of fill dirt required for the berms and the long-term effects of erosion.</p> <p>I am concerned about the cumulative effects on 60 or more train passages per day on wildlife, livestock, and people.</p> <p>I am concerned that the land will not be returned to the people if the railroad fails.</p> <p>I am concerned that if "brown outs" occur that the train will receive priority over people.</p>	Refer to EU-3, GN-4, GN-5, LU-10, LU-14, NE-1, PI-1, SG-1 and VA-1. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be

			<p>I am concerned that the tax payers will eventually get tagged for part of the costs for this project.</p> <p>I am concerned that the land along the train path will be forever destined to be non-developed.</p> <p>I am concerned that property along the train path will be devalued.</p> <p>I did scan the entire DEIS and did not find answers to my concerns.</p> <p>Thank you for your consideration to my email.</p>	<p>minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p>
Cox Robert Crider	2/14/2018	Letter	<p>It is important to know something of the history of this area. In pre-history, it was home to many generations of Native Americans along the tributaries where water was available are sometimes found arrowheads or bits of pottery. The soil, being acidic, has long ago reclaimed any skeletal evidence that they were there, but there they were by the thousands over thousands of years. During the Spanish/Mexican era in history, some expansive surveys were made. All of the deeds ultimately trace back to those Spanish Land Grants. In Colonial Texas, this area was part of Robertson's Colony. In 1854, B.D. Person established the community. It was populated by common folks, many of whom were "dirt-poor", meaning they were so poor they had to sharecrop or rent land from a land owner. Economics got really tough by the late 1920s, and the Great Depression was the death blow to the community. World War II was the coup de grace, and the town of Personville faded from existence. Today only a historical marker remains. My Grandfather's name is on it.....and that marker is only a couple hundred yards from the Bullet Train Route.</p> <p>We are also very concerned about the devaluation of our property adjacent to the rail line. The proposed route bisects my brother's tracts and my sister's tracts, and my tract is adjacent to it. All are sure to be devalued, yet I know of no plan to compensate for devalued land. Twenty years passed and now we are faced with another Bullet Train.....a 200 mph train that will be passing by 60 times a day. The Bullet Train propaganda says that the sound is not objectionable and that the wildlife and livestock will get used to it. They show cows grazing in pastures along side one of those European Bullet Trains as evidence. Maybe those animals will get used to it, but I know I won't.</p> <p>We question why they must have permanent title to the land. Why it can't be simply an easement that reverts to the owner if no longer used is a question that is sure to go unanswered. Why not pay land owners a royalty for each train that passes? That question will get a big "No" too. Although their propaganda is carefully worded to indicate how considerate they are to the landowner, in the end all details favor the Corporation. Then there is the question as to whether or not Texas Central Partners or any of its shell companies have the Right of Eminent Domain. They claim that they do. Other voices claim that they do not. Thus it will ultimately be settled in court, and I believe in the Texas Supreme Court. Whether they do or do not have Eminent Domain is important to the landowner because he or she will likely arrive at different business decisions based on whether or not they do or don't. It is important from a business standpoint to know whether or not the Right of Eminent Domain resides with Texas Central Partners.</p> <p>Of great concern also is the economics of the venture. Although there are many promises of "no tax dollars", it is probable that at some point the project may become "too big to fail", and the taxpayers of Texas will be stuck subsidizing the price of a ticket. Some of that price subsidy will filter to the bank accounts of the executives and investors....and out of Texas. All the previous narrative has been concerned with the "human environment". I hope this part is a major actor in the final determination, but I fear it will be of little or no consequence.</p> <p>I have attempted to make some sense out of the Draft EIS. It is very detailed, highly repetitive, written in technical language, and as such is very intimidating to the layman such as myself. I note that a recurring phrase is "no adverse effect". I tried to locate the definition of "no adverse effect" and how it can be determined in each and every instance, but I have been unsuccessful. No one has yet asked me how adversely I, or my heirs, will be affected watching a Bullet Train pass my farmhouse 60 times a day.</p>	<p>Refer to ED-1, ED-2, GN-4, NE-1, NR-1, SC-3 and VA-1. Historical Markers cover a variety of topics important to a community or region. It is the policy of the Texas Historical Commission (THC) to preserve the original location of markers whenever possible. The THC must be notified if a marker is ever to be relocated. In accordance with Section 106 of the National Historic Preservation Act and pursuant to 36 C.F.R. Part 800.4(b)(2) and 5(a)(3), FRA, TCRR, THC and other Signatories are developing and will execute a Programmatic Agreement (PA) that allows for the continued phased identification, evaluation and assessment of effects to historic and archeological resources as access to private land holdings becomes available and after publication of the Final EIS. Cultural resources surveys have been conducted for portions of the Project area, though many areas remain to be surveyed and will be subject to the methodology outlined in the PA. Under NEPA, federal agencies are required to analyze whether a proposed action will significantly affect the environment. A federal action is considered to be affecting the environment when it has an impact or an effect on it (the terms are interchangeable under NEPA). In order for an action to have an effect it must have a causal relationship to impacts on the affected environment. The magnitude of the impacts, as well as the sensitivity of the affected resources must be weighed in determining whether an action has an adverse effect. These determinations are made in the "Environmental Consequences" section of each chapter in the Final EIS.</p>
Cox Robert Crider	2/24/2018	Letter	<p>I am writing to provide my suggestions regarding the Draft Environment Impact Statement for the proposed Texas Bullet Train to be built on a Dallas/Ft. Worth to Houston route. I have spent more than a few hours trying to study and comprehend the document which I downloaded to my personal computer. It is certainly an impressive piece of research from many topics....very intimidating to an ordinary citizen like myself. As I studied the EIS, I tried making notes as I went. When I finally got to the end, I found that my notes were just as confusing to me as the original document! Thus my suggestions may seem somewhat out of order or context, but I am hopeful that you will understand and address each one.</p> <p>2. In various tables about different impacts, the use of "no" (for no impact) is likely overused. In my opinion, many of the "no" entries should be replaced with phrases like "cannot be determined". This is particularly important where the impacts are based on projections rather than observations.</p> <p>3. On page ES-3, the third paragraph begins with "In order to". Grammatically, this should be "To".</p> <p>4. On page ES-3, in the last sentence of the fourth paragraph, the word "potentially" should be inserted after the word "would".</p> <p>19. I was impressed with number of times the word "mitigation" was used with little or no explanation of how the mitigation would occur. As thoroughly complete as the document seems to be, this seems to be one of many unanswered questions.</p> <p>21. Another suggestion would be to cleanly separate the information from the various build alternatives or possibly leave out all but Build Alternative A since that is the favored route of both the FRA and TCR. The non-selected route information could still be indicated in the comparison tables.</p> <p>1. In the abstract, the term "fully sealed corridor" is used at least twice. In my opinion this is an inappropriate term leading one to believe that</p>	<p>Refer to AS-1, ED-2, ED-4, GN-2, GN-4, LU-14, NE-1, NE-9, NR-1, NV-1, NV-10, SG-1, SG-4 and TC-7.</p> <p>This photo has been updated with another located in the rural portion of IH-45. This is the address given in Google Maps. Text was updated to "white-tailed deer". All references to Houston Toads were changed from "Bufo" to "Anaxyrus" in EIS. "As needed, TCRR would secure access and construction easements from adjacent property owners for construction staging. Refer to Section 3.13.5.2.5 Land Use, Structure Displacement and Land Acquisition, for more information about advancement property owner easements." The environmental impact statement focuses on impacts to humans. However, the study of impacts to mental health is outside of the realm of NEPA. The majority of the Project is on viaduct (elevated structure), which would allow passage under the tracks.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>it would be inside a conduit tube of some sort. I am sure that a better term could be used instead of that one.</p> <p>2. In various tables about different impacts, the use of "no" (for no impact) is likely overused. In my opinion, many of the "no" entries should be replaced with phrases like "cannot be determined". This is particularly important where the impacts are based on projections rather than observations.</p> <p>3. On page ES-3, the third paragraph begins with "In order to". Grammatically, this should be "To".</p> <p>4. On page ES-3, in the last sentence of the fourth paragraph, the word "potentially" should be inserted after the word "would".</p> <p>5. The photograph Fig 1.3 on page 1-11 is not applicable to the study other than being a generic example of congestion. The presence of a bullet train would not affect congestion at that particular point. The photo should be omitted or the caption changed.</p> <p>6. In section 3.4 Noise and Vibration, the address given in 3.4.4.5.1 St-10 is: "FM 39 at East Yeagua St." This is not a real site location. FM 39 is 12 miles from East Yeagua St., which is in Groesbeck, TX.</p> <p>7. In this section, there is a conclusion "Therefore noise impact on wildlife would not be significant". It would be better to state that "the noise impact on wildlife cannot be determined at this time".</p> <p>8. In this Noise and Vibration section, I also looked for a "Cumulative noise effect" based on 60 train passages pr day. Perhaps I missed it, but I did not find information regarding the frequency and cumulative affect of the noise.</p> <p>9. I also looked for information about the "air pressure bubble" which would exist in front of the moving train and the noise effect produced when two 2 trains pass each other, but did not find it.</p> <p>10. On page 3.6-12, the term "deer (various species)" is used. There is only one species of deer in the study area, so "various species" should be deleted.</p> <p>11. On page 3.10-6, the term "professional judgement" is used regarding visual impact. (Judgment is the preferred American spelling instead of judgement). There is no definition of "professional judgement". Visual impact cannot actually be quantified. Although there may be objective elements, it is primarily subjective. "[sic] lies within the eye of the beholder".</p> <p>12. Page 3.11-52 states that some "oil pads would be acquired". How would that be compensated, especially if it is in production?</p> <p>13. Page 3.20-28 states that "no faults underlie the study area". There are ancient deep faults, so it would be more accurate to state that "no active faults underlie the study area".</p> <p>14. The same page, 3.20-28 states "no earthquakes have been documented in Limestone County". There was an earthquake in 1932 that caused building damage in downtown Mexia. There was also another one about 50 million years ago that created the Mia-Talco Fault Zone. To be accurate, the phrase should be "no recent earthquakes.....".</p> <p>15. Reference is made to the Houston Toad in several places in the document. In some places it is named Bufo houstonenis. In other places it is named Anaxyrus houstonenis . The new genus name Anaxyrus was proposed for the Houston Toad in 2006, but is still subject to some controversy in the field of herpetology. Nonetheless, one or the other of the names should be selected for the document.</p> <p>16. I looked for information about the cubic yards of fill dirt necessary, where the dirt would be acquired, and the methods to mitigate the environment impact of removal of fill from one location to another. I know it must be in there somewhere!</p> <p>17. I also looked for "adjacent property owner easement requirements" to allow access to the railbed, but I didn't find it.</p> <p>18. Although there is much detail about so many things, I found the amount of detail on erosion control to be disappointing.</p> <p>19. I was impressed with number of times the word "mitigation" was used with little or no explanation of how the mitigation would occur. As thoroughly complete as the document seems to be, this seems to be one of many unanswered questions.</p> <p>20. The most important biological population was entirely omitted from the study, the Homo sapiens who would be directly or indirectly affected along the route of the Bullet Train. There are aspects of mental health and happiness that cannot be "mitigated" by monetary payments. An entire chapter about this population should be added to this final EIS.</p> <p>21. Another suggestion would be to cleanly separate the information from the various build alternatives or possibly leave out all but Build Alternative A since that is the favored route of both the FRA and TCR. The non-selected route information could still be indicated in the comparison tables.</p> <p>It seems to me that the Bullet Train is a "done deal" if funding can be obtained. I feel as if the various meetings and inputs were just things to put a check mark on a List and that it will be a "rubberstamp" situation until all the paperwork is completed. One of the greatest fears of everyone is that the train will be built and at some point will become another burden on the taxpayer. I suppose the economic aspects are beyond the scope of the Environment Impact Statement. Perhaps there should be separate Economic and Sociological Impact Statements. Our family property will be split in two by the Bullet Train, so I have a particular personal interest in this project. My property is in Limestone County.</p> <p>Thank you for your attention to my letter...</p>

Robert Crider	1/31/2018	Letter	<p>My name is Cox Robert (Bob) Crider. I am also representing my brother Allen Billy (Bill) Crider and my sister Francelle Crider Bettinger. As I write this, my brother is on his deathbed, and in the event of his death prior to this meeting, I am also representing his children/heirs who are Angela Crider Neary and Allen Blake Crider. Our property is in Limestone County near the former community of Personville. Our grandfa-ther, Allen Blake Crider (known as A1 or Owl), came to Texas in 1893. According to family tra-dition, he left Cedartown, Georgia and went to Abilene, Texas where he stayed for only a short while before moving on to Personville. He went to work at the mercantile store there and eventually bought the store in 1903. He operated the store until the decline of Person-Ville, closing in 1938. During this time he became a prominent citizen of the Personville com-munity and the entire area. He also acquired land during that time which became the family ranch. The cattle brand, based on his first two initials, has been used by 4 generations for over a hundred years. Four generations have put much of their lives into that sorry land that we love so much. We have seen it cleared from woods and put into crop land, and have seen the cropland evolve back into woodlands. It is now becoming part of the heritage of the 5th and 6th generations of the family. That land represents the toil and sweat of generations. It represents "robbing Peter to pay Paul" when the notes came due. It represents going in the hole when a crop failed, or when there was not enough to pay the taxes. It represents a few years when the royalty payments showed up to get us out of a bind. It seems like that land has somehow ingrained itself into our very souls. It iS important to know something of the history of this area. In pre-history, it was home to many generations of Native Americans along the tributaries where water was available are sometimes found arrowheads or bits of pottery. The soil, being acidic, has long ago reclaimed any skeletal evidence that they were there, but there they were by the thousands over thou-sands of years. During the Spanish/Mexican era in history, some expansive surveys were made. All of the deeds ultimately trace back to those Spanish Land Grants. In Colonial Texas, this area was part of Robertson's Colony. In 1854, B.D. Person established the community. It was populat-ed by common folks, many of whom were "dirt-poor", meaning they were so poor they had to sharecrop or rent land from a land owner. Economics got really tough by the late 192(Ys, and the Great Depression was the death blow to the community. World War II was the coup de grace, and the town of Personville 6ded from existence. Today only a historical marker re-mains. My Grandfather's name is on it.....and that marker is only a couple hundred yards from the Bullet Train Route. Back in the 1990's , there was a big push for a bullet train. As was done this time, there were several "route alternatives" in the publicity, but the "real" route was the very same as this one, at least the part through our property. That effort ultimately failed. The executives in the company got rich and the backers lost their money. I sometimes wonder if this time is his-tory repeating itself. Twenty years passed and now we are faced with another Bullet Train.....a 200 mph train that will be passing by 60 times a day. The Bullet Train propaganda says that the sound is not objectionable and that the wildlife and livestock will get used to it. They show cows grazing in pastures along side one of those European Bullet Trains as evidence. Maybe those animals will get used it, but I know I won't. They also said they would only need a 100 ft. right of way, but as time progresses we learn that there is a lot more to it than that. History teaches us that the few often suffer to provide a greater good to the many, and that the hinterlands suffer to provide resources to the metropolis. I learned this many years ago in the works of Karl Bucher and Karl Marx (both communists). We, the majority of the rural population, are not convinced that the train is necessary for the greater good. Time marches on, and time will judge the Bullet Train. I will not live long enough to see if succeeds or fails if it is built. I fully expect that the voices of the rural citizens will be cast aside , and lives and lifestyles for-ever changed. I hope I am wrong and that common sense prevails. Thank you considering my opinion.</p> <p>We question why they must have permanenttitle to the land. Why it can't be simply an ease- ment that reverts to the owner if no longer used is a question that is sure to go unanswered. Why not pay land owners a royalty for each train that passes? That question will get a big "No" too. Although their propaganda is carefully worded to indicate how considerate they are to the landowner, in the end all details favor the Corporation.</p> <p>Then there is the question as to whether or not Texas Central Partners or any of its shell companies have the Right of Eminent Domain. They claim that they do. Other voices claim that they do not. Thus it wilt ultimately be settled in court, and I believe in the Texas Supreme Court. Whether they do or do not have Eminent Domain is important to the landowner be- cause he or she will likely arrive at different business decisions based on whether or not they do or don't. It is important from a business standpoint to know whether or not the Right of Eminent Domain resides with Texas Central Partners.</p> <p>We are also very concerned about the devaluation of our property adjacent to the rail line. The proposed route bisects my brother's tracts and my sister's tracts, and my tract is adjacent to it. All are sure to be devalued, yet I know of no plan to compensate for devalued land. Of great concem also is the economics of the venture. Although there have many promises of "no tax dollars", it is probable that at some point the project may become "too big to fail", and the taxpayers of Texas will be stuck subsidizing the price of a ticket. Some of that price subsidy will filter to the bank accounts of the executives and investors....and out of Texas. All the previous narrative has been concemed with the "human environment". I hope this part is a major %ctor in the final determination, but I fear it will be of little or no consequence.</p>	Refer to ED-1, ED-2, GN-4, NR-1, NV-1 and VA-1.
Renee Crow	2/27/2018	Website	I want to ride this train!	Comment noted.

Diane Crump	2/5/2018	Handwritten	I am against this high-speed rail project. I live very close to one of the proposed lines, I do not look forward to having my peace and quiet interrupted by a train running by my house every 30 minutes. I have animals and wild life on my property. I do not their habitat disturbed. I moved out of the city a very long time ago to get away from all the traffic and congestion. As I said, I am very against this project!	Comment noted.
Diane Crump	2/5/2018	Handwritten	Against-only people in Houston or Dallas may benefit from this project. They may not benefit at all if they elect not to use the train. If it even comes to be.	Refer to SC-19.
Diane Crump	2/5/2018	Handwritten	Against-need to do an emotional impact study with people in the path of the train. More research on impact noise. How the noise will have an impact on our health!	Refer to NE-1, NE-9 and NV-1.
Diane Crump	3/21/2018	Handwritten	Against-Endangered species should not be relocated from their habitat. Other wild life should not be disturbed either.	For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Gerardo Cuaron	2/5/2018	Website	I live ten minutes from the preferred station location in Houston. I fully support the HSR and will lend my support in any way possible. Let's get it built!	Comment noted.
Lawrence Cullen	2/6/2018	Oral	Well, one issue that hasn't been addressed, I think, is a moral issue and that is, there probably will be at least one, if not several, landowners on this route whose land will be taken and these will be men who served in the Pacific in World War II and here a Japanese company will be taking their land and, at the very least, there will be sons and daughters of veterans that served in the Pacific who will lose their land. That's a slap in the face to those men, to have a Japanese company, a company from a country that bombed Pearl Harbor in 1941, take their land. That's my statement.	Refer to ED-2.
Stephen Cumming	3/9/2018	Website	I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!	Comment noted.
Leon Cummings	2/6/2018	Oral	Okay. My name is Leon Cummins. I grew up over here at Shiro Roans Prairie area, and my family-- all my heritage goes back to that area. And I'm here to talk to everybody about the -- as that young man did a while ago, about the environmental impact of this thing. I treasure my critters that I have. I have lots of deer, I have lots of bobcats, and I want to keep them, you know, and all you got to do is change the territory and they're going to run out. They're going somewhere else. And so my biggest issue is that--the environmental effect on our animals that we have here. We're really blessed in this county. We're blessed with beautiful trees and animals, and we're bountiful with them. And so I'm real pleased to tell you that I love my Texas, and I'm a Texan and I don't want to go nowhere else. I'm right here. And so I'm having to defeat people like -- we defeated 69. At least we changed the route; went through that issue. We had highways and the pipelines keep coming. They just keep coming. And we keep challenging them, and we're going to challenge this one here, too. And I just want to let you know I am totally against this thing and will always be and have been from the get-go. I'm just now coming up out of the woods to say something, but all I can tell you is I live down in the woods down there in Richards, and I'm just -- I just want to do what I can to help everybody. I want to thank the people from outside the county that are here. I appreciate everybody coming to help us try to defeat this issue. And I will tell you that I've nurtured that land all my life, you know, and I want to continue is what I'm saying. It's been in our family over 100 years, and here comes somebody that wants to take it away from me. And so all I can tell you is we got these critters like the pileated woodpecker. I don't know if anybody knows anything about that dude, but he's around. And then we got, you know, things -- I don't know if you know anything about the	Refer to NR-2 and NR-5. In accordance with Section 106 of the National Historic Preservation Act and pursuant to 36 C.F.R. Part 800.4(b)(2) and 5(a)(3), FRA, TCRR, Texas Historical Commission, and other Signatories are developing and will execute a Programmatic Agreement (PA) that allows for the phased identification, evaluation and assessment of effects to historic and archeological resources as access to private land holdings becomes available and after publication of the Final EIS. All information provided by landowners and informants, including oral histories, regarding the presence of historical sites, artifacts, and cemeteries, will be used by project archeologists and cultural resource personnel to locate historic and archeological resources, both previously recorded and unrecorded within the Area of Potential Effects. The PA outlines a comprehensive methodology to

			<p>Spanish eagle. Those are beautiful things walking around out here. And so I got them all around me, and I just -- like I say, I don't want to lose them. I'm going to say something tonight that -- I don't know if -- Anna Beth came up there. I've known her all her life, too. I shouldn't say this, but I have discovered an Indian burial ground on my property, and I went to the historical bunch in the state of Texas down in Austin, talked to them, and they came out got it on document. How about that. And so they can't come within a quarter mile of this line. At least they can't come across there. I hope not, anyway. We've found all kinds of Indian lore, so this country is full of Indian lore. I want to tell everybody that. The Comanches 1 raided this country, the Bidai Indians. And I am really thankful that I have a great-great-great-grandfather who ran with General Sam Houston in Austin, and he was the first surveyor of Texas. His name was John S. Black. The stagecoach there unintelligible. And all these things are just all in my heritage. And I'm writing a book, by the way, everybody. Maybe some day I'll get it out here. I've been working on it about two years. I'm retired agriculture teacher with Cypress-Fairbanks for 31 years. Ran high school rodeo, and finally just walked away from it. I'm retired, finally. But anyways, I will tell you that, yeah, he ran with those guys and, man, they managed to get the Indians over there on the Indian reservation over at Alabama unintelligible. That's all in my heritage. But anyways, to keep going here real quickly, this railroad's going to cross over -- this rail's going to cross over a lot of historical stuff and going to go right across open cemetery area up there, there's Confederate graves up there and a Confederate burial ground up there. You got all kinds of railroad -- the old railroad used the run through Roans prairie, by the way, going to Dallas. And my grandfather used to ship cattle -- I got pictures of him loading cattle up there on rails head in Fort Worth. Thank you very much. Appreciate that. All I can tell you is we are losing a lot of grasses, too, by the way, in the right of way. We are talking about grasses like eastern gamagrass, blue stem. I don't know if anybody knows anything about them. They're some of the best native grass I've ever had for hay. And so we're losing all of those because of these kind of things coming through-- pipelines the rail. And so all I can tell you is that my mother was a schoolteacher. Tons of history in our background and our family. And my dad was county commissioner in this county. And my mother taught a lot of people in this county, and she enlightened me in the history of a lot of things, so I am going to share it with us in a book called -- I'm going to give you the name of the book. Okay? I'm going to call it Once in Grimes County Always in Grimes County. Now, that was given to me by a man named Howard Weaver. I don't know If you know anything about the Weavers, but they're neat, neat, neat people. My mother taught them in this county. And at the funeral, this big huge man steps up to me and puts his hand across like he was knocking at me and said, See that lady up there? He said, She taught me, just like that. And he told me, Mr. Cummins -- I told him I moved away, you know, from here, I grew up in Navasota. He said, Once in Grimes County always in Grimes County. And so I took that to heart, and it still inspired me to write this book that I'm writing. And so I'm in my third year of getting it done, but I'm getting it done. So I wanted to share that with you, and I thank everybody, like I say, from outside coming in to try to defeat this rail system. Okay? Thank you very much.</p>	<p>identify historic properties eligible for or listed in the National Register of Historic Places, and to consider avoidance and minimization measures to, as well as ways to resolve adverse effects for, those properties that may be affected. It also specifies that cemeteries in Texas are protected under provisions of the Texas Health and Safety Code in Chapters 711-715, Title 13, Part 2, Chapter 22 of the Texas Administrative Code; and in Section 28.03(f) of the Penal Code of Texas which prohibits the use of cemetery property for non-cemetery purposes. Cultural resources surveys have been conducted for portions of the Project area, though many areas remain to be surveyed and will be subject to the methodology outlined in the PA.</p>
Jeffrey Cupo	1/29/2018	Email	<p>As a resident of the DFW metroplex, it is about time we invest in a high-speed rail to connect these two large cities. The drive is ridiculously long and, when you add in construction and accidents, it becomes unbearable. I implore you to continue investing in mass transit options. It is about time the state moves beyond the 1940s and expands mass transit options. We have waited long enough. Is it possible to run it along land already in use for this purpose along the highway route? We must not let private land owners prevent progress in this State.</p>	<p>Refer to BA-9.</p>
David Currey	2/16/2018	Website	<p>I have studied railroads my entire life, and have ridden many Amtrak trains over the years, and even passenger trains of at least four different railroads before Amtrak. I worked for a class I railroad for five years (Missouri Pacific/Union Pacific), and have subscribed to many railroad related magazines over this same period, so I am knowledgeable of railroad related matters, and especially passenger rail. I've been keeping tabs on the Texas Central high speed rail initiative since early in the process. I've actually gone into the PDF files and studied the maps mile by mile. It seems to me that Texas Central has gone about this project in the absolutely correct way. While I thought the Houston station location should have been close to the Northwest Transit Center, I can understand the reasons for locating it at Northwest Mall, and I support that location. The design plan, which incorporates mostly elevated right-of-way (though I am also aware there will be other related aspects such as dirt and rock excavation and road realignments, as well as new roads, plus station construction), seems to me to be as environmentally friendly as is feasible. After construction, farmers will retain access to both sides of any properties that are built across, since the elevated R-O-W allows the unrestricted movement of animals and machinery. Houston and Dallas represent the 4th and 9th largest cities in the US based on population. Both cities reside in huge metropolitan areas. These are obviously the type of cities that would be the best opportunity for high speed rail. I wholeheartedly support the construction of this rail line, and think it is not only good for Houston, Dallas, and the state of Texas, but is something that is really needed in the area. This part of the country has always been treated as a passenger train wasteland by Amtrak, but this project can put Texas near the forefront of a new technology.</p>	<p>Comment noted.</p>
David Currey	2/27/2018	Email	<p>I support the Texas Bullet Train and the mall station location! While I would have liked to have seen the station location selected be across Old Katy Road from the Nolthwest Transit Center near 1-10 West and 1-610 West, I can also fully support the location selected at Northwest</p>	<p>Comment noted.</p>

			<p>Mall at Hempstead Highway and 1-610. The Northwest Mall location would be more conducive to usage by people living and/or working on the north and northwest sides of town, which areas are experiencing rapid growth especially along the Northwest Freeway and TX 249 corridors. This location is ideal for further economic development and should be easy to hook into the Houston transportation network. I reside on the northwest side of Houston near the race track, and the Northwest Freeway and TX 249 are the freeways/tollways I use the most. The improvements being made to both routes will improve access to the Northwest Mall station location. The location is also located close to downtown, and being on 1-610, it will have ready access from all parts of the city. I strongly urge that the Federal Railroad Administration expedite its approval of this Northwest Mall station site. Texas needs projects like the bullet train to alleviate transportation problems and to keep the state from falling behind other states, which are already in the process of building such high speed rail projects. I point out the California high speed rail line under construction, the Florida Brightline "higher speed" (110 mph) rail line that just began running, and the Illinois "higher speed" upgrades to Amtrak's Chicago--St. Louis route as examples of such initiatives that are greatly needed in this country. Houston, Dallas, and Texas need this bullet train. For Texas,</p>	
Scott Cutlip	3/6/2018	Website	<p>I live and work within a few miles of the proposed NW Mall station. I am in full support of the TCR's train and the location of the Houston Station. As a business owner we are trying to get more work in Dallas and this would help because we currently don't have an office in Dallas.</p>	Comment noted.

Paul D.	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. John Daigle	1/30/2018	Oral	Good evening. My name is John Daigle and we property in Leon County and I'm adamantly against this project for a number of reasons. Many things have been mentioned up here tonight. I want to bring the FRA's attention to the number 20 in their FAQ sheet. it talks about where the permits or permissions TCR has to start construction. It makes it sound like they're shovel ready. They out one really important thing. That eminent domain thing. That was brought up by Kyle so just keep that in mind. You have many rights when it comes to that. Hold tight and I know that most of you will. The other thing I want to talk about briefly that was brought up that caught my attention. I have a piece of paper here in my file from a year or more ago. It's something that's called the Railroad Preservation Finance Program. Don't be suckered into this. They will get federal money at some point. Rs just a matter of when if this thing ever goes. Federal money is paid for by everyone in this room. Don't ever forget that. It's going to happen. The FRA is a guilty party when it comes to that That is all I have to say. Thank you	Refer to ED-1 and GN-4.
Jessica Dainty	3/9/2018	Email	My entire immediate family lives in an area of Madison County directly affected by the proposed rail. If indeed it does come through, it will impede the emergency response teams that will need to get to my elderly grandparents in times of medical need. I also have a small child that if any emergency situation comes into play emergency teams will be slowed to reach us.	Refer to SS-23.
Crystal Dalby	3/9/2018	Website	I live in the White Oak Falls subdivision near Cy-Falls High School. I feel that taking away people's homes that they work and continue to work hard for is not a good idea. Taking away the homes in my neighborhood will affect the rest of the neighborhood by lowering our property values and increasing our homeowner association maintenance fees by the lower amount of homes that we will have left in the neighborhood. We already have issues with flooding, Hurricane Harvey and Memorial Day are just a few examples. The train and construction will only add to that. We have traffic issues with school buses, parents dropping off, students driving to school and others going to work. The construction will only add to the more constructed area that we have with the 290 construction, etc. Even though they say the high speed train will be going at a high rate of speed, the noise level will disturb us and our families and pets. Not to mention the vibrations that will occur with keeping up with the speed. Now, the high speed rail is going to be up off the ground but it's not to say that there will not be an accident at one of the poles that hold it up. That will affect the individual's lives that are driving around that area, the individuals on the high speed train, and the homeowners that are underneath or near the high speed rail pole accident. Do you want to put more people's lives at risk by adding to the already frequented driving area? At one of the meetings it was brought up that the technology for the high speed rail was going to be 50 year old technology. Don't you think, in this modern technology day and age, that it should be updated technology for the rail? The high speed rail built in Japan was built to accommodate a lower car driving area. This area is not equipped with subway stations and other non-driving areas. Out in Cypress/Houston, things are more wide spread out. The Japan train was built when there was more open area places that did not affect so many homes and land owners. Do you want to take land that has been passed down for generations away from these families and the future generations to come? The cost of the train in Japan is cheaper than ours due to the amount of people riding it. Here in Houston, not many people travel to Dallas for work. Most of us travel to downtown Houston, Galleria, medical center, etc not to Dallas. The cost also is cheaper to drive or fly to Dallas. It is not worth me paying to ride the high speed train, get off in Dallas and then having to rent a car when I get there to get around too. I might as well just drive there and already have my car with me. For those that communicate with people in Dallas for business, they have many forms of technology for communication (video conferencing) that they don't have to be riding the high speed rail in order to have a meeting with those in Dallas. We as Houstonians, did not get a true say so on this matter for it to be approved. This should be a proposition that we all must vote on and not a propaganda for the media or for Washington DC. I feel and think the high speed rail for Houston is not a good idea for the cost of riding, old technology, safety of others, noise level, drainage issues, traffic issues and the affects it will have on land and home owners for years to come. Sincerely. Crystal D.	Refer to BA-12, FP-1, GN-2, LU-3, NE-1, NE-9, NV-1, NV-5, PN-3, SC-3, SC-7, SS-1, SS-17, SS-19, TC-2, TR-6, VA-1, WW-1 and WW-2.

Dallas Regional Chamber	3/9/2018	Website	On behalf of the Dallas Regional Chamber, one of the state's largest and most influential business organizations representing 1,100 member companies that employ more than 500,000 workers, I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Central Partners' High Speed Rail project that will connect Houston to North Texas in 90 minutes. One of the Dallas Regional Chamber's main functions is to catalyze economic development in the North Texas region. Improvements in infrastructure play a vital role in economic development work and the high speed rail project is a game-changing opportunity for all. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The 90 minute high speed rail trip will unite the economic engines of the two most prosperous metro areas in Texas: the Cities of Dallas and Houston. The Dallas and Houston MSAs have the 4th and 6th largest GDP in the nation, respectively. Integrating these MSAs will generate an annual GDP of \$913 billion and combine the two workforces. This partnership will open up a labor market of roughly 7.2 million individuals, maximizing the strong business climate both cities have built. We support this project because in part it will: Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational with at least 25% of them in rural counties along the route; Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 2040; Bring the safest mass transportation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation; Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status; Preserve land access for property owners - a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; Give travelers with disabilities a safe, comfortable alternative to driving or flying - system meets or exceeds the requirements of the Americans with Disabilities Act (ADA); Remove up to 14,630 vehicles per day on Interstate 45 between Dallas and Houston - vehicular traffic on I-45 is projected to increase more than 200% by 2035, the high speed rail project will decrease barriers to the transport of people and goods. From a local perspective, the Dallas station as identified in the Draft Environmental Impact Statement (DEIS) is located in the historic Cedars area, a section of South Dallas currently undergoing revitalization. The DEIS's stated rise in property values of between \$71.4 million and \$161.1 million will help harness and expand on the current momentum of the area. Additionally, the new jobs created by the project will provide employment opportunities for residents in the area. The Cedars station will also be on the edge of Dallas' central business district and will seamlessly plug into the existing light rail system, the Dallas Area Rapid Transit (DART). We are excited to support the first true high-speed passenger train system in the United States - a transportation infrastructure project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously complete the remaining steps in the review.	Comment noted.
Abigail Daniel	3/9/2018	Website	I support this project and would like to see this built. I have relatives in Ft Worth/Dallas and regularly have to drive up there and definitely find this as a preferable option.	Comment noted.
Michael Daniel	3/6/2018	Website	The lack of serious evaluation of the advantages or disadvantages of other locations for the Dallas Terminal is inconsistent with the obligation to disclose and weigh the environmental consequences of the alternative courses of action. This includes the evaluation of the environmental justice consequences of the choice of the Dallas Terminal location.	Refer to EJ-1, GN-7, NE-1 and NE-9.
Pamela Daniel	3/9/2018	Website	This is a welcomed addition to our modern city. It will put both Houston and Dallas on the map with the east coast and west coast. We need more transportation options in our city besides cars and planes to travel within the state. THANK YOU!	Comment noted.
Stephen Daniel	3/9/2018	Website	This is an essential step for Texas to move ahead into the future. It will generate more business for both Dallas and Houston.	Comment noted.
Michael Daniels	1/31/2018	Oral	Good evening, I'm Mike Daniels, County Commissioner precinct two, and I just want to say to the lady who just spoke, I'm really proud of all of you standing up for your right. I think it's wrong that when someone just can run over you and take advantage of your rights and when I sit and hear all of the people and how you speak against this -- we're against this. We are not for it at all. And where do our votes count? Every town you go to the people say they don't want it, but it doesn't matter, their votes doesn't count. You don't take it into consideration. You say you take it into consideration but if you really took it into consideration and you thought about the people who own the property, people who have great passion for their property, the people who worked hard for their property then you would say this is not a good deal. This is not a good deal for Freestone County. As we have said, we are at a crossroad. We are losing the power plant that means that jobs are gonna be leaving. Then all of a sudden you want to come through with the train which is going to slow people down on the interstate that would stop, that would spend money in Freestone County. You have not shown me not one place that this is gonna benefit us in any way. The train's not gonna stop here. It's not gonna bring any people into our county and we are about the people. So I'm here today to let you know that I fully support the people. The people do not want it and we do not want it. May God bless you.	Refer to PN-3 and SC-19.
Willis Daniels	1/29/2018	Website	I'm concern with the impact on the train and the land I own. No one has been able to answer the true impact of the train and construction. The preferred route runs approximately 500' in front of my property. I'm in the process of building an 300K home, plus barns and cattle	Refer to ED-2, NV-1 and VA-1.

			corral. Will this project affect the value of this property. Additionally, what will the noise impact be. I didn't purchase this land with plans for a home, to listen to 68 trains daily.	
Rizalina Dannug	2/16/2018	Website	Modern transportation and it will create new jobs in Texas. Hoping for safety and not too expensive fee when completed	Refer to SC-3 and SS-1.
Lisa Darling	3/5/2018	Website	The Awty International School strongly supports the Northwest Mall site as the terminus for the High Speed Rail. The Northwest Transit Center would have severely detrimental impact on our school, which is located very close to the Transit Center. Costs would surely be much higher if that site were selected as well, as it is more densely urban, and is surrounded by expensive residential and mixed use property. The Northwest Mall site would provide much more space and parking and would transform a declining and almost derelict property. It makes so much more sense, so if the project proceeds, we hope that you will select the Northwest Mall as the terminus site. The Awty International School would be happy to make further comment if it would be helpful.	Refer to GN-9 and SC-8.
Galileo Darwin	1/30/2018	Email	CONTINUED: 5) Because the currently proposed high-speed train does not offer a faster or more convenient travel option than current modes of travel (let alone soon to be available other alternatives), the only way that the high speed train will be an economic success is by being significantly cheaper than travel by airplane. No such information has been provided because I suspect this is unlikely. 6) For the above reasons, this project will likely be a complete economic failure. As such, this project should not go forward, but if it does absolutely NO TAX dollars should ever go towards this doomed project.	Refer to BA-12, GN-4, NE-1, PN-3 and SC-3.
Galileo Darwin	1/30/2018	Email	CONTINUED: 3) Any high-speed train line will be a tempting target for terrorists, and it will be very costly to try to secure the entire line. And if terrorists are successful in blowing up part of the line, the entire system will be shut down for an extended period of time. 4) The advent of self-driving vehicles will make people more likely to use a car to travel between Houston and Dallas than use either an airplane or a high-speed train because self-driving vehicles will allow for stress-free travel from any departure point directly to any destination in the privacy of a vehicle. Eventually, there will be dedicated self-driving lanes on the highways that will enable even faster travel by such vehicles.	Refer to SS-2, SS-6 and SS-7.
Galileo Darwin	1/30/2018	Email	The currently proposed high-speed train will not provide for faster travel between Houston and Dallas. While supporters of the project tout a 90 minute travel time, they do not take into consideration the time required to drive to the train station, go through some form of security, wait for the train to arrive, board the train, and then get a cab or rental car once you arrive in either Houston or Dallas. Given that a flight between Houston and Dallas takes about 45 minutes, there is no reason to believe that travel by train between Houston and Dallas will offer a faster travel option. By the time that the proposed high-speed train is built, it will already be outdated. Elon Musk's Hyperloop concept will allow speeds of over 700 mph, or twice the speed of existing maglev high-speed trains. If Texas is going to start building high-speed trains, it should use at least go with the highest speed trains possible.	Refer to BA-4 and PN-3.
Galileo Darwin	1/31/2018	Email	Dear Federal Railroad Administration, As a native Texan, I want what is best for Texas, and I do not consider the currently proposed high-speed train between Houston and Dallas to offer any benefits relative to existing modes of travel between Houston and Dallas, namely travel by plane and car. As such, I do not see the point of this endeavor. Moreover, soon-to-be-available technologies, namely the Hyperloop train concept and self-driving vehicles, will make the currently proposed high-speed train either outdated or even less desirable as a mode of travel. 1) Speed: Supporters of the project tout a 90 minute travel time; however, they fail to take into consideration the time required to drive to the train station, go through some form of security, wait for the train to arrive, board the train, and then get a cab or rental car once you arrive in either Houston or Dallas. Given that a flight between Houston and Dallas takes 60 minutes from Hobby to Love Field, there is no reason to believe that travel by train between Houston and Dallas will offer a faster travel option. Elon Musk's Hyperloop concept will allow speeds of over 700 mph, or twice the speed of existing maglev high-speed trains. The Hyperloop concept would offer a slight time advantage over travel by air although it could be a lot more costly per passenger than air travel. 2) Stress: While driving between Houston and Dallas directly to/from a passenger's destination point usually takes longer than travel by plane/train, there is not the stress of making sure to leave with enough time to arrive at the airport with enough time to catch the plane/train, driving to an airport or train station, going through some form of security, waiting for the plane/train, boarding, riding on a crowded plane/train, catching a cab or renting a car, and then repeating all on the return trip. In a car, you can depart anytime and you can also stop off for many different types of food and snacks. The downside of travelling in a car is the stress of driving. However, with the advent of self-driving vehicles, this stress will be removed allowing individuals travelling by car to do work, watch movies, or even sleep as they travel in the privacy of their own vehicle. As such the currently proposed high-speed train does not offer reduced stress relative to air travel, arguably more stress relative to travel by car, and definitely more stress relative to travel by self-driving car. 4) Throughput: Another potential justification for the currently proposed high-speed train between Houston and Dallas is increased	Refer to BA-4, GN-4, PN-3, NE-1 and SC-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			passenger throughput between Houston and Dallas. However, this can be accomplished with expanded airports in Houston and Dallas as well as widening 145 between Houston and Dallas. Given that self-driving vehicles will increase the demand for travel by car between Houston and Dallas, 145 will likely need to be expanded anyway. At the same time, once there is at least one dedicated self-driving lane on 1-45 between Houston and Dallas, these self-driving cars will enable significantly increased throughput without adding more lanes. At the same time, any high-speed train line will be a tempting target for terrorists, and it will be very costly to try to secure the entire line. And if terrorists are successful in blowing up part of the line, the entire system Will be shut down for an extended period Of time. Thus, it would be unwise to rely on a high- speed rail for expanding passenger throughput between Houston and Dallas.	
Galileo Darwin	1/31/2018	Email	As a native Texan, I want what is best for Texas, and I do not consider the currently proposed high-speed train between Houston and Dallas to offer any benefits relative to existing modes of travel between Houston and Dallas, namely travel by plane and car. At the same time, once there is at least one dedicated self-driving lane on 1-45 between Houston and Dallas, these self-driving cars will enable significantly increased throughput without adding more lanes. At the same time, any high-speed train line will be a tempting target for terrorists, and it will be very costly to try to secure the entire line. And if terrorists are successful in blowing up part of the line, the entire system Will be shut down for an extended period Of time. Thus, it would be unwise to rely on a high- speed rail for expanding passenger throughput between Houston and Dallas.	Refer to GN-6, PN-3, RF-2, SS-17, TR-3, and TR-4.
Jay Dave	2/16/2018	Website	There is no Environmental Impact and everything about Environmental Impact is scam & BS. We need this TRAIN, so stop working for Lobbyist.	Refer to GN-1, NE-1, NE-9 and PI-1.
David Davenport	2/6/2018	Website	I have been a proud landowner on Binford Road for nearly 20 years. We love the peace and quiet this community offers and enjoy living there very much. I have two sons and four grandchildren and I wonder, "What is best for their future? What is best for their children's future?" I believe that the bullet train that will soon go through our neighborhood is just that. That being said, everything Texans Against High Speed Rail says is wrong. They base their campaign of misinformation on lies and deceit. I urge you not to fall for their tactics. I also ask you to write, email, or call your elected officials and tell them that you support this project. In closing, I ask: if there is a "no build", how will our children and grandchildren deal with the consequences? If TAHSR has its way, this project will be an opportunity missed. I ask you to do the right thing and build the Texas Central train-for us and for future generations.	Comment noted.
H.M. Davenport	1/29/2018	Oral	Hi, everyone. I am your county judge, H.M. Davenport. Thank you all for coming out tonight. This is just so great to see this kind of support regarding something that we don't want and we don't need. Just that simple. Okay? One of the things that we have to look at is the impact on the county, and that impact regards land use damage assessments; property value impact studies; transportation need assessments; noise and vibration impact studies; staff time or the need for us to add staff to the county government to be able to deal with some of this; engineering, we don't have an engineer on staff, folks; legal reviews; emergency management impact study. I'm, of course, director of emergency management, and we also have a coordinator and another group of folks who work with us to help us be able to do that. You-all all remember the flood of 2015. In my house I had 22.75 inches in 24 hours. Not a fun thing. But also the independent school district	Comment noted.

			<p>impact studies, economic development impacts, thoroughfare impacts, high speed rail regulations. There is so much to this that we have to be concerned with.</p> <p>And it was already brought up about folks who have land that's been in their family for over a hundred years. Certainly we need to protect that. The disrupting that that land, the residences where families have raised generations of children brought up in Navarro County, all cause a substantial degrading changing the way the land is used is what this railroad will do to us; not to mention the disruption of highways, roads, and school bus routes.</p> <p>Navarro County remains against this project. The county commissioners have already done a resolution against the project. Navarro County remains against the construction of the high speed rail especially when it's not really needed given our highway system and flat surfaces already in place. Thank you.</p>	
H.M. Davenport	2/26/2018	Letter	<p>It has been brought to our attention that the Draft Environmental Impact Statement (DEIS) prepared by the FRA includes relocation and realignment of public roads within Navarro County. Further, we understand that it is assumed that existing roads may be altered or closed and new roads are proposed to be constructed within Our jurisdiction for our future ownership, responsibility and maintenance. Please be advised, based on the information currently available, any construction, relocation or realignment Of county roads within our county is not acceptable and will not be granted. Further, even if county roads were to be moved or altered, Navarro County will not accept responsibility for new or additional roads without a long-term maintenance reimbursement plan in place. In addition, the Commissioners Court will require that all county roads remain open for use by the travelling public both during and after construction. I am enclosing resolution no 102-2018, which clearly expresses the Navarro County Commissioners Court's views On these matters. They are consistent with state law. This resolution was passed on February 26, 2018. Finally, the County has received a copy Of comments by LCA Environmental, Inc. to you on the DEIs. Those comments refer to a new proposed (byLCA) Route 3Z. We have reviewed the comments by LCA and agree that if any route is ever approved by the FRA, Route 3Z is preferable to the other routes proposed by Texas Central Railroad. To be clear, Navarro County opposes any route for High Speed Rail. But, if a route is approved, we prefer Route 3Z (as set forth in the LCA comment) to the other routes. Regardless, Navarro County will still insist on compliance with the enclosed Resolution. Please make the necessary adjustments to the DEIS document(s) to take this into account. At this point, we cannot even begin to evaluate the impacts to our County until the DEIS investigative findings are consistent with county regulations and the policies of the Commissioners Court. Once the DEIS has been updated and issued, only at that time will we be able to begin our detailed review and provide additional comments. M. Davenport, Jr. Navarro County Judge RESOLUTION NUMBER A RESOLUTION OF THE COMMISSIONERS COURT OF NAVARRO COUNTY, TEXAS, REGARDING THE COMMISSIONERS COURT'S INTEM TO DECLINE TO DISCONTINUE, ABANDON, CLOSE, VACATE OR ALTER A COUNTY ROAD IN CONNECTION WITH THE PROPOSED HIGH SPEED RAIL PROJECT; AND THE COMMISSIONERS COURT'S REQUIREMENT THAT IF A RAILROAD LINE IS LAID ACROSS A COUNTY' ROAD IN NAVARRO COUNTY, THE RAILROAD COMPANY SHALL CONSTRUCT AND MAINTAIN THE CROSSING, DURING AND AFTER CONSTRUCTION, SO THAT THE TRAVELING PUBLIC MAY USE THE COUNTY ROAD FOR ALL REASONABLY ANTICIPATED PURPOSES. WHEREAS, the Texas Central Rail and Infrastructure, Inc. ("TCR") has indicated its intent to establish the Texas High Speed Railway on a route from Dallas to Houston that travels through Navarro County, even though TCR does not have eminent domain power; and WHEREAS, the Draft Environmental Impact Statement ("DEIS") released in December of 2017 shows that the proposed route will cross at least fourteen county roads (and many other state, farm to market and private roads as well); and WHEREAS, pursuant to 5251.051 (a) ofthe Texas Transportation Code, the Commissioners Court has the authority to order that public roads be laid out, opened, discontinued, closed, abandoned, vacated or altered; and WHEREAS, neither TCR nor any actual railroad company (which TCR is not) has the authority to discontinue, close, abandon, vacate or alter any county road; and WHEREAS, Section 112.059@) of the Texas Transportation Code also provides that "each railroad company [which TCR is not] in the state shall place and keep the portion of the company's road bed and right-of-way over or across which a public county road runs in proper condition for the use of the traveling public;" and WHEREAS, the DEIS appears to assume that the counties through which the proposed route will pass, including Navarro County, will cooperate in relocating and closing county roads to accommodate TCR ' s proposed route; and WHEREAS, since the Commissioners Court of Navarro County has the sole control over all roads, highways and bridges in the county, and has the authority and obligation to ensure that any crossing of a county road by a railroad company results in the county road being maintained in its proper condition for use by the traveling public, the County Commissioners of Navarro County makes this resolution to express its intentions. THEREFORE, the County has determined, and by this Resolution hereby determines the I. The Commissioners Court does not intend to and hereby declines to close, abandon, vacate or alter any county road to accommodate the proposed the high speed railroad route; and 2. The Commissioners Court also requires that i f TCR ever acquires eminent domain power and seeks to establish its route across any county road in Navarro County, the county road that is affected shall at all times, during and after construction, be maintained for use by the traveling public, including specifically the typical public uses to which county roads in Navarro County are often subjected, such as use by vehicles, equipment and machinery necessary to conduct operations oil and gas operations (drilling, reworking, producing, etc.), farm vehicles and equipment</p>	Refer to ED-3, LU-5 and TR-8.

			<p>typically used in agricultural production, manufactured and mobile homes, and all other uses, whether named or not, for which Navarro County county roads are typically used. PASSED AND APPROVED BY A MAJORITY VOTE OF THE COMMISSIONERS COURT OF NAVARRO COUNTY ON THIS THE 26th DAY OF February, 2018.</p> <p>Finally, the County has received a copy Of comments by LCA Environmental, Inc. to you on the DEIs. Those comments refer to a new proposed (byLCA) Route 3Z. We have reviewed the comments by LCA and agree that if any route is ever approved by the FRA, Route 3Z is preferable to the other routes proposed by Texas Central Railroad. To be clear, Navarro County opposes any route for High Speed Rail. But, if a route is approved, we prefer Route 3Z (as set forth in the LCA comment) to the other routes. Regardless, Navarro County will still insist on compliance with the enclosed Resolution.</p>	
Courtney Davidson	1/30/2018	Email	<p>The renderings look great. My main concern is regarding the existing parking lot that serves the Alamo Drafthouse. This parking lot is barely large enough to serve the theatre, but the renderings show this lot will be cut in half by the new parking structure to serve the rail line. What measures are being taken to ensure the new project does not worsen parking conditions for existing businesses in the area? Will movie goer's be allowed to park in the structure free of charge? Some agreement for free parking that currently exists, but appears to be proposed to be eliminated, needs to be ensured for the future of such a great asset as a movie theatre in the downtown area.</p>	<p>The parking owned by Alamo Drafthouse will not be affected, however, parking south of Austin Street is on property not owned by Alamo Drafthouse and would be acquired. Property acquisitions will be made between the landowners and TCRR. The Dallas Terminal Station Option would convert commercial and civic land to a transportation use. The remaining areas of the terminal station site are already used for transportation (e.g., UPRR, IH-30 and surrounding roadways). Construction and operation of the Dallas Terminal Station Option would not substantially change the pattern and intensity of land use in the area and would be compatible with adjacent land uses. The Dallas Terminal Station Option could indirectly lead to increased land use densities in proximity to the terminal and facilitate the development of transit-oriented development (TOD) in downtown Dallas, which would be consistent with local plans and policies and existing redevelopment efforts in the area. Due to the existing pattern, intensity and character of land use within the terminal station area, the conversion of land use to transportation would not adversely impact the area. Zoning designations at and around the Dallas Terminal Station area are Planned Development and Central Area. The Planned Development zoning designation offers design flexibility for land use and carries specific development conditions, while the Central Area zoning designation accommodates existing development in the central area of Dallas and seeks to prevent the increase of street congestion. Prior to construction, TCRR would be required to obtain a development permit from the City of Dallas for the Dallas Terminal Station. During the permitting process, TCRR would coordinate with the City of Dallas to ensure compliance with all relevant zoning and special purpose district regulations. As previously described, one of the allowable land uses for the planned development is a railroad passenger station. Therefore, no impacts with the zoning designations or special purpose districts would occur as there would be no conflict with any applicable land use plan, policy or regulation of an agency with jurisdiction over the Dallas Terminal Station Option.</p>
Daryl Davis	2/16/2018	Website	<p>I'm super excited to see this project, which uses no Federal money, come to fruition, and see Texas remain a competitive economy, and also to ride this train to Houston to visit friends and family</p>	<p>Comment noted.</p>
Don Davis	3/5/2018	Website	<p>The Northwest mall location will still affect the The Awty International School if the traffic to access the Northwest mall site and the northwest transit center utilizes North Post Oak. We already have enough traffic on this road with the business, single family housinfg, and our 1650 student school without adding additional traffic. If the feedr is utilized along 610, this will help significantly, but I believe the only route from the energy corridor will be I-10 unless Metro and TxDot create some easy on and offs from 610 loop.</p>	<p>Refer to GN-9.</p>

Ester Davis	1/29/2018	Oral	Well, I love the idea of the high speed rail. Over the last 40 years I have traveled from Dallas to the Houston area so I really waiting and wanting for the high speed rail. I know some of the opposition because we did on land in Montgomery County so, but Dallas and Texas does have the land mass. Perfect city and perfect place for the high speed rail. Thank you.	Comment noted.
Janet L. Davis	3/9/2018	Email	Hello, FRA. We are opposed to the proposed high-speed rail project: Per those in favor of the train, the train is supposed to help with traffic congestion. But what about the additional city congestion created BY the train? That is, the hoards of drivers driving to and from the two primary stations located in Houston and Dallas? (And I say hoards, because regular hoards will be needed to financially support, via ticket purchase, the maintenance of such a train system.)	Refer to GN-6, TR-3, TR-4 and TR-5.
Janet L. Davis	3/9/2018	Email	Hello, FRA. We are opposed to the proposed high-speed rail project: It is not the right sort of project for our state. Why would we want some of our beautiful, and important, rural counties to be torn up, and residents displaced and/or otherwise negatively affected, for a project we feel is ultimately doomed to fail? The project just doesn't make sense in a practical way (except, perhaps, to those who are pushing it). And many, or most, negatively impacted residents wouldn't even be able to use the train, since the proposed stations aren't at all convenient to them. Who and where ARE the people who all day long, every day, are going to ride this train from Houston to Dallas (with at most only one stop along the way)? Wouldn't the ridership need to be steady, and huge, for this project to be viable?	Refer to BA-6, GN-2 and NE-1.
Janet L. Davis	3/9/2018	Email	Hello. We are opposed to the proposed high-speed rail project: First, we feel that residents in the affected areas haven't been, and aren't being, adequately represented by the Federal Railroad Administration and TXDOT. Yes, some public meetings have been held (though with inadequate advance public notice), to "dot the i's and cross the t's." But from our point of view, and the points of view of everyone we know locally, so what? The "bullet" train practically seems like a done deal, even though so many citizens are clearly opposed to it. The FRA has neglected to meet with the Waller County Sub-Regional Planning Commission, despite multiple requests over the past couple of years or so by county judge Duhon. (My understanding is that that isn't legal.) And I know that a few years ago, in earlier stages of the project, I myself had trouble when trying to voice my opinion and ask questions on the FRA website. All comments were supposed to have been posted publicly (and later included in a report), and questions answered, but my first set Of comments altogether disappeared from the website. When I pointed that out to the FRA, no one responded. And none Of my questions were ever answered. Maybe certain politicians and certain residents of Houston who haven't bothered to study the project in any sort Of in-depth way are in favor Of the Dallas-to-Houston HSR. ("A high-speed train - wow!") But many people actually are not in favor of the project, and we tend to feel we don't matter.	Refer to NE-1, PI-1 and PI-7.
Jessica Davis	3/9/2018	Website	I travel on this highway at least six times a year and would love to have a safer alternative for my travel. Drivers on this road can be very reckless. I would definitely vote in favor of the railway.	Comment noted.
Joy Davis	2/19/2018	Website	This project should only go through if the power of eminent domain is not used. If they can acquire the necessary land through private treaty then fine. But in no way, shape or form should this project be allowed eminent domain authority.	Refer to ED-1.
Matthew Davis	2/23/2018	Website	I strongly support this project.	Comment noted.
Mikeall Davis	2/10/2018	Website	Y'all haven't taken enough land from the Indians? Now your gonna take from your own citizens for something that really isn't needed? Shame.	Refer to PN-3.
Rebecca Davis	2/6/2018	Handwritten	No.	Comment noted.
Rhett Dawson	3/1/2018	Website	I support this project even though I live in Waco and would not be directly affected by the initial highspeed route. I think that offering a highspeed multimodal transportation system lays the foundation for future projects that will help support economic growth in Texas and will impact Waco in the long-run.	Comment noted.
Alicia Day	2/6/2018	Oral	Hi, I'm not a speaker so it's little bit harder for me, but I'm so passionate about it. I'm just thinking. I read the other day that Drayton McLane, the former Astros owner, is now the Chairman of the Board for TCP. And I feel like if these guys believed in this project, you know, let them find a way to get it financed. All of these people are so rich and so connected, they can get it financed if it's that good of a project. If they are not blocked from putting taxpayers on the hook for the expenses and the liabilities of their pet project, if they can call themselves a railroad when they own zero tracks, zero trains, and seize our land, what's to stop the first two rows of this room from seizing Drayton's land? I mean, it's so illegal, and if it's legal for one group to do, why wouldn't it be legal for another? This is just, on the face, such a horrible, horrible, concept; it just needs to be no-build.	Refer to ED-1, ED-2 and GN-4.
Marie Day	2/6/2018	Website	I am demanding the no construction option for this project. The reasons are what many, many people have said. My addition to this is: I'm sick and tired of government being in bed with developers. Please show character strength and recognize this project is a boon-doggle. thanks "It may not run through your property," said Duhon. "But rest assure it will run through your pocketbook."	Refer to GN-4 and NE-1.
Jamie De La Rosa	2/6/2018	Letter	IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 -a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the	Refer to GN-3 and LU-4.

			Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail protect could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area	
Jamie De La Rosa	2/6/2018	Letter	IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS	Refer to FP-1, WW-1, WW-2 and WW-8.
Jamie De La Rosa	2/6/2018	Letter	I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do- able, that will bring more residents to this area, as well of jobs, and businesses. But, none will be able to be completed Train Cuts through, which will also be Stifling to All Future Economics Development in this area. HC-4 route through Waller/Harris County: This route Is some three miles west Of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA Failed TO Coordinate With The Local Waller County government .	Refer to LU-4, PI-1, SC-13, TR-1 and TR-8.
Jamie De La Rosa	2/6/2018	Handwritten	Reference: IMPACT OF PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! No one has considered the lives of the residents that live in our community, or our safety Of an explosion, from the speed of the train. Again, FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to EU-2, EU-6, EU-7 and PI-1.
Jamie De La Rosa	2/6/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to NR-1, NR-2, RF-2 and WW-1.
Jamie De La Rosa	2/6/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Jamie De La Rosa	2/6/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This Is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile Stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to NR-2, RF-4 and WW-2. 			<p>visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.</p>	
<p>Jamie De La Rosa</p>	<p>2/6/2018</p>	<p>Handwritten</p>	<p>REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.</p>	<p>Refer to LU-3, LU-4, RF-1 and VA-1.</p>
<p>Jamie De La Rosa</p>	<p>2/6/2018</p>	<p>Handwritten</p>	<p>REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS. Sincerely From a Concerned Citizen of Waller/Harris County.</p>	<p>Refer to FP-1, WW-1, WW-2 and WW-8.</p>
<p>Jamie De La Rosa</p>	<p>2/6/2018</p>	<p>Handwritten</p>	<p>REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	<p>Refer to NR-1.</p>
<p>Jamie De La Rosa</p>	<p>2/6/2018</p>	<p>Handwritten</p>	<p>REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would not be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future</p>	<p>Refer to EJ-1, NV-5, PI-1, PN-3, PN-5, SC-19, SS-1 and VA-1.</p>

			disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	
Jamie De La Rose	2/6/2018	Website	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the high speed rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines, and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile stone down, with an un-needed, un-wanted high speed rail. How can Waller grow with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to NR-2, RF-4, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Michael Dean	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Neil Dean	2/28/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. THE TRAIN, ON ITS CURRENT COURSE, WILL HAVE A TRAGIC IMPACT ON THE RANCH LAND WHICH HAS SERVED AS A VALUABLE NATURE SANCTUARY AND RETREAT FOR PROFESSIONALS, FAMILIES AND ORGANIZATIONS THROUGHOUT NORTH TEXAS. PLEASE CONSIDER CHANGING THE ROUTE AWAY THE MORGAN LEGACY RANCH LAND.	Refer to FP-1, LU-5, WW-1 and WW-2.

			years ago, I added 25 acres to that. I drove an hour and a half to come to this meeting tonight simply because I wanted to stand with my friends and neighbor and look at facts about what's going on. The party environmental impact study is the effect on human beings. I think it's overwhelming negative all the way from Houston to Dallas and that's a huge bearing on this report. I also did just a little research today about numbers and again, admittedly I'm an educator, not a business man. I've been in public education for 45 years all over this state, at least the eastern half of it, primarily in small communities. And I understand the love people have for their land and the negative impact it has. Just tonight the Houston Chronicle printed an article naming the site of the Houston station with an estimated cost of this railroad at 15 to 18 billion dollars, which is on the small side. There's other estimates running over 20 billion dollars. According to the Texas Central Railroad they stayed they'll have 5 million travelers by 2025. Let's do the math. At \$200 a ticket, 5 million riders by 2025, that's only a billion dollars. And if they spend 18 minimum to build it, when do they show a profit? When do the investors get a return? Like everyone said, it's smoke and mirror and even their own figures speak against it. So again, I'm against it and I stand with you. Thank you.	
John DeBrock	2/27/2018	Website	I believe this project is a mistake. The ridership projections are extremely optimistic and hard to justify. I understand from the public meeting I attended that the impact on the quality of human life is to be considered as part of the environmental impact. When the multiple, negative effects of land owners at or near the tracks are considered, it should be clear that the lifestyle of many landowners will suffer. In cases where entire tracts of land are taken, there may not be a replacement available in the area. I see little chance of this project being economically viable without huge input of our tax dollars, as has been the case with almost every other project of this type. I encourage you to put a stop to this project so landowners in the affected areas can resume their lives with certainty and before it cost any more taxpayer funds.	Refer to ED-2, GN-2, GN-4, LU-11, NE-1 and NE-9.
Christopher Deegear	2/4/2018	Letter	Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-1, NR-2, RF-2 and WW-9.
Christopher Deegear	2/4/2018	Letter	Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Christopher Deegear	2/4/2018	Letter	The proposed alignment Will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-13.
Christopher Deegear	2/4/2018	Letter	Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-3, RF-1 and VA-1.
Christopher Deegear	2/4/2018	Letter	Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-4 and SC-12.
Christopher Deegear	2/4/2018	Letter	Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-2.

Christopher Deegear	2/4/2018	Letter	Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President Of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AS-1, NV-1, NV-5, TR-6 and TR-8.
Christopher Deegear	2/4/2018	Letter	The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, SI .8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose SI .3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$ 1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EJ-1, LU-3, LU-4, SC-3 and VA-1.
Christopher Deegear	2/4/2018	Letter	One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Christopher Deegear	2/4/2018	Letter	IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. 			attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Christopher Deegear	2/4/2018	Letter	The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EJ-1, LU-3, LU-4, SC-3 and VA-1.
Christopher Deegear	2/4/2018	Letter	The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5.
Christopher Deegear	2/4/2018	Letter	One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Christopher Deegear	2/4/2018	Letter	The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development Of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers.	Refer to ED-2, LU-4 and PI-1.
Christopher Deegear	2/4/2018	Letter	The Waller Harris Emergency Services District No. 200 ("ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SS-12, SS-18, SS-23 and SS-26.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Christopher Deegear	2/4/2018	Letter	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere...	Refer to GN-3 and NE-1.
Christopher Deegear	2/4/2018	Letter	Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 Of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Christopher Deegear	2/4/2018	Letter	FRA FAILED TO PERFORM A PROGAMMATIC ANALYSIS FOR THE EIS The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. S 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Christopher Deegear	2/6/2018	Handwritten	IMPACT ON WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2.
Christopher Deegear	2/6/2018	Handwritten	IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5, SC-6 and TR-8.
Christopher Deegear	2/6/2018	Website	IMPACT ON PUBLIC SAFETY At the coordination meeting between WCSRPC and TXDOT on February 9, 201 6, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 -- 20,000 lbs released, and June 11, 2007 -- unknown quantity On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department Of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-6.
Christopher Deegear	2/6/2018	Website	The proposed alignment Will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was	Refer to SC-5, SC-6 and TR-8.

			brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Christopher Deegear	2/6/2018	Website	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-2, RF-4, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Christopher Deegear	2/4/2018	Letter	The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "... we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options."	Comment noted.

Elizabeth DeLaney	3/9/2018	Website	Yes! I hope it is built. All progress involves difficulties, so it's reasonable to expect some. Anyone who has spent time in Europe has seen that train networks improve travel access and efficiency. It will be an advantage for Texas and Texans.	Comment noted.
Jose DeLeon	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
David & Julie Delesandri	NA	Website	We say No to high speed rail!!	Comment noted.
Maria Dellaplain	2/7/2018	Website	Why is it that so many people are opposed to change? Even if it's to their advantage, their first reaction is to oppose it. It's the discomfort associated with "getting out of their comfort zone" and it's killing the US by slowing changes that would allow us to keep a developed-country status. Even Uzbekistan is building a high speed rail! It was in the news a week ago. Getting the most cars, which mostly have just 1 or 2 persons inside, out of the streets is a win for the environment. The standards for what's allowed on the streets is very low. Cars with big exhaust problems, dripping oil, they all make it through the official vehicle inspection. Or worse yet, they don't inspect them and are running with expired registrations (did I hear banana republic?) People are brain-washed and want to keep on believing that the US is the most developed country in the world and will close their minds to all the examples of the more civilized activities that many other countries do. Please, just don't doom the project by letting them have extremely expensive tickets that will make even people like me choose the car. I rather spend the extra 2-2.5hrs driving that pay a ridiculous amount, especially if I'm traveling with my spouse. Look at Italy, France for examples of prices which are extremely low if bought 4wks in advanced.	Refer to NE-1 and SC-3.
Heather Dempsey	3/9/2018	Website	We strongly oppose this train. We have been homeowners since 2002 and will be within the two mile zone. There's not enough demand to warrant the build. We attended your meeting and most are opposed. It will be a traffic and environmental nightmare. Pipelines running under 290 - the proposed train. A disaster. Visually and functionally. Crime will in crease. Air quality decrease. It's not economically viable.	Refer to AS-1, NV-1, PN-3 and SC-19.

Roger Demuth	2/5/2018	Oral	But what I don't understand is it's supposed to be done by the environmental impact. When you're talking about the environmental impact we got two corridors. We've got an environmental corridor -- a utility corridor and a transportation corridor. Why do they want to put a transportation system down in the utility corridor? We've already got electrical lines there, and as other people mentioned the gas lines and oil lines. If it's got to go in, against that, but if it's got to go in, put it down I 45, put it down the transportation corridor, not down in the utility corridor. And if you want to least environmental impact, it's a no brainer to me. Why would go down a utility corridor with a transportation system? And I haven't heard that tonight. I've heard a lot of good talks and everything else.	Refer to BA-9.
Troy Denison	2/7/2018	Website	I strongly support the Dallas-Houston HSR development...I travel to Texas often and would love nothing more to ride the HSR...hopefully this will be the impetus to developing HSR for other areas of the USA...it's long overdue... Troy Denison	Comment noted.
Kevin Denney	3/6/2018	Website	Dear Sir / Ma'am; I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. I am a first responder and Chief of Police for the Red Oak ISD and have had the pleasure of being a guest on this property several times to both enjoy the facilities and train. I would urge you to consider moving the track away from the ranch to a location that would not cause such destruction of a regional treasure. Thank you for your time and consideration of this matter. Kevin Denney Red Oak ISD Chief of Police	Refer to LU-5, NR-2 and WW-1.
Brian Dennis	2/21/2018	Website	I have concerns about the high speed rail in Navarro Country travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
David M Densford	2/16/2018	Email	I want to encourage rural 55 senior community development in Grimes County. The idea is to increase ridership of semi-retired and retired grandparents who move out of the big cities to a quieter lifestyle. The residents from DFW, Houston, BCS and everywhere in-between can travel back to the city to visit family and friends or the grandkids can ride out to visit the grands. By focusing on 55 empty-nester developments (independent-living) for all income levels initially, Grimes County can benefit from an increase in revenue without the drag of needing schools for your commuters. Now, if the PV roofs just happen to generate excess electricity and the HSR just happens to buy it, well...	Comment noted.
Aimee DePew	1/30/2018	Email	Please find attached a Request for Extension of Time to Respond to the Draft EIS for the Dallas to Houston High Speed Rail project. If you have any questions, please do not hesitate to contact Karyn Booth at (202) 263-4130. Regards,	Refer to PI-3.
Manuel deSa	3/8/2018	Website	Submitted on behalf of Manuel deSa To whom it may concern, I have had the good fortune to be a guest at the Morgan Creek Ranch for two international events and am shocked that anyone would consider tearing that property apart when there are other perfectly viable options. As a visitor to Texas I was so grateful for the generosity shown to me and the other visitors, and the truly cultural Texas experience that the Ranch offers. Lawmakers should fight to preserve this Ranch. I can assure you that the feeling was shared by all the guests from other countries. Please consider an option that saves Morgan Creek Ranch for future guests. It truly is a Texas treasure to be preserved. Sincerely and with all due respect, Manuel deSa	Refer to LU-5.
Reena DeSanto	2/13/2018	Website	Sir, Even though this is being funding by private funds, I think this project has got to be the biggest waste of money to hit Texas. If this had been put to a vote state wide it never would have been approved. Texans do not take trains!! If you aren't going to provide rail cars that people can put their own vehicles on then it will be worthless. This will end up being funded with tax dollars in some manner and destroy our open spaces.	Refer to GN-4 and NE-1.

Jana Dickerson	2/6/2018	Handwritten	What Gives you The right to Distroy Grimes County? This farce Does nothing. Positive. Noise Poultion. Traffic. Bad Air. Why Do The Rights of Harris Montongomery Tarret Dallas County mean more than My Rights as an American Citizen. We do Not want or Need this it is of NO Value to Us. No one is going to pay 400.00 Round Trip To Ride a Train when the can fly for less.	Refer to NE-1, NE-9, PN-3, SC-3 and SC-19.
Jana Dickerson	2/17/2018	Website	I went to your so called meeting your employees are the most rude condescending people I have ever felt with. every question I asked was met with eye rolls and I don't know you need to talk to take to that person over there. Who didn't know didn't care what part of please don't destroy my home and my way of life the environment for profit. We don't don't want the trash the noise or the trash	Refer to PI-1.
James Dickinson	2/7/2018	Website	Many of us are looking forward to the economic and mobility benefits of the 'Bullet' train, which will include an evacuation option for our next natural disaster.	Comment noted.
Lisa Dickison	1/30/2018	Website	What will be the impact on wildlife in the area, specifically foxes, coyotes, and mountain lions?	For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures . In addition to habitat modeling, due to the association between Texas prairie dawn and mima mounds, the limits of disturbance was further investigated for the occurrence of these mounds using historical aerial imagery and field investigations. Impacts to wildlife and vegetation will be avoided and/or minimized to the greatest extent possible with compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Rosanne Dillon	2/5/2018	Website	I support high speed rail and have wished for a Houston/Dallas train since I moved to Texas from NY City in the early 80s. College Station is a welcome bonus, as would be Austin and San Antonio if they develop in the future. It is important that the cost to ride allows the average American citizen to purchase a ticket. I have heard that will not be the case, and the ticket could exceed the cost of an airline ticket. With the baby boomer population in retirement now, high speed rail would be a convenient way for seniors to travel without having to take to driving, albeit slowly, on the interstate, or not at all. Please consider a cost structure that includes a portion of seating for seniors and veterans, and standby rates for anyone for unfilled seats. Having ridden NYC and Boston metro for years, and crossed the country twice on Amtrak, I know the benefits of rail travel. Please make it affordable for all. And please pay a healthy premium to landowners whose land you take forcibly by eminent domain. I have friends in this situation and have seen property razed to the ground for the sake of progress.	Refer to ED-2 and SC-3.
Kyle Dincans	2/6/2018	Oral	I'm for the no-build option. All of my family is for the no-build option. So I just wanted to make sure it got on the record.	Comment noted.
Amy Dinn	2/5/2018	Handwritten	There needs to be another public meeting held in Houston, preferably near terminal station locations.	Refer to PI-10.
Amy Dinn	3/9/2018	Email	The FRA should also undertake some investigation of the potential interplay between existing pipelines at the infrastructure required for this Project and its subsequent operations. There are 19 pipelines in Harris County identified in the Draft EIS.41 From the Draft EIS disclosures, it is not clear if the TCRR has consulted with regulatory authorities regarding conflicts and hazards from parallel pipelines. For example, is there potential vibratory damage caused by construction up to 500 feet? And it is not clear what, if any, such vibrations might have on gas pipelines that are near the train.	Refer to EU-1, EU-2 and NV-5.
Cynthia Diserens	2/21/2018	Website	I 'm adamantly against the Dallas to Houston High Speed Rail. I believe God created this earth and I am privileged as caretaker for the 121 acres indirectly involved with the HSP where we operate cattle production. Our land involvement is with the questionable right-of-way of this transportation. I do not believe in Eminent Domain for the pleasure of condemning property to increase personal revenue or growth. The office of the Attorney General of Texas states that Texas Law prohibits condemnation authorities from taking your property to enhance tax revenues or foster economic development. (Texas Government Code Section 402.031 and Chapter 21 of the Texas Property Code) The Dallas to Houston HSR Project is not a railroad and does not qualify for Eminent Domain. Why should any family lose income in order for another person to condemn land for his/her personal gain? The "preferred" route is one of four corridors available, however this is a utility corridor established many years before and granted first for those purposes with operation of multiple highline and pipelines. Madison County is primarily cattle production, oil revenue and hunting leases. These each provide income for this rural county. If an oil well is no longer capable of producing it should be closed. However, to close a well in the "footprint of the Project" because it interferes with the pathway of this project denies income to the land owner and the county tax base. Issues needing addressing are the issues regarding the U.S. Department of Transportation approval, liability insurance to cover damages during construction and operation, financial obligation bonds securing 100%	Refer to BA-4, BA-5, BA-12, ED-1, ED-2, EU-2, GN-1, GN-2, GN-4, GN-5, LU-11, NE-1, PN-3, RF-2, SC-19, SS-21, TR-7, TR-8 and VA-1.

			<p>construction cost and operation for life of project, the project ownership and involvement with Foreign Government(s). This draft Environments Impact Statement offered in support of the Texas Central High-Speed Rail Project to the Federal Railroad Agency needs more factual verification by independent review to determine the probability of the project in light of the available methods of transportation currently available to the general public. These methods have the capability of being upgraded if necessary for future demand, and which offer accessible and lower cost per passenger mile. I question any agency making such an unethical decision for this incredible report. Dallas to Houston HSR will not be profitable, only the Foreign Investments from Japan and the person acquiring land for the three rail terminals will benefit. The losers will be the counties in the proposed project as they will be burdened with higher taxes to enable the county to meet financial responsibility for the up keep of this project, and landowner which will see property values deflated, closure of rural roads, property divided by proposed rail, higher taxes and most importantly the loss of revenue.</p> <p>I don't know of anyone that wants to lose their home or their land which in many instances was a family heritage handed down through generations of blood, sweat and tears. But the real tragedy would be to change their way of life for a project that is not realistic, may never be completed, may never be significant, and almost surely will require federal and state taxpayer bailout at some point in time.</p>	
Kenny Diserens	2/21/2018	Website	<p>I definitely oppose the proposed Dallas to Houston High Speed Rail. The selected corridor, one of four possible, is a utility corridor. Pipelines and utilities will have to be rerouted at the company expense, homes will be lost and cementaries and churches are in the proposed route for this transportation losing historical recognition. Madison County is primarily a cattle producing county. Property value will have a vast reduction and will affect the tax-base for these proposed counties. The right-of-way for an east bound/west bound track and road frontage for the trains will not fit in the existing utility corridor right-of-way. The counties in the proposed route will be responsible for road construction and upkeep for these roads that are for servicing the railway and will not be for public use. The Federal Railroad Administration draft Environmental Impact statement for Dallas to Houston High-Speed Rail that is available for public review is a document containing 5,647 pages with a 65 day review period. How can such an unreliable document evaluate the impacts of the project when Texas Central Partners took criteria from the information that should have been reported. This project will impact our state and individual Texans in such a way and is not representing the needs of our state in DC or looking out for the best interest of Texas. ObamaCare was presented in the same manner and no one understood the downfall of this insurance due to the anorminity of the document and the responsibility in time to read, review and understand all the language contined in the document before accepting the document. There needs to be an extension to the draft EIS comment period to insure it is properly vetted. This project will not benefit the people of Madison County in any way. The only people benefiting from such a project will be the foreign investors and the person(s) purchasing land for the three terminals for the railway. Take a look at the issues such as does the project have U.S. Department of Transportation approval? Is there coordination with the Electric Reliability Council of Texas regarding the impact on our electric grid regarding cost increases and reserve capacity for consumers? Are there financial obligation bonds to secure 100% o construction cost and operation/maintenance for the life of the project? What about ownership/involvement with foreign governments(s)? Is there verifiable ridership numbers to ascertain financial viability? Texas Central Partners has claimed they have Eminent Domain. However, the Office of the Attorney General of Texas states that Texas Law prohibits condemnation authorities from taking your property to enhance tax revenues or foster economic development. (Texas Government Code Section 402.031 and Chapter 21 of the Texas Property Code). Now, Texas Central has stated publicly they will seek federal loans to support the construction of its proposed HSR. (https://www.texascentral.com/rumors-vs-reality/project-financing/). Our tax dollars should not be used for private projects nor should Texas Central Railway be banking on tax dollars to make this project work making it seem like their project is a done deal because of that. I OPPOSE the Dallas to Houston High-Speed Rail.</p>	<p>Refer to CR-4, ED-1, EU-2, GN-2, GN-4, NE-1, PI-1, PI-3, PN-3, TR-7 and VA-1.</p> <p>The Federal Railroad Administration (FRA) was created by the Department of Transportation Act of 1966. It is one of ten agencies within the U.S. Department of Transportation concerned with intermodal transportation.</p>
Albert Dixon	3/8/2018	Website	<p>What is taking so long to get this train deal done ? are we going to be behind forever? THIS IS TEXAS GO BIG OR GO HOME... I need to get to Houston in 90 minutes .</p>	<p>Comment noted.</p>
R. Scott Dixon	1/30/2018	Handwritten	<p>Please address any road crossings that may have restricted heights for emergency service coordination. Emergency vehicles will need to be able to cross or alternate routes identified.</p>	<p>All crossings of the rail corridor over a public road would meet TxDOT vertical clearance standards.</p>
William Dixon	2/18/2018	Website	<p>I am very excited about the opportunity to improve the infrastructure within Texas with the addition of high-speed rail. Having worked outside the US I am concerned the US will not sustain it's role in the world if we don't support significant investments in our ability to move around the state and country.</p>	<p>Comment noted.</p>
Uyen Do	3/9/2018	Website	<p>As long as it doesn't cause significant impact on the environment, I'd totally be supportive of the high-speed rail. We really need it Thanks</p>	<p>Comment noted.</p>
Annette Dobbs	12/26/2017	Letter	<p>We are writing to you in reference to the Environmental Impact Statement Draft issued concerning the High-Speed Rail. Our property is right in the middle of the area for the HSR. It will consume all our property with this project. The property that we own has been passed down through the generations and has raised many kids. our grandparents told us that this place would always be our safe place to come HOME to. The way it sits right now, with the HSR and their plans, our Safe Place will no longer be. The representatives from the HSR have stated numerous times that they are working with the Land Owners. if they are, we have not seen it. We have not given them permission to go onto</p>	<p>Refer to ED-1, ED-2 and NE-1.</p>

			our property yet they have trespassed numerous times, even with the "no trespassing" signs up all over our property. They have pushed their way into my business offices that are not for public access due to HIPPA protected information in the and tried to intimidate my employees, including my daughter. We have called the Sheriff's Department when we have caught them on our property, but it did no good as they were not on our property when they arrived. Our neighbors have caught them on our property and called us but again by the time we got there, they are gone. We have also caught them ourselves and as soon as we head toward them, they take off and leave. When we sent them a no deal answer on their contract, they placed us on an Eminent Domain List and we have been receiving solicitation since from people wanting to help us protect our property rights as the land owners. We were raised on this property as well as our mom and her siblings. We are currently raising our kids and grandkids on this property. We enjoy the solitude, peace and quiet, and the wildlife roaming freely around. We ride our horses thru the pastures and enjoy the country life. We have made this our home and our children and grandchildren's home. Our roots are here on this land. As kids we would leave out with a sack lunch and prowl in the woods and enjoy the freedom that the country life provides. A HSR would greatly affect that solitude and peace that the country life has given us. We ask that you say no to this current route and stop the HSR from destroying our roots. We know no other life except what we have grown up in. These woods the folks call "God's Country." I invite you to come spend a few days with us and enjoy the life we have. We do not wish to have it uprooted by politicians, hungry money men, and foreign investors. Please stand being the people of Texas and stop this nonsense now.	
Annita Dobbs	1/31/2018	Oral	Mr. Crider brought up a good comment there. My business, my ambulance services, we run calls out of Dal -- to Dallas, from Dallas, out of Houston, from Houston back to Dallas -- you know, back. We run 45 pretty regular. The places where my crews run into congestion is when you get to Willis, Texas, and when you get to -- North of Ennis. Anyone? MR. WORKMAN; I-20? MS. DOBBS; It starts with an H. UNIDENTIFIED SPEAKER; Hutchins. MS. DOBBS; Hutchins; That's where we run into congestion. So, I don't know why you're bothering us for your congestion in the metropolitan area. That's not our problem. That's y'all's problem. Figure something out for the metropolitan areas, and leave us folks in the woods alone, or reap the consequences.	Refer to PN-3 and SS-23.
Annitta Dobbs	12/26/2017	Email	I am a property owner of some of the property that the HSR is threatening. They have placed us on an Eminent Domain List, even though they supposedly do not have eminent domain rights. Please see the attached letter concerning the HSR and our opposition of it. The property I am speaking of is located on #10 Dallas to Houston High-speed Rail DEIS Appendix D Footprints set 4 of 5 page 19 and 20 property's # 10277,10276, 10257. I am also a business owner that has my business located on that property and they have yet to acknowledge my business or the costs of having to move my business if they were to get the property. NO HIGH-SPEED RAIL THROUGH HERE!!!!!!!!!!!!!!!!!!!!	Refer to ED-1, ED-2, LU-7 and LU-12. The three properties (10277, 10276, and 10257) would be impacted by the Project. County Road 828, which is located between 10257 and 10276 would be reconstructed over the rail (as noted in Table 3.11-46: Limestone County Roadway Modifications). Due to the impacts of the roadway modifications and drainage facilities, approximately 45 percent of the 10256 would be within the LOD, which as noted in Section 3.13.3, Land Use, Methodology , would classify the parcel as a full acquisition. Parcel 10276 would be classified a full acquisition (39 percent of parcel is within LOD). Parcel 10277 would be classified as a partial acquisition.
Annitta Dobbs	1/31/2018	Oral	My name is Annitta Dobbs. I'm not only a property owner in Limestone County, but I'm also a business owner in Limestone County. Those of you that don't know, I have a private EMS service in, Texas. I know that sounds funny, but I do. One of the things, my property that I currently have we inherited from my grandparents. We're raising fifth and sixth generation kids on it. It's a total of 120 acres. HSR is going to take all 120 acres of this land. So, we have nothing. They sent us a letter to survey our property. I sent them back one that said "not just no, but hell no". As my aunt said, we've already run them off of her property four different times. My neighbors in my community, and I, I have called the Sheriff's Department myself on them. They've run them off of our property. They've come in -- after I turned down their contract, they come in and -- I started getting letters from lawyers wanting to represent me for eminent domain because I had been placed on an eminent domain list. Where did that come from? Because as far as I know, they don't have those rights right now. They recognize me as a property owner, but they did not recognize me as a business owner. The 120 acres, they can't buy it from me. I'm like the rest of y'all. There's not enough money in Japan to touch my property. One of the things that I keep asking is, they keep saying they're going to put fences up. Well, we as Texans have combatted with these feral hogs for how many years? As far as back as I can remember. Okay? And we, as Texans, have not been able to stop them. We've tried electric fences, we've tried their stupid chain link fences, we've tried everything, and we've yet to stop them. They tear up our buildings, they tear up our pastures, they tear up our barns. We've had equipment where they've dug under the equipment, and you can't get it out because they've dug a 10-foot hole. What's it going to do to this high-speed rail? Now, here's my question. Personville has one of the oldest aquifers in the State of Texas. It's not even on their map. The aquifers, well, Mexia gets their water when Lake Mexia gets too low. What's Mexia going to do about water? Why does the HSR want our mineral rights, along with our land? Do you know what I think? It's a mineral right grab to support the HSR That's what I think. Plus, they monopolize on the gas and well business. Why are they pushing eminent domain when they don't even have eminent domain? Tell me that. And then -- They just continually harass us. One of my buildings is HIPAA	Refer to ED-1, ED-2, GN-1, NE-8, PN-3 and SS-2.

			protected. Most of y'all know what HIPAA is. And it's marked very well, "Do Not Enter. HIPAA Protected Information". These folks keep entering. They keep entering, and barging their way in the door. It's against the law. Barge again, and you're going to jail. That's all I've got to tell them, is come across my property again, whether it's on air -- You don't even have the right to fly by my property from air. I told you not no, but hell no. So, I guess you can tell I'm very pissed. Come on my property. That's all I can tell you. Thank you.	
Catherine Dobbs	2/27/2018	Website	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 -a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area.	Refer to AQ-7, GN-3, LU-4 and NE-1.
Michael Dobbs	2/17/2018	Website	This project should be approved to help build a stronger Texas and national economy. The easier it is to get between places without having to use the roadways or airports, the better it is for the people and the economy. There are millions of drivers who travel between Houston and Dallas annually who could use this kind of transportation which would result in less traffic and better environmental quality. After visiting Europe many times and seeing how it fits into the locations where the routes are located, the fears of the property owners are unfounded. These trains fit nearly seamlessly into the landscape. The trains I have seen used in Europe also travel with less noise than the commercial trains transporting goods on standard railways. The only times they are loud is in close proximity to the stations or rail yards which would be located near population centers. Please approve this route and help so many people in Texas.	Comment noted.
David Dobyanski	2/6/2018	Oral	Thank you. Since I've been on the commissioners court here in Grimes County in 2015, we have fought Texas Central, the court has, to stop them from coming through Grimes County. Recently I worked with TxDOT in finding some landowners and doing the environmental study for the 249 road. I came in tonight, I talked to Mark Wills, and Catherine earlier, and asked them how this study was done without going onto people's property. And the reason they can't go onto people's property is because they don't have the right of eminent domain because of the lawsuit that we filed here in Grimes County. She stated that -- Catherine did, stated that they had hired some people to do this study. And I don't know how it was done. I questioned her, but she said that they used studies that had been done by Texas Parks and Wildlife for part of it. But how can you actually study the species that are endangered in the county, and some of those species are the Navasota ladies' tresses, which I did some research on back in Anderson when I was teaching ag there, we tried to study it there. We also have -- and the Navasota ladies' tresses is a flowering plant that's endangered. It's found in many places in Grimes County, and probably up and down the corridor from here to Dallas. We also have a red-cockaded woodpecker that is endangered that they looked for in the study for 249, and the Houston toad. How are these populations looked at if you didn't have boots on the ground? How was that done? There are also several wetlands in the county that will be impacted because of the drainage. The migration routes of wildlife will be impacted because of the fences and the berms. And also, as Mr. Haney [sic] talked about earlier, he has a pond on his property which has its own ecosystem, and that's going to be impacted if the project comes through. Bottom line is Texas Central didn't have the power of eminent domain to go in and do this study, so it's an invalid Environmental Impact Statement. And Glenn, if you need some more time, you come up and take some of mine.	Refer to NR-4 and NR-6. NEPA does not require 100 percent of the Project to have field surveys conducted.
David E. Dobyanski	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
David Dobyanski	2/25/2018	Website	The environmental impact study is invalid because there are thousands of acres of land which have not been examined by boots on the ground. As aGrimes County Commissioner I have worked closely with TXDOT in getting permission from landowners to do the study for the 249 project. Why is it	Refer to GN-1 and NE-8.

			important for TXDOT to study each property but not Texas Central? Furthermore the study is defended by maps and surveys done by Texas Parks and Wildlife which are outdated.	
Kay Doebler	1/28/2018	Email	The proposed high speed rail from Houston to Dallas is going to affect the quality of life for all Waller County residents by disrupting the roadways for years. We are still in the process of upgrading Hwy 290 which has been a major disruption for years, and now the powers that be want to start a major endeavor that serves absolutely no one in Waller County just so a few people can get to Dallas. It make no sense. Why should the citizens of Waller and surrounding counties have to endure such destruction of our land just for those few people that this project serves. Why should the citizens of Waller and surrounding counties have to endure the increased travel times while the project is under construction. Why should we have to endure our rolling hills and prairie land being ripped up to build this monstrosity!	Refer to TR-1, TR-6 and TR-8.
Kay Doebler	1/28/2018	Email	The high speed train from Houston to Dallas is one of the most irresponsible ideas I have ever heard. This train is only going to serve a select few, but the impact to the people along it's route is going to be devastating. I do not believe that the need for this train has been proven. I am a proponent of mass transit, but only if done in a purposeful manner. This train from Houston to Dallas is not. I believe the only logical decision is to select the NO BUILD option as the final Environmental Impact Statement.	Refer to PN-3.
Kay Doebler	1/28/2018	Email	I strongly oppose the high speed rail from Houston to Dallas. It will drastically impact my home value. Property values are going to drop throughout Waller county due to this train. Emergency services will be hit hard due to the drop in the overall tax base. Having a dependable ambulance, fire department, and police protection is a major priority. I believe the only logical vote in this situation is the NO BUILD OPTION as the final Environmental Impact Statement.	Refer to SS-26 and VA-1.
Kay Doebler	1/29/2018	Email	I strongly oppose the high speed rail from Houston to Dallas. It will drastically impact my home value. Tom Dohearty	2/15/2018	Website	I fully support the proposed privately funded high speed rail project between Dallas and Houston and hope this is the beginning of more high speed connectivity with other Texas cities and the rest of the country. I think the new Dallas HSR terminus should be located as close as possible to Dallas Union Station, which currently serves Amtrak, DART and Trinity River Express rail options in order to facilitate this connectivity. But the proposed location for the Dallas station is a mile away, on the other side of Interstate Highway 30. The City of Dallas owns vacant land adjacent to the existing Union Station since the demolition of the 18,000 seat Reunion Arena. I believe it owns a parking structure and large parking lot adjacent as well. I think this is where the new station should be. Since the proposed location is on land that is privately owned by one of the TCRR investors, perhaps a land swap can be worked out with the City of Dallas to better position the HSR station closer to the City center.	Refer to GN-7, GN-8 and TR-3.
Carol Dohmen	3/9/2018	Website	Dear FRA admiratrators, I am taking my time to contact you today in order to express my feelings on the importance of your help in securing our high speed train. Y'all have heard time and again the values to our culture, economy and ecosystems this train will gift us with here in Texas. The time has come for you office to choose to ensure these lifestyle changes arrive on time for us here in Texas. Please help the Texas Central gain it's official permits and plans to start construction soon. As a realtor I am intimately aware of the vast surges in new comers to our state and the Dallas to Houston corridor in particular. We have fielded and continue to do so for some time now, the average of some 1200 new transplants calling Texas home DAILY! We have no choice but to plan on a new way of accommodating the massive surge in travel and traffic within this corridor. Help! The Texas Central will for once and for all demonstrate to the nation the real need for fast , safe, and economically sound railroad transportation outside of the Washington to Boston corridor. The fact there is private funding within this project is proof positive the day is here for a new breed of passenger train to take its place in this State as well as this Nation. We as citizens are indebted to your agency for your aspects of assistance in ensuring this project will move forward as quickly as is possible. Lives will be saved, jobs will be formed, and Texas will be an example for hopefully numerous additional high speed corridors being developed access the US. Respectfully, Carol Dohmen Colleyville, Texas	Comment noted.
Philip Dohmen	2/18/2018	Website	Thank you to all involved in the approval and permitting process within your organization. It's time, not only as a nation, but in the betterment of the Texas way of life. It is fantastic to envision the possibilities for a much more productive culture courtesy of the vision Texas Central Partners has exhibited in seeing this project through to completion. This will be a game changer in the transportation playing field for this wonderful country as we continue infrastructure planning and development throughout the remainder of the 21st century and beyond. Here's to the future, and the future role of the new FRA! Let's get to work! Cheers, Philip Dohmen	Comment noted.
Andrea Donart	12/19/2017	Website	We have family in Houston and Dallas. This project CONNECTS FAMILIES!! Please hurry while my niece and nephews are still young and can visit easily!! Thank you sooo much!!! Andrea Donart	Comment noted.
Gay Donehoo	3/3/2018	Website	I have been to multiple public hearings and have reviewed the DEIS. I seriously question the validity of the ridership and economic forecasts offered by Texas Central for this project. The significant problems that should be the focus of attention and fiscal target for funding are inadequacies in LOCAL mass transit. The City of Houston, Harris Counties and the surrounding counties should worry about the continuing and worsening local gridlock rather than worrying about the "need" to get a small number of riders from Houston to Dallas. If the PRIVATE developers' ridership projections do indeed fall short, will they come to the Local, State or Federal governments for a bailout? This is a dangerous and absolutely predictable probability. I urge the Federal Railroad Administration to deny the Texas Central application to build the Texas Bullet Train. Finally, I am both dismayed and appalled at the use of eminent domain by the developers of this privately-funded project. At hearing after hearing, I have heard from and spoken to property owners whose property is subject to being taken by Texas Central - including at least one coworker here in Harris County. Tactics as described by these people are not something that the State should condone or be proud of.	Refer to BA-6, ED-1, ED-2, GN-2 and NE-1.
Gay Donnehoo	2/5/2018	Oral	I'm going to give you a little bit of a different perspective. I've been in Houston since '71. I live about a mile from the proposed terminal. I'm here representing my neighborhood. I don't speak for all of them, I will tell you that, because we haven't had a homeowners association meeting since this was announced. I've been to three of these meetings. I've been amazed at the number of people who are against this. I grew up in New York. I grew up in an area where you lived and died by the trains. I have taken the train from New York to Washington; New York to Philadelphia. It's great back there. I've been in Texas, though, and I go to Dallas probably six or more times a year. Unfortunately, my dog goes with me. I don't know that they're going have a dog car or a pet car on the high-speed train. I also, as a widow, am not going to be able to afford \$200 a ticket, which is why I drive to Dallas when I go. I just want you to know that I agree with the lady with the High-Speed Rail Watch. That FRA should definitely provide another public hearing. It's amazing to me that there have been so few, and that there's only the one right now in Harris County, especially after the announcement of where that terminal's going to be. I'm a realtor. I sell homes. I have	Refer to GN-1, GN-2, NE-1, PI-1, SC-3 and VA-1. The design will be comply with the requirements to accommodate handicapped civilians and service animals as per the following Americans with Disabilities Act (ADA) regulations: 49 Code of Federal Regulations (C.F.R.) 37 - ADA Transportation Services for Individuals with Disabilities; 49 C.F.R. 38 - ADA Accessibility Specifications for Transportation Vehicles; and, 2010 ADA Standards for Accessible Design, dated September 15, 2010.

			<p>sold homes. You talk about the impact of the high-speed rail going through your farm country. I've sold homes to older people, to young couples who have put their lives in their home. Those homes are going to be, as Bet, who's a friend of mine, said, they are definitely going to be negatively impacted by having a high-speed rail, you know, a mile from their home. I think it's -- I would love to be able to take the train. Like the guy with the auto business, I'd love to be able to take the train. I don't think, though, that the numbers -- I just do not see 5.9 million, or whatever the number is, going to Dallas from Houston. I just don't see it happening. And I think that if FRA, you know, is worth your salt, which you are great to have done all the compilation of all this information, but I think that somebody needs to maybe take a second look at some of it, and I think that you should definitely make yourselves available to those of us who are inside-the-loopers who are also going to be affected by high-speed rail going through their neighborhoods.</p>	
Lauren Donnell	2/6/2018	Website	<p>I am overjoyed at the prospect of this life-changing rail line. Please ignore the naysayers and bring Texas into the modern age. This rail would get cars off the road and provide a safe and economical way to travel. Full speed ahead!!</p>	<p>Comment noted.</p>
Katy Prairie Conservatory	1/18/2018	Email	<p>Ladies and Gentlemen: Thank you for the opportunity to submit comments to the draft Environmental Impact Statement for the proposed Houston Dallas High-Speed Rail project. The proposed route would pass within half a mile of the northern boundary of the Katy Prairie Conservancy's protected preserve properties, and would have negative noise and visibility impacts to the Katy Prairie Preserve, and in particular to Warren Lake and the Katy Prairie Conservancy's Matt Cook Wildlife Viewing Platform. The Matt Cook Wildlife Viewing platform is located at 15000 Warren Ranch Road, and overlooks the 140-acre Warren Lake. The ADA-accessible viewing platform is dedicated to the memory of a young wildlife and fisheries graduate student who loved the outdoors and spent many hours studying and enjoying the wildlife of the Katy Prairie. Warren Lake teems with wildlife yearround, which can be viewed by the public from the elevated viewing platform seven days a week. Many waterfowl gather at the opposite shore, which is the area closest to the proposed route. The proposed HSR route is directly in the path of a bird's flyway approach to the lake. The Katy Prairie is known internationally for its rich migratory and resident bird life. In 2012, the National Audubon Society designated Katy Prairie as a Global Important Bird Areas in Texas. KPC's preserve system on the Katy Prairie harbors important coastal prairie and riparian wetlands, which hold floodwaters and improve water quality by filtering sediment and pollutants from nearby land uses. The preserves offer valuable recreational opportunities, including hiking, bird watching, nature photography, hunting, bicycling, and other activities, for residents of the immediate area, the metropolitan and regional community, and other visitors. Katy Prairie hosts a diverse biological community of native and endemic wildlife and plant species (https://tpwd.texas.gov/hu ntwild/wild l ife d iversity/nongame/tcap/sgcn. phtm l). KPC properties contain three "Rare Plant Communities" as listed by the Texas Parks and Wildlife Department: (1) Houston Coastal Prairie; (2) Vertisol Coastal Prairie; and (3) Water Oak-Live Oak Prairie. Due to the uniqueness of rare plant communities and the severe threat from development pressures, activities that adversely impact these areas should be restricted as much as possible. The Katy Prairie is home to a number of species of "Greatest Conservation Need", including, but not limited to: Southern Crawfish Frog, Mottled Duck, Northern Pintail, Northern Bobwhite, least Bittern, long-billed Curlew, Snowy Egret, little Blue Heron, Tricolored Heron, Northern Harrier, Swainson's Hawk, American Kestrel, Pileated Woodpecker, Loggerhead Shrike, Sedge Wren, le Conte's Sparrow, Dickcissel, and Eastern Meadowlark. Other species that may be impacted include: Bald Eagle (state threatened), Peregrine Falcon (state threatened), White-tailed Hawk (state threatened), White-faced Ibis (state threatened), Wood Stork (state threatened). The Western Chicken Turtle, which is under review for section 404 listing, is also present on KPC lands. In 2007, the National Audubon Society identified the top 20 common birds in decline. Fourteen of the 20 species identified as being in decline live on the Katy Prairie or are migratory birds that stop over on the prairie, among them are Field Sparrow, Grasshopper Sparrow, Eastern Meadowlark, Little Blue Heron, Northern Bobwhite, Loggerhead Shrike, Northern Pintail, and Rufous Hummingbird among others. Katy Prairie lands include important vegetation communities, like salt barrens, along with plants identified as Species of Greatest Conservation need in Texas that include Texas Windmill grass (<i>Chloris texensis</i>), Texas Willkommia (<i>Willkommia texana</i>), Threeflower Snakeweed (<i>Thurovia triflora</i>), Curved Sicklegrass (<i>Parapholis incurve</i>), and Texas Saltbush (<i>Atriplex texana</i>), and Coastal Gay-feather (<i>Liatris bracteata</i>). KPC's preserve system has the largest extant population of <i>Hymenoxys texana</i>, or Texas Prairie Dawn, in the region. This endangered small native flower is federally protected. KPC strongly believes that evaluation of the high-speed rail project should respect ecological and environmental concerns, and KPC urges that no action be taken that would result in the loss and degradation of wildlife habitat and conservation areas already known to be of extra-regional and regional significance. Once natural assets are lost, they are lost forever.</p>	<p>Refer to AS-1, NR-2, NR-3 and RF-4. For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures. In addition to habitat modeling, due to the association between Texas prairie dawn and mima mounds, the LOD was further investigated for the occurrence of these mounds using historical aerial imagery and field investigations. Impacts to wildlife and vegetation will be avoided and/or minimized to the greatest extent possible with compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p>

			The Katy Prairie Conservancy (KPC) is a nonprofit land trust working to conserve a portion of the Katy Prairie for the benefit of its wildlife and plant species and for the enjoyment of all Texans. The Katy Prairie Preserve system is an important natural and cultural resource for the Greater Houston region.	
Jerry Dorcz	2/18/2018	Website	As a traveler, I see the benefit of this project to be absolutely positive. In my opinion, it will offer a valid alternative to air or highway travel between Houston and Dallas. It will provide employment opportunities to the communities it serves. It will provide property tax assessments to every community, school district, county it touches. The other benefits, it will be an environmentally responsible form of transportation that will help keep Texas clean for ALL Texans. Those opposed to this project, particularly in rural areas, have, unfortunately, been provided with wildly exaggerated falsehoods. If we, as a state, want to see a future of possibilities for this generation and the next, we should affirm this project since it will benefit all Texans!	Comment noted.
Gerry Dosier	2/5/2018	Handwritten	Which taxing entity will claim the trains for property taxes?	Refer to VA-1.
Giselle Doss	3/5/2018	Website	I have read quite a bit about the track design limiting noise from the bullet trains but have not seen the vibration created by these trains addressed anywhere. The National Institutes Of Health saw vibration from these trains worth conducting a formal study (a study they have deemed to be not yet complete), shouldn't we at least see mention of it? My home is roughly 2 miles from Hempstead Hwy, the proposed rail route, and I am concerned with property values being effected when windows are rattling and pictures are falling off the walls in my home every 30 minutes.	Refer to NV-1 and NV-5.
Gary Dossett	1/15/2018	Letter	Opposition! Draft Environmental Impact Statement -- Dallas to Houston High Speed Rail, dated 12/15/2017	Comment noted.
Gary Dossett	2/5/2018	Handwritten	During the Christmas Holidays I spent a good deal of time studying the Draft Environment Impact Statement, signed December 15, 2017, by Mr. Paul Nissenbaum. Mr. Nissenbaum, this Draft is an embarrassment to the Department of Transportation, and an insult to the people, people that you, as a civil servant, are under oath to serve and Supporters of the Government's right to condemn private property admit that under the process people will be hurt, but they allege the beauty in the end result will over shadow this ugliness. This Draft alleges that the beauty of this Project will be reduced traffic congestion reduced air pollution and more money in everyone's pockets. If this train cannot sell enough tickets to cover operating costs and to service a mountain of debt, there are only two possibilities for it's future. Number one it will cease to operate number two... to save face, government will pour money down a rat hole. There is no beauty in either Of these end results. Mr. Nissenbaum, if you have any respect for the people, you will not sign off on a "final study" supporting this train until the Project Supporters have made available to the people objective Verifiable data showing beyond a reasonable doubt that neither of these possibilities will result. Your draft does not contain one shred of verifiable data in this regard. To the contrary, it states that the people are not entitled to this information! If you folks out there have a 'gut feeling' this train cannot sell enough tickets to sustain itself financially, get a comment sheet and demand verifiable data to show, beyond a reasonable doubt, that this project has financial viability. If you have clout at the national political level, I say to you, as a document intended to show that the beauty in the end result justifies the environmental ugliness, this draft stinks! Where there is a stench this bad there is usually something rotten. If you agree, I urge you to use your influence and investigate Mr. Nissenbaum's true motivation in signing this document!	Refer to ED-1, GN-1, GN-2, NE-1, NE-9 and PN-3.
Gary Dossett	2/5/2018	Oral	Gary Dosset, Madisonville, Texas. During the Christmas holidays, I spent a good deal of time studying the draft environmental impact statement signed December 15 by Mr. Paul Disenbaum. Mr. Disenbaum, this draft is an embarrassment to the Department of Transportation and insult to the people. People that you are to service and protect. So the government's right to condemn private property admit that under the process, people will be hurt. But they allege the beauty and the end result will overshadow the ugliness. This draft alleges that the beauty in this project will be reduced traffic congestion, reduced air pollution and more money in everybody's pocket. If this train cannot sell enough tickets to cover operating expenses and to service a mountain of debt, there are only two possibilities for excuses. Number 1, it will cease to operate, or number 2, to save face, government will pour money down a rate hole. And no overshadowing beauty in either of these end results. Mr. Disenbaum, if you have any respect for the people, you will not sign off on a final study supporting this train until the project have made available to the people objective, verifiable data showing beyond a reasonable doubt that neither of these possibilities will result. Your draft does not contain one shred of verifiable data in this regard. To the contrary, it states that the people are not entitled to this information. If you folks out there have a gut feeling this train will not sell enough tickets to sustain itself financially, get yourself a comment sheet over there and demand verifiable data to show beyond a reasonable doubt that this project has financial liability. If you have clout at the national political level, I say to you, as a document intended to show that the beauty in the end result justifies the environmental ugliness, this draft stinks. And where there is stench this bad, there is usually something rotten. If you agree, I encourage you to use your input and investigate Mr. Disenbaum's true motivation in signing this document. 			speed rail, but by the operations of the rail itself. What affect will that have on the existing grid and where does the TCR rate with the grid's priorities?	
Judy Doughty	1/30/2018	Email	I very strongly urge you to open the public comment peroid to a 90 day window not just 15 days. As a taxpayer and as "the public" we deserve more than to be "RAILROADED" BY THE FEDERAL GOVERNMENT.	Refer to PI-3.
Mitchell Dowalgo	2/7/2018	Website	I support the construction of the high-speed railroad connecting Houston to Dallas.	Comment noted.
Judy Doyle	2/6/2018	Oral	Well, I'm not much of a speaker, but I do have some thoughts. I thought, "This doesn't affect me, so why should I care?" But when they said it affects two miles out from the main part, I drove it, and Oak Hollow is in that 2 miles, so now I am upset. And I'm a realtor, and I'm asking, "How does this affect the real estate values in our county?" That's going to really hurt. We moved from Houston, us that weren't as fortunate as you to have had this land over a hundred years, makes me want to cry. But we moved out of Houston, out of Conroe, to get away from the railroad tracks and the noise. And here we are, bringing it back to our peace and quiet. I'm really upset because they are, behind your backs, bullying people out of their properties. I've experienced people that own -- owned property that they've bullied out of. They've left. In came the utility companies that have bought up this land for them, and they have run over our driveways and tore it up, thinking it was their property when we had - and they tore down our gate, our electric gate, and our electric lights, thinking it was their property. We come back that night, and they're gone. Nobody knows where it went. But then we let them know, it was our property. Then they go next door, they find their piece of land and bulldoze roads -- or run that heavy equipment down through those -- that lot, and it just dug ditches in it. But it was too wet, so they decided to come back down our driveway. So we had to put up a new gate to keep them out and put no trespassing signs. The subdivision finally figured out, you know, there is -- you know, they have to get permission to build roads in a subdivision, so they stopped it. Now they bought some of their land, and they've got a driveway through it. Also, they came in and they bulldozed down bird stands for the bluebirds, just tore them up. And so, you know, I'm tired of being bullied. We don't allow it in school, so why are we allowing it in our county? Tear down that wall around Houston Oaks. Thank you. I vote no.	Refer to BA-8, ED-2, LU-14 and VA-1.
Janett Drake	2/22/2018	Website	Texas High Speed Rail As a homeowner in rural Madison County, Texas, I am upset, frustrated, and perplexed over the potential of a highspeed railroad crossing near our home. I have read and attended meetings but don't have enough understanding of the needs of "super-commuters" or the consequences to landowners and surrounding communities to debate my concerns, but I feel a need to make a statement. It doesn't take a lot of studying to know that the faster the train, the greater the risk to people on foot or in cars. I have read, like most of you, about the latest Amtrak crashes. I see very little need for a train traveling 200 mph from Houston to Dallas and back. In Texas? The consequence that upsets me most is the thought of landowners whose families have lived on this land for generations, and those of us who choose to live in this beautiful, peaceful, rural area of Texas for just that - the peace and beauty of rural Central Texas - being uprooted from their land or living with the consequences TCP's plan. The name Brazos Valley brings visions of deer, wildflowers, rivers, sprawling ranches to mind, which exactly what we have out here. I don't understand the fact that a privately-owned railroad, whose stated goal is a proposed profit-making venture for its investors, has the right to condemn homes, seize land, churches, and cemeteries. HOMES - that word is almost sacred to me. Is that true? Can someone really come in and take our homes or our neighbor's? In America? Can they really take soil that is needed for the massive berms required on both sides of the route from our neighboring grasslands leaving bare swampland in their place? What if - after buying out homeowners or seizing properties - Texas Central Partners (TCP) runs out of money and the once beautiful homesteads and ranches are left unoccupied along the planned route. Does the Federal Government take over the preposterous project using tax dollars for a train that will never run? Take time to read about the consequence in Denver whose residents are being shaken out of their homes up to eight times an hour by the city's new rail system, and study California's bullet-train project that has stood abandoned and become a "linear ghetto." If I have missed the point or have only heard one side of the story, feel free to convince me otherwise.	Refer to PN-3.

Leon & Janett Drake	NA	Website	Very opposed. Don't do this to our home! Please!	Comment noted.
Laramie Driscoll	2/16/2018	Website	This is a critical requirement for State of Texas to continue attracting new business. RD95	Comment noted.
Janice Duarte	3/9/2018	Website	Modern economically beneficial to two cities that have had a historical soft spoken rivalry. Planning finance (primarily in maintenance of the rail once built) as well as those who may be impacted during fruition, is a concern of many that needs to be transparent.	Refer to GN-4, GN-5, NE-1, NE-9 and PI-1.
Shannon Dubberly	1/29/2018	Oral	All right. Before I begin, I'd like to state for the record that when Commissioner Olsen asked all the supporters to hold up their hand, that would be zero. My name is Shannon Dubberly, and even though I am running for Congress, I'm not here to give a campaign speech. I am here to stop a train. as well in that three percent that was mentioned in the report. That is their sweat, their blood, their tears, their legacy, and not just recently but for generations. Now, don't get me wrong. We love progress and we love development in this county. We just don't wake to wave at it as it flies by. And also I don't see how this ultimately makes money. And taxes will be brought up, and they'll say, Oh, it's going to be temporary tax. But I would like to see a show of hands of anyone here that have ever seen a temporary tax. For the record, that's zero. So, finally, my name's Shannon Dubberly, and I want to be a hundred percent clear--I'm against that train. When I go to Washington, you will definitely have my support until the end. Thank you.	Refer to SC-19.
Debbie Dubois	2/6/2018	Website	I want to be clear....this project is a disaster to most all who live between Houston and Dallas. WE DON'T WANT IT!!!!Texas is known for its agriculture and cattle operations...this train will go through the heart of Texas and reduce and in some cases destroy the livelihood of many. Emergency services will be obstructed. It will put a major financial burden on each county this train travels through. This is only a few issues many of us have. Since this is a private company and individual investors who are initiating and supporting this endeavor, why should those of us who are affected, permanently give up our way of life for a project that will not be for the greater good of Texans...only those invested in it up front. It will start out being out of date and the success rate for a train like this is dismal. Two in the world are successful. Check out California's attempt. Why can't these private investors use already existing right-of-ways and leave central Texas alone if they think it is that important. Greg Abbott, Dan Patrick and all the central Texas Legislators are being watched as to how they stand and will be judged when we vote. It will not benefit anyone in Texas except those who are looking to have a selfish financial gain.	Refer to BA-8, BA-9, BA-10, GN-4, LU-2, LU-9, LU-11, PN-3, SC-19, SS-23 and TC-2.
Debbie DuBois	3/2/2018	Email	Texas central sent me an email urgently asking me to make a comment. They, of course, want a comment in support of the rail. They were even kind enough .to provide a prewritten letter in support of the rail for me to attach my name to. Since they have proven from the beginning that they manipulate, deceive, and lie I am not going to trust them to send you my comment rejecting their project. I did delete their message and wrote my own but I am afraid they have it set up to automatically send you their support comment... overriding mine. We DO NOT want the rail... it will devastate agricultural production through the heart of Texas, obstruct first responders and emergency vehicles, be a financial tax burden for each county and ruin the tranquility of life so many of us have chosen and worked hard to obtain. It is technically antiquated and a financial failure before it even begins construction. please, please don't approve this disaster project. Big city leaders and citizens whose lifestyles won't be affected should not be able to destroy the lifestyles of so many others when they have so many other options. We DO NOT WANT the high speed rail!!!!!!!	Refer to GN-4, LU-2, PI-4, SC-19, SS-23 and TC-2.
Tom Dubois	1/30/2018	Oral	Thank you for the turn out folks. Many of the items I had have already been discussed and I will leave it for the others to continue on those lines. But what I do want share is how important like Judges Ryder did mention earlier. We must get behind this. Not just our county but all counties. You must support this effort to stop this thing. Whatever you can do financially. No matter how small. We need money and we need it to continue coming in. That's the way we beat them. It was brought out to start of 3000 acres and now it's 8000. This thing has been a constant change since day one. It's been full of their lies from day one. For the leadership, commissioner's court, the president of this organization at the time and his entourage. They lied through this whole thing and we catch them left and right. Kyle Workman and his wife and staff there that work with them. Goodness knows how much money of their own they put into this thing. We must stay committed to this thing to get it done. I'm a fifth generation with 134 years worth of land. I feel the pain. I also have two friends that have given their lives savings to buy their piece of heaven. I understand that and I think everyone in this room understands. Please, please get behind it. It can be used. Thank you.	Refer to LU-14.

Tom Dubois	1/30/2018	Oral	I failed to say something a while ago that is very important to me and it may be important to you folks. Anyone that listened to these farm reports or happens to run into our State Agricultural Commissioner, Sid Miller. I personally have called his office. He is on the fence. He will not make a commitment one way or the other. You won't get to talk to him. You will talk to some attorneys in his office. But we need all the help you can get as the judge and Kyle and so many people have said. We need to put pressure on our Ag Commissioner. It's election time and he's on the ballot. Hopefully, we can get him to commit. Whatever he commits to that's his chose. He will be the first to tell you if you give him a microphone what he does for the State of Texas in the agriculture. This is one of the top corridors of cattle production in the state of Texas. South Texas produces a lot of cattle, but they take a lot of land to produce one cow down there. We can produce a whole lot of cows on a lot less land. This is a major ten county agricultural stretch. So keep Sid Miller in mind and give his office a call. The people out here are thinking about it when it comes election time. Please, thanks.	Refer to LU-2.
Colin Dudley	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property	Refer to LU-5.
Carbett Trey Duhon	3/8/2018	Letter	<p>RE: Comments of Waller County on Dallas to Houston High-Speed Rail Draft Environmental Impact Statement</p> <p>Dear Mr. Wright:</p> <p>On December 22, 2017, the Federal Rail Administration (FRA) released the Draft Environmental Impact Statement (DEIS) for the Dallas to Houston High-Speed Rail. This draft fails to identify, analyze and consider the direct and indirect impacts that will occur in our community if the project proceeds. In fact, the FRA has deliberately ignored and taken extreme measures to prevent our issues from influencing the outcome of the environmental study.</p> <p>June 25, 2014, the FRA announced it would be preparing an Environmental Impact Statement pursuant to the National Environmental Policy Act (NEPA), for a High-Speed Passenger Rail Corridor between Dallas and Houston Texas (79 Fed. Reg. 36123). The proposed action that requires the FRA oversight and NEPA analysis is “for the impacts of constructing and operating a dedicated high-speed rail system.” The project was proposed by a private company, Texas Central Railroad and Infrastructure, Inc, which was formed in 2009, for the purpose of bringing high-speed rail to Texas.</p> <p>Over the past two years, Waller County (through the Waller County Sub-Regional Planning Commission — herein after “WCSRPC”) has made multiple written requests to meet and coordinate with the FRA so that we could provide you with an accurate understanding of the true impact a High-Speed Rail system would have on our community (see prior communications dated November 14, 2014 and July 6, 2015 attached hereto as attachment A). To date, the FRA has refused to meet with us to engage in coordination (see response letters attached hereto as attachment B). On or about February 9, 2015, the WCSRPC held its first coordination meeting with the Texas Department of Transportation (hereinafter “TXDOT”), who was at that time designated as a co-lead agency on this project. At that meeting, we made TXDOT aware of number of impacts that this project would have on our community and we provided that information to TXDOT and requested that the information be forwarded to the FRA. The discussion of impacts that was provided to TXDOT and later provided to the FRA by TXDOT is attached hereto as attachment C, and such also constitutes Waller County’s comments on the current draft Environmental Impact Statement. On May 6, 2015, we sent a follow up letter to TXDOT regarding additional coordination meeting issues with a 17-page summary of the local issues that would result from this project as proposed. On May 13, 2015, we received a letter from TXDOT’s Dan Harmon advising that TXDOT was not going to engage in further coordination meetings. We later learned from Mr. Harmon that TXDOT’s refusal was per the FRA’s request to TXDOT that they cease coordination with our WCSRPC.</p> <p>On October 26, 2017, the WCSRPC filed a lawsuit in Travis County District Court in Texas against TXDOT for its refusal to coordinate with the WCSRPC pursuant to Chapter 391 of the Texas Local Government Code. On January 5, 2017, the District Court granted WCSRPC’S Motion for Partial Summary Judgment and ordered TXDOT to coordinate with the WCSRPC. TXDOT filed an accelerated appeal to the Third Court of Appeals and on February 24, 2017, the appellate court dismissed the appeal. On May 5, 2017, we conducted a second coordination meeting with TXDOT, in which we were advised that all prior information provided to TXDOT had in fact been given to the FRA by TXDOT officials, and TXDOT advised that for the most part, TXDOT was longer being kept in the loop in terms of communications with the FRA on the current status of the draft EIS. The WCSRPC once again reiterated its request to TXDOT to request that the FRA coordinate with WCSRPC in accordance with the Scoping Report that was released on this project in April of 2015.</p> <p>However, with the release of the DEIS, we note that TXDOT has been removed as a co-lead agency, and is now only considered a “Technical Advisor.” It appears that this may be a deliberate attempt to avoid coordinating with our local governments as required by law.</p> <p>The Waller County Sub-Regional Planning Commission (Commission) is a formally created entity under the state of Texas Local Government Code 391. Members of our WCSRPC include Waller County, the City of Waller, Prairie View, Pine Island, Hempstead, Pattison, Brookshire, Katy, Waller Independent School District and Hempstead Independent School District. We are not a “public stakeholder” as previously stated</p>	Refer to AS-1, BA-5, BA-6, BA-7, BA-8, BA-9, BA-10, CR-2, CR-9, ED-2, EJ-1, FP-1, LU-2, LU-3, LU-4, NE-1, NE-8, NE-9, NR-2, NR-5, NV-1, NV-5, PI-1, RF-1, RF-4, SC-11, SC-19, SS-23, SS-26, TR-1, TR-6, TR-7, TR-8, WW-1, WW-2, WW-6 and WW-8.

			<p>by the Federal Rail Administration.</p> <p>The National Environmental Policy Act (NEPA) requires the Federal Rail Administration and your agency to coordinate with our local government planning commission. At the same time, as a local government entity formed under Texas Code 391, the Texas Department of Transportation is required to coordinate with us under Section 391.009(c). As a statutorily created planning commission under Texas State law, we have the unique authority and expertise to ensure that all projects within our jurisdiction, whether city, county, state or federal, work together for the benefit of the people of Waller County. This includes high-speed rail.</p> <p>This letter has been prepared to summarize the specific local impacts that the Dallas-Houston High-Speed Rail Project will have on our local businesses, community, and landowners. It is also intended to point out some of the key violations that have occurred in the preparation of the forthcoming Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA).</p> <p>As the WCSRPC has discussed in its meetings with TXDOT, there is clear evidence that the Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that the FRA step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, I-45, Utility) that met the “Purpose and Need” of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015).</p> <p>Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. § 1501.2(c)). Some of these conflicts have been brought to your attention via the TXDOT meetings and are again noted in this letter. As was pointed out, the mere fact that you have improperly drawn a line for a preferred alignment has already harmed our community. Developers are forced to look outside of Waller County for housing and commercial sites to support the 4,000 plus jobs expected from the Daikin/ Goodman manufacturing site currently being constructed in our area. The expected growth and development opportunities that would greatly benefit every resident, especially our minority community, are being forced to consider other locations. Members of our Commission have received a form letter dated January 7, 2016, from the US. Department of Transportation, Federal Rail Administration, requesting we provide “information concerning environmental and land use constraints including current or proposed land development projects, city projects, or other issues of interest to Waller County within the study area.”</p> <p>It goes on to state: “This information will be used by FRA and AECOM in the assessment of impacts documented in the Draft EIS and the evaluation of alignment alternatives.” Please note that there is only one build corridor and one alignment carried forward by the FRA for study pursuant to NEPA in Waller County. It is disingenuous to ask us at this late date for information that should have been considered at the corridor level stage of the analysis. However, we do hope that providing you this information will demonstrate the need to step back and prepare a programmatic corridor level EIS.</p> <p>The National Environmental Policy Act (NEPA) requires the Federal Rail Administration and your agency, as the joint lead agencies, to coordinate with our local government planning commission. At the same time, as a local government entity formed under Texas Code 391, the Texas Department of Transportation is required to coordinate with us under Section 391.009(c). As a statutorily created planning commission under Texas State law, we have the unique authority and expertise to ensure that all projects within our jurisdiction, whether city, county, state or federal, work together for the benefit of the people of Waller County.</p> <p>As we discussed during the meeting, the FRA has failed to coordinate with our planning commission prior to selecting the Utility Corridor and H-4 alignment through Waller County. Had we met early in the process, as required under NEPA and requested numerous times by our Commission, we could have provided you and your staff with these important impacts creating a much more complete and sufficient analysis. A detailed summary and discussion of the impacts on Waller County is attached. Please consider this letter and the attachments to constitute the formal comments on the draft E18 by Waller County and the Waller County Sub-Regional Planning Commission.</p> <p>Sincerely, Trey Duhon</p> <p>ATTACHMENT A Dear Mr. Johnsen and Lt. Gen. Weber: On July 1, 2008, the Waller County Sub-Regional Planning Commission (WCSRPC) was created, under Chapter 391 of the Texas Local Government Code, to provide for special planning needs as it pertains to Waller County. The WCSRPC hereby places the Federal Railroad Administration (FRA) and Texas Department of Transportation (TXDOT) on notice that they must coordinate the planning of the construction and operation of a high-speed rail (I-ISR) project proposed by a private company – Texas Central High-Speed Railway. to the extent such project will be routed through Waller County. and such coordination shall be conducted in a meaningful way and to the greatest extent feasible with the WCSRPC at the regional level as required by the National Environmental Policy</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Act (NEPA) and Section 391.009(c) of the Local Government Code. Section 391.009(c) states: “In carrying out their planning and program development responsibilities, state agencies shall, to the greatest extent feasible, coordinate planning with commissions to ensure effective and orderly implementation of state programs at the regional level.” It is our understanding that one of the two routes for the HSR that has been designated for detailed evaluation passes through Waller County and could still be selected by the FRA and/or TXDOT as a route for this project. As such, we request that the FRA and TXDOT prepare to meet with the governing body of our regional commission no later than January 1, 2015, to begin the coordination process. We ask that FRA and TXDOT representatives be prepared to answer all questions from the commission regarding the current and future plans of the HSR and the EIS as it will impact our citizens and economies. Your prompt response is appreciated. As a duly formed commission under Chapter 391 of the Texas Local Government Code, it is our responsibility to plan for and guide the unified, far-reaching development of our region, eliminate duplication, and to promote economy and efficiency in the coordinated development of our region. From this point forward, any effort by your agency, your assigns, or other private contractors to study, plan, or prepare to construct the HSR through our combined jurisdictions must first be coordinated with the Waller County Sub-Regional Planning Commission. We look forward to working with you in this regards. Respectfully yours, WALLER COUNTY SUB-REGIONAL PLANNING COMMISSION</p> <p>Dear Ms. Feinberg, I appreciate your April 27, 2015 letter responding to our request dated November 14, 2014, to begin formal coordination with the Federal Railroad Administration on the Dallas to Houston High Speed Rail Environmental Impact Statement (EIS). One of the two routes proposed for further analysis by Texas Central Rail, a private corporation and partner with you in this project, will create a new corridor through our planning area, creating significant local impacts. It should be noted that your letter refers to our Commission as a “public stakeholder.” This is incorrect. We are a political subdivision of the state of Texas, with planning authority made up of elected representatives of the public. We are not a public stakeholder, but rather a local government with jurisdictional planning authority. State and Federal law recognize this distinction, which is why there is a separate and distinct process of coordination set forth in statute to ensure conflicts with local governments are resolved. In July of 2008, the Waller County Sub-Regional Planning Commission (WCSRPC) was formed for the purpose of planning the future development of our community, including the planning of transportation systems within our jurisdiction. Members of our Commission include elected representatives from as well as the County of Waller. As a statutorily created planning commission under Texas State Law, we have the unique authority and expertise to ensure that all projects within our jurisdiction, whether city, county, state or federal, work together for the benefit of the people of Waller County. Under Texas law, Section 391.009(c) requires all state agencies to “coordinate planning with commissions (WCSRPC) to ensure effective and orderly implementation of state programs at the regional level.” This directive for state agencies, such as the Texas Department of Transportation, to coordinate their plans with WCSRPC does not conflict with their responsibility to plan for improved transportation from a statewide perspective, in fact, it enhances their efforts. By planning regional projects in close coordination with planning commissions such as ours, federal and state agencies can develop an efficient and safe transportation system that benefits the local communities as well as those passing through our jurisdiction. The National Environmental Policy Act (NEPA) also requires coordination³ with local governments during the preparation of the environmental analysis of a project, such as the Dallas to Houston High Speed Rail (DHHR). This places a specific duty on your agency to coordinate directly with our Commission. Additionally, throughout NEPA and the Council on Environmental Quality (CEQ) regulations, there are specific requirements placed on the lead agency to ensure that impacts to local governments are thoroughly analyzed and conflicts with local plans resolved.⁴ The purpose of the NEPA study is not to approve a federal action, but rather to identify how that action may impact the “human environment.”⁵ In essence, the purpose for this environmental study is to determine, in part, its impact to the WCSRPC community.⁶ As the state designated planning authority for this area, it is necessary to coordinate with us to ensure you are fully informed of our current and future plans as well as the potential impacts your project will create in our area for the purposes of completing a legally sufficient environmental study. In the Scoping Report released April of this year for the DHHR environmental study, you state the next step in the NEPA process is to prepare the Project’s Purpose and Need statement and identify a reasonable range of alternatives. Specifically, you point out the need to coordinate</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>with our Commission prior to identifying the alternative alignments. “FRA will also undertake coordination and consultation with federal and state agencies, local government and Metropolitan Planning Organizations (MPO). Tribal governments, and the Section 106 consulting parties prior to identifying the alternative alignments to be evaluated in the Draft EIS.” (DHHSR Scoping Report, page 24) Although we would have preferred to coordinate with you early in the process to avoid potential conflicts with the two routes already identified to be carried forward, we are prepared to discuss these alternatives and their impact on our community as soon as possible. To this end, we renew our request to meet with you and have set aside the days of August 3, 10, 17, or 24 of 2015 for these discussions. It is our hope that one of these dates will work with your schedule so we can begin working through these critical issues. Although NEPA requires that local governments with jurisdiction or special expertise be invited to participate as a “cooperating agency,” we are not requesting this involvement, nor would such a relationship be appropriate. As an elected body of the public, our discussions and decisions must be made in public meetings with a quorum present. Coordination is the appropriate vehicle for us to convey our plans and policies to you and to give you the opportunity to meaningfully work with us to resolve possible conflicts. More importantly, it is good business to do so. It would demonstrate the FRA’s willingness to foster an open, strong and productive working relationship with our Commission. Only a small portion of the proposed routes cross into our jurisdiction, which may be the reason your agency has not met with us to discuss potential conflicts with our existing infrastructure and future plans. However, the placement of a High-Speed Rail corridor in the eastern part of our jurisdiction will have significant impacts on our community. Unfortunately, these impacts are not identified in your scoping report, nor do we anticipate that the public comment process can sufficiently convey these issues to you. Hence, it is important that we meet and share our concerns face to face. Please let us know by Friday, July 24, 2015, which of these dates will be most convenient with your schedule, or, if necessary, please suggest a date in the near future that would be workable. It is important, however, that our viewpoint be fully discussed and concerns aired sooner rather than later in order to avoid delays in this process. I look forward to hearing from you and meeting you and your team in person. Sincerely, Trey Duhon</p> <p>ATTACHMENT C AFFIDAVIT OF JUDGE CARBETT “TREY” J. DUHON III STATE OF TEXAS § COUNTY OF DALLAS § BEFORE ME, on this day, the undersigned personally appeared Carbett J. Duhon III, known to me and whose signature appears below, and who after being by me duly sworn and according to law upon his oath, upon his oath he said:</p> <ol style="list-style-type: none"> 1. “My name is Carbett ‘Trey’ J. Duhon III. I am over the age of 18 years, have never been convicted of a felony, and am in all respects competent to make this affidavit. I have personal knowledge of the facts stated herein and they are all true and correct. 2. I have been a resident of Waller County for 12 years and the Waller County Judge for 4 years. The cities, communities, and neighborhoods of Waller County are primarily made up of minorities. The cities, communities, and neighborhoods of Waller County will be directly affected by the construction and operation of the high-speed rail from Dallas to Houston. This is especially true for the City of Waller. 3. I have been active within the Waller County community and have personally seen the rich culture and heritage that resides within the community; it has grown and flourished over the years in which I have acted as County Judge, and plans to continue to grow and flourish. However, if the high-speed rail is constructed and operated through Waller County, as proposed in the Federal Railroad Administration’s (“FRA”) draft environmental impact statement (“DEIS”), Waller County communities along the proposed route will be destroyed by the adverse economic impact; in turn, this will negatively impact the community growth and employment. 4. As one example, the City of Waller has a 7-8-year construction plan to build a new town square on the east side of the city; right along the proposed route contemplated in the DEIS. To no avail, Waller County and the City of Waller have attempted to contact the FRA multiple times regarding the plans for the new town square. This project will be destroyed by the implementation of the proposed route contemplated in the DEIS. The FRA did not take this sever impact on the growth City of Waller into account in the DEIS. 5. Waller County’s municipalities rely heavily on sales tax as a main form of revenue. The cities, communities, neighborhoods within the county, and specifically along the proposed route contained in the DEIS, contain the stores and businesses that generate the sales tax revenue for Waller County. If the project is built, not only will it split the communities apart, but it will take the consumers that provide business to 	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>these communities off the road. This will decrease revenue for the community businesses, and thus sales tax for the County. Without this revenue, communities, cities, neighborhoods, and ultimately the County of Waller’s growth will be decimated. This will also decrease employment throughout the Waller County Communities.</p> <p>6. Further, implementation of the routes contemplated in the DEIS will require Waller County and the City of Waller to relocate roads. This will significantly impact the budget of the Waller County. Texas Central Railway, the company that proposes to build the high-speed rail (“HSR”), has not committed to be responsible for any increased county expenditures to retrofit the county road system to remedy the disruptions directly caused by the HSR, nor has Texas Central committed to find expenses in the future when a county road may need to cross the existing HSR; such a crossing the HSR could easily exceed \$1 million per crossing. Waller County cannot afford to build one crossing, much less many, as it grows into the future. Building the construction of the HSR will create an impassable divide across the county and will forever financially strap Waller County. Texas Central’s response to Waller County has basically been heartless.</p> <p>7. Moreover, Waller County has passed an ordinance which will not allow HSR to cross any county road without a permit. Texas Central has never collaborated with Waller County regarding such crossings, nor have they ever applied for a permit. Unless and until Texas Central has agreed to be financially responsible for all negative financial impacts to the county, in my role as county judge, I will oppose the granting of any such permit.</p> <p>8. The proposed route contained within the DEIS will also limit community accessibility; example the City of Waller. The community within the City of Waller is dependent on its accessibility to go from one end of the city to the other; the placement of the rail will disrupt the natural flow of the community resulting in irreparable harm through community involvement.</p> <p>9. The proposed route contained within the DEIS will also displace low income residents along the route. My County has numerous families that live at or slightly above the poverty line in multiple communities along the route, including the City of Waller.</p> <p>10. My community will be torn apart with the construction of the TCR high-speed rail and launch many communities, such as the City of Waller, into a depression that will be unrecoverable.</p> <p>11. A detailed discussion of the impacts is also attached hereto which more fully discusses the impacts to Waller County as outlined above, in addition to others. The attachment is true and correct and was previously provided to the Texas Department of Transportation, and they represented to me that such document was forwarded to the FRA prior to May of 2017, yet none of these issues have been addressed in the DEIS.</p> <p>Affiant further sayeth not”</p> <p>Waller County and Waller County Sub-Regional Planning Commission’s Comments on Draft EIS and Discussion of Impacts in Waller County and the Federal Rail Administrations Failure to Analyze Potential Corridors for the Dallas to Houston High Speed Rail, Pursuant to the National Environmental Policy Act.</p> <p>A. The FRA Improperly Narrowed Corridor Alternatives</p> <p>1. Federal Register Notice of Intent (NO1) to Prepare an Environmental Impact Statement for Dallas-Houston High Speed Passenger Rail Corridor June 25, 2014, the Federal Railroad Administration (FRA) announced it would be preparing an Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA), for a High-Speed Passenger Rail Corridor between Dallas and Houston Texas (79 Fed. Reg. 36123). The proposed action that requires the FRA oversight and NEPA analysis is “for the impacts of constructing and operating a dedicated high-speed rail (HSR) system.” The project was proposed by a private company, Texas Central High-Speed Railway (TCR), which was formed in 2009, for the purpose of bringing HSR to Texas. The Notice stated that the EIS would “evaluate route alternatives for passenger rail,” and evaluate “alternatives for construction and operation of the Proposed Action consisting of a sealed HSR corridor.”</p> <p>The notice committed that the EIS would address environmental issues of concern, including:</p> <ol style="list-style-type: none"> Describing the purpose and need for the Proposed Action. Describing the environment likely to be affected by the Proposed Action. Identifying the reasonable alternatives that satisfy the purpose and need for the Proposed Action. Describing the no-build or no-action alternative to serve as a baseline for comparison. Describing the potential environmental impacts associated with the reasonable alternatives and mitigation to address significant impacts. <p>Additionally, FRA committed that as a part of the EIS, it would study “the impacts of various alternative HSR route alignments,” including “shared corridors with other existing linear infrastructure corridors such as railroads, roads, and electric utility lines.”</p> <p>Prior to the FRA’s announcement, there has been no analysis of potential rail corridors between Dallas and Houston pursuant to the National Environmental Policy Act. Although the Texas Rail Plan (2010) identified three potential corridors (BNSF, UPRR, 1-45), no NEPA analysis was prepared in conjunction with this plan. Therefore, prior to the FRA’s June 2014 announcement, no programmatic study had been prepared</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>under NEPA to determine which of the numerous corridor alternatives would have the least impact on the human environment. This responsibility would need to be carried out by the Federal Rail Administration.</p> <p>2. Scoping Report (April 2015) The FRA initiated the scoping process for the purpose of defining and narrowing the scope of issues to be analyzed in the EIS. TCR had conducted its own screening process to determine the potential corridors that should be advanced for further analysis. The private company reviewed four primary corridors with nine variations. They evaluated the feasibility of each potential corridor based on “HSR design requirements, engineering and constructability challenges, and potential environmental constraints.” (Scoping page 3). The four primary corridors consisted of the three studied in the Texas Rail Plan and a new corridor identified by TCR, the Utility Corridor. TCR ultimately recommended to FRA two corridors (BNSF Option 1 and Utility) for further study, eliminating two of the State’s Plan recommendations. FRA presented these two corridor options to the agencies and the public for input during the NEPA scoping process. (Scoping, page 4) (See also Attachment 1, Table 1) Although NEPA requires coordination with local governments early in the process, no effort was made by TCR, FRA or the Texas Department of Transportation (Joint Lead Agency) to consider the local plans and policies of Waller County. No consideration or analysis was made as to how the local plans might restrict or impact the decision to carry forward or eliminate corridor alternatives for further study at this point in the FRA analysis process. Additionally, the discussion in the scoping report is incomplete. The Council on Environmental Quality (CEQ) regulations governing implementation of NEPA requires that three types of actions, alternatives and impacts be evaluated in the EIS. (40 C.F.R. § 1508.28). There was no consideration of these elements during the scoping phase. Had the FRA at least discussed these elements in the Scoping Report, their focus may have changed. At the very least, the public and decisionmakers would have had better information from which to form its position.</p> <p>3. Corridor Alternatives Analysis Technical Report (August 2015) After releasing the Scoping Report, the FRA initiated an “independent” analysis of the potential corridor alternatives, the results of which were published in the Corridor Alternatives Analysis Technical Report (CAATR), August 2015, just four months later. At this stage, the FRA considered seven distinct corridor alternatives and transportation options, including the two recommended by TCR. Presumably, one would have expected the FRA to compare the seven corridors pursuant to NEPA and the 23 environmental criteria required under the FRA’s Procedures for Considering Environmental Impacts (64 Fed. Reg. 28545) since no NEPA analysis had been conducted prior on these corridors. However, they chose a different path, one that prioritized “meeting the economic viability determinations made by TCR,” (CAATR page 2) as a basis for eliminating several of the viable and reasonable alternatives that deserved equal analysis pursuant to NEPA. “This report reflects FRA’s independent analysis and judgment in its capacity as the federal lead agency for the EIS. FRA undertook the Corridor Alternatives Analysis documented in this report in accordance with FRA procedures and generally accepted practices guiding the identification and evaluation of potential corridor-level alternatives. Because the Project is a private proposal by TCR, FRA’s alternatives evaluation documented in this report is premised primarily on complying with TCR’s technical requirements for the high-speed rail system and meeting the economic viability determinations made by TCR. FRA’s additional screening criteria are directly related to FRA’s role under NEPA: minimizing impacts to the natural and human environment.” (CAATR page 2, emphasis added) Although the FRA makes mention of considering the environmental criteria they are required to review under their own procedures and NEPA, a close look at what they examined reveals they selectively chose impacts to consider, and did not equally apply the analysis to each alternative. (Attachment 1, Table 3) Four of the seven alternatives were found to fulfill the “Purpose and Need” for the project. The “Purpose and Need” is defined as: “supports the purpose to provide economically viable high-speed (200 mph) safe and compliant passenger rail service competitive with air travel (90-minute travel time from terminal to terminal) using the N700-] Tokaido Shinkansen in a fully sealed and grade-separated Corridor.” (CAATR page 9) The BNSF, UPRR, I-45 and Utility Corridors were all found to meet the projects “Purpose and Need.” At the very least, these should have been carried forward for a rigorous corridor level alternatives analysis as required by NEPA. In fact, the FRA committed to doing so in the N01 to prepare the EIS. Factor “0,” identified above, states that they will be “Identifying the reasonable alternatives that satisfy the purpose and need for the Proposed Action.” It does not then add onto this statement, “and other factors the FRA determines appropriate.” If it did, it would be an unlawful statement because it would expressly violate the purposes and requirements of NEPA. However, this is exactly the path the FRA pursued. Instead of a rigorous analysis of the four “build” corridor alternatives that met the purpose and need statement, the FRA conducted what it describes as a “Fine Screening Analysis.” It compared the four build alternatives based on their “physical characteristics’ “operational feasibility,” and six “environmental constraints.” The environmental constraints were:</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>1. Number of stream crossings 2. Acres of wetlands 3. Acres of floodplains 4. Number of historic properties and archaeological sites 5. Acres of parks and national Forest/national parks 6. Acres of managed habitat areas</p> <p>There was no consideration of air quality, water quality, endangered and threatened species, land uses both existing and planned, impacts to the socioeconomic environment or minority populations, public health or safety, or many of the other 23 impacts required to be examined according to the FRA’s environmental procedures. (Attachment 1, Table 2 and 3). (comment continued below)</p>	
Carbett Trey Duhon	3/8/2018	Letter (comment continued from above)	<p>(comment continued from above)) Based on the FRA’s selective analysis during their fine screening process, they eliminated three of the primary build alternatives, leaving only one build corridor to examine pursuant to NEPA, the Utility Corridor. The Utility Corridor directly impacts Waller County. One of the primary reasons for eliminating the 1-45 Corridor was it passed through the National Forest, managed by the US. Forest Service.³ This decision, made without the required NEPA analysis, favors the federal landowner over the private landowner. It also favors saving trees over harming minority communities, conduct NEPA expressly prohibits. In fact, the primary purpose for NEPA is to ensure that potential impacts are compared equally and not selectively. The FRA’s analysis improperly resulted in carrying forward “one” build alternative corridor that cuts through Waller Co., a county whose population is 52% minority. At the very least, the FRA should have carried forward the four corridor alternatives for a side-by-side comparison as to their potential impacts weighing equally the 23 environmental criteria set forth in their procedures. However, instead, they selectively chose from that list to narrow the alternative down to the one preferred by TCR at the beginning of the project - the Utility Corridor. 4. Alignment Alternatives Analysis Report (November 6, 2015) November 6, 2015, the FRA released their Alignment Alternatives Analysis Report (AAAR), just three months after selectively choosing the Utility Corridor as the only path for the proposed rail. Here, they examined 21 potential alignments within the Utility Corridor. In some sections of the corridor, only one alignment was identified, and in others, such as that which travels through Waller County, five potential alignments were considered (Hockley Geographic Group). Again, it would be reasonable to assume that at the very least the FRA would compare the five alignments within the one corridor in Waller Co., through the lens of NEPA and the 23 environmental criteria of their NEPA procedures. Remarkably, they did not. First, they considered whether each alignment met the “purpose and need,” “alignment objectives,” and “design guidelines.” Four of the five alignments passed and were carried forward. Second, they considered 16 environmental concerns and incorporated cost and construction factors into the analysis to determine which of the four remaining alignments would be carried forward for analysis in the Draft EIS. Understanding the methodology they used to eliminate alignments is challenging. They attempt to determine whether there is a “direct” or “indirect” impact for each environmental criterion. However, their application of “direct” and “indirect” impacts is quite different from that required under NEPA. FRA considered a “direct” impact if the action occurred in the 125 foot ROW. If a house resided inside this ROW, then the impact would be “direct” and recorded under the environmental criterion of “structures.” If an impact was outside the 125 foot ROW, but within 1,000 feet of the centerline, then it would be an “indirect” impact. Presumably, anything beyond the 1,000 foot area had no impact. So, even though the action may cause a cumulative impact and may have an indirect effect well beyond the 1,000 foot area, it was not considered. Additionally, the information they used to make these determinations was “desktop level research and data collection.” (AAAR Page 24). There were no field surveys or coordination with local governments to gather this information. If the data was not in a computerized source they reviewed, then it was not counted. Further, each environmental criterion was then reduced to a number to represent the degree of the desktop accessed impact and given a ratio number between 1 and 4. Based on this number and a similarly calculated cost and construction factor number, a determination was made as to which alignments would be carried forward. It was a mathematical calculation, not an actual assessment of the impact. In Waller County, this resulted in narrowing the alternatives to be carried forward and finally to be analyzed pursuant to NEPA to one alignment within one corridor. (Attachment 1, Table 4 & 5). Interesting to note, is that while the FRA initially considered 16 environmental criteria at this stage, they dropped four of these from early screening consideration. They were “community facilities, historic properties, hazardous materials and US. Census block groups with over 50 percent poverty population.” (AAAR Page 29). Their reasoning was that “they did not create any differentiation between the scoring of the potential route alternatives at this level of analysis. For example, this desktop level analysis did not identify any historic properties within the 125-foot buffer, (62.5 feet from the</p>	Refer to AS-1, BA-5, BA-6, BA-7, BA-8, BA-9, BA-10, CR-2, CR-9, ED-2, EJ-1, FP-1, LU-2, LU-3, LU-4, NE-1, NE-8, NE-9, NR-2, NR-5, NV-1, NV-5, PI-1, RF-1, RF-4, SC-11, SC-19, SS-23, SS-26, TR-1, TR-6, TR-7, TR-8, WW-1, WW-2, WW-6 and WW-8.

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>alignment centerline) although they are expected to be present.”</p> <p>Had they assessed these impacts closer, particularly those which fall within the category of social justice, and also looked beyond the 1,000 foot zone, they would have had to report to the public and decision makers that the impact to Waller Co. was significant. They would have also had to report that anywhere they placed the rail in Waller County was going to impact a community that was over 50% minority.</p> <p>Had they properly compared the four build alternatives that met the purpose and need statement pursuant to NEPA, they would have had to compare and analyze whether the impact to minority communities was significant alongside their premature decision that the impact to the national forest was significant. It is conceivable that the public and other federal decisions makers would have called for a different preferred corridor. The FRA should pull back now, and prepare a programmatic EIS that analyzes the four build alternatives pursuant to NEPA. Once this analysis is completed, then they should begin a segment-by-segment alignment analysis, also pursuant to NEPA.</p> <p>B. The FRA is Preparing an EIS to Justify Decisions Already Made</p> <p>The primary purpose of an EIS is an “action-forcing device” to be used to “plan actions and make decisions. It shall provide full and fair discussion of significant environmental impacts and shall inform decisionmakers and the public ofthe reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality ofthe human environment.” (40 CPR. § 1 502.1)</p> <p>A record of decision issued by the FRA approving the rail project at the end ofthe EIS process will authorize the private company to begin the actions necessary to build the rail, including the condemnation ofprivate land in Texas. A “No Build” decision would prevent the rail from being constructed. Until the Dallas to Houston High Speed Rail project receives this environmental clearance, no landowner should be harmed, impacted, or be forced to allow TCR to physically occupy his land.</p> <p>A critical principle of NEPA is that the analysis should not be prepared for the purpose of justifying an outcome. The analysis needs to be unbiased, impartially prepared, equally weighing all the impacts in such a way as to ensure the purposes for the act are fulfilled — that man and nature exist in productive harmony. The CEQ regulations specifically prohibit the type of statement preparation the FRA has pursued. 40 CFR § 1502.2 (0 Agencies shall not commit resources prejudicing selection of alternatives before making a final decision (Sec. 1506.1). (g) Environmental Impact statements shall serve as the means of assessing the environmental impact ofproposed agency actions, rather than justifying decisions already made. And; 40 CFR § 1502.5 The statement shall be prepared early enough so that it can serve practically as an important contribution to the decisionmakingprocess and will not be used to rationalize orjustify decisions already made (Secs. 1500.2(c), 1501.2, and 1502.0). And; 40 CFR § 1 506.1 (a) Until an agency issues a record ofdecision as provided in Sec. 1505.2 (except as provided in paragraph (c) ofthis section), no action concerning the proposal shall be taken which would: (1) Have an adverse environmental impact; or (2)Limit the choice ofreasonable alternatives.</p> <p>(b) Ifany agency is considering an applicationfrom a non-Federal entity, and is aware that the applicant is about to take an action within the agency'sjurisdiction that would meet either ofthe criteria in paragraph (a) ofthis section, then the agency shall promptly notify the applicant that the agency will take appropriate action to insure that the objectives andprocedures of NEPA are achieved.</p> <p>(c) While work on a requiredprogram environmental impact statement is in progress and the action is not covered by an existingprogram statement, agencies shall not undertake in the interim any major Federal action covered by the program which may significantly affect the quality ofthe human environment unless such action (3) will notprejudice the ultimate decision on the program. Interim action prejudices the ultimate decision on the program when it tends to determine subsequent development or limit alternatives.”</p> <p>The FRA has violated these provisions. Instead of preparing a programmatic EIS analyzing the four build alternative corridors that passed the purpose and need test, the FRA has selected one corridor and a specific alignment within this corridor before conducting the required NEPA analysis. Landowners near the Utility Corridor and selected alignment have been harmed. TCR is actively surveying the 1,000 ft. impact area and landowners have been threatened with court action if they refuse to allow TCR access to the private land. Development in Waller Co. has all but stopped as investor’s are on hold waiting to see which parcels of land will be impacted. The FRA’s actions to this point have had an adverse environmental impact, have limited the choice of reasonable alts, and have prejudiced the ultimate decision on the program.</p> <p>The heart of the EIS is the discussion of alternatives. Because the FRA has improperly selected one build alt, it has failed to provide the meaningful comparative assessment necessary for proper decisionmaking. “Based on the information and analysis presented in the sections on the Affected Environment (Sec. 1502.15) and the Environmental Consequences (Sec. 1502.16) it should present the environmental impacts of the proposal and the alternatives in comparative form, thus sharply defining the issues and providing a clear basis for choice among options by the decisionmaker and the public.” (40 CFR § 1 502. 14)</p> <p>There is nothing for decisionmakers and the public to “compare” the analysis to. The FRA is offering only one build alternative to be compared against “no action.” How futile will the “affected environment” and “environmental consequences” discussion be to ensuring an informed decision? Of course, it is not futile ifthe intent from the beginning ofthe proposal was to build a High Speed Rail System in the Utility Corridor. This approach, whether intentional or not, is clearly unlawful under the provisions of NEPA.</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Two of the four build corridor alternatives were eliminated because it would have required negotiations with freight rail companies, the BNSF and UPRR alternatives. However, the FRA has said they will consider reassessing these if restrictions on the Utility corridor make this necessary. (AAAR page 3). What this means is that negotiations with the freight rail companies are possible, and reasonable. The pro's and con's of doing so should be examined equally alongside the other two alternatives, not eliminated at the outset of the project and, therefore, improperly preferring that alternative originally identified and recommended by the private company.</p> <p>So, the FRA eliminated two alternatives because it would be difficult to negotiate with Freight Rail companies, eliminated one alternative because it would impact the national forest, in favor of impacting primarily rural landowners. This decisionmaking process not only reveals the FRA's bias against rural landowners, but also their ignorance as to the unique land uses and irreversible and irretrievable commitment of resources in rural Texas.</p> <p>C. Local Significant Impacts to Waller Co. and WCSRPC's Jurisdiction Must be Resolved</p> <p>As has been noted above, the FRA has a duty through the EIS process to work to resolve the conflicts a proposed project will cause to local communities.</p> <p>"Study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources as provided by section 102(2)(E) of the Act." (40 CFR § 1501.2(0))</p> <p>The remedy provided through NEPA when conflicts cannot be resolved is to develop appropriate alternatives that avoid these conflicts. In the event this needs to be stated again, the FRA should have prepared a corridor level analysis pursuant to NEPA whereby it could have studied an alternative that resolved the conflicts imposed on Waller Co. Additionally, the FRA is required to discuss in the statement how the agency is going to reconcile the proposed action with the local plans. "To better integrate environmental impact statements into State or local planning processes, statements shall discuss any inconsistency of a proposed action with any approved State or local plan and laws (whether or not federally sanctioned). Where an inconsistency exists, the statement should describe the extent to which the agency would reconcile its proposed action with the plan or law." (40 CFR. § 1506.2(d))</p> <p>Again the burden falls on the federal agency to "reconcile" its proposed action with the conflicts imposed on the community.</p> <p>Numerous impacts and conflicts were discussed in the coordination meeting held last February that will need to be identified in the Draft EIS and the action the FRA will be taking to reconcile these conflicts. To date, there has been no effort by the FRA to contact our Commission in order to determine what reconciliation would be sufficient, even the FRA has been noticed of these concerns through the meeting with TXDOT.</p> <p>Some of these issues are discussed below, but by no means covers every issue. This does provide some of the most critical and important impacts to our community we are currently aware of that need to be resolved prior to any further action on development of an EIS.</p> <p>1. Emergency Services</p> <p>Mr. Gary Ferguson, Director of the Waller Harris Emergency Services District No. 200 (District), spoke about how the High Speed Rail (HSR) will divide the district down the middle cutting off access to 25 roads. These roads are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels.</p> <p>Also, the District is currently planning for an expected increase of residents due to the construction of the Daikon Goodman manufacturing plant. However, it is prevented from carrying out its planning responsibilities in a sufficient manner because the potential of a proposed HSR through the District creates too many unknowns. For instance, if the HSR path does go through the District, whether or not the train will be elevated above grade or raised up 12 to 18 feet with no underpasses, changes every element of the District plans. The District cannot properly move forward and plan sufficiently because of the FRA's actions.</p> <p>The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 M for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions.</p> <p>Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts.</p> <p>2. Economic Development Impacts on the City of Waller</p> <p>Mr. John Isom, Director of the City of Waller Economic Development Corporation discussed how the City of Waller was stunned when it discovered the HC-4 Route through the City's ETJ had been chosen with no opportunity for public input or comment. The City of Waller has a</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City’s extraterritorial jurisdiction and through the planned Waller Town Center.</p> <p>HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 M facility that will be 4.2 M square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources.</p> <p>Goodman Manufacturing has stated their position on the HSR route HC-4 this way: we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options. ” Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City’s development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 M investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The City has a retail “leakage” of \$352 M in our primary trade area and \$584 M in our secondary trade area. The WTC is critical to the City’s closing this leakage. This build out investment would double the City’s property valuation and could potentially double the City’s sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City’s retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities.</p> <p>One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP’s management team and legal department stated: “Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route. ”</p> <p>3. Waller ISD Impacts</p> <p>Mr. Danny Twardowski, Superintendent, Waller Independent School District (WISD), stated how he and his Board were never contacted or notified about the route being chosen. In fact, HC-4 splits the District in half. It is also located immediately behind one of the schools in WISD), which is totally unacceptable. WISD encompasses 328 square miles in Region 4 of the District. It has 6,600 children and has added over 320 students in 2016 and over 700 in the past two years. WISD has a five to seven percent growth rate and is expected to double in size over the next 10 years. For planning purposes of the District, we now need to know if the train track is going to be elevated, on grade, or subterranean. We need to know for our bus routes and safety of our students. The potential division of our District will cause our buses to travel many more miles, creating wear and tear on our equipment, which will need more maintenance and care. WISD derives 45% of its funding from ad valorem taxation. Any diminution of property values will have a direct and negative impact on the future growth of our school district. With Daikin/Goodman coming to our community, those 6,000 employees will have children who will need to attend school and WISD would like for them to attend their District, but the District cannot make the appropriate plans for future growth and economic development around the HSR because of the many unknowns regarding the HSR. People are scared and are now not willing to move into the area for fear that the train will destroy their property values. This is a major issue for the school district and future planning. The FRA has already harmed the District by selecting this alignment without proper NEPA analysis.</p> <p>Last November, WISD passed a Bond to build four new schools. Without knowing any details about the HSR, WISD cannot purchase land, make plans or know which routes to choose to transport their students. Some of their children are medically fragile and cannot be transported easily or for long periods of time. The HSR now creates significant issues that need to be resolved. WISD also plans on building a new satellite transportation facility, but without more information, cannot purchase land, make plans, or be as efficient with the public’s tax dollars.</p>

			<p>These conflicts must be resolved by the FRA before any additional environmental studies are released.</p> <p>4. Other Community Impacts</p> <p>Mr. T.J. Johnson, president of the Waller County Advocacy Group (WCAG) discussed numerous impacts on Waller County, which, according to government statistics, is one of the fastest growing counties in the nation. Impacts on the County include:</p> <ul style="list-style-type: none"> - High Speed Ground Transportation Noise and Vibration Impact Assessment by the FRA dated September, 2012 states that vibrations affect “sensitive” buildings like Concert Halls, television stations, recording studios, theaters and buildings like the Hewlett Packard facility where they house 1,500 servers. With up to 96 trains per day, this will cause significant impacts to HP, as well as, directly affect the viability and economic stability of the region. Ms. McNeely stated that the FRA was studying this very issue and would include it in the Draft EIS. We ask that HP be directly contacted so that impacts to their facility will be taken into account and any conflicts resolved prior to the final report being issued. - Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. Johnson estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 M. - Katy Prairie Conservancy — provides essential habitat for migratory birds and is designated as a Global Important Bird Area. A 200 MPH train barreling past this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly affected by a HSR corridor. - Kickapoo Preserve — a high-end development for 500 new homes for Daiken/Goodman employees has begun construction with a detention pond. The developer learned about the HC-4 route and has decided to stop all development until further knowledge of the train and its route is known. (See map). - Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines 7 all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone’s property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. - G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They have found and approved and finalized to build a water tower and the train route falls directly on top of it. - Woodhaven Subdivision was the area where three new schools were to be constructed, but that’s on hold because of the H04 route. <p>5. Waller County Economic Partnership</p> <p>Mr. Vince Yokum, Executive Director of the WCEP, a non-profit tasked with assisting the County to bring development, jobs and investment raised the following issues:</p> <ul style="list-style-type: none"> - Future road and thoroughfares through the northern portion of the County where the train is going to cut through. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all development. - Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it’s built. Tropical Storm Allison proved that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. - Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. <p>6. Economic Obsolescence</p> <p>Mr. Don Garrett, a real estate broker, discussed the economic reality of a train coming through the community. He referred to this as Economic Obsolescence. Using government studies, he explained how if anyone lived within 300 to 500 feet of the train, they’re what he called the “Walking Wounded.” In other words, the value of your land/home would be destroyed. The noise factor alone would do that. He likened it to living next to a freeway or in the flight path of an airport. Mr. Garrett explained how bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 M in annual revenue, \$1.8 M will be</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 M and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 M annually from developments that will be ruined by the train passing through or near them. Nobody wants to see or hear a high speed train near their home or business.</p> <p>The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing the fastest growth in the state. He requested the appraisers of the HSR look into what he calls Economic Obsolescence because it's going to cause people to lose value in their property, valuation of property to cause lower taxes collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes.</p> <p>7. Historical Impacts</p> <p>Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse.</p> <p>Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places.</p> <p>Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land.</p> <p>These are all historical sites that should not be destroyed by the HSR.</p> <p>8. Public Safety</p> <p>Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 — 18,000 lbs released, May 30, 2007 — 20,000 lbs released, and June 11, 2007 — unknown quantity</p> <p>On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away.</p> <p>It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur.</p> <p>Summary</p> <p>The FRA has failed to properly study the four build corridors that met the purpose and need test pursuant to NEPA, and by so doing caused considerable harm to Waller Co. and unresolved conflicts. Development in Waller Co. has all but stopped as investor's are on hold waiting to see which parcels of land will be impacted. Local governments have put plans on hold, jeopardizing properly preparing for their communities future. The FRA's actions to this point have had an adverse environmental impact.</p>	
Judge Trey Duhon	2/6/2018	Oral	<p>But let's talk about feasibility for a second. If you have haven't already, please take time to Google: Reason Foundation, high-speed rail, caution ahead. What will you find? You will find a detailed and critical analysis of this project. And you know what they found? They found construction costs underestimated, ridership severely overestimated; and as a result, they project this will lose \$500 million a year. This is coming from a pro high-speed rail, independent third party. They even stated, "Based on our experience and analysis, we're concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." And they are not alone. As of last year, there have been four other studies of high-speed rail in the Dallas-Houston corridor, all coming to the same conclusion: High-speed rail is not feasible in Texas. One of these was commissioned by Texas Central, the Lone Star High-Speed Rail Market Study. So you need to look it up. We have been shouting from the rooftops. It does not cash flow, Listen to what we are saying. When this</p>	Refer to GN-3, GN-4 and NE-1.

			fails, who will be left to pick up the pieces? Taxpayers. This may not run through your property, but I can assure you, it will run through your pocketbook. To me, this is important because our forefathers, who established this great country, they fought and died for the private property rights that we enjoy today. I would think that in our country, before we go and take away land from a family that's had that in -- that land for generations or they have fought and scraped to have that little piece of the American Dream; that at a minimum, we assure them that we're not building a bridge to nowhere. You know, back then our forefathers fought for something important at the risk of themselves, their family, and their property. Back then, everything mattered. It needs to matter again.	
Judge Trey Duhon	2/6/2018	Oral	I request a no-build alternative on this boondoggle of a project.	Comment noted.
Judge Trey Duhon	2/6/2018	Oral	All right. Good evening. My name is Trey Duhon. I currently serve as County Judge for Waller County, and I'm President of the Waller County Sub-Regional Planning commission. You know, over the last three years, despite our written requests, the FRA has flat-out refused to coordinate or meet with any local entities in Waller County to discuss this project. In April of 2015, you release a scoping report in which you stated that as part of your process, you would consult with federal, state, and local government prior to identifying the alternative alignments to be evaluated in the Draft EIS. That statement, quite frankly, was a lie. Not only did you fail to coordinate with local governments on this project, but you went one incredible step further and you instructed TXDOT not to meet with Waller County. Let that sink in for a second. A state agency. So our commissioner went to court in Travis County. We got a judge to order TXDOT to meet with us. We won on appeal. We met with TXDOT. We gave them all this very good, technical, precise information about all the impacts this will have on Waller County. That was given to the FRA by TXDOT. And you know how much of that stuff was-- went into the draft EIS and was addressed? Zero. Not one item. But let's talk about feasibility for a second. If you have haven't already, please take time to Google: Reason Foundation, high-speed rail, caution ahead. What will you find? You will find a detailed and critical analysis of this project. And you know what they found? They found construction costs underestimated, ridership severely overestimated; and as a result, they project this will lose \$500 million a year. This is coming from a pro high-speed rail, independent third party. They even stated, "Based on our experience and analysis, we're concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." And they are not alone. As of last year, there have been four other studies of high-speed rail in the Dallas-Houston corridor, all coming to the same conclusion: High-speed rail is not feasible in Texas. One of these was commissioned by Texas Central, the Lone Star High-Speed Rail Market Study. So you need to look it up. We have been shouting from the rooftops. It does not cash flow, Listen to what we are saying. When this fails, who will be left to pick up the pieces? Taxpayers. This may not run through your property, but I can assure you, it will run through your pocketbook. To me, this is important because our forefathers, who established this great country, they fought and died for the private property rights that we enjoy today. I would think that in our country, before we go and take away land from a family that's had that in -- that land for generations or they have fought and scraped to have that little piece of the American Dream; that at a minimum, we assure them that we're not building a bridge to nowhere. You know, back then our forefathers fought for something important at the risk of themselves, their family, and their property. Back then, everything mattered. It needs to matter again. I request a no-build alternative on this boondoggle of a project.	Refer to GN-1, GN-3 and PN-4.
Carbett Duhon III	2/20/2018	Website	Please be advised, based on the information currently available and the lack of coordination thus far, any relocation or realignment of public roads within our county is not acceptable and will not be granted. Further, Waller County will not accept additional road beds for our responsibility and maintenance without a long-term maintenance reimbursement plan in place. Please make the necessary adjustments to the DEIS document(s) and design to maintain all current alignments and ROW widths within our jurisdiction. At this point, we cannot even begin to evaluate the impacts to our County until the assumptions are consistent with county regulations and the policies of the Commissioners Court. Once the DEIS has been updated and issued, only at that time will we be able to begin our detailed review and provide additional comments.	Refer to ED-3, TR-7 and TR-8. As shown in Table 3.11-29: Roadway Crossings in Waller County in Section 3.11, Transportation , three roads would be crossed by the Project: Riley Road, Murphy Road, and FM 1488. For lengths and modifications to roads in Waller County, refer to Table 3.11-51: Waller County Roadway Modifications .
Richard Duley	2/8/2018	Website	I am totally for high speed rail between Dallas and Houston.I have driven that boring drive too many times over 4 1/2 hour's. I had at least 3 near accidents stopped only inches apart from the other vehicles. Please do this it's long overdue. Not to mention more people would visit Dallas and Houston if they could just get there faster without the hassle of airport's. Sincerely Richard Duley	Comment noted.
Micheal Dumas	2/7/2018	Website	I for one think it will be a great thing for Texas. I am from North Texas several miles North of Dallas. This train would be awesome to be able to go back-and-forth to visit family and help take care of my aging father and my aging in laws. Plus it would also allow them to be able to safely	Refer to SC-3 and TC-6.

			travel to Houston to see me and my wife. The train will also provide great job opportunities in a huge economic growth to the state and to the cities of Dallas and Houston. One question I have about the train he is how long will it take to build it and what are the normal ticket prices For these type of trains. Thank you	
Justin Dumlao	3/8/2018	Website	The planned high-speed rail route between Dallas and Houston is future-forward. We need ways to move around our state that do not involve additional emissions, and as the population of our state grows, existing freeways will not be able to handle the load. Interstate 45 is already congested. By offloading trips onto dedicated high-speed rail, using a proven and safe technology perfected by Japanese engineering, we have a potential to improve our environmental impact and demonstrate the viability of a wider high-speed system.	Comment noted.
Brenda Duncan	1/31/2018	Oral	Hi. My name is Brenda Duncam We have a ranch on 882 in Limestone County. And my main concern is the division of the property that's going to interfere with the farming and cattle, and — and the noise that's going to disturb the cattle: and - I — I just can't Imagine this train not having any vibration that' s going to be going through 200 miles an hour with our sections, and — I just — And the division of our property. How are we going to get back and forth from one section to another of our property? And the Do what? And the water table. I'll have it going to do to our water table? There's just lots of questions that I don't know if we're all going to get answered: or not: but — Our property value is going to go down: again. And that's another question. I guess that's all I to say. Thank you	Refer to LU-11, NR-1, NV-5, PI-1, PI-7, VA-1 and WW-6.
Jeff Duncan	1/31/2018	Oral	Good evening my name is Dr. Jeff Duncan and I am a resident for the past 32 years of Dallas, Texas. Tonight I will spend the night on a family ranch in Leon County as I make my way to Houston tomorrow. My brothers and I purchased this land ten years ago as a place to escape the hustle and bustle of our homes are in Dallas, Fort Worth, and Houston. Our land has active cattle operations and excellent deer hunter's paradise. It has a pristine 77-acre lake fed by some of the springs found throughout Leon County. Some of these springs cross the path of the 110 acres Texas Central would like to confiscate of our ranch. Our lake is home to a pair of nesting bald eagles, many varieties of ducks and other migratory water foul, as well as the endangered wood - which we have photographic evidence. It is hard for me to say what the impact of this rail line will have on our property, but I can tell you this, from an environmental standpoint this is not gonna be beneficial. Texas Central has said that we will elevate the tracks to allow landowners to utilize their properties. Great. Not only will we get to hear the train, but we'll now get to see it. The hubris involved by those who are attempting to place this line is no different than that of the ones who attempted it in Florida, nor the ones who created the unbelievably massive boondoggle in California. As you know by now, many officials and legislators in California are pleading to stop the progression of that project as it spirals out of control. Texas Central says to its investors this is a 50-year project. So they claim in 50 years the investors will reap a profit from their investments. To many pension plans that percentage is stated as being one percent. That sounds like a very slim and scary projection. But most of our manufacturing plants - develop self-driving cars. I personally feel that it is impossible to be able to say that this form of transportation, high-speed rail, will be a viable and sustainable mode of transit for the next five decades. I'm pleading for you to use common sense before allowing this very questionable project to impact our farms, our ranches, our homes, and our property. Thank you.	Refer to NR-1, NR-2, NR-3 and WW-9. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Archie Dunham	1/25/2018	Letter	Dear Mr. Wright, This letter is written in response to your December 19, 2017 letter requesting comments to the Draft Environmental Impact Statement recently released by the Federal Railroad Administration (FRA) showing the route of high speed rail system using the Japanese N700 Tokaido Shinkansen technology between Houston and Dallas. The purpose of this letter is to advise the FRA that the route will detrimentally impact the 1327 acre mixed-use Dunham Pointe development that Mason Westgreen LP is currently constructing on the Southside of State Highway 290 between Mason Road and Westgreen Boulevard. The development will contain single family residential homes, mufti-family housing units, office facilities, retail commercial centers, medical care facilities and a site for a future primary and secondary school. We are hopeful that you will appropriately evaluate the impact the proposed high-speed rail will have on the citizens of Harris County who live, work, and educate their children within our mixed-use development. We believe that the proposed high speed train route through Dunham Pointe will significantly reduce the economic viability of the development and we strongly proposed route of train as currently envisioned. The purpose of this letter is to advise the FRA that the route will detrimentally impact the 1327 ere mixed-use mnham Pointe development that Mæn Westgreen LP is currently constrwting on the Southside of State Highway 290 Mason Road and Westgreen Boulevard. development will c«uain single family residential homes. mufti-family housing units, office facilities, retail commercial centers, medical care facilities and a site for a future primary and secondary school. The purpose of this letter is to advise the FRA that the route will detrimentally impact the 1327 acre mixed-use Dunham Pointe development that Mason Westgreen LP is currently constructing on the Southside of State Highway 290 between Mason Road and Westgreen Boulevard. The development will contain single family residential homes, mufti-family housing units, office facilities, retail commercial centers, medical care facilities and a site for a future primary and secondary school.	Refer to LU-3.
Dustin Dunham	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas.</p> <p>3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</p> <p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
Allie Dunklin	2/26/2018	Website	While the proposed route has been vetted, I feel strong consideration of altering the path through the Corsicana section (where FM 709 & 3194 intersect), needs to be made. Crossing this 3-way intersection poses serious, and dangerous, issues in regards to traffic pattern and emergency response, as well access and future growth to properties along 3194.	Refer to SS-23. In this area (near the intersection of FM 709 and FM 3194), the Project is designed in a cut section. A new overpass for FM 709 would be constructed in place providing a grade separated movement over the Project. Neither FM 709 nor 3194 would require permanent closure. Therefore, no permanent impacts to transportation access, economic growth or emergency response times would be anticipated at this intersection as a result of the Project.
Allie Dunklin	3/1/2018	Email	I recently became aware of the possible loss of a property due to the proposed route of the HSR. This property listed as Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur.	Refer to LU-5.
Allie Dunklin	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Allie Dunklin	3/1/2018	Email	I strongly oppose the loss of watershed and loss of water for migratory waterfowl at Morgan Legacy Farms, given the topography construction go this rail would be better suited north of the ranch along the existing power lines.	Refer to LU-5.
Allie Dunklin	3/1/2018	Email	Morgan Legacy Farm holds cultural, historical, economic and unique emotional benefits to the county, the state and also has international significance. It cannot be destroyed by the proposed route- I urge the rail to move the route north near the existing power lines and allow Morgan Legacy Farm to continue to serve the community.	Refer to LU-5.
Allie Dunklin	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

Allie Dunklin	3/1/2018	Email	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory water fowl of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about The impact on limited areas for special charitable giving events.	Refer to BA-3 and WW-2.
Allie Dunklin	3/1/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.

I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.
Allie Dunklin	3/1/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.
Allie Dunklin	3/1/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared.	Refer to LU-5.

Allie Dunklin	3/1/2018	Email	The possible loss of Morgan Legacy Farm due to the proposed route of the HSR is a travesty. Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur.	Refer to LU-5.

Allison Dunklin	2/26/2018	Website	After reviewing the selected route for the high speed rail, there are multiple issues; however, the most prevalent are the negative impact the lands south of the power lines (as it runs through 3194 @ 709) will encounter. By moving the path just north of the power lines for this small stretch of land, you will save American Bald Eagle habitats, reduce the water shed impact, and maintain a more consistent topographic route. I strongly urge reevaluating the route to move along the north side of the power lines along the easement already provided.	Refer to LU-5.
Karen Dunning	2/16/2018	Website	We need the Dallas to Houston high speed rail and eventually Dallas to Austin Plus please get the Amtrak line from New Orleans to Florida open again.	Comment noted.
Roger Durham	2/1/2018	Email	The proposed Dallas-Houston HSR project is a vitally-needed transportation link that, in the long run, will impact the environment much less than alternative forms of transport. Additionally, it is proposed to be completed entirely by private enterprise, while competing forms require massive taxpayer infusions of capital funds. Texas is already criss- crossed by existing rail lines whose influence on the environment is virtually non-existent, with the exception of rail accidents involving bulk shipments of hazardous materials, which will not be carried by the HSR trains. HSR will remove hundreds of automobiles per day from Interstate 45, while generating almost no emissions itself, thus providing a net environmental benefit.	Comment noted.
Karen Dusek	2/9/2018	Website	I do not approve of the high-speed railway by my house. I do not feel that this project will benefit my family, friends or myself. This project will put more noise in our area, will make the landscape unsightly to look at and will be an overall nuisance to the area. Not only that but it will also bring down my property values and make it harder for my neighbors and myself to sell our homes. We will not be able to enjoy our properties because of the noise that comes with the rail system. There is no way Houston has that many people traveling to Dallas daily. It is a waste of money and resources that could be used in other places.	Refer to AS-1, GN-2, NE-1, NV-1, SC-19 and VA-1.
Laura Duty	2/1/2018	Email	I fully support the Texas Central high-speed rail project. In Texas, we are due for an advanced transportation solution that will link Houston and Dallas together by a 90 minute ride. Not only do I think that this segment should be built, but extensions to Ft. Worth, Austin, and San Antonio are needed as well. The technology has a service-proven track record and an outstanding safety record. Please build this system.	Comment noted.
Denise Dworaczka	1/31/2018	Email	I am opposed to the HSR. I am a resident and property owner in Navarro county.	Comment noted.
Denise Dworaczyk	1/31/2018	Email	I'm against the HSR proposed in Navarro County. Will roads have to be closed? Or, rerouted? What about the negative affects it will have on surrounding property, and it's value? It certainly won't increase the value! What about the impact will have on farmers and ranchers who's property will be divided in order for the train to go through? What about disrupting eagle nesting sites? What about disrupting lives of Navarro county residents? What about a 2 mile "no shooting" zone? Does that mean residents within that zone can't shoot at all? At any time? That's how we control feral hogs..we shoot them. What about taxes?	Refer to LU-11, NR-3, TR-8 and VA-1.
donna dyer	2/27/2018	Website	This will be such an awesome thing for the State of Texas - will make our roads so much safer	Comment noted.
Al Dykes	2/22/2018	Website	I wish to voice my strong support for this project. It will provide a valuable alternative for travel between Texas' two largest metropolitan areas. I have traveled by high speed train in Europe and it is considerably less hassle than flying. It is also far more comfortable than flying coach class. The seats are bigger with more leg room, and you have the ability to get up and easily move around. The stations will be closer in than the airports are, and Dallas in particular has excellent public transport options to connect with the proposed station. The intermediate station to serve the Bryan College Station area will significantly improve options for travel in that area. Building more roads is not a solution.	Comment noted.

			Electrically powered trains are clean, quiet and non polluting. High speed trains typically use a lot less energy per passengermile than do aircraft. As the right of way is grade separated, there will be no train/vehicle collisions. There have been concerns about property being divided, but the provision of accommodation bridges where needed easily solve that issue. (UK Railway Technical term: A bridge connecting two areas of land which were under common ownership but separated when the railway was built.). High speed trains are typically less subject to weather delays than are aircraft. This project will provide valuable alternatives for travel besides driving on congested roads or dealing with crowded airports and then need to be there at least one hour before departure time.

Darren Eagle	3/8/2018	Email	<p>The rail project would be devastating to my property mostly that it splits the land in two and would make it very difficult to continue to grow crops on it. I don't know how far we would have to travel to maintain both sides of the property since there will be limited cross overs or cross-unders. It would also displace my ranch foreman and his wife and kids because if the land is split in two it couldn't be farmed efficiently and thus I would have to quit farming--he would lose his job and his place to live. There has been enough loss of family farm land already. Also, it appears they would either have to drain one of my lakes or build over it which would interrupt watering for many wildlife in the area. For 18+ years I've been enrolled in the Texas Wildlife Habitat Management program and supplement water during droughts with one of my 3 wells on the property.</p> <p>I would also suffer GREAT monetary damage since I've been buying property in this area knowing that Dallas has only one direction to grow and that's south; as in directly toward my property. I've carefully waited and strategically bought parcels that allow the connecting of 2 county roads and a farm-to-market road for 3 ways of entrance to any development. My plan for many years was to either develop this property as the market was ready for it (and that time is finally here) or to sell it to a developer. If I did the development myself at current market prices I stand to lose between 8 and 9 million dollars. This property was bought for my fast encroaching retirement. My conscience would not allow me to sell the land now and let whomever buys it deal with the rail project without disclosing the project which would kill the deal.</p> <p>There would also be an impact to the Trinity River Watershed because all water flows to Red Oak Creek and then to the Trinity River and two lakes and a lot of riparian dirt work I've done over the years to reduce silting and soil loss would be changed. The dirt work I've done has also helped in flood control and flash flood control because it significantly slows down the time it takes water to get to Red Oak Creek. The placement of the tracks would also change the water flow causing damage or worse to my property and not allowing the water flow to go through the dirt work I've done and thus several "silt" bowl lake I have to help clean the water up before it reaches the Trinity. This would decrease the quality of the water runoff over all and would allow more water to hit the Trinity faster possibly adding to flooding problems down stream.</p>	Refer to ED-2, LU-11, WW-1 and WW-2.
Bo Eagles	3/4/2018	Email	<p>I have a small ranch in Waller County that will be severely damaged if the current proposed route is used to install this rail system. It will come within 300 feet of my property line. My house will be within 300 yards of the proposed right of way and this has greatly reduced the value of my property. In fact, I am not able to sell my house and property without taking a tremendous loss. I have Pileated Woodpeckers on my property and I hope they will be able to stay there. They are a unique bird and pleasant to watch. I am not sure if they are on the endangered species list.</p> <p>Over and above all of this, I think this is a terrible waste of our resources and the train will be underutilized and offer no true value to the public that you are charged with trying to serve. There are statements that this will require no tax payer money. We all know that this is the farthest thing from the truth. I am not sure who it will benefit. I would not be for this project if my property was not affected, but I am certainly not, given the current circumstances.</p> <p>I know you have an agenda. I just ask that you fairly represent the rural residents of Texas as we will be the ones most negatively affected by this project.</p> <p>Regards,</p>	<p>Refer to GN-4, NE-1, NR-2, PN-3 and VA-1.</p> <p>The Pileated Woodpecker is not on the endangered species list and is not listed by TPWD as state threatened or endangered.</p>
Marion Eagles	12/23/2017	Email	First Name: Marion Edward Last Name: Eagles Email:[...] Message: Challenge the route. Please send updates to above email address	Refer to PI-1.
Marion Edward Eagles	2/2/2018	Email	What is the Maximum Decebel noise level emitted from the Train at full speed. I am a concerned property owner that will be very close to the train if it gets final approval.	Refer to NV-6.
Michael Earsing	2/28/2018	Website	<p>I am opposed to the train destroying a culturally, economically and charitable ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. I am a great believer in the future of Texas and the positive role that technology such as the train can bring to the table. I always try to come up with a win- win scenario. I believe that a scenario that moves the rail north paralleling the existing power lines would provide a viable route and result in significantly less negative environmental impact as well as save an irreplaceable piece of property. The Morgan Legacy Farm is highly developed with multiple amenities including several guest houses, lodge, fully operational rodeo arena, and horse and colt barns all readily accessible to farm guests. The proposed train route would destroy the guest houses, the rodeo arena and cleave the horse and colt barns from the rest of the property, resulting in rendering the property useless for its intended purposes. In addition the proposed track location route elevation will cause watershed issues reducing significantly the available migratory waters and have substantial negative impact on the environment. The Morgan Legacy Farm has long provided a charitable service in many forms. It has served our first responders, health care providers and the military as an important emotional recuperation venue. The ranch has also been available</p>	Refer to LU-5.

			to young adults from many settings with the opportunity of emotional rehabilitation and spiritual renewal. I humbly ask that the planned train route be reconsidered and that the Morgan Legacy Farm be kept intact.	
Truman Edminster	2/18/2018	Website	This is a badly needed facility for our region. It is an excellent alternative to car and air travel, and an excellent investment. I love that this has been privately funded!	Comment noted.
Edmond Family Counseling	2/22/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about migratory waters.	Refer to LU-5.
Edmond Family Counseling	2/24/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.

I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about historic impact.	Refer to LU-5.

Edmond Family Counseling	2/26/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.

Furthermore, I am concerned about migratory waters.	Refer to LU-5.
Edmond Family Counseling	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about migratory waters.	Refer to LU-5.

A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the benefit to first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/1/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the benefit to first responders not available at any other venue.	Refer to LU-5.

I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.

A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about benefit the first responders not available at any other venue.	Refer to LU-5.

			the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.

Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.
Edmond Family Counseling	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.

Edmond Family Counseling	3/7/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.

Roma Edward	3/9/2018	Website	Good for employment and reducing traffic	Comment noted.
Christopher Edwards	3/9/2018	Website	Is there any reason as to why we are fighting to have a bullet train? Japan has them. Europe has them. They seem to be very effective in commuting people. To get from dallas to El Paso literally takes 24 hours! What kind of sick joke are you guys playing here?!? We are a rich state! Don't tell me can't afford it!	Comment noted.
Clif Edwards	3/5/2018	Oral	Good evening. My name is Clif Edwards, representing Harris County Commissioner -- Precinct 4 Commissioner Jack Cagle, representing 1.4 million people of the nearly 5 million people of Harris County. It's known that this population is going to possibly double within the next 15 to 20 years, and all transportation means need to be explored. The Commissioner supports alternative and complementary transportation systems for the benefit of people of the precinct, the county, and the state. Right now, we compete against Dallas. Once we complete this rail, we will be teamed up with Dallas, competing against the world. This offers a safe, efficient, and rider-friendly system of transportation. Thank you	Comment noted.
Jeanette Edwards	2/16/2018	Website	Texas needs a safe, fast transportation option like the Bullet Train. It will help our economy as well.	Comment noted.
Mae Edwards	NA	Website	I know that Houston Mayor Turner believes, and stated in interviews, that the high speed train will benefit all counties that it goes through. I do not believe this to be true. Many farms, that have been in the families for sixty years plus, will be broken up and it will be hard to farm the land in this state. They could lose their livelihood and even theirs farms. This is unconscionable to consider that our government would declare emanate domain and do this to our citizens. Especially when we need all our citizens to work when capable and this might through them into bankruptcy, onto welfare, and a burden to our taxpayers. Many of our farmers don't know any other kind of work. If the government keeps taking more and more of our farm land do they plan to import more and more beef, grain, and vegetables? I have heard that the train in the northeastern United States was expecting large numbers of ridership and this has not happened. In our area of Waller County many have addressed the issue of the Texas A & M alumnum have been helping to push this through so they can attend their football games without having to drive. Well Waller County will not benefit at all, nor do I believe that any other will either. The train will not be stopping, except for at College Station then Dallas. The riders will still have to get to and from the stations, same as flying and the time one spends doing this one might as well drive or fly. I don't see anyone from the north, south and east side of Houston using the train, as the airport is closer. The train is not being built by U.S. companies and they are already asking for Federal moneys so I don't see the benefit for the U.S., Texas and especially the counties it will disrupt. Using the existing land of the rail road would be a much better route. I still don't like the idea that it is being built by a foreign company. I have also heard that we are supposed to get Japans first train that is well over fifty years old. What is up with that? I know that the U.S. has the capabilities and smarts to build and construct tracks and train cars. Keep the money here. Don't build here.	Refer to BA-4, BA-10, ED-1, ED-2, GN-2, GN-4, GN-6, LU-2, LU-11, NE-1, PN-3, SC-19, TC-2, TC-6, TR-3 and TR-4.
Evalou Eeds	3/3/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5.

Bob Effington	3/5/2018	Oral	MR. EFFINGTON: I just have -- my name's Bob Effington. I'm speaking in behalf of John Breeding, who is President of Uptown Management District, also speaking on behalf of the Board of Directors there. I'm Director of Economic Development for the Uptown Houston District, one of the largest business districts in the United States. We have over 27 million square feet of office space, over 60,000 employees, 8,000 hotel rooms, 22,000 multifamily residential units, as well as retail sales that exceed \$6 billion a year. On behalf of the Uptown board, I'm here to express our support for the high-speed train as well as the Northwest Mall as the Houston station location and its connectivity to the Northwest Transit Center, which is the regional hub for Metro and the connection to the Uptown BRT system. So we are excited about the positive growth that this project is going to bring not only to the City of Houston but also to the great state of Texas. Thank you.	Comment noted.
Cecilia Egan	2/17/2018	Website	I traveled by train Brussels to London, London to Paris, and Paris to Brussels in November. I kept asking myself why Texas did not have any trains like the Eurostar. Build the train. It is time.	Comment noted.
David Eisenbeiss	2/16/2018	Website	A High Speed rail connection between Houston and Dallas would be a dream come true!!! This is the most important new infrastructure project in Texas, and one of the most important in the USA. It will benefit the people of the region as well as the Texas economy as a whole. And Texas would lead the way for other states to emulate.	Comment noted.
David Eisenbeiss	2/16/2018	Website	As far as environmental impact goes, extensive high-speed rail networks throughout Europe, Japan and China prove that high-speed rail has the lowest environmental impact of any modern mass transit alternative, especially compared to air travel or automobile. At the same time it is the fastest (and most comfortable/convenient) as well as safest way to get from point to point.	Comment noted.
James and Amy Eisterhold	NA	Letter	Dear Mr. Wright, I am this letter as a concerned citizen and landowner in Grimes County, Texas to express my vehement opposition to the High Speed Rail project under consideration between Houston and Dallas. I have actively followed this project and have extensively used publicly available information to formulate an educated and informed basis for my opposition. Like many other farndies in the Houston-Dallas train corridor, I oppose the project for the following reasms: 1. unlike an easement related to a privately owned pipeline or public utility. will condemn private property, induding the taking of portions ofour family ranch. Like many landowners, my family will see the bisection of my property as outlined in the Environmental Statement. into approximately one third-two thirds, less acreage condemned and taken. My property will have tracts with no or limited access and greatly diminish the agricultural for which it is now used and the overall value of the property. The rail will further diminish the value of the 750 acres not condemned in the lost opportunity to further subdivide to my heirs or in any other manner of my choice. 2. power lines and underground pipelines, the property will have no dual use for farming or grazingas with simple easements. The fencing of the line will further prohibit the crossing by persmnel, livestock or wildlife. 3. Operation of the rail will reduce the quality of my existing home with the noise and eyesore of the frequent trains. 4. There is currently no need for rail service between Houston and Dallas. Most Texans, like myself would not consider the rail due to the inconvenience and cost. Parking and securing transportation at the destination end would be cost and time prohibitive. Most people still drive the 4 hour trip even though bw cost air transportation is readily available. 5. In alllikelihood, the project would soon find itself uneconomic and in the laps of taxpayers, already burdened with a multitude of special interest government programs. Unfortunately this will be after the personal and economic pain of landowners and taxpayers of the state Of Texas. The abandoned system will result in environmental and security issues for adjacent landowners. There is no evidence to support the economic viability of the rail. 6. The rail proponents have not proven to meet the standards of public good to secure eminent domain and the privately funded project (with	Refer to AS-1, BA-4, BA-12, ED-1, ED-2, EU-2, GN-2, GN-4, LU-7, LU-11, LU-14, NE-1, NE-9, NR-5, NR-6, NV-1, PN-3, SC-3, SS-4 and TR-10.

			foreign dollars) should not be allowed to proceed with a project generating short term profitability in the construction phase but leave the state government and taxpayers with a long term burden to maintain. As a taxpayer and owner of property to be impacted with over 1 mile of potentially condemned property. I believe the RRA has an obligation to the Citizens it serves to provide a fair and unbiased assessment of this project. Clearly, the justification for this project does not exist and any short term job opportunities promoted by ex-local politicians and now employed by rail will be far outweighed by the long term liabilities to the taxpayer. I am confident that a thorough and fair assessment in this project will result in findings where the proposed rail can not be justified, economically, of benefit to the general public and or the taking of private land ownership, a fundamental American right. I am to discuss further. Sincerely, James and Amy L. Eisterhold	
Katherine and Benjamin Eisterhold	3/8/2018	Letter	We write to you with grave concerns and vigorous opposition to the high speed rail project between Houston and Dallas as proposed by Texas Central Partners, LLC. Our concerns and consequential opposition to the proposed project comes from ongoing research over the past few years. AS native Houstonians whose family owns acreage in unincorporated Grimes County that is expected to be intersected multiple times by the proposed high speed rail tracks, we oppose the construction and operation Of the high speed rail for the following reasons: The proposed train, unlike an easement related to a privately owned pipeline or a public utility (which we have allowed on our family property in previous years and believe it serves the greater good), will greatly diminish the value Of our family ranch due to the proposed high speed rail line intersecting and dividing the property into portions, some Of which will be rendered difficult to access or inaccessible. This land is currently being used for agricultural purposes and Our family has every intention Of continuing to use the land for agricultural purposes. We believe this rail line is not needed and will not see heavy use due to low-cost and readily available flights currently used by travelers today if driving is not preferable. Moreover, we highly doubt the long term economic viability of this project and believe when it inevitably fails that it will invariably become an undue burden for taxpayers. As fiscally conservative voters, we do not believe a taxpayer-funded bailout Of a partially foreign-owned rail line is prudent. Rather, we believe the way to prevent such a folly is to Stop this project before it begins. TO conclude, we again urge you to oppose this project to prevent the unjust taking of private property to build an unsustainable rail line that will be burdensome to taxpayers for years to come. We remain confident that further review Of this project will result in the findings that this project cannot be justified economically, will not benefit the general public, and will result in the wanton waste Of private property if productive land is taken for a railroad that sees minimal passenger use. Respectfully,	Refer to BA-4, BA-12, ED-2, GN-2, GN-4, LU-2, LU-7, LU-11, NE-1, PN-3 and TR-10.
Judith El Masri	2/7/2018	Website	I live on the street that the proposed train station will be for the train in Houston. I cannot emphasize enough how necessary any additional form of mass transit is needed not only in Houston but all of Texas. Our city will never be an internationally recognized hub of commerce until we improve the ability to move people. More highways and more personal automobiles will not help but instead will affect not only our health but our quality of life. Most of the East coast of the United States recognized the need for rail service over 100 years ago. Texas is woefully behind. This is a project that is necessary. Having said that, please find a way to make the cost of rail service less than air travel. If you build it you want people to use it!!	Comment noted.
Paul Elliot	1/27/2018	Website	I support the permitting of a high speed rail line between Houston and Dallas. I will use it frequently for business and personal trips between these major cities in Texas. High speed rail is safer, faster and more convenient than me driving, and I can do work and access wi-fi while on the train. could easily do a same daytrip for business. The train is more environmentally friendly than cars, buses or planes. And traffic on 1-45 is a nightmare. Flying today is a hassle when you consider check-in, security, waiting and delays. Finally, the operator a private company investing in Texas and is not asking for state or federal funding to build or operate the railroad.	Comment noted.
Kevin Ellis, Sheriff of Leon County	1/30/2018	Oral	Thank you for this opportunity to be here tonight I am Kevin Ellis. Sheriff of Leon County. Elected by these fine citizens here tonight. I am here to stand with them and serve and protect A few issues that we have already had the sheriff's office already with this train which I project coming through as disrupted us. We have made numerous calls out to county roads to their tactics of getting onto the land. Another one of my major concerns is the emergency response time for these county roads and these private roads. We haven't gotten a straight answer from them on anything. They won't tell you. They try to tell you what they are going to do but they don't know. They are going to put lives, people that need medical assistance or people needing the sheriffs department to get to them in a timely manner and how are we going to get there and they don't care. So that is all I have to say here. Thank ya'll_	Refer to NE-8, PI-1, SS-23 and TR-8.
Kevin Ellis, Sheriff of Leon County	3/9/2018	Email	Dear Mr. Wright, I write to you today to express my concern regarding the Draft Environment Impact Statement for the Dallas Houston High-Speed Rail. The public comment period for the Draft EIS will end today, March 9. The public has been given 75 days to review a 5,647-page document of highly technical information that took years to produce and is a first of its kind project with no assumptions or historical reference. Yet in all that time, Texas Central nor the Federal Railroad Administration ever found time to coordinate with any of our County Officials,	Refer to PI-1, PI-3, SS-1, SS-7, SS-18, SS-23, SS-26 and TR-6. Text throughout the Final EIS has been updated to reflect "Sheriff's Office".

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>commissioners’ courts or sheriffs, to properly coordinate the public safety aspects of the Draft EIS, or the project as a whole. In addition to the many apparent errors, inconsistencies and conflicting information, the most serious concern I have about the document is the lack of regard for public safety specific to the communities the HSR will pass through.</p> <p>I stand with seven other County Sheriffs who have also taken an oath to protect and serve the citizens of this great State. Each day we work to ensure their protection and quality of life is maintained. This coalition of Sheriffs representing the counties between Dallas and Harris came together to stand for public safety and security because we are concerned about the proposed Dallas Houston HSR project and the safety of our citizens.</p> <p>For well over 4 years now, Texas Central has been working in Texas to advance their project. And within the Draft Environmental Impact Statement published by the Federal Railroad Administration, there is a lengthy, albeit generic, section on Public Safety. Prior to the publication of this document, not one Sheriff’s Office had ever been contacted by Texas Central or the FRA to coordinate the public safety aspects of this project as it relates to our counties. And only after they learned all us sheriffs were meeting together to discuss our concerns, did they provide us with any substantive information. Finally, a company rep has reached out to me to coordinate a meeting between myself and their chairman of the board. Since the time of our press conference on March 1, Texas Central has also told the media that they were in touch with Sheriff’s Offices as early as May 2016, but we do not have any record of this.</p> <p>They have talked a big talk in the media about equipment and training for first responders, but, frankly, they have no idea what equipment and training we already have because they never even acknowledged us, yet set forth with their public safety assessments in the FRA’s Draft EIS. To be very clear, I am the top law enforcement and public safety officer in my county. It is absolutely unacceptable that this company failed to conduct the proper coordination with our Sheriff’s Offices.</p> <p>Because of this lack of coordination, the Draft EIS and the entire project planning process do not accurately reflect the priority that needs to be placed on Public Safety, Public Security, and the realities of law enforcement capabilities and challenges within my county. Within the DEIS is a list of first responders’ service name and location. This tells the public nothing about how well those first responders are prepared for a critical incident or how the county will be able to provide adequate service to our citizens if resources are diverted to respond to issues with the HSR.</p> <p>One issue noted in the Draft EIS that we take particular exception to is the FRA’s assumption that increased response times due to rerouted roads during and after construction would be within acceptable limits. We take our response times very seriously. This is truly a matter of life and death in some cases. Any increase in response time is unacceptable. The DEIS states, “Traffic control plans would be established to ensure emergency response times are within regulatory limits across the entire Study Area.” “Regulatory limits” for response times do not exist. The DEIS also loosely uses “within acceptable limits” and “no significant impact” as it relates to public safety and security issues. This is entirely subjective, and unless Texas Central or the FRA has spoken to anyone in my Office, no measure exists for what is “significant” or “acceptable” within my County.</p> <p>As a note of correction, in Texas, the Office of Sheriff is a statutory/constitutional office having and authority under state law and/or state constitution. My Office is not a department within our County government. Any and all references to Sheriff’s Department should be updated to Sheriff’s Office.</p> <p>We also have concerns about not only the first response to a critical incident involving this HSR, but our supporting medical facilities. And while the DEIS mentions “Construction Site Safety” related largely to traffic accidents, it fails to mention of Construction Site Security. We know from experience that with a construction project of this scale comes increased crime at the construction site and as a result of the temporary workforce, as they are seeing with the California HSR already.</p> <p>This project has already created issues within our communities related to reports of trespass and harassment by agents of Texas Central Railway. With these problems arising so early in the progression of this project, and having no coordination with company officials, we are very concerned about the future impact to our citizens and their personal property, especially since the eminent domain authority of Texas Central is still the topic of ongoing litigation in Leon County and they have been ordered by the court to not survey specific property in Harris, Grimes, and Waller Counties.</p> <p>As such, we have made our citizens aware that any violations including, but not limited to, the mishandling of paper service, any reports of harassment or intimidation, especially of the elderly and infirm, and all cases of trespass or illegal survey by any agent of Texas Central, including those of the Federal Railroad Administration, will immediately be handled by our Offices and referred to the District Attorney for review and possible prosecution to the fullest extent of the law. Our citizens deserve to have their private property and quality of life protected. Texas Central often claims they are working closely with landowners...based on calls we have received from citizens, we can each attest that is about as true as their claim that they are working closely with elected officials in each county. Keeping that in mind, as well as</p>

			our commitment to public safety, this coalition of Sheriffs will be coordinating a meeting with Texas Central at a time and location that we can all be in attendance together with a court reporter to ensure that the information we are told is documented and consistent. We understand that it is difficult to get this company to commit to and stand by their word, so we feel a court reporter would be beneficial. In our line of work, it is paramount that we plan for the worst-case scenario and still expect the unexpected. But when we are intentionally kept in the dark by Texas Central and the Federal Railroad Administration about a project of this magnitude, the safety and security of our citizens are put in jeopardy...and we will not allow this to happen on our watch. Thank you.	
Jack Ellzey	1/29/2018	Oral	I love looking at a crowd of crossed arms. My name is Jake Ellzey. I'm running to be your next congressman, Joe Barton's seat. I'm a retired Navy fighter pilot, and I'm now on a mission and that's to defeat this. I grew up on a farm and ranch up in Perryton, Texas. And when I retired from the Navy, this I chose to be my home. I didn't even have a job. We found some acreage out in Midlothian, Texas. So I sympathize with everybody. Everybody who lives out in the country, they want to live in the country. If you want a train going through your house, you live up in New York City or Chicago. This is an emotional issue for all of us, it's an emotional issue for me, but there's only one word you need to hear from me when I go up to Washington, D.C., and what is it? (Audience responds "No.") MR. JAKE ELLZEY Amen. No. Thank you.	Comment noted.

Jeffery Elswick	2/16/2018	Website	I would like to write to you regarding the pending approval and construction of the Texas high speed rail. I have been a Texan all my life and additionally I am a professional asset manager in the mutual fund business. I think I know a little about the economy and the fundamentals of the long-term needs for infrastructure in our state and nation. I view this project as an imperative need for the future growth for Texas and the country. The current transportation infrastructure connecting Houston (the 4th largest city in nation) and Dallas/Ft Worth (the 7th largest MSA in the country) is even today being stretched to the limit of breaking and inhibiting economic growth. This problem will only become more and more elevated as each decade continues, especially in light of the fact that Texas as a state is one of the highest growth states in the nation, and even to some extent the world. This project has to get done for the long-term success of our state. Today Texas has an estimated 28 million in population. What happens in two decades when Texas begins to challenge California for the largest spot. The state can not survive with its current infrastructure makeup. High speed rail can and should play a pivotal role in our states expansion. Regards, Jeffery A Elswick Director of Fixed Income and Managing Director Frost Investment Advisors, LLC	Comment noted.
Jennifer Elverud	2/6/2018	Website	My family and I are against the Dallas Houston High Speed Rail project. We moved from the city of Sugar Land where generations of my family had lived, to the small town of Normangee because Sugar Land had become over populated, the green pastures that were once full of cows were traded for apartments and roads. We commute over an hour to work and shopping to be able to raise our children in the country where we have fresher air, no light pollution to drowned out the beautiful starry sky, and no noise pollution to cover the noises of nature. Not only would our peaceful home life be disturbed but more importantly the path of the rail is to run through Union Baptist Church, our place of worship. Union Baptist and the cemetery next to it are Historical Landmarks. The rail should not be allowed to destroy these Historical Markers that hold a part of not only Normangee and Madisonville's history but also a part of Texas History! The rail will also destroy many other Historical Markers not to mention the numerous Cattle, Chicken operations that provide you with the food you feed your family! These families have land that has been in their family's for generations their livelihood relies on their land! They have taken years and years to build their farms and pasture land, this is no easy task that money can buy. It takes years to achieve! This rail will destroy so much that makes Texas unique and special. They very things that makes us proud to be called Texans. Please do not take away our lands, do not destroy our churches, do not interfere with the wildlife that lives here, do not destroy the future farmers we are trying to raise! We stand AGAINST this project! Thank you for your time.	Refer to CR-3, CR-4, CR-6, CR-8, LU-7, LU-11, NR-5 and SC-9.
Candy Emmerich	3/9/2018	Website	Please revisit the proposed route! This train will cross just behind my property in Leon County. It will destroy the beauty and tranquility we now enjoy, and will adversely affect our property value. Who would want to purchase a home with a train traveling in your backyard every 30 minutes? This train won't be profitable (look at California) and will end up a burdon on the tax payers. Build along I45 if you think this train is absolutely necessary!	Refer to AS-1, BA-9, GN-4, NE-1 and VA-1.
Yvette Epstein	1/5/2018	Email	Please note the below comments/questions that I would like to know : . Where are the beginning and end points that are used to calculate the 90 minutes? How often will trains run? 2. What kind of parking is available? Capacity of parking? 3.	Refer to TC-4 and TC-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Yvette Epstein	2/5/2018	Oral	Good evening. My name is Yvette Epstein, and I am a Houston resident as well as a rural property owner. And I don't really have a lot to say, except that I'd like to ask for some clarity. For example, I've read quite a bit about it and I've been engaged, and I'm not anti-train, I'm not anti-high-speed train, but I don't think this one makes sense based on what I've read so far. I've enjoyed the trains in Europe and other countries, and I don't see that the parallel actually exists, so I'd like for you guys to come clean with some very direct information so that people can make an informed decision. In particular, I have just a couple of things I'd like to ask you to clarify. When I look at the maps, I don't see small roads listed, so it's very difficult to look at the maps and know if you're going to be impacted without a whole bunch of research. The maps need to be very clear so that somebody doesn't have to spend 12 hours looking at the EIS to figure it out. I think you need to publish the price of this. People want to know if they're going to like it and what it's going to cost. So we need to know what it's going to cost and we need to know quickly. We also need to know about this transit time. Is 90 minutes from terminal to terminal? Is 90 minutes from door to door? Because I don't think of us really believe you could leave your house, drive to the terminal, go through security, get on the train, stop in College Station, get to Dallas, and get to your destination in 90 minutes. It's false advertising and it needs to be cleaned up. And then my last question that I'd ask you to address is who you're trying to target with this train. If you're trying to target business people, that's one thing; but if you're going to have a \$200 one-way ticket for a family of four to go to Dallas, we're talking \$1600 to go to Dallas, and I don't think very many families are going to pay that when they can drive. Thank you.	Refer to GN-1, NE-1, PN-3, SC-3 and TC-4. Mapbooks (Appendix D) included an inset map to aide in locating general areas along the route.
Ghada Erickson	1/29/2018	Email	I am against the high speed rail through Navarro county. Our land is our lively hood.	Comment noted.
Eliab Erulkar	2/13/2018	Website	Houston High-Speed Rail Watch, a coalition of neighborhood leaders, has put forward a proposal for connecting the HSR station to downtown with METRORail or BRT (Bus Rapid Transit) running elevated over the main lanes of I-10. With a modest number of station stops along the way, this line could serve the neighborhoods it passes by while providing a speedy end-to-end link. The new line could tie in to the Green and Purple METRORail lines downtown, and into the Bus Rapid Transit (BRT) line currently under construction in Uptown. It could also become part of a commuting solution for residents of West Houston. This solution would provide connectivity to other parts of Houston, strengthen Houston's transportation network, and benefit neighborhoods. I support this proposal, and urge METRO, Texas Central Partners, the FRA, and TxDOT to work with Houston High-Speed Rail Watch to make their connectivity proposal a reality for Houston	Refer to TR-4 and TR-5.
Dallas Ervin	2/16/2018	Website	The high-speed train needs to be built as quickly and safely as possible. Get'er done!!!	Comment noted.
Dallas Ervin	2/16/2018	Website	All existing oil, gas pipelines, and utilities must be identified and rerouted prior to construction.	Refer to EU-2, LU-11 and TC-7.
Dallas Ervin	2/16/2018	Website	Keep in mind to not impede ranchers and farmers to easily move their personal belongings, livestock, and products throughout their existing property. Wild animals, humans, and stock should not have any egress to the bullet train tracks.	Refer to LU-11.
Dallas Ervin	2/16/2018	Website	The high-speed train needs to be built as quickly and safely as possible. Beverly Eschenburg	2/7/2018	Website	I heartily support the Dallas to Houston High-Speed Rail project. This project will cut down on car use, and therefore cut down pollution. It will be good for both Texas residents and Texas businesses. Visitors to the state will be able to "cover more ground" during their vacations or business trips to Texas. High Speed Rail is forward-looking so Texas should hop on that strategic train! I also support the California High Speed Rail project in my own state. I have been a train traveler for many years and welcome high-speed rail as an alternative to passenger trains which are forever slowed down by joint use with freight companies. I hope that Texans will support this futuristic plan. Sincerely, Bev Eschenburg Fremont, California	Comment noted.
Miguel Espinosa	2/20/2018	Website	As long as it is built with private funding I'm OK with the project. I don't want to see any funding coming from the US Government.	Refer to GN-4.
Joseph Esposito	2/12/2018	Website	I have no specific comments to the EIS, other than to indicate my support for the proposed high speed rail project. Thank you.	Comment noted.
Jose Esquivel	3/9/2018	Website	This would be awesome, being able to get to my family in no time. Would make our world better.	Comment noted.
Jose Estrada	2/20/2018	Website	I do not want no more train in my area . The one that we have make a lot of noise	Refer to NV-1.
Jonathan Esty	2/8/2018	Website	As someone who twice a year must travel the Dallas - Houston corridor, I wish to offer my support for the Texas Central HSR proposal. The current highway is frequently congested making arrival times quite unreliable. A train modeled on those in current use in Europe and Asia would allow me and other members of the public to have a comfortable, safe and reliable means of getting to and from these large urban areas. We need to be working for a more balanced transportation system in this country and this proposal is certainly a step in the right direction for a very busy and growing corridor. Thank you.	Comment noted.

Melanie Eubanks	1/31/2018	Oral	I'm here tonight and I represent both my husband and I who are each third-generation ranchers to this county. So I speak from a very emotional standpoint from the land, but I'm also a financial advisor at one of the world's largest investment firms, so I look at it from a numbers-and-cents standpoint and what we do not need is a train. If you look at high-speed rail it's not been successful in the U.S. Amtrak, which is the largest high-speed rail, dates back to 1913 that's summarized by Ernst and Young's letters prefacing the recent audit. May I read? Without the receipt of Federal Government funding, Amtrak will not be able to continue in its current form, and significant operating changes, restructure, or bankruptcy might occur. Well we can see how this is headed with the high-speed rail. Amtrak receives over \$2 billion in federal grants annually, that's federal. With 11 states also providing funding. Their net loss in the last fiscal year was recorded \$1,080,488,000. The load factor for that time period was 49.7 percent prior year 48 percent. Now let's look at the Dallas area's rail transit system today. Only 98,600 people ride weekly in the Dallas system. With a total population that serves 1 over 4 million people, that means their load factor's running at about two percent for their usage. I also looked at Houston's high-speed rail and their usage is even less. Only 262,000 people ride - - rode that train system, or their rail system in November. That's for the entire month, okay. California's gonna take on the high-speed rail out there in their inundated state. They do have that construction project ongoing. Right now their estimated cost, \$118 billion, extremely over budget and people of California now are saying shut it down before it even gets finished. Texas has had a tremendous boondoggle in the high-speed toll road from Austin to San Antonio. Bankrupt in four years with \$480 million to the taxpayers on the federal budget there, okay. Guess who estimated their traffic projections, which were only 30 percent of what the traffic total. Well it was AECOM. AECOM's been sued numerous cases for fraudulently overestimating. Okay. Now let's look at some successes. Southwest Airlines, they have 25 flights daily from Dallas to Houston. Your ticket price round-trip is \$106 to \$227 and a load factor of 85.8 percent. American Airlines offers an additional 12 flights per day. So what would we increase -- we would lose our ag land. We're in the food business, folks. We raise beef, we raise commodities. What would you rather have, food on the table or a train going down the middle of Texas? How do we move our cattle, our equipment with a fenced railroad through our land? Our rural emergency systems. Sheriff Shipley, Clyde talked to it. How are we going to get our first responders on our rural roads that'll have to be closed, rerouted, okay. Then the long-term impact on the energy, the coal, natural gas through our county. Can coal be dug under these tracks? Nobody can answer these questions and we all know energy's been a major economic boom to this county. What impact is it gonna have on the wildlife? For the first time of my life in being here, I see deer every afternoon when Robert and I ride through the pastures. My husband and I were -for a generational as I said. We stand to lose over 80 acres. That doesn't -- just for the -that doesn't include the land that they can take if you read the fine print, but they're digging through dirt to raise it. It took two generations to build it. It takes everything he and I have to hold it together, and we've got a fourth generation coming on. So why should we let a foreign, limited liability corporation take our land through, especially, eminent domain. Again, they're foreign, it's a Japanese firm. I looked it up on the Washington records. And whose to gain from this, it's none of us. It's the investors and these investors -- the people like McLane, you know Baylor Stadium, owns the Houston Astros. Who do you think owns the land where that train station's going in Houston? You might find his name there. If you started looking in Dallas, Mayor Rawlings has been a big promoter. Might want to look where some of his money is today, or some of those vote are coming from. Because he wants to put this train in one of these reconstructed areas of Dallas. Well I drove through it last week. All I could see was a lot of homeless, people that were so high one guy couldn't even hold up his pants, so. NANCY: Thank you very much. MELANIE EUBANKS: You know who's going to a gain? Them, not us. Brian Evans	1/31/2018	Oral	Thank you. My name's Brian Evans, I'm the county attorney here in Freestone County. It's needless to say that Freestone County is at a crossroads right now, you know. We're having problems with the mine, we're having problems with jobs and things of that nature. I think I'm echoing what everybody said thus far, along with what people are gonna continue to get up here and say that we can't sign off and can't stop the fight against something that's just going to end up costing money in the long run to Freestone County residents along with every other resident along the line of this rail. And I kind of jumped on the band wagon along with everybody else thinking this is a rural versus urban fight. I think this is a Texas versus TCR fight. I myself have lived in Houston. I lived in Houston for seven years before moving back up here. I worked with a law firm in Houston, our main office was in Dallas. So I traveled back and forth between Houston and Dallas quite often. Probably once a month. There's flights with Southwest that leave every 30 minutes from Hobby. I would drive down there from the office, get on a flight for around \$100, \$110, fly up to Dallas, do my work, go back to Love Field, jump on a plane, and be back home in time for dinner. I don't see the need for this, not only from everybody that's sitting around here that I assume is from the surrounding counties, but also down in Houston and Dallas. I don't think that they care necessarily that the land's being taken from us, but I don't see the big need and why this needs to run through and split Texas, split Freestone County, along with the surrounding counties. I appreciate the time and welcoming me down here. My biggest thing that I want to say like I said, Freestone County is at a crossroads. Like judge -- the County Judge from Grimes County said, we cannot give up the fight. I feel like the pessimism has kind of set in with me, right. I was at the meeting two years ago we talked about opposition, talked about these different things, and I find myself kind of saying well it's just gonna happen anyway, you know. I'm gonna get up there and speak but nobody's gonna listen to me, who cares. You can't let that set it. I'm speaking to myself and I'm speaking to everybody else out there that feels the same way. If it's gonna happen we're gonna go down fighting and be proud of that. Thank you very much.	Refer to BA-12, NE-1, PI-1, PN-3 and SC-3.
Judith Evans	2/5/2018	Letter	My name is Judith Evans and I have property in Hockley next to my brother, WL Bane, and across the street from Calvin House, who also has property that will be negatively affected by the proposed Bullet Train. This will reduce the value of our properties and basically render it useless which is a shame, as I personally wanted to pass it on to my children and grandchildren. The farmer who leases our property will also be devastated as he will lose of 150 acres to farm. Four different people in this small area will be drastically, negatively affected and greatly oppose the Bullet Train.	Refer to VA-1.
Kristie Evans	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Thomas Evans	2/7/2018	Website	As an employee of Caterpillar, I travel to the Texas region regularly to visit suppliers. Many times I end up driving between Dallas and Houston and would much rather take a true high speed train. Not the fake "higher speed" trains like this country has dabbled in. As a California resident, I hate seeing how my state is running the California high speed rail program into the ground (Treating it as a minority workers job stimulus rather than a fast and direct transportation project). This Texas private investment approach seems to be on the right path to creating a system that will be self sustaining and profitable by connecting two large job and housing centers. I personally will use the system several times per year to travel between Houston and Dallas and in the process will remove one car off the road every time I visit. This has the potential to be a real game changer for Texas. Having ridden systems in Europe and Asia, once the system is up and running, farmers and country folk will realize the huge benefits this system will bring to them. In the meantime, they see old freight trains and think a faster version of that is high speed rail. Misinformed republicans (I am a republican), are the biggest risk to the project with their poor understanding of what real 200 mph high speed rail looks like. If they could visit China once to ride the 220 mph system there, they would quickly change their opinions. This project embodies the true republican ideal, private investment that betters the good of everyone while creating a profit for	Comment noted.

			investors without government funding. Roads are a huge government hand out (maintenance and initial construction costs) and the misinformed republicans need to stop acting like Democrats when it comes to the subject of roads.	
Alan Ewing	3/9/2018	Website	I strongly support the High-Speed rail project and look forward to using the service on a regular basis for both business and pleasure.	Comment noted.
Chinwe Ezetendu	3/1/2018	Website	I am writing to register my very strong opposition to the high speed train route. As is currently, this route will run through property that is a working ranch - Morgan Legacy Farm. This farm represents so much history that will be lost in an instant with this proposed train route. A move north of the existing power lines would have less of an impact on Morgan Legacy Farm and preserve history.	Refer to LU-5.

Bob Fackler	2/28/2018	Website	Re: Morgan Creek Ranch and the proposed path for the proposed high-speed rail. As a general contractor who has worked several jobs at the ranch, I am very surprised that someone wants to destroy this beautiful property by running the tracks through it when there is a perfectly viable alternative (the power line easement) right next door. Please reconsider the path.	Refer to LU-5.
Carolyn Fackler	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5.
Carolyn Fackler	3/1/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194 when there is a perfect solution nearby. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Kyle Fackler	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. There are numerous types of wildlife on this ranch not limited to deer, hogs, coyotes, ducks, geese, etc. etc. Any sort of train development would only destroy their habit, which would have ecological ramifications. This farm facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Jamie Fairchild	2/3/2018	Website	<p>I am very pleased to see the possibility of having a high-speed rail train between Dallas and Houston. I am, however, quite concerned about the proposed route that passes so very close to the Katy Prairie. We MUST take care to use existing developed corridors for ANY new construction. We Can NOT afford to continue to fragment and use up open prairie spaces. It is critical for the salvation Of our natural heritage and natural flood control. Here are the concerns and reasons: Specific Impacts to the Katy Prairie Preserve: The proposed route would pass within half a mile of the northern boundary of the Katy Prairie Conservancy's protected preserve properties, including the area where Warren Lake and the Matt Cook Wildlife Viewing Platform are located. A train thundering by every 30 minutes would be an intrusion on this natural setting and critical habitat, and would seriously diminish this community asset for both people and wildlife. Visitors to the Katy Prairie Preserve's Warren Lake and the Katy Prairie Conservancy's Matt Cook Wildlife Viewing Platform, would be disturbed by the noise, vibration and visibility of an elevated train. The platform is open to the public seven days a week, and is valued by birders and other visitors enjoying the natural setting of the lake, prairie and wildlife. Noise and vibrations will disturb wildlife. Warren Lake teems with wildlife year-round, and many waterfowl gather at the north shore, which is the area closest to the proposed route. The Katy Prairie is in the Central Flyway and has been designated a Global Important Bird Area by National Audubon. The proposed rail route is directly in the path of a bird's flyway approach to the lake. Many birds of the prairie are sensitive to light, sound and vibration and would be driven away. Other Impacts to Wildlife: Land fragmentation - Many Of the properties through which the bullet train is planned are large acre tracts. Land fragmentation impacts not only the landowners, but also the many plants and animals that live on the prairie and lands in rural areas. Smaller degraded fragments do not support the diverse wildlife communities that flourish on larger undeveloped and undivided areas. Destruction of habitat - Many Of the lands through which the high-speed railway will be constructed, on the prairie and throughout the rural counties, provide extraordinary habitat, which will be both destroyed and greatly altered. Rural lands are often seen as more easily disturbed because there are fewer landowners and fewer structures, when in fact we as humans are charged with protecting nature. Nature once lost is lost forever. THANK YOU for preserving our prairie while offering a fast and efficient transportation option.</p>	Refer to NR-1, NR-2, NR-5 and RF-4.
Lillian Fajkas	2/5/2018	Website	<p>Stop taking my property! 99 just took my land NOW my land is at risk of being taken away. Stop taking everything I have! Family property can't be stolen to meet other's needs. Not land owners of Texas. NO Bulld at ALL! It does not cash [sic]. — The construction of the rail will have increased traffic flow disruptions. The DEIS is too general and does not adequately address increases in traffic, permit loads and First Responder impact times. Any delay in First Responder times are unacceptable to the public. More detailed expectations and performance parameters must be provided.</p>	Refer to ED-1 and ED-2.
Lillian Fajkus	2/6/2018	Handwritten	<p>I support the NO Build Option. EMS Response will have increased risk for first responders, and the community @ risk to delay of emerg care & fire/police to reach land locked properties. Family own land was given for Texas Hwy 6 & 2978 and Hire Road for school bus to get down & turn. Also, Road 99 took property from us. We have given enough. The backs of Texas land owners is too great of a burden 8,000 acres is too much. Texas need to Help Harvey Flooded People NO expense of \$199 trip I nor anyone I kow will need this train. Use 45 Hwy straight road.</p>	Refer to BA-9, ED-2, LU-14, PN-3, SC-3 and SS-23.
Dennis Fakes	2/7/2018	Website	<p>What a great thing for the state of Texas. I am envious that Texas might be able to pull off such a marvelous project. Hope this happens very soon!</p>	Comment noted.

Clay Falls	1/19/2018	Email	The high speed rail may be good or it may be bad.	Comment noted.
Blair Fannin	2/20/2018	Website	<p>I am providing official response comment per the Dallas to Houston High-Speed Rail, Draft Environmental Impact Statement made public December 2017 and its impact to Madison County, Texas. The comments set forth are in full compliance and meet the February 20, 2018 deadline.</p> <p>It is with absolute disgust and disappointment that federal tax dollars have been allocated to produce such an incomplete document that fails in a multitude of areas. The draft impact statement lacks factual findings county wide due to lack of ground truth related to identifying existing endangered plant species, sources outdated data on the impact of soil erosion, does not accurately address altered stream flows, provides unproven and false future water availability projections, fails to address the impact of continuous vibrations to underground water tables, reveals false noise pollution test results allegedly conducted on select county roads in Madison County without a paid Public Notice in local newspapers, and lack of scientific research that studies the impact of daily high speed rail travel on adjacent livestock/wildlife operations and natural habitat.</p> <p>Of even greater concern is that current and future water shortages are not adequately nor accurately addressed. The 2011 Texas drought was of historical significance, ranking as one of the top two worst droughts in Texas history. Multiple water wells in the county went dry and altering natural surface runoff flows by building such a high speed rail project would threaten water supplies.</p> <p>Further, the study does not take into consideration in detail the 20-inch crude pipeline system that runs adjacent to the main Centerpoint Energy electrical transmission line throughout Madison County, which is merely less than 50 feet in some instances of the proposed rail line in the Cottonwood community. Continuous vibrations of such a high speed rail system so close to the pipeline could cause a major catastrophe in Madison County. Additionally, the scope of work provided in the document doesn't properly address the impacts to Oxford and Ten Mile cemeteries, both historical sites. As I wrote to the FRA in October 2014, the set of policies and procedures set forth by the FRA to conduct public meetings are discriminating and biased. They serve little use in providing the public and landowners the opportunity to participate in detail discussion and help provide factual outcomes of the proposed high speed rail system.</p> <p>In summary, I am totally dissatisfied with the Draft Impact Statement prepared by your agency and the multitude of problems that will be incurred financially, environmentally and life threatening for Madison County landowners and citizens if such a rail project is approved based on the Federal Rail Administration findings.</p>	Refer to CR-1, EU-2, GN-1, NE-8, NE-9, NV-5, PI-1, SS-15, SS-16 and WW-6.
Bilal Farahshah	3/9/2018	Website	We needed by now it will so convenient	Comment noted.
Morgan Legacy Farm	3/9/2018	Website	I am opposed the to proposed path of the high speed rail as it crosses under a 3 way intersection FM709 and 3194. Given the topography selected the train must travel in a cut and multiple berms creating significant watershed issues and damage to the local ecological environment due to loss is migratory watershed. Further the retention ponds will poison others bodies of water given the topography and drainage. In addition the modification of intersection blocks access between the horse barn and the guest homes and rodeo arena Further the design of the intersection does not meet Texdot standards for line of site creating serious safety issues for residents traveling 709 and 3194. The modification of the accesss roads to 709 and 3194 as designed creates an inappropriate tight radius risking additional opportunity for accidents. Destroying the access to homes, horse barns and one of the first rodeo arena built in Navarro County as well as creating excessive risk by crossing in some of the highest topography under a 3 way intersection could be eliminated if the Rail is relocated slightly north east on 709 in an existing already utilized easement.	Refer to LU-5.

Destroying the access to homes, horse barns and one of the first rodeo arena built in Navarro County as well as creating excessive risk by crossing in some of the highest topography under a 3 way intersection could be eliminated if the Rail is relocated slightly north east on 709 in an existing already utilized easement.	Refer to LU-5.
Morgan Legacy Farm	3/9/2018	Website	I am opposed the to proposed path of the high speed rail as it crosses under a 3 way intersection FM709 and 3194. Given the topography selected the train must travel in a cut and multiple berms creating significant watershed issues and damage to the local ecological environment due to loss is migratory watershed. Further the retention ponds will poison others bodies of water given the topography and drainage. In addition the modification of intersection blocks access between the horse barn and the guest homes and rodeo arena Further the design of the intersection does not meet Texdot standards for line of site creating serious safety issues for residents traveling 709 and 3194. The modification of the accesss roads to 709 and 3194 as designed creates an inappropriate tight radius risking additional opportunity for accidents. Destroying the access to homes, horse barns and one of the first rodeo arena built in Navarro County as well as creating excessive risk by crossing in some of the highest topography under a 3 way intersection could be eliminated if the Rail is relocated slightly north east on 709 in an existing already utilized easement. Morgan Legacy Farm	3/9/2018	Website	I am opposed the to proposed path of the high speed rail as it crosses under a 3 way intersection FM709 and 3194. Given the topography selected the train must travel in a cut and multiple berms creating significant watershed issues and damage to the local ecological environment due to loss is migratory watershed. Further the retention ponds will poison others bodies of water given the topography and drainage. In addition the modification of intersection blocks access between the horse barn and the guest homes and rodeo arena Further the design of the intersection does not meet Texdot standards for line of site creating serious safety issues for residents traveling 709 and 3194. The modification of the accesss roads to 709 and 3194 as designed creates an inappropriate tight radius risking additional opportunity for accidents. Destroying the access to homes, horse barns and one of the first rodeo arena built in Navarro County as well as creating excessive risk by crossing in some of the highest topagrophy under a 3 way intersection could be eliminated if the Rail is relocated slightly north east on 709 in an existing already utilized easement.	Refer to LU-5.

In addition the modification of intersection blocks access between the horse barn and the guest homes and rodeo arena Further the design of the intersection does not meet Texdot standards for line of site creating serious safety issues for residents traveling 709 and 3194. The modification of the accesss roads to 709 and 3194 as designed creates an inappropriate tight radius risking additional opportunity for accidents. Destroying the access to homes, horse barns and one of the first rodeo arena built in Navarro County as well as creating excessive risk by crossing in some of the highest topagrophy under a 3 way intersection could be eliminated if the Rail is relocated slightly north east on 709 in an existing already utilized easement.	Refer to LU-5.
Morgan Legacy Farm	3/9/2018	Website	I am opposed the to proposed path of the high speed rail as it crosses under a 3 way intersection FM709 and 3194. Given the topography selected the train must travel in a cut and multiple berms creating significant watershed issues and damage to the local ecological environment due to loss is migratory watershed. Further the retention ponds will poison others bodies of water given the topography and drainage. In addition the modification of intersection blocks access between the horse barn and the guest homes and rodeo arena Further the design of the intersection does not meet Texdot standards for line of site creating serious safety issues for residents traveling 709 and 3194. The modification of the accesss roads to 709 and 3194 as designed creates an inappropriate tight radius risking additional opportunity for accidents. Morgan Legacy Farm	3/9/2018	Website	I am opposed the to proposed path of the high speed rail as it crosses under a 3 way intersection FM709 and 3194. Given the topography selected the train must travel in a cut and multiple berms creating significant watershed issues and damage to the local ecological environment due to loss is migratory watershed. Further the retention ponds will poison others bodies of water given the topography and drainage. In addition the modification of intersection blocks access between the horse barn and the guest homes and rodeo arena Further the design of the intersection does not meet Texdot standards for line of site creating serious safety issues for residents traveling 709 and 3194. The modification of the accesss roads to 709 and 3194 as designed creates an inappropriate tight radius risking additional opportunity for accidents. Destroying the access to homes, horse barns and one of the first rodeo arena built in Navarro County as well as creating excessive risk by crossing in some of the highest topagrophy under a 3 way intersection could be eliminated if the Rail is relocated slightly north east on 709 in an existing already utilized easement.	Refer to LU-5.

Jessica Farrar	1/22/2018	Email	I am concerned because the list of public hearings does not include the area in Houston where the high speed rail is proposed to end, specifically impacting residents in the Spring Branch area. The drive to the nearest scheduled public hearing could be over 30 minutes long. While there are opportunities in the Houston area to view the Draft Environmental Impact Statement, there is not an chance to ask questions to representatives from the FRA and TCR. For these reasons, I respectfully ask that you consider adding a public hearing in Houston.	Refer to PI-10.
Debbie Farworth	2/6/2018	Oral	I'm Debbie Farworth. I live in Hockley. I wasn't born in Waller County; I've only been here 22 years, but I got here as soon as I could. Now, I'm just I don't have any technical stuff. I've never been to one of these meetings. I wanted to learn more. I've learned a lot tonight. And I just what I don't understand is they're hawking all this as private. There will be no taxpayer dollars. All private money. But how can they claim eminent domain and take your property when there's no federal or state funding? I'm not really quite getting that. Now, we moved out here because we liked the quiet. We love our home; we love our property. If somebody were to take my property of course, per our tax assessor, my property has gone up three times since I moved here. But I could never buy what I have now if I had to give it all up and buy new stuff. It just wouldn't happen. I couldn't have what I have. I don't think it's right. I don't think it's fair. I don't think it's legal. You know. If I wanted railroad tracks in my backyard, I would have stayed in Houston. Thank you.	Refer to ED-1, ED-2, GN-4 and VA-1.
Theresa Fasone	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property	Refer to LU-5, WW-1 and WW-2.

Joe Fauth	1/29/2018	Oral	My name is Joe Fauth. I'm County Judge of Grimes County, Texas. And I'm here to see the presentation but what I'm seeing on a lot of these charts is they're using words such as may, shall, we're going to cooperate with those that cooperate. What are they going to do with the agencies, the counties, the individuals that don't cooperate? How are they going to handle that? Another question I have is, they're having ten meetings throughout the area of the proposed train route. why are they doing it on five nights where they're splitting the groups so people can see the different presentations in the different counties? I for one am a landowner in Grimes County and Leon County. I have some real concerns of why they have to do these meetings in the next two weeks. This is a lifelong project if indeed it goes through. So what's the rush all of a sudden? And another concern I have is that there are a number of studies that have not yet been completed that do affect, impact, ground vibration, air vibration, sound, and issues. Most counties have their budgets in place and don't have additional dollars to spend for our research until probably October of this year. So if any of these impact studies are conducted, who's going to carry the charge for that? That ought to be part of Texas Central Partners' expense to this project but I have not seen cooperation from them or acceptance to make that happen. Thank you very much.	Refer to NE-9, PI-8 and PI-12.

Joe Fauth	1/30/2018	Email	We understand that the FRA has recently extended the public comment period to March 9, 2018. However, we do not believe this is a sufficient extension. For that reason, on behalf of Grimes County, Texas, we request a ninety-day (90) extension of the comment period for the pending Notice of Availability Dallas to Houston High Speed Rail draft EIS, announced in the Federal Register on December 22, 2017. The current extended Notice of Availability allows a comment period with a drop-dead date of March 9, 2018. Meanwhile, the U.S. Army Corps of Engineers has published Public Notice for two wetlands permit applications under Section 404 of the Clean Water Act for this same project, with an even more truncated deadline for public comments. These simultaneous, short comment periods, which commenced during the holidays, allow insufficient time for meaningful public participation. Moreover, the process has been so confusing that full public participation has been nearly impossible. First, the FRA's office was closed during the recent government shutdown. Second, on December 22, 2017, AECOM, the environmental contractor, distributed a notice of availability of the draft EIS. The notice listed the locations and time for public hearings in each of the ten impacted counties. The January issue of On Track, the Dallas to Houston High-Speed Rail newsletter, lists changes in venue for public hearings in Madison and Grimes County. It also corrected the address of the hearing in Limestone County. On January 17, 2018, a notice was published in the Madisonville Meteor listing only the change to the Madison County venue. None of these changes were reflected on the list of public hearings on the Federal Railroad Administration's website until after January 19. Additionally, several members of the public have received a notice of delivery failure when attempting to submit their comments via email to the address listed on Federal Railroad Administration's website for public comments, DallasHoustonHSR@urs.com. The issues relating to the submission	Refer to NE-6, PI-3 and PI-8. For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com), or sending a letter to FRA.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>of public comments are not limited to the comments submitted via email-the online form for submitting comments has also rejected comments. A project of this magnitude will permanently impact Grimes County, Texas and the livelihood of its citizens and landowners. And since there has never been a high-speed rail project in the United States, understanding its vast environmental impacts will be a difficult and time-consuming task. Accordingly, on behalf of almost 28,000 citizens of Grimes County, Texas, we request an additional ninety-day extension of the comment period to June 7, 2018 on this critically important EIS.</p>	
Joe Fauth	1/30/2018	Oral	<p>Good evening, my name is Joe Fauth and I am County Judge for Grimes County. Your neighbor to the south. The reason I am here tonight is we support you in Grimes County in your effort to defeat this project. I'm also a land-owner in Leon County and have been since 1989 where me and a partner, we raise some cattle. We think it's important for Americans to eat American beef. We also, my wife and I who is with me tonight -- we live down in Grimes County around the Plantersville area. We also have property there where we raise cattle because we like those people to eat American beef down there also. This is all about the environmental impact. People say well at least in Grimes County you're lucky. You are going to get a railway station and stopover. They are going to get a stopover so they can dump about 29,000 gallons of poo water out of their trains day in and day out. If you would like that to take place in your county you might want to talk to them about getting a stop. So we're not excited about getting that at the intersection of Highway 90 and Highway 30, getting a halfway station. Along with everything else they have talked in the environmental impact study about the visual impact. The FRA has only found 13 places along that entire route of 247 miles that are going to be visually impacted. I don't know where they get their research of what is good looking and what is not good looking but any of you land-owners, if you look out and can't see the sunrise because there is a railway station or line or you can't see your sunset because there's a railroad going through, I think that's visual impact. Somebody needs to explain that to our legislatures in the state of Texas and in Washington D.C. It's important for us we love where we live and we live because we love it. If you like trains and that sort of thing move to Houston. Move to Dallas. If you don't like it move to Leon County and leave us the heck alone. My final comment is this. In Grimes County I know through our two auction barns we sell 2,000 head of cattle per week. That feeds a lot of people. When you run out of rib-eyes, try grilling your railroad ties.</p>	<p>Refer to AS-1 and LU-11. Servicing and maintenance activities will be performed at the maintenance facilities, including toilet servicing and watering. Refer to TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F.</p>
Joe Fauth	1/31/2018	Oral	<p>Good evening, my name is Joe Fauth and I'm the County Judge for Grimes County. Why am I here? We're supporting you to defeat this project. We need you to help us defeat this project because it's not one county, it's all of us in Texas together. Please hear what I'm about to say. It's important to note for everyone here tonight, Texas Central's claim of eminent domain authority is still the topic of ongoing litigation, and even despite the company's own guiding principles for providing written proof of eminent domain authority they have none. Don't let them on your property, don't bow to them if they threaten you with suit. They do not have eminent domain authority. We've shared serious concern, documented evidence to our members of Congress about the EIS being based on illegally obtained information through illegal surveys and trespass by Texas Central's agent. And the FRA needs to be aware some of the information you may be reviewing is illegally obtained. That should cause concern. This project route has been selected with zero coordination or regard for the future planners of impacted pass-through counties. Each impacted pass-through county was invited to meet just last week to coordinate with technical experts. This is unacceptable. In our counties our budgets are already there, we approve those. In our county we're not doing any more budgeting until the first of October. We won't have money available. For us to do any additional research and studies the money from our taxpayers is not available. We need an extension of these meetings. Having ten meetings in five nights is not acceptable. This is my third meeting. It will not be my last meeting. I heard out in the hall tonight, they're gonna make this happen anyway. If you quit, it will happen. If you fight, we'll defeat it. Our motto in Texas is don't mess with Texas. One group has spent a lot of money -- of your money through donations is Texans Against High-Speed Rail. I encourage you to look at their website, gather information and be aware of how we're gonna stop this project. Thank you.</p>	<p>Refer to ED-1, GN-1, NE-8, PI-1, PI-6, PI-7 and PI-8.</p>
Joe Fauth	1/31/2018	Oral	<p>Good people, this is my second time and I don't mean to wear out my welcome, but I want to read to you something that is in the environmental study, 9.11. Kind of interesting this is 911. It states that the assessment identified potential locations where the high-speed rail system could constitute a significant esthetic or scenic impact. FRA identified 13 landscape units and a defined boundary within the project's area of visual effect along the study area. As well as key viewpoints, KVPs, for a location that represents the view of the landscape unit. How -- my question is, how the FRA could only have identified 13 landscape units with scenic value is an absolute mystery when that railroad is gonna be 247 miles long. You go out and you look at your sunset, or you used to look at your sunset, or you go out and you try to look at your sunrise or you used to look at your sunrise, and now you see a big dirt electric fence. Keep that in mind and that needs to be considered about the beauty of our state. Secondly, this doesn't talk about cattle. I raise cattle. In Grimes County you have two auction barns within about four miles of each other, one sells on Thursday, one sells on Saturday morning. Between those two sales on a regular basis they sell between 1,500 and 2,000 head of cattle. The rail's coming directly through our county from the north boundary to the south boundary and they're going to be taking up ranch land. TCP -- TCR does not care because I went to my first 2014 meeting Huntsville, Texas, one of their presenters said, I know you people are concerned about your bugs and your bunnies. Thank God I'm a County Judge now and my wife reminded me of the judicial code of conduct on our drive up here. Because I'd like to talk to that man about our bugs and our bunnies. This is serious business. This</p>	<p>Refer to AS-1, LU-11 and NE-1.</p>

			is important to all of us. Many of you, many of us, it's our livelihood, it's your home, it's your family heritage. I encourage you, again, do not give up this fight. TCR has not won. They do not have the authority to put a railroad through the center of our state. I hope you hear our comments tonight. Thank you.	
Joe Fauth	2/6/2018	Oral	Good evening. My name is Joe Fauth, and I currently serve as county judge for Grimes County. I'm here tonight on behalf of you, each and every one of you, and the thousands of families that support Texans Against High-Speed Rail. It's important for everyone to hear, know, and understand what I'm just about to say, and that is, Texas Central's claim of eminent domain authority is still a topic of ongoing litigation. And even despite the company's own guiding principles and their written proof of eminent domain, good people, they have none. Do not forget it. We've shared serious concern and documented our evidence to members of Congress about the DEIS being based on illegally obtained information through illegal surveys and trespass by Texas Central's agents. Many of your properties have been violated. They did not have permission to be there. They have illegal information that they're presenting. The draft EIS does not contain adequate rider information, revenue information. The question is why hasn't TCP -- if they're a business, why haven't they released their feasibility study? Their answer to that is it's a bad business plan. One of the things we need to be aware of is they can't get their own numbers right. From the very beginning it was going to be 3,000 acres. That's all the land that they're going to take--3,000. The number now is 8,000. The same thing's going to happen with the cost of the project. It's going to be a low number, and then it's going to continue to get bigger and bigger and bigger. You need to also be aware that the train might not go through your property, but it will eventually go through your pocketbook. Our county, Grimes County, is a cattle-producing county. There are a lot of ranchers. I'm a rancher. I have a cow-calf operation. And we feed a lot of Americans. When we utilize all of this land for high-speed rail and those types of projects, we're going to start seeing people -- the price of beef is going to go up because there's not going to be as much. My advice is for those people that are for the high-speed rail our government officials that might be for high-speed rail, when you run out of ribeye's, try barbecuing a railroad tie. I know that brought a little humor, but this is not a laughing matter. It's going to take each and every one of you doing what you can to stop this project. The best route for this train is no build.	Refer to ED-1, GN-2, LU-5, LU-14 and NE-1.
Joe Fauth	2/6/2018	Oral	I don't want to take up the good time of you folks, but I just want to make three quick points. In the Environmental Impact Study under the 9.11 it states, "The assessment identified potential locations where a high-speed rail system could constitute a significant aesthetic or scenic impact. FRA identified 13 landscape units along the 247 miles that would be visually impacted." How many of you get up going to your front porch and you watch your sunrise, or you go on your back porch and you watch your sun set? Well, with the 35- to 60-foot berm, the people that are going to get to watch your sunrises and your sunsets are the ones riding back and forth from Houston to Dallas. That is so terrible that the FRA would even say there are only 13 scenic disruptions along 247 miles. Please. The next thing that's very insulting to me is that in the EIS 9.14 it states, Between 3,145 acres and 4,394 acres, you know, it's going to impact the farmland, but it's only going to impact 0.2 percent of that farmland. I got news for you. This is rich farmland, it's rich agricultural property, and again, we raise a lot of cattle. Grimes County was once upon a time known for the land of milk and honey because of the dairies, because of the beehives. We are a food producer. And I already made the comment about railroad ties and ribeye's. I'm not being funny; I'm being very serious. As our population continues to grow, if we don't raise our own food we're going to be importing it and then we're going to have a hazardous situation. The last comment I want to make is that this is serious business for each and every one of us. I don't know where your home is. I don't know where you're going to go home to. But I'm sure that when you get home you're going to enjoy being there. Good people, we're home. We enjoy being here and we don't want to give it up to somebody else. This is bad business for everybody involved and it's extremely bad business for the people that are along this route.	Refer to AS-1.
Joe Fauth	2/14/2018	Letter	Please be advised, based on the information currently available, any construction, relocation or realignment of county roads within our county is not acceptable and will not be granted. Further, even if county roads were to be moved or altered, Grimes County will not accept responsibility for additional roads without a long-term maintenance reimbursement plan in place. In addition, the Commissioners Court will require that all county roads remain open for use by the travelling public both during and after construction. I am enclosing a Resolution, which clearly expresses the Grimes County Commissioners Court's views on these matters. This resolution was passed on February 14, 2018.	Refer to ED-3, TR-6, TR-7 and TR-8.
Amy Fehlau	2/6/2018	Oral	I found the open house portion of this meeting extremely disappointing. Each station could not answer my questions to any satisfaction whatsoever. They kept on directing me to another one and the answers I did get were extremely vague and I still have questions that are unanswered. I don't want the impact for my children and my grandchildren. I think it is going to be catastrophic in an economic manner for this state. The county I used to work in will be absolutely devastated and split in two and it's a poor county anyway. People don't deserve that. It's not for the better of people. It's for the better of a few. That's all.	Refer to PI-6 and SC-19.
Daniel Fein	2/16/2018	Website	I am VERY much in support of this project. The economic impact of this project would greatly benefit the city of Houston (where I am from) and Dallas, and would add jobs and further improve work/life balance for so many people. I CANNOT wait for this project to be operational!	Comment noted.

Guy Felder	2/16/2018	Website	I support this project. It is integral to the growing economies of the region.	Comment noted.
Jesus Felipe	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Jason Fell	1/28/2018	Website	I support the Dallas to Houston high speed rail project.	Comment noted.
Gary Ferguson	2/6/2018	Oral	Good afternoon, everybody. Thank you for putting this together. I know it's a requirement, but still, it works great, okay? Everybody here has something to say about it. My name is Gary Ferguson. I am a commissioner on the Waller Harris ESD 200. That is an Emergency Services District that takes care of all of Waller County and a portion of Harris County over to Roberts Road down to Katy. Our area runs from the Grimes County line on the north end, to Roberts Road on the east side, to below I-10 on the south side of the county line, and over to the river, the Brazos River. So we have quite a large area to take care of. In this area, there's ten fire departments and an EMS. So we are in working with the first responders, the fire and ambulance, the EMS people, they're the ones that are going to have to contend with all of this mess, okay? This railroad is going to cut through Waller County, and part of the district is on the other side. Now, if it's all elevated, I think we could probably get across there, but then we have construction problems and all these other problems to deal with. If we have to put more stations over there because we can't get across, that's more money; more money, more stations, more equipment. Shoot, a ladder truck is over a half a million and a half right now, and by the time they get this thing fixed and we put a ladder truck over there, it will be 2 and a half million. You got to have pumpers; you got to have tankers. You got to have more ambulances. So everything is more, more, more. We been working for 14 years to get your ISO ratings down so you have cheaper insurance, and it's a very, very long process. Up until this time, we have had no input or any communications with the railroad, the railroad people, the DOT, nobody. Nobody has come to the district and says, "We need to work on this." So it all boils down to tax dollars, okay? You're going to have devaluation where the track is, no doubt. Now, what happens there, I don't think there's any government entity that's going to cut their budget to offset the tax loss, so which means everybody else in the other part of the county, they're going to have to endure more taxes, higher taxes, to offset the property over here because I don't know any government guy that's going to take the train back because they don't have enough tax dollars to cover it. And they're going to have you know, they tax dollars. They don't have any money. Thank you.	Refer to PI-1, SS-18, SS-23, SS-26 and VA-1.
Alvaro Fernandez	1/26/2018	Website	I would like to voice my support for this bullet train project. Fast speed trains like this are a proven way to move large numbers of people over long distances in a safe manner. The competition to air travel will help lower the cost of plane tickets as well. I have often had to travel between Texas cities in various jobs, and this bullet train would make that sort of economic activity far more feasible, for example eliminating the need to come the night before and leave earlier the next day.	Comment noted.
Rhonda Ferrer	2/16/2018	Website	Totally opposed to this ridiculous project on so many levels.	Comment noted.
James Ferriss	3/3/2018	Website	I wish to give my strong support for the approval of this transportation project.	Comment noted.
Caryn Feuhs	3/2/2018	Website	We, Daniel and Caryn Feuhs, owners and operators of Feuhs Custom Farming in Madison County, Texas, are against the proposed high speed rail of Texas Central Railway. We are vehemently opposed to the possibility of the procurement of building material from our farm, which will lie within one mile of the train and its right-of-way. Whereas architects and investors in the project view the open Post Oak Savannah as nothing more than undeveloped fields of grass sitting idle, that very grass and the rich sandy loam soil below it determine our annual income because we bale hay and raise beef cattle. Both aspects of our farming operation require the soil Texas Central wants to use for the berms and overpass abutments that will elevate the high speed rail above our farms and roadways. With 60 cow/calf pairs, our operation depends upon the soil to produce enough grazing for the dams in the spring, summer, and autumn during their gestation period in order to produce a healthy calf. Once the calf arrives, the soil must provide nutritious Rye Grass and/or oats so that each cow can produce enough milk to raise the calf until it can graze later in the year. However, the soil not only provides grazing, we rotate cows from one end of the farm to the other in order to bale Coastal and Common	Refer to ED-2, LU-2, LU-11, LU-14 and WW-9.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Bermuda grass. Should we even lose 10 acres of soil, we will lose the production of 2 round bales minimum per acre per cutting. Given adequate rainfall, we cut hay three times between May and November, providing a minimum of 60 round bales of hay. With 60 pairs, we need a minimum of 4 bales per cow throughout the winter. Losing even 10 acres removes 75% of the forage needed to supplement winter grazing. Because we bale hay for a living, we can produce a bale for \$25. Should we have to purchase hay to feed our cattle, we would have to pay \$50 or more per bale to acquire the same quality. The financial strain of having to buy hay, as well as the normal protein and mineral supplements required for proper nutrition, would be unsustainable.</p> <p>These numbers only reflect our forage needs. All excess round bales are sold to local customers (\$35 to \$50/bale) for their cattle and we deliver square bales to horse stables in the Houston area during the calendar year. Should those 10 acres be taken from our square bale fields, we would stand to lose 50 bales per acre (again, three cuttings per summer) for a total of 1,500 square bales at \$9/ea delivered -- the equivalent of one of our annual tractor payments, two of the baler payments, or a year of payments for the truck that delivers the hay to Houston.</p> <p>We are a small operation of 60 cow/calf pairs on 300 acres. However, Texas Central is requesting 8,000 acres of land for the construction from Houston to Dallas. If the train was to be built and the soil procured from pastureland and hay fields up to two miles on either side of the right-of-ways, by either purchase or eminent domain, the financial effect on the many small farmers along the route would be staggering. A selling point has been that Texas Central will aid landowners by digging large stock ponds when removing the soil. We already have a 15-acre lake and three small ponds for watering our cattle. We do not need to lose more land.</p>	
Caryn Feuhs	3/9/2018	Website	<p>We, Daniel and Caryn Feuhs, owners and operators of Feuhs Custom Farming, are against the proposed high speed rail of Texas Central Railway as a matter of personal and public safety. As a small business owners who bale hay for customers in Madison and Leon counties, we are concerned by the dangerous situation a series of berms across Texas farmland would create if they cut off many of the dirt roads we utilize while moving tractors and hay equipment. We are uncertain of the possible closures, as Texas Central representatives have contradicted each other with varying answers over the last few years. We, along with employees who work for us during hay season, drive our tractors with accompanying implements and equipment in tow from one field to the next. Due to the length of hay baling season, we spend up to 5 days a week traveling public roads from April to November. Many of our customers are 15 miles or more from our farm, which takes almost an hour to drive in a tractor. Traffic on FM 39, OSR, and Highway 21 has grown exponentially in the last few years and the number of fatalities has grown as a result. Since 2015, our passenger trucks have thrice been forced into the steep ditches by near head-on collisions with careless drivers on cell phones, our main tractor was nearly hit head-on by a young woman who could no longer stand to be at the back of the pack and passed five cars on the narrow, very bumpy two-lane FM39, and numerous times we have nearly been involved in collisions because of illegal passing on curves, hills, or with on-coming traffic close at hand. Because our tractors travel less than 20 mph and our trucks pulling equipment travel less than 40 mph, we present a hazardous situation to ourselves and to the public moving 70 mph or higher on FM39, OSR, and Highway 21. It is for this reason that we choose to travel dirt roads that run either parallel or between paved roads. There are four other such custom baling operations in this area using this method to safely travel between customers' fields. This number does not include the many landowners moving tractors between fields and cattle leases in this manner as they avoid traffic on the paved roads. Please consider all of the slow-moving equipment operators who take advantage of the quiet dirt roads along the 8,000 acres to be affected by the proposed high speed rail project.</p>	Refer to LU-11 and TR-8.
Chris Feuhs	3/9/2018	Website	<p>We, Daniel and Caryn Feuhs, as members of Union Baptist Church of Madison County, are against the proposed high speed rail of Texas Central Railway. Members of the church were assured by Texas Central representatives at the initial public meeting, and in subsequent telephone conversations, that the church and adjoining cemetery would not be affected by the proposed high speed rail. These conversations took place while Union Baptist was in the process of constructing a new, larger building to house both sanctuary and classrooms. However, the information was recently changed and now the members have learned that Texas Central will be constructing an overpass bordering the cemetery. The issues at hand are both structural and peace. The literature provided by Texas Central states that vibration from the passing trains will not be felt beyond 275 feet from the right-of-ways. If the right-of-way borders our cemetery and the new church building adjoins the cemetery, then it will surely experience adverse structural effects. As for peace, the church body meets Sunday morning and Wednesday evening for worship. The members also gather for fellowship, revivals, and celebrations of life such as bridal and baby showers and weddings. Having trains whizzing by, if not over the cemetery, will mar the peace and solace one seeks at church.</p>	Refer to CR-8, SC-9, NV-1 and NV-5.
Douglas Fields	2/7/2018	Website	As a passenger rail user, I support the Dallas to Houston rail project.	Comment noted.
Reginald B. Fields	2/6/2018	Oral	My name is Reginald Fields, and I live at [...]. It is my understanding that the rail train is going to come right down beside my house. I am concerned for obvious reasons. No. 1, the high-voltage 1 electricity; my foundation, as well as the safety of the train being that close to my house. I would like to know if there is any interest in the Railroad Commission purchasing the house from me. I'm also concerned about the	Refer to BA-8, ED-2, NV-5 and VA-1.

			value of my home, property value going down. I do think there are some alternative routes that should be considered rather than coming straight down 290 for the railroad. I am in favor of it but just a different route.	
Jose Figarella	2/6/2018	Website	It would be a beautiful thing if the plans include an expansion to San Antonio and or Austin. A plan for the future infrastructure of connecting our cities in Texas will be great for tourism an economy.	Refer to BA-2.
Susan Filesi	2/11/2018	Website	I am looking forward to the train. My family travels to Houston often. The traffic on 45 is too heavy. On a 3 or 4 day trip too much time is wasted driving. In heavy rain it is not safe. During storms like Hurricane Rita and Harvey 45 cannot handle the numbers of cars trying to find safety. I am looking forward to the everything about this train.	Comment noted.
Karina Filipovich	2/21/2018	Website	I fully support Texas Central's Dallas to Houston High-Speed Rail.	Comment noted.
Ron Fillmore	2/8/2018	Website	I am opposed to this HSR roposal	Comment noted.
Doretta Finch	3/8/2018	Email	To Whom It May Concern: I am against the high-speed rail from Houston to Dallas. * Noise: I am concerned with the noise level of 100 dBA. After reading research, I discovered cattle develop discomfort at 90-100 dB. This would effect cattle reproduction, feed efficiency, and health problems. I realize some of the high noise producing construction activities would be temporary, but our income relies on cattle production year round. Is that noise level included in IO0dB? Wildlife has always had free range on our property. Research stated the consistent noise can cause wildlife to vacate their home territory. * Permanent changes to landscape: Will the train tracks form a barrier dividing our property and restricting farm equipment and cattle to pass from one side of the property to the other? * Taxpayers: Dallas and Houston do not fall in the category of "What Areas Make High-Speed Rail Lines Successful." According to the Reason Foundation, successful high-speed rails operate in areas with high residential and commercial densities, low rates of automobile ownership, subway systems, and without nearby airports with low-cost air service. Dallas and Houston have low population densities, some of the highest rates of car ownership, and limited transit systems. They are not short on airports. So, if the high-speed rail is allowed and the passenger base is not there to pay for the funding, will the taxpayers be forced to pay the debt, or does the land go to Japan? What happened to ... "Buy American, Hire American"?	Refer to BA-4, GN-3, GN-4, GN-6, LU-11, NE-1, NR-1, PN-3 and TR-8. A construction noise assessment, consistent with FRA guidance, has been conducted for the project and will be further refined during engineering and design as construction details are determined.
George Finch	1/29/2018	Email	The public comment period for the proposed high speed train between Dallas and Houston should be extended to 90 days. The public needs enough time to review the lengthy document. TCR delayed the publication of this document for years, to have enough time to create it. We, the public, the people whose homes and lands are threatened also need sufficient time to review the document.	Refer to PI-3.
George Finch	3/8/2018	Website	I am opposed to the high-speed rail. *Land Use: With the rail dividing our property, we will be forced to decrease the cow/calf numbers, which will have a significant negative impact on family income. The rail itself will form a barrier restricting movement of cattle and equipment from pasture to pasture. There is a possibility that access will be restricted to the back section of our property.	Refer to LU-11.
George Finch	3/8/2018	Website	I am opposed to the high-speed rail. *Property devaluation *Taxpayers loss: taxpayers inevitably will have to bail out the failure of this project.	Refer to VA-1.
David Finke	2/7/2018	Website	This project is vital and in the Public Interest in so many ways. It deserves to be supported.	Comment noted.
Nicole Fiori	3/9/2018	Website	Nicole Fiori Please see attached Comment. Thank you. As a Cypress, TX resident and homeowner for nearly 12 years, I respectfully submit this comment to the Federal Railroad Administration ("FRA") Draft Environmental Impact Statement ("DEIS") for the Dallas to Houston High-Speed Rail project ("project") as proposed by the private company known as the Texas Central Railway ("TCR"). Thank you for this opportunity to comment. The comments below are not intended to be complete due to the discussed time constraints and missing Project details; rather, my comments provide an overview of core areas of concern based on facts known to date. Request for Extension I request a 90 day extension of the period to provide this comment to the DEIS as it is not feasible to adequately review and analyze the lengthy document in a 10 week period for a Project with such far-sweeping potential risks to property values, quality of life, area economic growth, safety, the environment, flooding, taxpayer funds, and our daily commute locally. General Comments I feel that there should have been far greater effort across mediums to notify the public as to the details of this Project and across all stages of the DEIS process. Even though this may not fall squarely on the shoulders of the FRA, this is a serious deficiency by the TCR and others to the detriment of Texas residents. The DEIS appears to be missing key facts needed to identify, understand, and communicate fully the risks Of the project and risk mitigation recommendations. By Of example only, TCR data and calculation models as to ridership projections and ticket costs. The DEIS should have discussion, analysis, and risk mitigation recommendations as to the economic Viability Of the project, risk Of the project not being profitable or being abandoned, impact if the Project is abandoned (during construction or operation phases), and risk mitigation recommendations. The DEIS appears to base much of the analysis on information submitted by TCR as true and complete. There appears to be a need for more independent verification and/or collection of additional information as to the Project, its viability, and its impact so as to conduct a robust	Refer to BA-4, ED-1, FP-1, GN-2, GN-4, GN-6, NE-1, NE-9, PI-1, PI-3, PN-3, SC-3, TC-3, TR-2, TR-3, TR-4, TR-6, TR-8, VA-1, WW-1 and WW-2. Fry Road would be crossed by the Project and would not be reconstructed, rerouted, or closed. Operations along Fry Road would continue. Refer to Section 3.11.4, Transportation, Affected Environment information.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>cost/benefit analysis. I do recognize the FRAS resource challenges in doing so, yet feel it is important due to the enormous and expansive risks to Texans With this project. The DEIS appears to need additional documentation necessary for the Project to comply with local, state, and federal laws in areas such as pollution, hazardous waste, oil and gas pipelines, endangered species, and flood control/drainage. Based on the facts known to date, the FRA should recommend a No Action Alternative as the risks are too severe for a train that Will not be cheaper nor faster nor alleviate any traffic congestion. Specific Comments Subject to the above Request for Extension and General Comments, the following are more specific comments as to the DEIS, Private companies are not typically the vehicle for controlling public use projects of this type, especially when there is such a great risk to taxpayers, property owners, and local residents. Transportation solutions are historically within the control Of city, county, and/or state government so that there can be a "public benefit" analysis, full transparency as to details, full accountability of our elected officials, proper analysis of competitive bids for a project with proper due diligence and analysis of contractors based on qualifications, experience, costs, etc...with contracts defining metrics and performance obligations, and proper and timely notice to voters of a project with the opportunity for voter engagement. The DEIS should have addressed the risks of a private company solely controlling this Project (and by a company who has never built nor operated a railroad) as compared to a Government entity controlling the project. Flood control/drainage is a critical issue in our area that is not being adequately addressed by this Project. In the Cypress area, we are seeing increasing flood events with a pattern of more intense storms coupled with existing drainage already strained by the building of the Grand Parkway, construction in The Bridgeland, Towne Lake, Cypress Creek Lakes, and the new commercial and residential developments slated for West/Northwest of the Cypress/NW Houston area. The drainage issues have increased year-over-year resulting in an increase of flooding homes and roadways and blocking us inside our homes for hours to days When roads are impassable. The DEIS is deficient in documenting, analyzing, and identifying flood control risks from this Project, and making risk mitigation recommendations. The DEIS should discuss the fact that eminent domain is not permitted by TCR as private company, and the additional costs and risks to property owners associated with the TCR's eminent domain plan. under this Project, a taking will occur both directly (property needed for the project) and indirectly (property negatively impacted by the Project). Such taking of hard-earned property of Texas residents by the TCR is egregious, dangerous precedent, and contrary to the law. The economic viability of this Project is a serious concern; yet TCR fails to provide the information relied upon to calculate the total cost of the construction (including financing costs), the projected operating costs, the projected ridership numbers, and the ticket cost. TCR also fails to provide clear methods of calculating such items. Notwithstanding this deficiency, using the information that has been provided and filling in some of the gaps through independent sources, there are serious concerns as to the economic viability of this project based on projected ridership, costs of project, and ticket prices to "break even". And, if this project is abandoned at any phase Of construction or operation, it will fall on Texas taxpayers to deal with the fallout via an unused eyesore of a rail that further harms property values, paying for dismantling of the rail, or financing the operation of a train that provides no benefit. I believe the DEIS should delve into the economic viability and abandonment risk areas with independent collection of facts and analysis and a risk mitigation recommendation. Of course, in order for the FRA to perform a proper assessment the TCR must provide full transparency into their cost models, including the projected cost, amount/terms of any financing (whether private or publicly funded), and information as to the names and amount of contribution of their private investors. There is a risk of current traffic congestion worsening as a result of this Project. By TCR's own admission and based on the known facts to date, the Project will not alleviate the traffic congestion anywhere in the State Of Texas. The DEIS should discuss in detail the risks Of this Project as to our regional traffic issues based on the years of projected construction, the closure (in full or in part) of private roads and feeder roads during construction and thereafter, and the taking of actual roadways to be used for the Project. The DEIS should provide a detailed, granular analysis on the impact on traffic during the construction mode and thereafter in a several mile radius from the rail line with a risk mitigation recommendation. The DEIS should contain a risk analysis and a risk mitigation recommendation as to this Project preventing or impacting any future local railway or other transportation solutions along the Highway 290 corridor and feeder roads from the suburbs through downtown Houston. We need local, effective solutions to our serious regional traffic issue as it is negatively impacting businesses, economic growth, safety, property values, and quality of life. I should not have to commute 1-2 hours each way to work from the suburbs. It should not take me 20 minutes to drive 1 mile in rush house to get from the freeway to my subdivision on Fry Road. Yet, this is the current traffic situation. This Project presents challenges to local traffic solutions ata later date since the project Will take up critical, limited space. The DEIS should discuss, analyze, and communicate the risks to such potential, future projects with a risk mitigation recommendation. The DEIS should delve further into the facts surrounding speed of travel, the ticket cost, and ridership projections. Otherwise, it is unclear how this project provides a benefit and how the project is economically viable as asserted by the TCR. Based on TCR's projected ticket cost, the price will not induce people to forgo other modes of transportation and will not be at a price point that drives new travelers to take the train who otherwise may not travel at all. The DEIS also does not appear to include in the ridership projection discussion the ability and likelihood of other modes Of transportation being more competitive through price reductions,</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			which they can do more easily due to the high costs of this Project. The DEIS should also analyze further the speed of travel vs. other modes of transportation with a "total time" analysis using drive time to the station (which is also an additional cost), time for stops/loading/unloading/waiting for a train, actual travel time, and time to drive from station to destination. Factoring in these additional time components, the travel time does not appear to be any faster on the rail vs. other modes of transportation. The DEIS is not robust in identifying, analyzing, and addressing risks of the Project in areas such as air/water/soil pollution, noise control, vibration impact, security/safety measures for riders on the train, risks Of terrorism to communities near the rail, impact to wildlife and endangered species, impact to historical sites (such as Cypress Top in Cypress), safety, impact to oil and gas pipelines in the area, impact to Texans from reduced fuel tax IF people choose to ride the train, aesthetics (depiction in the Statement appears to be inaccurate), impact to property value, impact to local businesses near the construction areas, and impact to first responders, school bus routes, and other critical functions in light of projected road closures. If given more time to review and respond to the DEIS, I could provide more detail as to various risks in these areas that should be addressed by the TCR and the FRA.	
Carrenda Firby	2/18/2018	Email	Opening: I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; the Texas Central Partners (TCP) preferred route will adversely impact the ability for emergency services to get to us in a timely manner, as these vehicles must travel through Waller County to get to our property. A slower response time for EMS and law enforcement will put us and our property at risk. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to SS-23.
Carrenda Firby	2/18/2018	Email	Opening: I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; our home is in Grimes County, and our community straddles Grimes and Waller Counties. Texas Central Partners (TCP) preferred route for the proposed HS Rail Line will destroy property and property values in our community. The proposed route will be approximately 0.5 miles from our home. The HS Rail will destroy the appraised value of our home and property. The reduction in property values would necessitate an increase in the tax rates, in order for the taxing entities to have sufficient revenues to sustain typical levels of service, thereby placing further financial burden on my husband and I. This is money that we cannot replace, as we near retirement. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to VA-1.
Carrenda Firby	2/18/2018	Email	Opening: I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; our quality of life will be adversely impacted from the inconvenience of disruption from the construction. Also the noise and vibration will impact us and our property. There have been no objective studies conducted or released to the public that determine/document the adverse impact of the train's vibration on our water well, septic system, or the structural integrity of our home and shop. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to NV-1. Train vibration levels will be well below the threshold for damage to structures, including underground utilities. For construction in close proximity to utilities, mitigation measures (e.g. encasing pipelines) will be implemented as needed to avoid damage.
Carrenda Firby	2/18/2018	Email	Have a blessed day,	Comment noted.
Carrenda Firby	2/18/2018	Email	Have a blessed day,	Comment noted.
Carrenda Firby	2/18/2018	Website	I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; cutting off roadways we use on a daily basis to travel to work and church. The proposed route will cut through Riley Road and will add an additional 40 miles each day for my husband and me (approximately 11,040 miles a year). Additional wear and tear on vehicles and fuel not budgeted for when we moved here 4 years ago. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to TR-6 and TR-8. As discussed in 3.11, Transportation , Riley Road would be crossed by Segment 5 of the Project. The Project would be built over the road and the road would not be modified.
Clay Firby	2/14/2018	Email	Opening: I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; our quality of life will be adversely impacted from the inconvenience of disruption from the construction. Also the noise and vibration will impact us and our property. There have been no objective studies conducted or released to the public that determine/document the adverse impact of the train's vibration on our water well, septic system, or the structural integrity of our home and shop. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to NV-1. Train vibration levels will be well below the threshold for damage to structures, including underground utilities. For construction in close proximity to utilities, mitigation measures (e.g. encasing pipelines) will be implemented as needed to avoid damage.
Clay Firby	2/14/2018	Email	Opening: I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; our home is in Grimes County, and our community straddles Grimes and Waller Counties. Texas Central Partners (TCP) preferred route for the proposed HS Rail Line will destroy property and property values in our community. The proposed route will be approximately 0.5 miles from our home. The HS Rail will destroy the appraised value of our home and property. The reduction in property values would necessitate an increase in the tax rates, in order for the taxing entities to have sufficient revenues to sustain typical levels of service, thereby placing further financial burden on my wife and I. This is money that we cannot replace, as we near retirement. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to VA-1.
Clay Firby	2/14/2018	Email	Opening: I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; the Texas Central Partners (TCP) preferred route will adversely impact the ability for emergency services to get to us in a timely manner, as these vehicles must travel	Refer to SS-23.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			through Waller County to get to our property. A slower response time for EMS and law enforcement will put us and our property at risk. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	
Clay Firby	2/14/2018	Website	I object to the proposed High Speed (HS) Rail Line between Houston and Dallas for the following reason; cutting off roadways we use on a daily basis to travel to work and church. The proposed route will cut through Riley Road and will add an additional 40 miles each day for my husband and me (approximately 11,040 miles a year). Additional wear and tear on vehicles and fuel not budgeted for when we moved here 4 years ago. Closing: I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to TR-6 and TR-8. As discussed in 3.11, Transportation , Riley Road would be crossed by viaduct by Segment 5 of the Project. The Project would be built over the road and the road would not be modified. Refer to Table 3.11-29: Roadways in Waller County Study Area .
Travis Fischer	3/9/2018	Website	For too long, Houston has depended only on highways and cars. We need to expand our transportation options in the region to include other modes of transit. The TCR high-speed rail is the first step towards that better future and I see it as an important step to improving our city and our state.	Comment noted.
Leonard Flake	1/30/2018	Website	We have gas wells on property. We have eagles nesting here. We have red tail hawks nesting here. We have great horned owls nesting here. We have lots of oil and pipelines running through our property. We have fiber optic cables running through our property. Have cougars with little ones here We have a working cattle ranch. We understand that they might cap off oil and gas wells in area. We count on money from these wells for our income. Again, I strongly do want them to stay off my land. I will have anyone coming on my place to survey or construction of rail arrested.	Refer to EU-2, NE-8, NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Leonard Flake	2/5/2018	Oral	My name is Leonard Flake and I am a concerned veteran. I fought for this country but I don't want to give my land up and I am going to fight for it just like I did my country and then having it taken away. I worked for the railroad a long time messed them up a little bit. But the thing about it is, I mean we have cattle that cross that land back and forth but we have tunnels under the railroad where I live and we have cows that won't go through that. We have to load them up on trailers and take them on the other side of the properties well, they won't cross that. And I have a very few of them that will go through that tunnel. And we have fiber-optic cable that goes through there and they are talking about shutting in these wells. We depend on that for a living. Now how are we going to make a living if they take it away from us? This is something I am totally against and everyone else there should be too. And I'm just hoping that we can do things to stop this from happening. If there are other ways in getting this. The only ones that are actually benefiting from this is people from the big cities like Houston and Dallas. And they are talking about, well maybe we will pay you for your property Okay. What are you talking about, like, one cent on the dollar? We've had our property a long time and I don't want to move. It took me a long time to just get my place where I wanted it. I don't know why it should be taken away from me now. Thank you.	Refer to LU-11, ED-2, SC-19 and VA-1.
Sandra Flake	1/30/2018	Handwritten	I feel that the damage done to properties and [sic] people need to live on far outweigh any good that could come from the high speed rail. We live on 182 acres of an area rich with wildlife. We have bald eagles, red-tailed hawks, great horned owls, cougars, red fox, and [sic] bobcats that live on and travel through. We also have cattle on the property. There are gas wells (which provide part of our income), gas pipelines and fiber optic cables going through on our property. I highly object to the high speed rail going through Texas and destroying the property and the lives of people living in our great state. I do not feel that our lives should be ruined by a train that will only shorten the trip from Houston to Dallas by a few hours. That is why we have airplanes!	Refer to BA-4, BA-12, EU-2, NR-3, NR-5 and PN-3.
Bret Flemmons	3/9/2018	Website	As a resident living very close to the proposed track line I do have concerns about the impact to the area during the construction period. As long as the proposed high-speed rail does not force Hempstead hwy. to be converted to a toll road and severely alter our ability to travel in and out of the area then it will have significant support. If a toll road is planned with the rail-line then there will be significant negative impact on the local businesses and our ability to trade with them as well as traverse the multiple cross streets in the area, causing a increase to the already congested traffic we have here. As long as these concerns are addressed, and the rail-line will not include a toll road and cause the problems associated with this then you can expect significant support from the residents and business in the area near the station and along Hempstead hwy.	Refer to TR-5.
Tyler Flook	2/16/2018	Website	I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!	
Tress Flores	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Dr. Charles Florio	1/30/2018	Website	I am for the project as it will benefit Texas' largest number of taxpayers, millions of people who live in the Houston and DFW areas. The rest of Texas benefits from the taxes these millions pay. So, Texas needs to help Houston and DFW. The first speaker at the hearing asked the audience to raise their hands and keep them up if "you are against the train." I was the only person to my knowledge who did not raise their hand. I felt intimidated. There were about 4 speakers. I was going to speak, but did not as the speakers were hostile towards the FRA employees and I was afraid as I am 80 years old.	Comment noted.
Janice Floyd	2/6/2018	Handwritten	Too disruptive with noise. Destroys lovely country.	Refer to NV-1.
Joyce Floyd	1/16/2018	Email	I spoke with you a few days ago about a form like this. Please let me know if this form is acceptable to use. Thanks Joyce Floyd	Comment noted.

			impacted within the two mile high-speed rail. My grandparents, James and Mary Aimsforth will see this train go straight through their land that they put their blood, sweat and tears into. We live in Concord, Texas. This peaceful land is where we decided to retire. The land where we hunt, fish, raise cattle, chickens and ride horses on. It's my personal therapy when I get off of work. It's our little piece of heaven on earth. This train already has affected my grandmother's health. The first thing that she does when she wakes up is think about it and it's the last thing whenever she goes to bed. Worry is what she does all day. The look of my grandfather's face is almost unbearable to see as he drives his mule or the tractor wondering about the future of his land. The land where we know the name of all the cattle in the herd. A special place where there is a beautiful new lake stocked with catfish. Where the great grandkids swim in the tank during the summer like I did when we were little. This special place of land is where the train will stride directly through destroying it. This is the same place that my grandfather had to run off the high-speed rail crew that illegally tried to cross the other fence. We did not give you permission. You still are not allowed on our land. How can you trust a company after they sneak on to your land after being told no. You will no longer bully our elderly. There is no amount of money that will buy our cherished land. We will stand up and not be silent victims to the forceful intimidation by these people. We all know this train with fail, but if we stand together the possibility that our future generations being able to enjoy the same life in Leon County that we have will happen. Thank you to all of the Leon County Commissioners and the Leon County Judge that has fought so hard to fight against this train. Thank you.	
James Foley	3/1/2018	Website	I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5.
Laurie Foley	NA	Website	There is a historical cemetery on my county rd 219 AND a coveted evate soldier cemetery that will be demolished. Not to mention many of my neighbors homes, ranches.	Refer to CR-4. The intent of the methodology is to avoid impacting cemeteries and burials to the greatest extent possible. The Programmatic Agreement addresses unanticipated effects to burials should they be encountered.
Lesa Fontenot	3/9/2018	Website	I think the high speed rail line is a great idea so long as it is completed within the projected time frame because it will boost travel, commerce and trade between the two cities and everywhere in between.	Comment noted.
Kevin Fonville St	3/9/2018	Website	I think the high-speed train is a good idea I hope they go through with it	Comment noted.
Kevin Fonville St	3/9/2018	Website	I think the high-speed train is a good idea I hope they go through with it	Comment noted.
Scott Forbes	2/8/2018	Website	I am submitting multiple comments on several issues regarding the proposed high-speed rail line between Houston and Dallas, in particular with regard to potential adverse impacts to the Katy Prairie Preserve that has been protected by the Katy Prairie Conservancy: The proposed route would pass close to the Katy Prairie Preserve, within half a mile of the northern boundary of the Katy Prairie Conservancy's protected preserve properties, including the area where Warren Lake and the Matt Cook Wildlife Viewing Platform are located. The Wildlife Viewing Platform at Warren Lake is open to the public seven days a week, and is valued by birders and other visitors enjoying the natural setting and serenity of the lake, prairie, and wildlife. The project would have the following adverse impacts: Comment #1: Disturbance to Public Visitors to the Katy Prairie Preserve. Visitors to the Katy Prairie Preserve's Warren Lake and the Katy Prairie Conservancy's Matt Cook Wildlife Viewing Platform would be disturbed by the noise, vibration and visibility of an elevated train. The disturbance of wildlife at Warren Lake not only affects the birds and other animals that frequent the area, but also is a loss to the visitors that come to observe them from the public viewing platform. Comment #2: Wildlife Disturbance on the Katy Prairie Preserve. Warren Lake teems with wildlife year-round, and many waterfowl gather at the north shore, which is the area closest to the proposed route. The Katy Prairie is in the Central Flyway, and the over 20,000 acres	Refer to NR-1, NR-2, NR-5, NR-6 and RF-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			that the Katy Prairie Conservancy has protected have been designated a Global Important Bird Area by National Audubon. The proposed rail route is directly in the path of a birds' northern and northeastern flyway approach to the lake. Many birds of the prairie are sensitive to light, sound and vibration and may be driven away. In addition to the proposed rail location, there is a maintenance facility proposed to be located just northeast of the Katy Preserve property. This facility, which is planned to occupy a footprint of approximately 120 acres and will be operated at night, will likely produce light pollution which can affect bird migration routes. Comment #3: Soundscape on the Katy Prairie Preserve. A train thundering by every 30 minutes would be an intrusion on the natural setting, and would seriously diminish this community asset for both people and wildlife. It is a serene place where one can hear the calls of native birds and insects. The soundscape is a very important feature that Katy Prairie Conservancy is trying to preserve. Quiet places are few and far between these days, and keeping the Katy Prairie Preserve's soundscape quiet should have high importance when considering the project's impacts. Comment #4: Land fragmentation along route. Many of the properties through which the bullet train is planned are large acre tracts. Land fragmentation impacts not only the landowners, but also the many plants and animals that live on the prairie and other lands in rural areas. Smaller degraded fragments do not support the diverse wildlife communities that flourish on larger undeveloped and undivided areas. Connections between habitat patches are extremely important to maintaining healthy populations, and the high-speed train corridor will disrupt those connections. Comment #5: Destruction of habitat along route. Many of the lands through which the high-speed railway will be constructed, on the prairie and throughout the rural counties, provide extraordinary habitat, which will be both destroyed and greatly altered. Rural lands are often seen as the path of least resistance because there are fewer landowners to object and fewer structures, when in fact we as humans are charged with protecting nature. Nature once lost is lost forever.	
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: There is strong evidence to suggest that Texas Central Partners (TCP) and/or the Federal Railroad Administration (FRA) did not coordinate the DEIS effort with the local Grimes and Waller County governments, which is a violation of federal/state law and/or statute. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD Option.	Refer to PI-1.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: The Need and Purpose for this HS Rail project has not been addressed or demonstrated. Objective financial reviews, such as by the Reason Foundation, conclude that the project is not economically viable; that ridership will not match the number of people who currently fly between Houston and Dallas; that the project would lose hundreds of millions of dollars PER YEAR; and that tax payer dollars would be required. Amtrac does not generate positive cash flow and there is no proof that this boondoggle would either. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to GN-3, NE-1 and PN-3.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: There will be a Public Safety risk from the increased traffic and movement of construction materials; from interference with Natural Gas and other pipelines. These and other hazards have not been addressed. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to EU-1, EU-2, SS-19, and TR-6.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: Grimes County transportation and traffic problems will be worsened, whether the track is at grade or is elevated. There are already dangerous traffic incidents and tax payer inconvenience from existing traffic issues and road conditions. The HS Rail project will only make these situations worse, would further increase response times for emergency services, and would adversely impact school bus routes and travel times for students: closure of FM 1774 between Plantersville and Anderson (Grimes County); FM 1488 (Waller); Riley Road (Waller and Grimes); and many more. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to SC-6, SC-7 and TR-8. Refer to Table 3.11-51: Waller County Roadway Modifications for a list of roadway modifications that would occur in Waller County.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: This area experienced flooding in April 2016, May 2016 and August 2017 (Hurricane Harvey). A construction project of this magnitude will harm Grimes County's ability to adequately provide remediation and protection from floods and the resultant destruction to roads and property. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to FP-1, FP-4, SS-17 and WW-2.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: Our quality of life will be adversely impacted from the inconvenience of disruption from the construction; from the noise and vibration impacts to our persons and our property. There have been no objective studies conducted or released to the public that determine/document the adverse impact of the train's vibration on our water well and septic systems or on the structural integrity of our home. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to NV-1, NV-5 and TR-6. Vibration levels will be well below the threshold for damage to structures.

Submitted By	Date Submitted	Submission Type	Comment	Response
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: The Texas Central Partners (TCP) preferred route will adversely impact the ability for emergency services to get to us in a timely manner, as the route bisects Grimes County. A slower response time for EMS and law enforcement will put us and our property at risk. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD Option.	Refer to SS-23.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: I have concern that my taxes will have to be increased to help pay for the high speed train when it starts to lose money just like with Houston's METRORail. The following from Reason Foundation supports the fact that the high spend train will probably lose money: 1. In the document (https://reason.org/wp-content/uploads/files/texas-high-speed-rail.pdf), one of the points given is a study in 2013 showing only two high-speed train lines made any money -Tokyo to Osaka and Paris to Lyon. All other high speed train lines in the world lost money. It goes on and shows that the Texas High Speed will have even less population density and higher car ownership which will cause the Texas ridership to be much lower than other high speed trains. 2. Also on the Reason Foundation site, it concludes that the proposed high speed rail project could lose over \$500 Million a year. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to GN-2, GN-3, GN-4 and NE-1.
Gary Ford	2/6/2018	Email	I object to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason: Our, Gary G Ford & Kim Ford, home is in Grimes County, and our community straddles Grimes and Waller Counties. Texas Central Partners' (TCP) preferred route for the proposed HS Rail line will destroy property and property values in our community. The proposed route will be approximately 0.58 miles from our home. The HS Rail will destroy the appraised value of our home and property. The reduction in property values would necessitate an increase in the tax rates, in order for the taxing entities to have sufficient revenues to sustain typical levels of service, thereby placing a further financial burden on my wife and me. We have already seen an increase in number of properties for sale in "Saddle Creek Forest" neighborhood with declining property values. This neighborhood is along the proposed train line. I propose that the only reasonable choice in the final Environmental Impact Statement would be the NO BUILD option.	Refer to LU-3 and VA-1.
Gary Ford	2/6/2018	Email	The HS Rail will destroy the appraised value Of Our home and property. The reduction in property values would necessitate an increase in the tax rates, in order for the taxing entities to have sufficient revenues to sustain typical levels of service, thereby placing a further financial burden on my wife and me.	Refer to VA-1.
Isaac Ford	2/19/2018	Website	Time has come. Rail system is badly needed to offset I-45 traffic volume.	Comment noted.
Jason Ford	3/5/2018	Oral	Thank you. Good evening. My name is Jason Ford. I'm Vice President of Regional Economic Development for the Greater Houston Partnership. And I'm here tonight offering comments on behalf of our president and CEO, Bob Harvey, who was not able to be here tonight. We're grateful to the Federal Railroad Administration for the opportunity to offer our comments today. The Greater Houston Partnership is one of the state's largest and most effective economic development and world trade organizations. We represent more than a thousand member firms that employ more than a fifth of the regional workforce in the eleven-county area. Our organization is focused on ensuring that Houston and Texas continue to offer one of the most competitive business climates in the world, and we work every day to bolster the business community and help create an environment where businesses can thrive. As part of this, we believe that growing our transportation connections is critical to our long-term success. The properly-funded bullet train helps build those connections, linking the two largest economies in the world -- excuse me, in the state, with a short 90-minute commute. But when combined, the Houston-Dallas-Fort Worth super-region would be the second largest region in the United States in both GDP and population, right behind New York City. The economic prospects of this are incredible. American workers will benefit from construction work, such as building the system and maintenance facilities, along with supplying materials and providing long-term support for the new rail. But beyond the direct benefits of the jobs created through the construction and operation of the new rail line, this would place Texas, and more broadly, the United States, on par with countries who are already experiencing the benefits of high-speed rail. So as the partnership travels the world recruiting companies to Houston, we marvel at the high-speed transportation options available. If we marvel at this infrastructure, we know the companies we are trying to recruit must also be marveling at this as well. So for American cities to compete with the great global cities of the world, it's critical that we remain on the cutting edge of technology and offer robust transportation infrastructure that's attractive and advantageous to the worlds' leading companies and talent. So on behalf of the Houston business community and members of the Greater Houston Partnership, we proudly support the Texas Central Railway's privately funded bullet train, and I urge the FRA to complete this review in a timely manner. Thank you.	Comment noted.
Richard Fordan	2/5/2018	Website	Economic & Population Growth in the Houston & Dallas metro areas will strain existing infrastructure. Given the large space requirements for additional traffic lanes, cannot build enough roads to meet traffic demand between the two cities. It would be too expensive and impractical compared to high speed rail. We need to be bold and build for the Texas of tomorrow now	Comment noted.

Lisa Foree	2/3/2018	Website	I am a resident of Freestone County and strongly oppose this project. It is wrong to take land that belongs to people that they have worked hard for and for a project that is no benefit to anybody but the foreign people trying to benefit financially. The project will affect every county that it passes through and not in a good way. I just wonder who is going to support this project once it does not succeed financially? I would imagine taxpayers. Bad idea and horribly wrong.	Refer to GN-4, NE-1 and SC-19.
Bobby Forrest	1/31/2018	Oral	I'm Bobby Forrest, and I am the Precinct 4 Limestone County Commissioner, and I don't think I've ever talked less than three minutes. But having said that, I thought long and hard back there about what to say. You've pretty well heard all the negatives and so forth, and -- and those are all real important. I was fortunate enough to be elected to serve the people of Precinct 4 in Limestone County, and those people are opposed to this. They're some of the best Americans, best Texans, the residents of Limestone County, and especially Precinct 4. And I grew up going down to that part of the country. I've helped haul hay down there. I've been stuck numerous times, and tried to beg for a tractor to get out when the roads weren't any good. We've really got things going good in that part of the county, but we do not need -- we don't need to talk -- I'm not going to talk about the things it will do. You've heard that from everybody else. Everybody knows it's a negative impact. But these people, and those citizens of Precinct 4, they don't need that train to go through to hurt them. They have the biggest hearts, family traditions, and those things do not need to be destroyed so that somebody can ride from Houston to Dallas. And I don't need three minutes to tell you that the citizens that have put their life blood in that are the losers. And we don't -- we don't need that. And I don't need three minutes to tell you, so I'm going to relinquish a minute of my time back to you, sir.	Comment noted.
Patricia Fortson	1/19/2018	Email	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to BA-4, BA-6, CR-4, ED-1, ED-2, EU-4, LU-2, LU-11 and NV-1. Section 3.2 Air Quality and Section 3.21 Greenhouse Gas Emissions contain detailed analysis of potential air quality impacts associated with construction and operation of the Build Alternatives. Both sections determined there would not be significant, long term adverse impacts to air quality, and a net reduction in both major pollutants and greenhouse gases. Temporary adverse air quality impacts associated with construction were discussed, and mitigation measures outline at the end of Section 3.2, Air Quality .
Bill Foster	1/30/2018	Email	I seem to remember a picture in the "Ellis County Press from 30 years ago and the Super Collider. It involved eminent domain. The picture was of Sheriffs deputies marching an 80? year old woman down the front steps of a house on a farm where she had been born because she had been evicted by the government in order to make room for a project that never came to fruition. She had been given property without fences where she could move her cattle. I don't remember if there was even a house on it. I just remember that she received less that what was promised in the Constitution and in the paperwork from the county. She died in a home that was not hers. I see this railway project as doing the same to our rural citizens again. Lets don't go there. This people mover won't fly!	Refer to ED-2.
Jodi Foster	1/30/2018	Oral	I do not want to lose my rib-eyes. I don't know where ya'll are from but I moved here from DC to Texas. Let me tell you this. I don't know how TCR can call itself a train when they have no engine, no tracks, and no cars. I have been a realtor for 35 years in Montgomery County. My husband and I drove here to support you people and represent for you because this is going to run right through the middle of their land and cut that ranch in half. They are here to say something about the environmental impact but I want to talk about is the emotional impact and that is so important. We here in Texas we value our family. We value our land. We value our traditions. And what you're going to let Texas Central Railway do is come in -- these people and people all up and down the line and it is going to devalue their property. Some of it will be un-useful. These are Texas heritage ranches over 100 years old like the gentleman just before. He came up and talked about generations and generations and decades. I don't know if ya'll know what ranching is or even if you have a house on a lot. People put the most money that they ever spend on their land and their home. Everything they have. I seen that as a realtor and I know the impact. We seen in first hand. We fought tooth and nail in Montgomery County. We had 806 people in our meeting to say no. We don't want it in Montgomery County for these reasons. Think about the environment, but think about the emotional impact. Think about what you're doing. You're tearing families and homes and ranches apart. You're tearing friends apart. The people have been here for years. I have to tell you something. You haven't seen anything bad until you seen a mad Texan. You doubt what I'm saying go read the book about Santa Anna and the Alamo.	Refer to LU-11, NE-1, NE-9 and VA-1.
Mary Foster	1/31/2018	Website	I am a landowner in Limestone County in the rural area of Personville, TX. I am one of 6 children who grew up there on our family farm. My brother and I co-own the family farm. Should this project be allowed, our family farm which was settled by my grandfather in 1911 would be very negatively impacted by this. We own approximately 25 cattle, a horse, some chickens, a turkey, two dogs and a cat, plus we have our	Refer to ED-2, GN-2, GN-4, LU-14, NE-1, NR-2 and SC-3. The Federal Railroad Administration has prepared this Final EIS in compliance with all applicable federal and state historic preservation

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			"old" farmhouse just sold to our oldest daughter and her husband and their 3 young children. They are learning how to help out on the farm and how everyone has a job to do. My husband is a retired Air Force veteran since 2000. My dad and all 3 of his brothers left the family farm during WW2 to go to 4 different places with the Army/Air Corp. The value of honoring veterans and Texas landowners should not be allowed to be tread upon by foreign investors backed by a shell company in Garland. We have worked all our lives since 2000 to take care of this farm/ranch along with my brother, and most recently, we have undertaken the construction of a new home. The environmental impact would be not only noise pollution, but animals that are native to this region which are in short if not extinct supply would be most negatively impacted. We have roadrunners which are not very common anymore. I saw one of the largest ones I've ever seen in my cabin's driveway recently. Also, there are trees including a native pecan tree which was planted by my grandfather in 1911. We have a settler's historic cemetery at Personville which is maintained by my husband and several others of the Personville Community Church board. We still have our reunion and talk about old times in Personville in October of each year. I'm not against progress, but I do feel with the cost of ridership, and the amount of money that has been lost in CA by a bullet train, that this project is not only undesirable economically, physically, and financially, it will not succeed. I don't want my farm to be used for raw materials and not ever have a chance to buy it back. This sham of a railroad doesn't have enough money because it is priceless to me and my whole family.	regulations. The Personville Cemetery was designated as a Historic Texas Cemetery (see Table 3.19-4 of the Final EIS). Cemeteries in Texas are protected under provisions of the Texas Health and Safety Code in Chapters 711-715, Title 13, Part 2, Chapter 22 of the Texas Administrative Code; and in Section 28.03(f) of the Penal Code of Texas which prohibits the use of cemetery property for non-cemetery purposes. As stated in Section 3.19.4.2.5, Cultural Resources, Affected Environment , Cultural Resources by County, Limestone County of the Final EIS, the Personville Cemetery, which was identified during the literature search but not field-inventoried, is not located within the Limits of Disturbance of Segment 4 (Build Alternatives A, B, D and E); it is situated approximately 525 feet to the west of Segment 4. As such, this cemetery will not be physically impacted by the project. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
William Foster	2/16/2018	Website	This will be an egregious misuse of eminent domain for a project that Texas does not need in this form. Really a people mover in a state where people prefer to drive Pickup trucks everywhere. It should just suck enough taxes out of the economy to force people to use it at the inflated price just to move between Dallas and Houston. This is a return to the European economic model where people don't have the wherewithal to move more than five miles from their abode by walking!!	Refer to ED-1, GN-4 and PN-3.
Mary Franco	3/9/2018	Website	I think this is a great idea, however I have heard that the ticket price would be equal to an airline ticket, I think it should be less, giving people who could barely afford the price of an airline ticket to go visit their families more often. Maybe consider the ticket price the same as a regular Amtrak ticket? I think people would rather drive if the ticket is too expensive.	Refer to SC-3.
Gary Frank	3/2/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5 and NR-2.
Steve Franko	2/15/2018	Website	I am very excited and encouraged for the HSR between Dallas and Houston, however very disappointed that the alignment of the Dallas station. This train should be as close to if not at Union Station Dallas. It does not make sense to have the station at the river bottoms not even close to other modes of transportation. Right now Union Station Dallas serves Dart, Trinity Rail Express, Dart Bus and Amtrak. Dallas Union Station, in my opinion is the only option to the HSR Terminal. Thank you. Steve Franko	Refer to GN-7, GN-8 and TR-3.
Ms. Frayser	3/5/2018	Oral	I live very close to here My subdivision is just around the corner: but I did not know about this meeting I learned about this meeting by watching the news: the 10-00 O'clock news last night So I really don't understand why because we have a very civic club. All the other subdivisions around here: we're very active. So I'm really kind of shocked that we weren't notified earlier of the meeting and didn't get a chance to our voice. So I would like very much: since this is going to significantly impact us: to have another meeting where I can get the neighborhood and let people know that they can do this I learned a lot today here about the impacts and about the finances. I do believe that I am going to end up as a taxpayer bailing this out. We heard a lot about the numbers being incorrect: which I believe. I've heard about how the rail from Houston to San Antonio didn't make. Well: probably a good reason. This summer I was in Colorado and they had a rail line going from Denver out to the airport and goes through Golden: because I was actually in Golden: and someone told me: Oh: yeah, that's all funded.	Refer to ED-1, ED-2, GN-2, GN-4 and NE-1.

			It was supposed to pay for itself. But you can be on that train. There's not near enough people to cover the cost. So we need to look around the nation and all the projects that have been bailed out: all right? If they say it's privately funded: then why are they having to ask for a loan? And, now, the other thing I want to make and I think this is a comment that I really hope is stressed - this is Texas. You're asking for a fatal flaw. Well: here's the fatal flaw. They lied. They don't do the numbers correct My hairdresser: who is a single mom: her house is off of Hempstead Highway. They went to her two years ago and told her we have eminent domain and we need to sign this. You'll get more money if you sign early, but just lied to her: left: right and center. If she had to sell her house today, she would not be able to. If she had a financial crisis: she couldn't sell it because she has an option on her house. So that is a fatal flaw in the whole process right there. Just don't lie to Texans.	
Victoria Frayser	3/5/2018	Handwritten	NORTH WEST MALL - NO!! I live in Brookwoods Estates. NOISE!! I lived Near High Speed in UK. PLEASE - Move to Industrial Site or Better - NO HIGH SPEED. Taxpayers WILL have to fund!!	Refer to GN-7, NE-1 and NV-1.
Donald Freed	2/1/2018	Email	I would use this service, especially as a person who cannot drive.	Comment noted.
David Freeman	3/9/2018	Website	It would be better if the train were a high speed magnetic rail train . The track for this type, would cost millions of dollars less to build. Even more money would be saved if the entire track was on the ground, this design works better for circuit boards... The magnetic train would go faster making it more difficult to damage the train in a collision... so the train nor the track is physically damaged then the only liability would be the person or vehicle or object that was physically on the track itself... with a yellow light warning system 30 minutes prior to the arrival of the train going to orange 10 minutes prior to going to read five minutes prior to a company with a loud horn signaling the train is passing ... The train itself would pass in the moment ... The danger would only be less then > four minutes... The train itself would be accompanied with a loud sound and a red light ... At about 700 mph. With a low-speed steam engine going from Louisiana casinos to Fort Worth Stockyards (stopping near Tyler and in Dallas) , and a high speed Magnetic rail system going from Dallas to Houston and then from Houston to Longview would create a prosperity magnified heart.	Refer to BA-4, NE-1 and PN-3.
Roger Frey	2/27/2018	Website	The railroad makes an unnecessary impact on a large area. It destroys large areas of private land that is home to many native species. The train will be a failure economically and disrupt people and animals with the noise. Even if elevated, the frequency of the trains will change the patterns of animals due to noise. Prevent this destruction of habitat just to make more money for the big spenders	Refer to NR-1 and NR-5.
Friends of NFA	2/9/2018	Website	Our organization is 100% i favor of this project as it promotes the use of passenger rail in the USA. We are a regional support group for the Heartland Flyer passenger train and the Texas Central project would greatly help with ridership and local support. It is difficult to understand why anyone would not support a great rail project that is privately funded. We Vote YES! Friends of NFA	Comment noted.
Tammie Fritz	3/9/2018	Website	Do I want a high speed rail that can get me from Dallas to Houston in the time it takes me to get from McKinney to Dallas during rush hour? Yes. Build the train- and while you're at it, can we expand DART to McKinney?	Comment noted.
Kylie Fruge	2/17/2018	Website	I support this high-speed railway because it will provide a safe mode of transportation for my generation	Comment noted.
Kylie Fruge	2/17/2018	Website	I support this train because of the efficiency it will produce and how little it will negatively effect the environment	Comment noted.
Kylie Fruge	2/20/2018	Website	Approximately 100ft-500ft will be used for the train system and facilities (DEIS Section ES 2)	Refer to LU-14.
Nathan Frumkin	1/7/2018	Website	We own the property South Of the Beltline Road in Dallas County, which you are going to cross with the HSR (" "). Per your typical sections the access roads, which you show on one side, are one-way 12' wide roads. This will not work for our property access, because the City of Lancaster require at least two means of ingress and egress from the public road not less than 24' wide for fire accessibility. The elevated Beltline Road will not provide an access to our property too. our property zoned PD-067, Lanport District (City Ordinance 2008-03-12, Exhibits A-6 and A-7), Subdistrict: Logistics Port A-LPA (Light Office/Industrial Zone). Without adequate Beltline service roads, the City will not let us to develop whatever will left from the property, and it will be practically landlocked. Attached is a copy of your drawing NO. Jeremy Fuchs	3/9/2018		The Texas and Southwestern Cattle Raisers Association (TSCRA) appreciates the opportunity to comment on the Draft Environmental Impact Statement (Draft EIS), regarding the Dallas to Houston High-Speed Rail Project. T SCRA is a 141 -year-old trade association and is the largest and oldest livestock organization based in Texas. TSCRA has more than 17,500 beef cattle operations, ranching families and businesses as members. These members represent approximately 55,000 individuals directly involved in ranching and beef production who manage four million head of cattle on 76 million acres of range and pasture land primarily in Texas, Oklahoma and throughout the Southwest. With extensive experience in other transportation corridor matters, T SCRA believes the Dallas to Houston High-Speed Rail will have significant environmental impact, to include detrimental effects on cattle, other livestock, agricultural operations and farmers and ranchers on the path Of the proposed rail line A number Of significant issues are not adequately addressed in the Draft EIS, and TSCRA seeks to ensure these issues, questions and concerns are thoroughly addressed prior to FRA adoption of a final EIS. The Draft EIS, on page 28 within the Executive Summary, indicates that the project "would not result in a significant impact or loss to crop yields, livestock numbers or the state agricultural economy." T SCRA strongly disagrees with this conclusion provided for within the Draft EIS. In fact, agricultural operations, especially those related to the raising Of cattle, will be disproportionately impacted by the project. How, specifically, did FRA devise their conclusion? Further, can FRA provide the evidence on which their statement Of no significant impact is based?	Refer to LU-2, LU-11, NR-1, NR-6, NV-1 and TR-8. The Project's limits of disturbance represents a small fraction of the region's total agricultural productivity and is not expected to adversely impact agricultural sectors of the economy, as discussed in Section 3.13, Land Use .

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Section 3.13 of the Draft EIS indicates the total market value of agriculture as being more than \$25 billion dollars. While this may be an accurate reflection of cash receipts for agricultural commodities, such as livestock, it does not include the significant upstream and downstream components of the industry, which has an annual economic impact of more than \$100 billion dollars in Texas. TSCRA poses the question of the Draft EIS: What is the full economic impact of the project on the agriculture sector, not limited to cash receipts? Texas has also experienced a decline in agricultural lands as those lands are converted to non-agricultural use. The proposed rail line will continue to exacerbate the troubling trend. While the Draft EIS appears to account for the actual acreage that will be taken for the berm, tracks, stations and other physical components of the rail line, it does not seem to account for the loss of agricultural lands due to hardship placed on the current and future owners of traversed, adjacent and nearby property. Was any analysis conducted of agricultural land loss due to indirect factors such as landowner impact? If not, TSCRA requests that a full analysis of potential agricultural land loss be conducted prior to any further consideration. Additionally, has any analysis been conducted of land loss for specific tracts within the study area due to effective usability of those tracts of land? If not, TSCRA requests that the effect of the project on individual land tracts be included in the EIS. As described in Figure 2-26 of the Draft EIS, 10 counties have the potential to be traversed by the proposed project. These include Dallas, Ellis, Navarro, Freestone, Limestone, Leon, Madison, Grimes, Waller and Harris counties. All of these counties have significant agricultural operations, including cattle. As the Draft EIS states, livestock contribute significantly, often predominantly, to the viability of rural economies. While the study uses 2012 Agricultural Census data, more recent 2017 USDA County Estimates indicate that the 10-county study area is home to more than 582,000 head of cattle. While not a large percentage of the states' total, the more than half-a-million head of cattle in the study area represent the livelihoods of the men and women who raise those animals for a living. It is also an important economic driver for rural communities. The Draft EIS indicates that the project would not have a significant impact on agriculture, however it fails to consider the microeconomic level of impact on individual producers, animals and communities in the affected project area, TSCRA requests that FRA fully substantiate the assertion that the project "would not result in a significant impact or loss to crop yields, livestock numbers or the state agricultural economy," by conducting further microeconomic analysis on the impact to affected producers and rural communities. Related to land use, landowner hardship and agriculture productivity is also the issue of noise and vibration arising from the construction and operation of the Dallas to Houston High-Speed Rail Line. A memo published by the High-Speed Rail Authority in California indicated that a train going 106 MPH would create 71 decibels 150 feet from the track and a train going 220 MPH would create 83 decibels 150 feet from the track. According to Table 3.4-12, FRA's analysis of noise impact often occurred at distances in excess of 200 feet from the nearest rail, giving an incomplete analysis of the impacts on animals and their caretakers when closer to the track. It is reasonable to presume that both animals and their human caretakers would regularly be in closer proximity to the tracks. According to the National Institute of Health's National Institute on Deafness and Other Communication Disorders, noise-induced hearing loss can occur in humans from long or repeated exposure to sounds at or above 85 decibels. A rancher working or tending cattle near the tracks may regularly be exposed to such noise levels. Was any data collected by FRA that assesses the impact potential for humans in such proximity to the rail line as a course of their day-to-day employment? If not, TSCRA requests that FRA conduct a full assessment of potential human harm from noise exposure at distances closer to the rail line than previously evaluated. Like humans, cattle are also affected physiologically and psychologically by what they hear. According to a 2006 Beef magazine article by Dr. Jon Watts, PhD, "recent research suggests environmental sound has considerable influence on the behavior and physiological response of beef cattle. And that has important implications for handling and managing them." Cattle are, in fact, able to hear a much wider range of sound frequencies than humans, 16 to 40,000 Hz in cattle, compared to 12,000 to 15,000 Hz in humans. The Draft EIS in its current form does not provide adequate analysis of the noise frequency and level to which livestock will be regularly exposed. Table 34-4, and the document on which it is based, FRA, "High-Speed Ground Transportation Noise and Vibration Impact Assessment," Final Report DOT/FRA/ORD-12/15, September 2012, appears to arbitrarily set a noise exposure limit for livestock and wildlife despite the report's own assertion in Section A.5.1 that "for animals, the effects are not easily determined." In cattle, intermittent sounds can be particularly stressful, especially if they are sudden and at a loud volume. A train passing every 30 minutes could have a significant impact on cattle by way of added stress and changed routine. It may also inhibit, due to noise stress, the grazing of otherwise viable pasture land. This is likely to reduce productivity in weight gain and will thus have a detrimental effect on the overall economic productivity of ranchers in the area impacted by high-speed rail noise. In fact, in a court decision that reached the Minnesota Supreme Court, Harlan Poppler, et al. Respondents, vs. Wright Hennepin Cooperative Electric Association, it was decided that such an impact on lost productivity due to nuisance and change of routine in livestock was grounds for the award of significant damages. Although the case centered around an electrical line that interfered with a dairy operation, the basis of the jury award, which was upheld by the court, centered around the nuisance and trespass created by the project, which would also potentially apply to the construction and operations of a high-speed rail line. TSCRA strongly encourages further study on the impact of noise and vibration to health and productivity specific to livestock operations in the study impact. TSCRA also raises significant concerns in the way landowners will be able to access, maintain and utilize their property after it is bifurcated by the Dallas to Houston High-</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Speed Rail Line. This is especially important for agricultural uses, as these landowners depend on their land for their livelihoods and that of their families. In the Draft EIS, FRA appears to simply accept the Texas Central Rail (TCR) scheme for allowing landowners to access portions of their property separated by the rail line without further analysis. While TCR makes assertions, it has no requirement nor oversight to ensure that it will work with impacted landowners to provide whatever access to bifurcated property necessary. T SCRA urges FRA to conduct further analysis and implement strict oversight of TCR in these matters to ensure the present environment is maintained without detriment.</p> <p>As a portion of their plan to avoid separating landowners from parts of their property, T CR has proposed the implementation of "animal crossings" within the raised-berm portion of the project. Their engineering drawings, presented in Appendix G, page 4539 of the Draft EIS, demonstrate that these "crossing plans" are little more than box culverts. In addition, the proposed dimensions of these culverts are not sufficient to allow for continued agricultural operations on the separated portion of property. The animal crossing plans proposed by TCR, and blindly adopted within the Draft EIS, propose several types and sizes of culverts for different types of animals, separating large and small species. For small animals, the plans call for a six-and-a-half-foot square culvert with a ledge on which animals may cross. If a landowner does not have large animals, such as cattle, on the property at the time of construction, this effectively curtails the landowner's ability to ever raise such large animals on the separated portion of the property, as the dimensions are not sufficient to allow for their easy passage. The size also does not allow for even a pickup truck, a vehicle that is essential to caring for all manner of livestock, to pass. The Ford F-250 is a prime example of a common vehicle used on cattle ranches. From the factory, it measures 80 inches wide by 82 inches tall. This is two inches wider and four inches taller than the proposed culvert. The culvert design for large animals is larger at 23 feet wide by 11 _5 feet tall. However, it too faces similar limitations. Ranchers frequently supplement cattle grazing with hay, and pastures are also regularly used to grow hay that is baled and stored for use during drought or winter. Both of these activities require the use of farm tractors. Large tractors often used in these jobs come dangerously close to the culvert height. A 2016 John Deere 8400 is almost 11 feet tall, while others easily eclipse its height, especially with implements attached. Even a simple hay cutter, Figure 1 an implement necessary in the hay baling process poses a significant concern in relation to the proposed crossing dimensions, as the cutter far exceeds cab height when folded for transport, as shown in Figure 1. This size of culvert could also prevent the landowner or future landowners from repurposing their property from a livestock operation to a row-crop operation, which often requires even larger equipment. Finally, the Draft EIS does not adequately account for how these types of crossings will be maintained to avoid regular flooding and waterlogged soil within the crossing. These considerations are essential as a rain event may strand livestock on one side of the tracks without sufficient access to food, care or clean drinking water. Further, deep mud within a crossing may imperil the lives of cattle and other animals should they become stuck.</p> <p>Regardless of the type of animal crossing employed, the Draft EIS is unclear as to how and when these types of crossings will be implemented and by what standards their use will be overseen to prevent irreparable damage to current and future land uses. T SCRA urges FRA to conduct a more thorough review of these animal crossing plans and provide specific recommendations to mitigate the impact on animal and human access to land separated by the rail line on a tract specific basis. T SCRA greatly appreciates this opportunity to raise concerns and pose questions in regard to the Draft EIS for the Dallas to Houston High-Speed Rail Project. TSCRA maintains serious concerns about analysis within the Draft EIS in relation to the impact on livestock and agricultural economies, the potential for conversion of land to non- agricultural use, the physical and psychological hardships to be borne by individuals and livestock animals, including adverse health effects on both humans and animals as well as the impact on the livelihoods of these individuals, and excessive limitations that will be placed on current and future land use. We ask that FRA thoroughly review our comments so the concerns of Texas ranchers and landowners who will be affected by the project may be fully addressed prior to any further considerations or findings. We look forward to a continued dialog to achieve additional clarity on our areas of concern. If you have any questions regarding these comments, please contact Jeremy Fuchs at 512469-0171 or ifuchs@tscra.org.</p>	
Daniel Fuentes	2/23/2018	Website	I support this and believe it will help expand the Texas economy.	Comment noted.
Sergio Fuentes	1/25/2018	Email	Excited for the possibility of taking this train to the Dallas area instead of having to fly or drive. Does the pricing expect to be lower than flight prices? Also, will there be locations to park and/or rent vehicles (like National) near the stations? Hope this actually happens and you can connect all of Texas in the future!	Refer to GN-6, SC-3 and TC-5.
Takanobu Fujita	3/8/2018	Website	During the 2011 Tōhoku earthquake and tsunami of Japan, thousands of lives were lost. For those that survived, many came back to nothing; their homes and communities destroyed, memories of their loved ones gone. Millions were ultimately displaced, nowhere to go, no one to rely on. One man by the name of Robert E. Morgan, without hesitation, opened his Morgan Legacy Farm located near FM 709 and 3194 to those affected by the earthquake and tsunami, so that they could once again experience normalcy and peace. How did one man in the heart of Texas affect so many people in a country several thousand miles away? One year after the Tohoku earthquake and tsunami, the 2012 Japan-America Grassroots Summit was hosted by the communities of Dallas-Fort Worth. The participants from Japan included many students and adults from the ravaged communities of the Tohoku region. Their lives barely rebuilt, it was an opportunity for them to visit a country and	Refer to LU-5.

			a state who shares the same values as they do: honor, compassion, humility. It was also an opportunity for the citizens of Texas to help their brothers and sisters in a time of healing. I asked my friend, Robert E. Morgan, how we could help my fellow countrymen. Immediately, Robert wanted to open his Morgan Leagacy Farm to everyone that was coming to the Grassroots Summit. He provided lodging, food, staff to help provide tours and entertainment, all at his personal expense. I can still vividly remember the kids running wild to the lake, excited that they could fish again, something they were not allowed to do in the radioactive areas of the Tohoku region. The adults horseback riding, all with smiles on their faces, something that was missing since the days of the disaster. I could see relief on the faces of the elders as they rode a carriage across the fields of Morgan Legacy Farm. For a moment in time, a man from Texas was able to lift the spirits of a nation, a nation that needed help, a nation that needed someone to say, "You're going to be okay." That someone that day, was my friend Robert E. Morgan. I ask you today to show the same compassion that Robert E. Morgan showed the citizens of Japan that day and preserve the land that his Morgan Legacy Farm humbly sits on. If one man can help a noble nation, I believe a nation can help a noble man. Robert E. Morgan has and will continue to serve and help countless others; please allow him to use Morgan Legacy Farm the way that would make you proud. Morgan Leagacy Farm - located near FM 709 and 3194 in Navarro County	
Eileen Funk	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

Darren Furtick	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Fabrizio Gabbiani	12/19/2017	Email	The Draft EIS looks like a solid document. We look forward to being able to benefit from modern and rapid transportation between two major economic areas in Texas.	Comment noted.
Fabrizio Gabbiani	1/17/2018	Email	To whom it may concern: I have taken the high speed trains in Japan on which the Houston Dallas project is based. They are spectacular and serve their customers and the broader public exceedingly well. Texas will largely benefit from implementing them, both economically and environmentally.	Comment noted.
Bob Gage	2/1/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. Inadequate/Insufficient Documentation; "No Build Alternative" - (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The Public is NOT going to accept from the FRA general statements that support the HSR without the FACTS to back it up. The appropriate level of detail to support the FRA's claims about the No Build Alternative simply does not exist in the DEIS. Rationale is included in another comment on this subject due to space limitations. The FRA also mentions there would be no improvement of safety on I-45 with the No Build Alternative. The FRA must quantify that claim BEFORE it can be used to support the FRA's conclusion that the No Build Alternative is not an option. Therefore, the FRA does NOT provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6.
Bob Gage	2/1/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Question 1: Were any risk management systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in an isolated area; i.e., if there is a problem out in the middle of nowhere? Question 2: What Risk Management System has been applied or what Emergency Response Planning been has done to handle high elevation rescue of the Public in case of a shut-down or incident in the middle of nowhere during operation? Question 3: The same question would apply to the Construction Phase, also. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. William R. ("Bob") Gage, Jr. [...]	Refer to SS-3, SS-18 and SS-19.
Bob Gage	2/1/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Comment: If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a private company's application to construct and operate an HSR a green light WITHOUT the application of a Comprehensive Risk Management System, particularly since the lives of the public hinge on its safe and secure construction and operation. That sort of lack of credible oversight by the FRA, a Federal government agency responsible for "RR Safety" could easily be considered "Negligent," to say the least. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. William R. ("Bob") Gage, Jr. [...]	Refer to SS-19 and TR-6.
Bob Gage	2/1/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. Inadequate/Insufficient Documentation to eliminate "No Build Alternative" - (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. First, any claim regarding this Project being a traffic solution or congestion relief has been contradicted by TCRR many times...and we in the opposition have that documented. TCRR has stated...or, perhaps, admitted...that this Project will NOT solve any perceived traffic issues, particularly near the big cities. Second, the FRA must show more data regarding future estimates of traffic volume. After researching past predictions, it is found that today's traffic volumes on I-45 have in no way even come close reaching those predictions. In fact, it has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that No Build would provide no Alternative Transportation Needs. Where is the FRA's statistical proof of such "NEEDS"? No data is shown by the FRA. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. William R. ("Bob") Gage, Jr. [...]	Refer to BA-6, NE-1 and PN-3.
Bob Gage	2/1/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. "No Build Option" Must be Reconsidered - (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). Here are reasons the "No Build Alternative" MUST be reconsidered by the FRA. First, the claims by the FRA on I-45 transportation predictions, traffic congestion, safety on I-45, and transportation alternatives are not adequately supported with detailed facts. In fact, the opposite cases have been made with much more facts. Second, the "Public Need" has never been established in the DEIS by the FRA. Third, "Public Need" must clearly be established due to the huge negative impact on landowners' property, homes, cemeteries, livelihood, existing public roads, and county maintenance revenues. That has not been adequately covered by the FRA DEIS. Further, it has not been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes. In other words, the FRA's DEIS is simply a "thumb on the scale for TCRR's benefit" without the facts to back it up. I	Refer to BA-6, GN-2, NE-9 and PN-3.

			propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. William R. ("Bob") Gage, Jr. [...]	
Bob Gage	2/1/2018	Email	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason.</p> <p>Failure to consider Increased Acreage and Adverse Public Safety Impacts - "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The No Build analysis totally skipped the huge increase in Impacted Acreage from 3000 acres as communicated in writing by TCRR to 8000 acres. That 167% increase has not been addressed by the FRA at all; neither was it a part of the No Build Alternative Analysis.</p> <p>TCRR's current plan has caused the closure, rerouting, modification, and rebuilding over the HSR of many Private and Public Roads and increased the Road ROW land required without any ACCOUNTABILITY FOR TCRR's Earlier Claims. The FRA simply glosses over those huge changes. Why is that?</p> <p>What about the many Public Safety considerations that the FRA has Glossed Over, such as:</p> <ul style="list-style-type: none"> a) increased ER (Emergency Response) times, b) safety of traffic congestion around construction sites, c) lane closures, d) rerouting roads, e) road closures and f) more Public Road Travel required just to get around from point A to point B due to the HSR)? <p>The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to BA-6, LU-14, SS-1, SS-23, TR-6, TR-7 and TR-8.
Cynthia Gage	3/9/2018	Email	<p>I own property through which the Dallas/Houston HSR proposes to intersect. This land has been in my family for 5 generations, and is not for sale, nor is it for "intersecting"! The land is leased for cattle ranching, and your plans would destroy the possibility of grazing and cattle, in addition to affecting the water flow and tanks that supply the cattle. I have never given my permission for anyone to enter my property for the purpose of surveys, etc. I would like to know how it has been done without permission... Trespassing is illegal I cannot imagine that the great state of Texas would allow a few private individuals to have access to and be able to destroy our property for personal gain. I believe that I have rights and responsibilities as a citizen, and so does everyone else. The negative environmental impact that this proposed railway will have is detrimental to all wildlife, in addition to all humans within several miles on either side. The entire concept of this "railroad" is totally ludicrous. It is unbelievable to me that you, as civil service employees (which I used to be), would even give credence to this impossible, destructive project which will destroy the state of Texas, and its rural areas, as we know it. I beg of you, please do not allow this to happen.</p>	Refer to GN-1, LU-11, NE-1, NE-8 and NE-9.
William Gage	2/1/2018	Email	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public safety (Ref: DEIS Appendix FTCRR FDCE v7 REPORT: sect. 3.12, pg. 49 of 199; sect 4.1, pg. 62 of 199; sect. 4.2, pg. 63 of 199; sect. 4.4, pg. 64 of 199). Question 1: Has a Risk Management System been applied to the security Of the HSR during construction and operation? Question 2: Since the FRA is responsible for RR Safety, including that of the public, and would be the Federal Agency to allow TCRR to operate a RR in the future with the FRA's oversight, why is there no mention in the DEIS of risk management systems being applied to public safety or security? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to SS-19 and TR-6.
William Gage	2/1/2018	Email	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public safety (Ref: DEIS Appendix FTCRR FDCE v7 REPORT: sect. 3.12, pg. 49 of 199; sect 4.1, pg. 62 of 199; sect. 4.2, pg. 63 of 199; sect. 4.4, pg. 64 of 199). Comment: The HSR remote route With its crossings being routed very close to and utility facilities is, figuratively speaking, "screaming" for application of a comprehensive and competent Risk Management System, including of risk disaster scenarios along with qualitative and/or quantitative risk assessments being performed by qualified risk engineers on those scenarios followed by mitigation actions/planning. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to EU-2, SS-18 and SS-19.
William Gage	2/1/2018	Email	<p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason.</p> <p>Inadequate Documentation for elimination of "No Build" Alternative" (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. No Build is actually the Correct Answer.</p> <p>First, the FRA DEIS understates the damage to the public and property but overstates/assumes the HSR need.</p> <p>Second, TCRR underestimates the project cost and overestimates the ridership. The FRA never considered the Reason Foundation's analysis (which clearly proved this project WILL FAIL); that analysis has not been mentioned in the FRA DEIS at all. That is NOT AN OBJECTIVE,</p>	Refer to BA-6, GN-2 and GN-3.

Jon Gapa	2/19/2018	Email	Texas Central , DSE wants to support you I am impressed with how this will improve air quality and want to introduce our little Environmental Engineering firm DSE. Whom should I contact to help provide some of the specific field investigation or review to help the project progress. We do a fair amount of public health work as well.	Comment noted.
Christopher Garcia	3/5/2018	Oral	All right. First of all, I just want to thank the FRA and the TCRR for having this second public hearing here in Houston. I'm really grateful, actually, to get to hear viewpoints from both sides, both in support of and against this project. I think that's very important in a public hearing and in a public setting like this to hear from both sides and that is necessary, especially in order to be politically active and in order to be socially active with one another in society. I do -- I must say, I do support this project, nevertheless, despite the negative comments. I have traveled to Germany, the Netherlands, Austria, the United Kingdom. Some would consider them socialist paradises. I have experienced the Intercity-Express Deutsche Bahn and have been -- and I've been exposed to this high-speed rail system that's operated in Germany. And I understand the -- I mean, in a way, I guess I can say, I cannot quite empathize with those who own property. I've never owned property. I've never lived in Texas countryside. So I -- I can't speak on that end, but I'm pretty 100 percent certain that if I were in your shoes, I would more than likely say the same thing. I would very much speak out against this project in that case. And, you know, hearing both sides, I feel I developed a more neutral stance on the project, but I must ask to those who -- who chant no build or who speak out against this project, what other plans or solutions or alternatives do you have, if not this high-speed rail? Widen the roads? When you get home, I would encourage you to look up the term "induce demand." I haven't been here the entire time. I stepped out for a minute. So I don't know if that was ever mentioned. But to my understanding, it wasn't. Progress is needed. The times have changed, as was mentioned earlier. We have evolved from riding horses to street cars and then to automobiles for a reason. This is the end of my notes. So now I say this from the heart. And I have two -- and I'm going to end on two notes. I -- I'm asking the Texas Central Railroad to please listen to these people and take their emotions and their needs into consideration. We, as people, have a very communal feeling for one another, even if we may have opposing viewpoints. Hurricane Harvey has certainly demonstrated that. And to those who -- and to those who may not oppose this project or are kind of neutral, I would ask you to please have an open mind and at least be open to potentially -- open to potentially allowing yourself to improve the lives of not just the people around you but potentially your future generations down the line. Thank you.	Comment noted.
David Garcia	1/30/2018	Oral	I just want to say that I think that this is not a good idea for our families. They have worked hard to live out in the country and live a peaceful life and not have to see or hear this type of noise. All the farmers that have land out here and all the people that had cattle and ranches on	Refer to ED-2 and LU-11.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			land that has been in their family for a long time. It is not right that they get their land taken away from them just to do something like this. Especially when we already have means of transportation that I really don't feel is going to make a big impact. I just can't understand how this is actually going to make things better.	
Ricardo Garcia	2/12/2018	Website	Please help with traffic congestion and support the High speed rail. It will cut down the emissions of vehicle traffic, help the environment, and help move people efficiently. Please help the future of our state and country by supporting high speed rail. Thank you, Ricardo Garcia	Comment noted.
Sylvia Garcia	3/8/2018	Website	<p>I am writing to express my strong support for the Texas Bullet Train project and believe the Federal Railroad Administration should continue to move forward with this project. We are honored to be considered for one of the first high-speed rails in the country and know that there is a large need for this technology in Texas. It is a safe, convenient, and clean alternative to flying and driving that the large constituency of this region would love to utilize. I have read through the Draft Environmental Impact Statement and am so glad this project is on track. Some highlights that I believe will be particularly beneficial to Texans, especially those living in or near the four counties specified in the route:</p> <p>It will bring more jobs to the area during construction and operation logistics of the rail.</p> <p>It promises to rely entirely on private funding, so the public is able to benefit without carrying the burden Of heavy taxes.</p> <p>It will interconnect the economies of Texas's two largest cities.</p> <p>It will increase efficient travel, thereby decreasing traffic congestion and road fatalities.</p> <p>It will decrease overall vehicle miles traveled and, thus, overall emissions</p> <p>As both a resident and State Senator from Houston and East Harris County, I am very pleased with the thought that went into choosing a terminal in Houston. Northwest Mall is at the intersection of two of our largest highways, so it will be easily accessible to passengers and is even close to our METRO Northwest Transit Center for travel throughout the greater Houston area. More importantly, adding a railway there will have minimal negative environmental and community effects. Anyone who feels concerned about a potential "government bailout" for this privately funded project should rest assured that the legislature passed two bills this session that would prevent that scenario, should any funding complications arise in the future.</p> <p>SB 977 prohibits any appropriation related to planning, construction, maintenance, or operation of a high-speed rail project operated by a private entity. To enforce this, this bill requires impacted agencies to submit any expense reports related to high-speed rail expenses.</p> <p>SB 975 requires high speed rail operated by a private entity to absorb all financial responsibility for law enforcement officers needed to make the ridership safe. The company would consult with DPS, the legislature, and the appropriate agencies to plan, organize, and implement necessary precautions for safe entry, exit, and passage of all passengers. There are still some issues left to resolve, particularly those of sensitive environmental features and the acquisition of land. It is important to me and the people of Texas that sensitive features, such as waterways, aquifers, wetlands, etc., are not damaged in the process of the railway's construction. Some proposed solutions are to use soil erosion prevention mechanisms, consistent runoff rates, and not allow contamination to reach ground water in any case. After reading the Draft Environmental Impact Statement, I feel confident that we can bring this innovative technology to Texas while respecting Texas lands and boosting the economy.</p>	Refer to HZ-5, WW-1 and WW-2.
Vicki Garcia	3/5/2018	Oral	<p>Yeah, I am Vicki Garcia from Inwood Forest, which is about 5 miles from this terminus, and a lot of good comments tonight, but, you know, one -- one thing that stuck in my mind from the parade of professionals that started this, you know, the bigwigs, yeah, that was real intimidating, you know, but anyway, one term that stuck in my head is "the last mile" and that was going to be a problem for me and for people in Houston, these neighborhoods that are really totally ignorant about what's happening. Okay. So you go from Dallas, let's just say it really works out great, just making an assumption here. You go from Dallas, you get to this terminus in the Northwest Mall and then what? You know? They're talking about connecting it to a five-story garage, Metro and all. How many people do you know in Houston and Texas, in general, that go and ride buses, you know? That's just not going -- oh, a few people do maybe but -- but my point is this: I don't see how you're going to get people from that terminus to all of these areas, the medical center, downtown, Meyerland. You're already looking at the Hempstead Highway/North Post Oak corridor there, which I do drive, and let me tell you, it's already pretty tight already with all of the apartments and -- and homes and what everybody has already said, the Awty school, Houston Baptist and its schools, the business parks, Tex-Tube, it's going to be a really tight squeeze there already and I don't know. You can't really widen North Post Oak. And what are they going to do? They just wave this magic wand. Oh, well, there's Metro over there, like, that solves everything. You know, it just seems like a really nebulous bunch of assumptions, you know, unless you have a teleporting Star Trek-type facility that can say, beam me to downtown, Scotty, or something, I mean, I don't see how that works. I mean, I'm not hearing -- I think the best thing we could do at this point is what some people have already said. We need some really high-class urban planners to come in here. I know it doesn't solve that problem of you poor people. But I can only speak to what I know, but I'm totally sorry for your situation but -- but we need some urban planners. We need to get the local communities involved so they can see what kind of impact this is really going to have and are we going to be able to solve these</p>	Refer to GN-6, GN-9, TR-4, TR-5 and TR-12.

			problems or are we just going to take traffic off of I-45 and put it in our neighborhoods? So, you know, I'm saying, hey, we're not even anywhere near a plan here. So I guess that's all I have -- oh, my gosh.	
Steve Garland	2/23/2018	Website	Tired of driving to the Big D I use rail when in EU and high speed rail Seoul to Ulsan Korea Only way to go We are so far behind the rest of the world Build it and we will use	Comment noted.
Curtis Garrison	1/8/2018	Website	We are huge enthusiasts of high speed rail! We are very active and have been very successful with helping Texas Central with our Texas Bullet Train Advocates Facebook group. We want high speed trains connecting all of our major US cities. Please feel free to let us know how we can help. If there are events or updates we can pass on and help you get the message out, however we can help, just let us know.	Comment noted.
Curtis Garrison	1/29/2018	Oral	Hi, my name's Curtis Garrison. I've been waiting a long time for a bullet train to come to the whole United States where we have zero high-speed trains that go up to speeds of 205 miles per hour. I have in my hand a magazine that I've read since I was a much younger guy from 1993. Where in this magazine they talk about bullet trains coming already existing, 25 years, in this magazine. This is from 1993. 25 years since -- that I've been trying to go around doing business all over the country going to Houston the car shows, I'm a car guy. I love being able to be on the road punctually on time, knowing when I'm gonna leave a train station and arrive at your destination like you will on this. In Japan I've been many times and I can't tell you how many times I've been in Tokyo for business, contract has to be, you know, meet me at time for lunch and I only have like that afternoon to fly out of country but I find anytime that I need to get from Tokyo to Kyoto, and I know I'll be able to see them, eat lunch for a couple of hours, come back, get to the airport, and go back home. You cannot do that with any kind of transportation we have here in the United States. The highway's full, they're congested. Sure, you know, I rode the trains but I hate the congested traffic worse and it drives me crazy going down to Houston and back, and avoiding meetings altogether because I can't justify a whole weekend. So you're losing business. I have events that people can't come here and meet me, it's a big loss, I missed a great opportunity. Once we have this train -- and I'm just a little bit wired 'cause I'm telling you I'm not gonna live 25 years till I'm old and tired and just wondering what's going on in our country not having high-speed bullet trains. I don't know if you guys just like sitting in your cars. I don't know if you like sitting in the airport, just waiting on just, in fact, the last two flights I took last year, six of them were over an hour late for good weather, no other reason just ran into problems. These bullet trains are by the minute, on time, they're comfortable. I'm six-foot, you've got leg room to lay back, you can watch videos on high-speed internet. You can be on the -- you can flip the chair around and visit with neighbors or coworkers face-to-face. I've just 30 seconds I'm gonna keep on going. You can get up and use the restroom, you've got a big restroom. No airplane has a restroom that I will use because it's small. I'm like what is going on. Domestically we've got to upgrade because other countries are doing it and we're at a time where we are stagnated and we can't get around easily and it's costing us much more than people realize it and they see it and they want more.	Comment noted.
Curtis Garrison	2/5/2018	Oral	Okay. I wish everybody was staying a little longer. Everybody's got a lot of important things to say tonight. My name is Curtis Garrison. I'm from Dallas. I have friends and family here; just had lunch with them today; been here all weekend; and they just wouldn't come to the meeting. And I'm here to represent them, but also I have car shows at the Energy, Dallas Convention Center downtown, Autorama, those things, that I participate in. So not only do I live in Dallas and plan to come often, but I do business here. So I want to show you this. I have a magazine from 1993. It's November 1993 it's Boys' Life magazine. Awesome publication. This is going to date me, but what happened is in this magazine 25 years ago they are boasting and bragging about the future of travel, especially in America, after Japan had had bullet trains for 25 years already. We struggled and struggled waiting as I'm aging, getting closer and closer to retirement, trying to be able to get around the country where it's safe, where it's fast, where it's by-the-minute punctual, that a bullet train would provide. An airplane, we can't do that. There's no form of traffic or transportation in America that allows us to do like an elevator--you just walk on, sit down, the whole trip you're able to eat, recline, high-speed WiFi, everything, the whole trip. You can't do that on a plane ride. So there is a difference between an experience on an airplane where you go up, have about 15 minutes, then you go down, of what you can do besides buckle your seat belt, which there isn't even a seat belt on a bullet train. And I want to mention about the prices. I'll tell you. I got money. We are going to figure that out as far as the money goes with the market. And I'm not with TCR. I'm just saying, we as a community will say, Hey, I want to buy a ticket ahead of time, or I want to go regularly a few times a month. You can be productive. You can sit with your family. You can flip the row in front of you and sit face-to-face and enjoy the ride and be able to enjoy it instead of being stuck in congested traffic. So I just want to say this is the problem, ma'am. I'm sorry. Our transit systems in America are broken compared to more advanced transit systems in many other countries. There's -- Did you ride here, sir, on the road here, how bad it was. If the train system was developed, we could come down from Dallas and we could go to the convention center from the bullet train and then on a local rail and not have to worry about congested traffic. You have metro. I rode on it. It's great. I love it. So I want to say one last thing about the passengers. You guys, please, help defend the property and everything that you have real concerns about, but don't, you know, cause a lot of problems defeating -- you're causing problems -- I've got to say this. I got to say this because I'm trying to help everybody. America needs to get together and lead. I'm trying to say this last deal. Ma'am, please. Okay. Listen if you want to know how there's 1 million passengers just 1 million -- ma'am, I'm trying to finish this last	Comment noted.

			<p>sentence. If you just want to find the quiz of 1 million passengers, that's 200,000 people going five times a year. That happens. That's where this number is realistic. And things like that, I hear that, and I'm like, really? I want to help you guys and support certain things. Hey, it's just not me. Okay. Well, there's 7 million people in Dallas and 6 million people in Houston, and this is all that's in this room. There's a lot of people that want to see this train.</p>	
Jeanie Garro	2/6/2018	Oral	<p>Thank you. My name is Jeanie Garro. I'm a behavioral analyst homeowner in Waller in Harris County, Texas. I came last night to the hearing as well, and heard a lot of the same things from a lot of people. And I -- one of the things I want to start with you-all, Mr. Johnsen, is to ask for more public hearings in Harris County. It's one of the largest counties, and there's that one, like someone said, in Cypress. There needs to be more input just from a human perspective. So I want to start -- because before I go into what I prepared, I told a friend of mine, Bob, I would do this. So I just want to see a raise of hands who's ever ridden on a Japanese train? Oh, a couple of you have, including Bob. Awesome. Well, we're talking about the technology of this, and we'll be using old technology. Bob told me while he was in the Navy 48 years ago, he rode on Japanese rail and it just is appalling to him that we'd be using the same type of rail system 48 years later. I mean, that's pretty crazy. So I just had to talk about that for Bob. And now, I'm going to -- I'm a former teacher, so I like hand raising. Who here is -- demands truth and transparency. Raise your hands. Alright. Lots of people. Everyone's pretty much raising their hand, awesome. Who here loves lies and deception? Raise your hand. Nobody is raising their hand. Alright. We're on the same page. Even you guys, we're on the same page. So as a behavior analyst, I titled my talk Truth, Lies, and Bullying. And I've consulted with the organizations a lot about (inaudible). So I really want to talk to you guys. Let me remind you from the FRA website, your mission: The Federal Railroad Administration mission is to enable the safe, reliable, and efficient movement of people and goods for a strong America now and in the future." And this project, just by listening to all these smart people in this room, weakens the American spirit. I don't see how it makes it strong at all. And I don't see how it helps at all in the future. Your guiding principles: "We value integrity; therefore, the highest standards of ethical conduct guide our stewardship of the public trust and resources. We value transparency and accountability, and we value safety. You are public servants accountable to us citizens. Your job is to serve the public, not foreign interests. Based on many experts heard tonight and last night, as I understand the components of this, it appears that the EIS written by you ignores so many safety aspects, and I would hope that you look at that. Omission is the same as hiding facts to keep the truth suppressed, so hiding is the same as lying for a few people that are gaining from this project. The truth must be brought to light. The needs of the many outweigh the greed of the few. Look around. And a lot of people left, but there was a lot of people here tonight and a lot of people last night. We're the people that you represent. You don't represent the foreign entities; you represent us. And a few of you that are making decisions for us, I really, really want you to -- I pray for you to make the right decision. Do not be bullied by people that have more money than you or more power than you. And sometimes when I'm working with companies, I give them scripts you may not have a script to say this. I mean, it's intuitive when you're having to make a huge decision for us, so what I did -- well, first of all, I want to say -- I want you to practice saying, "I vote for a no-build." And I seek the truth in this. And I want you to practice saying that in case it's intimidating. I even wrote a script for all of you.</p>	Refer to GN-1, NE-1, NE-2, PI-10, SS-1, SS-4 and TC-2.
Lydia Garvey	2/7/2018	Website	<p>Why should you support Texas Central HSR? 100% privately funded infrastructure unlocks more local investment Creates 10,000 construction jobs each year and 1,000 permanent jobs Texas Central will be a tax-payer, not a tax-taker, paying \$2.5 Billion in taxes in 25 years Estimates injecting \$36 Billion over next 25 years into the Texas economy Re-enforces importance of investment in a balanced transportation system Creates vital piece of a 21st century transportation system N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas The current 4-hour, 240 mile trek up I-45 is expected to increase to 6.5 hours by 2035 I-45 is the nation's 2nd deadliest interstate in the U.S.; rail keeps more cars off roads and saves lives With a 90-minute travel time, be at your destination before you could board a flight after arriving at an airport With the Texas population set to nearly double by 2050, now is the time to be proactive and put in place infrastructure that can support the ballooning population along the Houston to Dallas corridor. Building more or wider highways is not the answer; sustainable, frequent, on-time mass transportation is, and will be, embraced as the preferred mode of transportation in the future.</p>	Comment noted.
Donna Gasen	3/4/2018	Website	<p>I find this an abomination to the citizens of the counties impacted by this purported rail system. There were definitely alternatives other than to bisect the countryside destroying properties that have been held for years through generations of families. I have my life savings invested in my property. I am a horse breeder. The fact that there will be 68 of these trains passing within a mile and a half from my home is very disturbing to me. The noise alone will be upsetting to humans and animals alike. There is no proof that this project will have the funding to build a HS train system let alone that the operation will be self sustaining. When I asked for a proforma financial projection of cost to build and proposed net revenues, I was told that that information was not available due to the fact that this is a private company. I do not feel it is appropriate for the citizens of my county or any other county to help to support this boondoggle that has all the appearances of a land grab. I believe that the environmental impact will be a negative one and strongly suggest the project be tabled until all of the information is available to those most adversely affected. Donna Gasen, Madison County Texas</p>	Refer to NE-1, NE-9, NR-1 and NV-1.

Casey Gaston	1/29/2018	Handwritten	Please Do Not allow this project to go forward. this is a bad plan. It will cost, I understand its a private venture now, the tax Payers in the long run and will have to be Bailed out by our Government. Thank you	Refer to GN-4 and NE-1.
Vesta Rea Gaubert	2/16/2018	Website	This is to voice strong support for one of the safest mass transportation technology in the world. This has been given excellent thought to the route and ridership it will attract Environmentally it is clean and safe. Allow this project to move forward and stop putting up obstacles to slow it down.	Comment noted.
Landon Gaus	2/21/2018	Website	I believe the idea for a high speed train is an excellent one. I have taken several trips to Tokyo and Hong Kong, in addition to a substantial amount of time in Seoul/Korea, and have gotten first-hand experience at how beneficial to the population a long distance train can be, in many ways such as efficiency, timeliness, and environmental factors. I believe this project would also serve an important role of de-stressing drivers commuting, lessening the load on the highways (especially during holiday travels), and putting less wear and tear on motorists vehicles. To me, traveling by airplane for this journey is burdensome because of airport security, parking, and the highly volatile ticket prices. I do not wish to see any of the neighborhoods and communities adversely affected by noise, but I am sure the route plan can be engineered such that this does not happen. There is, in my opinion, not much other reason one should really be opposed to this project. Some argue about cost, but it will eventually pay for itself with rider fares, and the investment of transportation infrastructure is one of the most important types of investment we can make as a society. I urge the Federal Railroad Association to approve this project.	Comment noted.
Tor Gavem	1/25/2018	Email	I'm currently on vacation and will return Jan 30th	Comment noted.
Tor Gavem	1/25/2018	Email	Rail road projects are always case studies in college because during front end engineering, cost estimate is half of final and actual cost and ridership numbers are inflated vs actual.	Refer to GN-2 and GN-4.
Julie Gavin	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Charles Gay	3/9/2018	Website	I'm for this project so long as options to travel around in these cities are also improved upon. Being in Houston or Dallas without a car to get around in can be very difficult.	Comment noted.
William Gay	1/25/2018	Website	I am highly supportive of the Texas Bullet Train. I believe this is the type of infrastructure project that will provide strategic advantage to the state of Texas, the connected cities, and to the economy in general in all areas where the train passes through, since local businesses will benefit during construction. While I understand some landowners will be impacted in ways they may not like, I believe the plans for the high speed rail attempt to mitigate the impact and that the railroad benefits far outweigh any drawbacks.	Comment noted.
William Gay	2/16/2018	Website	As someone who lives very near the terminus of the High Speed Rail in Houston, I am very excited to see this project come to fruition. I think the benefits far outweigh any cons and frankly the only cons I can think of are for the landowners over which whose lands the train will travel. But even there, the design seems to take that into consideration and I also believe these landowners will be recompensed for the train right of way. Also, in comparison to the vast number of people who will either use the train or will work on the construction and maintenance, I think the landowners will be a much smaller group (although possibly quite vocal. For that reason, I want to raise my voice, because I fear that many people who are in favor of this project, but not directly impacted, may not raise their voices and so all that the FRA will hear are the negative comments of landowners. As someone who lives close, and may be impacted by additional traffic in my area since the station will be close, I still think the advantage far outweighs the negative. Please keep in mind the silent majority who may not speak up.	Comment noted.
Nathaniel Geiger	2/9/2018	Website	It is crucial that we reduce our carbon emissions over the next generation. This high-speed train would cut out many car and airplane trips and save vast amounts of carbon dioxide and other heat-trapping gases from entering the atmosphere. The N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas, and a similar reduction relative to car emissions is also present.	Comment noted.
Jennifer Gellar	2/22/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement I believe this train will be great! It will create more jobs, cut down on moving (we could live in Houston while working in Dallas without moving), this would benefit both Dallas and Houston! We really need a train like this; Japan already has one and has had one for years! We really need to build this train and get Texas moving again!	Comment noted.
Jennifer Gellar	2/22/2018	Website	I believe this train will be great! 			<p>2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas.</p> <p>3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</p> <p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
Michael George	2/16/2018	Website	This is much needed. Being able to travel fast between Dallas and Houston would be huge. The highways are congested and adding lanes is not the answer. Much more efficient way to travel vs flying. Please make this happen.	Comment noted.
Michael George	3/7/2018	Website	Dear Sir or Madam - While I see the value of having a high speed rail connecting Dallas and Houston, I am opposed to the effective destruction of important property in the proposed right of way for the system such as the Morgan Creek Ranch located near FM 709 and 3194. In addition to the significant negative environmental impact of the plan (likely watershed issues), the current routing through Morgan Creek Ranch would significantly and permanently damage or destroy their ability to utilize the property to benefit others. Not only has the Ranch been of tremendous assistance in raising badly-needed funds for various important charities over the years, Morgan Creek Ranch has also provided a critical respite for a host of individuals who serve others on a daily basis - medical care providers, military and first responders. These valuable community partners depend on places like Morgan Creek Ranch to unwind and recharge. They deserve the best we can offer, and Morgan Creek Ranch performs a tremendous public service in this regard. I strongly urge you to consider moving the proposed path north of the powerlines and running parallel to them. It would seem this path creates a "win-win" situation where ALL public need is taken into consideration. Such a plan is in the best interest of your project and protects nearby properties like Morgan Creek Ranch that exist largely for the benefit of others. Thank you for the opportunity to voice my concern, and I truly hope that you will reconsider the proposed routing of the high-speed rail so that the project benefits the most number of people possible and avoids the needless destruction of an important Texas treasure like Morgan Creek Ranch. Respectfully submitted, R. Michael George	Refer to LU-5.
Richard Gibbins	2/27/2018	Website	I am excited about the prospects of high speed rail travel between Houston and Dallas. I am a Houston resident and do not often go to Dallas, but I can see that changing. I think that this may also increase business between the two cities. Not only with daily working necessities for businesses to meet with each other, but leisure activities can increase as a result of this additional option for the communities of each city. I can also see how this may increase transportation alternatives within each of the two cities. When there is an inner city transportation demand created by rail travelers, others in the city can benefit from the innovation and infrastructure created to solve the demand.	Comment noted.
Dolores Gibson	3/9/2018	Website	Ranchers say NO!!	Comment noted.
Marial Gidney	3/5/2018	Website	I believe we should go with the original plan with the Japanese rail system. They are much safer than anything we can come up with and have been doing it for many years longer. We have had many derailments on our lines and a lot of it is due to neglect. I trust in the original plan.	Comment noted.
Ryan Gilbert-Wilson	2/7/2018	Website	I advocate for the FRA to recommend that the project proceed and under no circumstances recommend that the line not be built. I would ask the FRA to weigh in its environmental impact statement the savings in the prevented road accidents which would take place from having a transportation option between Dallas and Houston like this. In 2016 Texas had 1.44 deaths per hundred million vehicle miles traveled with 67 serious injuries per hundred million vehicle miles traveled. With each train journey saving 250 miles of driving and an approximate ridership of 10000 a day, this would save 13 people's lives and 611 serious injuries per year. The railway technology used has never had a passenger fatality due to collision or derailment in over 50 years, and carrying over 10 billion passengers. Why should 13 extra Texans die each year so that some property owners can maintain their rural ambiance, please save lives and injuries and ensure the Dallas to Houston high speed rail gets built. Thank you for your consideration.	Comment noted.
Jim Giles	3/9/2018	Website	Most of Europe is now connected via high speed trains, a lot of the Far East is connected with high Speed trains and more are planned. Older, slower trains might be good for most of our freight needs, to haul people at high speeds, long distances won't cut it. We need to have a fast high speed rail. We can't put airports everywhere, but using existing rail routes would be a good start.	Comment noted.
Tiffany Gilfillan	1/29/2018	Oral	My name is Tiffany Gilfillan. I am a 42-year resident of Navarro County. My husband and I have owned 38 acres along FM 3194 since July of 2013. We have lived on that property for the past year. We enjoy the abundant and wide variety of wildlife that populates the area. Over the past years on multiple occasions I've had the pleasure of viewing the bald eagles that live, nest, and hunt in the FM 3194 area, an area which the preferred high speed rail route runs along. After my first sighting of one of these bald eagles, I did an internet search and quickly	Refer to NR-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			discovered that a nesting pair of bald eagles had indeed been confirmed as living in our part of the county. The Texas A&M AgriLife Extension website confirms this, so it's difficult to understand why the DEIS states there were no known protected species in the area. And it calls into question every piece of information gathered for the DEIS. If you got this wrong, why should we think you got anything right? Our neighbors Mr. Robert Geggenheimer and Mr. Billy Steele have also seen the eagles, and they have viewed large bald eagle nests on their own properties. Mr. Billy Steele has seen eaglets in the nest on his property. All of my own sightings have been within the same stretch of FM 3194, the same area that the high speed rail runs. Bald eagles are protected under the law. The Bald and Golden Eagle Protection Act is the United States federal statute that protects these eagles. The purpose of this act is three-fold. It protects these two species of eagles against one, abuse; two, interference with their substantial lifestyle, including shelter, breeding, and feeding; and three, nest abandonment. Every one living in close proximity to the high speed rail currently enjoys a lifestyle that will no doubt be interfered with substantially. Although the lifestyle of individual property owners may not be valued by some, it's encouraging to know that federal law protects the lifestyle of these bald eagles. Construction and alteration of this railway will no doubt interfere with these eagles' lifestyle, their shelter, their breeding, and their feeding. Thank you for the opportunity to voice my concerns.	
Tiffany Gilfillan	3/9/2018	Website	As a homeowner who will be directly impacted by this ill-conceived project, I have many concerns. We have bald eagles, a protected species that live, hunt, and breed along the FM 3194 road- right where the HSR route is planned to travel. Our most recent sighting was Sunday morning, March 4, 2018. The eagles' lifestyle will be "substantially interfered with" if this project proceeds. The "substantial interference" of the lifestyle of the bald eagle is a direct violation of the Gold and Bald Eagle Protection Act.	Refer to NR-3 and NR-5.
Tiffany Gilfillan	3/9/2018	Website	As a homeowner whose life will be directly impacted by this ill- conceived project, I have many concerns. My family resides at. There are high wire power lines on either side of our property. I am concerned about the impact to my family's health from living within the range of these power lines combined with the exposure to the electro magnetic field produced from the HSR. What are the results from any testing done on LONGTERM effects of living within exposure to the COMBINATION of electromagnetic fields from power lines AND the exposure to the electromagnetic field from the HSR? My family plans on living in our home until we die, and I do not want the time frame of our natural death to be accelerated or our health/quality of life to be compromised because of this project. Should we come down with some type of disease that may have resulted from the increase and accumulation of the electromagnetic field from the HSR, I will hold TCR financially responsible for all healthcare costs associated with treatment and for the financial welfare of my family.	The Project complies with the International Commission on Non-ionizing Radiation Protection (ICNIRP) guidelines for human electromagnetic field (EMF) exposure, which are lower than the US regulatory requirements. As stated in Section 3.15.4.1.1, Electromagnetic Fields, Methodology, EMF Guidance Documents Review, National/International , "The ICNIRP recommendations are based on the epidemiological data available from verifiable research studies. ... While the guidelines are voluntary, the levels are designed to prevent potential health risks associated with EMF exposure." Section 3.15.4.1, Electromagnetic Fields, Methodology, EMF Guidance Documents Review , also points out that the ICNIRP EMF exposure levels have built-in safety factors and are designed to protect the general population from ill effects of long-term exposure: "The safety levels are set at 10 to 50 times below the levels at which scientific research shows harmful health effects may occur, thus incorporating a large safety factor." Please also note that, while your property may have both the Project and power lines, the EMF strength of each decreases markedly with distance. Please see Section 3.15.4, Electromagnetic Fields, Methodology : "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels." Based on the address that you provided, the alignment is over 1,000 feet from your house. Therefore, EMF levels within your residence should not be impacted by the HSR. While a vehicle maintenance facility (VMF) is identified as close to your property, the VMF is not expected to generate significant levels of EMF. Please also note that both the Project and the power lines comply with the US regulations for public EMF exposure. Thus, the power lines and the Project are not expected to interfere with each other nor have adverse health effects for human beings living along the length of the Project.

Tiffany Gilfillan	3/9/2018	Website	As a homeowner that will be directly impacted by this ill-conceived project, I have many concerns. My husband and I purchased our property at [...] TX 76681 almost 5 years ago after a 10 year search for land. This property is uniquely beautiful. It is in one of the most beautiful areas in Navarro County- the Pigsaw Ridge area. It has abundant wildlife, and we purchased this particular piece of property because of the serenity and isolation that it offered us. After the building of our home (much of the work with our own hands), we thought we were finally going to be able to enjoy the lifestyle we had always longed for- country life with the peace and quiet and retreat like setting that our home offers! However, this HSR project threatens all that we have dreamed of and invested into! At 50 and 48, my husband and I have put everything we have worked for into this piece of property. Under usual circumstances, this property would be a sound investment and would eventually produce a wonderful profit for our children upon our deaths. With only the threat of this HSR, the idea of any profit simply evaporates. Our investment becomes worthless. We could not sell this property right now- even if we wanted to. The HSR does not need our property for its construction or operation. However, our property is impacted greatly. We are within a very short distance to the HSR route and a 13 acre maintenance facility that is currently planned. No one moves to the country to be close to a 13 acre maintenance facility and train that passes by on average every 15 minutes. How will the HSR compensate us for our loss, because we will incur very GREAT losses- not only the financial loss on our investment of money and any future profit on the sale of our home and property, the loss on our investment of personal time put into this property, but also the loss to our quality of life. We will be forced to give up so much! We will lose financially. We will lose the serenity of living in the country even though our nearest neighbor right now is at least 1 mile away. We will lose the quiet environment county living offers. How will we be compensated for our many losses?	Refer to ED-2 and VA-1. The referenced property is located approximately 1,000 feet east of the proposed centerline of the Preferred Alignment. The maintenance facility is no longer proposed at this location.
Kevin Gilhooly	2/16/2018	Website	Dallas and Houston need an alternative to I-45 and a painful drive! I believe the proposed right of way is a good solution to an ongoing transportation issue in the State.	Comment noted.
Matthew Gilmore	2/24/2018	Website	I support this project. Texans need multiple modern transportation options between our two biggest cities.	Comment noted.
David Gilyot	3/9/2018	Website	I don't want to live close to tracks with train going 200 miles per hour. The noise alone will be too much & don't want to go through many years of construction after suffering through hwy 290 construction. It should be along highways in triangle Dallas, Houston & San Antonio makes more sense	Refer to BA-2, NV-1 and TR-6.
Judith E Glasgow	1/26/2018	Letter	Navarro County is a rural and agricultural county. The land I purchased is in Navarro County. Routing the Dallas to Houston High-Speed Rail Project through Navarro County would be detrimental to my ranching operation. It would cut my property into 2 pieces and access to those 2 pieces would be difficult and costly for me. In addition the proposed route would go through existing structures such as my HOME and my out buildings that are necessary for the ranch operation. Therefore I OPPOSE this project. Please consider this opinion in your data regarding this project.	Refer to LU-6 and LU-7.
Kathleen Glass	12/20/2017	Email	The idea of a high-speed train for Texas is just silly and unnecessary. Passengers will have the same problems they have using airlines, such as parking on one end, getting a rental car on the other, the traffic problems. The cost will be much more than using airlines and the travel time is actually longer. Air time is only about half an hour as opposed to 90 minutes on the train. Then there is the "robbing" of people of their land and causing problems with the rural lifestyle in this state. The movers and shakers for this idiocy need to look past the potential profits from this project. There won't be any and the taxpayers of Texas will be punished for this selfishness..	Refer to ED-2, GN-4, PN-3, SC-3 and SC-19.
Kathleen Glass	2/18/2018	Email	I vote "NO BUILD" for the High Speed Train for a number of reasons 1. My husband and I would be forced off the land we bought 35 years ago and planned on living on until we die and then passing on to our children. 2. Ridership will not be as expected. It wasn't when Amtrak went down the 290 corridor several years ago. Many times, the train was empty. 3. Too much disruption to the everyday ranching and farming industry of this state. 4. Problems with first responders getting where they need to plus more expense in having to buy additional equipment. 5. More time on school buses for children in Waller ISD. Many are on the buses close to 2 hours every morning and afternoon as it is. Again, additional expense for more buses.	Refer to BA-6, ED-2, GN-2, GN-4, LU-2, LU-11, SC-5, SS-18, SS-23 and SS-26.
Marilyn Glasscock	2/17/2018	Website	I am very interested in High Speed Rail project.	Comment noted.
Thomas Gleason	1/11/2018	Website	The DEIS states that 50% of the rail will be on viaduct. How much of that 50% will be in the urban areas of Dallas and Harris county? With that in mind, how much will be elevated through farmland so that farm equipment and animals can move beneath the viaducts? Will they be high enough for the farm equipment to safely pass underneath?	Refer to LU-11, NR-6 and TR-8.
Thomas Gleason	1/11/2018	Website	What time period does the DEIS project fuel consumption savings estimates into? For instance, are they projecting out 10 years, 20 years, or 30 years? In doing so, are they doing so by comparing the future of cars and aviation as well? According to Levinson, 2012 in an article in the Journal of Transport Geography, "cars are getting better from both an environmental perspective and from the perspective of automation	Refer to AQ-5 and AQ-14. Fuel savings were done assuming the passenger vehicle average of the most current CAF\0201 standard at the time (31.3 miles per

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			technologies. The DARPA Urban Challenge vehicles, subsequent development by those engineers working at Google, need to be bested to justify HSR. Aviation is improving as well, both in terms of environmental impacts and its efficiency. Socially-constructed problems like aviation security or congestion can be solved for far less money than is required for any one hsr line given sufficient will." Have those types of things been taken into consideration when evaluating energy savings estimates in the DEIS?	gallon [MPG]), which sets the goal that manufacturers must meet in new, future cars manufactured. The then-most current model year of 2014 was assumed because it was the readily realizable fuel economy in place. Fuel savings estimates are specific to vehicle travel and do not factor in fuel consumption from aviation.
Thomas Gleason	2/6/2018	Email	This train was not voted on by taxpayers and will end up costing us billions of dollars that could be better spent improving our roads and highways. Not to mention the illegal land grab that is involved. The number of people that would actually ride the train on a regular basis is minimal. Also the excessive sound and danger to farm animals and residents is unacceptable. Sci Fi should stay that way. There is a reason that we do not all have flying cars. It would not make any sense to implement this destructive plan.	Refer to ED-1, GN-2, GN-4 and NR-1.
Tom Gleason	2/6/2018	Oral	Hello. My name's Tom Gleason. Our family has property that would be directly affected by this And a lot of people have addressed a lot of issues, and I hate to be redundant, but I'll probably the same as well. First and foremost is eminent domain. These folks don't have eminent domain authority. If you take their position and theory on it: all you have to do is file a Certificate of Incorporation: call yourself a railroad: and say: 'Tm going to run a passenger rail. " So for any of you aspiring railroad engineers, here's your chance. You can be a railroad and go out and condemn property in Texas if you follow their theory. In addition to what Mr. Webb said: this process has been flawed from the very beginning. A lot of the people to the west of Hegar Road had no idea it was coming anywhere close to them: so they had no ability to participate initially in what was going on and what was being discussed. And again: there's this concept of due process in this country that absolutely was voided by the way they went about this thing. I'd like to thank: again, Representative Bell for the legislation that he proposed to require them to post bond to put the property back in its original state to the extent that they couldn't complete it And I think part of that has to do with where they're probably going to start this train. The reason for a midpoint is that's where they can start it. And when they get close to the cities: that's where they're going to fail. And at that point: the option will be, "What do we do? Do we finish it the last 20 miles or do we just let it sit there and rot?" We all know what ifs going to be. State and federal government is going to come in and bail this thing out in a hurry. The other thing that needs to be looked at in that context, I think Representative Bell was onto this as well: Look at how many subsidiary companies this thing has. Who's going to own the real estate? s going to the own the rail? Who's going to own the fiber-optics they're planning to put in under this rail as well? None of these questions have been answered. And watch out: because that's where they're ultimately going to go with this stuff. They're going to get into your pockets in multiple People in the City of Houston and Dallas, watch out They're going to be looking for tax increment financing on this thing. They probably won't have a lot of money in the building of this thing. Ifs interesting that the location of the — that the facility in Dallas happens to be owned by one of the principals in TCR_ Isn't that amazing? And he's owned that property for about 11 or 12 years. Now he's contributed it to the partnership. We're not quite sure which one and how that partnership owns it and how that falls into line with the rest of the companies: but rll guarantee you if this rail fails: he's not going to lose that real estate: is he? And then if the operation of the rail fails: are they going to cut those contracts for those terminals? Not going to happen. This thing is going to be set up m a manner that those entities and those positions are going to be bankrupt-remote. The guys Mith the deep pockets are going to get more and more money placed in them and you and I are going to ball out the stuff that's going to fail on that. I'm for the no-build: and I would ask that there be extension in terms of the response These guys laid this gift on us on December 22nd? Wasn't that nice to go home for Christmas week and having this laying in front of us and find out we had until February 20th to respond to this? And it's not the first time from the timing perspective that they've done that If you go back and look at the initial scoping meetings: they started in October. The whole month: there was a gap: the whole month of November, a gap: until Judge Duhon went to a meeting and said — in Huntsville: I believe, if I'm not mistaken and said, "Hey, you guys coming to Waller County? What's going on?" Well, they finally scheduled something in December, and then we had about three weeks to respond - again: over the Christmas holidays. So if you look at the character of these folks and what they're doing, watch out, because they're coming after us. Thank you.	Refer to ED-1, ED-2, GN-4, GN-7, NE-1, PI-1 and PI-3.
Courtney Glover	3/9/2018	Website	PLEASE DO NOT BUILD THIS TRAIN along 290. This will severely impact my community, White Oak Falls, ele2minating homes, causing noise disturbances and depreciating home values. There is major concern for the safety for the children in the community and Cy-Falls High School. We have already been dealing with the multi-year 290 expansion project causing major traffic issues every weekend. It would be unbearable to add another multi-year rail project. This will certain cause mass departure for this community and lower the overall standard of living.	Refer to LU-3, NV-1, SC-8 and VA-1.
Diane Glueck	1/30/2018	Email	This is a horrible deal for all Texans and Texas land owners The land confiscations is shady, the ridership is way overstated, the ticket price is ridiculous and the price tag is way understated. Leaving Texas taxpayers on the hook for this project.	Refer to GN-2, GN-4, NE-1 and SC-3.
Carol Glynn	3/8/2018	Email	We have a peaceful acreage that borders a small private lake. Now, we have learned the chosen route for this "bullet train" will run directly east of our home in less than a mile's distance. Instead of spectacular sunrises, we will see and hear trains running across the ridge every 30 minutes from 5:30 am until 11:30 pm. Our property values will plummet, our peace and quiet will be destroyed, and this project will not benefit anyone residing in Navarro County.	Refer to AS-1, NV-1 and VA-1.

Carol Glynn	3/8/2018	Website	As a Native Texan, I have lived and worked in the Dallas area my entire life. My husband and I bought our BloomingGrove property in 2016 as our retirement home. We have a peaceful acreage that borders a small private lake. Now, we have learned the chosen route for the "bullet train" will run directly east of our home in less than a mile's distance. Instead of spectacular sunrises, we will see and hear trains running across the ridge every 30 minutes from 5:30 am until 11:30 pm. Our property values will plummet, our peace and quiet will be destroyed and this project will not benefit anyone residing in Navarro county! Please stop this project now! Thank you, Carol Glynn	Refer to NV-1 and VA-1.
Arlette Goddard	2/26/2018	Website	The Morgan ranch is an invaluable asset to the community. It has given my family vacation time together that they would not normally receive, due to the gracious gift of Dr. Morgan and his family. This needs to be kept for future generations and families to enjoy I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5.

Joseph Goins	2/16/2018	Website	<p>Mr. Kevin Wright Environmental Protection Specialist Federal Rail Administration RE: DEIS Comment Dallas to Houston High-Speed Rail Project Wetland Impact Reduction Navarro County Segment Re-examination Benefits of Feasible Alternative Segment 3Z, blended from vetted routes 3B and 3C Dear Mr. Wright: In addition to prior oral comments of 29 January 2018 at the Dallas County DEIS open comment meeting at Wilmer Hutchins High School, LCA Environmental, Inc. (LCA) respectfully presents this written comment presenting a project review in support of value-added wetlands impact reduction and environmental benefits through a feasible re-routing of the proposed high speed rail segment in Navarro County along alternative alignments already vetted and considered for the project (as presented on attached supporting exhibits). COMMENTER BACKGROUND Mark K. Boyd, PhD, PE, is a Texas Licensed Professional Engineer and Principal Engineer of LCA Environmental, Inc., a renowned Texas registered environmental engineering and geoscience firm in continuous service to the community for over 25 years. LCA's one page statement of capabilities is attached for reference. Dr. Boyd is an environmental engineer with over 25 years of environmental engineering experience, including academic expertise, training and project background in hydrology, water resources, and evaluation of projects for waters of the US impacts in accordance with industry practices and applicable U.S. Army Corps of Engineers jurisdictional determination procedures. Dr. Boyd has also served for over 15 years as an Adjunct Professor of Environmental and Civil Engineering at Southern Methodist University Lyle School of Engineering providing environmental engineering instruction to Master and Doctoral candidates. Dr. Boyd's abbreviated one page résumé is attached to this comment letter. ALIGNMENT ROUTE SECTION 3Z (FEASIBLY BLENDED FROM VETTED ALIGNMENTS 3B AND 3C) The DEIS refers to alternative route segments 3A, 3B, and 3C located in Navarro County. Dr. Boyd collaborated with others in the development of a rail-feasible alternative route in Navarro County, which is named Route 3Z and shown on the attached location map and schematic exhibits. Route 3Z would diverge from Route 3A from a northern limit at the State Highway 31 crossing and converge to 3A at the southern limit of the section near County Road SW 2190. Route 3Z runs nearly parallel to the previously studied route 3C from its northern divergence from 3A and blends with vetted route 3B to the south to converge back to 3A. See attached exhibits showing general location and route schematics. This differential wetland impact evaluation was developed from review and analysis of the DEIS documents and other publically available information about the project area. DIFFERENTIAL WETLAND IMPACT COMPARISON The following table presents the differential wetland impact comparison between Navarro County Segments along Route 3A and parallel Blended Route 3Z. The following environmental impact benefits would be achieved from selection of Navarro County blended segment alternative 3Z compared to the parallel segment along route 3A:</p> <ul style="list-style-type: none"> • 476 linear feet, 100% reduction, of the perennial streams affected by 3A would be saved by routing along 3Z • More than 6 acres, 93% reduction, in Freshwater Emergent Wetlands would be saved by routing along 3Z • In excess of 8 acres, 94% reduction, of Freshwater Ponds along the 3A alignment would also be saved. 	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			A marginal increase in intermittent wetland impact of 180 linear feet may be experienced by selection of 3Z, which is negligible when compared to the reported total project alignment 3A impact of 8,743 linear feet for the same wetland category. This apparent increase in wetland impact may be mitigated during future project design refinements. An increase in Forested Shrub Wetland is a possibility, as tabulated. However, DEIS reporting of this wetland type is based on current national wetland inventory maps, not on actual field determinations of wetlands. The commenter strongly urges project planners make an effort to field verify the mapped areas for confirmation, to thereby produce more effective project planning and improved reliability of environmental impact estimates. Finally, the commenter also reviewed catchment and drainage features along route 3A in this area. Several large and small ponds near route 3A may be affected by a change in drainage and runoff patterns and reduced catchment areas. The unintended tangential adverse environmental impacts from a reduction in available runoff water quantity and potential deterioration of water quality to these pond waters should be studied and considered by project planners before a final decision is made about rail routing along 3A in this segment of Navarro County. As noted by commenter Mr. Johnathan Zimmerer, PE, ponds in the vicinity of route 3A would experience reduced runoff catchment areas ranging from 16% to upwards of 62%. Even though not considered in the DEIS as wetland impact, the substantial drainage changes which would be caused by rail installation at or below existing grade could virtually dry up some ponds entirely, and would certainly affect the viability and environmental quality of others. The adverse impact to localized flood control caused by reduced pond catchment areas should also be considered. Similar unintended impacts to pond environments would not be associated with segment 3Z selection. CONCLUSION The following are the broad conclusions of this commenter's analysis: • 3Z saves about 500 linear feet of the most valuable streams/rivers (perennial year-round flow and healthy aquatic ecosystems) • 3Z saves over 6 acres of high value natural Freshwater Emergent Wetland preserving flood control benefits, emerging wetlands areas, species habitats, and beneficial ecosystems	
M M Golden	2/6/2018	Website	No to train.	Comment noted.

Monica Gomez	2/27/2018	Website	To have to be fighting for this bullet train's existence in this day and age with our exploding population, and where traveling from city to city can be all in a day's work is really mind boggling. You'd think a state as big as ours would have done this already, and that this country, that's supposedly one of the riches and technologically advanced, would not be behind the Europeans on effective transportation. It's time that we get on board and stop holding up progress once and for all. Allow Texas to lead us into the future.	Comment noted.
Stephan Gomez	3/9/2018	Website	Adding this railway system in what is already a highly congested area for traffic (290 Highway) is not only going to be terrible for the people already living in the area but for the people arriving from Dallas. This station should be in a more remote area on the outskirts of the beltway 8 loop, similar to how IAH airport is. Yes it would be a drive to downtown but at least it would not affect what is already a terrible traffic situation here in North West Houston.	Refer to GN-7 and TR-4.
Michael Gonzales	2/24/2018	Website	Texas needs this rail system as removing more than 14k cars from the road will make a vast difference in carbon emissions. It will also add jobs, so it's a win-win all around.	Comment noted.
Darryl Gonzalez	2/5/2018	Website	I write today to voice my opposition to the planned High Speed Rail proposed by Texas Central Railway. This is a project likely doomed to financial failure that will likely within 10 years result in a huge ugly 240 mile track scarring the beautiful countryside between Dallas and Houston. Studies by the Reason Foundation and others show that the proposed Bullet Train will lose an estimated \$500 million per year. As noted in the draft analysis, Texas Central forecasts it will get about 7.2 million riders per year, and they have informed me that they think they can make a profit from fare revenues alone. This is unrealistic in the extreme: as an example, the Taiwan High Speed Rail gets approximately 7 times that amount of passengers, and they were recently declared a financial flop by the Nikkei Review. See https://asia.nikkei.com/Politics-Economy/Policy-Politics/Shinkansen-operation-a-flop-in-Taiwan . This may result in a temporary jobs boost for Texas, but the effect will likely only be temporary as the project will likely go bankrupt in only a few years without significant foreign investment or governmental takeover. Also has the potential impact on towns between the two metro areas been considered? If this has any impact at all on automotive traffic between the two cities, as Texas Central Railway has almost boasted that it will, the roadside shops, restaurants, gas stations and hotels that are along IH-45 will lose business and therefore be forced to lay off employees or close their doors. Also of note is their claim that this will affect automotive traffic. How? In the one Shinkansen line in the world that is financially feasible (Tokyo to Osaka), they get 150 million passengers per year. Despite those staggering numbers, according to the Reason Foundation and the American Dream Coalition, automotive traffic in Japan has risen an amazing 900 percent over the 50 years of operation of the Shinkansen line. See http://americandreamcoalition.org/2013PAD/Baruch_Feigenbaum/high_speed_rail_lessons.pdf . Also note that the population of Japan has roughly doubled in that time, so the increase cannot totally be attributed to population growth. See https://www.washingtonpost.com/news/worldviews/wp/2016/02/26/its-official-japans-population-is-dramatically-shrinking/?utm_term=.d90012469415 . This is a bad idea for Texas. Please do not approve this project.	Refer to GN-3, NE-1 and SC-15.

Manny Gonzalez	3/3/2018	Email	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.
Manny Gonzalez	3/5/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. Manny Gonzalez	3/5/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5.

Manny Gonzalez	3/5/2018	Website	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of	Refer to LU-5.

			groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.

Manny Gonzalez	3/8/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about historic impact.	Refer to LU-5.

Patrick Gonzalez	3/9/2018	Website	I am approximately 1 mile away from the existing railroad tracks running along Hempstead. My house is not too far from the proposed northwest transit station. Will sound barrier walls be put around the neighborhoods in the immediate vicinity? Although the train technology is set to be quieter than a traditional train, high speed rail will be an everyday, 18 hrs. a day operation. That's a lot of traffic both in and around the transit station, as well as the noise from the train constantly passing by the neighborhoods. Also, will the said noise be consistent with city ordinances around noise.	Refer to NV-1. Because railroad noise is federally regulated, HSR projects such as this one are exempt from local noise ordinances for operations.
Eric Goode	3/5/2018	Oral	Good evening. I'm Eric Goode, speaking on behalf of Judson Robinson, President and CEO of the Houston Area Urban League. First, I would like to thank the Federal Railroad Administration for convening an event of this magnitude, allowing for the thoughtful comment on both sides. Whether you agree or disagree, I think this is very productive. As has been stated, the Texas Bullet Train will be an economic driver for the City of Houston region, the state, and our county. We believe that it plants the seed of industry in Texas and the United States that will continue to benefit Texans and Texas businesses for generations to come. According to the current projections, of course, the bullet train was for economic investment. We refer to statistics generating about \$36 billion in direct economic activity, creating 10,000 jobs, and ultimately over 1,000 jobs that will maintain here in the state of Texas. The recent release of the Draft Environmental Impact Statement backs these projections with detailed data and analytics. For the Houston Area Urban League, we had the privilege of serving as one of the organizations that worked with Metro and Houston Rapid Transit for the light rail expansion projects. The opportunity, for us, allowed us to facilitate outreach and intake along those rail corridors, training people with a nationally recognized certification and direct job placement that built the light rail. So we have seen from a practical aspect what this can look like, and hopefully will have an opportunity to participate in the future. For the Houston station, we are supportive of the proposal, Northwest Mall location, which will be a catalyst for growth in a high-growth area near the intersections of two major highways. Certainly we can see all the construction now existing on 290. We feel that this rail station will be an enhancement to the community. Finally, we support the bullet train because of its incredible safety record and environmental friendly design. In the 53 years of service in Japan, the system has moved billions of people to and fro. We are highly optimistic of what this project will bear. We're also highly optimistic that we can come up with a win-win situation that will address everyone's concerns. On behalf of the Houston Area Urban League and Judson Robinson, thank you.	Comment noted.
Gary Goodfriend	2/27/2018	Website	This is a progressive move for the State of Texas. I see no downside to completing the project and seriously considering and initiating impact studies at a later time to expand the existing route or establish new routes radiating from both the Dallas hub and Houston hub. Countless folks from both cities do NOT want to continue to pay egregious fares even on SW to fly the 30 minutes between the two cities. These fares have risen over the years and now force many people to drive the 4 hours between the cities. This is bothersome, exhausting and EXPENSIVE. The option is a very viable one.	Comment noted.
Lea Goodman	2/22/2018	Website	This train will be a huge improvement in Texas transportation. I rode on the bullet train from Kyoto, Japan, to Tokyo and it was an amazing experience. The idea of being able to travel to Dallas for a meeting and be back home that night is extremely exciting and progressive.	Comment noted.
Kathy Goodwin	1/12/2018	Email	I am sending this as a concerned citizen in the route of the HSR. I have grave concern concerning the economic impact on my community. The concern that I have has to do with the cost of adding and moving utilities in Ellis county. I have seen nowhere in the EIS study where this issue addressed. Question 1 where do the funds come from? Question 2 Who pays for new county school buses when new routes are needed because of road re-routing? My husband and I are retired on limited income. We are staunchly opposed to the HSR our voting will reflect that going forward. We are going to all meetings opposing the HSR.	Refer to SC-19, SC-6 and EU-2.

			are hypocritical and forget that roads are required for them to go to work, school or family or for the clothes they wear, food they eat, gas for their vehicles. those roads went through or near someones house or farm. the rail will do the same, it goes near or through someone but it will provide benefits to all. let's keep this moving forward. thank you!	
Joan Gorney	3/8/2018	Website	This is not only a good idea but a necessary idea. I have lived at my location 45 years. I love riding trains. I am watching our land be covered by concrete just adding more to the global warming. I worked 35 years outside for Southwestern Bell/AT&T. I did not have an air conditioned van and I can tell you where the wide concrete highways are the temperature was much warmer than where the smaller roads still remained. The small foot print on this railroad, and others I hope will follow, will help in many ways. It will help with the global warming from concrete, take cars off the road from business people, travelers making the connection to Amtrak in Dallas, and people like me who ride Amtrak or just to ride. I have ridden this train in Japan. I found it smooth, quiet, and a very pleasant experience. For the ones opposing this train, I would gladly give them another toll road. I live on the last street of a neighborhood. There are houses across the street from me then probably 1,000 acres of woods. It has been great then toll 249 was planned. I can see the trees falling and hear the machinery all day crunching them up and leveling ground. When this is done, I will not get peace. I will get car horns, racing vehicles, 18 wheelers with their jake brakes, squealing tires, and emergency sirens. The same noises that caused the relocation of a very old scout camp on I-45 just south of Conroe, Camp Strake. I would gladly give this to the those folks and take the train. When your construction is over, there will be peace and quiet except for the occasional quiet which of a train as it passes for a few seconds. I hope this is the first of many new train routes. It's a shame big freight train companies are so influential and Amtrak isn't important enough to help. I rode it to see relatives in Chicago as a child and am now teaching my grandchildren to be train lovers.	Comment noted.
Teresa Gossett	3/7/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Josh W. Goswell	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Jennifer Gourlay	3/9/2018	Email	I am opposed to this and there is ABSOLUTELY no need for a bullet train from Houston to Dallas. Not too sure what the motive is behind its construction, but it is a waste of time and money. Thank you,	Refer to PN-3.
Carrie Gourley	2/6/2018	Handwritten	The money spent on this would be a sad waste. Just think of the great commuter rails that could be added to our metro areas. Shame on your souls.	Comment noted.
Brandy Gradberg	2/13/2018	Website	Property values will be reduced around the HSAR which will ripple throughout the county affecting all property values.	Refer to VA-1.
Brandy Gradberg	2/13/2018	Website	The Eminent Domain will create multiple security corridors that will split the county into multiple sections. Social and cultural factors associated with living in between a walled community could create a confinement mentality resulting in a divided society where the populous is segregated and labeled by numerous social, economic, cultural and racial classifications. This would result in degrading the quality of life for all citizens living and working within the affected areas, including other counties.	Refer to SS-23. Impacts to community cohesion as a result of the Project are discussed in Section 3.14.5.2.2, Socioeconomics and Community Facilities, Environmental Consequences, Build Alternatives, Impacts to Community Character and Cohesion.

Jordan Gradberg	2/13/2018	Website	There are only two High Speed Rails in the world that operate in the black that are not government subsidized. These two are in highly dense populated areas. Dallas to Houston is not very dense. The area cannot financially support this project.	Refer to GN-4 and NE-1.
Jordan Gradberg	2/13/2018	Website	DESTINED TO FAIL WITHOUT GOVERNMENT SUBSIDY. The Reason Foundation Policy Brief 139 dated February 2017 reports in detail why TCR cannot be financially stable in the long term without a government subsidy.	Refer to GN-3 and GN-4.
Jordan Gradberg	2/13/2018	Website	Why the HSR will have a serious devastating impact on our economy and quality of life in " Ellis County and other counties located in between: 1. Eminent Domain Rights by a FOREIGN Company (80%) wnership with a small Texas Rail Company (20% onership) as the front man. 2. No Train Station or stops which would be a hub of economic activity for our county. 3. No railroad crossing allowed. All future crossings will require an expensive overpass or underpasses. The few crossings will impact emergency vehucles, property values, school district boundaries etc.	Refer to ED-1, SC-6, SC-19, SS-23, TC-7, TR-7 and VA-1.
Jordan Gradberg	2/13/2018	Website	The few underpasses that may be built will use the TxDOT standard of 14 ft high. Much farm equipment is taller than 14 ft. How will they reach their property on the other side of the train? Farms, ranches, and agricultural lands will become inoperable removing them from production affecting the tax base and property values through the county.	Refer to TR-8.
Jordan Gradberg	2/13/2018	Website	The Trans Central Railroad claims that no public monies will be involved. No modern HSR has ever been built with just private investment capital. FRA (Fed RR Admin) TxDot and NCT-COG (North Central Texas-Council of Gov't) have already contributed funds and assistance. The HSR is supported by TxDot and North Central Texas- Council of Governments (NCT-COG) who recently supported two Toll Roads planned for Ellis County. So who is looking out or Ellis County's best interest?	Refer to GN-4.
Jordan Gradberg	2/13/2018	Website	High Speed worldwide have killed 220 people and injured 457.	Refer to SS-4, SS-12 and SS-13.
Jordan Gradberry	1/29/2018	Oral	My name is Jordan Gradberry. I have been brought up on land in Ellis County and I remember being five or six years old and my grandpa coming to me and telling me that he bought a whole bunch of land and that we were all gonna be able to build houses on it one day. I grew up on that land. My mom and dad built a house there in 2000, when I was seven. My uncle lives right down the road from us. He built a house there, my cousins grew up there. One day I would love to raise my son that I have now and the other one that's due in March. I would love to build a house on my family land, our family land, and raise my boys out there. We grew up, did a bunch of crazy stuff on four-wheelers out there. We got this thing, I don't know what it's called, but we called it duck. Where you can go on land and drive straight into a pond and just keep on going and come out the other side and I can't wait to take my son, Noah, to all those ponds and lakes we have out there. So many years we've spent fishing on our family land and, you know, I can't wait to take my two boys and whatever other kiddos God blesses me with, I can't wait to take them out there four-wheeling, do some paint balling, fishing, duck hunting all sorts of – all sorts of stuff. And I think that's the type of stuff that's missing from the poster boards out there with all the information that y'all collected for it. I think the pictures of young kids riding on four-wheelers through pastures and jumping hills and being stupid, I think that's the stuff that is being missed in all of this and if this does go through it's gonna affect a lot of people. I know it's great for Dallas and Houston, but Texas is not just two big ol' cities, it's a lot of counties in between. And it's gonna affect a lot of people. So I am 100 percent against this and I can't wait till I can build my own house out there and raise my boys out there. Thank you. Brandy Graham	1/25/2018	Letter	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the Overestimated the projected ridership. Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere.	Refer to GN-3.
Brandy J Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population Of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HCA Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is	Refer to LU-3, LU-4, PI-1 and SC-19.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>estimated that the suppliers will add another 2- 4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: , we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing tracts delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS</p>	
Brandy J Graham	1/25/2018	Letter	<p>Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to PI-1.
Brandy J Graham	1/25/2018	Letter	<p>The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to EJ-1, LU-4, SC-19, VA-1 and VA-3.
Brandy J Graham	1/25/2018	Letter	<p>The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, I am requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 145, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to BA-3, BA-5, BA-8, BA-9, BA-10 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Brandy J Graham	1/25/2018	Letter	Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and Kickapoo Preserve - all developments for nearly 1,000 homes, some of which have already been built. Four or five that were in the works are now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-3, RF-1 and VA-1.
Brandy J Graham	1/25/2018	Letter	The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-8.
Brandy J Graham	1/25/2018	Letter	At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-2 and CR-9.
Brandy J Graham	1/25/2018	Letter	One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Brandy J Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-1, NR-2, RF-2 and WW-9.
Brandy J Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AS-1, NV-1, NV-5 and TR-8.
Brandy J Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The Waller Harris Emergency Services District No. 200 ("ESD") provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing.	Refer to SS-12, SS-18, SS-23 and SS-26.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Brandy J Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment will run through a large portion of Waller ISD's district, which would negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1, SC-5, SC-10, SC-19, TR-6 and TR-7.
Brandy J Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SS-17, WW-1, WW-2 and WW-8.
Brandy J Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 - 20,000 lbs released, and June 11, 2007 - unknown quantity. On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-6, SS-18 and SS-19.
Brandy J Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to RF-4, NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.
Brandy J Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2.
Jason Graham	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property. This property should not be damaged by this rail way.	Refer to LU-5.

			unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. I personally have used this property free of charge to unwind from my stressful healthcare job. Please do not disrupt this property so others can enjoy it as well.

I personally have used this property free of charge to unwind from my stressful healthcare job. Please do not disrupt this property so others can enjoy it as well.	Refer to LU-5.
Matthew Graham	1/29/2018	Oral	My name is Matthew Graham. So to start with, the biggest concerns that I have are for emergencies on the train, and are there going to be access roads for emergency personnel to -- If the train has to stop due to somebody having a heart attack, how are emergency crews going to respond to that spot on the rail? That hasn't been addressed. If there's a grass fire on one side of the rail, it's going to jump to the other side of the rail during the drought scenario with high winds. It just going to. If the track's on the ground, how are the emergency people going to move from one side of the rail to the other quickly to respond to that grass fire They're not going to. If smoke -- Parker County burned up a	Refer to SS-2, SS-3, SS-18 and SS-27.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			thousand acres the other day. Smoke was seen down here from that. Will smoke shut the train down? Another issue is that -- looking through the road closures, there was at least I think five to ten roads that were going to have to be -- will have bridges built over it. Well, what's going to happen if that train goes underneath that bridge while I'm changing a tire on the bridge. Can't get that answer. What if there's an emergency on the bridge? Are the emergency personnel in Navarro County going to have the rights to contact and shut that train down like they do with other railroads? Are helicopters being brought in for emergency personnel use? Are they going to have access to shut these trains down so that when they're passing, the train wind doesn't affect the landing or take-off of the helicopter. Also questions that have not been answered. That's all really I've got.	
Michael A Graham	1/25/2018	Letter	Specifically, I am requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project in Waller County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Michael A Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U. S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere.	Refer to GN-2, GN-3, GN-4 and NE-1.
Michael A Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EJ-1 and VA-1. A discussion of potential impacts to Environmental Justice communities in Waller County has been added to Section 3.18, Environmental Justice.
Michael A Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2- 4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities,	Refer to ED-2 and LU-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: " ... , we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The City Of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would	
Michael A Graham	1/25/2018	Letter	Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and Kickapoo Preserve -- all developments for nearly 1,000 homes, some of which have already been built. Four or five that were in the works are now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property.	Refer to LU-3, RF-1 and VA-1.
Michael A Graham	1/25/2018	Letter	One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on Our property and Our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route."	Refer to SC-11.
Michael A Graham	1/25/2018	Letter	Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-13, TR-1 and TR-8.
Michael A Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment will run through a large portion of Waller ISD's district, which would negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5.
Michael A Graham	1/25/2018	Letter	Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train.	Refer to NR-1, NR-2, RF-2 and WW-9.
Michael A Graham	2/6/2018	Letter	Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-4.
Michael A Graham	2/6/2018	Letter	I am writing to Object to the proposed high-speed rail line between Houston and Dallas, Texas. I live in Grimes County, Texas approximately 1.5 miles from the recommended high-speed rail route sited in the FRA DEIS published in December 2017. My home and subdivision are in a rural area that will be split in two by the rail route. It will adversely impact wildlife and quality Of life for rural Texans. Many Of the reasons for a NO BUILD have not been addressed in this DEIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view Of the increased resources and infrastructure that will be required of them including Education, particular in very small ISDs?	Refer to LU-3, NR-5, SC-4 and SC-6.
Michael A Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection Of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory birds sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that	Refer to RF-4, NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species,

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.
Michael A Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1 and WW-8.
Michael A Graham	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2.
Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, I am requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and Kickapoo Preserve - all developments for nearly 1,000 homes, some of which have already been built. Four or five that were in the works are now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-3, RF-1, SC-12 and VA-1.
Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-2 and CR-9.
Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man- hours year for residents in Waller	Refer to AS-1, NV-1, NV-5 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			County and cost an additional loss of disposable income up to \$3 million. issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. The proposed alignment will run through a large portion of Waller LSD's district, which would negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5.
Michael F Graham	1/25/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-1, NR-2, RF-2 and WW-9.
Michael F Graham	1/25/2018	Letter	The Waller Harris Emergency Services District NO. 200 ("ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SS-23.
Michael F Graham	1/25/2018	Letter	On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Michael F Graham	1/25/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: The Waller Harris Emergency Services District No. 200 ("ESD) provides emergency services throughout the impacted area Of the proposed alignment Of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time, The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days, New fire stations and emergency services will be needed should the H,SR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built The District is also very concerned with catastrophic accidents that may occur from an HSR accident Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type Of emergency. This will place an undue burden on the District. TO date there has been no discussion with the FRA as to how	Refer to SS-12, SS-18, SS-23 and SS-26.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			they will resolve these conflicts. This issue was brought to the attention Of the FRA by Texas Department Of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Michael F Graham	1/25/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this Old Inn and Stage Coach site and cemetery, When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-2 and CR-9.
Michael F Graham	1/25/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet Of the HC4 route When notified Of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve Or disapprove the proposed route, . However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Michael F Graham	1/25/2018	Email	One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet Of the HC4 route When notified Of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve Or disapprove the proposed route, . However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. Refer to SC-11.
Michael F Graham	1/25/2018	Email	The proposed alignment will impact all future road and thoroughfares through the northern portion Of the County. Dozens Of roads are planned, but none will be able to be completed if the train Cuts through stifling all future economic development in that area. This issue was brought to the attention Of the FRA by the Texas Department Of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-8.
Michael F Graham	1/25/2018	Email	Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and Kickapoo Preserve - all developments for nearly 1,000 homes, some Of which have already been built. Four or five that were in the works are now cancelled because of the route, The HC-4 route travels right through the developments and destroys the economic viability Of them and the value of everyone's property Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS	Refer to LU-3, RF-1 and VA-1.
Michael F Graham	1/25/2018	Email	The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials, The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility, a heating and air conditioning, \$410 million facility that will be million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 6,000 by 2018. The City is part of a Greater Houston Pannership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2- 4,000 employees. There is concern that the HSR will	Refer to LU-3, LU-4, PI-1 and SC-19.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016, The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Michael F Graham	1/25/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC4 route When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route. Refer to SC-11.
Michael F Graham	1/25/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1.
Michael F Graham	1/25/2018	Email	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AS-1, ED-2, NV-1, PI-1, TR-8 and VA-1.
Michael F Graham	1/25/2018	Website	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 - 20,000 lbs released, and June 11, 2007 - unknown quantity On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an	Refer to EU-6.

			electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any Other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Michael F Graham	1/25/2018	Website	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track Of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May Of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Michael F Graham	1/30/2018	Website	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently built a new water tower and the proposed train route falls directly on top Of it, This issue was brought to the attention of the FRA by the Texas Department Of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2.
Michael F Graham	1/30/2018	Website	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part Of the Katy Prairie Preserve, a vast collection Of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department Of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-2, RF-4 and WW-2. Rolland Graham	2/19/2018	Website	I strongly support the development of high speed rail between Houston and Dallas. As our population continues to expand, so too will the demand for transportation. High speed rail has proven in Japan, Europe and elsewhere that it is a energy efficient transportation alternative with a lower carbon footprint than air or highway alternatives.	Comment noted.
Thomas Graham	3/2/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional	Refer to LU-5.

Charles E Graham Jr	2/8/2018	Website	I am a resident of North Carolina and I am extremely excited of the anticipated approval and construction of the Dallas-Houston High Speed Rail System. This project is watched by some of us in NC as a possible like link in the Southeast US (NC-VA-SC-GA-FLA). I am a volunteer Host on Amtrak trains in NC and onboard am often asked when and if the southeast is going to get a fast train. I know the interest is there and hope to someday give our passengers the good news. All this is not going to happen if this Texas initiative is not allowed to flourish. I will be organizing a trip to Texas to experience this grand project once it comes to fruition!!! Thank you for your consideration and approval!!	Comment noted.
Doris Grainger	2/5/2018	Website	The draft environmental impact report is untrue with flawed statistics and should not be used as a study of true existing, meaningful environmental and social statistics. This is a very serious life changing matter for us in that this ranch land was to be our livelihood starting this year. You involving us in this makes us a stakeholder and we need more information about financials. Please contact me.	Refer to GN-1, NE-1 and NE-9.
Doris Grainger	2/5/2018	Oral	No, actually they're all facts. Doris Grainger, G-R-A-I-N-G-E-R. And I have a letter that I wrote to Kevin -- to Mr. Wright and have not heard back from him. And I wrote two letters to Texas Central Railway in Dallas and Houston, and they have not written me back. I wrote to the U.S. Corps of engineers, and I did get a postcard back from them to look online at financials. This is a response to the letter of notification that we that our land is being considered for a rail system by Texas Central Railway. "The draft Environmental Impact Statement is untrue with flawed statistics and should not be used as a study to existing means of environmental and social statistics. "Aerial views of sparse rooftops on and near our property cannot be used. We have preserved our acreage as a pristine Southeast Texas landscape for over 50 years. Wildlife that lives on our land include whitetail deer, Texas mountain lion, bobcats, wild bore, coyotes, red fox, waterfowl, ducks, geese, owls, dove, pigeon, and many other birds of other species. The state animal, endangered species armadillo, skunks, rabbits, squirrels, snakes, turtles, fish, frogs, and endangered species the Texas horned toad. These are just the species of animals found and reptiles we have seen. Others may exist. "Also many aquatic plants, including golden glade cress and Navasota foxglove have been spotted in the marshy lands to the back of our property. These are endangered species. This does not include a more comprehensive search for endangered species on the federal and Texas governmental list. "Along with the preserved thicket, we have one hundred plus grazing livestock with a new quarter million dollar facility to manage our livestock business. It would be a travesty to lean on disproved statistics that have been presented to the FRA that are now published in a false report. This report was obviously developed without testing and seeing the terrain and landscape. "Texas Central Railway, LLC has never stepped foot on our pristine land, but merely made up whatever presented in their favor. The report has statistics about minority populations and traversing the lands in regard to this. We personally have race-mixed family members, so Texas Central Railway, LLC really do not know who we are to report this statistic. "The Banbury (ph) 300 acres is owned by people of Asian immigration with an active church, all composed of minority immigrant Americans. The FRA published report has a low score for minority disruption. The true facts are missing, making this a flawed report. "Our land is a lifelong investment which we paid for with our entire savings as a young family. As we enter retirement age, we are planning to develop our livestock business and live on the land. Texas Central Railway has caused enough stress and family pain over the last few years, and they should take heed that we do not want them near our life's work investment. "We have had to seek medical care over the stress Texas Central Railway, LLC has caused. As 2018 starts, we are all seeking medical care over the stress of receiving the letters from Michael Johnsen and the Federal Railroad Administration with reference to false statistical reports. "We have inquired many times about the train and its passenger target without an answer. The people of Texas are much different from the Japanese people. My family has ridden the train out of Tokyo, and our observation is that it is not used by families, but mostly by the white collar workers who live way out of Tokyo and work late and have no other means of transportation. The day we used the train out of Tokyo it stalled out due to mechanical issues. We sat in a stuffy train with no food or water for two hours before being rescued. The experience would often be repeated here. "Other issues that are around the train out of Houston. We are just now recovering from Hurricane Harvey in the gulf coast area, and the train station is projected to start from an area near Buffalo bayou. This area of Houston, better known as Allen Parkway, is often	Refer to ED-2, FP-1, GN-2, GN-4, LU-11, NE-1, NR-2, NR-5, PN-3, PI-7, SS-17, WW-1 and WW-2. According to TPWD and USFWS, Golden glade cress is known only from San Augustine and Sabine counties in Texas. According to TPWD, Navasota False Foxglove is not state or federally listed. The Draft EIS used American Community Survey (ACS) 2014 5-year estimates, block group data. The Final EIS incorporates newly available data, ACS 2017 5-year estimates, block group data. All block group data is included in Appendix E, Environmental Justice Technical Memorandum. Block group mapping is included in Appendix D, Environmental Justice Mapbook and findings are summarized in Section 3.18.6, Environmental Justice, Avoidance, Minimization, and Mitigation . Buffalo Bayou is located approximately 4.5 miles from the Houston Terminal Station. Prior to construction, the entire Preferred Alternative, including the entire watersheds (upstream and downstream of the route) will be surveyed to determine base flood elevations and hydrologic modeling.

			flooded during heavy rains. Just look at aerial photos taken during the hurricane in April 2016 and many other times. I personally have seen this area under water many times over the last 40 years. Entire roads and parking lots go completely under water. Even though the Army Corps of Engineers has published many diagrams, they do not take into account the flooding in that large area. "The logistics of this train system do not make sense for the amount of money involved to get it up built and running. A person in the Houston area, which is a huge area, could be halfway to Dallas for the time she gets to the station, board, and go halfway to Austin, and then turn north to Dallas, plus not have a car when she arrives. How much luggage and goods will be allowed with a purchased ticket has not been answered, although I have asked many times. Texans have relatives in both cities and want to take extra luggage and household goods when traveling from Dallas to Houston and vice versa. Our car is loaded down when we go see our relatives in the Arlington, Texas area. "This is where the target group for ridership is not clear, as family logically would not use this for their transportation. It appears that Texas Central Railway is wanting prime land to build a project which is modeled after Japanese culture of use to and from work daily. All of Texas is built of a diverse group of hard-working people who would not be able to ever use this train for daily transportation. "It is very obvious the ridership will not sustain the cost of the project, and if you ask anyone if they want another tax to subsidize a project like this, they will say no. "As you can clearly see, this is a very serious life-changing matter for us. Upon receiving your letter that we are potentially impacted landowners, we are now a stakeholder as well. We are demanding to know more about this project. The board of director of Texas Central Railway, LLC, Drayton McLane, who at one time was highly regarded in Temple, Texas and Houston, Texas as being a people's person, is impacted to make millions if not billions by using his own companies for the construction. "Since Texas Central Railroad, LLC is literally stealing our ranch right out from under us, we have a right to see their financial records. Please forward to us all financials, including receivables and payables, balance sheets, and payroll summaries for the previous three years for our review before the TRA scheduled this month in February so we have time to review all Texas Central Railway, LLC's books. Also financials including receivables, payables, and payroll from the regulatory branch Galveston Army Corps of Engineers must be included. This request for the above records should be delivered to us at the above address. Which I think you got from my husband. Okay. [...].	
Doris and Jack Grainger	2/6/2018	Letter	We were notified by letter from Kevin Wright, Environmental Protection Specialist, that our ranch land was being considered for the railway for Texas Central Railway, LLC. First of all, we bought this land with our entire savings as a young family. It is our inherent constitutional right to Own this property. It has been kept as a pristine Southeast Texas landscape for over 50 years. Now we see our rights threatened by a high-speed rail proposal that makes no sense, coming through the heart of our property. The fact that the investors have raised 133 million dollars toward the project is not nearly the figure of 18 billion that is needed to build the rail system. Texas Central Railway, LLC has not responded to my request to see their company's financials since I am now a stakeholder upon the notification by the above-mentioned letter. They have had since January 8, 2018 to respond to my letter Of request. Texas Central Railway, LLC needs to lift the veil of tax subsidies and other abuses which they are not revealing. As a family who is now involved involuntarily with Texas Central Railway, LLC, we have suffered heart wrenching family pain and have all sought medical attention. Along with this comment memo, I am attaching a copy Of the letter we sent to Kevin Wright, Environmental Protection Specialist, Federal Railroad Administration, U.S. Department of Transportation. He received the letter in his office on January 22, 2018. This letter is a summary of the environment Of our land, not the untruthful EIS Draft which is being published. (No letter attached). The meeting in Cy-Fair did not have room for everyone on Feb. 5. Over 200 people stood outside. The meeting in Waller on Feb. 6, 2018 is at the same time as the meeting in Grimes County. We have property in both counties which is not a fair hearing.	Refer to ED-2, NE-1 and PI-8.

H. Jack Grainger	1/8/2018	Letter	<p>This letter serves as a response to your letter of notification that our land is being considered for a rail system by Texas Central Railway, LLC. The Draft Environmental Impact Statement (Draft EIS) is untrue with flawed statistics and should not be used as a study of true existing, meaningful environmental and social statistics.</p> <p>Aerial views of sparse rooftops on and near our property cannot be used. We have preserved our acreage as a pristine Southeast Texas landscape for over fifty years. Wildlife that lives on the land include white tail deer, Texas mountain lion, bobcats, wild boar, coyotes, red fox, water fowl, ducks, geese, owls, dove, pigeon and other birds of many species, the State animal and endangered species armadillo, skunks, rabbits, squirrels, snakes, turtles, fish, frogs, and endangered species Texas horned toads. These are just the species of animals, fowl, and reptiles we have seen, others may exist. Also, many aquatic plants, including golden glade crest and Navasota Foxglove have been spotted in the marshy lands to the back of the property. These are endangered species. This does not include a more comprehensive search for endangered species on the Federal and Texas governmental lists.</p> <p>Along with the preserved thicket we have one hundred (plus) grazing livestock with a new quarter million-dollar facility to manage our livestock business. It would be a travesty to lean on the skewed statistics that have been presented to the FRA that are now published in a false report. This report was obviously developed without testing and seeing the terrain and landscape of our property. Texas Central Railway, LLC has never stepped foot on the pristine land but merely made up whatever presented in their favor.</p> <p>The report has statistics about minority populations and traversing the lands in regard to this. We personally have race mixed family members so Texas Central Railway, LLC really do not know who we are to report this statistic. The neighboring three hundred acres is owned by people of Asian immigration, with an active church, all composed of minority immigrant Americans. The FRA published report has a low score for minority disruption. The true facts are missing, making this a flawed report.</p> <p>Our land is a lifelong investment which we paid for with our entire savings as a young family. As we enter retirement age, we are planning to develop our livestock business and live on the land. Texas Central Railway, LLC has caused enough distress and family pain over the last few years, and they should take heed that we do not want them near our life's work investment. We have had to seek medical care over the stress Texas Central Railway, LLC has caused. As 2018 starts we are all seeking medical care over the stress of receiving the letters from Michael Johnsen and the Federal Railroad Administration with reference to false statistical reports.</p> <p>We have inquired many times about the train and its passenger target without an answer. The people of Texas are much different from the Japanese people. My family has ridden the train out of Tokyo, and our observation is that it is not used by families, but mostly by the white-collar workers who live way out of Tokyo and work late, have no other means of transportation. The day we used the train out of Tokyo, it stalled out due to mechanical issues. We sat in a stuffy train, with no food or water for two hours before being rescued. The experience would often be repeated here. Other issues surround the train out of Houston.</p> <p>We are just now recovering from Hurricane Harvey in the Gulf Coast area, and the train station in Houston is projected to start from an area near Buffalo Bayou. Jack Grainger	2/5/2018	Oral	Jack Grainger, G-R-A-I-N-G-E-R. We have 258 acres out in Waller. It's a cattle ranch. We just built a house there to retire to it. They're going to come through and take off the back part of that whole property. And my biggest concern is -- of course, that is our entire life savings, investments. It comes down to price. What's the price of all this? Are they going to try to cut us down and do we have any recourse? They're selling right next door to me in a housing edition lots for \$37,000 an acre. So that's my main concern is the price. And, of course, they can't tell us anything now. My wife has more emotional concerns.	Refer to ED-2 and LU-11.
Jack and Doris Grainger	2/6/2018	Handwritten	<p>Concerned the high speed train and/or track will be unaesthetic to surrounding residents/businesses.</p> <p>Concerned about the train not being profitable or having an impact on traffic & being abandoned.</p> <p>Concerned about the impact if/when there is an accident (derailment) of the high speed train.</p> <p>Concerned about the people losing their homes & businesses having to relocate to accommodate the high speed train's path.</p> <p>Concerned about additional noise caused by the high speed train.</p> <p>Concerned about more flooding issues in the area caused by the high speed train construction & build up for the track/path.</p>	Refer to AS-1, ED-2, FP-1, GN-2, GN-4, NE-1, NV-1, SS-12, SS-13, TC-7, WW-1 and WW-2.

Richard Grall	2/5/2018	Website	Kevin Wright, Mr. Wright this is shameful! Many people will lose their life's work if this train is built. no organization should have the right to disrupt people's lives, property, homes, etc. This idea is ill conceived and poorly developed! Don't build the train!	Comment noted.
Richard Grall	2/13/2018	Email	As a land owner not effected by the location of the proposed High Speed Rail in Madison County, I am opposed to the rail in any form or any location. I AM OPPOSED TO THE HIGH SPEED RAIL!!!!!!!!!! As I grew up in Madisonville I know first hand the devastation that will occur if the rail is built. Land, homes etc will be forever ruined or changed as a result of the rail. No amount of progress is worth the misery that the rail will bring upon the lives of the people of Madison County.	Comment noted.
Cesar Granados	2/26/2018	Website	So many people travel back and forth from Houston to Dallas and vice versa. This project will allow both cities to expand their job markets markets which is good for all Texas	Comment noted.
Elana Granston	1/25/2018	Email	According to (recent?) research, bullet trains can be designed to minimize motion sickness but most aren't. There are many of us, including me, who would like to ride them but cannot due to motion sickness. Please consider/research this when designing the system. I would definitely be interested in using a bullet train if I could without feeling sick for the whole ride (and a while after). I lived in Europe for a while, so I have tried them. While I have used regular trains extensively, many of the bullet trains are prohibitively problematic.	Refer to BA-4 and NE-1.
David Grant	2/16/2018	Website	Although I live in San Antonio, I consider high speed rail anywhere in Texas an excellent idea. I hope this project will serve not only downtown Dallas and Houston, but also Ft. Worth, and the airports DFW, Love Field, Bush International, and Hobby. In the future I'd like to be able to take a high speed train to connect to flights out of Austin, Houston, and Dallas. Ideally, I'd want to be able to clear security and check baggage on the train, then get off the train in the secure area of the airport terminal.	Refer to BA-1 and BA-2.
Jason Grant	1/29/2018	Oral	I knew those commissioners are always going to use all three minutes. Some great public speakers tonight, too. You-all should consider running for office. My name is Jason Grant. I am county commissioner for Precinct 1, and I represent all the people of Navarro County, and I'm here to address the people of Navarro County. We're all going to get up here and pretty much say the same thing for the most part. Everyone	Comment noted.

			here has commonsense. We know why we don't want it and why we don't need it and why it's not going to work and logistics and all of that. So that being said, my vow to the people of Navarro County is to fight this project as hard as I can for as long as it takes. The gentleman who used the time earlier to make it easier to digest, in Navarro County we don't mind digesting something but we will not be force-fed. So thank you, and God bless Navarro County.	
Linda Grant	2/28/2018	Letter	<p>Mr. Wright, It has been brought to our attention that the Draft Environmental Impact Statement (DEIS) prepared by the FRA includes relocation and realignment of public roads within Freestone County. Further, we understand that it is assumed that existing roads may be altered or closed and new roads are proposed to be constructed within our jurisdiction for our future ownership, responsibility and maintenance. Please be advised, based on the information currently available and the lack of coordination thus far, any construction, relocation or realignment of county roads within our county is not acceptable and will not be granted. Further, even if county roads were to be moved or altered, Freestone County will not accept responsibility for additional roads without a long-term maintenance reimbursement plan in place. In addition, the Commissioners Court will require that all county roads remain open for use by the travelling public both during and after construction. I am enclosing a resolution which clearly expresses the Freestone County Commissioners Court's views on these matters. This resolution was passed on February 28, 2018. Please make the necessary adjustments to the DEIS document(s) to take this into account. At this point, we cannot even begin to evaluate the impacts to our County until the DEIS investigative findings are consistent with county regulations and the policies of the Commissioners Court. Once the DEIS has been updated and issued, only at that time will we be able to begin our detailed review and provide additional comments. Sincerely,</p> <p>Please be advised, based on the information currently available and the lack of coordination thus far, any construction, relocation or realignment of county roads within our county is not acceptable and will not be granted. Further, even if county roads were to be moved or altered, Freestone County will not accept responsibility for additional roads without a long-term maintenance reimbursement plan in place. I am enclosing a resolution which clearly expresses the Freestone County Commissioners Court's views on these matters. This resolution was passed on February 28, 2018</p> <p>The Commissioners Court does not intend to and hereby declines to close, abandon, vacate or alter any county road to accommodate the proposed the high speed railroad route; and</p> <p>The Commissioners Court also requires that if TCR ever acquires eminent domain power and seeks to establish its route across any county road in Freestone County, the county road that is affected shall at all times, during and after construction, be maintained for use by the traveling public, including specifically the typical public uses to which county roads in Freestone County are often subjected, such as use by vehicles, equipment and machinery necessary to conduct operations oil and gas operations (drilling, reworking, producing, etc.), farm vehicles and equipment typically used in agricultural production, manufactured and mobile homes, and all other uses, whether named or not, for which Freestone County county roads are typically used.</p>	Refer to ED-1, ED-3, PI-1, TR-1, TR-6, TR-7 and TR-8.
Wayne Grantham	2/9/2018	Website	I really think you need to look at Jerry (Moonbeam) Brown's toy train to nowhere--at its costs and overruns even before construction starts--and all the other problems, such as every little town and shopping mall along the way will want a stop. Better to let private industry do it and pay for it, if it can be economically justified.	Comment noted.
Darlene L. Grassl	2/6/2018	Letter	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 	Refer to BA-6, CR-4, ED-1, LU-2, LU-11, NE-1 and NE-9.

Dawn Gray	2/21/2018	Website	<p>This project needs to be rerouted another direction. Folks along the anticipated route did not invest in their land for years to have it taken away from them. Most of us depend on our land for retirement. This project will devastate a lot of land owners and will be for a project not many will find appealing to travel on. The route needs to not encumber land owners but be built along the existing freeways. Its just not fair to us and we will NEVER allow surveying on our lands.</p>	Refer to BA-8, BA-9, ED-2, GN-2 and NE-8.
Dawn Gray	3/9/2018	Website	<p>This idea would be detrimental to our retirement plans in Waller County. I have depended on my land to be my retirement so only if the high speed rail were to pay me what I will make in 2028 would my plan go as scheduled. No one will buy land once the rail is put in place because folks are looking for peace and quiet when they search for land, not a high speed train hovering their land every 24 minutes. I strongly reject the idea of a train through waller county. Our residents don't want to go to Houston OR Dallas, that's why we live there away from it all.</p>	Refer to VA-1.
Lila D Gray	2/7/2018	Email	<p>I found this article pretty interesting and in fact, the law, regarding taking ones property for eminent domain. Increasing tax revenue and economic development are exactly the mentioned primary reasons by this HSR that this project has been labeled for. Lawyers will have a hay day with this. In Waller County, our properties are NOT unsafe and do not need to be condemned. I can think of several areas in Houston that are however. Shut down acres homes and put it through there, it's a rat hole. What does public use mean? Public use includes projects such as highways, bridges, railroads, commercial structures, schools, and more. In Texas, increasing tax revenue and economic development cannot be the primary reasons the land is taken. There's an exception to the economic development rule; land can be taken for this purpose if it means alleviating harm to society that would otherwise exist because of the unsafe property. The land also can't benefit a private party.</p>	Refer to ED-1.
Lila D. Gray	1/22/2018	Email	<p>I am writing regarding my concerns of this HSR on my community in Waller County. This project was never thought out with all involved interests. This project will impact those of us who live under the proposed project track in a tremendously negative manner.</p> <p>First of all, I have planned and depended on my property as an investment for my future retirement and this will negatively effect that. Not only will my property value go down but the project would cause more flooding in our area and our quality of life. We don't invest a million in property for your ideas. We like our peace and quiet which is why we moved out there.</p> <p>Second, we were never consulted for our input regarding the rail before plans were made.</p> <p>Third, if there were a need for this type of project and benefited others in a more than positive way, it might be received/ considered differently in our community.</p> <p>Furthermore, a route that does not affect a close net community would make more sense- like above the existing highways to not affect any private citizens or their property.</p> <p>This project has one thing in mind, to make money for the originator at our expense. I will NEVER give the right for my property to be surveyed and you will never achieve immanent domain for it. Do your homework and study first - you will see no one in the middle wants this project and no one at either end probably does either. The price to pay to ride the project far exceeds what any middle class is willing to pay to go such a small distance. This will never be a routine way of transportation for anyone but the rich. Put it in THEIR backyard.</p>	Refer to BA-9, ED-1, GN-2, LU-4, LU-9, PI-1, PN-3 and SC-19.

Lane Grayson	1/29/2018	Oral	Good afternoon, my name is Lane Grayson and I am the County Commissioner For Ellis County. Tonight I am here in strong opposition of the high-speed rail, as is our Ellis County Commissioner's Court. As many of you know the high-speed rail has only provided a small portion of this rail to be elevated at any given place and that's very significant to those of us who, just like the Risinger's who -- their property will be intersected in some form or fashion. My biggest concern is a small rural county has the infrastructure dollars that we have to commit to these roadways. I represent the small southern east side of Ellis County. In that small section alone there are over 30,000 residents that need to be on either side of that berm that's gonna be built to support that high-speed rail. There's only one way to cross a high-speed rail. You either go under it or you go over it. There's two ways, I'm sorry, I said one. There's two, over it or under it, which we, as a county, don't have the resources, number one, to maintain those kind of structures or to maintain them at any given time when you speak of the duration that it takes to do that. With over -- in my small section there's 900 miles of roadway in Ellis County and on a limited budget for those of you that are in rural counties know how difficult it is to maintain rural roadways. Out of that 900 miles, I have 22 roads -- regular county roads that it will intersect 22 And I have 11 Farm to Market roads that it will intersect. All of those that you can't have an at-grade crossing. Ambulatory care for those that are living in these rural areas. School transportation with kids that gotta get back and forth. Oh by the way, did I mention that Ellis County is a tremendous ag producer. We have to get big farm equipment on either side. Let me just leave it to you with this. This is my most -- the strongest point that I can share with you tonight. You build that wall straight through my county, straight, specifically, through my precinct the constriction that it's gonna take for these good folks that have larger properties, regardless they live 18 in small rural towns, they have to commute back and forth. This will be a huge economic hindrance to our county. It'll be a huge economic hindrance to Ellis County as a whole. There's a tremendous amount of roads, there's lots of development in our county and we're excited to have it. I don't believe that this project is, number one, has the authority to ever claim eminent domain because by definition of eminent domain it's good for all. There's a lot of folks that are in between this all. We give it to hand belt, the dumbbell effects. There's a lot of folks in Dallas County, there's a lot of folks in Harris County and those of us in the middle, those other seven counties are getting looked over. We have a say, let this be a private venture that uses private funds, so be it. But it doesn't need to come through the Risinger family property, it doesn't need to come through the Sullivan family property without being a -- paying the price. Thank you for the opportunity to speak tonight.	Refer to ED-1, LU-11, PI-1, SC-6, SC-7, SS-23 and TR-8.
Greater Houston Partnership	3/5/2018	Website	Dear Administrator Batory, The Greater Houston Partnership is one of the state's largest and most effective economic development and world trade organizations. We represent more than 1,000 member companies that employ more than a fifth of the II-county region's workforce. Our organization is focused on ensuring that Houston and Texas continue to offer one of the most competitive business climates in the world, and we work every day to bolster the business community and help create an environment where businesses can thrive. As part of this, we believe that growing our transportation connections is critical to our long-term success. The privately-funded Texas Central Railway bullet train helps build those connections - linking the two largest economies in the state with a short 90-minute commute. When combined — the Houston and Dallas-Fort Worth super-region would be the second-largest region in the United States in both population and GDP, right behind New York City. The economic prospects are incredible. American workers will benefit from construction work, such as building the system and maintenance facilities along with supplying materials and providing long-term support for the new rail line. But beyond the direct benefits of the jobs created through the construction and operation of the high-speed train, this would place Texas and more broadly, the United States, on par with countries who are already experiencing the benefits of high-speed rail. As the Partnership travels the world recruiting companies to Houston, we marvel at the high- speed transportation options available. If we marvel at this infrastructure, we know that the companies we are trying to recruit are marveling as well. For American cities to compete with the great global cities of the world, it is critical that we remain on the cutting-edge of technology and offer robust transportation infrastructure that is attractive and advantageous to the world's leading companies and talent. On behalf of the Houston business community and members of the Greater Houston Partnership, we proudly support the Texas Central Railway's privately-funded bullet train, and we urge the FRA to complete its review in a timely manner.	Comment noted.
Greater Waco Chamber of Commerce	3/1/2018	Website	The Greater Waco Chamber of Commerce is a well-respected, high-profile economic and community development organization advancing a progressive and visionary agenda for economic growth and quality of life for Central Texas. With over 1,600 member businesses, the Greater Waco Chamber represents over 70,000 jobs in the area. Our Chamber actively seeks to promote policies at the local, state and federal levels that are conducive to helping diversify and grow the Greater Waco economy and create economic prosperity. Upon recommendation from the thoughtful leadership of the Chamber's Public Policy Committee, the Greater Waco Chamber Executive Committee and Board of Directors adopted a public policy platform in 2015 that includes support of high speed rail for our region. We believe that the development of high and	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>higher speed rail in Texas will prove to be transformative to economic activity and connectivity of our region. In 2014, when the Texas Department of Transportation was considering routes for a possible passenger rail service, the Greater Waco Chamber issued an Action Alert requesting members to write letters of support. Over 150 such letters were gathered from leadership representing diverse sectors of the community. Attached are a small sample for your consideration. Highlights include: "CentexAGCrepresents over 225 commercial companies who specialize in vertical construction...it is our belief that a...(passenger rail) system would be a boon to both states, and all points in between." K. Paul Holt, Central Texas Chapter Associated General Contractors of America, President & CEO ".on behalf of the Waco Business League, an organization consisting of approximately 120 chief executive officers of various businesses in and around Waco...we are excited about the prospects of a high speed rail service along the I-35 corridor." Rick Brophy, Waco Business League, President "As a long term businessperson...I am very aware of the need to expand our state's transportation infrastructure. I begin by thanking the Texas Department of Transportation committing the time, energy and resources to produce this study which we feel is a critical first step in ensuring that Texas has a modern and world-class transportation system for the future." Virginia DuPuy, DuPuy Oxygen, President & CEO "I think it is imperative, both for Waco/McLennan County, but also for Texas, that high speed rail approximate the route of commerce...without question, high speed passenger rail accessibility in Waco/McLennan County will benefit both our community and the customers served [sic] its availability." William Clifton, Jr. The Clifton Group "...will be a benefit in many different facets, including growth to our economy, population, tourism, as well as several direct benefits to local businesses." Bryan Young, TYMCO "The broad spectrum of cultural tourism and sports offerings in this area is unique in the region. We would urge your consideration of the above routes to facilitate travel and tourism." Byron Johnson, Texas Ranger Hall of Fame, Executive Director The Greater Waco Chamber of Commerce would encourage the FRA to understand the support of this project and sentiment of leadership throughout the state, the business community, and beyond. While the opposition has a voice, please know it is not the only voice, nor the prevailing voice, of Texas. We firmly believe that bringing high-speed rail to Texas will have an immediate impact on job growth and economic impact, while also laying the foundation for economic growth in communities throughout the state. The development of high and higher speed rail is critical in meeting the changing transportation needs and to prevent environmental degradation of our great state, which is facing significant strain on existing infrastructure with our rapid-growth population rate. High speed rail will provide faster and more energy efficient means of travel and establish a new industry that provides stable jobs, while also allowing existing industries to expand and flourish. We thank the FRA for your work, and look forward to seeing this project come to fruition.</p>	
Greater Waco Chamber of Commerce	3/1/2018	Website	<p>Support of high-speed rail initiatives for our state is a public policy priorities of the Greater Waco Chamber of Commerce. Not only was our Chamber- and our community- supportive of a potential high-speed rail project along the I-35 Corridor, but we also have been paying close attention to the "Texas Bullet" project. While there has been some opposition, there has also been a great amount of support. Our own City Council and Waco Metropolitan Planning Organization Policy Board- with representatives not only from our County Commissioners, but also other county municipalities such as Ross, Robinson, McGregor and Hewitt- both recently passed resolutions of support for the Texas Central project. Those opposed are predominantly speaking from a perspective focused primarily on property rights and the concern that detriment to farm and ranch land value could come with construction of a high-speed rail system on the proposed Dallas to Houston corridor. These can be charged and divisive issues, and we must respect the position of those voices, rural and urban alike. However, much like the ardent and passionate opposition President Eisenhower faced when wanting to plan and build an interstate highway system across our country's wide open lands, we feel the support to this new mode of travel and transportation is an acknowledgement of the changes in demographic realities facing our state which will call for a robust- and multi-modal-infrastructure system that will allow for the efficient transportation of goods and services and people throughout our great state and beyond. That electoral districts were drawn in such a way that many of our elected officials represent both urban and rural Texans puts those legislators in a difficult position, as they might feel bound to sometimes conflicting urban and rural interests. And while they must be respectful of those rural constituents, they also might recognize, as these conversations gear up in Texas, that they do also represent urban areas largely in favor of high-speed rail. In fact, 80% of our state population resides in urbanized areas, which tend to be supportive of rail projects. This may explain the constitutional amendment passed by Texas voters in 2005 authorizing our legislature to invest public dollars in passenger rail infrastructure, or similarly the results of the 2011 study which showed that Texans are overwhelmingly in support of not only high-speed rail, but further, public investment in the same. The Greater Waco Chamber of Commerce is committed to advancing a visionary agenda for economic growth and quality of life for Central Texas. Our chamber actively seeks to promote policies at the local, state and federal levels that are conducive to helping diversify and grow the Greater Waco economy and create economic prosperity that will improve quality of life for all Wacoans. We believe that the development of high and higher speed rail in Texas will prove to be bring significant economic stimulus and increase connectivity of our region. It reflects the kind of advanced planning and forward-thinking as advocated by Ray Perryman in a recent Perryman Report as critical as we invest in our future prosperity. High and higher speed rail would stimulate our economy, create new industries, and increase mobility. As noted by the U.S. High Speed Rail Association, it will open new domestic markets and supply chains, and broaden regional labor markets. The potential for economic stimulus is</p>	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>great. Recent studies by the Economic Development Research Group, Inc. and others have projected that the construction, maintenance and existence of high-speed rail lines could create sharp rises in new business sales in cities with high-speed rail; create new jobs that bring new wages earned for families; and expand the overall tax base through tax revenue paid to the state, cities, counties, and school districts. The potential for economic impact that will improve quality of life for us all is real. Texas leads the nation in population growth, and according to recent projections from the Office of the State Demographer, our population will double by 2050. If we do not act now to expand and improve our existing transportation infrastructure, this dramatic increase in population will strain our existing resources and infrastructure, and bring environmental degradation for which our children will not thank us, degradation that will not only detract from quality of life, but also limit our ability to grow our economy. With the EPA regulations which require urban areas to keep their ozone levels at under 70 parts per billion, communities could easily be forced into air quality nonattainment with millions and millions of new Texas drivers- including freight trucks, which are projected to increase at twice the rate of passenger traffic, even considering the population boom- locked in gridlock traffic. Road and airport congestion have been calculated to cost America over \$156 billion per year in time and fuel (a recent trip home from Austin took me more than four hours with lane closures on 35. Those are hours I could have been working, shopping, or just enjoying life and time with my beautiful children). It is calculated that in one year, Americans collectively lose 4.2 billion hours wasted in traffic jams. We must be strategic and future-oriented as we plan for the transportation needs of our great state. We must recognize the realities of demographic changes, and the needs of a 21st century economy that will demand connectivity from its leaders. We must recognize that while significant progress has been made with the passing of Proposition 1 and Proposition 7 in Texas, and the FAST Act at the federal level, our transportation challenges are not now resolved. The state's continued rapid population growth will likely necessitate that decision makers continue to develop innovative ways to pay for future transportation infrastructure to support a 21st century economy. Texas is the 10th largest economy in the world, and our employers are leaders in the nation in job creation that stimulates that economy. As our great state strives to remain a leader in the nation, and the nation in the world, high speed rail is one of many tools we may use that would support and facilitate community and economic development so that all future Texans may enjoy even greater prosperity and quality of life. The time to plan for the future is now. As urban planner Daniel Burnham said, "Make no small plans. They have no magic to stir humanity's blood and probably themselves will not be realized. Make big plans; aim high in hope and work, remembering that a noble, logical plan once recorded will never die, but long after we are gone will be a living thing, asserting itself with ever-growing insistency." We thank all those local, state and federal leaders who are being forward thinking and planning on how to invest in our future and the infrastructure needs of our state and nation. They are aiming high in hope and work, and we stand with them to envision a Texas that is equipped for a 21st century economy and enhanced quality of life for this community and state we all love.</p>	
Kim Green	3/6/2018	Website	I'm all for progress I just hope El Paso to both Dallas and Houston will be in a future project.	Comment noted.
Ranae Green	3/8/2018	Email	<p>WHL Dallas 45 LLC ("WHL") is writing to provide its comments to the December 2017 Draft Environmental Impact Statement ("DEIS") for the Dallas to Houston High-Speed Rail project (the "Project").</p> <p>WHL, is the owner and developer of Prime Pointe Industrial Park ("Prime Pointe"), a 3,000 acre master planned, rail-served industrial park located at 1-45 and East Wintergreen Road in southern Dallas County in the cities of Hutchins, Lancaster and Wilmer. A map of Prime Pointe is enclosed with this letter, Prime Pointe is strategically located next to Union Pacific Railroad's Dallas Intermodal Terminal ("DIT"). Prime Pointe offers rail-served sites for commercial and industrial development and operation. Prime Pointe receives rail service from Union Pacific via a spur track Off Of the main line that runs through DIT. Prime Pointe is the largest development in the Dallas County Inland Port and is leading the effort to create thousands Of jobs and billions of dollars of economic growth for an underserved and underdeveloped area of Dallas County.</p> <p>The 2016 Project alignment ran through Prime Pointe, and WHL,, appreciates the fact that Texas Central Railroad ("TCR") redesigned the Project to avoid bisecting Prime Pointe. Since 2016, significant warehouse and distribution centers have been built at prime pointe, which reinforce the importance Of preventing TCR from interfering with the operation and growth of Prime Pointe.</p> <p>WHL Objects to any Project plans or alignments that would limit accessto prime Pointe or disturbits growth and operations. In order to avoid any negative impact on Prime Pointe and to allow Prime Pointe to grow in the future, Prime Pointe requires all TCR road crossings in the vicinity of Prime Pointe and DIT to be grade-separated, specifically including but not limited to the major throughcares of West Belt Line Road, Greene Road, East Pleasant Run Road, West Wintergreen Road, Lancaster Hutchins Road and Interstate 20. All grade-separated structures along the West side of Prime Pointe should be built in conformance with Union Pacific's standard vertical clearance for overhead bridges, 23'-6", to allow for future railroad extensions.</p> <p>Prime Pointe further objects to the location of a TCR service facility south Of Pleasant Run Road and requires plans for this facility to be relocated. WHL appreciates the efforts of TCR to accommodate Prime Pointe and looks forward to continuing to work with TCR regarding the</p>	Refer to LU-12 and TR-1.

Green Oaks Physical Therapy	3/8/2018	Website	<p>To the FRA and Texas Central Rail,</p> <p>I have had the pleasure of being able to visit Morgan Legacy Farms on multiple occasions and each trip has been unique and special. The ranch provides a unique space for relaxation and enjoying the benefits of being outdoors. As a Physical Therapist Assistant, one of the values we try to instill in our patients is movement. Decreased physical movement can lead to decreased quality of life. Upon entering the ranch, you are stimulated to move about the property to take in its many wonders. You are encouraged to walk around the many ponds, visit the various farm animals, try a round at the skeet shooting area or even take in the views from horseback. This is a place where you are able to engage in activity to increase cardiovascular and mental stimulation that you may not otherwise be able to access.</p> <p>The charity that Morgan Legacy Farms shows by allowing my husband and me to visit at no charge combined with the very convenient location outside of the DFW metroplex will not be found elsewhere. The ranch allows my family and friends to bond and gives us an outlet to relax in a safe environment. One of my favorite activities to do at the ranch is fishing in the many ponds available and making s'mores under the star light without the sounds of the city. It is a great property to "get away from it all" and enjoy nature. Access to the entirety of Morgan Legacy Farms allows me to de-stress from the professional work week. You are able to see sights and sounds not found in the heart of the metroplex. You can even find Mexican Whistling ducks on the main pond! I fear that if the ranch is destroyed with the placement of the high-speed rail the tranquility, the wildlife and the environment will be put in jeopardy. I have been informed that the FRA would like to build a high-speed rail through the Morgan Legacy Farms and I have concerns about the proposed location. The preferred route travels in one of the highest elevations which will create, in my opinion, significant watershed issues causing a loss of migratory water fowl in the area. I propose to move the route slightly North, above the ranch and near existing power lines. I feel a move to this area would have less impact on the environment and prove less damaging to the county in the long term.</p> <p>The Morgan Legacy Farms is an irreplaceable property that gives back to so many people. Over 900 people have visited this ranch from church groups, Girl and Boy Scouts, Military Personnel, Police and Fire, students, and each has gotten to enjoy the benefits of the ranch. There is no comparable property near DFW that provides so many positive aspects, while remaining free to so many people. I strongly encourage you to consider changing the proposed route of the high-speed rail to that location north of the ranch, near the power lines, as the benefit strongly outweighs the cost to those associated with Morgan Legacy Farms.</p>	Refer to LU-5.
Todd Greene	1/30/2018	Email	As a land owner in Grimes County, Texas that will be affected by the Dallas to Houston High Speed Rail I oppose the development of the high speed rail. The draft EIS has identified my residence as being in a moderate impact noise and vibrate area. This will not only decrease my property values, but it will also have significant impact on the quality of life for my wife and me. I feel this will also diminish the possibility of any potential development or other uses for the property due to this project.	Refer to NV-1 and VA-1.
Ted Greenlee	2/1/2018	Email	I live in Palmer Tx / Ellis Count. Once I first heard about this high speed rail idea being thrown around I started to put math together on what this would benefit TX. There is no way amount of people willing to travel on this train would be able to pay back how much it cost to build this dumb idea. I would never drive to Dallas get on train ride to Houston then rent car to go attend to whatever business I have to attend to. Yea there are small percentage of people that would ride this train but our population not high enough to reap any benefits compared to land and environmental impact it would have. My wife and I worked our whole life and purchased piece of land years ago that we devolved cleared trees built fence stocked our pond with fish planted trees and them we built house with lots of hard work for year straight. We call this our home and we are proud it because we worked out tails off day night so our family would have nice peaceful place to live. Not till recently we found out that project path of this Train is to possibly go through middle of our house/ land due to back side if our property has power line which they intend to follow. Me and My family are AGAINST building this High Speed Rail. It will change lives for everyone disrupt famers in my area people home that have been in families for years or one families have built , wildlife , ponds with fish. This is project that needs to be stopped or it will end up like Supercollider project that started but ran out of money. It is actually one mile from my house now. 26 billion dollar high speed rail project is never going to be profitable plus number keeps going up.	Refer to ED-2, GN-2, GN-4, LU-11 and NE-1.
Jeff Greenwood	2/2/2018	Letter	I purchased my 136 acres in Leon County to get away from the big city (Houston) and enjoy the peace & quiet of the country. I enjoy hunting whitetail deer, hogs, and other animals. My wife and I enjoy taking long walks through the woods and absorbing all that Mother Nature has to offer. And now you're contemplating putting a train across my private road (P.R. 4284, Normangee, 77871) and close to my house. This would	Refer to GN-1, GN-2, NE-1, NE-8, NR-1 and NR-2. The Project would be crossing west of the referenced property via embankment. A service road constructed along the east side of the

			<p>create a significant environmental impact in my eyes. The whitetail deer herd along with all other animals will definitely have a negative impact by your train.</p> <p>And now, speaking of your DEIS - how are we to believe what is actually inside the draft when we know that many people did not permit your surveyors on their property. Did they illegally obtain surveys, or did they just make stuff up?</p> <p>Texans do not need high speed rail. We are not a commuter state. To prove it — just take a look at the HOV lanes around Houston. There are as many or more single occupant vehicles in them paying tolls as there are multi-occupant vehicles. One could also look at the train that ran from Houston to Galveston — another losing proposition. High Speed Rail simply will not work in Texas; it's going to be a boondoggle. Don't take my word for it; look at what California State Rep. Maienschein had to say about their HSR. "MFhen voters approved California's high-speed rail project in 2008, supporters promised a cost-effective, rapid way of traveling around the state. The project was supposed to cost \$34 billion and would include 800 miles of track to connect California's major hubs. It's been almost a decade since those promises were made and none of them have been fulfilled. High-speed rail is riddled with budget overruns, constant leadership changes, missed deadlines and broken promises.</p> <p>While our bridges and roads crumble, the government continues to allocate California taxpayer dollars into the black hole known as high-speed rail. Experts told voters that bullet trains were the future of transportation, attracting billions in private investments and federal transit funds. They claimed that the state would be on the hook for less than a third of the project's \$34 billion price tag. A decade later, that number has ballooned to more than \$67 billion and the state is picking up the tab. High-speed rail proponents overestimated the project's appeal to investors. If high-speed rail actually had any private investors (which it doesn't), they would be livid with the project's delays and cost overruns. Clearly, no one thinks this is a good way to spend their money. This leaves Californians saddled with a project that's costing the state \$5 million a day. To make matters worse, the first 119-mile phase of the project isn't even close to being complete, and it's already running \$2.8 billion over budget. Californians were promised that the train would be done by 2020. More recent projections by the High-Speed Rail Authority show that the train won't be done until 2029. The next projections will likely show even further delays. " If this Texas HSR project does actually come to fruition; I will guarantee that we taxpayers will be in the same boat with [he California tax payers. We will be spending a butt load of money for a project that most people in the State either do not want, or do not care about. Let's stop kidding ourselves and scrap this idea before we get any further along.</p>	<p>HSR ROW would connect the referenced private road to County Road 408 approximately 0.35 miles north. Access would be maintained to the property by the re-routing of roadway. Refer to Appendix D, Project Footprint Mapbook for maps and images of impacts to this property. In regard to visual impacts, Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation outlines best management practices for minimizing visibility of the Project.</p>

			addition as a result of the participation, the Texas Battle of Independence. It's been in the family since the 1830s. On the other side of the family, we're not Madison County, but I'm the descent of Rogers, who built the Rogers prairie east of Normangee. And at the turn, a few of you might remember Dr. Rogers and Dr. Cole. They delivered many people in the county. Now I can remember one thing. Dr. Rogers was in the first car wreck in this county. And someone was killed because the transportation they delivered without the infrastructure to accommodate. And I want to ask you, did anyone in this audience believe the economic numbers that have been presented? Do any of you have memory of a few other government boondoggles that we're still hanging for? How about power from nuclear that were too cheap to meter? Do you know that they only exists because legislation was passed by one of the representatives that guaranteed the government would back up any damaged cause by that industry? Now, who's going to pay for this when it goes belly up and they've taken all our property? You're going to pay for it because they're going to pour money down the drain just like they've done in the Northeast Corridor where Amtrak has never ever made a profit. Never. It exists because of government power to take what is yours. This is Texas. I feel differently about how we ought to be governed. Remember the Alamo? Somebody stood up and said no. I call in the same against this project.	
Brenda Grissom	3/5/2018	Website	I am against the high speed rail for Texas, true at times traffic on I 45 is congested. The average person or family will not use HSR because of projected cost of tickets . The property planned to be used is now being used for farm and ranch use. Putting the rail on the ground will divide and cut off excess to roads. It has been suggested in meetings that many of the routes will divide property in half, with no excess. As for creating jobs I cannot see many new jobs, if anything it will cut jobs that now exist on I 45. I am totally against HSR anywhere in Texas.	Refer to LU-11, PN-3, SC-3, SC-15 and TR-10. The economic assessment presented in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts, assumes that employment and earnings growth during the construction phase would reflect labor and materials needed for the Project as well as indirect growth in supporting industries.
Brenda Grissom	3/5/2018	Email	I am against this project. There is no need for this it will divide farms and ranches, that supply meat and produce. The average family or person will not be able to pay the projected amount for a ticket. As far as jobs go I can see lose of jobs along I45.	Refer to LU-2, LU-11, SC-3 and SC-15.
Melinda Grissom	1/25/2018	Email	i do not support this rail. it is a proven fact in california that it can not sustain and pay for itself. it is syphoning more tax dollars from that state and its residents to operate and it produced false projections on running without using more of peoples hard earned money!! Not to mention will go thru the property where i own a business, and north of it will go thru property where live. after relocating from the cypress area we have been here 25 yrs and do not plan on letting them buy or split home property nor do we want to relocate our business!!	Refer to GN-4.
Pam Groba	3/5/2018	Website	The train passing so close to my property would devalue my investment as it will make my property less safe, noisy, polluted, destroy native wildlife, limit hunting on my property, make egress difficult. The train is not a necessary transportation option and only benefits pockets of foreign business interests at the expense of local tax payers. It is too expensive to ride, flying is cheaper. I don't want Houston theives making my home accessible.	Refer to GN-4, NR-5, PN-3, RF-2, SC-19, SS-1, SS-12, SS-21, TR-10 and VA-1.
Michael Groff	3/9/2018	Website	I strongly favor this proposal. I do feel that it needs to be strongly regulated to maintain the highest standard of safety.	Refer to SS-4 and SS-5. The Project must comply with all applicable regulations as described in Section 3.16.2, Safety and Security, Regulatory Context.
Charles Grotzke	2/7/2018	Website	The project should be approved because it will provide a faster and safer route between Houston and Dallas. It is a privately funded venture that will not only create high paying jobs; it will pay taxes as well.	Comment noted.
Jeremy Grzywa	3/9/2018	Website	I fully support this effort and welcome any infrastructure development that helps to improve transportation options in the city of Houston.	Comment noted.
Sarah Grzywa	3/9/2018	Website	I fully support this effort and welcome any infrastructure development that helps to improve transportation options in the city of Houston.	Comment noted.
Gayle Gudger Grubbs	2/6/2018	Handwritten	Property at [...] within 1/2 mile of proposed route.	The property at [...] would not be directly impacted by the Project. The Project would travel over State Highway 90 approximately 1.3 miles to the northeast.
Gayle Gudger Grubbs	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Submitted By	Date Submitted	Submission Type	Comment	Response
			cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	
Jeanette Guerra	12/20/2017	Email	The High-Speed Train proposal will not work in Texas and will be a tax burden on all tax payers in the state. It will also destroy the natural habitat in Texas.	Refer to GN-4, NE-1, NE-9.
Jeanette Guerra	1/20/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The citizens of Texas did not buy and build their homes to have a noisy high speed rail line run through the quiet neighborhood and disrupt the natural habitat; nor is it right for the state to take property from the land owners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, ED-1 and NV-1.
Bobby Guinn	1/31/2018	Email	I would like to go on record to be in opposition to the Texas High Speed Rail.	Comment noted.
Bobby Guinn	2/2/2018	Email	I would like to express my opposition to the Texas High Speed Rail. This Rail system would cause a Great Burden to Many well established families , Long time Texas residences who make their living off the Land whether by farming Ranching or other Business. It will destroy the Homes and lives of so many Texans. This project will cause ill effect of the Land environmentally , It will harm wild life. It will remove the right we have to hunt on our own Land. The list could go on and on. Please consider this as my voice in opposition to the Texas High Speed Rail.	Refer to NE-1, NE-9 and RF-2.
Bobby Guinn	2/5/2018	Email	I would like to express my concern and opposition to the Texas High Speed Rail. As a Land owner and resident of Ellis County Texas I can tell you this project will have a devastating impact on the environment , On the communities , On hunters , Ranchers, Farmers. Land that has been in Texas families for generations taken by private enterprise claiming Eminent domain for a Land grab. Roads will have to be rerouted, Bridges will have to be built . and you can bet the people of Texas will have to foot the Bill for this through Taxes(and it supposed to be a Japanese owned system fully paid for by them). This Rail system will not work , Will not be profitable and end up costing Texans. In addition who will provide emergency response and equipment needed as well as training for this Rail system should the need arise. We have had one Federal Disaster Here with the Superconducting Super Collider let us not make it Two.	Refer to ED-1, GN-4, LU-2, LU-11, NE-1, RF-2, SS-18, SS-23, SS-26, TC-6 and TR-7.
Michael Gulino	3/5/2018	Website	I do do wish for the record to state that I do wholeheartedly support this project and what it stands for. If Texas is to grow, this high speed line needs to be built to allow the rapid movement of people from Houston and Dallas instead of going by road. I do know that many will be impacted by the construction of this system, but it will be for the greater good in the long term for everyone. I will suggest, however, that the Houston station be moved closer to Metro's Northwest Transit Center to allow for better connectivity to Houston's Central Business District, though the Northwest mall location would allow for expansion. The Transit center would be more ideal, however, if Metro decided to build an elevated rail line over Interstate 10, it could be connected via walkways to provide direct access to the buses that serve the transit center and to TCR.	Refer to GN-7, GN-8 and GN-9.
Ramesh Gunda	3/5/2018	Oral	Thank you. I'm Ramesh Gunda. I'm a transportation personnel. I had the opportunity a couple of years back to chair a transition (inaudible) and transportation committee for Mayor Turner. And we had the opportunity to look at all the transportation options we have and our needs. And I will tell you, we had to look at all the options we have on the table, and the TCR rail fits in that bill. We need to handle the growth; and one of the things you look at is, if you don't have an alternative, you may need to double up 45 based on the demand. And think about the devastating consequences if I-45 went double. So this could be -- alleviate that. And also, a couple of other things we need to look at is, we are looking at, you know, the (inaudible), airports. You can fly. And there's another alternative you can look at. And evacuation, when it happens, the (inaudible) is going to be dissipated. There's an opportunity you can send people out of Houston. And the location for the Transit Center, Northwest Mall, identified as the preferred alternative by TCR, and I think it's a great idea to develop that area. It will provide opportunities for more development and more improvement in Houston. That's all. Thank you.	Comment noted.
Calvin Gunter	2/20/2018	Website	I work in Europe a great deal and ride the trains there quite often. I would love to bring their public transportation system to Texas. However, it simply isn't feasible. As you consider your EIS, make sure that when you attempt to remove the automobiles on highways, etc. that add back the additional impact of having to rent a car or use multiple ubers, etc. once you get there. Our population densities in the cities and suburbs are exponentially different than in Europe, so walking isn't a viable option in Texas. Additionally, the public transportation systems are in their infancy versus Europe. High Speed Rail is the LAST step of improving our transportation systems in Texas - not the first step. This project will be woefully overbudget and underused for decades until the local public transportation systems are addressed. Spend your time and money there. Again - this comes from someone that spends \$4K-\$5K per year on regional transportation in Europe using primarily their rail systems.	Refer to GN-4, GN-6, NE-1, PN-3 and SC-22.
Xiaoyu Guo	2/15/2018	Website	It is great project, looking forward on it	Comment noted.
Pradeeband Sonita Gupta	2/5/2018	Handwritten	Too much noise is not acceptable. CLS and TCR are bogus, never explain anything.	Refer to NV-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Pradeep/Sunita Gupta	2/28/2018	Email	My property Address is [...] HSR want to build this high speed line in front of our Home than they have to buy our property. Too much noise Too much vibration High Visibility running train. House condition in the neighborhood looks like become zoo adventure(Animal do not know anything). Even in the USA animal are treated better than anyone else.	Refer to AS-1, ED-2, LU-7, NV-1 and NV-5. This property is approximately 315 feet south of Segment 5 on the would not be directly impacted by the limits of disturbance.
Raya Guruswamy	2/24/2018	Website	I support the project. It would remove a significant amount of vehicle traffic on I-45, improve travel times and be a massive economic benefit to Texas.	Comment noted.
Jerry Gustavano	NA	Website	I am very much opposed to the High Speed Rail. My church (Union Baptist) is in it's path.	Refer to SC-9.
Jerry Gustavus	1/30/2018	Handwritten	My property will be affected by the train but my major concern is my church, which is union Baptist, The church is 130 years old. I have been a member for 63 years. We are growing and have just completed a new building less than a year ago. We have been recognized as a historical site. We are next to the Ten Mile Cemetery (150 years old) which has been recognized by the state of Texas as a historical site. This is going to be a terrible injustice to the people of this area. We hope in some way this project is defeated.	Refer to CR-8.
Antonio Gutierrez	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. David Gutierrez	2/21/2018	Website	Let's build this train	Comment noted.
Hector Veronica Gutierrez	2/11/2018	Email	My address is [sic] and it seems that it is located 145 ft away of the HS railroad track. When I asked to TCRR they told me that my home is in the limbus because until the final EIS is released then they will know how to proceed with my property. Could you please confirm this information? For Sure I have no complains about the progress Of this project and the purchase Of land, as long as it be fair.	This property is not directly impacted by the LOD. The neighboring residence however, would be within 50 feet of the LOD, which the analysis has deemed a displacement. The residence at [...] is approximately 136 feet from the HSR centerline (track). This specific location would likely suffer adverse visual impacts due to the close proximity to the Project. The exact mitigation has not yet been determined for specific cases and will continue with negotiations between TCRR and the landowner. Mitigation measures can be found in Section 3.10, Aesthetics and Scenic Resources . Additionally, noise walls may be used to minimize impacts where it has been determined noise impacts will occur. The walls could be treated with vegetation to soften the look of the noise mitigation. If there are no noise impacts, trees or vegetation could be planted to limit the views of the Project. Please refer to Section 3.4, Noise and Vibration for impacts related to noise.
Kelly Guy	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. Joseph H	3/8/2018	Website	My hope is that you will Save Morgan Legacy Farm (located near FM 709 and 3194) by amending the proposed route. The Morgan Creek Ranch has be used by former YMCA Indian Guide Leaders and their sons to provide ranch awareness activities. Change the route!	Refer to LU-5.
Dung Quoc Ha	2/5/2018	Handwritten	I live around the old train right now, and whenever the traingoes by, a lot of noise. I have a baby 3 months and a baby 2 years old, they always cry when the train goes by. The problem is about high speed, it is gonna make more noise and have bigger impact on the environment. I saw the model, the train model and compare with the model of the car. I think the rail is almost higher than any house, and the vibration and noise will be bigger. It is not my problem if I live far from the train but I live very close. I don't want my children to grow up with nightmare and they cannot forget about the train. Please think about our children and have better idea.	Refer to NV-1 and NV-7.
Eric Haas	2/10/2018	Website	I support this project as an investment in improving our nations infrastructure. The project is a win-win as it will be privately funded and provide valuable mobility. The rail line will provide an option to travel on I-45, the nations second deadliest interstate. The project will also have positive environmental improvements including producing less than 10% o the CO2 emissions vs. driving. This project will be a valuable alternative to the current 4 hr drive and the 90 minute trip time would beat downtown to downtown travel times of flying. I encourage the FRA to support this project.	Comment noted.
Craig Hablinski	1/17/2018	Email	The route as originally touted was supposed to follow the utility corridor yet at the end it was shifted 3 miles west to keep it off of Hegar ranch. The reason Texas Central did this was politically motivated since Mr. Glen Hegar is the Texas Controller and at the time was a Texas senator. Since Waller has a historically minority population I would expect the EPA to defend the minorities over Hegar ranch.	Refer to BA-8 and EJ-1. EPA serves as a cooperating agency on the Project. FRA considers and responds to any and all comments made by EPA and other cooperating agencies as part of their review of the Final EIS.
Craig Hablinski	1/17/2018	Email	In reviewing the DEIS, I do not see where the increase in sound is being addressed. Case in point, In Waller County off of Hegar road there are roughly 8 houses including my dads that will now be less than 700 feet away from the proposed route. Based on calculations provided by the FRA sound manual, These house will now have to endure 65 db of noise every 30 minutes. This will make these homes unlivable. I would hope that my EPA would defend David against Goliath and force TCR to either mitigate the sound by placing the train in an enclosed tunnel or have them move the train back to the actual utility corridor which runs through Hegar ranch adjacent to the transmission line that is already in existence.	Refer to NV-1 and NV-10.
Craig Hablinski	1/17/2018	Email	With the Reason Foundation(a proponent of high speed rail) stating that this project could lose over \$500 million dollars a year. I think at this time the "no build option' is the only appropriate decision by our EPA. I would think high speed rail should be perfected in the Northern States where it is more likely to succeed before is attempted in Texas. We are already seeing the ramifications and cost overruns of the California High Speed Rail experiment.	Refer to GN-3.
Craig Hablinski	1/31/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. The current ridership projections are flawed due to the fact that they are not taking into account the future decrease in business travel due to the acceptance of video conference technology by major business. I currently work for Schlumberger which is the biggest oil service provider in the world. In the last several years we have been installing video conference rooms at our sites at a cost of \$30, eee per room. In Texas as the oil and gas industry goes so does the rest of the state so if companies are video conferencing from Houston to Dubai they certainly can conference from Houston to Dallas. This reduction in ridership needs to be taken into account in the ridership projections to determine if this train that only has one destination is still feasible.	Refer to GN-2, GN-4 and NE-1.
Craig Hablinski	1/31/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route does not address the real congestion problem which is from downtown Houston to the Woodlands and from downtown Houston to Conroe. The proposed route is not going anywhere near the Woodlands or Conroe. Yes TCR has created projections of how many riders travel between Dallas and Houston but based on comparable studies done by TXDot, TCR numbers like any propaganda produced by TCR are highly inflated The Houston to the Woodlands and Conroe area does not need a projected study it is something that any Houstonian can visibly see now. If this were strictly a government financed project (which it inevitable will become once TCR financially fails), the government would try to alleviate the biggest traffic problem Houston has regardless of the cost. If this project moves forward it needs to go through the Woodlands and Conroe.	Refer to PN-3.
Craig Hablinski	1/31/2018	Email	In reviewing the DEIS, I do not see where the increase in sound is being addressed. Case in point, In Waller County off of Hegar road there are roughly 8 houses including my dads that will now be less than 7ee feet away from the proposed route. Based on calculations provided by the FRA sound manual, These house will now have to endure 65 db of noise every 30 minutes. This will make these homes unlivable. I would hope that my EPA would defend David against Goliath and force TCR to either mitigate the sound by placing the train in an enclosed tunnel or have them move the train back to the actual utility corridor which runs through Hegar ranch adjacent to the transmission line that is already in existence. Craig Hablinski	1/31/2018	Website	As currently proposed this train will shutdown Hegar and Joseph road in Waller County. This will force any required medical providers required by the homeowners on Joseph Road to travel several miles out of their way to provide medical assistance. This fact is particularly troubling to me because my dad who has required medical assistance due to a heart attack in the past lives on Joseph road. The value of this train has not been justified and is not worth the negative impact that it is going to have on emergency services. The only positive option at this time is the "no build option.	Refer to TR-8. Approximately 2,100 feet of Hegar Road would be rerouted to FM 1488, approximately 1,300 feet to the north. Joseph Road would also be rerouted to FM 1488, approximately 3,000 feet to the north. Refer to Table 3.11-29: Roadway Crossings in Waller County Study Area for a list of roads that would intersect with the Project and the corresponding Project Footprint pages for these roads. Refer to Table 3.11-51: Waller County Roadway Modifications for more details about the reroutes for these roads.
Craig Hablinski	2/5/2018	Oral	Hello. My name is Craig Hablinski. I'm going to talk about one thing with this study, and what really jumps out at me is how this -- they're relying on the business traveler to take this flight -- to take this train. And by 2040, and what I'm seeing, is I don't think there will be any business travelers by 2040. The reason I say that, I work for Schlumberger and, you know, we're the biggest oil service provider. In the last two years the technology for video conference rooms has gotten so good that we have started putting video conference rooms in all our big campuses. And that's what Exxon and all the big companies have started doing. And, you know, this is the oil industry. So I'm kind of concerned that the loss of the business traveler has not been taken into account in these projections. A video conference room, what it is basically is you have tables that are in a V, you have a screen, and you have people on the other side, and, I mean, you're -- it's like being in the same room. And it's \$30,000. It's not \$12 billion or \$16 billion. It's \$30,000. And if we can have conferences between Houston and Dubai and Houston and Bogota, we absolutely can have a conference between Houston and Dallas. And as the big companies go, the other companies will follow, and that's what we're seeing because we're putting them in now. So if you take out the business traveler, all you have is social travelers that will be riding this train, and that's what they're going to have the rely on for this to be profitable is just social travelers, like the gentleman that said he wanted to come to a car show. And I kind of find that odd, you're riding a train to see a car show, but, you know. So you have social travelers like him. You have the social travelers that are going to go from Dallas to Houston like to see the Cowboys, see the Texans. That only happens once a year at the most. So, I mean, I hope that you-all will go back and look at this, because that's what we're seeing is the business traveler of 2040, that's not -- it's not going to be there. You know, there's just not going to be with us it's really you really have to fight to be able to take a trip. They don't want us to take trips. So that's my two cents. Thank you.	Refer to GN-2 and GN-4.
Daniel Hablinski	2/25/2018	Website	The draft EIS does not properly address sound mitigation in the rural areas. Texas Central has frequently stated that they will have trains traveling in both directions at the same time. Therefore the magnitude of sound should be determined by two trains passing in both directions simultaneously. The existing level of sound when I sit on my front porch is no louder than 20 db. If this train is allowed to proceed, the FRA should protect taxpayers like myself and insure that the sound level is not increased. Basically I am saying that I should be able to sit on my front porch and not be subjected to anything more than 20 db. Even if this requires Texas Central to spend the money to entirely enclose their trains in a tunnel when the train will be closer than 1 mile to an existing home. In my case the proposed route has it running within 700 feet.	Refer to NV-1.
Daniel Hablinski	2/25/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. At the rate video conferencing and communication technology is improving(i.e. cell phones) there will be no need for business travel within the next 2 years. Case in point, my son works for an oil/gas fortune 500 service company. In the last 2 years they have been installing video conference rooms in all of there major company sites around the world. These video conference rooms cost roughly \$30,000 per room and allows them to conduct meetings between Houston and Dallas as well as Houston and Dubai, etc. The technology has gotten so good that physical travel is now discouraged by management. This same installation trend is currently being done by other companies such as Exxon. Therefore this fact alone makes the economical viability of this proposed train impossible. The train will have to strictly rely on leisure travelers for viability and at \$190 per ticket one way that is simply not going to happen. At this time the "no build" option is the only option that makes sense.	Refer to GN-2, GN-4, NE-1 and SC-3.

Daniel Hablinski	2/25/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason. As currently proposed, it would do nothing for relieving the daily traffic congestion to and from downtown Houston to the Woodlands and downtown Houston to Conroe. Contrary to what Texas Central would have people believe via their unverified cell phone data, not that many people travel from Houston to Dallas daily, even TXdots data supports this fact. Texas Central should be forced to run their train right down the existing I45 corridor. If the current 19th century train technology cannot run that route then they should improve the technology. Also if this is going to be such a profitable endeavor for Texas Central then they should be able to afford the additional cost of running down I45. They might be able to work a deal with TXdot so that Texas Central would not have to purchase any land. If technology will not allow them to run down I45 then the "no build" option should be chosen.	Refer to BA-9 and PN-3.
Daniel Hablinski	2/25/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The draft environmental impact study does not address how the presence of a 200 mile per hour train within 700 feet of my existing home is going to affect my home owners insurance policy premiums. For that matter will an insurance company even be willing to insure my home or simply drop me as well as my neighbors. 3. If there is some form of sabotage and the train derails on my property and the railroad then goes into bankruptcy causing the insurance company to cover my losses through my homeowners policy. All of the above brings into light that the insurance company might just decide that I am now too much of a risk and simply drop me as customer. For the reason above, I highly recommend that the "No build" option is the proper option at this time.	Refer to SS-12, SS-13, SS-21 and TC-3.
Janet Hafercamp	2/12/2018	Email	I HAVE LIVED IN THIS NEIGHBORHOOD ALL MY LIFE. I REMEMBER WHEN THE NORTHWEST MALL FIRST OPENED ITS DOORS. THIS IS A HORRIBLE IDEA. AS IF WE DON'T HAVE ENOUGH TRAFFIC AND CRAP AROUND US WITH ALL THESE SNOWFLAKES AND YUPPIES MOVING IN AROUND US IN OUR SURROUNDING NEIGHBORHOODS. MOST PEOPLE WHO LIVE WITHIN 10 MILES HAVE BEEN HERE FOR 50 PLUS YEARS. THIS IS A BULLSHIT IDEA. I FOR ONE AND I MIGHT BE THE ONLY ONE, BUT I WILL BE OUT THERE PROTESTING THE MINUTE GROUND BREAKS. CAN'T HANDLE THE TRAFFIC WE HAVE. NOW THIS WILL JUST ADD TO THE PROBLEM. NO. NO.	Refer to GN-7, GN-9 and TR-5.
Lori Hagaman	2/5/2018	Handwritten	I am against the project as TCR has not shown an actual need for the project. Request an extension for review the Draft EIS as 75 days is not enough time to review and research the 5600 plus page report. FRA has no safety regulation in place. Needs to be an emotional impact study done in communities in the path of train. More research on noise impact as it has a huge impact on our life. Active pipeline has been excluded from the report, why?	Refer to EU-2, NE-1, NE-9, NV-1, PI-3, PN-3 and SS-4.
Calvin Hagar	2/6/2018	Website	I am a resident of The Woodlands and work in Downtown Houston. I am a strong supporter of the Texas Central Partners bullet train between Houston and Dallas. I have ridden bullet trains in France and Japan, and it is obvious that such trains greatly improve the transportation infrastructure and economic development of the areas they serve. Also, there is no disruption to the rural lifestyle along the routes. I would prefer the Houston end of the line be in downtown Houston.	Refer to GN-6, GN-7, NE-1 and TR-4.
Bruce Hain	1/13/2018	Email	Like the XpressWest plan before it, the Texas Central high speed rail proposal is incredibly inept. Now, after lengthy and no doubt costly consultations and review by the FRA and AECOM, and hiring of a civil engineer with a household name to lead the corporate promotions effort, none of the contributing experts has seen fit to clue Mr. Kieth in on the folly of this proposal, which simply has no chance of realization as a going concern. While Shinkansen is arguably the high speed rail system by which all others are measured it may not be the best alternative when planning for development in certain instances and locales. And this may explain why, when offered bids on developing service between Ft. Worth and Dallas by TxDOT, Kieth turned them down. (!) It is my belief that having a number of stops between the two cities combined with a one-seat ride through Dallas to Houston would approximately double the number of passengers using the service at-and-through Dallas. And I doubt I am alone in this. This defect alone is enough to justify totally scrapping and rethinking the plan, and it should have been done a long time ago. The preferred 240-mile Texas Central route suffers from the now common affliction of high speed design in the Western World - it is circuitous, avoiding civilization where possible while requiring the continuous grinding around of extreme wide-radius curves at speed - thus enabling the high speed but wasting it on the lengthy alignment, and failing to serve the populations in the places avoided, because they are too developed - a characteristic that in Texas Central and several other recent high speed entries has been taken to a point of ridiculousness. If built, this Preferred Alternative will be a permanent disincentive etched in stone and steel to upgrading and expanding the proper high-speed alignment between Dallas and Houston. (see below ((it's not a matter of taste)) It would essentially double the intrusiveness often complained of concerning rail projects, with a costly and duplicative new-build alignment that is ten miles longer than the existing one. The proposed Dallas end station appears particularly unpleasant and difficult of access. It is remote from anything visible in the yet-vague detailed drawing where an apparent pedestrian bridge is labeled in the side panel as "Systems". Is the bridge to have a conveyor-belt-people-	Refer to BA-1, BA-2, BA-9, BA-10, ED-1, GN-6, GN-7, NE-1, PN-3, TR-3 and TR-4.

			<p>mover? Of course the Houston station alternatives are all in the wrong place, regardless of the brilliant rendering by architecture student Kiana Karimi. The very idea of using any but the splendid Dallas Union Station - thereby bringing it to complete revival including the main waiting room - is folly that makes you wonder what's going on and who's behind it. All arguments asserting business interests and the need for more sh*tty-geometry trolley tracks pale vis-a-vis the fact that a prestigious high speed service would put this landmark back on the map as a public showplace rather than some private venue for conspicuous consumption.</p> <p>Disclaimer: I am unable to find any information on the current structural particulars of Union Station and it's surrounding trackage other than what is available from aerial photos and very limited photos of the interior, but am convinced - if by instinct only given a number of other current passenger rail SNAFU's I'm intimately familiar with - that a feasible and aesthetically improving solution exists that would allow high volume long distance service to co-exist with DART at this location, benefiting and allowing further expansion of both - even if it means two levels of tracks.</p> <p>The point is to work up and solidify plans that include high volume long distance and higher-than-current volume local service, coexisting and conveniently interfaced on location, while taking advantage of this legacy that cannot now or foreseeably be equaled or reproduced. This might possibly be undertaken as part of the project currently known as Core Express. Armed with the said particulars and adequate preparation I would argue against any engineer or interested carrier entity, that a minimum of four completely grade separated tracks from Ft. Worth and the capacity to accommodate the traffic at Union Station, along with that of the Houston service, is not only doable but a necessity. It is only a matter of taking the time to divine the the best solution, truly a revelatory and rewarding process - and most interested parties are suspiciously unwilling to undertake that.</p> <p>It has been increasingly difficult to ascertain exactly (or even loosely) what is meant by environmental documents found at the FRA website and Texas Central is no exception. I am still unable to pin the one alleged Grimes County station down to any particular location, as with most of the intended route, and have found it quicker to consult an article in the Dallas Business Insider than to struggle on with the 53 PDFs plus the additional documents on other pages. What page among the reams of PDF's put forth as the Texas Central DEIS would show a reasonably easy-to-view illustration of the Preferred Alternative with it's route and specific geographical context, with stations?</p> <p>The layered structure of the detailed drawings makes them so time consuming to scroll through as to discourage further investigation. They should have been photographed by FRA and put in a readable, navigable context for public consumption.</p> <p>There is no legible key, for identification and location of the reams of detailed drawings. I suspect the detailed drawings represent more than one route but without specific labeling and a key showing each drawing's position along whatever route is being represented this is certainly not evident at all.</p> <p>The FRA has failed to work up intelligible titles for the fifty-three PDFs comprising the DEIS (only part of the December publishing dump related to Texas Central) that would differentiate one from another, and they have failed to make clear the addresses of the web pages where their various documents are located - particularly in the recent email notification of DEIS availability. The usual environmental documents page seems to have two Texas Central projects but this is not the case, forcing everyone to examine both, in trying to find the DEIS. The FRA's tendency in this direction may end up being subject to legal review at some point if it not remedied quickly.</p> <p>The towns along the proposed alignment for a Dallas-Houston high speed line hereunder described for you perusal - some of them quite sizable - are railroad towns. Their existence in many cases was due the railroad's presence, and their daily life and economic well being were to some degree dependent on railroad-enabled businesses at one time or another, and scheduled passenger service.</p> <p>But now that is a distant memory - and what do they have to show for it?</p> <p>An antiquated and intrusive infrastructure based on the post-war business formula of investing as little as possible while illicitly boosting revenue through things like triple-stack freight, heavy axle loads and deferred maintenance - with massive derailments and frequent accidents at grade crossings.</p> <p>These carriers haven't voluntarily removed a grade crossing since before WWII - and far from Keith's optimistic claim of a special form of eminent domain reserved for railroads the opposite would seem more appropriate in the interest of the public good, i.e. to use it against them. After all, many of these things were originally land grants. It doesn't help when the FRA publishes absurdities such as the following: "To be located immediately adjacent to but outside of the freight rail right-of-way would require that TCR construct a barrier wall between the freight rail tracks and the high-speed rail tracks for safety purposes. This is to prevent derailment of one service from colliding with the other service. safety purposes. This is to prevent derailment of one service from colliding with the other service. The cost of an approximately 240-mile barrier wall exceeds TCR's purpose in that the Project would not be economically viable."</p> <p>There is not much news about the railroads here except the not-infrequent grade crossing accidents and notable massive derailments - and the failure of Texas Central to include an appropriate string of cities and towns in their plans is a symptom of their SNAFU-influenced and thus myopic view of American railroading. It is elitist, inasmuch as the nascent railroad entrepreneurs, tired of the daily grind of getting to the</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>airport, would expect an "uninterrupted" non-stop ride to Houston which would be a fatal misapplication of the passenger rail mode; and it is un-American, in that inclusion of these cities and towns is mandatory - not just because it's right, but because it is a requirement that is essential to generating the necessary passenger draw.</p> <p>Alternate Proposal DALLAS-HOUSTON LINE USING U.P. AND B.N.S.F. RIGHT-OF-WAY, CONNECTED BY TUNNELS AT CORSICANA AND HOUSTON</p> <p>Certain of the express stops shown might be substituted through skip-a-stop service at various scheduled times. Thus, a stop at Palmer rather than Ferris; North Zulch rather than Normangee; and Tomball or Rosslyn Road rather than Willowbrook. The College Station High Speed Connection (red) would require 46 miles of very-low-density right-of-way for its new-build alignments, with the last 4.6 miles in College Station running along existing UP right-of-way having room for four tracks. This would need to be upgraded for grade separation. There is a total of twenty-six stations contemplated along the 230-mile alignment between Dallas and Houston excluding the two terminals. Between Ft. Worth and Dallas, five new stations are contemplated along the 31.4-mile UP right-of-way. An extensive and expensive upgrade would eliminate all 29 grade crossings including the double-track diamond at Ft. Worth. Such an upgrade has probably been seriously considered, since any new route would involve still more numerous and insurmountable conflicts - besides claiming precious space where it's not necessary. Lateral straightening does not appear likely owing to the built-up nature of the area, but with a minimum four tracks and complete grade separation the line could be made easily the quickest conveyance between the two downtowns, and with the five stops. Regarding the Ft. Worth - Dallas segment: the post-war delay in removal of grade crossings has now become the status quo, and "light rail" lines having tracks in the middle of the street (a conscious misuse of the conventional rail mode in other than the most limited, temporary instances) is a ploy used to justify the freight carriers' negligence in failing to address appropriate modernization. So the end result of such an upgrade as Ft. Worth-to-Dallas would actually be nothing special, given proper regulation and compliance with generally accepted 20th Century intentions, leading to appropriate 21st Century norms. The freight carrier would benefit from the upgrade.</p> <p>FIRST NEW ALIGNMENT GOING SOUTH FROM DALLAS</p> <p>The first 4.3 miles in Dallas going south is designed for several tracks and largely grade separated as is. The main north-south line is entered before crossing the Trinity River and would need a minimum four-track upgrade with grade separation to accommodate the stops at Joppa, Hutchins and Wilmer. The new alignment shown above (blue) has existed in the vast majority of its length before, almost exactly as shown, though with probably a single track. (The lines in the pictures generally represent two tracks.) Besides the shortcuts shown, the old SP line had a secondary generally represent two tracks.) Besides the shortcuts shown, the old SP line had a secondary alignment running about 120 feet to the west, seen also in Corsicana with one bridge still extant, and this line is used here to connect the shortcuts. The name Goliad Circle is derived from a street name in the community, and a station there would serve as a bribe causing local values to soar. There are no built conflicts in the area of the picture and little that would be considered intrusive. The southern end of the existing alignment (white) would be shifted slightly west to achieve a speedy and unintrusive reuniting of the two lines going south.</p> <p>MINIMAL CORSICANA CONNECTION</p> <p>At Ennis the existing route runs off on an 7-mile tangent in the wrong direction, and this state of other-than-optimal modern alignment obtains uninterrupted except for a jog west to reach Corsicana and back again - for the next 44 miles. It is surprising that no connection currently exists between the UP and BNSF lines at Corsicana because the route from Dallas (59.2 miles) is five miles longer than the one thus afforded, although the route through Waxahachie is probably faster currently, and has fewer grade crossings. The connection shown is three quarters of a mile long. The old connection once followed the route of high-tension wires visible below the connection shown in the picture. It was part of the western sub-alignment of the old SP line mentioned earlier, and would require some 3 miles of extension north to get a smooth connection to the existing line.</p> <p>CORSICANA PASSENGER TUNNEL</p> <p>Here the optimum plan gets heroic - although nothing on the order of the Chinese. The Corsicana tunnel would be extended from a more-or-less tangent line running south 15 miles from Ennis (blue). The two-track, single-tube tunnel with approximate 35' outside diameter would start opposite the reservoir dam shown (red) with low cover rather than a cut, and continue in bored section to a location east of the proposed Corsicana passenger station on 7th Street, where boring of the approximately 3.5-mile bored section would be initiated. The tunnel would continue south past the proposed station in an alignment just under 7th Street, to another station outside of town at Corsicana Crossing Boulevard, with the entire tunnel being 5.75 miles long. Using the grading scheme shown, top of rail would be at least 200' below the vast majority of the mostly residential buildings the line crosses under or goes by in passing through the bored section (It passes under three houses and one church as drawn.) with the two grades working out to about 1.3 and 1.6 percent. (descending and ascending, from the north respectively) It's possible a center track with its loading gauge straddling those of the other two could be used for nighttime freight including</p>

			<p>double-stack, but wheel maintenance would want to be strictly enforced. The proposed abbreviation between Ennis and Kirvin 24 miles south of Corsicana, would take three miles off the old 44-mile route, allowing direct high-speed service and the two below-grade stations in Corsicana, with an additional new station further south.</p> <p>COLLEGE STATION The College Station High Speed Connection is shown here entering the existing UP line 4.5 miles south of the College Station terminal. Besides the terminal station there are nine additional stops shown within College Station, to insure that anyone traveling to points near or on the Dallas-Houston rail axis would be able to get there fastest by taking the train.</p> <p>LONGEST STRETCH OF SEPARATE HIGH SPEED ALIGNMENT, 60 MILES A station, Richards, is planned off the main high speed line where the College Station line that exits and heads northwest (the curves of which have not yet been drawn) turns out, but not at the analogous location on the College Station line exiting and heading southwest, which exits the main line by way of the existing one. Otherwise no additional stops are planned for the high speed connection due to its sparsely populated route. A somewhat analogous stop might be achieved at connection due to its sparsely populated route. A somewhat analogous stop might be achieved at lola (i - ninth letter of the alphabet o-l-a) by having some trains run past the the high speed connection on the old line, then reverse at the station and enter the southwest-headed connection by way of the closing leg of the wye formed where the connection leaves the old main line, as shown - which would be 2.5 miles long - the closing leg that is.</p> <p>ZOOM-IN ON DOBBIN No effort has been spared in the search to find the most unintrusive route possible along the fifty-six miles of this longest stretch of separate high speed alignment, which takes 3.3 miles off the original route - as the relatively tight zig-zag at upper left, with points of tangent intersection (as shown) 1.25 miles apart, will attest. Invisible in this picture is the deep cut located right above the Google Earth logo through which a pipeline, that along with high tension wires defines most of the proposed 56-mile alignment, passes. The three tunnels totaling 1.7 miles in length, with two of them flanking the open-air Dobbin Station, would probably all require excavating from above, though there is some possibility the southernmost one could be bored. The two tunnels flanking the Dobbin express stop would need to have provision for four tracks in case of future developments, and so would add some considerable breadth at this point. The northern one nearly crosscuts a picturesque farm operation directly north of the station, quite closely, but otherwise there are no built/structural conflicts along the 56 miles that I can detect.</p> <p>The telltale markers for possible County Road and Plank Bridge stations have betrayed my intentions regarding the apparently frequently used BNSF freight line crossing at the proposed Dobbin station. While this is a touchy subject and impossible to assess without complete investigation it is my believe that a physical configuration could be developed that would benefit the freight carrier logistically in spades - rather than monetarily by payments for trackage rights - to achieve at least partial realization of the very desirable passenger service that would be afforded by this line. The high speed station at Dobbin would generate considerable demand for service to Conroe, with many of the suggested stations showing signs they have been used as passenger stops before. There are ten suggested stations between Dobbin and Conroe. Likewise, the longer leg to Navasota and on to College Station would revive a very useful service made more so by availability of the high speed line at Dobbin. Navasota would benefit by being tied in to both ends, after decades with lots of tracks and trains but no passenger service.</p> <p>HOUSTON TUNNEL CONNECTION The BNSF line coming in from the north (left) would be connected to the UP crosstown line by way of a tunnel under Mangum Avenue, with a station stop at the Northwest Mall. There is plenty of lateral play given four tracks along the incoming line for achieving a somewhat deep grade configuration to pass well under both the freight track(s) and a sluiceway located directly past them, and this would insure quiet operation as the alignment passes close by residential properties directly to the south. The tunnel is shown here as having three simple curves with 2500' radiuses (save the one point-of-intersection node) and the northernmost of these would bring the alignment quite close to the apartments on each side successively, in the interest of tracing a straighter path - but this would have to be optimized before any thought of realization. The tunnel alignment would propagate to three tracks north of the Northwest Mall station and continue with three passenger tracks to the end of the line.</p> <p>HOUSTON OVERVIEW The crosstown UP freight line was originally a high speed line with 120' right-of-way and a curved alignment having a minimum radius nearly four miles long, but now it has a grade crossing every three hundred feet. There should be provision planned for six tracks, running from the intersection of the Mangum Avenue tunnel to a point 4.25 miles east of it, where most of the freight traffic would exit. No flyover or grade separation at this point would be required in relation to the three passenger tracks since they would cross to the south of the line at Mangum Avenue and the freight traffic would turn out to the north. Thence one and a half miles to the main station.</p>

			<p>HOUSTON STATION</p> <p>The station approach is quite long and odd looking since it zigs then zags - due to existing buildings and configurations I have not had the inclination to disturb. The buildings nonetheless affected are part of the Houston fire and rescue company's vehicle maintenance operations and as such could probably be negotiated on with the city having the incentive of a beautiful new train station. The projected station expansion (fully in keeping with the odd appearance of the original) would add two platforms and two tracks, both of which might gain egress to the east by way of a connecting line that requires alterations to one of the bridges of Interstate 10. Thus there might someday be a station with seven tracks, of which four enjoy through running. Using the existing bridge leading under the University of Houston Downtown, the second track from the bottom might be used, with the crossover, for nighttime freight runs to avoid a reverse move. A possible passenger improvement that comes readily to mind in this regard would be a speedy trip to Galveston (about fifty miles) with revival of their main station there. But the grade separation issues of the connection would have to be dealt with (Two different options exist Galveston-wise for the connection, with one bridge still in place.) as well as negotiations concerning many other improvements, with the railroad.</p> <p>The main entrance to the station would be by way of the concave box suggestive of some iconic structure and having curves derived from an earlier site plan, at lower right. Passengers would pass under the first two tracks from there to reach stairs and conveyances to the platform level, with end long access to most of the tracks. This would be located on a bridge next to the existing one over North Milam and Travis Streets, or on part of a replacement bridge. An additional bridge, at a higher level, would give access to the University's terrace overlooking the city, as shown. Access to the bottom platform is restricted to its first 250 feet by the Interstate access road, so would require intensive provision for vertical access in a confined area. A wide tunnel would continue under the remaining four platforms, with ramps extending west. The existing Amtrak/Southern Pacific station - built when they sold the station's land to the post office - would also be equipped with a tunnel, to provide access at the west end, with ramps rising to the east. Alterations in keeping with the design of the original 1934 platform shed would be required to accommodate the wider platform. An overarching glass shed or iconic structural tent or tents might help in achieving the desired tony train station feel. The station is extremely long at 2800' but nothing on the order of those in India. As shown, there are five tracks and four platforms 35 feet wide. With Dallas high speed service only half as frequent as currently proposed the station would not seem empty and would serve to occupy the property before someone gets a hold of it. Certain maintenance and cleaning operations could be located in the station saving on the need for facilities elsewhere. In future years, two not particularly short trains might occupy a single track for boarding, served respectively through the two entrance points, and depart in opposite directions.</p>	
Aubrey Haines	3/9/2018	Website	I fully support the proposed high-speed rail connecting Dallas to Houston irrespective of the relatively minor environmental impacts it may introduce. This kind of revolutionary travel will reduce heavy traffic and congestion on IH 45 and would be economically beneficial to both cities and it's users.	Comment noted.
Anton Hajek	2/16/2018	Website	I think this is a fantastic opportunity to provide high speed travel, with quick turn around, and easy passenger access. I believe there to be a low environmental access. What I have seen the company shows a strong concern for the environment they will operate in.	Comment noted.
Anton Hajek	2/16/2018	Website	I think this is a fantastic opportunity to develop fast travel, that would be convenient in access and have a fast turn around. What I have seen of this company they display concern for the environment they operate in. I suspect this travel will be more like boarding a bus than an airplane.	Comment noted.
Anton Paul Hajek III	3/8/2018	Website	BUILD THIS TRAIN It is a win win situation. Expansion will take plan on existing lines,. They are environmental conscious. I want a ride!	Comment noted.
Karen Hale	2/6/2018	Handwritten	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. Stefanie Halvorson	2/19/2018	Website	<p>Why are the citizens not being allowed to vote on this issue? Since when does our elected officials get to decide this issue on our behalf without our final vote of approval? Giving so much right of way to a PRIVATE company to benefit a few does not add up. The route does not make sense! Having the train have a half-way point of College Station, a very popular destination for sporting events and a way for college kids to travel easily, would make more sense. But even changing the route does not seem to validate this project. What kick-backs to the communities it runs through are there? Is there a tax break, electrical credit, improvements to existing roads/bridges, more funding to law enforcement and first responders buried somewhere in this back room deal with officials? Nothing of this operation has been very transparent except for the fact that the planners seem to want the common citizen to think it's useless to raise their voices and be heard; instead just wanting us to think it's a "done deal" and let them have their way. I do not agree with a LOT of what I've been seeing, and can't really think of where the benefit is in losing more of our farmland to a project that does not give back to the hard working people that worked that land.</p>	Refer to BA-7, BA-8, ED-1, ED-2, GN-4, GN-7, LU-11, NE-1, PI-1, SC-19, SS-23, TR-2 and VA-1.
Barbara Hamala	3/4/2018	Website	<p>This is the biggest Sham and Scam ever. If this is a PRIVATE venture, and the venture has less than 5% of the necessary money to fund it, why are we talking about it at all? Why would we split a major portion of Texas in half for something that doesn't make a positive impact for EVERY Texan? Ultimately, when this boondoggle fails, EVERY Texan will have to support it or pay to tear it down. Either way, it's causing a lot of upset, not to mention our money and time and true distress fighting it. Sounds like some folks plan to get even richer than they are (Bob Echols?) using friends in high places. Shame on them!</p>	Refer to GN-2, GN-4, NE-1 and SC-19.

George Hamilton	2/6/2018	Letter	<p>STOP THE JAPANESE BULLET TRAIN</p> <p>Summary: The united opposition Of Texans from the farms and ranches, as well as the big cities, can drive a stake through the heart of the Japanese bullet train. A Japanese company must not be allowed to carve a line in the Texas heartland using eminent domain on behalf of Japanese profits.</p> <p>Introduction My name is George Hamilton. I am a landowner in Grimes County, near Plantersville, a ranch that my family has owned since the late 1940s. The current proposed route for the Japanese bullet train is about 200 yards west of my property line, but that could change as the route is still fluid. The proposed route would also cut right through the farm in Ellis County that has belonged to my aunt's family since the late 19th century. So I'm feeling the impact on two fronts.</p> <p>In addition I spend a substantial amount of time in France where I use the TGV high speed train and am familiar with its strengths and weaknesses. In fact I used a bullet train 18 times in the last twelve months.</p> <p>I will speak against this flawed project.</p> <p>The Japanese Bullet Train — from Houston to Dallas to Nowhere This project has been billed as the Texas High Speed Rail project. Indeed it is no such thing. It is a proposal for a Japanese bullet train, modeled on the Japanese high speed trains. It's not Texas technology, nor Texas ownership. It's simply a Japanese bullet train designed to slash through the rural parts of Texas between two city centers. Why Texas? Because we have a relatively flat terrain, and the Japanese desperately need a place to show off their technology since they've been losing the race for high speed trains being built around the world. In other words, they are using rural Texas as a test case for their technology with the support of big Japanese banks and the Japanese government, Japan, Inc. Why on earth is that important to Texas, and what will it eventually cost all Of us?</p> <p>The Bullet Train's real impact on farms and ranches The proposed route carves through family farms and ranches indiscriminately, responding to the needs of the Japanese engineers who have devised the route.</p> <p>A bullet train has a dire effect on the land, the surrounding areas and landowners way beyond the immediately affected rancher or farmer. We are talking about a major swath of land that will be cutoff permanently. It's not at all like the trains you know.</p> <p>The bullet train Will consist Of two tracks, and a road alongside for access and maintenance. Set back from the train tracks will be high fences on each side of the track. For security reasons and to prevent livestock and animal accidents, the fences will either be eight feet tall with additional barbed Wire, or ten feet tall. There will also be no grade crossings Of the train tracks in order for the trains to reach high speed safely. Any crossings will have to be either tunneled under the tracks or bridged over the tracks. Therefore pastures on one side of the tracks will not be accessible from the other side of the track. Indeed there will be few opportunities to cross from one side of the tracks to the other. All will be on major roads to take advantage of the tunnel or bridge crossings. The inconvenience is almost impossible to imagine. And it will be permanent.</p>	Refer to ED-1, LU-11, NE-9, NR-6, NV-1, TC-6, TR-8 and TR-10. Despite their higher speed, HSR trains are shorter and generate less noise and vibration than typical freight trains. The noise and vibration assessment was carried out in accordance with FRA guidance. The assessment methodology, criteria for impact, and locations of impacts are contained in Sections 3.4.3, Noise and Vibration, Methodology, 3.4.2, Noise and Vibration, Regulatory Context, and 3.4.5, Noise and Vibration, Environmental Consequences , respectively.

			<p>Environmental Issues - Not Addressed</p> <p>The deep scar caused by the Bullet Train will divide the eastern side of this bullet train track from the western side. Livestock will not be able to move, except by road. Wildlife groups of deer, hogs, coyotes, and even raccoons will be permanently divided. There will be no migration for our wildlife and if you 100k into the future there will be isolation of habitats and a shrinking of the gene pool. The barriers used by high speed rail are a much harsher challenge for our Texas wildlife than even the interstates. This effect is long term and real, but not addressed by any environmental reviews. The Japanese Bullet train sounds high tech, but its effect is very local for the people caught up between the fancy stations.</p> <p>perhaps the most important problem posed by the high speed rail is the sound issue. If you live two miles from the east-west rail line that parallels Hwy 105 in Grimes County, you can hear every freight train that passes by. Those trains carry a maximum speed of about 45 miles per hour. When I was young, my grandparents had a house in Palmer Texas, in Ellis County, less than two blocks from the train tracks between Houston and Dallas. In those days, the trains would roll through town at about 55 miles per hour and everything in the house would shake because of the weight of the trains and the sound would stop conversations. The Japanese bullet train will operate at much higher speeds and when it screams by you its sound and vibrations will spread far beyond the neighboring farm or ranch. That environmental effect has not been addressed by the Japanese bullet train apologists because they won't have to live with it, like people in Grimes county and Ellis County and all the other affected parts of rural Texas.</p>	
George Hamilton	2/6/2018	Oral	<p>Hi I'm George Hamilton. A landowner here in Grimes County. I also spent a lot of time in France: and I've taken IS trips on high-speed rails within the last year: and I'm against this project. It makes no sense. It makes no sense financially. I think we all know it who here in this room thinks that this can possibly make any economic sense? We got one person. Who thinks it makes no economic sense? For the record: let's just say that all but one hand in the entire room went up. Apart from the question of the economic sense: the question really being posed tonight has to do with the Environmental Impact Statement. I think: in all honesty: the whole logic says that the least Environmental Impact Statement-- impact on an incremental basis would be to put this thing right up the middle of 1-45 because you have the connectors: you have the population base. So if you weren't going to do a no build, the only logical thing would be to do 1-45. That would absolutely have the minimal impact. It probably is much more expensive: though: but there's no way you can say that that wouldn't have the least environmental impact of all the available options, and that's the base thing being discussed today. In addition to that: I think you have three or four different issues you need to raise. One is the question of the wildlife migration. Someone mentioned it before. But you know you think of this as a railroad: don't think of it as the east-west railroad along 105 _ This is a very different animal. It is two tracks: it is also an access road: and on either side of it you're going to have an eight-foot fence with barbed wire on top, or a ten-foot fence, because if that's the only way they are prevent wildlife and pedestrians having access. If that's the only way you can run these trains at this speed. So you have to have that. Once you have that: you have cut a gash across Texas: and you've divided all of the foot traffic wildlife from one side to the other so your gene pools over 50 or 60 years is going to change. And this is something that's going to be forever. It's going to be a long time before it goes away _ So that's one thing. Second--noise _ The noise and the sound is a considerable issue. I spent a lot of times close to these trains, because it's the nature of my job that I end up there: and I can assure you personally that sound is an issue that is severely minimized in this report. The third issue is going to be the question of safety. Who's going to look at this? Look at the Federal Railroad Administration. They've done such a good job with Amtrak that we've had numerous fatalities over the last year _ They're having a hard time keeping up with 150-year-old technology. Seriously: what are they going to do into the future? This is a whole new set of technology. They don't understand it. [sic] are they going to find the people? Who's going to be responsible? Who's going to cover the insurance on this? Who's going to be able to deal with the accidents? All these issues. Is Texas itself going to have to come up people to look into this? These are the questions that I don't think been addressed at all in this issue. So if I had to say: in addition to what you've heard about the people you need to talk to, you need to talk to everybody in the state legislature: everybody in the state senate: your congressmen: but at some point you may have to form groups and go down and talk with the Japanese consulate. Why? Because this is not Texas high-speed rail This is a Japanese bullet train. That's what it is. It's a Japanese bullet train It's not Texas-made: it's not Texas designed: it's not Texas engineered. You just have a couple of country club boys in Houston and Dallas who put their faces on it.</p>	<p>Refer to BA-9, GN-4, NE-1, NR-2, NR-6, NV-1, LU-11, SS-12, SS-13, SS-18 and SS-21.</p> <p>Local and State emergency responders would retain authority over accidents occurring within their jurisdictions.</p>

			bullet train 18 times in the last twelve months. I will speak against this flawed project. The Japanese Bullet Train - from Houston to Dallas to Nowhere This project has been billed as the Texas High Speed Rail project. Indeed it is no such thing. It is a proposal for a Japanese bullet train, modeled on the Japanese high speed trains. It's not Texas technology, nor Texas ownership. It's simply a Japanese bullet train designed to slash through the rural parts of Texas between two city centers. Why Texas? Because we have a relatively flat terrain, and the Japanese desperately need a place to show off their technology since they've been losing the race for high speed trains being built around the world. In other words, they are using rural Texas as a test case for their technology with the support of big Japanese banks and the Japanese government, Japan, Inc. Why on earth is that important to Texas, and what will it eventually cost all of us?	
Michael Hammersley	2/16/2018	Website	I think it is absolutely crucial and essential to build the high-speed rail. Not only will it serve a great and very needed purpose of high-speed transportation between two huge metropolitan areas that have huge traffic between them for many reasons, but also it will be a testament to the United States simply keeping up with the rest of the developed world to have these high-speed trains that most of the rest of the developed world already has and we none. These high-speed trains will eventually be built anyway, but the sooner the better. I think the rest of the developed world that has these trains looks upon the US and really wonders what is wrong that we can't get it together enough to build such a useful transportation system that obviously has the potential to cut down on congestion and on pollution from cars. On a personal note I simply would love to be able to travel to Houston on high-speed train with low-cost and getting there efficiently. I actually would love to live in Houston but it would not be very easy for me to just move there. The city is simply a great and beautiful city, but also is only about 30 minutes from Galveston and I would personally use this train as often as I could.	Comment noted.
Delilah Hanberry	2/5/2018	Handwritten	I live within 1000' of the freight train tracks. How is this new construction going to affect me and my property values?	Refer to VA-1.
Delilah Hanberry	3/9/2018	Email	White Oak Falls Subdivision (Highway 290 and Huffmeister, Houston) I am a ten-year home owner in the White Oak Falls Subdivision (Highway 290/Huffmeister, Houston). This proposed project will affect over 750 homes in this subdivision. Texas Central MUST not be allowed to take-over one of two detention pond closest to Highway 290. In 2017, the subdivision flooded heavily even with both detention ponds. If Texas Central takes one detention pond, White Oak Falls will become a natural disaster area, but man made, with all existing homes flooding and ruining us all! This project cannot happen here.	Refer to FP-1 and WW-2. The Project near the White Oak Falls subdivision is parallel to Highway 290 and is on viaduct.
Stephanie Hanberry	2/5/2018	Website	TCR should compensate home owners right outside the line of construction and not just the homeowners who are losing their homes. I am going to be the first house left standing facing the HSR. It will literally be 12 feet outside my front door. Nobody from TCR has bothered contacting me other than to force me to sign a waiver so they could survey my land or go to court. They have spoke to my neighbors whose homes they are taking and made them offers of 3x market value. I have received nothing.	Refer to ED-2 and LU-7.
Jacob and Natasha Hancock	2/6/2018	Handwritten	We are very concerned how this railway may affect first responders access on/to roads. How this, should it fail, become a major tax burden to us and the surrounding areas. How this will affect livestock and other sensitive pets that live outside as well as wildlife. There has been no assurance or explanation how this railway will truly succeed and benefit this area, seems like Houston may benefit and we will be stuck with the clean up during and after. There are no privately funded HSR in the world; they all end up to be government funded. Why on earth would we want to be stuck with that kind of burden knowing exactly what ends up happening every single other time? This just sounds like a disaster waiting to happen that will yet again be swept under the rug once it fails. And the people that didn't want it in the first place will be the ones that have to deal with the consequences.	Refer to GN-4, LU-11, NE-1, NR-5, SC-19 and SS-23.
Ricky Handerson	2/22/2018	Website	Who's dumbass idea was it to make a train from Dallas to Houston. 1, who would need to travel so fast they couldn't take a plane, 2, it would unnecessarily cut through land and screw up the roads, 3, have you thought about the dangers of floods or animals or traffic getting in the way, 4, who has the money to do this.	Refer to BA-12, GN-4, LU-9, NE-1, PN-3, SS-2, SS-15, SS-16 and TR-8.
Ray Hankamer	2/7/2018	Website	This is a wonderful project and it is long overdue. Japan for example has had high speed bullet trains since the 1960s. Unfortunately there are some people who are against anything new, just because it is new. This trains will be non-polluting, unlike the cars and airplanes which currently spew dangerous particles into the air all the way from Houston to Dallas and back. I strongly support this project.	Comment noted.
