John D. Hannsz	3/3/2018	Website	As a resident since 1955 with in 3 miles of the final stop in Houston (AKA Northwest Mall) I'm against this project. 1. This is a private project and should not have the ability to claim "Right of Eminent Domain". 2. If I was raising cattle on a large partial of land and they wanted to split it down the middle with a rail road track, I would not be a happy camper. Thanks For you efforts to end this Land Grab boondoggle. John D. Hannsz 7107 Alderney Dr. Houston, Texas 77055	Refer to ED-1 and ED-2.
Charlotte Haralson	1/30/2018	Email	I would like to receive updates concerning areas in grimes county. is there somewhere im able to get maps i was not able to attend the last meeting.	Refer to PI-8.
Owen Hardy	2/7/2018	Website	Thank you for the opportunity to comment on this important project. As an advocate for high-speed rail my entire life - and as an American whose business has taken me around the globe where I've been able to sample the high-speed rail systems of many other countries - I commend the state of Texas for being the first to consider a privately financed, high-speed rail system. Given the projections of continued	Comment noted.

			population increase and continued environmental harm done by conventional airline and automobile-based transport systems, the choice seems obvious. We must invest in high-speed rail. To turn our backs on the Texas project is to consign Texans to decreased mobility and increased transportation-caused pollution. Texans have always thought big: Let Texas lead the way!	
Huie Harkey	3/9/2018	Website	There is not enough benefit justifying this train	Refer to PN-3 and SC-19.
Brian Harkins	1/29/2018	Email	The proposed high speed rail is the last thing Texas residents need. The time it would take to travel on the rail is the same as it is on a plane. You still have to depart and arrive at a station. So there is no time saved. The fact that the rail spans 10 counties should be reason enough to ditch the idea, but you insist on developing even more Texaslands. I live near the grand parkway and it has already caused climate change. Extreme heat, extreme cold, and severe winds. This will have the same effect on a larger scale. In addition to the cost it will shut down the current transit because of construction, and once completed will increase the population which is already at capacity in these major cities. Traffic Will not decrease; it Will increase. You also have no supporting infrastructure to support the rail, which would need to be completed later at the cost Of taxpayers. The proposed project does not benefit the people only corporations.	Refer to AQ-1, BA-4 and GN-4. In regards to Grand Parkway, climate change is influenced by larger continental and national phenomena, not by a localized road network. The global contribution of greenhouse gases by every source, whether it is residential, transportation, or commercial sources are implicated in climatic rise in temperatures. Such effects cannot be isolated or ascribed to one project or one singular source.
Susan Harmeyer	2/16/2018	Website	This project would be absolutely fabulous for Dallas and Houston and surrounding areas. We need to be progressive and move forward on this project. Our cities can benefit in many ways economy growth and very attractive for upcoming Super Bowl events. We will stand out thought out the world.	Comment noted.
William Harmeyer	2/16/2018	Website	Our cities need this project to go forward. Benefits are numerous. Growth in economy will help pay for it.	Comment noted.
Marcus Harold	2/25/2018	Website	This railroad will be a disaster for our community and I am completely opposed to this boondoggle. The chances of it ever turning a profit are vanishingly small and the investment would be better served in expanding existing highways and freight rail services to handle the amount of vehicle and truck traffic. This rail which would cross right next to my property will introduce significant noise and travel issues as we have to cross the line for property access via road and to our pastures on west side. Please do not approve this disaster in the making for rural Texans between Dallas and Houston.	Refer to BA-4, GN-4, LU-11, NE-1, PN-3 and NV-1.
Bond Harper	2/8/2018	Website	I am very excited to see this project coming together! I think the station locations in both Houston and Dallas are well situated to take advantage of the current available space. Particularly in Houston, that area has been very depressed for quite some time and I hope this brings a needed density and revitalization. While I currently live in California, I travel frequently to Texas to visit family in Dallas, Houston, and Austin. We fly to either Houston or Dallas and I would love to not have to rent a car and spend hours on the freeway to go visit family in other cities. I hope high speed rail becomes an option while my family is still alive.	Comment noted.
Rebecca Harper Thompson	2/6/2018	Oral	Thank you. I'm Rebecca Thompson. I have been a proud resident living in Waller County for about 15 years. Brought the kids from the city, moved out here. We live only on two acres, but we love it. We are not in the direct path of the rail, but it affects our whole area. I'm also third-generation Texas through maternal DNA. Those people fought to keep their land, and they worked it well. Like many of you, probably, I have DNA through my paternal side in this case going back to the Revolutionary War. Those soldiers did get land by fighting, and they held onto it. It is evident that rural Texans living out in the rural area care about their land, their water, and their guns. Rural Texans also care about their vehicles. We happen to love our trucks, or whatever it is we choose to drive back and forth in. This high-speed rail is bound to be a disaster. We are being bamboozled by Texas Central. They are not showing any economic viability, and the version being marketed is like what they do in Hollywood. The numbers are very unrealistic; and as it's been pointed out, this is not a public necessity. On the business aspect, from my family, we have been located as tenants at 9950 Hempstead Road, which is part of Northwest Mall, for the past six years. Before this, we were at Interstate 10 and Old Katy Road. And if you happen to know that area, that was taken by eminent domain, but at least it was taken for TXDOT to work on expansion of Highway 290, meaning the State of Texas got that land. Of course, Highway 290 is not completed. But there is progress. I go that way at least five times a week. This land-grabbing endeavor for the proposed rail is outrageous. And for the eager, want-to-be bullet-train travelers who want to travel above ground and go faster than what they could go in a truck but slower than what they can go in an airplane, my suggestion is to go invest in an obsolete jet pack and add a Hemi to it. This technology is already outdated and it's just not going to be viable. The only choice for the FRA is no-build at all. And please extend the period for the public comments. Thank you.	Refer to NE-1, PI-3, PN-3 and TC-2.
Bobby Harris	2/3/2018	Website	I am Texan. However for the last 20 years I lived in the Northeast (Boston) and mainly on the West Coast, Az., CA., WA., OR., and those areas love their rail transit. Everything is so well connected. Not having a car or not wanting to drive is a no brainer because of the Well thought out transit system. Then you come to Texas. It takes 12 hours to drive across the state. All the light rails system are basically useless because they don't connect to enough part of the cities because they don't have commuter rail services to get to the outlying areas where everyone usually lives. And none of the commuter trains connect the most congested and closed cities, ie Austin and San Antonio, Houston and Galveston, and the entire Rio Grande Valley.	Comment noted.

			<p>We have the metrosto support ridership and the traffic jams to prove that we need rail alternatives, but the red tape and dipshits we elect can't see why metros around America have figured it out and Texas hasn't.</p> <p>Light rail connects to commuter railsand to high speed rail and buses . This web of transit completes commuters needs. How high speed rail for Texas is the paradigm shift this conservative state needs to have their eyes open to our awesome topography and landscapes that scream for railways to be laid across them and get people out of their lifted obnoxious dullies and get them on trains going 150 mph to their destinations.</p> <p>The most important thing in life you can give someone is your "time". And the hours sitting in rush hour traffic is wasted every year and so many families see so little of each other because of traffic delays and congestion with no alternatives.</p> <p>Please build this HSR from Dallas to Houston. Then keep going all the to Monterey Mexico, backup to Laredo over to San Antonio and Austin then back up to Dallas. Incorporate all the major metros in our state. Get the connectivity this state needs for future generations. When I was a kid I used to have to hitchhike to go see my friends in a few counties over. Build the HSR and let the future generations ride a bullet train to go visit their friends a couple of counties over.</p>	
Cody Harris	1/29/2018	Oral	<p>Hello. My name's Cody Harris. I am 100 percent opposed to the high speed rail. Not only is this a gross abuse of eminent domain power. Eminent domain granted by our Constitution is supposed to serve the overall good of the public. This serves the good of those in Houston and Dallas, and that alone; not the people of Navarro County. Not the people of Freestone County. I want to read to you-all something that I noticed in the little handout that we got where it asks what impact will this project have on ag lands. It says, "Farm lands within the ten-county study area constitute approximately three percent of the total acres of all farms in the state of Texas", so to say, You farmers are rendered insignificant on the total impact of this project. It then goes on to say, "But don't worry. You can find a replacement easily in this area and throughout the state of Texas." I'll tell you guys, you cannot find a way to replace a hundred-year-old farm ground or ranch land where your granddaddy fought and--the sweat his labor, and you have those memories. You can't replace that. I don't care where you go throughout the state. You know, as a professional real estate broker, I served as an expert witness on cases that deal with eminent domain and property valuation. Just because this thing might not go through your property, don't think for a second that this won't affect your property value. If it's a half mile that way and you can see it, your property values are going down. I will fight to stop the high speed rail in the Texas legislature. Thank you.</p>	Refer to ED-1, ED-2, LU-2, PN-3, SC-19 and VA-1.
Cody Harris	1/31/2018	Oral	<p>Hello, my name is Cody Harris. I'm 100 percent opposed to the high-speed rail. We shouldn't even be at this meeting 'cause it shouldn't make it this far, because there's no question that eminent domain does not apply in this circumstance. I want to point out this little piece of paper that everybody was given by the Federal Government. Number 17 says, what impact will this project have on agricultural lands? Their answer, the Federal Government to you, is farmland within a ten county study area constitutes approximately three percent of the total acres of all farmlands in the State of Texas. So if you're a farmer or rancher, no worry, you don't matter. Then they go on to say well the project will convert ag lands to transportation use. The analysis dictates that agricultural capacity is available within the southern area as well as the State of Texas. So if this affects you, you can find somewhere else. Let me tell you something Federal Government, you cannot replace 100 years of family history. You cannot replace the blood, sweat, and tears somebody's granddad put into a place and they want to pass on to their kids, and their kids, and their grandkids and the next generation. In my professional life I've served as a combination commissioner, I testified on property valuations and I want to tell you guys, even if this high-speed rail doesn't go through your land, if you're within eyeshot of it, or earshot of it, you're property tax -- your property values -- are gonna tank. And what's gonna happen to county tax revenues when your property values tank? They're gonna go down. Then you're gonna see tax rates go back up. And it's just gonna go on and on a continuous cycle the bad things that are gonna happen if this high-speed rail goes through. If you choose to send me to the state legislature as your representative, I promise you I will fight tooth and nail to make sure that this organization does not get eminent domain power. Thank you.</p>	Refer to ED-1 and VA-1.
Darlene Harris	2/6/2018	Handwritten	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. Jessica Harris	1/26/2018	Website	I would LOVE to be able to go from Dallas to Houston and back without having to drive or fly - faster than I could go by bus. With the time saving I could spend more time in Houston. I love train travel anyway but this would be a trip I could take frequently, which I can't do now.	Comment noted.
Jessica Harris	2/27/2018	Website	I am a senior who lives in the panhandle but has friends, family and my home church in Houston. I do not fly. I cannot drive at night. To take the bus requires a minimum of 13 hours. I could take the bus to Fort Worth, stay there overnight, take Amtrak to San Antonio, wait at the station through the night until the early morning train to Houston arrives - this process takes close to two days. How much easier it would be just to get to Dallas and take the bullet train. How much more often I could go to Houston, how much more time I could spend there. It would be a godsend to me.	Comment noted.
Elbert Harrison	2/16/2018	Website	Please see included attachment for my thoughts on the project, thank you very much! I am writing today to express my concerns regarding the high speed railway currently being considered to connect Dallas to Houston. I am not a proponent of this proposed project, and I would like to highlight my reasons as to why I feel this way. My wife and I lived on the Eastern	Refer to NE-1, PN-3 and SC-19.

			Shore of Delaware and Maryland all of our lives. Until recently, we enjoyed the quality of our lives in the relatively isolated location, in a rural setting. The area has become inundated with retired people from the metropolitan areas of Philadelphia, New Jersey, Baltimore, and Washington D.C. in recent years. These people have continuously driven up the cost of living, complained about the lack of infrastructure and services, and have let their liberal politics creep into the daily lives of the local population. Approximately a year and half ago, we decided that it was time to seek a better quality of life in a more southern region, an area that met our needs in several areas. We believe strongly in minimal government representation upholding our personal freedoms foremost above all, followed by a strong moral and ethical backbone to the general population. Southern values have appealed to us for quite some time, and after researching quite a bit of socioeconomic information as well as climatological history of the South, we decided to move into the Bryan/college Station area to continue the pursuit of happiness. We have been weighing out the decision to purchase real estate in the rural area of Grimes County since we arrived here. After many hours of riding the county roads in the area and seeing so many "Stop the High Speed Train" signs, we started researching the high speed rail proposal information. Based on our findings, we are currently renting our home and waiting out the results of the proposed project, and I cannot say that we are happy with our status. I would like you to know that we do not believe that this project is a good idea. I base this opinion on the fact that it is NOT essential to anyone's needs. People's quality of life and personal investments are in jeopardy due to this proposal. There are already several existing types of infrastructure in place that meet the needs of all of the people identified as the benefactors to this project. If you are to support this, you will be outweighing the convenience of some over the personal freedom of many others. I firmly believe that this is in direct conflict with every single Texan's personal beliefs. Please be aware that we will be watching the proceedings on this proposal in hopes that we will be able to purchase a home sooner rather than later, and that we will be showing up at the voting booths down the road to express our approval or dissent on the outcome of the proposal accordingly. Sincerely, Elbert E. Harrison III	
Michael Hart	2/18/2018	Website	This is a great project that will serve as a template for adding much needed infrastructure across the US. The HOU-DAL absolutely generates the demand for this to be a success.	Comment noted.
Elizabeth Hartmen	NA	Website	I live 4.8 miles and am very much against it!!!	Comment noted.
Elizabeth Hartnett	2/28/2018	Letter	I live 4.8 miles and am very much against it!!! I AM OPPOSED TO HIGH SPEED RAIL! Keep Texas Central OUT of Madison County!	Comment noted.
James Hassell	2/6/2018	Oral	I am for the rail. I think it will build out tax base and help with the boom to Grimes County. We have more unpaved roads than other counties around. This will help get those paved. I look forward to being able to go from Dallas and Houston in 30 to 40 minutes. I think it is hard to educate people about something that will bring a big change. I think it makes it harder for someone to be for change. Change is inevitable. I know that. But I am for this because we need the boost for Grimes County.	Refer to TR-7.
James G Hassell	2/6/2018	Handwritten	I think the High Speed Rail would be great for Grimes County. The tax revenue, the revenue from the construction of the railroad would be a tremendous boost for Grimes County. Most people are against change and I understand that but that is similar to sticking your head in the sand.	Comment noted.
Jaime Hastings	2/22/2018	Website	I would love to have the bullet train that way I could visit family in Houston a lot more	Comment noted.
Julie Hasty	3/5/2018	Website	I do not want the HSR to be near my home. Imminent domain is insane and will more than likely be the way most of the land ends up obtained. I think this is a waste of money and will not be utilized as claimed.	Refer to ED-1 and ED-2.
John Hatler	1/10/2018	Email	I support building this line. Having spent 6 hours on a return journey from Houston recently. 90 minutes would be a breeze.	Comment noted.
Suzanne Haveman	2/27/2018	Website	I strongly support the Dallas Houston bullet train. I am a supporter of reliable public transportation and getting cars off the busy roads and highways. I support a much larger train system throughout Texas.	Comment noted.
Carol Hawkins	3/9/2018	Website	My community White Oak Falls will be directly affected by the high speed bullet train. I strongly oppose the train since about one third of community will be destroyed while the remainder of properties value will be devalued greatly. In addition, vibration will directly affect foundations, as well as noise, increased traffic congestion, drainage issues will be impacted, etc. The cost vs. value added is distorted. Hundreds of acres of family owned farm/ranch land will be adversely affected. The high cost of travel on the train will limit ridership and lack of convenient parking at both destinations. Property owners voices as to negative impact needs to be heard loud and clear.	Refer to GN-4, LU-3, LU-11, NV-1, NV-5, PI-1, PI-7, TC-5, TR-8 and VA-1. Traffic impacts are discussed in Section 3.11, Transportation and drainage issues are discussed in Section 3.3, Water Quality .
Rachel Hayden	2/28/2018	Website	As a small business owner in Dallas I am in full support of the high speed rail project. I look forward to the economic development that will occur as a result of this project. It will open up opportunities for me and my firm.	Comment noted.
Greg Hayes	1/29/2018	Letter	1. Concern about Texas counties, Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and Wheeler. Endangered species-bald eagles, monarch butterfly, wood pecker, passenger pigeons, red wolf, gray wolf, migratory game birds, wood stork, Texas horn lizard, Brazos water snake, Houston toad, white face ibis, interior least tern, Cagle's map turtle, Ouachita, rock pocket mussel, including wildflowers of large fruited sand verbena, Navasota Indian tresses. 2. Concerns about water shed impact of flow and drainage of water in flood event.	Refer to NR-1, NR-2, NR-3, NR-4, NR-5, SG-1, SS-23, WW-1 and WW-2. Passenger Pigeons are extinct. The Red Wolf and Gray Wolf are extirpated from Texas. The Monarch Butterfly is currently "Under Review" for listing by FWS and is not currently a protected species.

Kyle Hayes	1/29/2018	Letter	<ol style="list-style-type: none"> 1. Concern about Texas counties, Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and Wheeler. Endangered species-bald eagles, monarch butterfly, wood pecker, passenger pigeons, red wolf, gray wolf, migratory game birds, wood stork, Texas horn lizard, Brazos water snake, Houston toad, white face ibis, interior least tern, Cagle's map turtle, Ouachita, rock pocket mussel, including wildflowers of large fruited sand verbena, Navasota Indie tresses. 2. Concerns about water shed impact of flow and drainage of water in flood event. 3. Concerns about soil erosion. 4. Concerns about livestock reproduction due to vibration and noise. 5. Noise pollution. 6. Re-routing roads and closing roads that are easier access for emergency situation. 7. Electromagnetic currents that "High Speed Rail" radiates. 	Refer to NR-1, NR-2, NR-3, NR-4, NR-5, SG-1, SS-23, WW-1 and WW-2. Passenger Pigeons are extinct. The Red Wolf and Gray Wolf are extirpated from Texas. The Monarch Butterfly is currently "Under Review" for listing by FWS and is not currently a protected species. Other species mentioned were assessed in Table 3.6-8 except for those not listed by TPWD or FWS such as the Brazos water snake, Cagle's Map Turtle, Ouachita, and Rock-Pocket Mussel. The Project does not radiate electromagnetic currents. Rather, the electric current used to power the Project does generate electromagnetic fields (EMFs), as discussed in Section 3.14.1, Socioeconomics and Community Facilities, Introduction . As discussed in Section 3.15.4, Electromagnetic Fields, Methodology : "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels.
Jerry Haygood	2/21/2018	Website	I am against the use of eminent domain to acquire any properties by a private company. I am also against public funding of TCR, a private company. A better solution would be to have the route follow existing highway or power line corridors. The I 69 proposal was defeated as was a previous bullet train rail proposal. Hopefully, this project will fail also.	Refer to BA-5, ED-1 and GN-4.
John Haynes	12/22/2017	Email	One concern I have is the potential for this train line to be a terrorist target. From my understanding, this train will run at a speed in excess of 200 mph. If that vehicle were to derail, it would be an absolute disaster. I do not find it feasible to expect that the entire 200+ mile track can be secured 24/7/365, and it would not take much to create an utter disaster. One person with a will to do harm and no regard for his own safety could very likely succeed in creating a massive catastrophe. It would, of course, be worse in a populated area, but it would be bad enough in a rural area.	Refer to SS-2, SS-6, SS-7, SS-9 and SS-12.
Vickie Haynie	2/6/2018	Handwritten	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. 	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
William Hays	2/7/2018	Website	Go for it!	Comment noted.
Gene Haywood	2/20/2018	Website	This project needs to be completed as soon as possible. Not only will it bring many jobs with it but will also open up travel options unheard of before. I have been on the bullet trains in Japan and marvel at their ability and safety. I live in the DFW area my daughter lives in the Houston area. As I get older I am beginning to dread the 5 plus hour drive there and back. Having access to the bullet train would allow me many more visits than I am able to currently take or will be able to take in the future.	Comment noted.
Stephen Hazen	2/5/2018	Website	Will drainage for the impermeable surface created by the new rail lines effect private land along the corridor?	Refer to WW-2.
Mary Headley	2/6/2018	Website	I don't think it is right that my property value will go down for the proposed route through rural land. Put it down I45 or 290/Hwy 6 where the transportation sounds already exist.	Refer to BA-9 and VA-1.
Jackson Hearn	2/19/2018	Website	It is high time that America (and Texas) become less dependent on private cars and more so on public transport. I applaud this effort, and encourage the state to do all that is necessary to get this project started!	Comment noted.

Nadia Heffernan	3/5/2018	Website	<p>Overall I support the building of the high speed train between Houston and Dallas, however, I have a few reservations. Because it is a private company, the use of eminent domain is very problematic in my view. I know it is a difficult and complex issue, but I hope that the use of eminent domain can be avoided.</p> <p>Ensuring that the stations are in accessible and connected parts of Houston and Dallas will be critical. I like the choice of the former Northwest Mall as a station.</p> <p>Thank you.</p>	Refer to ED-1, TR-3 and TR-4.
Lawrence F. Hegar III	2/6/2018	Handwritten	<p>here's my list of why we need new forms of Multi-Modal Transit: 1) Texas is open for business; new people by 10,3000 coming to our state each day 2) Cities to dense to be have fluid mobility in and around urban centers 3) Monoculture of automobiles is on overgrown market less w/limited room everyday for transportation 4) Need inner city transit; But if has to be retro-fitted which is tough to do because of the way we developed our cities; they are not transit oriented developments (TOD) Difficult to do END O of STORY but I am for Progression List of NOT High Speed Rail (same as other people Blah-blah it won't Pay yoda-yoda) Real Reasons besides Financial 1) Ethically discrediting of our nation; its ripping apart the people of our nation; its dis(sic) rting to be fed half truths that are spewed from the media; You are creating a divide between amongst the citizens of country anal & government and the agencies that drive these projects; Stop lying to US Even More! so "QUIT LYING TO YOURSELF" I am a pro-growth pro-development driven person in my beliefs...But at the same token we must be able to take a step back, look at what we are proposing to do and give a fair analysis of it. Actors behind the project must for the sake of the greater good of the people, leave Emotions out of their base of reasoning</p>	Refer to GN-1, GN-4, NE-1, NE-9 and PN-3.
Ruth Heidi	1/31/2018	Oral	<p>Hello. My name is Ruth Heidi, and I'm a retired veteran, and a state retired veteran. I spent 20 years in the Service. I have been overseas, I have seen these trains, --Thank you. -- and they work overseas for a reason. When they get -- when you get to your destination, you can step off of that train, and within five minutes be across the town of Munich. And when you get to your other destination, you can still get off your train, and go somewhere else within five minutes, because they have the Intercity Transit that is safe. There is not an Intercity Transit in Dallas or Houston that will support the train like they're saying there is. It really isn't. I wouldn't get on a bus in Houston, not unless I was packing, and I surely wouldn't get on one in Dallas. So, -- You know. They're just not safe. But you can ride anywhere in Europe on -- from one train to the other, and that's why those trains work over there. They don't work here because we're Texans. We like our trucks. We like to go places, and be able to get -- when we get there to get where we want to go without having to wait 30 minutes to an hour for a train or a bus to take us somewhere else. So, this thing is going to go right through my property. They have been on my property four times, and ran off, when they were not suppose to be there. They told me at my doorstep that I had to sign their paper and accept their offer because they had eminent domain, which I invited them to leave. This place where it's going to come through our property has a low lying area when it floods and it rains real heavy. We support that That water that stands there supports things, like, blue herons, cranes, coots. We also have on our land bald eagles, and we have had a picture of a Canadian Linx, which I could not believe that we had one of those. But there are panthers all down in there. So, the wildlife will be affected. And there's a lot of deer. But most of all, they're taking away my right -- In which my parents have always taught me, land ownership in Texas is sacred. You can't touch anybody's land. So, they're taking away my right to build on my land a farm, a working farm, and teach my grandchildren how to live off of the land, how to raise cattle, how to store and raise their food, and store it properly, and not have to buy that poison stuff that they serve in the grocery stores. You know? All that fruit and vegetables you get, by the time you get them home, you're suppose to put it in the garbage, because it's already rotten. You know? And I can't do that. And that just really upsets me to no end. What makes them think that they have the right to do that, to take away my land, and take away my rights as a citizen of the United States, let alone a citizen of Texas. The other thing that I think that they need to really lookat, they need to turn around and look. What if we took their land, and their property, and make it a homeless shelter for veterans? UNIDENTIFIED SPEAKER: Amen. MS. HEIDI: I think that's what we need to do. Thank you. Bye.</p>	Refer to ED-1, ED-2, GN-6, NE-1, NE-8, NR-2, NR-3, NR-5 and PN-3.
Ruth Heidi	1/31/2018	Oral	<p>I fs me, again, but I'm probably going to tell you what I found in that EIS: because I broke the — the bandson it from Mexia -from Mexia Public Library. I spent four-and-a-half hours up there reading it, and it was very elusive. r ve read several Environmental Impact Statements before, and I've done environmental studies before So: that thing was very hard read: very hard to make any sense out of In fact: almost impossible to make sense out of: because you had A 7 dot da-da-da, and then you had some statements out there you had to go find where that referred to. But the one thing I did find that concerns me: and that was: they gave the history of Limestone County and Leon County: and they brought up the Little Flock Cemetery: they brought up the New Hope Cemetery: and the Personville Cemetery. And they talked about the Personville — also: the Personville historic marker there. And they talked about the historical values of the cemeteries, and the fact that they had contacted the Texas Historical Society. But they never said anything about how that train was going to impact the cemeteries. So, we know that it's going to have a lot of vibration. It's going to do? Knock over all of those old tombstones: cause them to crumble: or are they going to</p>	Refer to NV-5. Publicly available data was used to identify aquifer locations. Public water is supplied by available surface water including reservoirs and lakes as well as aquifers. If this area is not supplied water via an aquifer it is likely supplied via a surface water source.

			block our access to our cemeteries? Because I, for one: family buried in all of those So, that was one of my concerns. And the other is that they said there was no aquifer down on 828. I would like to know where we get our water from: because we really have some really nice water down there. So: you know: I just think that a lot of the stuff in there is not true. And they did not address anything on our property, although they went on it four times: and were called on it four times.	
Tristan Heinen	2/21/2018	Website	This project clearly avoids the most environmentally sensitive parts of the state and could displace many car trips! I hope that Texas' biggest innovation in the 21st century is allowed to precede without issue! Build this train!	Comment noted.
Mark Hempen	2/20/2018	Website	I am completely in favor of the high speed rail project. Please help us to put this new rail line into place. It will not close any roads and will greatly improve travel conditions between these two great metropolitan areas.	Comment noted.
Cam Henderson	1/31/2018	Oral	My name is Cam Henderson. I'm a property owner here in Limestone County: and some adjoining counties. You've been listening to everybody speak tonight: and I pretty well echo what everybody else is saying. I can't really see any benefit to any of the rural counties that this railroad is going to provide. You know, I'm concerned about a number of things. One is, I don't really see a necessity for this thing. I mean: how many Southwest flights are packed between Houston and Dallas? You know. Another thing is: my understanding: this will be the first one in the United States. So: we're basically going to be the guinea pig to see how the thing works. And there's a safety concern. You know: my grandson goes to Leon. It's coming right by the school. My understanding is that: you know, the studies that have been done, there's a vibration factor of 275 feet. But that's based on the soils of the area. Well: that's You know: we've probably got 150 different types of soils. How does it know what it's going to be? Another thing is: how many people live within the 275 feet: and they're not — At this point in time: is there only I mean: are you leaving them with having to - to bring a condemnation action? Because it's my understanding they're not offering anything for that. What type of setback lines are you going to have? Another thing is the impact on And last night in the State of the Union address: the President spoke of the new coal activity. In this area: there's extensive coal mining. Now: the mines are beginning to shut down in some of the areas: but the coal is still there: the lignite is still there. You're basically You can't mine through this thing with a dragline. So, if you think about the damage to the remainder: on the other side of the railroad: from wherever the power plant is: you basically turn that land into that may hold vast lignite reserves into grazing land. That's going to be its only use. So, you know, all of these things need to be, I think, considered. All in all: I don't see — I'm opposed to it, and I don't see any benefit to this area. Thank you.	Refer to BA-12, ED-1, ED-2, LU-7, NE-1, NV-5, PN-3, SC-2, SC-19 and SG-3.
James Hendrix	2/9/2018	Website	This entire project is a waste of time and money. How the heck does a "private" project have eminent domain to take tax payers land and ruin their farms and ranches that have been in the family for generations? I personally don't know one single person that would utilize this.	Refer to ED-1.
Janis Hendrix	12/18/2017	Email	Updates.	Refer to PI-1.
Thomas Anthony (Tony) Hennes	3/9/2018	Website	I have been involved in the history, protection and development of a rail for the past 25 years. As a former city official in Temple, Texas, I instigated the restoration of the 1910 Sante Fe Depot in Temple and the restoration of Amtrak service to the city. I have served as a member of TEMPO, an Amtrak Texas Eagle advisory group. I'll show worked as a television news man here in Texas for over 30 years some of that and Dallas. I am highly suspicious of a move of the Dallas terminal to a location that would be less desirable and suspiciously motivating the development of real estate in the area. Without convenient locations rail service which is already fighting an uphill battle will die. ... but that may be the intent. Please feel free to contact me I have served almost 50 years in media and government. I'm one of the few people on the planet who understands both.	Refer to GN-6, GN-7 and TR-3.
Sarah Hennessee	3/6/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Lynne Henrion	2/13/2018	Website	Houston High-Speed Rail Watch, a coalition of neighborhood leaders, has put forward a proposal for connecting the HSR station to downtown with METRO Rail or BRT (Bus Rapid Transit) running elevated over the main lanes of I-10. With a modest number of station stops along the way, this line could serve the neighborhoods it passes by while providing a speedy end-to-end link. The new line could tie in to the Green and Purple METRO Rail lines downtown, and into the Bus Rapid Transit (BRT) line currently under construction in Uptown. It could also become part of a commuting solution for residents of West Houston. This solution would provide connectivity to other parts of Houston, strengthen Houston's transportation network, and benefit neighborhoods. I support this proposal, and urge METRO, Texas Central Partners, the FRA, and TxDOT to work with Houston High-Speed Rail Watch to make their connectivity proposal a reality for Houston.	Refer to TR-4.

Lyndon Henry	3/9/2018	Website	The proposed Dallas and Houston endpoint station locations for the proposed Texas Central Railway (TCR) highspeed rail project are not acceptable for the adequate connectivity needed for rail passenger service. These station locations should therefore be rejected. The proposed Dallas station is approximately one mile distant from the central intercity/urban rail hub at Dallas Union Station, thus effectively eliminating convenient, accessible passenger interchange with other long-distance, regional, and urban services at this busy transport hub, which currently interconnects DART light rail, Trinity Railway Express regional passenger rail, and Amtrak train services. Any plausible design properly meeting public need must relocate this TCR station at Dallas Union Station for connectivity with other intercity and regional rail services. The proposed location for the Houston station (near Interstate Loop 610 and US 290) likewise eschews rail connectivity, and also violates good urban design principles, instead reinforcing outlying suburban sprawl development rather than reinforcing transit-oriented development in the urban core, which is served by both Amtrak and Houston's Metro light rail system. This is where any plausible design adequately meeting public need for accessibility and connectivity needs to locate this station.	Refer to GN-7, GN-8, TR-3 and TR-4.
Laszlo Hera	2/27/2018	Website	Please make the Dallas to Houston High Speed Rail happen. Do you not think we need to have such an efficient mode of transportation as Japan and European countries have? Shouldn't we be a leader instead of being behind in modes of transportation? Why are we so far behind? Do what is right for our state and country. Thanks.	Comment noted.
Rebecca Heredia	2/16/2018	Website	I am positively for this project. I think we need to really think about the positive influence that this will have on our community and State. It is time we moved into the current century.	Comment noted.
Eduardo Hermoso	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. 			interested in protecting the monarch butterfly, and so we applied and found out that, yes, we could become a part of this monarch butterfly preservation activity, I guess we could say in some ways. And then this is work through the State Soil and Water Conservation Board. And the regional area for us is in Dublin, Texas. It is also worked out of here in Navarro County. We have followed the guidelines. We have purchased the various seeds, we have planted, we have prepared the land, which took quite a bit of time, and then after it is planted, you have to protect the growing area. We have done that, too. This particular study will continue for a number of years. So all the things that I named that we did with the land, the cattle, the crops, the preserving of the livestock and areas, this will be no more. It cannot happen again in this area once that train crosses our land. As I have listened to everyone talk here tonight, the first thing that comes to mind when we say the facts that we're hearing are not true, another example of fake news, isn't it? We are getting it right here. I also would like to remind people that the train that is being worked on now in California that is never ending is very similar to this one. And guess what? The tax payers are still picking up the bill, billions and billions of dollars every year, and it's never-ending. I don't know about you, but I don't need anything that is brought from California to Texas.	Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures. The Monarch Butterfly is currently "Under Review" for listing by FWS.

Adan Hernandez	3/9/2018	Website	I am NOT on board with the bullet train. There are far too many environmental interruptions, and the cost is too expensive. Like many big projects, this contract will likely end up over-budget. We're better than this when it comes to spending money.	Refer to GN-4, NE-1 and NE-9.
Darrell Hernandez	2/26/2018	Website	I am concerned about the high speed rail project's proposed location in Navarro County near the intersection of 709 and 3194 - splitting the Morgan Legacy Farm. I believe the proposed location will cause significant damage to the environment, wildlife and the water shed of the Morgan Legacy Farm. I was invited as a guest on the Morgan Legacy Farm in 2014 when they hosted our 2013 class of the Salesmanship Club of Dallas - a civic organization committed to funding the Momentous Institute - a Dallas-based charity that aspires to promote social emotional health for all children across the United States, so they can achieve their full potential. My Salesmanship Class' experience at the Morgan Legacy Farm has helped solidify our commitment to raise funds for the Momentous Institute - and since then, our class (alone) has raised over \$2,000,000 for Momentous through ticket sales to the AT&T Byron Nelson PGA Golf Tournament and development efforts. In turn, Momentous has assisted thousands of at risk kids and families and trained thousands of educators and mental health professionals on best practices. I understand that the proposed route will separate the farm's lodge from its rodeo arena, stables and guest houses and I believe that the damage the proposed route will cause to the farm's charitable mission to host and entertain groups like the Salesmanship Club, the staff of Children's Hospital, the Boy Scouts of America and others would be irreparable. I would ask that the 5-7 mile portion of the proposed route scheduled to parallel 3194 be moved north of the existing power lines to lessen the harmful environmental, economic, charitable and historic impact the proposed route will have on the Morgan Legacy Farm.	Refer to LU-5.
Juanita Hernandez	2/20/2018	Website	I do not want our tax dollars spent on this train there is too much local needs for tax dollars to subsidize the bullet train this money they need to complete this needless transportation addition will quickly become a local drain on resources benefiting only the bullet train as local communities struggle to repair and improve their needs	Refer to GN-4.
David John Hernandez	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

			<p>their vision for the need of High Speed Rail in Texas.</p> <p>3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</p> <p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.</p>	
Lee Ann Herod	2/2/2018	Website	<p>As a Navarro County resident, How could someone who doesn't drive in Dallas or Houston ride this train who is 3/8 of a miles from my house? Can I go to Corsicana and get on this train? If your answer is NO.....THEN WHY WOULD YOU EXPECT ME TO SUPPORT THIS ? Thank You and I Will be expecting a reply back soon.</p>	Refer to GN-7 and SC-19.
LeeAnn Herod	2/2/2018	Email	<p>I am against this Bullet Train that is coming through Navarro County. This train will be 3/8 of a mile from my back porch. My question to you is:</p> <ol style="list-style-type: none"> 1. Why wouldn't you go right down the middle of Interstate 45 with this train? 2. Do the investors have all the money to support this project from finish to end? 3. If they do not have all the money, and they don't What will happen to the land they have taken from landowners? My fear is they are going to come in and start this project and never finish. A. We Will have lost our land B. We have an unfinished eye sore in Navarro County C. It will cost landowners & Tax payers thousands of dollars to clean up the mess. D. AND WHO CARES....because the investors are in Japan NOT Navarro County. 4. I raise show animals and the stress from the noise will have a huge impact on my show stock: What am I suppose to do since this is part of my yearly income that's going to be effected? 6. I have sensitive ears and noises of airplains and trains effects my health, that is Why I chose to live in a rural area. Who is going to pay to relocate me to an area without the noise and vibration of this Bullet Train or will pay my medical expenses this noise will have on my health? 5. On Hwy 22 there are many Bald Eagles that live on this train path, that composes a huge problem. How would you fix this? 6. I have sensitive ears and noises of airplanes and trains effects my health, that is why I chose to live in a rural area. Who is going to pay to relocate me to an area without the noise and vibration of this Bullet Train or will pay my medical expenses this noise will have on my health? 7. It is a concern to me on the time it will take an emergency vehicle to get to a locations because of all the rerouting caused by this Bullet Train. How do you plan on addressing this in court? You will be taken to court when someone looses their family member due to the fact of rerouting. I do not think you will win a law suit in the State of Texas. WE Are against this train. 8. We have a airline that operates from Dallas to Houston and can get a person to such destination faster than this train. SO WHY DO WE NEED IT? 9. If you are going to take peoples land GO REPLACE IT FOR THEM See YOU CAN'T DO That because WE ARE OUT OF LAND HERE IN NAVARRO COUNTY !!!! Is it fair that you up root 100 plus year family land to build something that is not needed? We are not talking about something like food supply, electricity, fuel etc We are talking about a way of transportation for people in Dallas and Houston to use THEY Already have SEVERAL ways to commute back and forth. We do not need this Bullet Train. 10. My last question for you 	Refer to BA-9, BA-12, ED-2, GN-4, NE-1, NR-1, NR-3, NR-5, PN-3 and SS-23.
Luis Herrera	2/6/2018	Handwritten	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> 1. Don Herring	1/29/2018	Email	The High Speed Rail will be an economic engine for our great state by offering an option to the already overcrowded freeways at speeds that are competitive with air. It's hard to imagine our great state not seizing this opportunity.	Comment noted.
Mary Carol Herrington	2/6/2018	Oral	I am Mary Carol Herrington. I am an investigative reporter and I am reactivating. And don't think I haven't busted some people; and I have and I will again. I'm also in emergency management on the area response team. That's a concern. I am a rancher. I raise coon dogs, Australian shepherds. My family helped found Grimes County. I'm a former small business development center. People, if you don't know where those federal funds are coming from, it's coming from the SBA. That's a fact. Check it out. I'm concerned about the sound. It's going to impact production of my animals, my livestock, my livelihood, because now I'm disabled. That's all the money I've got coming in, so I'm going to have to supplement. The electric lines are viewable. They're ten acres over. You-all are trying to say that the rail's not going to go there; that that's just only an idea. That you tried to go along the electric lines, that's a lie. Vibrations. I'm going to get the vibrations at my house. Don't think I won't. There's been four wrecks in two months. That's a whole nother issues. Crimes going to go up, land values down. And guess what those laborers are going to have? You're going to have prostitutes here. They ain't paying taxes. In the valley ask the oil workers. I was over the HIV/AIDS grant that is in that area. The oil workers, there is now a boom increase in HIV/AIDS. We don't need that. Wells Fargo crossed my land back in the 1800s. I'm not on a historic site. I am within two miles where you can get gravel. Guess what. You ain't coming. I do own guns and I will protect my land. I am also within that 200 acres that you think you're going to put construction on. Ain't happening here. Ask my neighbor when he tried to trespass on my land. He's still alive. I donate my last 26 seconds to Mannina. I tried.	Refer to BA-5, BA-8, GN-4, LU-11, LU-14, NR-1, NE-9, NV-1, NV-5, SS-8, SS-23, TR-8 and VA-1.
Mary Carol Herrington	2/6/2018	Oral	Quick and dirty. I forgot to say no build option, in case you didn't get it the first time.	Refer to BA-6.
Kara Herrstein	3/9/2018	Website	I am a frequent business traveler to both Houston and Dallas. Easier access between the two cities would make it easier for non-Texans to bring business to your companies.	Comment noted.
Janis Herron	2/5/2018	Handwritten	I live in the country for a reason as much quiet and calm as possible. Railroad this close to property--noise, commotion and disturbed countryside. Why not follow Interstate 45 already have acquired that ground. Quality of life.	Refer to BA-9 and NV-1.
Kenneth Herron	2/5/2018	Handwritten	How can this offer enough value to offset the devalue it will cause on property owners from Dallas to Houston? It's not a railroad so how can you use eminent domain? Of all the people it will effect negatively, it has absolutely no value at all. This is not a good program at this time!!! On top of the high speed rail project, there i a project, also negative, of widening Hwy 21. Between the two programs I have no idea how low the property value can go!!! Very negative programs.	Refer to ED-1, ED-2 and VA-1. Section 4.4.4.5, Indirect and Cumulative Impacts , in the Final EIS discusses projects considered for the Cumulative Impact Analysis and includes the SH 121 project.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact of Historical Sites, waterfowl and Hunting. An Army Corp of Engineers Section 4 permit reports there a 4 archeological sites and 2 prehistoric/historic sites considered for inclusion in the National Register of Historical Places. Also the route cuts through the north end of one of the major wetlands in the the region where duck hunting is vital tot the economy. The waterfowl and hunting will be diminished, if not destroyed by a high speed train. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to CR-9, NE-1, NR-1, NR-2, RF-2 and WW-2. Based on this comment, there is not a way to identify the specific wetland that is being referenced.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact on Public Safety. There are no emergency services in the counties between Houston and Dallas that would be able to handle a disaster with a train going 200 miles per hour. The high speed train would pass within approximately 580 feet of a natural gas pipeline compressor station. This hazard has not even been addressed. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to SS-12, SS-13, SS-18 and SS-23.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact of economic development. There are dozens of roads planned which cannot be completed if the train cuts through. Stifling all future economic developments in all counties along the proposed route.	Refer to SC-13.
Megan Hesse	2/4/2018	Website	The feasibility of this project is not there.	Refer to PN-3 and PN-4.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact on the Waller Independent School District. The proposed alignment will run through a large portion of Waller ISD's district. It will negatively impact the bus routes, which will cause Waller ISD to purchase additional school busses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project.	Refer to SC-6 and SC-7.
Megan Hesse	2/4/2018	Website	It will negatively impact the bus routes, which will cause Waller ISD to purchase additional school busses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project.	Refer to SC-6 and SC-7.
Megan Hesse	2/4/2018	Website	The feasibility of this project is not there	Refer to PN-3 and PN-4.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact on the Hewlett Packard Data Center. The proposed route will have very serious negative impacts on the property and the critical data center operations at the property.	Refer to SC-11.
Megan Hesse	2/4/2018	Website	The feasibility of this project is not there.	Refer to PN-3 and PN-4.

Megan Hesse	2/4/2018	Website	I am very concerned with the impact this project has on the City of Waller improvements. The future plans for the development of housing and commercial businesses will be greatly impacted due to it passing through the new Waller Town Center.	Refer to LU-3, TR-1 and TR-8.
Megan Hesse	2/4/2018	Website	The feasibility of this project is not there	Refer to PN-3 and PN-4.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact on flooding and drainage. Local environment impact includes the Spring Creek watershed where 5 creeks will cross the track of the HSR. And many other watersheds will be affected along the proposed HSR route. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to FP-1, NE-1, WW-1, WW-2 and WW-8.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact this project will have on the Katy Prairie Conservancy. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles. Along with more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within 1 mile of the migratory bird sanctuary is going to cause bird collisions and accidents. There is also important wetlands that will be directly affected by a HSR corridor. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to NE-1, NR-2, NR-3, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Megan Hesse	2/4/2018	Website	I am very concerned with the impact of the quality of life. This includes issues for everyone living within the noise and vibration distance. And also on the appearance of the project that people will have to look at, particularly where the track is elevated. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to AS-1, NE-1 and NV-1.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact on property values and the tax base of Waller County, which is a historical minority population county. This project will create an obsolescence that will negatively impact property values in Waller County. The proposed route will cause people to lose value of their property, and the decreased valuation of property will cause lower tax revenue collected. School districts, cities, emergency services and all public entities will lose income. This will reduce the services that are being provided to the citizens that pay the taxes. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to NE-1 and VA-1.
Megan Hesse	2/4/2018	Website	I am very concerned with the impact on our Waller County Emergency Services would this project continue. There will be delayed response time due to the potential impact on county and private roads. There will be a need for new ESD facilities and equipment. This will greatly impact all of Waller County Tax payers. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to NE-1, SS-18, SS-23 and SS-26.
Megan Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact on Our Waller County Emergency Services would this project continue. This will greatly impact all of Waller County Tax payers. The feasibility Of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to NE-1, SS-18, SS-23 and SS-26.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact this project has on the City Of Waller improvements. The future plan for the development of housing and commercial businesses will be greatly impacted due to it passing through the new Waller Town Center. The feasibility Of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to LU-4, NE-1 and SC-19.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact on the Hewlett Packard Data Center. The proposed route will have very serious negative impacts on the property and the critical data center operations at the property. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to NE-1 and SC-11.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact on the Waller Independent School District. The proposed alignment will run through a large portion Of Waller ISD's district. It will negatively irnpact the bus routes, which will cause Waller ISD to purchase additional school busses to transport students and accommodate delays due to county and private roads being	Refer to NE-1 and SC-5.

			irrpacted and/or closed by the proposed HSR project. The feasibility Of this project is not there. In closing a NO build should be as the only viable option in the final Environment Impact Statement.	
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact on property values and the tax base Of Waller County, which is a historical minority population county. This project will create an obsolescence that will negatively impact property values in Waller County. The proposed route will cause people to lose value of their property, an the decreased valuation of property will cause lower tax revenue collected. School districts, cities, emergency services and all public entities will lose income. This will reduce the services that are being provided to the citizens that pay the taxes. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to EJ-1, NE-1, SC-19 and VA-1.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact of the quality of life. This includes issues for everyone living within the noise and vibration distance. And also on the appearance of the project that people will have to look at, particularly where the track is elevated. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to AS-1, NE-1 and NV-1.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact this project will have on the Katy Prairie Conservancy. The prairie is biologically diverse powerhouse with more than 300 species of birds, 110 species Of mammals, amphibians and reptiles. Along with more than 600 species Of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within 1 mile of the migratory bird sanctuary is going to cause bird collisions and accidents. There is also important wetlands that will be directly affected by a HSR corridor The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option.	Refer to NE-1, NR-2, NR-3 and RF-4. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact On flooding and drainage. Local environment impact includes the Spring Creek watershed where 5 creeks will cross the track Of the HSR. And many other watersheds will be affected along the proposed HSR route. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to FP-1, NE-1, WW-1, WW-2 and WW-8.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact of Historical Sites, waterfowl and Hunting. An Army Corp of Engineers Section 4 permit reports there a 4 archeological sites and 2 prehistoric/historic sites considered for inclusion in the National Register of Historical Places. Also the route cuts through the north end of one of the major wetlands in the the region Where duck hunting is vital tot the economy. The waterfowl and hunting will be diminished, if not destroyed by a high speed train. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to CR-9, NE-1, NR-1, NR-2, RF-2 and WW-9.
Nick Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact on Public Safety. There are no emergency services in the counties between Houston and Dallas that would be able to handle a disaster with a train going 200 miles per hour. The high speed train would pass within approximately 580 feet of a natural gas pipeline compressor station. This hazard has not even been addressed. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environmental Impact Statement.	Refer to EU-2, EU-6, EU-7, NE-1 and SS-18.
Nick Hesse			Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact of economic development. There are dozens of roads planned which cannot be completed if the train cuts through. Stifling all future economic developments in all counties along the proposed route. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to NE-1, PI-1 and TR-8.
Robert Hesse	2/4/2018	Website	I am very concerned with the impact of Historical Sites, waterfowl and Hunting. An Army Corp of Engineers Section 4 permit reports there a 4 archeological sites and 2 prehistoric/historic sites considered for inclusion in the National Register of Historical Places. Sandra Hesse	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact this project has on the City of Waller improvements. The future plan for the development of housing and commercial businesses will be greatly impacted due to it passing through the new Waller Town Center. The feasibility for this project is not there. In closing, a NO build option should be Chosen as the only viable Option for the final Environmental Impact Statement.	Refer to LU-4, NE-1 and SC-19.
Sandra Hesse	2/6/2018	Handwritten	I am very concerned with the impact on the quality Of life. This includes issues for everyone living within the noise and vibration distance. And also the appearance of the project that people will have to look at, particularly where the track is elevated. The feasibility for this project is not there. In closing, a No build option should be chosen as the only viable option in the final Environmental Impact Statement.	Refer to AS-1, NE-1 and NV-1.
Georgia Hickman	2/10/2018	Website	I am totally against the HSR going to and from, Dallas to Houston, Texas. All it will do is hurt the people of Texas. It will lower Land values And make property taxes higher, it will hurt the cattle industry and wildlife. It will hurt business along the Hwy. 45. It will hurt Texas Independence because of electrical grid, for a few people to ride a train. I truly hope and pray that this does not happen. sincerely, Georgia Hickman	Refer to EU-4, LU-11, NR-5, SC-15 and VA-1.
John N Hicks	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Linda Higgins	2/15/2018	Website	I do NOT feel that the Dallas-to Houston High-Speed Rail system will benefit Texas; therefore, the project should be stopped. With the addition of lanes on Interstate 45 and the increase in the speed limit to 75 most of the way, the trip to Dallas is about 3.5 hours to drive.	Refer to PN-3.
Christina Hildebrand	1/28/2018	Website	we need this rail badly!	Comment noted.
Mark Hilderbrand	2/6/2018	Website	I support this private sector capital investment. Private operation of high speed rail is necessary and needed. Only capitalistic supply and demand can appropriately drive market cost and service price for a sustainable transportation service. Federally funded and highly subsidized light rail transit and commuter rail services have not provided a commensurate level of ridership impact with dollars invested. Amtrak has been a fiscal disaster and does not provide market driven service. Texas Central Partners HSR between Dallas (College Station) and Houston will provide business and commuters between Dallas and Houston a reliable and cost effective alternative to both commercial airlines and an alternative mode to driving a vehicle or Bus line taking much more travel time.	Comment noted.
Marty Hiles	1/29/2018	Oral	<p>All right, you-all. I started with Ken Cope about four years ago. We've been in opposition of the high speed rail, and we've done research on it in our group. And I looked at the environmental study. This thing's is 46-foot wide, and it drops off 40-plus slope and drainage ditch and fence; another 40-foot slope and a drainage ditch, and an access road is going to go all the way down to Dallas, across to Houston, and then another drain and a fence. 220 feet wide this thing is going to be. Now, you look -- and then by Texas statute they can take from the center line for two miles out in either direction, four-mile wide. I need your dirt. I need 20 million yards of work from Navarro just to build this thing. I need your dirt. I need your water. I need your land. Think about that. Four-mile wide this actually will run all the way down for a berm and wall basically is what you're looking at. That's pretty bad. Now you look at the impact. We know this thing is going to be subsidized, don't ask me how, because we've seen the contracts. Even though they are sealed with the Secretary of State, we've seen the contracts with the numbers and they went three times more with the ridership analysis to justify this thing. So it's just -- all the way around it's just not good. So you look at -- now you look at -- because it's going to be subsidized, all the property they've taken and destroyed, no taxes. Now the school district's going to suffer. They're going to raise your property taxes just to be able to have the kids go to school here. And then because it's subsidized, all the Texans will be paying higher property taxes. I mean, this thing is just not good any way you look at it. I'm giving you fear factors here because you need to be afraid of this thing. You need to go to the comment page and you need to take every issue you have one at a time and file it. The government deals with they've got a lot of voters or a lot of money. So you get on that comment page and any issue you have, you do one, send it in; one, send it in. It's volume. All of you do that. Get your neighbors to do that, too. Good. Another minute. So that's really what we're up against. It's -- and then, you know, like other people said, people want to know what the ridership analysis is. Well, they sealed it away. But we had a good idea. We sat down and we found in a piece of the contract for the formula. So then you take that, you take operating costs, all the maintenance costs, and then you get a five percent loan or a two percent interest loan, and you're looking at -- we</p>	Refer to GN-2, GN-4, LU-14, SC-3, SC-6, SC-8 and SC-19.

Debbie and Melvin Hill	1/31/2018	Website	My name is Debbie Hill I'm married to Melvin Hill We are against the High-Speed Rail for many reasons , We have had a small ranch in Our family for many years dated back from my dad and his parents which are all deceased. My children was raised here swimming in the pond hunting playing, watching Wildlife ,camping with their baseball teams, raising cattle Etc. This Is ours hot yours to take the memories from us this is ours to keep in the family and let the next generation of my family enjoy. This idea of you to destroy families and small town and the Beautiful land with a train is very unconstitutional! Tell me one thing who will this benefit ? not me Nor my neighbors, nor the small town but Dallas and Houston will get the benefit. Why dont you consider running this train right Over the top of 1-45 going straight over into Dallas and then to Houston Why? because they don't want the train right downtown Houston or right downtown Dallas Texas. TxDOT already owns 45 corridor from Dallas to Houston. Leave the little towns alone leave the farmers alone leave the people Of Texas alone. I moved from Houston to Streetman to get away from the pollution, noise, hustle and bustle and I go to our family farm just for a little getaway to enjoy the scenery and quietness and Wildlife because its settled in a bunch of woods and you're wanting to take it for a train. Think again this is my land you are trying to mess with, not yours.	Refer to BA-9, LU-11, NR-5, RF-2 and SC-19.
Donna Hill	1/31/2018	Email	The High Speed Rail that is proposed to be built between Dallas and Houston will be within 1/2 mile of my country home of twenty years. The only paved road to my house will be partially closed permanently. now understand that this NON- US company also will be condemning lands within 2 miles of their path for building materials. After our lands are raped clear, and IF they build this monstrosity, I will get to enjoy the sounds of it ripping through my area every 15 minutes making a sound like a low flying jet. Please stop this insanity now!	Refer to LU-14, TR-7, TR-8 and TR-10. For information about the Noise and Vibration analysis including mitigation measures, see Section 3.4, Noise and Vibration .

Think again this is my land you are trying to mess with, not yours.	
Suzanne Hill	2/6/2018	Handwritten	In Grimes county the proposed line by Plantersville will go within 1 mile of High Point Elementary school. Not only the proximity to the school a concern it slices through the middle of the district boundaries for the students attending that elementary school. For many of the students that track will separate their access to the school from their home. That would require students to be forced to get to school only via high traffic roads such as Hwy 105 that have an underpass to get from one side to the other. The Plantersville-Stone ham area will be cut in half. The fire station will have limited access from one side that it serves not to mention other services being divided.	Refer to SS-23. The Project would be passing via viaduct in the Plantersville area. No roadway reroutes would be necessary in this location.
Bruce Hillegeist	3/5/2018	Oral	Bruce Hillegeist, President Greater Tomball Area Chamber of Commerce. It is my duty to be here this evening to represent the 725 Tomball Chamber members who, on May 16 of 2016, voted to endorse the high-speed rail project from Houston at Dallas. Texas is a business-friendly state growing in residential population and business and an alternative way to travel and for ability to keep our No. 1 status in the nation as a state. This project is very much needed, economically, safety wise to have -- for Texas to remain No. 1.	Comment noted.
Bruce Hillegeist	3/9/2018	Website	On behalf of the Greater Tomball Area Chamber of Commerce, I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be an economic driver for the region, the state and our country. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because in part it will: * Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational—at least 25% of them in rural counties along the route; * Increase tax rolls in ALL impacted counties - \$6.5 - \$7 billion net positive tax impact by 2040; * Bring the safest mass transportation technology in the world to Texas - Shinkansen trains boast a 53 year history with ZERO crashes or fatalities while in operation; * Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status; * Preserve land access for property owners - a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; * Give travelers with disabilities a safe, comfortable alternative to driving or flying - system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035 - and current state and local transportation plans cannot adequately address these growing concerns. We are excited to support the first true high-speed passenger train system in the United States - a transportation infrastructure project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review.	Comment noted.
Suzn Hilvers	2/8/2018	Email	Why we oppose the Houston>Dallas train: A) It will force land owners to give up their family's land. Would you want to give up your father's or grandfather's hard-won land, land that could be passed down to your children and theirs? B) It will ruin the living experience for hundreds of adjacent landowners and their families. Would you want rail alongside your pristine rural property? C) With a very clean, efficient and inexpensive direct bus system already going to Dallas, why is this needed? D) Riders will have to drive downtown-in traffic-to the station, pay to park, and wait for the train. The train will cost about 2/3 of a plane ticket, take 90 minutes to get to Dallas, and then riders will have no vehicle to get around town. Driving directly to Dallas is easier, cheaper, and doesn't take much more time, and you have your car. Businesspeople know this. Who is going to even ride this? E) The funds should instead be used to create badly-needed rail for Houston. This is an insane plan to line the pockets of bureaucrats. The people don't want it	Refer to BA-4, GN-2, GN-6, PN-3, SC-3.
Owen Hinds	2/7/2018	Website	If this works -- and from the status of high speed rail in other countries, I think it certainly can -- it could help spur enthusiasm and funding for similar ventures elsewhere in the country. The United States once had a passenger railway network unequaled in the world, and I think that reviving that could be of great benefit to the country in the future as air travel faces increasing fuel supply costs.	Comment noted.
Lynn Hipp	2/17/2018	Website	My wife and I are anxiously looking forward to being able to travel to Dallas via high speed rail. As a long term Houstonian (40 years) we have needed a transit resource such as this for many years. The selection of the train station being located at the Northwest Mall site is excellent. The area is an eyesore and it will be a great boost to the local neighborhoods and area.	Comment noted.
Stan Hirota	3/9/2018	Website	I think it will be a great alternative transportation option for business people travelling between Dallas and Houston. High Speed Rail is reliable, safe and punctual on time, which is incomparable to the experience travelling by air.	Comment noted.
Kathleen Hirschheim	3/9/2018	Website	I'm in full support of this project, it's long overdue! Can't wait!!	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
Christopher Hisle	3/9/2018	Website	I think this project is both a very good idea, one that I would ride to get to Dallas to watch Astros v Rangers, and also important to link Houston and College Station with the station planned near College Station. I would prefer the terminus to be in downtown, but I understand that would be costly, and would prefer to have the train than not have it.	Comment noted.
Lorie Hoagland	3/9/2018	Website	I object to the use of federal loans to fund the HSR project as it is suppose to be a private project.	Refer to GN-4.
Lorie Hoagland	3/9/2018	Website	I object to any and all tax dollars being used on the HSR project. This is a private company so they should find their own funding for this project.	Refer to GN-4.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as it will slow down the response time of police.	Refer to SS-23.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as is will slow response time for fire services.	Refer to SS-23.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as it will slow response time for ambulance service	Refer to SS-23.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as it will slow the flow of transportation in and around the rail project before and after completion.	Refer to TR-6 and TR-8.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project in my area as it generates zero revenue to my county.	Refer to SC-19.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as it lowers property values in and around the project.	Refer to VA-1.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as the proposed route is to close to an elementary school.	Refer to SC-8.
Lorie Hoagland	3/9/2018	Website	I object to the HSR project as it will have no positive impact on my community.	Comment noted.
Steve Hoelke	2/7/2018	Website	This is a project that will benefit all across the nation by providing needed connectivity. Please support its completion.	Comment noted.
Jo Hoepfner	2/9/2018	Website	This project is doomed to failure, and we the taxpayers will be left holding the bag. Study after study has confirmed that successful financial viability is not only questionable, but highly unlikely. Proportionally speaking, the rail would benefit VERY few citizens of the State of Texas and when it fails, ALL will be left footing the bill while the "investors" walk away from it with zero impact on them financially. I am NOT against alternative forms of transportation, and for years have felt that a rail system from suburbia into Houston would make sense (think Chicago, Dallas). However, the slightest bit of research reveals that "According to a Hamilton Project (THP) post, of the more than 1,800 mass transit systems in the United States-including those running trains, buses, or other transport modes-only about two percent reported that fare revenue exceeded operating expenses in 2013." "In general, average losses per trip are smaller for larger metro systems. For instance, riders in the five largest systems-New York, Washington, DC, Boston, Chicago, and the San Francisco Bay Area-pay about a dollar less than the actual cost of each trip." WHY ON EARTH would you subject Texans to a fiasco such as this when time and time again these systems have proven to be financial failures that must then be subsidized by the citizens in the form of MORE TAXES! Enough already! The cost comparison to airline tickets touted by the TCR media blitz is a wash--by the time most people drive to the probable site of the station in the Northwest Mall area, pay to park, pay the fare and board the train, they could have easily flown to DFW or DAL for the same or less cost. There is no more convenience in taking the train than there is in flying. There is ZERO benefit to the citizens of Houston and the negative impact on the thousands of landowners between Houston and Dallas far outweighs any positives.	Refer to GN-2, GN-3, GN-4, GN-5, NE-1 and NE-9.
Kelly Hoerner	2/21/2018	Website	I am for it! As long as it doesn't become some cost boondoggle.	Comment noted.
Sean Hoernke	1/30/2018	Email	The Dallas to Houston High Speed Rail is destined to be a total disaster just like California. This is a pure land grab and money grab for our country with profits going to Japan and a few key politicians. The practical use of this train makes no sense to people either. In 3 hours you can drive a car and get wherever you want. In 90 minutes you take the train and another 90 minutes driving to/from train station on each end. This train has one thing and one thing only attached to it....money for Japan. Say no to this train!	Refer to PN-3.
MJ Hoffman	2/7/2018	Website	It is very important that the US follow the green lead of progressive nations when it comes to HSR, especially privately funded. The Dallas-Houston corridor is a perfect example for others to follow, and it's environmental impact will pale compared to automobile and jet exhaust fumes. Please note this favorably. Thank you.	Comment noted.
Brett Hogan	2/12/2018	Website	This is a project that needs to happen, both for the state and for the country. This is the right project at the right time.	Comment noted.
Carolyn Hokanson	2/6/2018	Handwritten	My family owns land on Binford Road in Harris County that is permanently impacted by the proposed high speed rail project between Houston and Dallas. I think the plan is a terrible idea that will have a devastating impact on all the landowners between Houston, Dallas and the one stop in between. It will result in an almost impossible barrier between East Texas and the rest of the state of Texas. It will hamper development in our area because of the noise, vibration and general ugliness of embankments, viaducts and high voltage transmission lines. There will be lots of high security fencing as well. While it may have some benefit to Houston and Dallas, it will cause great harm to those permanently impacted by the rail line. There are several ways to travel between Houston and Dallas: car, bus or 1 hour plane ride. I don't believe that the benefit, if any, is worth a 240 mile scar across Texas. I support the "No Build" option.	Refer to AS-1, BA-4, BA-6, BA-12, LU-11, NE-9, NV-1, PI-1, PN-3, TC-7 and TR-8.
Carolyn Hokanson	2/6/2018	Handwritten	I write to urge you to extend the time allowed for the public to review the Draft EIS issued by the FRA on December 22, 2017. The 15 day extension until March 9, 2018 is not sufficient. I have been unable to download the entire Draft EIS on my iPad. It is impossible to make sense of the enormous amount of information provided. I found 6 volumes of the report in book form in the Waller County Library in Hempstead! The study carrels in the library were too narrow to open the books completely. Often the legend that explained the page was lost in the	Refer to PI-1 and PI-3. Electronic materials of all hard copies were also available online at //www.fra.dot.gov/Page/P0700 . This site has been re-routed to

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			fold of the book. Each topic covered in the Draft EIS began in the Dallas area and hundreds of pages later, ended in the Houston area. Most people are interested in the environmental impact on their area. More tie is required to sift through this Draft EIS.	https://railroads.dot.gov/current-environmental-reviews/dallas-houston-high-speed-rail/dallas-houston-high-speed-rail .
Carolyn Hokanson	2/6/2018	Website	I attended the Public Hearing held February 6, 2018 in Waller County. My family has lived in the Waller/Spring Creek area since before the Civil War. We currently own farm land on Binford Road that my grandfather inherited in 1941. I support the "No Build" option because the high speed rail will cause irreparable damage to our community. In addition to the noise, vibration and impact of 68 trains a day. The East/West division of the land will forever change the nature of the area. I am very concerned that the embankment sections will act as a barrier to drainage and flooding will result. I believe that the environmental statement was prepared before Houston experience hurricane Harvey. The 100 year flood level designation will undoubtedly change. Texas Central needs to update their data and the public needs ample time to study the results.	Refer to BA-8, FP-1, GN-1, LU-11, NV-1, PI-1, PI-3, SS-17 and TR-8.
Carolyn Hokanson	3/1/2018	Letter	I am concerned about safety issues with the high speed rail proposed by Texas Central. They have stated that if it is a closed system so no collisions are possible. They expect to operate 34 trains in each direction traveling over 200 miles per hour, everyday between Houston and Dallas. While the track can be protected by fencing on the ground, how would it be protected from overhead dangers like birds or drones or small planes? If there was a power outage or single train had a problem, the whole system would have to stop. Since the system is closed to surface crossings, how could passengers be removed? It took hours for the Republican congressmen to be moved by bus after the Amtrak collision with a dump truck recently. Many of them were injured by the sudden stop and required medical assistance. A high speed rail accident in remote areas of Texas would be horrible. I support the "No Build" option.	Refer to SS-6, SS-7, SS-18 and SS-19.
Carolyn Hokanson	3/2/2018	Letter	Texas Central has not been forthcoming with the truth about road closures either. A copy of an early Texas Central publication addressed the issue of local road closures. A copy is attached. The first answer is "No" Texas Central will not be closing roads. Next, they say they expect "every existing public road will remain in service." They state that state, county and municipal agencies and governments are empowered to make decisions about roadways and that Texas Central is not. Then they admit that some roads may be closed by these entities. This is a deceptive answer that leads to no trust in Texas Central. I am for the "No Build" option. At our meeting, the FRA stated that the final decision had not yet been made and that all alignment alternatives were still under consideration.	Refer to BA-6, TR-6, TR-7 and TR-8.
Carolyn Hokanson	3/5/2018	Website	The order of speakers was mishandled at the March 5th meeting. The various political speakers and their surrogates were allowed to speak first. The Houston officials have nothing to lose in this discussion. Even if it is a financial disaster they know that the taxpayers will have to pay. It is all the people who live between Houston and Dallas that have everything to lose. That is why they are speaking out so loudly. Their homes, businesses and chosen way of life are all at risk. The high speed rail has no benefit to them. The elected officials were given special treatment. Even this form has a new box to designate the special status of the elected official. It was not on the form for the February 6th meeting in Waller. Perhaps that was because the Waller officials spoke against the rail. The Declaration of Independence proclaimed that all men were created equal, but this is clearly a case of some being more equal than others.	Comment noted.
Carolyn Hokanson	3/7/2018	Handwritten	Many people mentioned at the March 5th meeting that the Houston-Dallas high speed rail would be the first use of technology in the U.S. It may be the first use of the Japanese technology, but it would not be the first attempt of high speed rail. California voters approved a high speed rail project to connect major hubs in 2008. It was supposed to build 800 miles of track at a cost of \$34 billion. The state was only going to pay for a third of the cost. Ten years later, the costs are up to \$67 billion and the state is having to pay the difference. The California high speed rail was supposed to be in service by 2020. The completion date has now been changed to 2029. Texas should learn from California's expensive nightmare.	Refer to BA-4, GN-4 and TC-2.
Carolyn Hokanson	3/8/2018	Letter	The Schultz family has been living in the Waller/Spring Creek area for generations. William Schultz and his wife, Caroline, had 3 small children aged 4, 6 and 8 when William died in August, 1865. He is buried in the family cemetery on a portion of his land. Two months after William died, Caroline's older son, Eddie, got sick and died and was buried next to his father. Caroline was a 36 year old widow with two young children to raise in post-Civil War Texas and yet she still managed to stay on the land. When she died in 1897, she was buried next to William and Eddie in the family cemetery. Our family is descended from Caroline's surviving sons, Charles and his son Edward. Our parents and grandparents taught us to love this land and to understand the importance of this land to our family. The thought that a private, for profit, entity, with no rails and no trains could claim the right to our land just makes my blood boil. I support the "No Build" option.	Refer to BA-6.
Carolyn Hokanson	3/9/2018	Handwritten	Many people spoke at the March 5th meeting about the importance of anticipating the future needs of Houston and Dallas. One man spoke about his family's property north of Houston that was needed to build a reservoir during a drought in 1950. The area around the lakes was highly prized and many expensive homes were built during hurricane Harvey. Many of these homes flooded because the water couldn't be drained away fast enough. A similar problem occurred on the west side of Houston when the Addicks and Barker dams could not contain all of the water. Many homes were flooded downstream. The point is that you cannot anticipate all of the future problems when plans are made.	Refer to GN-2, GN-4, SS-15, SS-16 and SS-17.

			Thirty years ago, almost no one had a home computer. There was no internet. There were no cell phones. Presentations were made with an overhead projector. There were no video conferences. I think the projections of the number of people wanting to ride a train to Dallas are vastly overblown. I support "No Build."	
Diane Holland	2/6/2018	Website	NO BUILD! I am strongly against the High Speed Rail! It is economically not viable, it destroys peoples' property and value. It guts the heart of Texas. There is no return in investments. It destroys our beautiful state and will eliminate God's House of worship. It will destroy historical land marks and creates many health conditions.	Refer to CR-4, GN-4 and NE-1.
Justin Holland, District 33 Representative	2/23/2018	Email	Thank you for contacting me. My staff and I read all emails sent to this address and will do my best to respond in a timely manner. Each piece of constituent correspondence is recorded so that I can refer to the opinions expressed on various matters as they come before the Texas House. It is an honor to serve the citizens of Rockwall and Collin counties. As your State Representative, I appreciate you taking the time to relay your concerns and provide me with pertinent information. Sharing your viewpoints helps me to more effectively represent your interests, which is always my top priority. If you are writing in regards to a specific situation in which you are requesting assistance from a state agency, we will continue to process your request and will contact you soon. If you did not provide your complete name, address, and phone number please do so now so that we may more easily get in touch with you. If you need immediate assistance, please contact my office at (512) 463-0484. Thank you again for your correspondence. It is an honor to work for you in the Texas House.	Comment noted.
Brian Holloway	2/27/2018	Website	I am opposed to the current train route as it would destroy a charitable ranch named Morgan Legacy Farm which is located near FM 709 and 3194. This facility is already developed with multiple amenities including guest houses, a lodge, a fully operational rodeo arena, horse and colt barn, several large fishing ponds. The proposed path would destroy many of these amenities including: the guest houses and rodeo arena; and block accessibility to key areas of the property thus, rendering it useless for fulfilling its primary purpose. I also understand the proposed route will cause water issues and have significant negative impact on the environment and migratory birds. I believe it is important to recognize that this facility has served as an R&R facility for many involved with and serving in our military. Not only that, but also a place for young boys and their fathers to experience fishing, hunting, and learning horseback riding away from the city. What's best, is that the owners of this wonderful facility do not charge a dime for the use. Please seriously consider saving this property by considering a route move north that parallels an existing power line. This makes much more sense and would be significantly less detrimental to the environment and this wonderful property.	Refer to LU-5.
Kelly Holub	2/6/2018	Oral	I live in Waller County, and I live three miles from the rail line. I work every day for a company in Dallas. I have never once had to go to Dallas. So I think this train is useless because the majority of people nowadays telecommute. I mean, we have over 2,000 employees and the majority of them work from home. So I don't see the use of it. And then addressing of the flooding. If we have property that's never flooded and it floods after the train is built, who is going to be responsible for that? That's my comment. Let me say, we have lived here for 25 years, owned the property for 30 years and don't want any kind of noise or thing affecting the environment. Thank you.	Refer to FP-1, NV-1, WW-1 and WW-2.
Robin Holzer	2/27/2018	Website	I strongly support the Dallas <> Houston High Speed Rail project known as the Texas Bullet Train. This train will become my family's preferred travel option between Houston and Dallas. This tiny, quiet train will pose minimal adverse impacts, and each of the stations will attract significant economic development. Because railroads must pay property taxes, all of the infrastructure along this line will confer significant ad valorem value to all of the counties along the route. Thanks for soliciting public input. Please help build this train!	Comment noted.
Jerry Homan	1/30/2018	Email	Please consider answering the following three questions that I have: 1. DO PRELIM PLANS ANTICIPATE ANY SHARING OF THE EXISTING Union pacific RR R.O.W. OR NOT? 2. DO WE KNOW WHEN ACQUISITION OF PROPERTY WILL BE INITIATED? 3. DO WE KNOW WHO THE STATE OF TEXAS WILL IDENTIFY AS THE AUTHORIZED CONDEMNING AUTHORITY WILL BE?	Refer to BA-5, ED-2 and TC-7.
Lauren Honeycutt	3/9/2018	Email	My name is Lauren Honeycutt and my daughter wrote the attached letter in opposition to the high speed train. I apologize it is in pencil and it is hard to read. I have typed it as well below. Dear Public Servants, I am the first granddaughter of these people on whose land you want to build a train. I suggest you don't bother building a train because you are risking wild life. Here's something you should know. My grandparents had TPWD come and they found out they have Houston Toad. Now you have to agree not to build that train. Second, you are making my cousins and I very mad and unhappy. My cousins love Flynn and you are close to ruining a family land carried on my my great great great grandparents to my whole family. I will do anything to stop these people from building that train. My cousins will do anything to stop you and I hope you agree with me, so don't build that train. My cousin Alena and I	Refer to NE-8, NR-4 and NR-5. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural

			are going to live in Flynn and if you build that train it ruins all our dreams and memories. My two uncles and aunt and Dad lived there and you would ruin the memories of Flynn. Here's something to think about: I will stand and keep writing letters until you don't build that train. (Will you please read this to the people who want to build the train)	Ecological Systems and Protected Species, Mitigation Measures. For information regarding the Endangered Species Act and federally listed species with potential to occur within the Project see Section 3.6.4, Affected Environment. Section 3.6.4.2, Protected Wildlife Species , discusses federally and state-listed species reported by USFWS and TPWD. All species listed as threatened or endangered by either the ESA or by state for Navarro County are included in Section 3.6.8, Protected Wildlife Species with Potential to Occur within the Study Area.
Russell Honma	2/16/2018	Website	To: Texas Central, Board of Directors High Speed Rail Transit Project: From: Russell Honma, International Business & Transportation Consultant, APEC Master Plan Author APEC Hawaii: Subject: Recommendations & Comments on Texas Central Project: Aloha ! Thank you for giving me an opportunity to provide comments on the Texas Central High Speed Rail Transit Project going from Dallas to Houston. As you know the Texas Central shall be the Nations first High Speed Rail Transit Project show casing Japan High Speed Rail Transit 'Shinkansen' Project in the North America. Whereas, the National Railroad Act, specifies that United States shall implement at least three(3) High Speed Rail Transit System in the United States under the U.S., Department of Transportation, Federal Transit Administration rules & regulations. Therefore, the Texas Central shall meet those requirements and obtain federal fundings. Whereas, under the President Donald Trump recent announcement of establish an 'Infrastructure Plan' of US\$ 200 Billion dollars for design, construction and development of infrastructure in Airports, Highways and Railroad Projects in the United States. Therefore, Texas Central shall meet those requirements and obtain federal monies to fund the infrastructure of the Texas Central Rail Transit Project. Whereas, Japan shall be investing US\$ 450 Billion dollars to create 700,000 jobs in the U.S. soil and some of those monies can be used for the Texas Central High Speed Rail Transit Project. The monies will be a 'low interest' loan from Bank of Japan and their financial affiliations such as, Mitsubishi Tokyo Bank, Mitsu Sumitomo Bank, Mizho, Daichi and etc.. If you have any questions or need more information please contact me at: .Best wishes & All goes well ! Russell Honma APEC Master Plan Author APEC Hawaii	Refer to GN-4.
Brian Hood	3/1/2018	Website	It should be highlighted and the public made aware, that almost all high speed rail in the world loses money and must be subsidized by the respective governments and I would propose that the this high speed rail project would require the same. Buyer beware.	Refer to GN-4 and NE-1.
Michael Hoover	3/6/2018	Email	I personally would like high speed rail under the right circumstances. There are many issues that need to be addressed. Eminent domain is the major issue. No land owner wants to have his property taken from them in the name of progress. I have some ideas on how to overcome those issues BUT it will alter your economics. 1. Purchasing property at what is perceived as market value is not acceptable. Ag property is significantly less than residential or commercial property. 2. You will need to pay up for such property because you will be devaluing the remaining owners property or dividing it. You need to discuss with land owners the loss of income from taking their property (loss of ag, livestock, added cost such as fences devaluing remain property). No one wants to live close to a loud train. 3. How will the rails be isolated from the owners remaining property (fences)? Property protection is a key concern. Anyone can walk a train track. 4. Offer some type of profit sharing on a percentage basis (such as a royalty payment) on profits. 5. The tracks must be for high speed passengers trains only. If High speed trains are not profitable after a certain amount of time (10 years) then shut the system down and the property goes back to the owners. BUT the rails must stay in place and maintained so if/when High speed rail becomes financially favorable again the infrastructure is in	Refer to ED-1 and ED-2. The Project design includes security fencing, physical barriers, and an intrusion detection system to secure the entire right of way. Intrusion detection sensors on perimeter fencing, closed circuit television, security lighting, and warning devices would be employed to prevent unauthorized access, secure the entire Project right of way, and promote early detection of potential threats.
Savanna Hoover	2/17/2018	Website	I think this will be an excellent way to connect people in Texas. I wish we were doing a hyperloop. I think there should be a stop in College Station. Texas representatives should transfer funding for the Trans-Texas Corridor to this project instead. I don't see any actual EPA statements though. Is this a coal powered train? How will that impact our atmosphere in Texas? Please inform the public of these repercussions. I imagine it would reduce car traffic on I-35 and other major roads however, which would be excellent. Thanks & Gig 'Em, Savanna Hoover.	Refer to BA-4, GN-7 and TC-6. See Section 3.2, Air Quality for expected impacts to air quality.
Susan Horn	2/6/2018	Oral	Hi, my name is Susan Horn. have no big credentials. I have no big statistics. I just have some common sense. As I'm sitting here, these guys up here, this is their job. They were given the task of looking at environmental and safety. That's what they do, okay? My question is: If the guys back there should be the ones sitting up here. Just because the guys back there had a great idea that wasn't even funded, why do they get to pay our -- use our taxpayers' dollars to hire them to look into something that nobody wants? When they look at this project, this great idea, did they do a needs assessment? Is there a need to have a train from Dallas to Houston and back? I would say no. What politicians do they	Refer to GN-4, NE-1, NE-5, PI-3 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			know that got it through to here? Why is the onus put on us to defend their job -- which they're doing as well as they can with the resources they have, probably. Okay. I feel bad for you-all, really. Okay. Why is the onus on us to ask for more time to evaluate a survey or a study that should never have been done in the first place? Find out what politicians gave them the okay to let it go to this stage in the first place. Thank you.	
Tyler Horn	2/5/2018	Handwritten	Why was the Harris county meeting held outside the county seat? Reaching the meeting required undue driving and directly targeted a biased representation of the opinion of residents of the county. People living in the city were put to the back of the line for the rural and suburban commuters who use city infrastructure daily to conduct business. FRA should seek a more balanced opinion from county residents! The environmental advantages plainly exceed the disadvantages, but expressing this by speaking was prohibited because city-dwellers were sidelined. I support the rail as a local landowner.	Refer to PI-11.
Tyler Horn	3/5/2018	Oral	Good evening. My name is Tyler Horn: and I want to start off by apologizing for my outburst earlier when a gentleman in the first hearing went over time. I was at the previous meeting in Cypress. I made it late because of traffic, getting out of Houston and one of the frustrations I've had with this process is that at least at these two meetings: I felt like Harris County residents' meetings have been hijacked by people who don't live in the county. So there are real concerns along every stage of this process, but at this meeting: from what I've heard: there have been many people who don't live here. And what I would like to hear is how: as a resident who lives 1.3 miles from this: how this will impact my quality of life. Will I be able to hear the train? The 290 redesign. The on and off ramps. How is my access to the station going to be? So when a person goes over time or when people who aren't in the county where this process is being held: I feel like Harris County residents' voices are being hijacked. That said: I sympathize with those of you who expressed the concerns about the way that Texas Central has treated you. And if any of that is true, I would urge Texas Central to treat all Texans with respect, because no matter how much the people on the end points need this tram: we also need the people in the middle. Finally: as you probably guessed: I do support this train and my environmental perspective on this: as it might impact the environment: is what happens if it's not built? If both end points double in size — I got on 45 — or I'm sorry, 290 at Highway 6 to get up to Fort Worth last weekend and I would have gladly paid to take the train and I'm a middle class person. And my friend whom I went to visit would gladly pay to take the train to see me. And the companies I have worked for in Houston would all: every one of them: pay to take the train because it's more reliable: on time, don't have to wait on security: don't have to drive to Hobby. Lastly: a couple points I'd like to: in my mind: address are the end-point connectivity. So Dallas has got it going on and Houston is a little behind on that point. But we still go to the airports and they don't connect any high-speed rail. So I don't understand why that's such a big obstacle. And being so close in town, it gives us the opportunity, induce demand: as you mentioned; and, also, the City is going to keep growing their public transit infrastructure. So this just helps us focus that infrastructure in a more constructive way. And lastly, I'd like to say that at that point, you know, if the project doesn't become viable, it's still got a lot of financing from the outside: you know: if it gets built and they end up needing public funds: we're not talking about — this is debt I would be happy to take on and pay in my old age. Trillion-dollar deficit reform just got passed into law and nobody is griping about that in this meeting. So I'm not afraid of a little bit more debt that promotes our economy. That said: I do genuinely apologize for interrupting, if you're still here, or: you know, and disorderly conduct. Thank you	Comment noted.
Jacquelyn Hornell	2/5/2018	Email	THE IMPACT OF A HIGH SPEED RAIL LINE ON THE VALUE OF MY PROPERTY WILL BE NEGATIVE. IT CAN ONLY BE TO THE NEGATIVE BECAUSE OF THE BLOCKING OF ROADS THAT CURRENTLY CROSS WHERE THE LINE IS PROPOSED TO BE CONSTRUCTED AND OPERATED. THE POTENTIAL BLOCKAGE COULD LIMIT CIRCULATION WITHIN THIS PART OF THE COUNTY NEGATIVELY AFFECTING LIFE SAFETY AND EMERGENCY MANAGEMENT SERVICES INCLUDING FIRE FIGHTING. WE ALMOST LOST OUR HOME IN 2011 TO WILD FIRES. IF IT WASN'T FOR EMERGENCY SERVICES BEING ABLE TO GET TO OUR HOME QUICKLY, WE WOULD HAVE LOST EVERYTHING. THEREFORE, THE NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION IN THE FINAL ENVIRONMENTAL IMPACT STATEMENT.	Refer to SS-23, TR-10 and VA-1.

Kendall Hotz	2/26/2018	Website	As a tax paying citizen and private land owner in Texas, I am strongly opposed to this disaster train project. This project will do little to nothing to relieve any traffic congestion on I-45 between Houston and Dallas. The primary cause of traffic is due to freight trucks and this train project doesn't remove any freight trucks from the road. In addition, I do not believe it will relieve any commuters from the roads due to ticket cost being comparable to that of a Southwest flight by THSR's own admission. They are basically attempting to offer a service that is cost comparable to airline flights and take longer and want us to believe that it will somehow relieve traffic. Auto commuters are driving because they already can't afford that type of travel price or just prefer the convenience of their own private vehicle. No incentive to use the train equals massive infrastructure project bankruptcy that will need to be funded with taxpayer bailouts or left to rot since the tracks are not compatible with any other rail system in the US. I do not want that pile of garbage running through my property in central Texas nor do I want the habitat of my wildlife destroyed for the sake of a few greedy businessmen. There is no bullet train project in the world that has ever operated without massive infrastructure cost assistance from govt (taxpayers) and this will be no different considering the projected ridership by THSR is far less than existing ridership numbers in ASIA for similar projects that still needed a bailout. I am strongly opposed to this project.	Refer to BA-12, GN-2, NE-1, NR-5, PN-3 and SC-3.

Randy Hotz	3/9/2018	Website	A number of my family and friends own property along the proposed route. Most will see their properties cut in half, with no ability to make beneficial use of what remains. I have also heard that an undisclosed provision will render properties as far away as 5 miles on either side with also be affected and again not be able to be beneficially used. This is nothing more than a play from people outside the state to come in and start a project, suddenly "discover" that it's not profitable, receive a bailout from the State of Texas, and move on with us left holding the bag.	Refer to GN-4, LU-7, LU-14, NE-1 and VA-1.
Kenneth Houdek	3/4/2018	Website	I am a property owner of the proposed route of the high speed rail. I am in great opposition of the project due to its great impact on my livelihood. I am a full time farmer and the project will take land out of production, cause problems moving equipment from field to field due to the low clearance underpasses, 14 ft. will barely allow semi-trucks to pass, farm equipment needs at least 18 ft. for safe clearance. This project will also devalue my property when it comes time for me to sell my property and retire. The other problems we will have are fire protection, police and medical response times, bus routes will have to be changed, costing more money to schools and the county. This project has nothing to offer us and to anyone along its route except a lot of noise, inconvenience, and a sore sight to look at for the rest of our lives. HIGHLY SADDEN, Kenneth Houdek	Refer to AS-1, ED-2, SC-5, SC-6, SC-7, SC-8, TR-8 and VA-1.
Brenda House	2/26/2018	Website	Would love to have this... Every other country has transit.. We need it	Comment noted.
Calvin House	1/29/2018	Website	My name is Calvin V. House and am 79 years old. I live at [...] which is located in the Western edge of Harris County. I wish to voice my objection to the proposed high speed rail between Dallas and Houston for the following reason: The peace and serenity of country life would be destroyed each time a 205 mile, per hour train goes by their residence or business approximately every 25 minutes. At the very first Texas Central Rail meeting that was held, a sound track was introduced to the public, it was equivalent to a jet airplane going by. This could not be a very peaceful place to live with their families more retirement homes. I propose that the only viable alternative would be that the No Build option be chosen in the final environmental impact statement.	Refer to BA-6 and NV-1.

			the middle of Texas, next to homes, businesses, through crops, ranch land and people's lifetime dreams of their retirement. It is not right that a private group of investors could force farmers, ranchers and retirees from their homes and a means to make a living on their land. For this reason, the No Build option should be applied to this project.	
Calvin House	1/29/2018	Website	My name is Calvin V. House. I live at [...] which is located in the Western edge of Harris County and I would like to voice my objection to the proposed high speed rail between Houston and Dallas for the following reasons. The safety of the proposed train from Houston and Dallas should be a big concern of anyone that would consider riding it. Below are examples: a. If an animal, such as cattle, deer, hog, coyote or horse should get in the way of a 200 mile per hour train, it would derail the train. b. Would also be a good target for terrorism. It would only take a small bomb. c. Any malfunction in either engine or cars at that speed would result in a tremendous loss of lives, All security and safety standards of Senate Bill 975 passed in 2017 Texas State Legislature should apply to a high speed rail also. If these standards are not followed, then a "No Build" option should be in effect for this private railroad.	Refer to SS-2, SS-6, SS-7, SS-9, SS-12 and SS-13.
Calvin House	1/29/2018	Website	My name is Calvin V. House. I live at [...] which is located in the Western edge of Harris County. I am voicing my objection to the proposed high speed rail line between Houston and Dallas for the following reason: The need and purpose, at this time, has not been established for a \$20 billion project. I am not against progress or a means to transport people, but this is not the time or place for this rail. It will not be cost effective. I propose that the only viable alternative would be that the No Build option be chosen in the final environmental impact statement.	Refer to NE-1 and PN-3.
Calvin House	1/29/2018	Website	My name is Calvin V. House and am 79 years old. I live at [...] which is located in the Western edge of Harris County. I wish to voice my objection to the proposed high speed rail between Dallas and Houston for the following reason: The bullet train cannot be cost effective when the price charged would be the same as an airline ticket, or now it has been decided at \$199 per person one way. If 6,000 riders a day make the trip and each way would take an extra hour of time, more than an airline, it will take approximately 75 years to pay the construction cost alone. I cannot think how any business minded person would consider such a project of this type. For that reason, I think the No Build option should apply to this proposed high speed rail.	Refer to BA-6, BA-12, GN-4, NE-1, PN-3 and SC-3.
Calvin House	1/29/2018	Website	My name is Calvin V. House. I live at [...] which is located in the Western edge of Harris County. I would like to voice my objection to the proposed high speed rail from Houston to Dallas. I own a wedding venue called House Estate which is our only business. With this unnecessary approximate \$20 billion dollar, unprofitable train going past every 25 minutes at 200 miles per hour and being within 750 feet. it would destroy every wedding. It would totally shut our business down completely. The weddings at House Estate are held in my grandfather's home that was built n 1890. I take a lot of pride in this business and certainly do not want it ruined. The No Build option should apply to stop a private company that is not even a railroad from shutting my business down.	Refer to ED-2, VA-1 and VA-4.
Calvin House	1/29/2018	Website	My name is Calvin V. House and am 79 years old. I live at [...] which is located in the Western edge of Harris County. I wish to voice my objection to this proposed high speed rail between Dallas and Houston for the following reason: If this rail would be allowed to be built through the middle of Texas, all property values would be reduced tremendously. Therefore, all school, state and county taxes would also be reduced according to the property values, As a result of this lower valuation, all taxes would be raised to get the same amount of money. All Texas property owners would pay more, not just the rail people that are affected. I propose that the only viable alternative would be to apply the No Build Option in the final environmental impact statement.	Refer to ED-2, VA-1 and VA-4.
Calvin House	1/29/2018	Website	My name is Calvin V. House, 15419 House Rd, Hockley Texas 77447, and have lived at this location all my life and do not plan to move. In am in opposition to the proposed high speed train from Dallas to Houston, Texas. It would completely divide my 360 acres, in Western Harris County, property. Property values would be reduced, in my opinion, by at least 75%. If this happens, all school, county and state tax money will also be reduced proportionally to land values. It is a shame a person works all their lives on their land and an unprofitable train would come through and destroy everything. This is not right!!! The No Build Option should apply in this case. It would destroy my life's work that I am very proud of.	Refer to ED-2, VA-1 and VA-4.

Calvin House	2/5/2018	Oral	My name is Calvin house. I live at [...], which is in the Western part of Harris County. Now, Texas Central wants to run a rail through my property, which I got 350 acres of land. They want to run through the middle of it all the way down going east and west direction, almost to Waller County before they turn and go to Dallas. I've got a wedding facility called House Estate. We do weddings and receptions, company parties, and everything else. That's very near this rail that's coming through our property. With a train coming through here that sounds like a jet plane going 205 miles an hour every 25 minutes, there's no way that we're going to ever have weddings at our facility in the future. We'll have to shut the doors. And we've been in this business for -- since 1998, and this property was given to my great grandfather, a league of land from Stephen F. Austin and the state of Texas, and it's been in our family for four generations. Now, also on the western part of my property I've got a 40-acre property over there that joins a major road, Katy Hockley, and they want to take 2,000 foot of my frontage on Katy Hockley road, and 777 feet of frontage on the north side of Katy Hockley and Becker Road. That means they're going to take a hundred percent of my frontage on 40 acres of my property, which I won't have anything left. Now, that's about 16 acres of this 40 acres they're taking. That's not right that they can come in there and take all my property. I farmed this land all my life, I run cattle on it, and I take a lot of pride on my property as well as my wedding facility. So I don't think this is a viable program that Texas Central wants to come up and show us that they can make money out of it. There's been a formula that has been -- that I've been told--now, I don't know if it's the truth or not--but if they have 6,000 riders a day going back and forth Dallas to Houston and they charge the same price that an airline ticket charges--it takes an hour and a half for the train, 30 minutes for an airplane--it will take 75 years to pay back that \$18 billion. There's no way that this investor will put their money into something like this. I can't see it. So, therefore, I'm against the rail, and the no build option should be exercised in this situation.	Refer to ED-2, GN-2, GN-3, LU-7, NE-1, NE-9, PN-3 and VA-4.
Calvin House	2/6/2018	Oral	Good afternoon_ Calvin House. I live on House Road in Hockley, Texas. Now, this proposed railroad to go through the center of my property. Texas Central came to me six different times in 19 - in 2016, said, "We're going to go through your property. We're going to do the surveying. We're going to do core samples and whatever else we want to do." And I said, "No: you're not: not Without eminent domain power." They never could prove it They said, "Well: we're going to sue you." So they sued me. We went to court in Houston: Judge Halbach's court We had five of our attorneys with Texans Against High-Speed Rail there representing me and all the other property owners. They had seven of their high-dollar layers there Judge Halbach ruled in our favor, they cannot come on our property, do any surveying. That ruling is still in effect to this day. Nobody can go on — they can't come on anybody's property at this date. I've got a wedding facility that's about 500 feet from this proposed rail called House Estate. We do weddings and we do all kind of parties and everything else lfs going to put us out of business if it comes through this property of ours. Our residence is real close to it, also. We don't like the sound of all this noise and vibration: whatever else is going to be with this high-speed train going 205 miles an hour. Another point I want to make is that you heard about all the train: rails: crashes: and different things in the last year of all the different train wrecks. Well: what happens if one of these trains was going 205 miles an hour? How many people would have got killed? All these representatives and senators on this one train ran into this garbage truck: it would kill quite a few of our people. Another point I want to make is that: you know: when I went to school: the shortest distance between two points is a straight line. If we got to this rail: why can't we go from Houston to Dallas by the way of 45? Makes a whole lot more sense than coming out here and ruining 8 to 10,000 acres of valuable farmland and people's homes. That's --that's what got to say. And if you have a chance: look at Channel 11 tonight at 10 o'clock We got a little deal on there that they come out to our place today. Thank y'all	Refer to BA-9, SS-12, SS-13 and VA-4.

Calvin House	3/5/2018	Oral	Good afternoon. My name is Calvin House. I'm out in the western part of Harris County. I've got about 350 acres of land. Texas Central wants to come through the center of my property, which I'm certainly against it because it's going to ruin the values of all this property out in this area. This property has been in my family for four generations and I take a lot of pride in it. Now, we have a report here from the Reason Foundation, Policy Brief No. 139. If you happen to get this in your mail or order it, it shows that the feasibility of this train on the ridership that was going to be taking place. Now, they show -- they show that if the same price that an airline ticket is, that it's going to be in -- go in the hole for \$537 million a year for the next 40 years. They will not have the ridership to ride this train. And another thing is, the problem of -- this might make a pretty good terrorist attack, also, that they can sabotage this train and ruin millions of dollars. This thing is 18 to \$20 billion. Now, another scenario this thing is that if we have 6,000 riders a day riding this train and it's going back and forth to Dallas every 25 minutes at 200 miles an hour, that it will take 75 years to pay this construction cost back. Now, how many people would want to get into a business venture like this? It's not right. So do we want to have the Japanese to own a strip of land all the way to Dallas, 8 to 10,000 acres of prime property that's farms and ranches? This is not right. We need to have a better understanding of what's going to happen for the people of Texas. The Texans are not going to be riding a train for an hour-and-a-half when they can jump on an airplane for 30 minutes. I am certainly against this project. Thank you.	Refer to GN-2, GN-3, NE-1, PN-3, SC-3, SS-7, VA-1 and VA-4.
Pam House	2/5/2018	Oral	Hello. My name is Pam House, and I'm married to Calvin. And I married into this family, and I've heard stories of my husband getting up in the middle of the night to go out on the rice fields. When everybody else was sleeping, he was out working very hard, and it breaks my heart to see what's happening to the land we live on. I have a little grandson that's seven. He lives in Pasadena. There's not a lot of room for him to run and play. And he comes out to our place, and we'll get on the dune buggy and go riding around, and he said, Grammy, can I get out and run? And I said, Sure, baby. Get out. And that little boy runs and plays. How he's he going to do that with a big old train going by. It's hard on us people that live out in the country to see our way of life going down the drain. Another fact, though, is the biggest reason for the difference between Texas Central's ridership estimated at 5.9 million per year and my much lower estimate of 1.4 per year is that Texas Central relies heavily on predicting that a large number of Texans will switch from passenger vehicles to rail, even though Texas Central commissioned a study of the Lone Star Market Study that implied only five percent of the automobile travelers will switch to high-speed rail. We all need to step up, protect our children, protect our grandchildren, and protect ourselves. And I'm for the no ride -- the no -- No Build. I am. I'm for that.	Refer to GN-2.
Pam House	2/6/2018	Oral	Good evening. I'm Pam House, and I off of House Road. We are in Harris County, but we go to our kids go to Waller School District and all. I did have something here I'm going to read to you. There we go. "The biggest reasoning for" — it just changed. The ridership is not what it should be on this. Texas Central is saying they have a certain number of ridership when it's not the truth_ It is way under what they're saying. So the money coming in is not going to be what they are promising_ It's all here: I promise. But I want to tell you something personal. My husband has lived on this land for all of his life. His great-grandfather was granted from Stephen F Austin a league of land in 1831 His parents: they fanned it His grandparents fanned it: his father's farmed it. My husband was a rice fanner for 32 years. And we had a tree farm there. We took the house his parents — grandparents built in 1890 and we restored it and made it into a wedding facility_ We were the first ones that got married there. And my son and his wife have gotten married there, and my grandson thinks he owns the place: and we hope one day to pass it down to them. And I don't understand how somebody can come in and say: "Yes, you worked your land all this time. You've got out in the middle of the night" he did: when the levies was breaking. He's gone out with the cattle and worked the cattle and stuff How can they come in and say: "You can't have your land. You can't pass it down to your children and to your grandchildren and all." And I think ifs just morally "Tong. Thank you.	Refer to GN-2, GN-4 and VA-4.
Pamela House	2/1/2018	Email	My name is Pamela A. House and I live at [...] which is located in the Western edge of Harris County. I wish to voice my objection to the proposed high speed rail between Dallas and Houston for the following reason: This proposed train would go through the middle of our entire 350 acres on an East to West direction. We have a 40 acre of land fronting 2.294' on the major road of Katy-Hockley. Texas Central Rail wants 100% of our frontage, South and North of the proposed high speed rail. We also have 777' of frontage on Becker Road to the North. All together Texas Central Rail would take approximately 14 acres of the 40 acre tract. It is not right that a group of private investors, as well as the Japanese, can take our land we worked all our lives for. The No Build Option should apply in this case.	Refer to BA-6, ED-2 and LU-7.

			each time a 205 mile per hour train goes by our residence and wedding facility approximately every 25 minutes. At the very first Texas Central Rail meeting held, a sound track was introduced to the public which was equivalent to a jet airplane going by. This could not be a very peaceful place to live families or retirement homes. I propose that the only viable alternative would be that the No Build option be chose in the in final environmental impact statement.	The wedding facility is outside the range of where there would be noise impacts from HSR operations.
Pamela House	2/1/2018	Email	My name is Pamela A. House and I live at [...] which is located in the Western edge of Harris County. I wish to voice my objection to the proposed high speed rail between Dallas and Houston for the following reason: The bullet train cannot be cost effective when the price charged would be the same as an airline ticket at \$199 per person one way. With the proposed 6,000 riders a day making the trip and each way would taking an extra hour, it will take approximately 75 years to pay the construction cost alone. I cannot think how any business minded person would consider such a project of this type. For that reason, I believe the NO Build option should apply to this proposed high speed rail.	Refer to GN-4 and NE-1.
Pamela House	2/1/2018	Email	My name is Pamela A. House and I live at [...] which is located in the Western edge of Harris County. I am voicing my objection to the proposed high speed rail line between Houston and Dallas for the following reason: At this time, the need and purpose of this train has not been established for a \$20 billion project. I am not against progress or a means to transport people, but this is not the time or place for this rail. It will not be cost effective. I propose that the only viable alternative would be that the No Build option be chosen in the final environmental impact statement.	Refer to NE-1 and PN-3.
Pamela House	2/1/2018	Email	My name is Pamela A. House and I live at [...] which is located in the Western edge of Harris County. I would like to voice my objection to the proposed high speed rail between Houston and Dallas for the following reasons. The safety of the proposed train from Houston and Dallas should be a big concern of anyone that would consider riding it. Below are examples: If an animal, such as cattle, deer, hog, coyote or horse should get in the way of a 200 mile per hour train, it would derail the train. Would also be a good target for terrorism. It would only take a small bomb. Any malfunction in either engine or cars at that speed would result in a tremendous loss of lives, All security and safety standards of Senate Bill 975 passed in the 2017 Texas State Legislature should apply to a high speed rail also. If these standards are not followed, then a "No Build" option should be in effect for this private railroad.	Refer to SS-2, SS-6, SS-7, SS-9, SS-12 and SS-13.
Pamela House	2/1/2018	Email	My name is Pamela A. House and I live at [...]. In am in opposition to the proposed high speed train from Dallas to Houston, Texas. It would completely divide our 360 acres located in Western Harris County. In my opinion, property values would be reduced by at least 75%. If this happens, all school, county and state tax money will also be reduced proportionally to land values. My husband has worked all his life on our land and an unprofitable train would come through and destroy everything. This is not right!!! The No Build Option should apply in this case.	Refer to ED-2, VA-1 and VA-4.
Pamela House	2/1/2018	Website	My name is Pamela A. House and I live at " _ " which is located in the Western edge of Harris County. For the following reason, I would like to voice my objection to the proposed high speed rail between Houston and Dallas. There will be hundreds of miles of unsightly power lines through the middle of Texas, next to homes, businesses, through crops, ranch land and people's lifetime dreams of their retirement. It is not right that a private group of investors could force farmers, ranchers and retirees from their homes and a means to make a living on their land. For this reason, the NO Build option should be applied to this project.	Refer to AS-1, ED-1, ED-3, NE-1 and NE-8.
Pamela House	2/1/2018	Website	My name is Pamela A. House and I live at " _ " which is located in the Western edge of Harris County. I would like to voice my objection to the proposed high speed rail from Houston to Dallas. My husband and I own a wedding venue called House Estate which is our only business. With this unnecessary \$20+ billion dollar unprofitable train going past every 25 minutes at 200+ miles per hour and being within 750 feet of our venue, it would destroy every wedding and our financial livelihood. It would totally shut our business down completely. The weddings at House Estate are held in my husband's grandfather's home that was built in 1890. We take a lot Of pride in this business and certainly do not want it ruined. The No Build option should apply to stop a private company that is not even a railroad from shutting our business down.	Refer to CR-11 and VA-4.
Pamela House	2/1/2018	Website	My name is Pamela A House and I live at " _ " which is located in the Western edge of Harris County. I wish to voice my objection to the proposed high speed rail between Dallas and Houston for the following reason: The peace and serenity of country life would be destroyed each time a 205 mile per hour train goes by our residence and wedding facility approximately every 25 minutes. At the very first Texas Central Rail meeting held, a sound track was introduced to the pubic which was equivalent to a jet airplane going by. This could not be a very peaceful place to live families or retirement homes. I propose that the only viable alternative would be that the No Build option be chose in the final impact statement.	Refer to NV-1 and NV-6. The wedding facility is outside the range of where there would be noise impacts from HSR operations.
Pamela A. House	2/1/2018	Email	My name is Pamela A. House and I live at [...] which is located in the edge of Harris County. I wish to voice my objection to the proposed high speed rail between Dallas and Houston for the following reason: This proposed train would go through the middle of our entire 350 acres on an East to West direction. have a 40 acre of land fronting 2.294' on the major road of Katy-Hockley. Texas Central Rail wants 100% of our frontage, South and North of the proposed high speed rail. We also have 777' of frontage on Becker Road to the North. A1 together Texas Central Rail would take approximately 14 acres of the 40 acre tract. It is not right that a group of private investors. as well as the Japanese, can take our land we worked all our lives for. The No Build Option should apply in this case.	Refer to ED-2.

Gladys House-El	3/5/2018	Handwritten	1. Who Will Be the Contract Compliance Officer? 2. How will low-moderate persons be considered for jobs? 3. Contract awards; will such be with justice to ensure moorish population of reasonable percentage? (contractors) 4. Socioeconomic - 34 homes to be replaced how/where? will moorish communities be displaced? 5. Water impact - clarity how wetlands, streams etc. will be respected.	Refer to GN-4, NE-1, SC-4, SC-22 and WW-2. The EIS identifies the Le May/Le Forge neighborhood in Dallas County as an Environmental Justice neighborhood directly impacted by the Project. The Project footprint would directly displace 14 homes, creating a divided, remnant neighborhood. FRA recommends the acquisition of all 34 homes within the neighborhood and the relocation of the residents within the greater Cedar Crest Community. Details regarding impacts to this and other neighborhoods are available in Section 3.14.5.2.2, Socioeconomic and Community Facilities, Impacts to Community Character and Cohesion . For the EIS, public outreach was done to reach as many Environmental Justice communities as possible. FRA is not part of the property acquisition process. Mitigation measures for displacements and acquisitions can be found in Section 3.13.6, Land Use, Avoidance, Minimization and Mitigation . Mitigation measures for

				Environmental Justice communities in are located in Section 3.18.6, Environmental Justice, Avoidance, Minimization and Mitigation.
Gladys House-El	3/5/2018	Oral	Gladys House-El. And what happens if this project is totally scrapped, denied, rejected? That's my first question. Second question is jobs. I've heard 10,000 jobs and then 1500 permanent jobs, but it's the jobs for Americans. So what about Moorish people -- that's basically African American or black people -- M-O-O-R-I-S-Hor M-O-O-R-S. Who will be the contract compliance officer to ensure that fairness and justice in hiring and awarding contracts to Moors will be done? Basically, those are my concerns.	Refer to BA-6, GN-4, NE-1, SC-4 and SC-22. If the Project is not approved or TCRR withdraws its proposal then no action will be taken to construct the Project. Section 3.14.5.2.3, Socioeconomic and Community Facilities, Economic Impacts includes an estimation of permanent employment and earnings impacts. The Project would create direct employment in the intermediate counties at Maintenance of Way Facilities and the Brazos Valley Intermediate Station. Some indirect growth in supporting industries is also expected (See Tables 3.14-20 and 3.14-21 in the Final EIS). While some of the station area employment may require specialized training, much of the anticipated job growth would not. Ticketing agents, security personnel, grounds keeping and maintenance positions as well as employment growth in supporting industries or adjacent hospitality services could largely be filled from the existing unemployed labor pool. As a company operating within the State of Texas, TCRR must comply with any state laws related to fair hiring practices. FRA does not have a regulatory responsibility with respect to the contractors/firms that TCRR hires/employs.
Gary W Houston	2/1/2018	Email	There is not now (and has not been for at least the past 40 years) a direct rail connection between Houston and Dallas, two of the largest metropolitan regions in the USA and the two largest cities in the South. Any minor environmental or agricultural disruptions can be tolerated in pursuit of this greater national objective.	Comment noted.
Houston Chapter of the American Council of Engineering Companies	3/9/2018	Website	The Houston Chapter of the American Council of Engineering Companies is a business organization comprised of over 200-engineering member companies in the Houston metropolitan area. We are writing to express our overall support for the Texas Central Railway High-speed Rail Project (HSR) connecting Houston to Dallas. This project will be a benefit to thousands of Texans and provide for a proven and safe alternative mode of transportation between two of our largest cities in Texas. There are many other beneficial factors which make this project worthy of FRA approval, such as: reduced traffic congestion; employment opportunities; minimal environmental impacts and, due to the private financing of the project our state and local transportation funds will not need to be used for this project but instead be retained for local projects. However, with all that said, there is a design concern that has come to our attention that we believe needs to be addressed in order to alleviate potential negative impacts. Use of Berms. While the majority of the project will be built as a viaduct, in some areas of Northwest Harris County the proposed design will be berms. The berm structures may cause disruption to drainage patterns in the area if they are built without adhering to state and local drainage criteria. Based upon the recent historical rain event that our region experienced with Hurricane Harvey, as well as other major rain events over the past three years which caused major flooding, it is critical that whatever is built must adhere to sound engineering design principals which are spelled out in our state and local drainage regulations. We request the FRA require the HSR Project to meet those regulations as they pertain to drainage criteria. We believe the HSR Project will be a benefit to our region but, there is the potential for flooding risks in those areas where berms will be built instead of the viaducts that must be taken into consideration. Thank you for your consideration of our point of view.	Comment noted.
Houston Sierra Club	2/8/2018	Website	Enclosed are the comments of the Houston Regional Group of the Sierra Club (Sierra Club) about Texas Central High-Speed Railway's Dallas to Houston High Speed Rail Project (DHHSR) and the Federal Railroad Administration's draft environmental impact statement (DEIS) that has been released for public review and comment. The Sierra Club is concerned about landscape level (regional), ecosystem, and wildlife habitat issues in the Houston Area. The proposed route of the DHHSR would pass 1/2 mile from the northern boundary of the Katy Prairie Conservancy's (KPC) Warren Ranch Preserve (WRP). The WRP has been protected by KPC, a certified land trust, for restoration of part of the "Katy Prairie" (a total of about 20,000 acres have been protected by KPC via fee acquisition and or conservation easements) for tallgrass, riparian, and other habitats. The KPC Preserves also provide significant flood control and water quality benefits for the Houston Area. The WRP has the largest operating cattle ranch in Harris County. It is the location of Warren Lake and the Matt Cook Wildlife Viewing Platform where large and important populations of endemic and migratory birds and waterfowl reside each year. In addition, Sand Post Oak Mottes and Saline Barrens provide unusual habitats, like important space for the federally endangered Texas Prairie-Dawn Flower (<i>Hymenoxys texana</i>). Scheduled runs of the DHHSR will occur about every 30 minutes and will cause noise pollution, light pollution, vibration pollution, and	Refer to NR-1, NR-2, NR-5 and RF-4. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			commercial development activities that will impact bird and wildlife use, the natural setting, aesthetics, solitude, and natural sounds of the WRP. The DHHSR would disturb visitors who come to enjoy Warren Lake and the Matt Cook Wildlife Viewing Platform to observe birds, like Bald Eagles, and other wildlife (White-tail Deer). Because the Matt Cook Wildlife Viewing Platform is open seven days a week, people come from the Houston Area and around the world to use the platform. People bird here, and participate in educational activities scheduled throughout the year. The DHHSR would reduce visitor enjoyment and use of these areas. This is of concern since the WRP is in the Central Flyway and has been designated a Global Important Bird Area by the National Audubon Society. Birds approach the WRP by flying over the route of the DHHSR. Impacts on bird behavior and use of the WRP would be unavoidable. The Sierra Club requests that the FRA choose an alternative that is as far from the KPC Preserves as possible to ensure that environmental impacts will be minimized or avoided. The FRA should require that the applicant, Texas Central High-Speed Railway, work with the KPC to ensure that environmental impacts are kept to a minimum. Mitigation measures that reduce environmental impacts on KPC Preserves must be implemented and coordinated between the sponsor of the DHHSR and the KPC. The Sierra Club appreciates this opportunity to provide these comments. Thank you.	
Eric Howard	2/16/2018	Website	I am in total support of the proposed high speed rail line between Houston and DFW. This is a transformational proposal whose time has come. This easy, safe and environmentally friendly option for travel across Texas will add value to millions of our citizens lives - not only economically but in opening the minds and hearts to modern travel!49	Comment noted.
Felicity Hoyt	3/9/2018	Website	This privately funded project is only possible in Texas. For once Texas can lead our country's infrastructure into the 21st century. The success of this project can provide a model for cities across the county. I only wish such a project could exist in the Northeast Corridor where the dream of high speed rail is not attainable on existing track and within rights of way currently within a few yards of residences or rising ocean coastline Come on Texas. Show us how it's done!	Comment noted.
Xiao Hu	3/8/2018	Website	TCR DEIS - Drainage and detention In south Texas, drainage is a major topic of concern for all residents and the government. Every proposed project is required to supply new independent adequate drainage and detention to be identified and implemented and NOT push the "run off" into existing drainage systems. According to the Appendix F_TCR Constructability v4 Report Section 2.6, it states TCR would incorporate existing drainage systems into design approach. This can not be allowed. I live in the Stone Gate neighborhood. The drainage ditches built around this neighborhood were designed to prevent flooding to our homes. In 2015 and 2016, we received 20 +/- inches of rain in a 12 hour or less timeframe. The drainage ditches worked but were at capacity, no homes flooded but some streets were under water. In 2017 we were hit with Hurricane Harvey that dumped 50/- inches of rain. The drainage ditches failed to protect the homes due to the amount of rain, the runoff, the over flow of Cypress Creek and the over flow of Addicks reservoir. We could not get out of the neighborhood for days, and numerous homes were under water. TCR proposes to build a 65 foot super structure that is 48 feet wide and a 12 to 15 foot wide access road that will be abutting the drainage ditch. The rain "run off" of the super structure will erode the ditches. This will cause additional flooding problems when we get torrential rain storms, tropical storms or hurricanes. Homes that never flooded before will flood as a result of this structure and road since TCR is not providing their own independent detention and drainage that is adequate for the amount of impervious area they are creating. The drainage ditch along Stone Gate was not designed for TCR's capacity. After reviewing the alignment sheets and project footprint drawings, I found that from Loop 610 to Fry Road, TCR will be adding 175.43 acres of impervious cover (that does not include the station area) while only adding 20 acres of detention from Jones Road to Fry Road. There is no drainage detention provided from Loop 610 to Jones Road. That includes zero detention ponds or drainage at the station locations. 1.3 acres of detention will also being removed. Harris Counties existing infrastructure has proven it can not support this type of increase. The environmental consequences caused by flooding has some of the most devastating impacts. Flooding can decimate key ecosystems functions and biodiversity, spread unknown contaminates, loss of human life, damage to property, loss of merchantable crops, loss of livestock and deterioration of health due to waterborne diseases. DEIS, Impervious Cover and Detention page 3.8-26 states "construction of stations and other infrastructure in highly urbanized areas would contribute additional volumes of stormwater runoff to existing stormwater drainage systems. Increasing stormwater runoff flow rates and volume would increase the risk of flooding in areas that are lacking storm water infrastructure or in areas where existing infrastructure cannot support an increase." Since it is not feasible or possible for TCR to supply adequate detention and its own independent drainage, I request the Federal Rail Administration to implement the No Build Alternative. Respectfully,	Refer to FP-1, SS-17, WW-1 and WW-2. The entire route from Loop 610 to Fry Road, with the exception of where the route crosses Beltway 8, would be constructed on viaduct allowing for free movement of water.
Xiao Hu	3/8/2018	Website	RE: Dallas to Houston High-Speed Rail, DEIS. Research based on need and viability. Mr. Kevin Wright, The Federal Highway Administration documented the "Peak Period Congestion on National Highway System 2012" which shows congestion currently exists between Houston and San Antonio along I-10 as well as San Antonio to Dallas along I-35. They also documented on the "Peak Period forecast for 2035" which shows the demand is highly congested on I-10 as well as I-35 but NOT Houston to Dallas on I-45. According to TXDOT Statewide planning map website, three traffic congestion monitoring sites between San Antonio to Dallas (I-35), Houston to San Antonio (I-10) and Dallas to Houston (I-45), the I-45 route has the least growth consistently over the past 10 years, which pales in comparison to the San Antonio to Dallas (I-35) corridor which has about three time more daily volume. Station No. 110703 along I-35 route between San Antonio to Dallas had a daily	Refer to AQ-7, BA-2, GN-2, GN-3, NE-1 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>volume from 2006 to 2016 from 85,000 to 110,703 with only one year reporting decreased volume. Station No. 45180 along I-10 from San Antonio to Houston had a daily volume from 2006 to 2016 from 37,000 to 45,180 with one year of significant decrease. Whereas Station No. 236H88A along I-45 route from Houston to Dallas between Harris County and the City of Madisonville has a daily volume from 2007 to 2016 from 32,000 to 35,762. A fractional increase over 10 years, five of which had a decrease in daily volume. This information provided by TXDOT and Federal Highway Administration does not support claims made by Texas Central to justify constructing a high speed rail from Houston to Dallas. The FRA board did approve the Oklahoma City - South Texas Corridor project which addresses the need and the only need for mass transit to Dallas. Even by projections from the Federal Highway Administration, Houston to Dallas still would not provide enough ridership to sustain the proposed Texas Central HSR project. If the Federal Highway Administration shows no need, it is critical that Texas Central provide the evidence displaying their interpretation of Purpose, Need and Viability since section ES.4 Purpose of and Need for the Project lacked substantial proof and substance. Predictions being made on forecasted growth does not take in consideration, that Houston may continue to have 500 year floods from here on as predicted by the National Weather Services which does look at data objectively. This will cause a decrease in growth, simply because people will move out of the Houston area since rebuilding year after year has an emotional, financial or psychological toll on people's lives. By the evidence of data from the Federal Highway Administration and TXDOT statewide planning map, there is not enough evidence to support Texas Central proposed High Speed Rail from Houston to Dallas. I ask the Federal Rail Administration to consider the No Build Alternative at this time. Respectfully, XIAOHU</p>	
Xiao Hu	3/8/2018	Website	<p>RE: TCR DEIS - Hazards Disturbance of all the hazardous waste sites could potentially put the public in harms' way. According to the EPA Toxic Release Inventory, it shows Harris County to be one of the most polluted counties in Texas. Once polluted and hazardous waste areas are disturbed it opens the door to releasing all sorts of toxins that could harm the public. This is a proven fact as it has already happened in other parts of Harris and Galveston Counties. A good example of this is the dioxin waste pit sites on the San Jacinto River, that have been exposed due to flood water and storm damage weather events which released the dioxin into neighborhoods causing cancer cells or pockets within the communities. These toxins seeped into the ground and water. It took years for people to discover this since so many parties did their best to deny and hide relevant information that endangered human life and the environment. To this day there is no permanent solution to this environmental disaster. The route along Highway 290 (Utility Corridor) is no different. According to the DEIS, 307 hazmat sites were identified in Harris County. Forty six (46) are adjacent to the limits of disturbance (LOD) and twenty nine (29) are inside the LOD, however only forty (40) out of these seventy five (75) sites will be investigated. A site that was not appropriately rated was the Wyman Gordon properties (which have changed hands in the last two years). If research on all the previous owners is performed in the Harris County Judicial courts along with Wyman Gordon, you will find that people have sued Wyman and Cameron Forge because employees have died of different types of cancers from the products or by-products or hazardous waste that Cameron and Wyman Gordon used and disposed of on and off site. Additional concerns stated in the public forum, are, that TCR understated their construction workspace and if the record of decision and the final EIS are issued, nothing prevents TCR and its third party vendors to stay strictly within the footprint that was reviewed. Thus, meaning those sites they listed as low and outside of the reviewed footprint would be disturbed and no oversight on these hazmat sites would occur, nor would a proper investigation be done on these sites. These sites would not be properly cleaned thus causing contaminants to be exposed that would put the public in harms' way. The FRA can not be 100% certain that construction of the HSR will not release toxins in the environment. The FRA also can not be 100% certain, all relevant information about hidden hazardous sites have been given to you or reviewed. These will be discovered after construction starts and then there will be no oversight of how those sites will be handled. If the federal government won't protect the people, then who will? The Utility Corridor (route along Highway 290) is not a viable solution as there are too many factors going against it. Due to the numerous road closures, such as the Beltway 8 which is a main thoroughfare, road relocations, the pipelines and utility relocations, not enough adequate drainage thoroughfare, road relocations, the pipelines and utility relocations, not enough adequate drainage or detention and the numerous hazmat sites that would be disturbed. I am requesting the No Build Alternative be implemented. Respectfully, XIAOHU</p>	Refer to BA-5, HZ-1, HZ-2 and LU-14.
Xiao Hu	3/8/2018	Website	<p>RE: Texas Central DEIS, Road congestion While the FRA was in town, you got to experience fake news as well as some gamesmanship moves by Texas Central and the City of Houston with the Mayor participating. If memory serves millions of Texans correctly, both the Mayor of Houston and Texas Central took the opportunity to hold a special news conference to publicly announce the Houston Train Station location. They lied, causing the public to believe the FRA had given TCR and the City of Houston insider information. This false announcement came just hours before the Houston public hearing. Then another fake news story was being circulated, claiming that construction on Highway 290 would be completed by the end of 2018. Thus again deceiving the public and attempting to influence a federal agency with a false narrative in favor of the high speed rail. These two heavily publicized reports are still being circulated. So here's some facts to chew on. TXDOT has taken 8 plus years to get less than 50% of Highway 290 constructed. So by mid 2019 they will possibly be done with the first 50%. Then TXDOT will have to work on the second 50% of the highway project. Since the past is generally a foreteller of the future, it will take TXDOT much more</p>	Refer to GN-6, GN-9, PN-3, TR-4 and TR-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>than one year to finish Highway 290. Another nightmare construction project to add to the mix, Loop 610 has begun to create a double decker which will cause delays for two or more years. Now according to the DEIS, TCR wants to add to the anguish of the daily commuters by altering, relocating and/or closing 97 to 105 roads that feed into Loop 610 and Highway 290. Now let's say that Texas Central's projections of ridership are not fabricated. The 5 million proposed passengers will cause 3 million more vehicles to be added to the already heavily congested freeways and side streets. NO, this certainly isn't a recipe for disaster. Really people enjoy utter grid lock, road rage and not being able to get to their destination within Houston. Then let's say we have a major hurricane during the next three years, Highway 290 is one of the major evacuation routes. Adding Texas Central's chaos to two major highway construction projects will ensure there will be fatalities during regular commutes and especially during a hurricane evacuation. The problem isn't getting from Dallas to Houston or vice versa. The problem is getting around within Dallas and within Houston. The City of Houston supports this project because the City is financially bankrupt and would grab pennies while stepping over dollars. Commuters are already burdened with a failed freeway system. This project will ensure continued grid lock and frustrations. While Texas Central openly admits they will not fix the congestion within the cities, it is an admission this project will greatly contribute to increased congestion within the cities. I'm sure that will be great for business. If people can't get to the proposed train station, then no one will take the train. Texas Central has put the cart a mile in front of its horses. Allow the City of Houston and the Gulf Coast Rail District to address the alternatives to fixing the congestion within the City of Houston before adding a High Speed Rail from Houston to Dallas. This will provide sensible travel arrangements that will clearly indicate where the need for the High Speed Rail is truly warranted. I ask the Federal Rail Administration to consider the No Build Alternative at this time. I ask the Federal Rail Administration to consider the No Build Alternative at this time. Respectfully, XIAO HU</p>	
Xiao Hu	3/8/2018	Website	<p>RE: AS-MM#1 Public Outreach - Lack of involvement of the Stone Gate Community As per the Section 3.10.6.1 Mitigation Measures - The following Mitigation Measures (MM) would minimize the aesthetic and scenic impacts of Build Alternatives A through F. AS-MM#1 Public Outreach—Public Meetings with Impacted Neighborhoods. As part of the LID approach, TCRR shall continue to incorporate stakeholder input into design throughout the project to inform their decision-making process. Prior to construction, TCRR or its contractors shall present visual impact mitigation strategies to the following neighborhoods: Saddle Creek Forest Development (Grimes and Waller counties), Plantation Drive (Grimes and Waller counties), Mallard Crossing (Harris County), Stone Creek Ranch (Harris County), Mallard Crossing (Harris County), Stonegate (Harris County) and White Oak Falls (Harris County). For all other residential areas, public comments from the Draft EIS will be incorporated into the Final EIS. The responses and comments would be used to guide mitigation measures implemented during construction and operation of the HSR system. I am a Stone Gate homeowner. I have lived here for 16 years with one address. I have been following the Texas Central High Speed Rail project from 2014 when CLS contacted me to see if my home was for sale on two occasions. I have requested verbally and in writing that the Stone Gate neighborhood be involved, be notified and included in open house meetings and requested a neighborhood meeting for the residents. At the initial open house meeting at the Tin Hall in 2014, very few residents were sent an email from the HOA 30 minutes before the meeting. Not every homeowner got the email as many are not on the list. This gave no one time to plan to attend that meeting from the start.</p> <p>The Stone Gate neighborhood was excluded from this process while the DEIS was being prepared, so our input was not included as the Section above indicates. However, Texas Central reps met with the Townlake neighborhood two miles up the road from Stone Gate and the proposed route. Here's the problem with this process. TCR and its third party vendors have not included all homeowners in the Stone Gate community. They may have a public outreach after the March 9th comment period is over. That means Stone Gate residence concerns will not be part of the Final EIS. That's a huge problem. I am requesting the following: Certified return receipts letters be sent to everyone in Stone Gate inviting them to a community meeting sponsored by Texas Central. An advance notification of two weeks to allow residents to make allowances in their schedule to attend. The meeting time to be set at 7pm to allow residence who have longer commute times to attend. The meeting to be set at a location to accommodate all community members and close to our neighborhood. Details of how TCR will mitigate sound disturbance, vibrations, decreased land values, visual pollution and other concerns of the community. The comments from this meeting must be included in the final DEIS or a decision of the No Build Alternative should be selected. Respectfully, XIAO HU</p>	Refer to PI-1 and PI-4.
Xiao Hu	3/8/2018	Website	<p>RE: TCR DEIS - Noise pollution impact I live in the Stone Gate neighborhood that will abut the proposed high speed rail project. Homes here range from one story to two stories in height and trees average about 30 /- feet. There is nothing above forty feet that would block or limit noise. As I stated in the public hearing on February 5th, 2018, the noise disturbance was grossly under stated in the DEIS. I live 1,665 feet from the UPRR tracks. I hear the train in my house with the TV on and the windows closed. This train is not traveling faster than 35 mph. On any given day of the week, I also hear the daily activities from a business that is 7,872 feet from my house. This company which is at ground level drops pipe, moves metal and uses forklifts. In front of the Stone Gate neighborhood off of Highway 290 and Barker Cypress road, the proposed super structure will be 65 to 70 feet above the ground. According to the DEIS, "when trains are on elevated structures, the noise is</p>	Refer to NV-1 and NV-7. Despite their higher speed, HSR trains are shorter and generate less noise and vibration than typical freight trains. A construction noise assessment, consistent with FRA guidance, has been conducted for the project and will be further refined during engineering and design as construction details are determined. The distances quoted are for noise impact, and not audibility of a source of noise.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>increased, partially due to the loss of sound absorption by the ground and partially due to the extra sound radiation from the bridge structure". In the Appendix E Combined Tech Memo Set 1 of 2, the construction of the structure will involve the use of pile drivers (Pile Hammer & ACC. D46-32: 100-125K-ft-lb PILE HMR 252 (64), 350HP VIB HMR/EXT I416 264 (65) and SWINGING LEADS 252 (64)), hydraulic hammers, backhoes, dozers, excavators, graders, loaders, cranes, rollers, compactors, man-lifts, trucks, air compressors, generators and welders. According to the study, the noise generated by these activities will not go beyond 220 feet during the day and up to 600 feet away during the night. There is absolutely no way these activities and the use of heavy construction equipment will be contained in the limits of disturbance as set out in the Tech Memo. According to the report "Dealing with Vibration and Noise from Pile Driving" by W. Allen Marr P.E., states "vibrations and noise may extend thousands of feet away from the pile driving activities". In addition to this report, independent research was conducted of sound sampling for pile driving activities, hammer drivers and other heavy construction equipment stated above. The noise impacts as indicated in the DEIS are completely false, flawed and a misrepresentation to get a favorable decision from the Federal Rail Administration. As I stated above, I clearly hear daily operations from Howco Group that is 7,872 feet away as a crow flies. When cars are racing at ground level on Highway 290, traveling at speeds of 100 mph or more, that sound can clearly be heard inside my home with the TV on and windows closed at approximately 1,700 feet away. Not only is the results of noise disturbance in the DEIS a flat out lie, it is so incredibly misleading to say that the noise disturbance of construction activities will just stop at 600 feet when heavy construction equipment will be used. It is also a fabrication to facts to say the daily operations would not be heard beyond 220 feet when the high speed rail will be elevated 65 feet in the air traveling at 185 to 200 mph, metal on metal, with no natural or manmade barrier to absorb the noise. Up to sixty eight (68) times a day from 5:30 am to 11:00 pm. And we are being told essentially the sound waves will just fall out of the air at the distance of 220 feet. Sound waves can't possibly go beyond that point. This is preposterous.</p> <p>So when people bought their homes they had an expectation of relative peace. We purchased not only our home but the atmosphere surrounding it, thus setting a precedent of what was to be expected. Our homes are surrounded by a golf course and other residential structures, not a monstrous massive super structure that would generate a noise nuisance to our environment. The prolonged construction phase of 3 to 5 years and daily operations of the proposed high speed train will have detrimental affects on home values, quality of life and peaceful entitlement. This is extremely unreasonable to expect residences to endure this type of nuisance. I request the Federal Rail Administration to consider the No Build Alternative. Respectfully, XIAO HU</p>	
Doc Hubbard	1/29/2018	Oral	<p>I want to be clear. We fought the Japanese in World War II to get their butts out of our country. We don't want them back. I want to be clear about that. I know when my boots are being pissed on and somebody's calling it rain. This is our county. I've got a lot of friends I've seen here leave tonight that have to go home because they have to get up and go to work tomorrow. If they want to fight, let them bring it. I say let's run them the hell out of here. This is our county, this is where we live, generations of our families have lived here. You guys and cowboys, I've known a lot of you-all. I know how tough you are. I know the Navarro rifles statues in Navarro County up there at the courthouse. There's still a lot of us old farts around to fight. So you people back there that work for the Japanese company, I spent some time in Japan over there, and I know what they are, too. They are the most dishonorable people I've ever laid eyes on. They're not coming over here and tell us how we live, and they're not going to build this monstrosity through our county because we're going to fight. If they go to our neighbor's house and try to tear it down, we're going to fight them. You can be damn sure about that. We're not going to run. You can send all the federals in that you want to. I promise you, the sheriff and all of them will lay their badges down and stand with us. Amen? That's enough.</p>	Comment noted.

Eddy Hubbard	3/9/2018	Website	<p>After reading any information that is available about the project, I do not support the proposed bullet train project. First, not much is known about price of a ticket. It's not even expensive to fly or even drive to Houston now, so I am questioning how is this will be the best option. Second, I do not support taking people property away. If it's the person legally owned property, companies should not have the right to use eminent domain. Third, while I support making public transportation for everyone, we should consider economic impact. If the project gets approved, how will this sustain jobs?. Once construction is complete, what happens to the builders once the project is complete? They have a</p>	Refer to ED-1 and SC-3.

Craig Hublinski	2/6/2018	Oral	Hello, I'm Craig. I want to turn your attention to this -- let me ask a question, because something just really jumped out at me. And if you read it, there's been some talk about the noise mitigation, but one thing it says, it says, "Where sound barriers are not feasible or desirable, building sound insulation may be a better choice for reducing indoor noise." Now, think about that. Okay. People have moved out to the country to get away from the noise, okay. They've taken and they've invested their money in it. They come -- they now have this railroad coming through -- if it ever were to get built. They're going to want to take the people's-- landowners' land. They want to then make the homeowner live next to a railroad and now, if there's a sound problem, they say, "Hey, you can put more insulation in and you take care of the sound problem." Now, my grandfather used to have a saying for stuff like that. People that ask too much, he would say, "That's asking a little bit too much to do for a dime." It just -- it don't make any sense when - when the FRA's going to -- and I want to remind the FRA, y'all do not work -- I mean y'all do not work for Texas Central Railroad; y'all work, really, for us. Y'all are supposed to take care of our requirements. Okay. So if this were to ever go, y'all need to make sure that if a landowner -- if he currently sits in front of his house and the noise that he has to listen to is at 20 decibels, when this is done, he needs to be able to still sit in front of his house and the noise level is still 20 decibels. And it doesn't matter if they have to put a -- put the train in a tunnel, and they have to pay for it, it's not y'all's responsibility to assure that Texas Central Railroad's project is profitable. Y'all are supposed to take care of the landowner and y'all are supposed to take care of us and allow these people that have spent their life savings to enjoy their property. Thank you.	Refer to NE-1 and NV-1. Where mitigation is required and sound insulation is deemed the most appropriate form of mitigation, TCRR would be responsible for completing that work and the associated costs.
Will Huckin	3/9/2018	Email	I am writing to inquire about the need for mitigation/ mitigation specific projects to offset potential 404 impacts with the newly proposed rail. My firm, NeoVerde LLC has been in the mitigation banking business for over 10 years now. We would be interested and instrumental in facilitating these needs. Please let me know steps I need to take or whom I should contact to inquire further. I look forward to hearing back.	Comment noted.
Alberto Huerta	1/29/2018	Oral	My name is Alberto Huerta and I would like to have it made. That's all.	Comment noted.
Mitchell Huff	3/9/2018	Website	High-Speed Rail connecting Houston and Dallas will result in significant economic benefits to the entire state of Texas. This project will help to modernize public infrastructure and will demonstrate the benefits of high-speed rail in the US. The draft EIS is a first step in addressing all of the various environmental concerns. The public benefit of this project for a region of 12 million people should be heavily weighted in the discussions involving the project's merit.	Comment noted.
Jacob Hugentobler	1/26/2018	Website	I support this project, no matter its costs or environmental impact. This is a good use of private funding and should receive my government's blessing.	Comment noted.
Jacob Hugentobler	2/28/2018	Website	I support this train no matter what environmental impact is ultimately found, if any. The train is desperately needed to connect major metropolitan areas, and I pledge to take my car off the road if I have a reliable, fast train as substitute transportation.	Comment noted.
Holly Hughes	3/1/2018	Website	Please consider an alternate route north of the power lines to preserve the historical, charitable and ecological importance of Morgan Legacy Farm, located on FM 709 and 3194, which will be effectively destroyed by the presently considered route. The Morgan Family has been extremely generous to community organizations, First Responders, in the use of its wonderful facilities. It would be tragic for all the good to be lost when other good options are many.	Refer to LU-5.
Holly Hughes	3/7/2018	Website	REROUTE TO NORTH OF POWER LINES. Please use the alternate route north of the power lines to preserve the historical, charitable and ecological importance of Morgan Legacy Farm, located on FM 709 and 3194, which will be effectively destroyed by the presently considered route. It would be tragic for all the good to be lost when other good options are many.	Refer to LU-5.
Joseph Hughes	2/25/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally	Refer to LU-5.

Joseph Hughes	3/9/2018	Website	My hope is that you will Save Morgan Legacy Farm (located near FM 709 and 3194) by amending the proposed route. Morgan Legacy Farm is providing a service to the Navarro County surrounding area. The unspoiled natural beauty of the land and the tranquility of the setting is too special to cast aside. Move the train! Change the route!	Refer to LU-5.

Katie Hughes	2/25/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term.	Refer to LU-5.

Donna Hull	1/30/2018	Email	I am very opposed to this high speed railroad. I believe it is a useless waste of taxpayer money and is not going to be as successful as originally thought. I also live in Leon County and do not believe that a foreign company should be able to come in and take land. The projected path of the train will come right next to the school that I teach at and that my children attend. I do not plan on standing idly by and watching this happen. I plan to fight it to the highest courts. There could be a derailment at any point in time yes that means at 3:15 when our buses or taking precious cargo home. Your ill thought ideas and your stupid train are not more important than the lives of my children or any other child that attend that school. Thank you for letting me leave my opinion. I know you will probably not ponder the thought that you are endangering the lives of kids, or even read this for that matter. But I promise you, you will be hearing more from me. See you in court	Refer to ED-1, GN-2, GN-4, NE-1, SC-8, SS-12 and SS-13.
Donna Hull	1/30/2018	Oral	Good Evening. Many of you know me. My name is Donna Hull and I am a teacher here at Leon and I come to you tonight to talk to you about a different aspect of why I'm against the high-speed rail. I received this picture this morning from my mother. I honestly don't have a speech. I didn't realize I was going to want to speak until I walked through the doors. This is a picture my mother sent me this morning. This is my school. This is where my kids go to school. The school that I love. I come up here every day for all the kids. How many of you have kids in the school? How many of you have grandkids in the school? The projected path puts it within one-quarter of a mile from our school. One-quarter. Less than one-quarter. Our babies get on those busses in the morning and they come to school. They get on the busses at 3:15 and they go home. They cannot promise us that a derailment cannot happen close to our babies. What if something were to happen on the buses? Or something were to happen when we are taking them on a field trip. There are too many what-ifs for any of this to be good. For any of it to be anywhere near this school. And if I get emotional on this, I do apologize. These are my two daughters. Callie is posing after she got baptized. That's Grayson and I after the one-act play three years in a row. Their safety is worth more to me than a 90-minute commute from Houston to Dallas and it ought to be worth more to everyone here and in the state of Texas or any school it comes near. My two daughters are worth way more than your stupid train.	Refer to SC-8, SS-12 and SS-13.
Jessie Hull	2/16/2018	Website	I would love to see this rail developed and would visit Houston more often if it was!	Comment noted.
Bob Humphrey	2/5/2018	Oral	I'm Bob Humphrey. I'm amazed at all you wonderful and talented speakers here, and I'm No. 46 and they haven't said a thing about what I wanted to say. Ms. Coffey spoke earlier about the Shinkansen, or whatever they call it, technology being 60 years old, and the young man in the back talked about wanting to ride a high-speed rail. I think we all can see that. When we look at the pictures of these over here, they're very futuristic. But, in fact, the way we see technology change today, the gentleman over here talked about rail is rail. That is not true. There is linear rail now, there is the rail that comes out of Europe that meets the high-speed requirements and does a lot more in terms of high-speed curves rather than straight lines. There's a whole lot more to it than that. Texas deserves not the used car but a new car, and I just don't believe that what they're providing us here is a straight shot at getting what we deserve in Texas at the time. They tout that this is supposed to be a privately-funded rail with the help from some lenders. And who are the lenders? Well, so far they don't have any. They've got \$300 million raised out of \$20 billion needed. And that \$20 billion does not include the acquisition of the right of ways. And I don't know what -- and now they already increased the amount of right of way they want from 3,000, I understand, to 8,000 acres. Okay? We fought TCR. We went to Austin to try to get the state to take a look at this and make sure that public money, Texans Against High-Speed Rail did, that public money wasn't used for the purpose of this rail because they said it was private, but they were beating on the doors of state, and they fought us every step of the way until we got House Bill 975 passed. They wanted -- they did not want us to be able to prevent them from using that public money. And where are they today? They're in Washington, D.C., they're at the White House steps, and they got their hand out, and they're looking for money through the RRI program, the TIFIA program, that one of them is designed specifically for buy America, and they're also looking at getting involved in Trump's infrastructure scheme that they've got here. Without the government safety net, they will have no private funding at all. So contact your congressman. Their real purpose of this is to build, operate, and transfer, and I believe -- and from -- what I mean by that, build it, operate it, and transfer it to the public and let us have it and take care of it. Finally, I want to chide the public, our media, Channel 2, 11, and 13, we are not getting a fair shake out of this. This looks like everything we've ever seen in the way politics are operated and run today -- big money and people control. The little guy doesn't have a chance. We don't get the press releases that they do. We've tried. They stay out of us. Okay? We need to be after our people here publicly. We need to hammer them and get something started, otherwise we're going to be in real trouble.	Refer to BA-4, GN-4, LU-14, NE-1, PN-3, SC-22 and TC-2.
Bob Humphrey	2/6/2018	Oral	I'm Bob Humphrey. I live here in the Waller area. I pay Harris County taxes; I have Waller politics to contend with. How many people here tonight are not - does this rail not come directly over? How many? All you guys look around; it's directly affecting you. These are your neighbors. They support you. It's like 50 years ago when you had a barn burn, neighbors came and helped. We need to bind together and take care of our neighbors. Just because one person is hurt doesn't mean we're going to move it over and let somebody's else's ox be gored okay? We need to stick together. We've heard here tonight about the financial viability of the project. And I just wanted to add a couple things. Initially, it was a part of the DEIS. It was later removed. Other rails that were being considered by the FRA: One by Amtrak, one in Florida, all of those include the financial aspect of it. Texas Central publicly insists that it's a properly funded rail. And they say "with the addition of the help	Refer to GN-4, NE-1 and PN-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			of lenders." Who are the lenders? None, as of now. In the last three years, they have only been able to raise 300 million of the 18 billion. And that's to build the track, not buy the right-of-way. That's 1 or 2 percent of all that's required of private money in this deal. What they've done is they went to the State. We shut them off at the State level. They are now at the steps of the White House, looking at Trump, wanting this new infrastructure bill that comes up -- to be included in that bill to run their railroad through us. Here's the deal: If they do that, when the bill is passed, I understand that the way it is, the Congress up there divides all the money among the states for infrastructure. Well, guess what? They've got ahead of the line. They have cut what Texas is going to get, they're already taken that out. The State Legislature who takes that money and distributes it through Texas and the people that need it don't get the benefit of it. These guys are hogs at the trough, okay? Let's no-build this. Alright?	
Bob Humphrey	3/5/2018	Oral	Yeah, Mr. Scofield gave me his time. Can I take it? Yes. I'm speaking for Randy Scofield. My name is Bob Humphrey. I live in Harris County. He works for and represents people in Harris County that have land in that area. A lot has been said tonight about all the different issues, about the DEIS, about all the conflicts, all the things that are bad, but the thing that really strikes me tonight is the fact that I cannot believe that after we've heard all that's gone on about how TCRR has treated the landowners and everybody else, that they have, once again, stooped to one more low in the fact that they've paraded all of these associations through here for their benefit, okay? And then on top of that, that makes it worse, is the fact that they bring children, our young adults in here, who really don't have a clue about what's going on, and tell them lies that they come up here and repeat and those lies are the fact. There's a young lady here tonight, a very nice lady, said it's private. It's private. Private money. We also had Sylvester Turner's representative up here say, it is private money. It's private money. That's a lie. And when they tell us that they voted for the -- or pushed for the 977 House Bill where no state money could be used, they fought us every step of the way to the last minute. They lied and they're lying now. When they say they -- they have eminent domain, they was -- they sued Calvin House in court, in District Court 333, September 2016. They got a summary judgment against them. Calvin did. They lied. They do not have eminent domain, but you would make these young people here believe all of those lies. I -- it's beside me how these people can come and stand to look at us. They're our own neighbors and our own -- the people we see every day. How can they, for money, stand up and lie like this? The ridership. They claim they're going to haul 13,000 people a day. Well, Southwest Airlines, we're told, carries 1800 a day. Okay? They're going to put 13,000 people and take them out of their cars at a ridership of \$200 one-way trip? That's not possible. You've taken out of the EIS the financial viability aspect of it because if you look -- took a hard look at it, we, as Americans in Texas, are going to be paying for this, all of us. It's coming out of our pocketbook. And finally, they've been to -- they've been three or four years trying to raise private money, private. \$18 billion is what they claim. That's not the acquisition of the land. That's the property. I mean, that's the building of the rail. They've been able to raise about 300 million, 150 million of that is cash. The rest of it is in kind. That's less than 1 percent. They've been to the hedge funds in New York. They will not put any money up with them. They will put money with anything, but they won't put it with this. Now they're in Washington, D.C. and they're looking for a safety net from the federal government. If they can get that, then they can get these other people in because they'll have a guarantee. We need to stop them and stop them now. This is a no build. Thank you.	Refer to ED-1, ED-2, GN-2, GN-4, NE-1 and SC-3.
Bob Humphrey	3/9/2018	Website	State and Federal requirements directing both TXDOT and FRA To coordinate with county and local elected authorities and Agencies were not just ignored but denied them, which Makes the current DEIS void as the rule of law was Denied to those entities.	Refer to NE-1.
Bob Humphrey	3/9/2018	Website	State and Federal requirements directing both TXDOT and FRA To coordinate with county and local elected authorities and Agencies were not just ignored but denied them, which Makes the current DEIS void as the rule of law was Denied to those entities.	Refer to NE-1.
Bob Humphrey	3/9/2018	Website	The DEIS is deficient in that the required study of endangered species was woefully ignored. Bald eagles nest and hunt in this area. I see them regularly Especially in mating season. The AECOM had approved access to a very Small percentage of the rail route and could hardly have done their job When looking for and observing species such as the red wolf, Texas Horned Toad, bald eagle and a dozen other protected and endangered Species as listed by Texas Parks & Wildlife in the affected counties. Deny this EIS and have TCR provide a complete environmental assessment.	Refer to NR-3 and NR-4.
Bob Humphrey	3/9/2018	Website	The financial viability of this project was removed from the Current DEIS early on in the process. TCR has always Insisted that this was a privately funded rail. Their on Documents show that they have only raised just over \$100 million-of the 18 billion needed for construction, That doesn't include right of way acquisition., in the Last three years. Their revenue is based on a ridership Of 13,000 a day at \$50 a ticket more the the airlines Charge one way. The airlines carry fewer than 2000 Passengers daily currently. These are the numbers in the DEIS. THIS IS NOT A VIABLE ALTERNATIVE AND A NO BUILD DIRECTIVE SHOULD BE GIVEN. THIS SHOULD NOT BECOME A TAXPAYER BURDEN " THE EMPEROR HAS NO CLOTHES "	Refer to BA-6, GN-2, GN-4, PN-4 and SC-3.
Bob Humphrey	3/9/2018	Website	Please include the attached High Speed Rail study in the comments for the DEIS.	Comment noted.
Donny Hunter	3/7/2018	Website	I support the development of a future high-speed rail line. This seems to be the only way to relieve the congestion on IH 35 and improve the train in the golden triangle of Texas.	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
Bill Huntsinger	2/3/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The proposed HSR plan does not provide for the intent or funding to address the adverse impact to the major thoroughfare plan and roadway grid of Waller County. Waller County does have the funding capacity to do so - thus leaving our citizens at risk in case of emergencies, our school children to suffer from even longer busrides at our expense, and our properties further diminished in value due to lack of access as a result of the rail. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-6, SC-7, SC-8 and LU-11.
Bill Huntsinger	2/3/2018	Website	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: The EIS does not provide a professional and audited financial report from the Applicant or public sector addressing the financial feasibility and potential risk exposure to the public. There has been NO Full Disclosure. The public should NEVER be engaged in or invested in a private sector project that leaves the public at further financial risk or obligation for a failed and under performing venture that will at some point require subsidies or favorable financial treatment. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement".	Refer to BA-6 and NE-1.
Amber Hurd	2/18/2018	Website	The Texas HSR will be life changing and will have a positive impact on air quality by eliminating cars from our clogged highways. Texans deserve a mass transit system that is reliable and clean. I hope you consider the positive impact this will have on our future generations.	Comment noted.
Bill Hurles	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Mary E Hurst	2/20/2018	Letter	This letter is written in response to letter dated December 19, 2017, from Mr. Michael Johnson, Supervisory Environmental Protection Specialist, advising of the release of the Draft Environmental Impact Statement for the Dallas to Houston High-Speed Rail Project (the "Project"). My sister (Sharon Hurst Hibbert) and my brothers John T. Hurst and Edward P. Hurst) and I together own approximately 675 acres in central Grimes County, Texas, which our father and grandfather owned before us. The December 19, 2017 letter from Mr. Johnson advises us that the Project "could either directly or indirectly impact your property." In 2017, we were forced under threat of condemnation to grant Centerpoint Energy Houston Electric, L.L.C. an easement for placement of a high voltage electric transmission line across our property, adjacent to an existing CNP electric transmission line easement already encumbering our property. By this letter, I voice the strongest possible opposition to the Project for the following reasons: 1. Two existing major electric transmission lines encumbering our property create more than our share of "public good" contribution to the welfare of the residents of Dallas and Houston who will benefit from the project. Even assuming that the Brazos Valley station is actually constructed (in my mind, a dubious promise at best), the project will hold little benefit and great negative impact to the landowners of Grime County generally and particularly those landowners whose property is impacted by the Project. 2. The aspects of the Project that we object to most as negatively impacting our property include without limitation the following: (a) introduction visually, audibly, and by vibration of the urban and industrial landscape to a rural retreat, 24 hours per day, 7 days per week, and 365 days per year; (b) impairment of the marketability of our property for recreational purpose because of the undesirability of proximity to increase electro-magnetic fields and the public's general misgivings and fear of the same, whether or not justified; (c) significantly increase vehicular and manpower activity in, on, and around the proposed right-of-way 24/7/365 needed to service and maintain Project infrastructure and moving assets. 3. Vehicular access to our property by means of FM 1774, as well as vehicular access to other property we own in central Grimes County with significant proximity to the preferred "utility corridor" route by means of FM 2819 and CR 149, may well be significantly impaired and made significantly more circuitous if these local roads (FM 1774, FM 2819, and/or CR 149) are not afforded costly underpass and/or overpass improvements at crossing with the proposed right-of-way. Please note that our family has over decades elected to forego higher returns that might likely have been realized on other investments in order to retain ownership of rural acreage. That is a choice that we have had the right to make. Taking what we have worked to keep is not the right of a privately owned enterprise intending to profit at the expense of those who will be so negatively affected.	Refer to AS-1, ED-1, ED-2, GN-4, NV-1, NV-5, SC-19, TC-4, TR-6, TR-7, TR-8, TR-10 and VA-1.

I				
Albert Iandoli	2/10/2018	Letter	My name is Albert Iandoli and live at [...]. The proposed Texas High Speed Rail will go directly thru my property. I will lose acreage, lose my timber and lose value to my property. I also will lose the ability to hunt on my property. I moved from Massachusetts 3 years ago to retire in this rural community. If the HSR goes thru it will not only generate noise but be an eye sore that is directly seen from my back porch. It will disturb all the wildlife on my property. I sincerely hope this project does go thru.	Refer to AS-1, LU-7, NR-1, NV-1 and RF-2.
Doris Iandoli	12/28/2017	Email	My husband and I are against the proposed Texas High Speed Rail. We do not feel it is fiscally sound. Reason Foundation's analysis indicates that Texas Central has exaggerated ridership and under estimated costs! We as taxpayers need full disclosure of costs. We do not believe Texas Central will be able to build this without public subsidies. We do not want to bail out a sinking ship!	Refer to GN-2, GN-3 and NE-1.
Sheereen Ibtesam	3/8/2018	Website	I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!	Comment noted.
Andy Icken (City of Houston)	3/5/2018	Oral	I'm Andy Icken. I'm the Chief Development Officer of the City of Houston. Mayor Turner would be here, but he has another commitment tonight. We speak in support of this project. There are many reasons that this -- we support this project, not the least of which is the job creation and the economic impact that Chris has already talked about. More importantly, from the City's viewpoint, we face -- and I think some of you may be aware of, that Mayor Turner, in his very first speech to TXDOT in January of 2016, pointed out that we need to make changes in the way mobility occurs in this area. We can't continue to widen roads. We are going to have to find alternative means of getting people from here to other places they want to be. What's particularly appealing to us about this project is this project is entirely financed from the private sector. There is no public sector involvement in this. Yes, the City of Houston is the supporter, and we run three airports in this city. This project will compete with that, but we think that's highly desirable from the City's point of view. And in fact, the airlines that operate out of our airports are supportive of this project as long as it is privately financed in one way. We do support the discussion of the selection recently of Texas Central Railroad of the Northwest Mall area. This an area that is has been deficient in investment over time. We think it can bring jobs to the area; and in fact, there's a multiplier effect of jobs in this area to allow for development. Lastly, this project itself will need connectivity to other parts of the city and other job areas in the city. Discussions have begun; and Metro, Texas Central Railroad and the City are committed to finding efficient ways that that connectivity, the so-called last mile, occurs from this station to other employment centers. Thank you.	Comment noted.
Darin Iglehart	2/20/2018	Website	I think this is to far from Union Station Surely there is a closer location to Place this position.	Refer to GN-7, GN-8 and TR-3.
Brian Illgen	1/30/2018	Email	We are going to cut through the environment for what? So we can say we have a high speed rail. That is the only reason. There is only going to be a few that will actually use the rail and many who will lose property not to mention the wildlife and general environment. If we had a real need then yes by all means. But there is not a need. It is a dream and bragging rights. And that is a poor excuse to change the environment along the route. And they cannot say there will not be any impact. That is a lie. Even a small impact is an impact. Thank you for the opportunity to speak me peace.	Refer to GN-2, NE-1, NE-9, NR-5 and PN-3.
Bryan Illgen	3/9/2018	Website	There are many factors to the impacts on our environment. Do we really need this rail to better life and have any impact on the environment at all? There is no doubt there is a so called "acceptable" level on impact. But any impact on a project that is not needed is not acceptable. Speaking of Houston. An already congested area will be more congested. Land owners up and down the line who do not want the property split in two will be forced to do so. Think about how they will get from one side to the other without a crossing. Also livestock will be restricted. Then wildlife patterns interrupted. Plus all the many Texans opposed to this idea. The heartbreak they will feel when fellow Texans are hurt. On yes that is an impact. We always here private companies say deal with it. Please do not be a part of this catastrophe.	Refer to LU-11, NE-9, NR-5 and NR-6.
Peter Imhoff	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

			<p>their vision for the need of High Speed Rail in Texas.</p> <p>3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</p> <p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
John Inabnett	3/8/2018	Letter	<p>WHL Dallas 45 LLC ("WHL") is writing to provide its comments to the December 2017 Draft Environmental Impact Statement ("DEIS") for the Dallas to Houston High-Speed Rail project (the "Project"). WHL is the owner and developer of Prime Pointe Industrial Park ("Prime Pointe"), a 3,000 acre master planned, rail-sewed industrial park located at 1-45 and East Wintergreen Road in southern Dallas County in the cities of Hutchins, Lancaster and Wilmer. A map of Prime Pointe is enclosed with this letter. Prime Pointe is strategically located next to Union Pacific Railroad's Dallas Intermodal Terminal ("DIT"). Prime Pointe offers rail-served sites for commercial and industrial development and operation. Prime Pointe receives rail service from Union Pacific via a spur track off of the main line that runs through DIT. Prime Pointe is the largest development in the Dallas County Inland port area and is leading the effort to create thousands of jobs and billions of dollars of economic growth for an underserved and underdeveloped area of Dallas. The 2016 Project alignment ran through Prime Pointe, and WHL appreciates the fact that Texas Central Railroad ("TCR") designed the Project to avoid bisecting Prime Pointe. Since 2016, significant warehouse and distribution centers have been built at Prime Pointe, which reinforce the importance of preventing TCR from interfering with the operation and growth of Prime Pointe. WHL objects to any Project plans or alignments that would limit access to Prime Pointe or disturb its growth and operations. In order to avoid any negative impact on Prime Pointe and to 6023556 &#8226;&#8222;2 ps000.0004S046) allow Prime Pointe to grow in the future, Prime Pointe requires all TCR road crossings in the vicinity of Prime Pointe and DIT to be grade-separated, specifically including but not limited to the major thoroughfares of West Belt Line Road, Greene Road, East Pleasant Run Road, West Wintergreen Road, Lancaster Hutchins Road and Interstate 20. All grade-separated structures along the West side of Prime Pointe should be built in conformance with Union Pacific's standard vertical clearance for overhead bridges, 23'-6", to allow for future railroad extensions. Prime Pointe further objects to the location of a TCR service facility south of Pleasant Run Road and requires plans for this facility to be relocated. WHL appreciates the efforts of TCR to accommodate Prime Pointe and looks forward to continuing to work with TCR regarding the Project. If you have any questions or require additional information from WHL, please coordinate directly with Mike Rader at 817-310-5595 or mikender@prime45.net. WHL DALLAS 45 LLC a Delaware limited liability company By: WHL Dallas 45 Manager LLC, a Delaware limited liability company, its manager By: Kane Russell Coleman Logan p C, a Texas professional corporation, its sole member By: Enclosure 6023556 v2 allow Prime Pointe to grow in the future, Prime Pointe requires all TCR road crossings in the vicinity of Prime Pointe and DIT to be grade-separated, specifically including but not limited to the major thoroughfares of West Belt Line Road, Greene Road, East Pleasant Run Road, West Wintergreen Road, Lancaster Hutchins Road and Interstate 20. Fred Infortunio	2/6/2018	Oral	<p>Hi, all. My name is Fred Infortunio. I live in Harris County in the Tomball area. I'm also running for House District 130, which covers part of this area. I would definitely do what I can -- if I get there -- to bring down this project. There's no way that this is -- this project is financially feasible. The harm that they are proposing to do for the landowners is horrific, and they did not do an adequate Environmental Impact. I'm not going to need the three minutes. I wanted to give you my opinion and my backing if I get to Austin.</p>	Refer to GN-4, NE-1 and NE-9.
Alyssa Ingram	2/24/2018	Website	<p>I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.</p>	Refer to LU-5.
Carol Isbell	3/9/2018	Website	<p>My husband and I are residents of Leon County and are OPPOSED to Texas Central Dallas to Houston high speed rail project. The project will negatively affect emergency response times for medical, sheriff and fire departments, divide private property, damage surface spring and creeks, close roads, disrupt natural habitat of wildlife and change forever our rural way of life. Our emergency services will be disrupted and compromised with longer response times due to road closures and inconvenient rerouting. The DEIS statement states impact times are not</p>	<p>Refer to LU-2, LU-11, NR-5, SS-23, TR-8 and WW-2.</p> <p>For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>expected to be significant. This project is not worth a single loss of life due to slowed ER response times! The division of property will cause undue and unfair burdens on land owners for beef , swine and poultry production and the ability to feed and water animals. Agriculture use whether is for crop production feed families, the general public or livestock will be disrupted. This will likely cause an increase in grocery prices with decreased supply. Why create the Berlin Wall in TExas? Texas is a relatively dry state most of the time and with the proposed construction of the rail surface springs and creeks which farmers, ranchers and wildlife depend on will be damaged. The natural habitat of wildlife will be destroyed. Road closures and rerouting of roads will cause traffic congestion like many people have never seen before as the public changes the travel routes forever. Many rural landowners will be making huge sacrifices as a result of the project. This project hurts the most who will benefit the least. Please do not let the rail project destroy our rural way of live and lives!</p>	<p>and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p>
Carol Isbell	NA	Website	<p>I am a resident of Leon County and opposed to the dallas to Houston high speed rail and disagree with the short time span we were allowed to comment and review the DEIS thank you</p>	<p>Refer to PI-3.</p>
Scott Isbell	3/9/2018	Website	<p>I am a resident of Leon County and Oppose the dallas to Houston high speed rail project. I also feel that residents were not given a sufficient amount of time to completely review the DEIS on the FRA website. Texas Central had several years to prepare and we had very little time to review the materials and lies submitted by Texas Central!</p>	<p>Refer to PI-3.</p>
James Isensee	2/16/2018	Website	<p>I fully support the development of high speed rail between major cities in Texas and this particular project between Houston and Dallas. This project 1) is environmentally friendly, especially as an increasing amount of electrical power is being generated by renewables sources and lower-carbon emitting gas-fired power plants; 2) will help reduce traffic on I45 between Houston and Dallas and future capital expenditures to address congestion; 3) will increase the real estate values within several miles of station locations; 4) provide an economic and more environmentally friendly and safe alternative to ground and air transportation modes between Houston and Dallas; and 5) is way past due being developed.</p>	<p>Comment noted.</p>
Alexander Ivanoff	3/9/2018	Website	<p>Dear FRA, I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying while adding the equivalent of several additional lanes of I-45, paid for by the private sector. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. Coming from a rural part of New York, I can attest to the importance of that. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for both Texans and Americans as a whole. I welcome a faster, safer and cleaner transportation alternative to reduce congestion, because it's good for Texas and good for America. Sincerely, Alexander Ivanoff</p>	<p>Comment noted.</p>
Reanne Ivie	1/30/2018	Oral	<p>So I have a few questions. One would be that there are numerous studies that show that cattle get stressed at anything above 80 decibels. It affects their fertility, visibility, heart rate and it causes hypoglycemia. I am sure that it not only has a negative effect on cows but goats, chickens, pigs and humans. I am concerned about the wind and the electromagnetism. The impact that that has on humans, bees, birds, our soil, water. Does the wind blow fertilizer off our crops? Does the wind itself have an affect on string or seeded crops, and hay. I'd like to know how they screen their workers. What kind of workers are you going to have? What types of security screenings are in line because this is a transportation type system and cutting off the path of some of the emergency responders? I'd like to know where the waste from their work is going. Like the brown water they have from new construction. I would like to know how they are going to take care of their workers in these rural areas trying to build in eight and ten hour shifts. A lot of the counties and small cities can't support feeding these people lunch. There are not restrooms near. The Sheriff and the emergency management coordinator were not notified and were not consulted. I would like to know how the rerouting of roads in the country is going to impact our emergency system in that county. If they are going to need our first responders to deal with emergencies on the train or rail emergencies. Are they going to pay to train our first responders for rail emergencies. And I want to know if they are going to police their own station. Are they going to have something a kin to what is in Dallas where they have DART, the Dallas Area Rapid Transit Police? I would like to know if we are going to have to work their own station. That's it.</p>	<p>Refer to BA-3, NR-1, PI-1, SC-4, SS-9, SS-7, SS-23 and TR-8. TCRR will adhere to all Federal and State employment regulations as well as any additional employment screening needs that may result from its System Security Plan as described in Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation, SS-CM#8. 1. Effects of EMF: The Draft Environmental Impact Statement (Draft EIS) discussed the health effects of EMF. Please see Section 3.15.2, Electromagnetic Fields, Health Effects of EMF: "Reputable authorities on the subject of EMFs include the World Health Organization (WHO) and the International Commission on Non-Ionizing Radiation Protection (ICNIRP). The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>"epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas. "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects."</p> <p>2. EMF and Distance from the tracks: As stated in the Draft EIS, Section 3.15.4, Electromagnetic Fields, Methodology, EMFs fall off markedly with distance from the source. EMFs are expected to be at ambient levels within 500 feet of the alignment. "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."</p> <p>3. EMF and Environment, wildlife, and residents: Potential effects to human beings are discussed in point #1 above. No reputable research on the effects of EMFs and wildlife/environment have been conducted, although several studies that have been questioned by the scientific community are available on the internet. However, since EMF levels follow the inverse-square law, the effect to wildlife and the environment are expected to be negligible. EMFs do not affect soil or water. As defined in Section 3.15.1, Electromagnetic Fields, Introduction: "All sources of electricity produce both electric and magnetic fields. Electric fields result from the strength of the electric charge, and magnetic fields are produced from the motion of the charge. Together, the combination of electric and magnetic fields are referred to as "electromagnetic fields." "Because air and water are not sources of electricity, they are not affected by EMFs.</p> <p>4. Wind and Environment: During operation, the trains induce airflow (i.e., generate wind) along the sides and at the end of the train (known as wake). Studies summarized by FRA in 1999 show that the strength of the airflow depends on the distance from the train, the train's geometry (i.e., the shape of the nose and end of the HSR), and the operating speed of the HSR. FRA found that the airflow dissipates in less than 1 second (FRA 1999). Other studies found that wind generated by the train has a velocity of approximately 10 percent of the train velocity at a distance of approximately 10 feet from the train (Neppert and Sanderson 1977; Sterling and Baker 2010). An extrapolation of these studies for a train traveling at 220</p>

Rheann Ivie	1/29/2018	Oral	Good afternoon. Thank you all for showing up here this afternoon and for fighting for our county. My name is Rheann Ivie. I am one of three female-owned ranchers in Navarro County. It is a dying breed. I am raising the next rancher right beside me. So I'm here tonight to fight not just for your land and my land, but for her land. I came tonight thinking this was mostly about the environmental impact, and we have -- we raise laying hens, beef cattle, we have a cow-calf operation, and she raises pigs. So we have Googled several different places and looked at the effects of noise on our food supply, on livestock performance, and on stress as well. Those of you that raise pigs, you will agree with me that it is very easy to stress a pig. I cannot imagine the amount of decibels that a jet engine going by every 30 minutes, what that will do to my child's prize-winning pigs. Our hay fields. Someone brought up the fact that we have wild hogs. Folks, if you think there's not a hog problem in the state of Texas, it will become absolutely rampant with something like this. We have hay fields that are near where they're going to put the lines in at, and I have heard that you cannot shoot within a mile of it. Two miles? Well, I'm here to tell you, I have to keep hogs out of my hay fields and I have to keep coyotes away from my calves. It is a part of my everyday life. It's what I do in the evenings when I get home. It's part of ranching. It's going to cease to exist. We cannot let something like this come in and take our land and our children's land. We can't let something like this invade our county and other counties out of convenience. It's not going to be convenient for us. It's not going to be convenient for the small rural counties around us. It will only benefit the Dallas area and the Houston area. I wish I had something more poignant to say. I will say in a world of organics and people who want organics and less pesticides and everything else, to keep your livestock de-stressed, you can't have trains going by every 30 minutes. It's not going to help. It's not going to happen. We're a dying breed, and I am so grateful that my whole community has come out to support all the other ranchers. Thank you.	Refer to NR-1 and RF-2.
Institute of Policy Innovation	3/7/2018	Website	On behalf of the Institute for Policy Innovation (IPI), a free-market public policy research organization that closely follows regulatory policy nationally as well as in the State of Texas, I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections Texas Central Partners has demonstrated a sensitivity to the needs of the environment along the proposed pathway, as well as sensitivity to the needs of landowners along the route. They have already decided to elevate a greater portion of the rail project than originally anticipated in response to these concerns. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 500 jobs permanently when operational at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. We are also strong proponents of privately financed major infrastructure projects such as the Texas Central Rail project. Building infrastructure with private risk capital instead of taxpayer dollars is an innovative way to build and reinforce America's infrastructure without making huge demands on the public purse. We believe this project, if successful, could encourage other such privately financed ventures. We would be happy to answer any further questions the Administration might have on this matter, and would pledge to work constructively with the Administration to encourage the successful completion of the Texas Central Rail project.	Comment noted.
Obinna Iwuchukwu	3/9/2018	Website	Houston has an Intermodal Transit Center near Downtown. METRO had intended to use that as a site for a new rail transit, but it never came to fruition. There is a METRORAIL site there and it is very close to the Amtrak station near downtown. I propose that there is a link from the Northwest Mall to that site. It would serve the city better as it would link downtown as well as the light rail system there. I also believe that there should be a separate station in the College Station area for university students there as well as one for Fort Worth. I hope you take this into consideration	Refer to BA-1, GN-7, TC-4, TR-2, TR-4 and TR-12.

Eleanor Jackson	3/8/2018	Website	The high speed rail as currently planned would take nearly 8 acres of the property we have owned since the 1960's and would destroy our current and future planned uses. Not only do they intend to take the necessary easement, but they also are planning an "access road" that would take additional property. If this was being done for the public good, it would be easier to accept. But this type of project has never proven financially viable. Texas is even less likely to be profitable because Texans do not like to use public transportation. They are an independent group who prefer being in control. We have been told that this will eliminate traffic from our highways. The 18 wheelers that clog our current highways will not be eliminated because there is no way to transport freight on the high speed rail. Please do not allow this project!	Refer to ED-2, GN-2, GN-4, NE-1 and PN-3.
Geoff Jackson	3/7/2018	Website	How can I get a copy?	Refer to PI-1.
Geoffrey Jackson	3/8/2018	Email	I am excited about working on the Texas Bullet Train and urge the Federal Railroad Administration to move forward with its review and approval. Texas is the perfect place to plant the seed to grow this new high-tech industry in the United States. The new high-speed economy created by this project will be a game changer for workers, vendors, contractors and other companies and small businesses all along the route. The fact that it is fully investor-owned means it will provide a great benefit for not only passengers, but all taxpayers. The Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. For instance, it states that the Train will create more jobs, contribute more than \$2.5 billion in taxes over its first 25 years and increase property assessment values within a half-mile of the proposed stations by between \$71.4 million and \$161.1 million. We want more travel options between Texas' two economic hubs and this project fills delivers and gives all travelers the freedom to choose a safer, more reliable and cleaner way to move across Texas. I welcome this new innovative industry and I urge the FRA to expedite its review and approval -- because it's good for business, good for the economy and good for Texas.	Comment noted.
George Jackson	3/5/2018	Oral	Hello. My name is George Jackson and I am here on behalf of myself and on behalf of my family. I have lived in Houston since 1973, and I have gone up and down I-45 hundreds and hundreds of times since then. One of the things that I find to be of great concern is that, as the population centers grow in Houston and Dallas, that travel time is going to get worse and worse. From what I understand in 2002, traffic was moving about 59 miles an hour between the two cities. In 2035, the estimate is it's going to be 39 miles an hour between Houston and Dallas. That's a six-and-a-half hour trip by 2035. As I understand the numbers, there's about 53,000 vehicles now. There's going to be over a hundred thousand by 2035. One of the problems, and it's a very significant problem, there was an article in the Houston Chronicle on October 14th, 2016 that said Interstate 45 is ranked as the second most dangerous stretch of highway in the country, fatalities per mile. Only Highway 99 in California is ranked worse. And as more traffic goes on I-45 between now and 2035, those numbers are just going to get worse. They're going to get worse and worse and it's going to become more and more congested. One of the reasons I am very in favor of the train is because of safety, safety on I-45. This system has been used for more than 50 years. You've heard, transporting billions of people, no accidents. And in conclusion, what I would say is this: If the train is not put in place, I think the alternative is very grim. I think that the transportation is going to become more and more congested. It's going to be slower and slower and there's still going to be more accidents, there's going to be more trucks on I-45 and there's going to be more deaths and I say, let's find a better solution. Thank you.	Comment noted.
George Jackson	NA	Website	I am in favor of the train. As Houston and Dallas continue to grow. Alternatives are needed to move more people between [sic] Houston and Dallas. I-45 will become more congested and more dangerous - and a lot slower. I have been driving between Houston and Dallas for 25 years - expansion may not help. We need and deserve a safer means to get from here to there and back again.	Comment noted.
Guy Jackson	2/9/2018	Website	I support the Houston to Dallas High Speed Rail. I travel between Anahuac and Dallas fairly often. Prior to 9/11 I would fly Southwest to Love Field. Now days by the time that you have to arrive to go through security I can be half way to Dallas. A single driver in a single car adds to the traffic congestion and to the pollution. A high speed rail would make this trip easier for me while helping alleviate traffic and pollution. As a property owner of a large tract of rural land I understand the desires of the property owners along the route to protect their lands but we have to understand that there are greater goods that need to be served. Our family lands created the Anahuac National Wildlife Refuge out of some of our lands and over the years have helped increase the size of the refuge. The proposed elevated design minimizes the footprint on the properties along the route allowing for unencumbered access to both sides of the tracks. As Texas grows the need to move large numbers of people between the metropolitan areas of the state only grows in importance. Once again, I support the high speed rail proposal and the path.	Comment noted.
Jennifer Jackson	1/11/2018	Email	I am very excited about this and really hope building will start soon! #BuildThatTrain	Comment noted.

Lee Jackson	2/17/2018	Website	I support the proposed Dallas to Houston High Speed Rail line and appreciate your study of any environmental issues of significance. No transportation improvement of this magnitude is possible without some inconvenience or change in land use for some neighbors, but it does seem that the sponsor entity has made every effort to align this project sensibly, conform to local desires wherever possible, and to acquire most of the needed rights of way by voluntary purchase. This is not an either/or transportation decision for our growing state, but rather an attempt to use all reasonable tools to keep up with our growth and to complement highways and airports which have significant capacity limitations. The financing of this project is now its main yardstick of feasibility, as it should be, and if it can be financed privately and if your study determines no insurmountable environmental issues then the marketplace and the needs of the traveling public and its willingness to pay for these services should be the ultimate test of its value.	Comment noted.
Robert Jackson	3/5/2018	Website	ROBERT JACKSON: My name is Robert Jackson. I'm the senior vice president for public affairs for the Houston First Corporation. Houston First is a local government corporation created by the City of Houston. Its mission is to enhance quality of life, promote economic prosperity and raise the profile of Houston as a destination. So that's the what of how we do. The how we do that is travel and tourism. So to that end, we operate the -- so the George R. Brown Convention, the Americas Hotel, Wortham Theatre Center, Jones Hall, Miller Outdoor Theatre and about a dozen other smaller venues around the city. In addition to that, we serve as the city's destination marketing organization. Essentially it's a responsibility to have an image for Houston as a destination so travelers who want to visit Houston, meeting planners who want to hold conventions there and along with our partners in the greater business partnership, businesses will be enticed to do their business in the City of Houston. We come today to -- we have seen firsthand what the draft environmental impact says is correct when it claims that travel demand is increasing and the increasing infrastructure is not able to accommodate this growing demand between. In Houston, we support the bullet train as an important part to solve our transportation changes. In addition, as our population grows, we look back on this project as an economic accelerator to help to generate economic activity while preserving public funds for use on public infrastructure. This project is a game changer for our city, for our state and I urge the FRA to complete its review in a timely manner. Thanks very much.	Comment noted.

Shelli Jackson	3/5/2018	Oral	Hi. My name is Shelli Jackson. I've lived here in Houston for the last 26 years and all of my extended family, including my parents, my kids' grandparents, live in the Dallas area. So I've made lots of trips between here and Dallas. So maybe I'm here as a representative of people that go back and forth and back and forth a lot. I've driven the route. I've flown on Southwest Airlines a couple times. I've even taken Mega Bus on several trips. So I have firsthand knowledge of I-45 between here and Dallas and in the last 26 years with the increasing challenges of driving it and the increased congestion. I'm here because I'm in favor of the Texas bullet train as an alternative mode of transportation. Texas is growing, Houston is growing and our highways are congested. We need options. I'm also in favor of listening to the concerns of the landowners, of respecting and accommodating and addressing their concerns while we do -- while this project moves forward. I'm in favor of the new -- of the Northwest Mall location of the Houston station and the redevelopment of this area and I'm looking forward to hearing how the terminus will connect with Metro and how it's going to move the people to the -- to the station and then once people arrive here, to get them to their destinations throughout Houston. It sometimes feels like a pie-in-the-sky idea that we can do something else besides drive cars around in this city and between cities here in Texas, but I'm encouraged by what I've seen in Dallas about what DART has done and the options that they have and they have built and are in the process of building a good transit system. People use it and people want it, and I think the same thing would happen here. For all these reasons, I'm asking that the FRA approve the bullet train project so it can move forward as soon as possible. Thank you.	Comment noted.
Veronika Jackson	3/2/2018	Website	I am highly in favor of this high speed rail project as I believe it will make a positive environmental impact as well as connect communities and businesses. This project will enhance our long term plans to compete globally for jobs and will allow Texans more choice when traveling. Thank you!	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
Leslie and Jecku Jacob	3/8/2018	Email	Would you be able to tell me what kind of extra noise the high speed rail will bring to residents in the country areas that it goes through and how kids will be kept safe from a high speed train going through our towns?	Refer to NV-1, SC-8, SS-12 and SS-13.
Leslie Jacob	3/8/2018	Email	I have recently been doing some research on the high speed rail that is being planned. I would like to know what the financial impact will be for residents as far as increased taxes to pay for it and the up keep of the system.	Refer to SS-26 and VA-3.
Steve Jacobs	1/22/2018	Website	I am glad to see that Texas is implementing a high speed rail between Dallas and Houston. This will provide a safe alternative way to link these two cities while not polluting the environment. I hope this is just one step in Texas improving the passenger rail system throughout the state and our country.	Comment noted.
Floyd James	1/30/2018	Email	This train will divide the county in half. For Navarro county that will be destructive. What will you do to mitigate the flooding that will be caused by the Dam (burm) across this low lying county?	Refer to FP-1 and WW-2.
Karl James	1/17/2018	Website	I am a land owner along the Utility Corridor route whose land would be directly affected by the project. In spite of that fact, SUPPORT the project and SUPPORT the Utility Corridor route. The Project and its representatives have treated me respectfully and have provide me considerable information. I think Texas needs this high speed rail project and I support it moving forward.	Comment noted.
Regina Jamieson	2/5/2018	Oral	Regina Jamieson My name is Regina Jameson. I spent the first 30 year of my life in Ft. Worth: which is like a quick trip to Dallas: if you didn't know that. And I spent the last 15 years traveling from this area to work in Houston. And I'm pretty sure I can tell you if not the commute back and forth to Dallas and Houston: that's the problem. It's the problem in the cities; the traffic: navigation in the cities. That's where the problem lies. As you notice tonight: Texas rural residents are very proud of their quiet rural lifestyle and they folks resided for decades on their family land. I will not support a private endeavor to be given the right to use eminent domain for a private profit: especially a project that will not benefits the general public: but one that is geared toward a few wealthy individuals: one that can afford spending \$ 199 dollars for a one way ticket. It goes against everything Texas stands And TCR will not be able build this thing without eminent domain. It's not my property they want this time: but maybe it will be next time. And that's why I'm here speaking to you tonight. Texans are strong for private property rights. I ask you: how will this rail will affect day-to-day travel in these affected counties. How will it increase first responder times? How will it affect water? Property values of adjacent properties will decrease, as no one will want to live next to it I wouldn't want to live next to it If I was looking for a property: the only way I would buy it next to this train is it was cheaper. Families and wildlife will be displaced, farms and ranches disrupted or destroyed. Ridership will never cover the expense of running this thing. They will be in our pockets. The need is just not fair. Plus Houston's mass transit system: have you ever been to Houston? It's pretty much non-existent How many Texans want to ride a Metro bus anyway? If you're not from Texas: I can assure you: not very many. No: thanks: I'll drive my vehicle: just like most other Texans will. There are so many other negatives. Three minutes just doesn't allow time to cover them all. All of these negatives and no positives for these affected communities in between that can't even utilize the train that they will give up so much for. I think it's an injustice that this endeavor has even gotten as far as it has. The wishes of these affected properties should be heeded; no HSR_ To the FRA, this train cannot be built without eminent domain because we do not want it on our properties. It should never be eminent domain rights because it is not for the good of the majority and will only service a wealthy few. Thank you for your time.	Refer to ED-1, ED-2, GN-2, LU-11, NE-1, NE-9, NR-5, PN-3, TR-8, SC-3, SC-19, SS-23, TR-4, TR-5, VA-1 and WW-6.
Japanese American International Summit	3/8/2018	Website	Written on behalf of the Japanese American Summit : We have issues with the loss of the internationally known facility, Morgan Legacy Farm. Please see attached photos of the Japanese Tsunami victims fishing again for the first time at Morgan Legacy Farm since the tsunami devastated our lives, as well as finding enjoyment in the ranch rodeo- just one of the many things they were able to do at the ranch. See link for further details about the Japanese American Summit at Morgan Legacy Farm: https://hibarisensei.wordpress.com/tag/japan-america-grassroots-summit/	Refer to LU-5.
LINDA JARVIS	1/31/2018	Oral	I'm Linda Jarvis, Freestone County Clerk. Myself, along with the Freestone County Commissioners Court, I am against the high-speed rail coming through Freestone County. I do not see any benefit for the county as individual owners for this high-speed rail it is approved. I am not supportive of the eminent domain process of taking individual's or county's property. I am totally against this and if you have any questions feel free to come by my office and I'll answer anything that I can. Thank you	Refer to SC-19.
Asim Javed	2/16/2018	Website	I feel that this project will be a boon to the Texas Economy as a whole, specifically of course positively impacting the Houston and DFW areas. Care should be taken to minimize environmental impact along the eventual chosen corridor. But as is the case with all major infrastructure projects such as highways and rail lines, this will be an invaluable resource for all Texans to benefit from in the years to come. I hope that the EIS process reaches a successful and positive conclusion for this project.	Comment noted.
Olin Jaye	2/16/2018	Website	My family has owned property in two of the counties along the proposed route of the high speed rail and some relatives still live in the area. If proper environmental and construction safeguards are maintained, it will be a major asset to the central Texas area and the entire state.	Comment noted.
Walker Jeff	1/30/2018	Oral	We have land in Leon County and this land was bought by and John and now I take care of it. And they would sure hate for me to give this land away after they have fought hard for our country and bought this land with sweat and hard work. Now I am trying to fight for them. I	Refer to LU-11, NR-6 and TR-10.

			have a couple of examples here. Sample 4 sheet 389 has our place. We have 250 acres there and split in half and my question is which hasn't been answered yet -- is what happens to the land, the land lock for that there is going through? No way to go through the wildlife and cows and there are no tanks that will be over on the other side for our cattle and our wildlife. We have these questions to be answered. They haven't been answered. We have 200 more acres down the road. There are closing off 408 according to this map and so we are having to rearrange our method of getting into that land. Our tenant lives across the road but he is going to go about 15 miles around to get to that place. So there are so many things and these are just small examples compared to some of yours out there, but we wanted to be heard today.	The Project is not on viaduct at this location. The track configuration is both embankment and retention-cut. Prior to construction, TCRR shall coordinate with individual landowners regarding compensation for temporary use or permanent take of land on a case-by-case basis if alternative mitigation measures cannot be developed.
Katherine Jefferson	3/9/2018	Website	Great idea, it would hopefully rid some of the traffic.	Comment noted.
Maggie Jeffries	1/26/2018	Website	I am in massive favor of his train!!! I would travel bath and forth much more often and think this will benefit the economy of both cities. A huge YES!!!	Comment noted.
Ellen Jenkins	NA	Website	Very Bad Idea!!	Comment noted.
Oliver Jenkins	3/9/2018	Website	The high speed rail is an excellent and fast transportation system.It is a great way to travel and connect two major cities.The time is now for a safe,efficient and quick commuter rail line. Many positive benefits from this type of service.	Comment noted.

Robert Jenkins	NA	Website	DALLAS! no one wants to go to Dallas. It should totally got to Austin instead or at least San Antonio. Dallas is so lame.	Refer to BA-2.
Bet Jennings	2/5/2018	Oral	My name is Bet Jennings. I'm against this project. TCR does not have imminent domain powers. A thug-like character came busting at my door at 9:30 at night to sue me. This was the action of thugs. This was after only one letter asking me to survey. No legitimate business acts this way. When the case before mine on the same issue was heard, Judge Halbach ruled against TCR. TCR does not have the right of imminent domain. The city of Houston and surrounding areas have a problem of thugs robbing people. Perhaps our government officials need to set a good example, respect our privately-owned land, stop trying thug-like tactics to rob people of their property. I'm a licensed real estate broker. The negative real estate effect would dramatically decrease property values all along the route. A new subdivision next to my property on the right and on the left would drop in value dramatically; effectively a reverse condemnation, just like those who were flooded during Harvey when the dams released the water. I talked with numerous engineers and they've said the 20-foot berms would alter the watersheds and increase flooding. Officials after Harvey said they would have to start using the 500-year maps, not the hundred year maps, because epic flooding is now the norm. With residents still reeling with the devastation of Harvey floods, it is immoral of anyone to consider building 20-foot berms that would affect the watersheds of Harris and Waller Counties. The great Japanese wall across Texas, the deaths and destruction that the increased flooding would cause is villainous. The devastating economic loss is shameful. The only option is no build. Evil triumphs only when good people do nothing. It's time for good people to stand up and stop this project.	Refer to ED-1, ED-1, FP-1, SC-19, SS-17, VA-1, WW-1 and WW-2.

Bet Jennings	3/5/2018	Oral	My name is Bet Jennings. I live in The Galleria area. Congestion at 610/I-10/290 interchange is already bad, even though they just are completing the interchange. It will make traffic worse for Houstonians, not better. I am against TCRR's project. Let's set the record straight. TCRR has said no roads would be closed or diverted. That is false. The DEIS completely omitted published maps of future thoroughfares in west Harris County. Those thoroughfares are vital to Harris County residents, not a special interest train run by special interest people for their own pocketbooks. At \$400 a round tripper person, a family of four is not going to go to Dallas at \$1600. Just not something they're going to do. TCRR would block roads, wreck havoc on emergency services, schools, developments. Instead of improving transportation, it would hamper it for many years to come, endangering the public, endangering our children and their schools and become a taxpayer burden. Five	Refer to BA-4, FP-1, GN-4, NE-1, SC-8, SC-3, SC-6, SS-1, SS-23, TR-1, TR-4, TR-5, TR-8, WW-1 and WW-2.

			independent studies have shown that TCRR's plan will not cash flow and lose 500 million a year. TCRR has admitted they will apply for TIFIA federal funding. The 20-foot earthen berms would create a Japanese wall across Texas. Flooding would worsen. You should be concerned over TCRR's plan to only use Japanese Shinkansen rail technology. This technology is not compatible with other technologies, including all rail systems currently used in Texas. Reliance on a Japanese monopoly has serious negative consequences. It would hold future generations of Texans hostage from a monopoly railroad from Japan.	
Bet Jennings	3/9/2018	Website	The DEIS produced by AECOM is seriously flawed and should be discarded. How does an engineering company completely omit the published future throughfare plan of Harris County and have the train blow through major planned thoroughfares? Why are high numbers of pipelines omitted? Why are hazardous waste sites omitted? Consider the following failed projects that AECOM produced: 1)AECOM Technology has settled a major lawsuit over forecasts it made for a toll road in Australia, paying US\$201 million to creditors, documents filed with Australia's corporate regulator show. https://www.wsj.com/amp/articles/aecom-unit-pays-us-201-million-to-settle-australia-toll-road-lawsuit-1442826365 2)Securities lawsuit : http://securities.stanford.edu/filings_documents/1058/A00_01/201691_f01c_16CV06605.pdf 3)Private Toll Road Backed By \$430 Million in Federal Funds Goes Bust https://usa.streetsblog.org/2016/10/18/private-toll-road-backed-by-430-million-in-federal-funds-goes-bust/ The DEIS is badly flawed and the only option is the NO BUILD option.	Refer to EU-2, GN-1, TR-1, TR-6 and TR-8. Hazardous waste sites are referred to as hazardous materials sites in the Final EIS and are discussed in Section 3.5.4.1, Hazardous Materials and Solid Waste, Affected Environment, Hazardous Materials and summarized in Table 3.5-2: Hazardous Materials Database Search .
Bet Jennings	3/9/2018	Website	IT WOULD INCREASE FLOODING. The GREAT WALL OF JAPAN would create a 20' high berm and exacerbate flooding in areas that already experienced epic floods during Harvey. It would interfere with watersheds all along the route. Further the flawed DEIS shows that no plan is in place to offset the increased water runoff created by this ludicrous scheme.	Refer to FP-1, SS-17, WW-1 and WW-2.
Bet Jennings	3/9/2018	Website	There is no need for this scheme of a HSR between Houston and Dallas; tickets at \$400 round trip are the same as for a plane round trip ticket. Planes do not destroy develop-able land, do not take away tax bases for schools and cities. Planes do not interfere with watersheds nor do they cause flooding; air fare creates a sales tax for cities; train tickets are not taxed, therefore cities will lose sales tax money; planes are faster than trains; planes have a security system in place; TCR claims no security checks. The train scheme is a 240 mph invitation to a terrorist attack. The only option is the NO BUILD option.	Refer to BA-4, BA-6, BA-12, FP-1, PN-3, SC-3, SS-6, SS-7, SS-9, SS-13, TC-3, VA-1 and WW-1.
Beth Jennings	2/6/2018	Oral	My name is Beth Jennings. I'm going to challenge the engineers in this room. Last night, we had a room full. You know me, and you know my husband, A.J. Each of you takes an ethics course each year. TCR has been unethical. The project is unethical. Please don't support it. I understand what chasing work is, but do it right. Do it ethically. You don't want another State Highway 130 black mark, an economically unfeasible project when finished. If you support this, that's what you'll have, a taxpayer burden, and you'll have ruined countless families in the process. That is unethical. TCR does not have eminent domain authority. A thug-like character came busting at my door at 9:30 one night, trying to sue me. That was after one letter asking to survey. It was the action of thugs. No legitimate business acts that way. They sued me. When the case before mine was -- on the same issue was heard, Judge Halbach ruled that TCR did not have the right of eminent domain. Eminent domain should never be imposed for the benefit of a private foreign corporation. You should be concerned over TCR's plan to only use Japanese Shinkansen rail technology. This technology is not compatible with other rail technologies, including all rail systems in the State of Texas. Reliance on a Japanese monopoly has serious negative consequences. It would hold future generations of Texans hostage to a monopoly railroad technology with no competitive suppliers to keep operational costs down and passenger fares affordable. Think about this: Would we build an airport with runways that could only handle airplanes manufactured by Airbus to land and take off? Would we build a highway with lanes that only cars manufactured by Volvo -- of course not. The DEIS is flawed. Pipelines, hazardous waste sites, environmentally delicate sites, endangered wildlife, outdated floodplain data. Most properties were never even set foot on. I live in the Galleria area. The propaganda says inner loopers want it, and that's a lie. I would never take it to Dallas. Congestion at the 610, I-10, and 290 interchanges is already bad, it will make traffic worse for Houstonians, not better. Transportation should make life less stressful. TCR will ruin the environment through sound, visual blight, loss of jobs, loss of business, loss of neighborhoods, loss of developed land. I challenge the engineers in this room, do the ethical thing. Don't support TCR.	Refer to ED-1, ED-2, FP-4, NE-1, NE-8, NE-9, PN-3, TR-4 and TR-5.
Betty Jennings	3/9/2018	Website	Five independent studies including one quoted by Sen. Charles Schwertner, R-Georgetown. cited an independent study by the Reason Foundation, which indicates a proposed high-speed rail between Dallas and Houston will lose over \$537 million a year and could cost taxpayers up to \$21.5 billion. TCR has admitted they would apply for federal TIFIA loans as well as other federal loans. This project does not cash flow and would be a taxpayer burden. The NO BUILD option is the only option.	Refer to GN-3, GN-4 and NE-1.
Chase Jennings	2/5/2018	Oral	How are you-all doing tonight? My name is Chase Jennings. I'm actually an environmental scientist. I'm also a GIS technician. I have a Master's in geoscience at Texas A&M University. So, you know, what we have to think about is really the three people who are going to be riding this train are, for one, people whose corporations are willing to pay a couple of thousand dollars a month for them to be able to go from Houston to Dallas every single day, and people who, quite honestly, only go to Dallas once a year. They're willing to quite selfishly want this train built, and they don't care about the lives of the people who are destroyed along the way. Well, so let's start looking at facts. I'm a scientist, so I love looking at the facts. I love looking at the numbers. Well, let's look at the railway that they have in Japan. Use the same comparison that Texas	Refer to BA-12, GN-2, GN-4, NE-1, PN-3 and SC-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			Central does with the Osaka to Tokyo Shinkansen bullet train. It costs about \$124 to \$130 from Tokyo to Osaka. Remember, they're going to have vastly more ridership, so obviously the ticket's going to be cheaper. Tickets are going to be a lot more expensive here because we're not going to have near as much ridership. So this is really not a good comparison, though, because the distance between Houston and Dallas is only 238 miles, so I'll admit that. So let's compare the Tokyo to Nagoya portion of the route. The cost is \$95 to \$100; not a whole lot less. And that's for one-way ticket. The route is 231 miles, only seven miles less than from Cypress to Dallas, and takes about four hours to Tokyo -- from Tokyo to Nagoya by car, an average speed of 58 miles an hour. It's only three hours and 30 minutes from Cypress to Dallas, an average of 68 miles an hour; much faster because our infrastructure is built for transportation via car instead of mass transit like Japan. We're a lot more spread out than Japan is. If we look at the combined population of Tokyo and Nagoya, it's 11.569 million people with an average income of 106,000 USD, versus only 3.816 million people between Dallas, College Station/Bryan, and Houston, with an average income of \$52,000. Comparing car ownership, Tokyo only has .5 cars per household, versus 1.57 between Dallas and Houston. Comparing population density, 6,158 people per square kilometer in Tokyo, versus only 1,301 people per square kilometer in Houston. The bullet train works in Japan because it has three times the population, almost five times the population density, a third of the car ownership, and twice the income of Dallas and Houston. This is not Japan. And comparing flights that are only \$50 to \$200 and only 45 minutes, versus proposed hour and a half, those who don't drive will instead fly. I can rent a car for \$20 for a weekend through Enterprise and spend maybe \$20 in gas with a 30 mile-per-gallon fuel efficient car as well, so I see no reason to ride the train. These factors will all lead to low ridership with Texans, as daily use will be cost prohibitive and other faster more affordable modes of transportation are already available. This will lead to unprofitability and an eventual burn on us taxpayers and landowners. Thank you.	
Chase Jennings	3/9/2018	Website	I have read the EIS and do not support this project nor do I support the unethical tactics of the company behind the project. The no build option is the best option.	Refer to BA-6.
Betty Jennings	3/9/2018	Website	Further, we should all be concerned over TCR's plan to only use Japanese Shinkansen rail technology. This technology is not compatible with other rail technologies, including all rail systems presently operated in Texas. Reliance on a Japanese monopoly has serious negative consequences. It would hold future generations of Texans hostage to a monopoly railroad technology with no competitive suppliers to keep operational costs down and passenger fares affordable. Think about this. Would we build an airport with runways that can only handle airplanes manufactured by Airbus to land and take off? Would we build a highway with lanes that can only handle cars made by Volvo? Of course not.	We do not have high-speed rail that operates at this speed in the U.S. at this time. The introduction of high-speed rail introduces a new transportation option into the state infrastructure. In order to stay competitive in the market, TCRR will need to provide an option that is economical compared to driving a car, riding a passenger train like Amtrak or flying a plane.
Donald Jensen	1/29/2018	Website	I am very much in favor of the DFW - HOU high speed rail project. We need to work diligently with DART and our other Mass Transit entities in the DFW area to make sure when folks reach the Dallas station they have really excellent & timely options to get to the DFW destination they chose. Right now Rail connections to DEW Airport or to Plano take almost an hour travel time. We definitely need to work to have better rail and bus schedules in the DFW area. Right now the TXDOT emphasis on the rapid rail in the metroplex shows stations at DAL, Arlington, Ft Worth. WE NEED DAL, DFW AIRPORT, Ft. WORTH. DFW airport is right in middle of Metroplex and is the region's top economic engine. For the entire line I think we must be sure to let local entities, and Ranchers know that they will have good access to property on opposite sides of the rail corridor. (that was a flashpoint years ago when high speed rail was considered).	Comment noted.
Steve Jensen	3/9/2018	Website	I attended the meeting to discuss the proposed high speed rail train when the meeting was held in Houston. I am a Houston resident and am very much in favor of this new high speed rail project. At the meeting, I was saddened to see that probably 90% of the attendees were property owners and "NIMBY" types who did not want the train coming thru their property or nearby, and most of them were basing their decisions based on speculation and rumor. I am in favor of the high speed rail to be built between Houston and Dallas, simply because it is a viable alternative method between driving and flying, and it will save time as well. Many years ago, I was a field service technician for a hospital equipment company and I was based out of Atlanta, Ga. We had products under warranty throughout the state of Georgia and often I would be driving from Atlanta to Savannah, Georgia, which is about the same distance as Houston to Dallas. And like the interstate highway between Houston and Dallas, the roads between Atlanta and Savannah were boring - there is _nothing_ along the road except farms and trees. I couldn't fly because back then a walk up fare was \$600 round trip, so I always drove. It got to where I hated the drive, and having made the drive from Houston to Dallas a number of times, it is just about the same - I do not care for it at all. But if a high speed rail was in place between Atlanta and Savannah, you can bet your bottom dollar that I would have been a passenger on every service call I made to Savannah. If the high speed rail is built between Houston and Dallas, and if they leave every half hour as advertised, I would most certainly use it to visit my brother and sister in law (who are Dallas residents) more frequently. Conversely, my sister in law would visit Houston more often to see her father who is wheelchair bound and cannot tolerate long drives very easily at all. I did not know that there would be trains leaving every half hour until I went to the public comment meeting, and this makes it much more attractive to me and my wife. We are both in our 50's and riding on a high speed train for 90 minutes relaxing is much more attractive than me driving - I always end up doing the driving - for 4	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
			to 4.5 hours each way to Dallas and back. I truly hope this project will be built, and you can count on me and my wife as riders once the trains go into service. Thank you very much for allowing me to voice my opinion on this project.	
Lloyd Jernigan	2/18/2018	Website	I am President & CEO of PL Consultants, LLC a Service Disabled Veteran Owned Small Business, Texas HUB, City of Houston MBE and PDDBE, Port of Houston and Houston Metro SBE. PL Consultants, LLC is very interested in participating in the Texas Bullet Train project. Is there a concerted effort to ensure Veterans have an active part in the building of the Bullet Train project? If so, How can my organization actively engage? Please give me a call at " ". Thank you!	Refer to GN-4, NE-1, SC-22. Please reach out directly to TCRR regarding hiring engagement.
Elizabeth Jesurun	3/6/2018	Website	My husband & I own 160 acres within 2 miles of the proposed route through Roans Prairie. We are 100% opposed to this project for the following reasons: 1. We have invested thousands of dollars in our property as a retirement homesite. The traffic congestion, noise pollution, and the construction zone are all concerns. 2. As older adults, Emergency Response time WOULD BE NOTICEABLY AFFECTED! THSR has LIED to the public about its planned road closures, re-routes, etc. 3. This will impact the 'country lifestyle' we have desired & previously bought our property for many years ago. Currently, we have abundant wildlife & the serene quiet we desire. 4. THSR has sent surveyors into the field that have threatened many local residents. This is not an acceptable business practice. 5. THSR is a private project that SHOULD NOT have ANY ACCESS TO STATE TAXPAYER LOANS or the 5TH AMENDMENT (eminent domain)! 6. The only people truly in favor of the project are the money grabbers that invested in Dallas & Houston property or the project themselves. If they really love their bullet train, not their investments, place it next to I-45 like was done to the Leander to Austin commuter! 7. The California Bullet train is a great example of what will happen to this project; over budget & bankruptcy! My husband Robert and I VOTE and are TOTALLY AGAINST THIS PROJECT! Please consider the Texas country communities/counties that will be impacted by this project.	Refer to AS-1, BA-9, ED-1, LU-14, NE-8, NE-9, NR-5, SS-23 and TR-6.
Carolina Jimenez	2/5/2018	Website	Please build it. Build it quickly! The NW Houston location makes sense. (And once you're finished building that, look at commuter rail from Houston's suburbs to the center, please.)	Comment noted.
JL Murphy Farm Ventures, LLC	2/6/2018	Email	I am strongly opposed to the proposed Dallas to Houston high speed commuter railway. As a ranch/farm owner and operator in Ellis County I have concerns about not only our farm being affected, but also for our neighbor farmers. Some of my concerns are negative effect the railway will have on our crops and cattle and the devaluation Of our family farm. It is extremely important that a private business should not have access to eminent domain and use public tax dollars for their private business ventures. Please block the approval of this project.	Refer to ED-1, GN-4 and LU-11.
David Jobe	1/30/2018	Email	I am for the Dallas to Houston high speed Rail, I think that it is a positive move forward that will bring economic benefits to the state.	Comment noted.
Joey John	2/26/2018	Website	It's is very essential that we need rail road between Dallas and Houston.	Comment noted.
Matthew Johns	2/7/2018	Website	I am from Dallas but now live in Houston. I went to Texas a&m for college. As someone who has made the I-45 drive countless times I am so excited for this project to come to fruition. I know plenty other people share my opinion. One thing I hope is that the train can interface with the DART such that passengers can take the DART to other Dallas locations upon arrival. A similar interface in Houston would be favorable as well, especially to the Clear Lake/Johnson Space Center area considering the drive to Dallas is even more extensive for those of us in South Houston. Thanks for your time.	Refer to GN-6.
Michael Johnsen	12/19/2017	Handwritten	This plan will ruin my Madison county land and I am 100% against it. My property is posted NO TRESPASSING.	Comment noted.
Alan Johnson	3/4/2018	Website	I believe TCR's ridership statements are grossly overstated, even TxDot doesn't have that high of ridership projections. Therefore without the ridership the rail would not be able to sustain itself requiring some sort of tax payer bailout. This is also pointed out in the Reason report. TCR has stated that this is a 100% privately funded project with private investors footing the bill, however they have also stated that they would seek federal loans. If that is the case that would not make it a privately funded project. Again requiring some sort of bailout from the tax payer. TCR routing makes no sense, TxDot has offered right away down the I 45 corridor and yet TCR says this is not an option. The rail down the I 45 corridor would have many advantages as to the one through the country. Stops could be added as demand rises for an example. As of now the proposed stop is at a 4 way stop with a gas station and nursery in the middle of nowhere without any public transportation to get to either College Station or Huntsville.	Refer to BA-9, GN-2, GN-3, GN-4, GN-7, NE-1 and TR-2.

Ashton Johnson	NA	Website	I am concerned that the Dallas to Houston high speed railway will put undue stress on not only the environment, but also farmers and ranchers who be in the path of it. If this thing has to be built, why not make it as close to the existing freeway between the two cities to minimize the impact it will have.	Refer to BA-5, BA-6, BA-7, BA-8, BA-9, LU-9, LU-11 and TR-8.
Candice Johnson	2/27/2018	Website	This train would destroy the Morgan Legacy Farm located near FM709 and 3194. This is a charitable ranch that house many servants of the state at no cost such as health care workers, first responders and military. These people use the site to "get away" from the stressors that these jobs place on them on a daily basis. The proposed path would also have a huge impact on the environment in a negative way reducing the migratory waters.	Refer to FP-1, LU-5, WW-1 and WW-2.
Cherie Johnson	1/30/2018	Oral	It's actually Che-rie Johnson. I'm in Limestone County. I purchased property 21 years ago and am also a proud land owner of (?) Road. Ya'll need to come on up and see how much fun we have. I didn't know I was going to talk or I would of wore contacts. But really it doesn't matter whether you are for or against the high-speed rail. Justin and I were at an event with him in Jenkins in October and had a gentleman come up to us after Judge spoke and said, "why are you against the high-speed rail? Why are you naming it the high-speed rail?" It's a land grab and Judge had a great answer because there are people right now -- and this is what is going on with the high-speed rail. That's why it is Texans Against High Speed Rail. If you are not supporting it get on board. \$5. I don't care what it takes please, please, please help. But really if this does pass what precedence this is going to set for all future projects? That is not just a problem for those that are in the path of this train but a problem of every Texas landowner in this entire state. So you know FRA, if you haven't figured out we are very passionate here in or little route here in Texas and we are going to do what it takes to stop the largest land grab to count in Texas history. This is the largest Texas land grab ever. Please get behind Texans Against High-Speed Rail.	Comment noted.
Cherie Johnson	2/5/2018	Oral	Hi. I'm Cherie Johnson. I'm actually from Limestone County here to support Harris County. I'm actually -- this little high-speed rail would come about a mile from my property, and you think, Oh, what's the big deal. Well, when they can condemn two miles on either side of that rail line, that's a big concern to all of us. I have neighbors, six generations that they've owned their farms out there; six generations. And the way that they have bullied their way onto my neighbors' land, it is just incredible. The contingency contracts that are out there, a lot of them are going to have to be renewed in 2019 because this whole thing has been done so bad. The contingency contracts, if they don't go through, mineral rights. Think about this. They are able to keep the mineral rights even if this doesn't go through. So we talk about 8,000 acres of mineral rights. You know, are they going to use a highway, you know, get this land to maybe do something other than a high-speed rail? Think about the mineral rights that they're going to claim. You know, I'm looking at -- the FAQ No. 16 just cracks me up. It's like -- it says here, "If TCR obtains federal financial assistance for the project, such as a federal loan." Who do they think they are? Why is this not being put up for a vote? Why is this not being taken to the ballot boxes? Why can we not vote for this? You know, it really doesn't matter if you're for or against the rail. To me what I really think matters is how they're going about it. And if this does pass, what precedent is this going to set for all future projects in the state of Texas? This isn't a problem for just those in the path of this train. It is a problem for every property owner in the great state of Texas. Please keep in mind that if this does pass, this will be the largest land grab in the Texas history. I ask you to please get behind Texans Against High-Speed Rail. This takes a lot of manpower, time, money, and we still have a long way to go. \$5, \$10, whatever you got, please, Texans Against High-Speed Rail needs your help. Thank you.	Refer to ED-4, GN-4 and LU-14.
Denise Johnson	2/9/2018	Email	NO build This email is to inform you that I strongly object to the HSR project, Dallas to Houston. It will take land my neighbors depend on for their livelihood and homes. It will decrease land values and increase taxes with no benefit to us. Please do not go forward with this project. Denise Johnson Leslie Johnson	Refer to VA-1.
Helena Johnson	2/5/2018	Oral	That was my sister. I think everyone has heard all of the -- I think everyone has done a really wonderful job of bringing up all of the issues that are problematic in the creation of the DEIS, and I would urge the agency to go back and look at all of these concerns that have been raised and give them all the attention that they richly deserve, and that they will ultimately find out that this is a bad idea for the state of Texas. And that's really all I have to say.	Refer to PI-1.
Jim Johnson	3/9/2018	Website	I'm in favor. I typed in a long comment, but your online system failed. No time to keep battling your system.	Comment noted.
Jolita Johnson	1/31/2018	Oral	My name is Jolita Johnson. I've lived in Limestone County most of my life. Now, we're right in the edge of Freestone: but we have a Mexia address. Anyway: this company has made it pretty clear that if they can get eminent domain: they are going to try' and take anything they can, and we're all against it My question is — my question is with all this, •when the normal person goes to get on this train: they're going to have to park their car — or: drive from rural areasto Houston: park their car_ Then: they're going to have to buy a ticket. Then: they're going to have to go through some kind of customs like they do with an airplane. What? Roughly 30 minutes to an hour right there. So: that tacks on to their time of what? Two hours: they're saying? UNIDENTIFIED SPEAKER: 90 minutes. MS. JOHNSON: 90 minutes; an hour-and-a-half. So, now, we're up to two-and-a-half hours — or, two hours: roughly. You go through the customs: you get on your train, you go on your ride. You get to Dallas: then you're going to have to get off the train: walk back through some kind of customs. Then: you have to go and rent a car: catch a bus: or get a taxi to go where you're going. You're almost up to the same amount of time that you would have spent driving: in the	Refer to ED-2, GN-4, PN-3, TC-4 and SS-9.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			first place, especially if you drove an hour to get to Houston: and then got on the train: and then went. Where is there a benefit there? Other than if you were in your own vehicle, you would have your own stuff with you: you wouldn't have to pack anything or carry it on the train: and you can go straight where you're going. You're not having to bounce through three or four different things: where you can possibly leave something on the train: or in a car: or on a bus. It's ridiculous: especially for people who have kids. Business people are going to use this, people that have kids aren't I've got a 9-year old, and a 15-year old. They would probably do good: except they probably would something on the stinking train. A mend of mine has a one: and a two-year old. There is no way she would get on that train. Families are not going to use this: especially: rural families. It's impacting our rural areas in a negative way, and it's just not going to work out There is no reason for it.	
Neil Johnson	3/9/2018	Website	Hi, I just wanted to say that I support the Dallas-to-Houston bullet train. I have been tracking this effort since its beginnings, having experienced firsthand the benefits of these transportation systems when I lived in Japan. I think you all have been handling everything correctly as far as gathering consensus from stakeholders. I wish you luck and I can't wait to ride the finished product.-NJ	Comment noted.
Phil & Bobbie Johnson	NA	Website	This would be an interruption to our DREAM PLACE-	Comment noted.
Richard Johnson	1/31/2018	Oral	I'm Richard Johnson from-- I live at [...]. I see this as nothing but a land grab. Until 1964, the railroad run four passenger trains a day through – two of them from Fort Worth to Houston. Nobody would ride them. This is all this is is land grab, and i don't like it.	Comment noted.
Roy Johnson	1/12/2018	Email	This is just a test direct email as the ones from the form are getting kicked back	Comment noted.
Roy Johnson	1/21/2018	Email	Land use- what restrictions if any will there be on hunting near the ROW	Refer to RF-2.
Roy Johnson	1/26/2018	Email	Table 3.9-5 pu have Brazos Valley station as segment 4 where it should be segment 5. Is this to shift some of the other data to segment 4 and remove it from the segment 5?	The Brazos Valley Intermediate Station is in Grimes County. A portion of Segment 4 ends in Grimes County before Segment 5 begins. Data for Table 3.9-5: Wastewater Treatment Capacity has been verified in the Final EIS.
Roy Johnson	1/26/2018	Website	Table 3.11-26 missing data. CR 313 is not listed CR 123 is not listed so does this affect the tables where road crossings were used to justify the route? It needs to be no build until ALL routes can be 100% verified and re-evaluated	These roadways are listed in Section 3.11, Transportation, specifically Table 3.11-26: Roadways in Grimes County Study Area . These roads would both be crossed by the Project and would not be re-routed or modified.
Roy Johnson	1/26/2018	Email	ES.4 Purpose and need- Maximize Adjacency to existing infrastructure. The route near 290 as it makes the turn is not going along the existing utility line. STEP 1 had the radius restriction at 17,100 but on map CVL-HN-001155 the Radius is 18,700 which prevents from make that turn to tie into the Utility line. If requirements are set forth but not held too then it must be restarted or a no-build looked at harder.	As detailed within TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F , TCRR's design criteria required a radius of 18,700 feet for an operating speed of 330 km/h (with a preferred maximum of 6 inches super elevation).
Roy Johnson	1/26/2018	Website	Section 3.9 page 17 you do not list Midsouth synergy. Why is not all current providers listed? Will they be able to handle the increase	Refer to EU-4. Mid-South Energy is mentioned in Section 3.9, Utilities and Energy of the Final EIS including Section 3.9.4.2.1, Utilities and Energy, Electricity and Section 3.9.5.2.2, Utilities and Energy, Energy .
Roy Johnson	1/26/2018	Website	Table 3.9-3 water shortage and usage. This should not be based on shear volume of shortage or supply it should be on a per person basis. \expected grimes county shortage is 19,053 ac/ft while Harris is 272,972. One is a larger problem to the local residents than the other. Poor weight basing of data.	Refer to WW-6.
Roy Johnson	1/26/2018	Website	Table 3.9-1: Summary of Utility Crossings Grimes county you have ZERO Utility lines crossed. So for 40 miles NO UTILITY lines will be crossed? This is basically stating NO EAST WEST lines are in the LOD. Poor planning by TCP and contractors	Refer to EU-2.
Roy Johnson	1/29/2018	Email	ES.4 FALSE CLAIM "Flight time between the two regions is relatively short; however, the overall trip duration when considering pre-arrival time, more than doubles" this is an absolutely false statement. You are counting door to door times vs seat times. TCP published door to door times and flying on avg in only 50 minutes longer and NOT DOUBLE. AVG door to door time using HSR is 3.5 hours vs the plane at 4hr 20 min	Refer to PN-3.
Roy Johnson	1/31/2018	Email	Table 1: Primary Residential Displacements and Acquisitions You list the rice milling as being displaced with 25 jobs. One huge thing is that you list only 2 similar within Harris county. You are removing 50% of the rice milling in all of HARRIS COUNTY. What impacts will this do to local traffic since the products this plant produced was in town shorter trips and now will have to be brought in further away?	Refer to SC-21.
Roy Johnson	1/31/2018	Email	Table 1: Primary Residential Displacements and Acquisitions DEIS list 41 property displacements but only 24 per zillow on price comparables. Does the fact that only 24 places are listed for sale affect when you have 41 displacements? Same for waller county. I assume the 24 pieces are nearby locations.	The stated figures regarding the number of available housing were a snapshot of potential housing identified at the time of the Draft EIS assessment. Those numbers have been removed from the discussion. Additionally, Displacements and acquisitions identified in Section 3.13.5.2.5, Land Use, Structure Displacement and Land

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				Acquisition , are calculated based on potential property acquisition impacts. All structure displacements and property acquisitions made by TCRR for the construction and operation of the HSR System would comply with applicable regulations and mitigation measures outlined in Section 3.13.6, Avoidance, Minimization, and Mitigation .
Roy Johnson	1/31/2018	Email	Table 12 in section ES-21 you have ZERO oil and gas structure acquisitions. Later in the DEIS on a table 4 that is labeled MISC Acquisitions of Primary Structures in the Tech memo land use that table has 2 for Grimes County. Why the discrepancy? is this another source of flawed data that lets the project on this path proceed? The only option is to NO BUILD until all information can be trusted.	In the Draft EIS, Table 12 of the Executive Summary provided a total of the primary and secondary structures that are estimated to be acquired. The two structures listed in Grimes County (in Table 3.13-8: Parcels within LOD), were oil and gas structures that were located within 200 feet of the limits of disturbance but were not necessarily acquired. Table 3.13-16: Summary of Structure Acquisition (No. of Primary and Secondary Structures) by Build Alternative listed in more detail the primary and secondary structures that were estimated to be acquired. There were none in Grimes County. Refer to Table 3.13-16: Summary of Structure Acquisition (No. of Primary and Secondary Structures) by Build Alternative in the Final EIS for updated primary and secondary structure acquisition information.
Roy Johnson	1/31/2018	Website	table 3.2-4 calculated VMT- Table is wrong, inflating the VMT removed and therefore skews the data to a build over a no build. ALL ROUTES NEED TO be recalculated based on a TRUE VMT reduction 2024 vmt(from chart) 2,182,178,028 total vmt avoided. If you take the 239 (Your chart assume 478 for each vehicle removed) miles one way you get 9.13 mil cars which 1.2 per car gets you to 10.956 mil passengers in 2024- WRONG WRONG WRONG. You should be using 239 miles and that would get you 4.56 mil cars removed which gets you about 5.478 mil passengers. the total of VMT avoided is 1,091,089,014 miles which when divided by 239 miles gets you 4.56 mil cars more realistic. DATA IS 100% over estimated	Refer to AQ-3.
Roy Johnson	2/9/2018	Website	ES.4 Previous passenger rail studies completed by FRA and TxDOT support the need for reliable multimodal transportation alternatives to promote congestion relief strategies. One of these strategies identified in the State Rail Plan included the potential implementation of HSR within the Dallas to Houston corridor. The State rail plan was told to House members in Austin that was not a basis for the DAL-HOU project as the state plan states WAY lower ridership numbers than TCP forecast and hence why TCP told them that was not a true study. But you use it here? If you are going to cite study to justify the project you should use it good or bad.	Refer to AQ-7 and GN-2.
Roy Johnson	2/9/2018	Website	ES.7 Greater movement in and around the HSR system. Did any of this greater movement include any of the many mile new public roads in Grimes county? That will in essence divide ranches in half and if TCR raises the road in the certain area. The issue of extremely restricted access to the other side will occur. You will need in most places 13-15 raised road to get tractors and trailers loaded with hay back and forth. So a person with 10,132 ft of HSR track will be reduced down to maybe 2 locations of crossings? Specifically Stonham Ranch in Plantersville on CR 313. You can see the Civil elevations that very small portion of his ranch will be able to be access viaduct that is not in the 100 yr flood plan. he only has 1800 ft out of 10,000 that has a 10 ft clearance or more that is not in the flood plain.	Refer to LU-11 and TR-8.
Roy Johnson	2/9/2018	Website	ES.7 TCRR also engaged in early coordination with federal agency stakeholders such as the USACE and other stakeholders, such as utility providers and the public, to collect feedback and coordinate on other planned projects. Waller county was not contacted about the biz center they are planning for many years. Waller county 391 commish TOLD txdot about this project and it was never addressed in the DEIS. Knowing this then ALL routes should be reconsidered and until that time only option is NO BUILD due to the lack of cooperation between TCRR and local governments as its claimed in the DEIS as Above	Refer to ED-2 , LU-4 and PI-1.
Roy Johnson	2/9/2018	Website	Es.7 Coordination with other municipalities, businesses and community groups along the Build Alternatives allowed TCRR to consider and coordinate the design with future corridor development plans. The above quote from DEIS is PATENTLY false. Due to no contact with the county leaders for most part in the middle counties. They cannot and I repeat CANNOT claim coordination with municipalities and NOT DO THOSE coordination. Due to this FATAL flaw I suggest the entire DEIS is tainted and should be sent back to page one day one. until then NO BUILD is only option	Refer to PI-1 and SC-13.
Roy Johnson	2/9/2018	Website	ES.8 The No Build Alternative would not meet the specified Purpose and Need for this Project, but is retained in the EIS as a basis for comparison. The No Build Alternative would not provide congestion relief, improve safety on IH-45, meet current and future transportation needs between Dallas and Houston and would not offer an alternative transportation mode that would connect to existing modes. Looking at the TxDOT statewide planning maps under AADT the stations in the middle from 2007-2016 has not grown much at all. Station 82H83 is actually lower than the highs from 2010-2011. and from 2007 of 27000 to 2016 of 29759 traffic count that is right at 1.02% traffic growth. If	Refer to AQ-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			you count just the local population growth that means that the traffic from DAL-HOU has to be way under 1% growth. goes against the purpose and need and claims that traffic will double on 45. This proves that the people traveling DAL-HOU stagnant at best or even anemic. No purpose of easing congestion then only option is NO BUILD	
Roy Johnson	2/9/2018	Website	ES.9.2 Table 1: Physical Attributes of the Build Alternatives Attribute You have Alt A as 57.9% viaduct and only ALT C is 60% as stated above. Albeit small but wording means something with TCR claims min of 60% will be on viaduct. The ALT C would give more access based on viaducts. It should be considered or NO BUILD until its all weighted correctly	Refer to BA-7.
Roy Johnson	2/9/2018	Website	Flawed data table 3.11-26 you list 28 road crossings in Grimes county. 28 for all of them and if you remove the 3c you have 26 along preferred ALT A route. You are missing FM 1774 2 times You are missing CR 124 You are missing CR 313 And by the map count might be missing High oaks drive which is a private drive plus more Very bad data and elsewhere its different.	Table 3.11-26: Roadway Crossings in Grimes County lists the roads that could potentially interact with the Project. FM 1774 (found on page 447 of the Project Footprint Mapbook, Appendix D) would be rebuilt to travel over the Project. Approximately 2,400 feet of FM 1774 would be reconstructed. More information about the modification for FM 1774 can be found in Table 3.11-48: Grimes County Roadway Modifications . County Road 313 (found on page 445 of the Project Footprint Mapbook, Appendix D) would be crossed by the Project and would not be modified. High Oaks Drive High Oaks Drive (found on page 457 of the Project Footprint Mapbook) would be crossed by the Project and would not be modified. County Road 124 does not intersect with the Project (neither under nor over). It runs roughly parallel to the Project but does not intersect.
Roy Johnson	2/19/2018	Website	Emissions- DEIS overstates the VMT removed by double of actual data. DEIS counts each car removed from each 1.2 passengers as removing it for 478 miles. Each passenger is counted as a single 1 way trip hence 7,200,000 passengers and not 14,400,000 passengers that would equate to 5,340,000 vehicles removed each making a full Round trip. see attached for tables and more explanation. In essence the VMT is overstated and should be recalculated and go back to the start to refigure all true emissions from a true VMT removed data point. DEIS NO BUILD VMT OVER STATED Table E3.2-9: Number of Cars Originating from Each City Assuming Inferred Trip Balance FSL has total of 5,340,000 cars but below you get the 5,340,000 from 7,200,000 passengers using the hsr. If this is true then each passenger is counted as a one way trip to get to the 7,200,000 passengers then why does that car from that 1 passenger get counted as making a round trip of 478 miles as in Table E3.2-11 calculated VMT.	In regards to the cited article by Chester and Horvath, the occupancy rate range of 90% and 10% were extremes used to frame uncertainty around emissions impact benefits of mass transit caused by occupancy variations, and the median of that range was 50%, and the median of another range in a companion study by one of the authors was 67%. The TCR ridership represent average occupancy of 44% and 62% for 2024 and 2040 respectively. The source of electricity used to power the HSR was considered in the emissions estimate as described in the Power Consumption in Section 3.2.3, Air Quality, Methodology and is detailed in Appendix E, Technical Memorandum . This includes the mix of coal, natural gas, nuclear, wind, and other generation types in the ERCOT power region that the project would draw from. Because of the interconnectedness of the power grid in ERCOT, power demand for the train would not be solely from the nearest power plant. As explained in those sections, wind power has become a significant portion of the total ERCOT generation mix and continues to grow. These emissions produced by power consumption was compared to emissions reduced which is relevant to assessing the net impact of the project. It is not appropriate to only state that the project is environmentally detrimental solely because power consumption produces emissions. With regards to citing greenhouse gases increase of 15% due to concrete production used in HSR construction, this is solely citing that emissions associated with an HSR increases by that much, not a net impact when considering reduction of other more polluting modes of travel. This also does not account for the life cycle emissions of manufacturing an automobile, which the cited paper acknowledges exist. Besides concrete used in the plants to manufacture cars, there would be concrete and asphalt associated

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				emissions associated with road construction and repair, not to mention materials mining, processing and manufacturing of both trains and cars. Accounting for a full life cycle analysis for trains and cars (and planes and buses that would also not be used) in the emissions estimate for this Final EIS would be beyond the intent and scope of NEPA decision making for FRA. There are many other factors that go into selecting the best alignments for the HSR with respect to the project proponent's purpose besides avoiding forest. There are considerations such as minimizing residential structure impacts, avoiding difficult-to-relocate infrastructure, minimizing road impacts, and proximity to power sources. The largest forested impact of HSR alternatives was 2,540 acres of woodland/shrubland habitat. Sequestration rates vary greatly according to tree species, climate, age etc. and trees provide more sequestration than shrubs. Given annual tree sequestration rates from forest extension service sources (U. of Minnesota, Southern Regional Extension Forestry) ranging from 0.7 to 9 tons/year per acre, the associated removal would range from 2% to 32% of the net reduction of the HSR operation. This is without accounting for the lower rate that the shrubland portion would contribute, and without accounting for replanting that TCR would implement in the impact corridor. The net reduction of GHG from the HSR would still be significantly greater than sequestration eliminated by impacts to forested areas.
Roy Johnson	2/19/2018	Website	Deis list ROADS OVER RAIL- Then turns over upkeep to the local authorities. When you do this the impact to an EW growth will be constricted due to the cost to expand an overpass for a rural county. If HSR was over ALL ROADS require by state statue 112.059 then the county could expand with very little extra cost.	Refer to LU-11, TR-7 and TR-8.
Roy Johnson	2/19/2018	Website	DEIS states ROAD over RAIL- for local counties that are getting High-Speed internet, water or other utility. This will increase the cost and may bar the expansion of service across a Bridge vs running it along the county ROW beside the road at grade. Now it will have to be bored under the HSR or in case of pipelines may have to be sleeved which will cost alot more money doing that under HSR vs open trench process. Due to this possibility of injustice to rural landowners and communities, a no-build would be the best way to serve the future needs of the rural population	Refer to EU-2. Approximately 55 percent of the Project is constructed on viaduct (elevated structure), which would allow roadway passage under the tracks.
Roy Johnson	2/20/2018	Website	Table E3-19a: DFW NAA IH-45 Miles and VMT It is stated that Total length of 41.4 miles which is correct from end of 45 in Dallas to south side of Ellis county. The issue comes that in the calculation of the total VMT removed. You are counting the 41.4 twice to make 82.8 miles removed for each vehicle. But looking at the total FSL vehicles for Houston and Dallas you have 5.3 mil cars removed but you are counting each car making a 81 mile trip in the DFW NAA. You cannot count a car being removed twice as it only provides the 1.2 passengers removed from 41 miles of the DFW NAA. THIS TABLE has the DFW NAA as a 200% overstatement. It should read under FSL 221,076,000 VMT removed vs 441,938,400 miles as chart is indicating. From 7.2 mil passengers, you remove 5,340,000 cars each making a one way trip. The 7.2 mil riders are only measured in ONE WAY. This is a HUGE ISSUE that is rampant in the DEIS and it all needs to be corrected and sent back to the starting line. Any data derived from this overstatement should be considered invalid and removed This would make Table E3-19b: DFW NAA Vehicle Emissions Reduction- read under FSL for NOx 6.12 and VOC 14.36 vs the table has 12.23/28.71	Refer to AQ-3.
Roy Johnson	2/20/2018	Website	Table E3-19c: HGB NAA IH-45 Miles and VMT Not only is the TOTAL LENGTH IS WRONG should be 56 miles vs the 84.6 posted in table above. You are counting each car removed from passengers as being a RT In the HGB NAA. Each car removed is for a 1.2 people that is riding the train ONE DIRECTION but you are removing them as the trip its saving is they get counted twice. FALSE. Then you do the same for the Dallas cars in the HGB NAA so inflating it again. FSL Houston cars should be (using the 56 miles and one way miles) 159,082,336. THE table has 480,769,514 miles which is a 202% over statement which is HUGE HUGE mistake then the Dallas FSL same thing- It should be 2,499,244 cars removed at 56 miles each for a total of 139,957,664 actual miles removed from those cars in the HGB NAA. which is also over 200% mistake. So total FSL HGB VMT in the chart should read 299,040,000 vs 903,741,600 which is an overstatement of again 200% overstatement. DEIS with this kind of mistake should be allowed to be corrected and a new comment period allowed. The true emission are 33% of what is stated a HUGE flaw.	Refer to AQ-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Roy Johnson	2/20/2018	Website	Table 3.2-13: 2040 Passenger Vehicle Emissions Reduction Flawed data- the VMT removed is counting each vehicle removed for the passengers as making a complete round trip which is false. FSL you have 2,552,520,000 VMT removed. This is for 5,340,000 cars removed which means each car is removed is counted as 478 miles removed. It should be 239 miles removed. Flawed data with only being able to comment for DEIS this should be corrected and reopened for comments again. This is a major flaw in the calculation.	Refer to AQ-3.
Roy Johnson	2/20/2018	Website	Environmental justice- What will be the mitigation for allowing counties to expand E-W? With the many Road over rail of county roads, some of which are dirt roads. This will place an undue burden on local rural taxpayers to expand that overpass when needed. going from a few 10k to well over a few million to widen the concrete overpass and ramps up to it. IT WILL FREEZE E_W movement in the rural counties.	Refer to EJ-1, TR-7 and TR-8.
Roy Johnson	2/20/2018	Website	Table 3.9-19: Annual Operation Energy Savings Estimate For each car removed the chart is counting it as a full RT. When at FSL the cars removed is 5.34 mil for the 7.2 riders. Each one way is counted as a journey to make the 7.2 million passengers. You must say that each car removed is for one way which is 239 and not 478 as in this table. This will reduce the 81,500,000 gals saved to 40,500,000 gals and reducing the MMBTU also to 4,668,780 MBTU which when you subtract the HSR consumption you get a net savings of 3,074,821 151% overstatement on savings. If the ridership is not thereby FSL then its even a less of a net savings. Due to the egregious oversight the DEIS should be corrected and opened back up for comments on a more true data in the DEIS.	Refer to AQ-3 and GN-2.
Roy Johnson	2/20/2018	Website	"The net GHG emissions were then determined by adding the train operation emissions and vehicle emissions reduction. Table 3.21-6 provides the result. As shown, the net impact would be a reduction of 0.417 million metric tons annually. Compared to the most current (2013) state-level GHG annual emissions estimate of 641 million metric tons, the reduction would be a small percentage. However, this would be a long-term reduction. Therefore, the Build Alternatives would have a small, but long-term positive effect on GHG emissions. Though the impact is small compared to state annual emissions, the net reduction of 0.417 million metric tons per year is greater than the maximum annual construction emissions of 0.136 million metric tons. Therefore, the total construction emissions over 4 years at a maximum of 0.136 million metric tons per year would be offset by operational net reductions of 0.417 million metric tons per year within less than 2 years at full operation." from page 3.21-10 is flawed and since the emissions by the cars was doubled the VMT to the error of counting every car removed as making a RT but only counting the passenger as a single trip the Table 3.21-6 is flawed. In order to do a true comment, we must have accurate data. The data used is flawed and should be corrected and comment period reopened up for correct data to look at.	Refer to AQ-3.
Roy Johnson	2/20/2018	Website	Land Use- Since Sound is listed in the maps as severe and moderate with Mitigation methods needed. How will adjacent landowners be able to develop their land the way they want too? Will the Train install sound barriers or will that be left to the landowner and therefore making it cost prohibitive to develop their land the best way that they see fit.	Refer to NV-1.
Roy Johnson	2/20/2018	Website	What will be the restriction of the sound produced by the Train as it passes by? How many dBa at how many feet? Who will enforce any violations of this sound level?	Refer to NV-1.
Roy Johnson	2/20/2018	Website	Flood plains calculations Table 4-1: Cumulative Analysis of Resources you list 565.5 average acres of permanent impacts to 100-year and 500-year floodplains 74.6 average acres of temporary impacts to 100-year and 500-year floodplains Where in table 8 page ES-16 you have the acres listed and the above is for only the 100 year and not the 100 and 500 year as that average is 640.17 ac and the TCR preferred route is not the lowest one. With this simple mistake was anything else left out and how can we comment on a flawed data inputs	565.5 and 74.6 acres were calculated by averaging the acres in the 4th ("Permanent Impacts to the 100-yr and 500-yr Floodplains") and 5th rows ("Temporary Impacts to the 100-yr and 500-yr Floodplains") of Table 8, respectively (not the 6th row "Total Acres of Impacted Floodplain").
Roy Johnson	2/21/2018	Website	Flawed data Table E3.2-15b: 2040 Passenger Vehicle Emissions Reduction FLAWED data. the VMT used is counting each car removed as 478 miles in VMT calculations. If this was the case then the passenger count should be 14.4 mil trips to remove 5,340,000 RT for cars. Flawed data so bad how can we comment and expect it to be corrected then not have the chance to comment on real data?	Refer to AQ-3.
Roy Johnson	2/21/2018	Website	Flawed data Table E3.2-16: Net Operational Emissions This table is derived by using flawed VMT data. VMT calculation is overstating the actual miles from the 5,340,000 cars removed by 200%. since 7,200,000 passengers generate savings of 5,340,000 cars removed that should be 239 miles but DEIS has it as 478 miles. How can we comment on a DEIS with a 200% overstatement of VMT?	Refer to AQ-3.
Roy Johnson	2/21/2018	Website	Flawed data Table E3.2-10: Assumed Trip Distances If you have 7,200,000 passengers making a 1 way trip. If they were making a RT that would be 14,400,000 passengers on HSR. SO you using each car removed as making a RT is false. You could take the 5,340,000 cars and divide in half so that 2,670,000 cars making a round trip to make the 5,340,000 total that gets you the 7,200,000 passengers. How can we comment on such a flawed assumption in the DEIS? Must correct and allow more comments on a better data in the DEIS	Refer to AQ-3.
Roy Johnson	2/21/2018	Website	Flawed data Table E3.2-11: Calculated VMT The VMT removed is showing for FSL the RT miles removed for each car removed. The number of cars was based on one way ticket sales so why is the cars removed calculated as making a RT? How can anyone comment of such bad data that is making a 200% mistake in the assumption of VMT removed	Refer to AQ-3.
Roy Johnson	2/21/2018	Website	Table E3.2-15b: 2040 Passenger Vehicle Emissions Reduction Was the advent of the increasing advent of electric-only cars included in these emissions?	Refer to AQ-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
Roy Johnson	2/21/2018	Website	misleading info? Table E3.2-1: Train Traction Power Consumption You have 7.5 MWH for a RT then you have 68 trains a day. if you calculating the MWH consumed per RT you should not count each train each direction and should be 34 trains making a round trip. But the question is- Is the 7.5 wrong and should be single one way trip? This is a huge issue on data of possibility of being off by 200% ad how can any one comment on such flawed data. For this, I demand that the errors on data with this large of an issue be corrected and the public gets to comment again once corrected.	Refer to AQ-14. The 7.5 MWH is correct for end-to-end power consumption of a single train from Dallas-Houston or vice versa. The 68 trains per day is accurate for the initial service level and are trains going in one direction with 34 from Dallas to Houston and 34 from Houston to Dallas. The column was mislabeled as round trip and has been corrected in the Final EIS. None of the train power consumption numbers are altered by this correction as the consumption was provided by TCRR and the assumption of one way or round trip of trains was not used in the calculation of the total daily train consumption.
Roy Johnson	2/21/2018	Website	Table E3.2-3: Total Train Operations Power Consumption You have the station and facility consumption the same for ISL and FSL with a 45% increase in passengers from 5 mil to 7.2 mil the added demand for maintenance and work needed at the MOW and TMF has to increase also some what? When you adjust the VMT to correct info vs the 200% overstatement some emission items are very close to zero with NOx being a net gain and not increasing the consumption of TMF, MOW and other areas makes the net gain in emissions larger and some closer to zero net gain. A true calculation for FSL consumption for station and facility should be included in the DEIS	Refer to AQ-3. As indicated in TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F , specifically Section 15.6.2, power consumption estimates for facilities and stations are provided for FSL levels only. To be conservative, FSL levels are used in Table E3.2-3 for both ISL and FSL scenarios.
Roy Johnson	2/21/2018	Website	DEIS states "The vehicle speed assumed was an average speed of 40 miles per hour (MPH) which was the average speed (39 MPH rounded up) projected by TxDOT in 2035 for IH-45 travel between DFW and Houston, contained in the Project Planning Documentation for the State's funding application for the High-Speed Intercity Passenger Rail (HSIPR) Program17. This speed reflects a decrease from the 2002 average of 59 MPH, commensurate with the increasing traffic volume trend observed in traffic data, and the exceedance of the highway's design capacity in future years." That study was used for the STB petition as a justification for this project. It was released in 2009 (original chart). Since it has hard data of 2002 at 59 mph it should be easy to confirm the 2018 data and see if we are on the path of 39 mph by 2035. We are NOT. Transtar data has avg speed for every segment of last 2-5 years See the PDF Transtar date. notes show miles per segment and esimated speed on that segment from chart Word doc is the spreadsheet showing each segment and the speed then calculated as a weighted avg vs a simple avg.	Refer to GN-3.
Roy Johnson	2/22/2018	Website	FLAWED DATA Table 3.9-16: Impacts to Oil and Gas Utilities This table only list (alt A route) two gas pipelines to be relocated But in appendix J: utility crossings you have a CU-WT-1 as a relocate which to the table 3.9-16 is not listed. So a person looking at this only sees the first table and assumes nothing to comment about when in fact its incorrect. Due to this oversight the DEIS needs to be corrected and resubmitted for more comments with accurate data listed.	Refer to EU-1, EU-2, EU-6, PI-1 and PI-3.
Roy Johnson	2/22/2018	Website	ALL in the DEIS its stated how many VMT is removed from total and for NAA areas. Those are calculated wrong as in double counting miles removed. But I see nowhere in the DEIS any mention of the miles that won't be removed due to folks driving to the station. If you remove 56 miles from Houston NAA for a single car but it takes 20 miles to get the station that added miles to the Station that if was not there only 56 would be added. the HGB NAA is wrong miles from Houston center to north Montgomery line. So with the correct mileage, the NOx net actually becomes positive and if you truly add the cars going to the station vs on 45 that would make the net even more positive.	Refer to AQ-1. The HGB NAA distance was corrected, and this did not change the conclusion of no significant adverse impact to general conformity emissions. When the passenger trip assumption is corrected to one-way, the HGB NAA miles corrected, and vehicle occupancy revised to 1.5, there is only a very small net increase in HGB NOx of only 0.1 tons per year or 0.1% of the de minimis threshold. However, this is expected to become a net decrease with revisions to the train power consumption using newer EIA data.
Roy Johnson	2/22/2018	Website	Flawed data Table 3.9-19: Annual Operation Energy Savings Estimate The VMT counted each car as removing a RT where passengers are only counted each way. So VMT is double of what it should be. Reducing the MMBTU by half to 4,668,780 for a net savings of 3,074,821 mmbtu. The chart over states this by 250%. ow can any one be expected to comment on such flawed data. Also with this being so wrong why isnt the passengers for FSL validated? So much wrong data that we know of if the passenger count is wrong or the 1.2 people per car is wrong that shrinks the net MMBtu saving even more. Bad data - Correct and resubmit for stakeholders to comment on better data.	Refer to AQ-3.
Roy Johnson	2/22/2018	Website	Table 3.9-18: Construction Fuel Consumption Estimate Flawed data decreasing the MMBTU USED. Gasoline is 114,000 btu per gallon and diesel at 129,500 btu per gallon Since the Rail line number at 210,999 gallons to get to 24,159.40 MMBtu then each gallon is 114500 btu which indicates gasoline vs diesel. Most all construction equipment list elsewhere are diesel. This will increase the BTU used for construction thus lowering the advantage of no build and build. Until the data is some what more accurate the DEIS needs to be refigured using corrected	Refer to EU-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			data then opened up for more comments. How can a person comment on wrong data and just allow the FRA correct it without further comments allowed.	
Roy Johnson	2/22/2018	Website	Community and culture maps- I was told that noise impacts were not listed if the property would assume to be taken sheet 227 has some concern that you list that southwest of the pine circle curve You list the one between Holly St and Carolyn Ln but you do not list the house between Carolyn Ln and hickory. How can we confirm this data as the ones below are listed but the one above is not listed with even the next spot up between hickory and cedar mill is actually closer than the ones just below but is not listed as a sound impact. This noise is very important in the NEPA process and routes were eliminated or carried forward based on this impact of noise and if that is wrong how can this be a valid DEIS? How can we comment on an incomplete DEIS? How can YOU determine the least impactful based on incorrect data?	Two residences have been added to the impact assessment in this area. They are classified a moderate impacts.
Roy Johnson	2/22/2018	Website	Noise impacts flawed data? You have on community and culture maps 246 for a white oak falls subdivision You have the row against the ROW as those being bought out as no impacts. Then you have across the street on a few with the yellow noise moderate labeled. Following the ones you labeled with dots there should be about 35 more noise impacts listed. this is incomplete data and how can we make comments on a mistake like this? The Noise is very important on the route and no build options and until we can get accurate data no build has to be the only conclusion	Refer to NV-8.
Roy Johnson	2/23/2018	Website	Recent news is that Harris County will get another Open House comment by FRA on March the 5th. What was this in regards too? Was it due to the fact that the only Harris county open house was limited by the size and more people showed up that would be allowed to enter? If that is the case then Madison County needs to be looked at for sure. With the change of venue the Madison county open house was limited also by the smaller size of the new venue. Why does Harris County get another one and the rural area does not. I demand that the comment extension be extended to allow for another open house so that more of the impacted. This is restricting equal input by impacted stakeholders.	Refer to PI-3, PI-10 and PI-11.
Roy Johnson	2/23/2018	Website	Bad data on super commuter. DEIS quotes a story that links to this report https://wagner.nyu.edu/files/rudincenter/supercommuter_report.pdf Which has been used by TCR themselves to claim the super commuter effect. In this study they state that the 2002-2009 increase in super commuters was 218%. oing back and looking at the traffic data from TxDOT at station 82h34 the AADT actually went from 26,000 in 2002 down to 24,000 in 2009. Any claim should be investigated as this one is not being close to being supported by data. Reading that report you will also see that telecommunication is leading to alot of the super commuters. those do not get on the road or air to travel.	Refer to GN-3.
Roy Johnson	2/23/2018	Website	1.2.2.3 59 to 39 MPH is using data that is true in 2002 and estimated for 2035 along 45. DEIS portrays the traffic on 45 will double. But that study was based on weighted avg for each segment of AADT stations. The traffic in the middle has for the last 10 years only grown 0.27% ear Streetman Texas. See attached transtar speed maps and since we are about half way in the study the speeds should be slower. If you actually calculate the avg speed for each segment and weight it per length of segment the speed today is avg of 58-60 mph. Very old and outdated data used. One PDF attached is southbound just plain line graph of speeds the second one is the distance of each segment and the avg speed from the chart I entered and was generous. I came up with 58-59 avg speed. Projects purpose is based on false data that can be easily proven not correct and since this is a major reason of the project it should be looked at and shelved so therefore no build until data is proven to be matching the prediction.	Refer to TR-4 and TR-5.
Roy Johnson	2/23/2018	Website	Deis States As detailed in Chapter 3.11, Transportation, multiple expansion projects are currently planned by TxDOT along IH-45 through 2040. However, even with these substantial planned investments, significant decreases in congestion would not be anticipated to occur given the continued population and travel demands. As a result, planned highway improvements are not expected to make highway travel more reliable. Adding additional highway capacity, particularly in the already congested urban areas, would require ROW beyond the existing limits, which would increase costs of expansion and impact communities along the IH-45 corridor Being that the congestion is in Houston then adding more people traveling to and from the station near the #1 most congested highway in the state will not help this problem listed above. Matter in fact it will aggravate the problem. Since HSR is not tying into Houston light rail more people will use cars and uber. This adds to the congestion at the NW station location. You must have a model connection that folks will use and Metro BUS IS NOT IT. Takes 60 minutes to NRG stadium. Houston does have LIGHT RAIL but TCR refuses to tie into that so traffic will be horrendous.	Refer to TR-4 and TR-5.
Roy Johnson	2/26/2018	Website	13.10.2 ARUP section on reservoir any listed of the talked about Millican reservoir that will go from college station almost to lola? just miles from the HSR route	The Millican Reservoir is not a planned reservoir listed in the Texas Water Development Board 2017 State Water Plan; therefore, was not considered.
Roy Johnson	2/26/2018	Website	17.2.2 ARup files Noise levels- Nothing stated about speed of those trains or two trains passing each other- The test appears to happen in rice harvest in which the field of measurement was in dry standing rice which absorbs sound. Compare that to short grass or water filled fields the sound will be higher. Why wasnt the sound taking with trains going 205 mph? how can we comment on collection of bad data	Refer to NV-1 and NV-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
Roy Johnson	2/26/2018	Website	Speed charts in Appendix A the Dallas to Houston ones for ALL routes I am not seeing the speed restrictions at the 42,400 ft mark as per civil curve table under C-HN1-9 through C-HN1-12 That is just west of Brittmore that is approx 8 miles from the station. Charts are hard to tell but the best that I can see the speed does not reach 265 kmh per speed restriction ISL and FSL until east of brittmore. Trains northbound no issues as its almost 17 miles to get up to speed but southbound trains the speed restriction is I think is not included in speed charts and since some are so close to 90 minutes the time is going to be a tad more than 90 minutes?	TCRR updated the 'Speed Distance Trip Graphs' associated with the Project and they are included in TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F.
Roy Johnson	2/26/2018	Website	Table 1: Primary Residential Displacements and Acquisitions Looking at Grimes county values and the high value of \$342,090 is there a chart or table listing each of the 41 displacements so that we can determine if its accurate? Seeing how so much is wrong in the DEIS on VMT and emissions how can we trust any number listed in the DEIS	Table 3.13-13 summarizes the primary and secondary structures that would be displaced by the project. As stated in the methodology, these estimates are for comparative purposes only and are detailed within the Land Use Technical Memorandum, Appendix E.
Roy Johnson	2/26/2018	Website	Table 4: Miscellaneous Displacements and Acquisitons of Primary Structures Grimes Oil/gas you have 2 with low of \$2,330 and high of \$342,090 but an avg of \$69,054. Where is the data on which wells are being displaced and how do you get that avg when only two wells are included. Bad data and hard to comment on DEIS that is not complete	Table 3.13-13 summarizes the primary and secondary structures that would be displaced by the project. As stated in the methodology, these estimates are for comparative purposes only and are detailed within the Land Use Technical Memorandum, Appendix E.
Roy Johnson	2/26/2018	Website	Table 9 commercial displacements and acquisitions primary Dallas and Harris county has over 1000 job displacements. Why is this not being weighted against jobs gained as a very slight net gain. Some companies are grandfathered in so moving within Harris county may not be an option. What is the true cost of jobs lost for HSR displacements	Section 3.14.5.2.3 of the Final EIS documents the new jobs generated by the Project. (See Tables 3.14-20 and 3.14-21 under Permanent Impacts: Employment, Earnings, and Sales and Use Tax). Section 3.13.5.2.5 of the Final EIS and Appendix E, Land Use Technical Memorandum documents business displacements, including an assessment of potential employment at displaced businesses based on average employment numbers in similar industries. This information is important in understanding potential impacts to individual employees and owners of displaced businesses. However, that displacement is not likely to impact the demand for a particular good or service within the economic assessment area. The regional employment, earnings and sales tax calculations in Section 3.14, Socioeconomics and Community Facilities do not include employment estimates from Appendix E, Land Use Technical Memorandum , as it is assumed that many displaced businesses would relocate within the economic assessment area, and, where relocation is not feasible, new business would be created to meet demand. All employment and earnings calculations are based on economic input-output multipliers that estimate the ripple effects of the Project's capital investment, and do not include Project costs associated with property acquisitions or displacements.
Roy Johnson	2/26/2018	Website	Commercial Displacements and Acquisitons (Primary) for Dallas and Harris county where is the value of those businesses?	Section 3.13.5, Land Use, Environmental Consequences and Appendix E, Land Use Technical Memorandum document business displacements. Impacts to landowners would be mitigated through compensation (see Section 3.13.6.2, Land Use, Mitigation Measures), but are not likely to affect regional employment or earnings projections as individual business would likely relocate or be replaced within the study area to meet regional demand for goods and services. The property tax assessment in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts does incorporate the potential loss of property tax revenue where business structures would be displaced by the Project. Notwithstanding, the net impact to property tax revenues would be positive for all economic assessment areas as a result of property assessments on the Project's built infrastructure and the transition of currently tax exempt land uses to TCRR ownership.

Submitted By	Date Submitted	Submission Type	Comment	Response
Roy Johnson	2/26/2018	Website	The additional cost to County first responders. Grimes county Budget is just above 20 million a year. TCR says they will help with training and equipment but we are an All VFD (County Budget \$522,866) with just a few certified firefighters at each station. (Navasota not VFD but 20 miles or more away) We cannot afford what they want to give us or match. I have asked several times the cost allocated for each county to purchase EMS type equipment. no answer. This must be addressed and have local input before the first dirt moves	Refer to SS-18, SS-23 and SS-26.
Roy Johnson	2/26/2018	Website	Table 12: Summary of Land Use Impacts per Build Alternative Is listed estimated total structure acquisitions you have 8 for Alt B but on the same chart above you have structures displacements with in the LOD at 49 which matches up with later charts listing type and employees.	Refer to LU-7.
Roy Johnson	2/26/2018	Website	Table 12: Summary of Land Use Impacts per Build Alternative ALT A is not the lowest in the special farm land takings structure displacements Estimated Permanent parcels estimated temp parcel Ag structures residences Other ALT routes are lower in all of those above but ALT A is the preferred route? Based on what and DEIS needs to go back and look at this and decide which is the least impactful until then no build is the only option at this time	Refer to BA-7. Agriculture Structure Acquisitions are provided for Build Alternatives A, B and C on Table 2-14 of Section 2.7.2 - Comparison of Build Alternatives A, B, C of the Final EIS . USACE determined that routes not located on federal property would be preferred; therefore a summary of Build Alternatives D, E and F was not included in the executive summary. Detailed Agriculture Structure Acquisitions are provided for all Build Alternatives in Section 3.13, Land Use .
Roy Johnson	2/26/2018	Website	Flawed data ES.9.15 you have towards the bottom Additional sales tax revenue would result from the sale of tickets for travel on the new HSR system on an annual basis while it is in operation. HSR ticket sales could generate between \$15 and \$39 billion in sales tax for the state in addition to \$5 billion to \$12 billion in local tax revenue for Dallas and Harris counties. Being that DEIS states about 63 million in state sales tax will be collected a year that will take anywhere from 150 years to over 300 years to reach the 15-39 billion in sales tax on tickets. extremely flawed data so not a good way to comment on this data without it being corrected and opened up for comments based on more accurate data	Refer to SC-3.
Roy Johnson	2/26/2018	Website	How can this be done without 100% of the NLT areas being allowed to be surveyed> NR-CM#7: Protected Plant Species Surveys for Navasota ladies'-tresses, and large-fruited sandverbena in Freestone, Leon, Madison, Grimes, and Waller Counties. One year of presence/absence surveys have been conducted for Navasota ladies'-tresses and large-fruited sand verbena. While no individuals were observed, additional surveys are necessary and will be completed by FRA in 2017-2019 (as necessary, to obtain three consecutive years of data). If FRA determines species absence based on three years of surveys, the agency' will complete informal consultation with USFWS. No additional preconstruction surveys would be anticipated.	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Roy Johnson	2/27/2018	Website	Economic impact Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives DEIS list sales tax collected for State. State does not collect sales tax on PLane/Bus/Limo or trains. extremely flawed and as you can see on attached its actually a net loss to the fed/state tax revenue. See that the DEIS used such corrupt info how can any one make a comment based on false data. Who at AECOM/FRA or TCR is looking over this stuff? Since this is the simple stuff what else is wrong. I demand that the DEIS be stopped and resubmitted with correct info per state law	Refer to SC-3 and SC-16.
Roy Johnson	2/27/2018	Website	Economic impact Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives Under Federal Tax impact for airlines, DEIS wrongly puts it as sales tax to state and local government. NO CITY OR STATE sales tax on airline tickets. Federal has an EXCISE TAX of 7.5% n With such oversight of a simple data point how can any one make an intelligent comment on a flawed data in the DEIS? Only option is No Build until the data can be updated and resubmitted for comments.	Refer to SC-3 and SC-16.
Roy Johnson	2/27/2018	Website	Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives Since the net impacts are being touted so much is there any validation of ridership numbers? Other agencies and reports shows ridership well below the 5 mil ISL level. Even TCP stated a 20% mrket share in the STB statement then came out with only 14 mil journies being made that is 2.8 mil passengers using TCP own data. Which happens to be just high of the TxDOT study released using the same LBG group With so much riding on the ridership from net tax impacts to net emmissions its is critical to verify the ridership numbers	Refer to AQ-7, GN-2 and SC-3.
Roy Johnson	2/27/2018	Website	Deis states Es-32 "FRA's federal action related to the Project focuses on the evaluation of the safety of the system. The introduction of 45 miles of adjacent rail and highway frontage roads as a result of Build Alternative C would require a safety barrier to prohibit vehicular drivers from impacting the track infrastructure. Due to this added safety component, FRA does not recommend Build Alternative C as the preferred alternative" Then Grimes county getting 41 miles of new public road right up against it doest count? We are allowed to travel those roads with no protection? Sad state of affairs to pit one group over anothers rights. If Alt C can be dropped then others can be also due to the "new public road" being proposed along side of HSR ROW.	Refer to BA-7 and TR-8.
Roy Johnson	2/28/2018	Website	3.4.5.2.4 HSR Operational Noise Impacts Based on a FRA General Noise Assessment, the evaluation of noise impacts from operations (assuming a maximum speed of 205 mph) What is the true dB of a train in simple terms? Open house it was 85 db at 150 ft and a recent FRA	Refer to NV-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			open house TCP stated the sound was taking in Japan (noted in the DEIS) that it was only going 125-175 mph so any sound at 205 has to be assumed as stated above where is that hard number of dB at 205 mph? We need good data in order to comment on the DEIS and without it being supplied the DEIS needs to be redone to include this data so we can comment with the facts vs assumptions. Sound is HUGE NEPA requirement and we can only comment on assumptions ? BAD process	
Roy Johnson	2/28/2018	Website	Table 3.4-16: Comparison of Noise and Vibration Impacts by Build Alternative ALT A is not the lowest in sever or moderate sound impacts per this table. Alt A sound be removed due to the environmental impact it will have vs other routes. No build until a correct route is chosen is the only option.	Refer to NV-1. Alternative A was chosen because it had the fewest impacts overall but not necessarily the fewest impacts to every individual resource area.
Roy Johnson	2/28/2018	Website	ES-22 FRA completed an independent evaluation of the economic impact of the Project confirming a net positive tax impact, estimated to generate between \$6.5 billion to \$7.0 billion by 2040. Since the FRA completed an independent evaluation of the project using Salestax data that is NOT COLLECTED and said a positive net tax impact would occur. Train tickets have no sales tax and airline tickets have no sales tax just Fed Excise tax. So the net tax impact is a negative vs positive. If any of this data was used to "Independent" report than all of the report needs to be rewritten. Due to other HUGE financial impacts assumptions and wrong data the DEIS needs to scrapped and restarted to contain the correct informationso a TRUE NEPA evaluation can be obtained. Until that is done the only option is a NO BUILD due to bad data that we know of in the DEIS creating a study on impacts that we cannot see any figures on.	Refer to SC-16 and SC-3.
Roy Johnson	2/28/2018	Website	Table 3.2-4: Calculated VMT You can not count a car removed from a passenger as making a round trip while counting the passenger once. If 5 mil ride the train that is 2.5 mil each way and there fore the VMT is overstated by 200%. Since we are not allowed to comment on the EIS and this data that is VERY important to the NEPA process I ask that the glaring flaws be corrected and DEIS be reissued for a true comment period until then NO BUILD MUST be carried forward	Refer to BA-6, GN-1 and PI-1. The passenger trip assumption associated with the ridership used was clarified with TCRR to mean one-way travel, and a GIS error in the Harris County road length was corrected, and VMT recalculated with these corrections. The HGB NAA NOx did not show a net gain. Only the DFW NAA in 2040 showed a negligible net gain that was 0.1 percent of the de minimis threshold for general conformity applicability. Even when the vehicle occupancy was changed to 1.5 to test the effects on emissions calculated, the HGB NAA net emissions were still reductions, and only DFW NOx showed small net increases of 1 to 3 percent of the de minimis threshold. It should be noted that overall operational emissions for the whole corridor still showed net reductions with these changes, except for SO2 as before. The conclusion of no significant impacts to air quality from operational emissions in the Final EIS would not change. The assumption of one-way trips was also checked for its impact on the conclusion of HSR net energy saved and no adverse impact on energy usage and is summarized below for the largest emission alternative (A). This change halved the VMT, gallons of fuel saved, and associated energy usage reduced by HSR use, but there was still a net reduction of energy used. Even in the case of initial service level in 2024, net energy savings is estimated. This is summarized below for 2040 and detailed in the Final EIS. Therefore, the conclusion of no adverse long-term impacts on energy consumption and depletion of energy sources does not change. The following revised assumption was included in the Final EIS: VMT = 1,276,260,00, Gallons of Fuel Saved = 40,775,080, Net energysaved = 3,074,821 MMBTU Overcoming a carbon footprint is not required in a NEPA analysis or by current executive orders governing NEPA. The emissions of the power generating plants were accounted for in the analysis of operational emissions as documented in Section 3.2.3. Construction emissions were calculated considering their engine technology (typically diesel). Though overcoming a carbon footprint is not a national or state policy requirement, the overall

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				operational CO2eq emissions with the revised assumption show a net reduction of 64,350 metric tons annually that in several years of operation, would offset those produced during construction.
Roy Johnson	2/28/2018	Website	With the relocation of pipelines has the FERC been contacted?	Refer to EU-1.
Roy Johnson	2/28/2018	Website	Table 3.9-18: Construction Fuel Consumption Estimate You have a total of 500,714 gallons total being used. If you break that out to 320 days a year I seen elsewhere for 4 years that is only 400 gallons a day of fuel. Looking at the total 2,503,568 hours using 500,714 gallons that is .2 gallons per hour. that is way way to low which in turns reduces the MMBTU energy consumes.	Refer to AQ-3 and GN-2.
Roy Johnson	2/28/2018	Website	Maximum Annual Construction-Related NOx and VOC Emissions for Years 2018-2021a (tons/year) You have listed under HGB NAA NOx for off road construction 63.74 tons But then proceed to list other HSR emissions as in page 16 HGB waller and Harris county for 64.41 NOx non road construction page 17 you have per Station in HGB area has one so thats is 37.84 tons NOx (NON ROAD) Page 17 you have TMF (assume MOW is included) 30.27 tons NOx (NON ROAD) page 18 has the MOW so if you count the HGB MOW that is 13 tons if not included in the TMF for HGB. So for HGB you have 64.41 tons NOx non road for constructio 37.84 tons NOx non road for station 30.27 tons NOx non road for TMF 13.03 tons NOx non road for MOW if separate. 145.55 tons NOx just for the HGB non road emission during the project Then page two of same section you have Maximum Annual Construction-Related NOx and VOC Emissions for Years 2018-2021a (tons/year) This shows 63.74 tons NOx per year for 4 years that is 252 tons total but above you only have 145 tons NOx Where is the other 100 tons of NOx for HGB	Table 3.2-8: Annual Non-Road Construction Period Emissions (tons/year) and Table 3.2-11: Maximum Annual Construction Period Emissions (tons/year) shows the Maximum Annual Construction Period Emissions during any one year from 2018-2021. Maximum annual emissions are used for the General Conformity emissions analysis required for the HGB (and DFW) non-attainment areas. The emissions calculations as you note are included in Appendix E, Air Quality Technical Memorandum. Maximum annual NOx emissions (tpy) for track construction within the applicable HGB counties is 16.10 tpy NOx, station emissions is 15.14 tpy NOx, TMF emissions is 15.14 tpy NOx, and construction emissions for two MOWs is 17.36 tpy NOx (8.68 tpy NOx per MOW). Maximum annual emissions therefore would be 63.74 tpy NOx. Annual emissions should not be added for the four-year construction period since not all construction activity would occur each year as noted in the calculation tables included in Appendix E. For example, station construction would occur over a 30-month construction schedule, TMFs would occur over a 24-month construction schedule, and MOW construction would occur over an 18-month construction schedule.
Roy Johnson	2/28/2018	Website	Noise DEIS states Finally, with regard to the effects of noise from passing trains on animals, the FRA noise exposure criterion limit is a Sound Exposure Level (SEL) of 100 dBA. For the TX HSR trains operating on a viaduct at the maximum speed of 205 mph, this limit would only be exceeded within about 15 feet from the tracks and within the HSR ROW. Because no animals would be this close to the tracks, noise impact on wildlife is not anticipated. Then on civil map CVL-HN-01201 you have quite a few section of the viaduct that is 5' or less in which the animal will be within the 15 ft and making the the above statement false	Refer to NR-1.
Roy Johnson	2/28/2018	Website	DEIS states With regard to potential increased annoyance due to the startle effect of noise from passing trains, at the maximum train speed of 205 mph this effect would only occur within about 45 feet from the tracks which is within the ROW. Therefore, increased noise annoyance due to startle should not be an issue. There is ALOT of viaduct less than the 45 ft for startle effect. Was any testing done on American Breed of cattle? Angus, Hereford and your European cattle are fairly docile. But the cattle we run around here are Brahman-influenced cattle with ear. Those cattle are very skittish and smart. If I am trying to get cattle through a crossing or a low viaduct section and trains approach. I can kiss my plans goodbye. NO other country have cattle like we do along the route and that being a tiger stripe momma cow that will dart off if anything is out of place while trying to work them to the pens. I want to see actual testing on different breeds of cattle and compare the startle effect distance on each. American breed type, British breed types and European type cattle breeds	Refer to NR-1. HSR effects on wildlife and livestock are assessed in Section 3.4, Noise and Vibration . The FRA guidance includes the most up to date research on noise effects on animals. The Mineta Institute conducted a literature review on the effects of noise on horses and found no additional or new information that would supersede the information in the FRA guidance. The assessment presented is similar to that conducted for other HSR projects around the country, which shows a very limited area in close proximity to the tracks where there would be an potential for effects.
Roy Johnson	3/1/2018	Website	Emissions flawed data. DEIS states that 1.2 people arrive at the station so the 7.2 mil passengers which 89% comes from cars divided by 1.2 you get the 5.340,000 cars removed and 14,630 per day on 45. The truth is the avg riders per car is 1.51-1.8 people per car. When you factor this in you get alot less cars removed. 7,200,000x 89% as per DEIS you get 6,408,000 from cars. 6,408,000 people avg 1.5 per car gets you 4,272,000 cars removed Then taking the correct VMT removed per car in the HGB NAA of 56.8 vs the 169 number 4,272,000 cars 56.8 miles= 242,949,600 miles removed in the HGB NAA area. DEIS has it as 903,741,600 miles removed using wrong distance in the NAA and double counting the miles per car. 242,949,600 /903,741,600= 26.8 % of what the DEIS states. Take the NOx emissions for HGBNAA for FSL you will get a NET GAIN IN NOx for HGB NAA. DEIS is suppose to be about the NEPA process and environment. so with this 373% over statement of	Refer to AQ-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			VMT removed in HGB NAA the DEIS is not valid and no way we can comment on such errors. Therefore until this can be corrected and allowed comments on a truer DEIS the NO BUILD IS THE ONLY OPTION of the ones avail to us today	
Roy Johnson	3/5/2018	Website	DESI under Table E3.2-16: Net Operational Emissions You have these words "The emissions are relatively small, no counties in the project area are in nonattainment of the SO2 standard, and the proposed action results in net reduction of all the other pollutants" Sorry but FRE is a NAA for SO2 period. The proposed action results in net reduction in ALL the other pollutants. IS NOT TRUE. HGB NAA is actually a NET INCREASE in NOx. Since the VMT removed counted each car for the passenger making a one way trip as making a RT the emissions are overstated in the DEIS. Then the HGB miles is 300% overstated due to the wrong miles in the HGB area and doubling again for every car taken off the road from 7.2 mil trips generated by HSR. Each trip is 239 and not 478. If you took the 5.3 mil cars removed and used 2.65 mil cars RT then you are correct. How in the world does a DEIS and NEPA process make this huge mistake. How can we comment on such flawed data? Would not be so bad if we could comment again on corrected data but the NEPA process does not allow that. SO I am demanding a New DEIS be published correcting all this mistakes on emissions and others. For a new comment period until then only option is a NO BUILD	This Executive Summary has been revised in Section 3.2, Air Quality of the Final EIS to reflect Freestone's nonattainment designation. This has been corrected in the Executive Summary. There was an error in the HGB miles caused by a duplicate GIS feature that has been revised to correctly reflect the approximate 27 miles from the Houston city center to the northern edge of Harris County. TCRR was consulted to verify what passenger ridership numbers used for the VMT, meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate This change halved the VMT and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for same as before, sulfur dioxide. This was true of the overall operational emissions and conformity pollutants NOx and VOC in the HGB NAA, with net HGB emissions in 2024 and 2040 respectively of -11.7 and -3.8 tons per year (TPY) for NOx, and -19.9 to -17.8 TPY for VOC. Only DFW NAA NOx in 2040, is barely a net positive, at 0.1 tons per year, which is 0.1 percent of the de minimis threshold to determine if general conformity applies, while other years for NOx and VOC show reduction. Therefore the conclusion of no adverse long term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS. With an update to the train power consumption using more up-to-date data from the Energy Information Administration (EIA), the 2040 DFW NAA NOx emissions is expected to show net reduction because the percent of wind power has increased more than was previously forecasted in the Draft EIS. When the vehicle occupancy assumption is also changed to 1.5 in addition to the passenger assumption revision, the net NOx emissions in the HGB NAA are still reductions with results in 2024 and 2040 respectively of -6.9 to -2.2 for NOx and -15.6 to -14.0 for VOC. With vehicle occupancy changed, only DFW NAA NOx in 2024 and 2040 are respectively, small net positives of 2.7 to 1.4 TPY, which is 1 to 3 percent of the conformity de minimis threshold, while all other HGB and DFW emissions in 2024 and 2040 showed net reductions (except for SO2 as already described in the Draft EIS).
Roy Johnson	3/5/2018	Oral	Hello. My name is Roy Johnson. I'm here tonight to speak on the flaws contained in the DEIS_ First of all: the of miles moved is overstated by 200 percent. It also — the miles moved in the HGB non-attainment area is overstated by 300 percent Y'all have 903 million miles accounted for in that area? It's supposed to be 303 million miles. That's a huge issue. What right does TCP have to move on county roads above the HSR? What right do they have to close and reroute our county roads? What state statute gives them that power? I see none. Just last week, a representative of TCP stated HSR will go over all roads. FRA, I do not have to tell you where to look to find that is a false statement. If TCP is stating stuff like this in the public: what are they stating in the ridership to FRA? And I demand that any ridership info be frilly vetted and emissions recalculated based on true information. None of this noise: If this was so quiet, why then why are there noise abatements? And will they install those in case someone moves closer to the right-of-way? Why is the train speed in Japan restricted in places? It's the noise it	Refer to AQ-6, AQ-12, AQ-13, ED-1, GN-2, NV-1, NV-9, SS-1, TR-8 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			creates. The emissions in 2040 actually shows a net increase in NOX for the Harris GB non-attainment area if you do your vehicle miles correctly. This is due to the 300 percent overstatement of miles removed This alone is a huge concern for the NEPA process. You cannot use bad data to justify the net increase in the Houston non-attainment area. For this reason alone, the DEIS needs to be scrapped and restarted using correct data Since all the emissions data is calculated on ridership: then FRA should validate that ridership. This is unacceptable to use information for such an important issue without vetting it first. And rm going to leave you with a quote: October I meant August of 2015 an elected official was quoted in the scoping process: "Property values will decline; and in these very neighborhoods where homes are being built and neighborhoods being revitalized: the progress may very well be halted. Already, some of the prospective homeowners are delaying their decisions to purchase property in the area: uncertain of the route that the high-speed rail train may take. Furthermore, the safety of families in these dense urban areas would be compromised "That is from the Mayor, Sylvester Turner, when he was a House Rep in 2015 _ This will also affect homeowners in the White Oak subdivision and Stonegate_ So if it — if he was upset with it before, he should be upset with it now. Thank you for your time.	
Roy Johnson	3/6/2018	Website	Open House March 5th- Still, dont know why the elected officials and organization leaders could not speak at the other Harris county Open house? I think we as the public and stakeholders should know what and who caused this additional open house? What influenced was used? As other counties only had one meeting and were over capacity. Many meetings on adjoining counties were the same night so stakeholders could not attend both. These meetings are for information from AECOM/FRA TCP and when I have attended my first meeting in Leon County. The knowledge was very low from the staff. My second one was in harris county and little better but still could not address the HUGE MISTAKE in the HGB NAA overstatement on miles REMOVED is 300%. How does an agency make that big of a mistake and only allow the stakeholders one comment period to address this HUGE HUGE gaff. Using this extremely BAD input data to produce the DEIS, that has a major emissions component, Should be thrown out and something tangible and close to accurate be allowed to be commented on. Other wise my only option is a NO BUILD until AECOM can get the data closer than 300% wrong and that FRA is lacking any oversight in this project.	Refer to AQ-12, GN-1, PI-6, PI-8, PI-10 and PI-11.
Roy Johnson	3/6/2018	Website	Safety for local residents- NO ONE at the FRA/AECOM or TCP contacted Grimes county Sherriff to get consul on local needs or concerns before the DEIS came out. Since the DEIS came out with NO INPUT from local EMS and first responders it affects the rural residents. Who will hold TCP accountable with the closures and rerouting of roads in the rural areas? What power will my local sheriff have at the negotiating table with the project when NO ONE IS STANDING BEHIND HIM and making sure the concerns are addressed? This project is not worth one life due to many miles reroute on roads that were not consulted with before DEIS. Many of the reroutes from road CLOSURES are NOT IN THE table of miles added or subtracted.	Refer to PI-1, TR-8 and SS-23.
Roy Johnson	3/6/2018	Website	TxDOT has a statewide crash rate per Hwy system. You will see attached the 2015 and 2016 data the interstate is the safest road system for crashes per 100 mil VMT. and if you notice the interstate in rural areas actually decreased from 2015 to 2016 while the urban rates went up for the same period. This project only shifts the traffic from 45 in rural areas to the interstate in urban areas. Since the location of the midstop is located in rural area STATE HIGHWAY that is even more prone to accidents at a rate of 150 percent of what it is on interstate. Then you have road type and again interstates are for most part divided 4 lane highways where SH 30 and SH 90 are undivided 2 lane 2 way road types. Again it goes from 62 crashes per 100 mil vmt to 101 per 100mil vmt this is shifting the burden of this system to local residents that will not use the system due to the location of College station. There for the rural elderly are at a severe disadvantage over another location of the station. NO BUILD is only option with the current alternates we have to choose from	Refer to EH-1, PN-3, TR-2 and TR-5.
Roy Johnson	3/6/2018	Website	How can the cars for station demand be at 1.2 people per car and that number be automatically used for those cars to be removed from 45? If riding a HSR since its cost per person you will have alot more people leaving when they want too but if carpooling they will rider together to share the cost. LIKE COLLEGE Students. This increase people per car on 45 over going to the station will reduce the number of cars removed on 45. This will decrease even more the miles removed from HGB NAA which when you factor in the correct miles in HGB NAA the net gain in NOx is even LARGER. This system if BUILT WILL INCREASE the NOx in HGB NAA and cause health issues and financial issues for increasing the emissions. This is a serious oversight by FRA and DEIS needs to address this and publish the correct NET GAIN vs NET REDUCTION in NOx. No build until we can comment on a more accurate DEIS emissions.	Refer to AQ-4. The HGB NAA distance was corrected, and this did not change the conclusion of no significant adverse impact to general conformity emissions. When the passenger trip assumption is corrected to one-way, the HGB NAA miles corrected, and vehicle occupancy revised to 1.5, there is only a very small net increase in HGB NOx of only 0.1 tons per year or 0.1 percent of the de minimis threshold. However, this is expected to become a net decrease with revisions to the train power consumption using newer EIA data.
Roy Johnson	3/6/2018	Website	AQ- Emissions and data used to calculate NOx DEIS has the VMT removed wrong along the entire route VMT removed in HGB is 300% overstated People per car at the station is counted the same as on 45 thus increasing the cars actually removed These above reasons is why the NOx is a net gain for HGB NAA and since the NEPA is about air quality and other subjects. This oversight of AECOM and FRA TAINTS the DEIS on its core responsibility. With not being able to comment again this flawed data needs to be corrected and resubmitted so that stakeholders can have more accurate date to look at.	The passenger trip assumption associated with the ridership used was clarified with TCRR to mean one-way travel, and a GIS error in the Harris County road length was corrected, and VMT recalculated with these corrections. The HGB NAA NOx did not show a net gain. Only the DFW NAA in 2040 showed a negligible net gain that was 0.1

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				percent of the de minimis threshold for general conformity applicability. Even when the vehicle occupancy was changed to 1.5 to test the effects on emissions calculated, the HGB NAA net emissions were still reductions, and only DFW NOx showed small net increases of 1 to 3 percent the de minimis threshold. It should be noted that overall operational emissions for the whole corridor still showed net reductions with these changes, except for SO2 as before. The conclusion of no significant impacts to air quality from operational emissions in the EIS would not change.
Roy Johnson	3/6/2018	Website	Since I have been to 4 open houses as doors open to learn about the project and get answers to my questions. I am very concerned that the system allows me to show up and talk with the experts that created this system but no one has the data or source of that information in the DEIS. Another issue is that person that did that chart is not here to answer that question. SO if I only made one open house to get details to only find out no one knows where the data came from. I feel like we are being pushed down the road and ignored. Open house by the FRA should be where we can GET ANSWERS from AECOM and FRA that created the DEIS. The process is very flawed and designed to keep the stakeholders in the dark. I have spent in those 4 open houses maybe a total of 6-7 hours with AECOM folks and not one gave me the source of the flawed data. Almost like they are right and since you cant comment after this period we dont have to understand you or correct the issue. Extreme ISSUE ON social justice or whatever you want to call it when the stakeholders are promised to get answers and the ones giving them all can say submit comments. DEIS is flawed and ripe with BAD data period. I am not talking about misspelling or mislabeled stuff I mean data that is the core of the NEPA findings. FRA MUST DEMAND that DEIS be corrected and resubmitted with a new round of open houses with folks that can answer something as simple as " you list two wells being closed in county, do you have the names of those?"	Refer to GN-1.
Roy Johnson	3/6/2018	Website	Many comments were made from the Open house March 5th that was using data from the DEIS that were not verified. The 59 mph to 39 mph was used and he stated it was 2002 at 59 mph and here we are in 2018. Transtar avg speed maps for each segment still have it just at 58060 mph for the 239 mile trip on 45. FRA has to vet the information or it gets used to promote the project which is extremely misleading. The data is very easy to obtain to verify some simple data that was included in the DEIS that was PREDICTIONS. Collected DATA DOES NOT SUPPORT THE 59-39MPH and it you think it does than that same chart has SAT-HOU from 57-19 MPH and should be a greater concern than 45. It will only be more expensive later to do SAT-HOU.	Refer to TC-3.

Roy Johnson	3/7/2018	Website	private water wells. What is the requirement for them being listed on the maps? I am seeing alot of houses with a private water well that in the buffer zone (just outside of LOD) that has nothing listed. The maps have public water supply and groundwater wells. But where are the other water wells ?	The Water Quality Study Area for surface water quality, groundwater quality, and water supply included the LOD plus a 1,000-foot buffer. All water well information obtained from TCEQ, TWDB, and the EPA was included in Section 3.3, Water Quality and in Appendix D, Mapbooks, Natural Resources . Any water wells discovered during future surveys would be coordinated with appropriate agencies and owners.
Roy Johnson	3/7/2018	Website	Table 4-1: Cumulative Analysis of Resources DEIS list NET EMISSIONS benefit under direct impacts and is carried forward to CIA. But the NOx in 2040 is actually a net INCREASE due to the errors of HGB NAA miles and VMT removed as it was overstated by 300% in the emissions part of the DEIS So you carried it through but calculated it wrong while in the meantime the others things on this chart that is not carried forward has no data for use to see	The passenger trip assumption associated with the ridership used was clarified with TCRR to mean one-way travel, and a GIS error in the Harris County road length was corrected, and VMT recalculated with these corrections. The HGB NAA NOx did not show a net gain. Only the DFW NAA in 2040 showed a negligible net gain that was 0.1 percent of the de minimis threshold for general conformity applicability. Net NOx and VOC emissions in the HGB NAA in 2024 and 2040 respectively were -11.7 and -3.8 tons per year (TPY) for NOx, and -19.9 to -17.8 TPY for VOC. Only DFW NAA NOx in 2040, is barely a net positive, at 0.1 tons per year, which is 0.1% of the de

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				minimis threshold to determine if general conformity applies, while other years for NOX and VOC show reduction. Therefore, the conclusion of no adverse long term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS. With an update to the train power consumption using more up-to-date data from the Energy Information Administration (EIA), the 2040 DFW NAA NOx emissions is expected to show net reduction because the percent of wind power has increased more than was previously forecasted in the Draft EIS. Even when the vehicle occupancy was changed to 1.5 to test the effects on emissions calculated, the HGB NAA net emissions were still reductions, and only DFW NOx showed small net increases of 1-3 percent of the de minimis threshold. It should be noted that overall operational emissions for the whole corridor still showed net reductions with these changes, except for SO2 as before. The conclusion of no significant impacts to air quality from operational emissions in the EIS would not change. NOx emissions in the HGB NAA are still reductions with results in 2024 and 2040 respectively of -6.9 to -2.2 for NOx and -15.6 to -14.0 for VOC. With vehicle occupancy changed, only DFW NAA NOx in 2024 and 2040 are respectively, small net positives of 2.7 to 1.4 TPY, which is 1-3 percent of the conformity de minimis threshold, while all other HGB and DFW emissions in 2024 and 2040 showed net reductions (except for SO2 as already described in the Draft EIS). With these revisions and changes, the inclusion and analysis of air quality in the cumulative impact analysis does not change from before, as it was still carried forward, as the comment acknowledges.
Roy Johnson	3/7/2018	Website	Table 4-1: Cumulative Analysis of Resources NOISE impacts. With not knowing how the full and partial takes were done on ANY MAP how can we verify this 27 severe impacts? With so much other data flawed that we know of this area of full or partial should be listed at least. If the Land use had parcel outlines we could see what might go under a full take based on other data in the DEIS. But without that we cannot tell what AECOM assumed was a full take and there full cannot confirm the severe impacts	Refer to LU-1.
Roy Johnson	3/7/2018	Website	What type of community outreach was made in regards to the last added open house March 5th? Was there any mailers and where did they go? Some people that are near by have no idea what is about to happen if this gets built. I think its very important to get local folks more involved in the process	Refer to PI-1 and PI-10.
Roy Johnson	3/7/2018	Website	land use map 212/257 you have (see attached) a barn marked but not the house. The maps are full of all this stuff but the route is based on impacts but how can we tell what is included or not. this goes to route selection and the data used for it needs to be accurate so we can comment on true and accurate data. If houses are left off by mistake that influenced the route. WE cannot trust the DEIS with the other HUGE FATAL FLAWS found. You need to create a map so we know that a house under a full taking should not be counted by a symbol or different color. Since you have a count on takings and noise impacts why cant you have dots for takings?	Refer to GN-1, LU-7.
Roy Johnson	3/8/2018	Website	Why does Houston area get another open house ?	Refer to PI-11.
Roy Johnson	3/8/2018	Website	Why does Houston area get another open house ?	Refer to PI-11.
Roy Johnson	3/8/2018	Website	Clarification on DEIS on residences listed or not due to full or partial takings. Map 212 land use has a house just east of hwy 90 that has a yellow square and another house just south of it below the HSR ROW that is not listed (see file attached) Those are on the same parcel per your map 440-441 in footprint and the Grimes county CAD file (attached with notes also) Not knowing why one house was counted and other house not counted on same parcel is wrong. Even if you apply the threshold of full taking then why two houses on same parcel is counted one as a residence and other one is not. This goes to impacts to communities and such a flawed data source the results are bad and should be corrected and all alternatives recalculated. Without an outline of parcels with the residences and noise impacts, we are left to determine why a house may not or is included. This is just one example of knowing that HSR is down the middle of a tract and one house is counted and one is not.	Refer to GN-1, LU-7 and NV-1. Residential structures were marked if they were within 200 feet of the LOD. A residential structure marked was included in the list of structures that was analyzed to determine whether it was a displacement, an acquisition or no effect.

Roy Johnson	3/8/2018	Website	Oil/gas wells will be shut in and bought out in the DEIS. What happens when you close a well and return the minerals back to the owner and now the size of the pool is so small to drill a single unit? Will their minerals be tied up for many decades until nearby wells are abandoned and minerals are released back to owners? This is very important as no telling the technology will be available and price of minerals in the future will be. But to basically land lock a small lease can cause severe economic impact	Refer to ED-4 and EU-2.
Roy Johnson	3/8/2018	Website	Noise flawed data See attached for a location that is on one tract- outlined in red One house that has the yellow with black dot symbol a House that is not listed on same tract A house that is in the LOD that is removed so no noise issue If a tract that is a full take then why have only one house listed and not the other? If its not a full take then why list only one house for noise impacts. this is a very common occurrence in the DEIS and it should be fully vetted to expose all the issues. One solution is that have a set of maps showing the parcels that are assumed a full taking vs those that are not considered as a full taking.	The residence with impact is adjacent to an area with an elevated structure, which generates additional noise and results in impact. The other residence without impact is adjacent to an earthen embankment, which generates less noise.
Roy Johnson	3/8/2018	Website	Noise flawed data You have the Noise impacts on map 228 under CCR its attached but do not list the other houses that are just as close and out of the foot print of the project But on Land Use map you the house marked. So why is this not listed as a noise impact? With such flawed data and route based on least impacts this should go back and do a true accounting of the least impacted route based on more accurate data	The residences in this area without impact are either proposed to be acquired by the project, or are far enough away that there is no noise impact.
Roy Johnson	3/8/2018	Website	Since AECOM included state and local sales tax on ticket revenues which is false as Texas DOES NOT COLLECT sales tax on train tickets. The entire DEIS needs to be rewritten any where an economic projection was made. This must be corrected as bad data made even worse data in the economic projection throughout the DEIS. MUST BE A NO BUILD until data is corrected and allowed to comment on again	Refer to SC-3 and SC-16.
Roy Johnson	3/8/2018	Website	Noise omitted data Com Cultural resource map 245/257 you have no houses in stone gate listed as noise moderate although some are 200 ft away. Whit oaks falls has some houses with Noise moderate that are marked at about 200 ft away also. So why Stone Gate has ZERO noise moderate while White oaks has several and should have alot more.	The residences in Stone Gate are just outside the distance for impact, while those in White Oaks are just inside the distance for impact.
Roy Johnson	3/8/2018	Website	noise - Map 244 in community and culture resource maps you have two apartment complexes at fry and mound. One of which is not listed on the map but elsewhere as taking of a complex building. Why is there ZERO noise moderate symbols for these locations?	There are no noise impacts identified at this location.
Roy Johnson	3/8/2018	Website	Noise on community and culture resource map 247 you have a HOTEL on the NE corner of HWY 6 and Heamstead hwy that is located over 250 ft from front door to the HSR route as noise moderate but do not list the apartment complexes east side of Fry road and south of HSR ROW?? What in the world is the methodology on this? How can anyone be expected to comment on this type of error? This is a huge part of the NEPA process and determining least number of impacts and this HUGE OVERSIGHT on noise moderate should case the DEIS To be invalid.	Using the FRA criteria, noise impact is based on a comparison of the project noise level with the existing noise level on a site-specific basis. In this case, the existing noise levels at the two locations are very different. With lower existing noise levels (at the hotel) there is more impact, and with higher existing noise levels (at the apartment complexes) there is less impact. The impacts at these two locations are correct.
Roy Johnson	3/8/2018	Website	from all over the world and all walks of life are welcome come and enjoy the beautiful area and abundance of wildlife. Families can come out to relax and unwind. The children are offered horseback riding lessons, they can pet the animals, feed the deer, go fishing, ride across the ranch on UTVs, and get a feel for nature they normally would not experience. All of this is offered to families FREE OF CHARGE. If Segment 3A is used, it is unlikely that the current usage of the property for charitable purposes could continue.	Refer to SC-21, TR-7 and TR-8.
Roy Johnson	3/8/2018	Website	need more input from stakeholders	Refer to PI-1.
Roy Johnson	3/9/2018	Website	Table 3.16-3: Safety and Security Hazards Inventory How can you have Grimes Crime listed as High and high and have Harris county as the same High and High under freq and severity? Harris county --- Crime Persistent High More crime per capita than national or state average, approximate 15% violent crime rate High Grimes County--- Crime Persistent High Less crime per capita than national or state average, approximate 6% violent crime rate High This skews the impact of crime in Grimes County by using an inflated starting point. NEPA should not allow this type of data in the decision process	The rankings of crime in a particular county as high, medium, or low frequency and severity are intended to help compare the relative potential for crime in a particular county with other natural and physical hazards in that county. A ranking of high frequency indicates a hazard that would be expected to occur more frequently than yearly, as described in Section 3.16.3, Safety and Security, Methodology . Hazards with a high severity ranking are those that could result in fatalities or large property damage. Unlike natural disasters or other hazardous events, the potential for criminal activity is an ongoing condition. For this reason it was categorized as a high frequency and high severity hazard in every county where residents and passengers may interact at a station.

Roy Johnson	3/9/2018	Website	Legal authority to be a RR. In the DEIS it is stated page 3.13-2 Texas Transportation Code, Title 5, Chapters 112 and 131 The Texas Transportation Code authorizes railroads to acquire the real property rights needed in order to construct, operate and maintain a railroad through the use of eminent domain. Nothing is stated about the definition of Texas law defining a RAILROAD under section 81.002 that states it must be operating a RR. WE passed a law called SB 18 that forced any entity that wanted to continue to have the power of ED they MUST register with State Comptroller or LOOSE the power of ED. TCP did not incorporate and file under SB 18 it was TCRI that incorporated 12/20/2012 (thursday) and comptroller rec that paperwork claiming ED powers on 12/26/2012 (Tues) that means they incorporated and less than 24 hours later sent in the paperwork to beat the 12/31/2012 that SB 18 imposed for filing. By calling this TCRI (NOT TCP OT TCR) a Railroad when no operating railroad was in existence. Means they were not a Rail Road per 81.002 operating a RR. Therefore they do not have the power under 112 or 131 that a Rail road has ED powers. Why did the FRA not have the claim by TCP that they were under 81.002 by definition a RR? Very sad state of affairs for sure. They can be doing the work not and planning to be operating a RR but they did not operate a RR by 12/26/2012 and there for cannot be called a RR	Refer to ED-1 and NE-1.
Roy Johnson	3/9/2018	Website	Is Alt A the least impact based on Takings of property and such? Table 12: Summary of Land Use Impacts per Build Alternative Alt A ties or beats others on 3 items out of 15 items. Alt C BEATS in 3 and ties in 1. Table 18: Comparison of Build Alternatives A, B and C Alt C is lower in 10 out of 17 items while ALT A is lower or ties on 3 items Table 3.7-83: Estimated Impacts to Wetlands by Build Alternative Alt A is actually the HIGHEST total of wetland crossings. Alt A is HIGHEST in number of acres temp perm Table 3.9-20: Comparison of Utility Impacts by Build Alternative Alt A is not the lowest in any of the 4 categories Table 3.13-17: Summary of Land Use Impacts by Build Alternatives Alt A is lowest only one 1 subject and tied for lowest in 2 others. Alt C Lowest in 3 and tied at zero for the 4th Table 3.18-10: Estimated Parcel and Structure Acquisitions by Build Alternative Alt A does not even have a single item its the lowest out of 10 items. ALT F is the lowest in 3 of them The above is all the items that ALT A is not the best option. Even with the bad data on noise impacts being wrong (Nothing noted in Stone gate and White Oak Falls the indicators for the house same distance one has noise marker and other one does not) We need, DEMAND, an accurate DEIS so that an informed decision can be made on impacts to local stakeholders. Current DEIS is nothing better than thrown together to get the result desired vs true and accurate (as good as it can be) to let the data dictate the projects fate. No build is the only option until these above items are corrected and a true route based on true impacts can be looked at	Refer to BA-7 and GN-1.
Roy Johnson	3/9/2018	Website	Since the stated 90 minutes or less is the basis of this project and why 45 highway fails to meet that purpose. I bring up the following. In Japan, the speed is restricted based on noise levels. Since noise increases as the speed increases doesn't the DEIS include any slower speeds around residences? If this slows down the speed shouldn't that affect the travel time? With any increase of travel time, the HSR does not meet the 90-minute goal and should be eliminated as 45 was not valid to carry forward? What is the level of noise that will be permitted at a residences? not as a total but single events?	Refer to NV-1 and NV-9.
Roy Johnson	3/9/2018	Website	noise- I see in the DEIS it measures and predicts noise levels based on trains during operations. Is there any data on the nightly noise generated by the maintenance of the HSR? Night time I think is a 10 dba difference	The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24 hour period. Because of this, the noise assessment uses the total number of trains per day in the assessment, and adds a 10-decibel penalty to noise that occurs during the more sensitive nighttime hours (between 10 pm and 7 am). Maintenance was not included in the cumulative noise impact assessment, as it would only be conducted as needed and not on a regular basis.
Roy Johnson	3/9/2018	Website	Noise- Since night time noise is weighted different than daytime noise. Was the DEIS county the portion of the 68 trains a day that would be traveling at night time plus the maintenance work every night?	Refer to NV-1.
Roy Johnson	3/9/2018	Website	Noise- From DEIS "Time Pattern–Because environmental noise is constantly changing, it is common to condense all of this information into a single number, called the "equivalent" sound level (Leq). The Leq represents the continuously changing sound level over a period of time, typically 1 hour or 24-hours for rail transportation noise assessments. For rail projects, the Day-Night Sound Level (Ldn) is the noise descriptor	Refer to NV-1. Ldn is the noise metric used for the assessment of noise impact at

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			commonly used, and has been adopted by FRA and FTA as the best way to describe how people respond to noise in a residential environment. Ldn is a 24-hour cumulative A-weighted noise level that includes all noises that occur over a full day, with a 10 dB penalty for nighttime noise (between 10 PM and 7 AM). This nighttime penalty means that noise events at night are equivalent to ten similar events during the day. Typical Ldn values for highspeed rail sources and non-rail sources are shown in Figure 3.4"1- If trains after 10 pm and before 7 am count as 10 events during the day. Where is the data is that accounted for. after 10 pm should be a min of 2-4 depending on location and before 7 am is a min of 6 trains. SO using a factor of 10 and 3 trains after 10pm and 6 trains before 7 that adds 90 trains to the model. That is more impact than all trains during the day. I cannot believe for one second that the impacts from the night time trains our weigh the day time trains and it doesn't move the needle? Plus the Yellow train to do maintenance. Will that run both ways during the night? Plus the maintenance work during the night. The noise impacts need to be clear on how these night time events impact the total impact.	residential and similar locations where there is sensitivity to nighttime noise. In calculating Ldn, a 10-decibel penalty is added to all noise that occurs during the nighttime hours (between 10 pm and 7 am) and the results are combined with the daytime noise to obtain the 24-hour noise exposure. For train operations, this means that one train at night is equivalent to 10 trains during the day in terms of the contribution to the Ldn. Based on the proposed schedule for the TX HSR project, the contribution of noise from a small number of nighttime trains to the Ldn is typically similar to, and sometimes greater than, the contribution of noise from the much greater number of daytime trains.
Roy Johnson	3/9/2018	Website	Nepa process- In general the Fra open houses should allow stakeholders to gain information about the impacts and the project as a whole. WHEN I have been to 4 of these FRA open houses and the answer is " that is a good question you should submit that". How can a stakeholder understand the project when asking basic questions cannot be answered. One HUGE FLAW of this is the VMT removed from the highways is overstated by 200% in 2040. When you remove cars from passengers you cannot count the cars twice but the passengers only once. This cascades into so many other flaws in the DEIS. WITH no chance of commenting on more detail issues and concerns, we are forced to comment on these type of flaws vs the results. A simple one is speed restricted curve at Station 422 on inbound Dallas Trains to Houston has restricted speed at 165 mph in ISL and FSL. But nowhere else in the graphs is that curve accounted for.	Refer to PI-6. Cars were not counted twice while passengers were counted only once. Instead, passenger numbers were assumed to constitute actual numbers of passenger that would travel up, and then have to travel back. The ridership used was clarified with TCR to mean one-way travel, leading to revision of the passenger trip assumption. Even with revision of this assumption, overall operational emissions for the whole corridor still showed net reductions with this change, except for SO2 as before. The conclusion of no significant impacts to air quality from operational emissions in the Final EIS would not change.
Roy Johnson	3/9/2018	Website	Table 4-1: Cumulative Analysis of Resources How can only 12 assessments be made for aesthetic and visual along a 240 mile route and not be carried forward? Was the 12 locations fairly assessed as true repetitive along the route?	Refer to AS-1.
Roy Johnson	3/9/2018	Website	Bad ridership data- DEIS claims 21% market share in 2040 but a report by TCP claiming 10 mil riders by 2050 also contains on page 9 that 27 mil journeys will be made by 2050. At 21% that will 5,670,000 which is far less than the reports 10 mil ridership number. if 10 mil will ride the train in 2050 out of 27 mil journeys that is 37% market share which is not achievable. this goes to ridership being inflated in the DEIS which inflates the cars removed which INFLATES the emissions. Which even makes the HGB NAA even a larger net gain in NOx. this project is NOT GOOD for the environment period. Bad bad data and only option on the table that we can choose from is No build until the data gets updated	Refer to GN-2 and SC-3.
Stuart Johnson	2/7/2018	Website	I am in full support of the Texas Central high speed rail project as it will not only provide a fast efficient transportation option between Houston and Dallas but also alleviate growing congestion on the highway transportation system.	Comment noted.
Terry Johnson	2/23/2018	Website	#Buildthatrain	Comment noted.
TJ Johnson	2/6/2018	Oral	I'm kind of like Kyle. I'm going to come up here to the front. My name's T.J. Johnson. I am the President of Waller County Asset Group, the vice-president of Waller County Sub-Regional Planning Commission. The first thing I want to do is I want to walk over here and hand-deliver a few comments of a couple neighbors to Mr. Kevin Wright over here, because it seems the FRA -- the FRA hasn't exactly told us the truth on everything. We know that TCR hadn't. And the federal government as a whole has a problem with missing e-mails. This can't seem to find them. And we're supposed to trust these people. That's the problem with all this. The needs -- they talk about the purpose and needs of the project. In the draft itself, the FRA -- it says the FRA's mission is to enable a safe, reliable, efficient movement of people and goods for a strong America now and in the future, supports development of safe and reliable inner-city passenger rail. I don't see a whole lot of safety issues in the draft. Does anybody think that we might have a terrorist attack on this thing? This is not the Metrorail downtown. This is a lot bigger project. I don't see any of that kind of stuff in there. And that -- actually, go back and look at the board back there. That's basically where it stopped as far as they want everybody to see. But in reality, in the draft itself, it actually says, TCRR identified the Dallas-to-Houston corridor as an ideal location and distance to implement high-speed inner-city passenger rail that is financially sustainable, constructible, and connects two of the largest urban centers in the country. My biggest question-- like Trey, a couple of the other folks have said today -- financially sustainable? Prove it. That's all we're asking for, is to put the numbers on the table. We've all run the numbers. The Reason Report runs it. Cecil Bell, he runs them. We've all run the numbers, and they don't add up. They don't add up at all. Then you go back to what they put on the board up here, Section 106 process. Talked about inviting to come out and talk to folks. Trey, how many times have we invited the FRA to come out, coordinate with us? A dozen times? A bunch. The first time we actually got TXDOT to the table, we gave them a whole list of stuff that we wanted to go over economically, environmentally, the whole nine yards. We gave them a list, a three-hour presentation on what we	Refer to BA-6, GN-1, GN-2, GN-3, GN-4, NE-1, PI-1, PI-7, PN-3, SS-4, SS-6, SS-7, SS-8 and SS-9.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			considered concerns. How did the FRA respond? They told TXDOT to break Texas law. Do not coordinate with Waller County ever again. It cost you, the taxpayer, over \$50,000 just to get TXDOT back to the table to fight this thing. That's what they want us to believe is the truth. That's what they tell us as we go through it. As we go through this thing -- the last thing I'm going to say, because I'm out of time, is I'm going to ask the FRA -- we have sent them, over the last year, numerous response -- numerous requests for Open Meetings Act on paper on Corridor-- the communication between TXDOT and the FRA. We've been doing it for over a year now, requesting this information. Does anybody know how many pieces of paper we've gotten back from them? None. Zero. Why? It's a real simple thing, guys. There's only one thing we can do with this train. It's called a no-build. No-build.	
Roy Johnson	2/9/2018	Website	AQ ES.9.3 For NOx, VOC and carbon monoxide (CO), the net reductions in 2024 are greater than in 2040, despite ridership and vehicle miles traveled (VMT) reduction being greater in 2040. This is because the vehicle emissions of cars are expected to improve drastically by 2040 compared to 2024, making the potential emissions that would be reduced by taking cars off the road, smaller. For example, the NOx emission factor drops by an order of magnitude from 2024 to 2040, countering the effects of greater ridership. By contrast, the train NOx emissions factor only drops by roughly half. For the other pollutants, the relative drop in emissions rates from 2024 to 2040 would be smaller, and the increase in ridership helps make emissions smaller or have a greater net reduction. Most criteria pollutant emissions would be reduced over the long-term under the Build Alternatives – a net benefit. You will see attached the chart showing the calculations on VMT removed. You counted each car removed PER PASSENGER JOURNEY one way as removing a car for an RT in essence doubling all the VMT info and therefore inflating the Emission Reductions	Refer to AQ-3, AQ-7 and AQ-13.
Roy Johnson	2/20/2018	Website	Table E3-19c: HGB NAA IH-45 Miles and VMT Bad DATA DEIS States City center to city center is used for NAA areas. Table above has the miles broken out as Montgomery as 27.9 mile - this is very close Harris county as 56.8 miles - WHICH IS VERY VERY WRONG. total HGB NAA miles is 84.6 which is very wrong and the only way you can get to 84.6 is to go into the Galveston Bay. City mile marker on 45 and I69 south of Downtown is 55ish miles. A good possibility that a person put in that 56.8 miles just for Harris County when it should have been the HGB NAA CITY Center to NORTH MONTGOMERY county line. This need to be corrected as it feeds bad data into other tables and numbers. Data derived from bad data should be thrown out and restarted. Since this data we will have no chance to comment after the FEIS is released the DEIS NEEDS TO BE REDONE and NEW COMMENT PERIOD BE allowed on CORRECT DATA. This is not misspelling or mislabeled it is the HEART OF NEPA and with INVALID DATA how can we comment on it correctly? RESTART the DEIS and let us comment on CORRECT important data.	Refer to AQ-2.
Roy Johnson	2/20/2018	Website	Table E3-18c: Station and Maintenance Facilities DEIS list Station and Maintenance facilities for DFW and HGB NAA as 64,903 each what is the units? Without units its hard to compare across tables	Referenced table not found/understood.
Roy Johnson	2/21/2018	Website	Ridership question You have 2024 Calculation: 4,400,000 passengers/year X 89% cr share = 3,916,000 passengers using car 3,916,000 passengers/1.2 passengers/car = 3,263,334 cars/year Then using the market share from 2043 for 2024 (assume market share at ISL will be lower than FSL) you get 3,916,000/21% which is 18,647,619 people traveling on 45 as it is stated above table E3.2-7 "This mode share and the annual ridership were used to calculate the number of passengers that would be using cars to travel between Houston and Dallas on IH-45" If a total of 18,647,619 are traveling this corridor and 73% are using car you have 13,612,761 people using the car. 18 mil x .73=13.6 mil Then take that to get daily you have 37,295 per day traveling by car. Using the 1.2 per car we get 31,079 cars a day traveling. TxDOT shows the Station for AADT count near Streetmen in 2016 carrying 29,805 total vehicles. Which per TxDOT is about 35% truck traffic (Class 4 and above vehicles) only leaving 19,371 cars a day in 2016 and will need to capture 31,079 cars by 2024. that is a simple growth of almost 8%. Were at that station the last 10 years its only increased by 2.7 TOTAL over those 10 years Ridership numbers need to be vetted as today and projecting out a 2-3 % per year growth they would have to capture over 100% of ALL CARS ON 45.	Refer to AQ-2, AQ-7, GN-2 and PN-1.
Roy Johnson	2/21/2018	Website	Table E3.2-6: Train Operations Emissions in the Year 2040 You have two rows of data but table is labeled year 2040 and it appears to be ISL and FSL should be the two rows. ISL should be top row and FSL should be the bottom	Refer to AQ-1, AQ-3, AQ-4, AQ-5 and AQ-13.
Roy Johnson	3/7/2018	Website	Table 3.13-6: 2012 Agricultural Statistics Grimes county on a Market value of livestock sold you list top livestock for grimes as chickens. While that is true per source but when you take	Refer to LU-2, LU-6 and LU-11.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			the total livestock sold at 36 mil and back out the 12 mil for poultry and eggs that leaves you 24 mil shortfall. With others added the cattle is left with the largest livestock produced. The chart has it as (d) to protect identity. But that is not listed NO WHERE On this chart. To the common person they would think Grimes is chicken area and its NOT PERIOD . Further investigation should have been done to find the top livestock in the count. Maybe a simple call to the Ag extension agent could have filed in this report. It is not the over look its the fact that no one tried to find the true economic impact of this project the largest sector of ag in Grimes County. Not one chicken house is affected by Route but a vastly majority of the ROW will damage and hamper cattle country and its not reflected on this chart this is the link that matches your table https://www.agcensus.usda.gov/Publications/2012/Online_Resources/County_Profiles/Texas/cp48185.pdf	
Roy Johnson	3/7/2018	Website	Table 8: Scheduled Travel Times (186 MPH Maximum Speed, With Schedule Margin) You have listed four of the six can do the trip under 91 minutes. The speed charts Figure 5 same page does not account for a speed restriction at about 42,000 ft from the common point on the houston end. With the distance needed to stop from 185 is 21,484.5 ft (from ARUP simulation sheet) the 165 mph speed restriction is at 42,000 ft or more from station so the train MUST SLOW DOWN approx 8-10 miles before it gets to the station. This adds time to the trip so the above table and statement that only 4 of 6 is under 91 minutes is false. A speed restricted curve SHOULD BE ACCOUNTED FOR period.	Refer to TC-4.
Christopher Johnston	2/26/2018	Website	This is an important project and will be disruptive, however, the end result will be worth the challenges. Please approve this project and allow Texas Central the ability (through Federal Agencies, perhaps) the ability to use eminent domain to accomplish the property acquisition needed as this project will serve the greater good. Highways will not be able to keep up with the capacity between Houston and Dallas and this is one forward thinking way to address the issue. Please also press for a comprehensive transit plan between the Northwest Mall location to downtown Houston in order to serve the most people in an efficient manner.	Comment noted.
Dusty Jones	2/19/2018	Website	I am so excited for this to come to Texas. It will make it so much easier to conduct business between the two cities. I spend an average of 8-12 hours round trip on my travel between Dallas and Houston. I would love to hop a train and zoom to my destination with ease and little concern about traffic. I think it will be a huge economic boom for TX.	Comment noted.
Pamela Jones	2/18/2018	Website	This Bullet Train will be a valuable asset to the community, let's get this train moving on the right track. The environmental impact shouldn't have no harm to our plants, trees or wild life. Thanks you.	Comment noted.
Stephen Jones	3/8/2018	Website	This is going to be a massive waste of taxpayer money because nobody will use this train. This project will negatively impact the Texas environment. Please stop this project. Thank you.	Refer to GN-2, GN-4 and PN-3.
Anita Jordan	1/14/2018	Email	The grand parkway was a long thought out process and STILL left many areas in a huge predicament both during the tax day flooding, memorial day flooding and of course hurricane Harvey. Watershed planning was neglected; even though they claimed to have the best civil engineers working on the project to ensure decent watershed. Currently our area of Waller has some major flooding issues WITHOUT further development and construction of a superfluous HSR. The construction of the HSR will further disrupt water shed in our area and lead to greater property destruction during times of intense rain. With the city-wide destruction of Houston and surrounding areas during Hurricane Harvey; we should not support any further ridiculous and poorly planned developing that will lead to more loss	Refer to FP-1, SS-17, WW-1 and WW-2. Approximately 40 percent of the Preferred Alternative in Waller County will be constructed on viaduct (bridge type structure) which allows for free movement of water and would avoid and/or minimize floodplain and waters impacts.
Anita Jordan	1/14/2018	Email	In the Draft EIS there is not a firm description of how emergency first responders will be negatively impacted by the train route. Currently response time is quite good; however, there will be a huge impact on first response if the main access roads are affected by train crossings. This alone should deem this "NO BUILD". First responders are key in many situations involving life or death. Their paths should not be negatively affected; if anything development in the area that has been planned (outside of this ridiculous train) will bring more first response capabilities. This train will do nothing but hamper first response; subsequently putting residents' lives in danger	Refer to SS-23.
Anita Jordan	1/14/2018	Email	I am a land owner, whose property will be within 1500 feet of the proposed track. Not only do I think this project has no real place in Texas; I worry about the known negative effects of construction (water source destruction and well destruction, contaminants, and other countless worries stated in the Draft EIS) and running (vibration, noise, electromagnetic effects) of this train will have on my family. Our property is located in the "shadow zone" and this will greatly decrease our property value and may make selling our property in the future difficult, if not impossible. Texans love their land- obviously this is not backed by true Texans. Federal	Refer to NE-9 and VA-1.
Billy Jordan	1/29/2018	Oral	I'm just an old goat, but I'm a hundred percent Texan. I was born in Texas in Victoria. In 1943 my daddy brought me back here at Munger, Texas. And we are against all of this. We farmed and ranched. And nobody has said anything about this train what really is going to happen. There will be about an 18-foot or 12-foot chain link fence underneath this track on each side, and there will be a crossing every three to five miles. And there are some of these roads that won't have a gate on it, but it will be 16- to 18-foot wide. How are you going to get a combine or get a tractor through there? And this is my second one of these for me to be on. I was on the first committee when the Saudi Arabians tried to put it through here. I was living in Hubbard then. And this is my second time. And Mr. McNutt, I am 204 percent against it, not 102 percent. I've been in rodeos all my life. I rode professionally for 30 years. I rode bulls, bareback horses, and stock bulls, and was a burning man. So I'm for you-all 100 percent against this thing. We don't need it because it's going to go down behind my house. They have moved this thing	Refer to BA-3, LU-11 and TR-8.

			three times that I know of. One we thought it would be down behind Darrell Shelton's house. Then it was going to go over down behind my house. Now it's going to go over on the other side of the power line on the Three-Legged Ranch. We don't need that. So we -- I'm a hundred percent Texan. Thank you very much for listening to me.	
Kortnee Jordan	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Kortnee Jordan	3/3/2018	Website	I am opposed to the train destroying a ranch referred to as Morgan Legacy Farm located [...], of which I currently reside. My family and I live on and run the ranch for the Morgan's. This property is our whole life and having the rail go right through the middle would destroy it, and make it dangerous to raise our kids here. Marguerite Jordan	1/29/2018	Oral	<p>Hello. My name is Marguerite Jordan. I have small acres compared to everybody else. I'm an organic farmer. And I don't want this train coming through. Even though it's not right on my property, it will definitely affect my property and my animals. Nowhere in the pamphlets or the brochures does it say anything about the electric magnetic fields. Now, California is the only one I know that did a study, and they recommend people don't live within five miles of these high lines that they recommend have to be used for this type of train. And not only that, but animals are much more sensitive, so it affects their productivity, you lose animals, you lose your crops, you lose your lifestyle. And this affects people, causing strokes, heart, cancer, all the autoimmune diseases because you are suppressing the immune system. I am a certified herbalist and I work with a lot of people. And it's not fair to come in and try to take people's land or affect people around. I agree with everyone 1001 percent. We are here because we want to be here. We are here because we live in a rural sector. We like our lifestyle. But to run through and run us over, you got a fight on your hands, baby. That's the bottom line. Thank you very much.</p>	<p>The literature and Internet contain myriad reports of adverse health effects of electromagnetic field (EMF) exposure. Anyone can find reports claiming that EMF exposure can cause anything from rashes to cancer, and everything in between. For the purposes of this work effort, the following guidelines were used when determining whether to include published materials in the Draft EIS.</p> <ol style="list-style-type: none"> 1. Evaluate the source. Anyone can publish anything on the Internet. This makes Internet sources suspect, unless the source is a reputable authority on the subject, such as the World Health Organization (WHO) or the International Commission on Non-Ionizing Radiation Protection (ICNIRP). Likewise, not all scientific journals are of the same caliber. Some journals, such as the Journal of Physical Chemistry, have stringent requirements for publication as well as a rigorous peer-review system to ensure the validity and quality of the articles published. Other journals have different standards. 2. All research should be based on sound scientific principles, control for all variables, and have an experimental design that includes a study and control group. 3. The research should be repeatable. If a study reports findings that cannot be verified by an independent group, the results and conclusions are suspect. 4. The research should have a relatively large sample size. A large sample size helps to ensure the applicability of the results. In other words, a small sample size (20 people or less, for example) makes the results and conclusions of the study difficult to generalize to the entire human population. Similarly, anecdotal evidence from one person may be relevant to that one person only, and not to the entire human population. On the other hand, the larger the sample size (300 or more people, for example), the more applicable the results may be to a similar population. That said, the Draft EIS did discuss the research related to health and EMF from reputable sources, including studies that evaluated long-term exposure. Please see the following sections: 1. Section 3.15.2, Electromagnetic Fields, Health Effects of EMF: "Reputable authorities on the subject of EMFs include the WHO and the ICNIRP. The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." 2. Section 3.15.4.1.1 (National/International): "The ICNIRP has adopted EMF exposure guidelines and standards in the extremely low frequency and radiofrequency bands of the EM spectrum. The ICNIRP standards address EMF exposure by the general public and workers in an occupational setting, and are widely used within the U.S. and abroad. The ICNIRP recommendations are based on the epidemiological data available from verifiable research studies. Based on the ICNIRP's work, the European Union has adopted these same standards for EMF exposure." 3. Section 3.15.4.2 (Literature Review): "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..." Also, as stated in the Draft EIS, Section 3.15.4, Electromagnetic Fields, Methodology, EMFs fall off markedly with distance from the source. EMFs are expected to be at ambient levels within 500 feet of the alignment. "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels.</p>
Rhonda Jordan	1/12/2018	Email	Throwing good money (tax funded loans) after bad (investors dollars) makes no sense and cannot be justified, therefore the only option is NO BUILD.	Refer to GN-4 and NE-1.
Rhonda Jordan	2/5/2018	Oral	You can't keep me from talking. I've been talking against this project since I first heard about it December 2014. After several delays, the DEIS has been released and it addresses the effects to wild and domestic animals, drainage, traffic mobility, among other things. It does not acknowledge the negative impact on humans. Nearly three years ago I stood face-to-face with then president Tim Keith of Texas Central Partners. He refused to accept that Texans have a lack of interest and an unwillingness to part with their land, their history, their future, and their legacy. This man, ironically born in California where the wreckage of high-speed rail is a current reality, would not acknowledge the real fear of landowners who stand to lose their legacy to an abomination due to fail called Texas Central Partners and the Japanese High-Speed Rail. It has been mentioned, please research the Reason Foundation. You can go to reason.org. You can see where they first thought it was a good deal, changed their minds, and they put out a number of articles that are well-researched and well-thought out. Lastly, in my opinion, it's our government's responsibility to protect, not aid, the desecration of Texas land at the hands of Texas Central Partners. The FRA has the opportunity to prove, by offering an honest presentation, both views represented. The only place that has been done was representative Schofield had an honest debate with Texans Against High-Speed Rail. It was about two years ago at a high school a couple of miles down the road. It was probably attended by about half this many Harris County residents. So the facts have been out there whether you've been	Refer to GN-3, NE-1 and NE-9.

			listening or not, but it's time you start listening. This is your opportunity, administrators, to prove to us this is not a dog and pony show. We, the people, pay the FRA's salaries, and we, the people, are more important than any money-borrowing scheme. This land is our land from the Gulf Coast waters well, you know the song. We will not stand here while it's ripped from our hands.	
Rhonda Jordan	2/6/2018	Oral	Rhonda Jordan My name is Rhonda Jordan. I'm with Texans Against High-Speed Rail if you don't already know it I remember the feeling in my gut I got when we first heard of high-speed rail: because at that same time, we were shown the preferred route went right through our ranch. And we own one of those ranches he just spoke about My great-granddaddy settled this land and rm going not going to easily give it up. It was to take out our bam: run 50 feet from our house. Due to things beyond our control, the route moved further west. That gut feeling was why I remain committed to defeating high-speed rail. I won't let my neighbors down. My question is: Where will the electricity come from to provide power for this new train y'all speak of? I know the answer. A fourth transmission line will be constructed running along the culTent three that cross our ranch. On a side note: those of us who own land can't read my own writing who own the land respect our land, and we don't appreciate our land being called a utility corridor. Ifs not a utility corridor, folks. It belongs to us. It is leased by the power companies, and ifs not for sale. The next question is: will take responsibility for putting untold Texan citizens in harm's way when the terrorists realize what a ripe target four power lines, one pipeline, and one high-speed rail could be? I have a freelance journalist friend: and I offered her a ride one day down to the Rodeo Houston to come interview contestants. I work on the Rodeo Contestants Services Committee. She said, "Why would I want to do that? I Skype every athlete — every article I write: I Skype from Canada to Florida. I don't need a ride." We against high-speed rail have lobbied in Austin in the 2015 and the 2017 legislative sessions. All of you in the audience: please join us. We are self-financing our lobbying. Our land is more valuable than all the salaries at Texas Central partners. Texansagainsthighspeedrail.com , thank you.	Refer to EU-4 and SS-7.
Rhonda Jordan	2/6/2018	Oral	I know y'all heard me before. I want to reiterate. When we talk about this train: don't say, "It will come across my property. It will damage my income." It won't. You say "it would" or "it could." But it's not going to if we have anything to say about it As Fred mentioned just now about the fact it could create a dam across Texas. And y'all know what happened with Addicks Dam when they had to release it? We don't need a dam on the other side of The other thing I wanted to mention was: high-speed rail could have been successful 30, maybe 40 years ago • when there was no Fairfield subdivision: there was no Black Horse: there was Huffington Ranch right by Mr. House's property, and Nine Bar Ranch had Santa Geffrudis cattle on it from Josey Ranch all the way to Highway 6 in Hempstead. Those big landowners might have parted with a strip across their property because they had plenty of others Rs too organized now. They think we're rural. We like to think we're rural, but there are too many of us out here for them to tread on When I mentioned the school bus, they do have - the State says they cannot ride the school bus more than a certain number of minutes. My sister worked in transportation. My husband worked in transportation just retired 25 years here in Waller. They can't ride it for more than a certain time period. So that means the school is going to have to buy more buses and create more routes: going on these long trips around this train if it were to be built The other thing I wanted to bring up is that — (inaudible) is the one that brought it up. People home talked about how it got moved. Folks: it got moved from 45 to us. I'm aware of what the people that have the big country club on the west of our property did. They have a lot more money than all of us: and they had a lot of influence on this route. If we put our money together, we can stop it I asked them would they stop. I said: "Why didn't you stop it? Why did you push it this way?" Well, I have good news for you It's not going to come across your ranch." He still cannot guarantee me that because these people right here said tonight: Every one of these routes are still on the table until they're through with their studies. So we're not: any of us: home free. But I'm here to tell you that when we found that it was going to go — would not come across our property: it didn't make me quit my fight. I don't want it to go on anybody's property. It doesn't belong in Texas: period. Please support Waller County Advocacy Group. This need your financial support So does Texans Against High-Speed Rail. They have the — "infrastructure" is a bad word: but traffic what they to help us fight it And if we don't have those people who have done the research and have done the footwork: we're not going to beat it in Austin: and that's where we got to go. Thank y'all. I appreciate all of you.	Refer to BA-3, BA-7, BA-9, FP-1, SC-5, WW-1 and WW-2.
Rhonda Jordan	2/10/2018	Website	As a Native Texan I expect our state government to use discretion when awarding power of eminent domain. High-Speed Rail is not a Texas priority nor is it a necessity. HSR would cause unnecessary road destruction. That destruction would be multiplied exponentially by the massive equipment required to build the infrastructure. Rebuilding these roads would bankrupt the affected counties. These same counties would receive minimal benefit, if any, from HSR. This does not even consider the issue of roads made obsolete due to a permanent dead end into the HSR track. Roads that rural residents depend on to get to market, work, and to receive emergency services. Taxes that Texas Central boasts as windfalls to these counties, when divided over the life of the construction and disruption caused by HSR, would not begin to replace current and future taxes paid by resident land and homeowners with a vested interest in seeing their counties thrive. These very residents will flee affected counties should this project move forward. Any realtor will hesitatingly verify that the market for land and homes along the proposed route is already showing a decline. Realtors don't want to scare potential buyers, but they are well aware of the downturn in land sales due to just the potential for HSR to divide our state. Funny how the lack of escalating value in real estate along the route would work to the advantage of TCP investors, don't you think?	Refer to ED-1, PI-1, SC-19, SS-23, TR-7, TR-8 and VA-1.

			For the reasons above, the NO BUILD option is the only route HSR can take in Texas. Sincerely, Rhonda Page Jordan	
Rhonda Jordan	2/10/2018	Website	Public transportation NEED should be foremost in a public transportation business plan. There is a negative public need for a third option of transit between Dallas and Houston. When one considers the infrastructure required for such a proposal, if the construction nightmare is not enough to cause pause, the billions of dollars wasted creating this albatross should. Add to this the desecration of our beautiful scenic state, the acres of farmland and ranchland lost and there is only one suitable response: Do Not Build. This public need has not been proven over the four years since Texas Central went public with their land-grabbing scheme. Once the public is presented with truthful facts, the burden of cost overruns laid on their shoulders in the form of a bailout, the touted ridership exposed as false speculation, and the ultimate cost to our state, the public will also concede that this is a fatal attempt to wrestle land from Texans. And that is something Texans will fight to keep.	Refer to AS-1, GN-2, GN-4, LU-11, NE-1, PN-3 and TR-6.
Rhonda Jordan	2/10/2018	Website	Dear Sirs, Throwing good money after bad makes no sense. Texas Central Partners have spent untold dollars in their effort to convince your administration and the general public high-speed rail is a viable project. I dispute their propaganda. It does not justify throwing federally-backed taxpayer-funded loans to their multi-billion dollar plan that is doomed to failure. Tax dollars cannot be justified, therefore the NO BUILD option is the box to check. Sincerely, Rhonda Page Jordan	Refer to GN-4, NE-1 and PN-3.
Rhonda Jordan	2/10/2018	Website	For a reason to deny federal loans to Texas Central Partners, one just needs to look to California and the disastrous train wreck created in that state while still in the construction phase. Cost overruns and difficulty in acquiring ROW from rightful property owners is just a sample of what the future holds for Texas Central Partners should they be given the go-ahead from your administration. Texas Central Partners is presenting only the embellished expectations to your administration and to the public. When given the truth, Texans want no part of a Japanese bullet train ripping apart our great state. Please join Texas landowners and taxpayers in sending high-speed rail the message to make tracks out of Texas. Sincerely, Rhonda Page Jordan	Refer to GN-4.
Rhonda Jordan	2/10/2018	Website	I wish to address the claim by Texas Central Partners that private companies all over our state use Eminent Domain. Their claim is one of the few truths. There are many private companies who use Eminent Domain to gain access to otherwise unavailable property. The difference is that other companies have met the burden of proof required as stated in the State of Texas Landowner's Bill of Rights. Texas Central Partners are unable to meet this burden due to the glaring fact that a high-speed rail would not "serve the general public" and still be profitable. TxDOT has two advantages over TCP: 1) they have power of eminent domain, and 2) they actually do serve the general public. Unfortunately for TCP, our Texas Legislators made it very clear that TxDOT cannot participate in this venture and no taxpayer monies are to be spent in the construction, maintenance, operation or bailout of it. "Texas law prohibits condemnation authorities from taking private property to foster economic development." If one digs deeper into the investor's properties and historical data, one will see that these very investors are attempting to do just that at the expense of landowners. Landowners who have either inherited family farms or ranches, or have invested a substantial sum in their land and/or home. Having personally conversed with Mr. Tim Keith, who was president of TCP two years ago, I could not make him understand the very personal attachment we landowners have with our property. Unfortunately for Mr. Keith, he was born in California, which is the one state who has stepped off into the abyss of High-Speed Rail. To him each of us could be bought out with the right offer. Even in California many landowners are not willing to part with their land. So, I am reiterating to you, our property is not for sale at any price. It is our history, our future and our legacy. It will not be taken by a Japanese train. Thank you for the opportunity to express my views,	Refer to ED-1.
Rhonda Jordan	2/10/2018	Website	This letter is in direct opposition to the proposed Texas Central Partners' proposed High-Speed Rail. No Build is the only option. Magellan is in the initial stages of routing a pipeline between the transmission lines leased by the Lower Colorado River Authority and CenterPoint, which run through Waller County and our family ranch. They are in the final stages of land survey and EPA soil sampling. Adding high-speed rail adjacent to this easement would be an unnecessary potential hazard as well as a very real terrorist target. For this reason alone the NO Build option is the only safe option for Texas.	Refer to BA-6, EU-2 and SS-7.
Rhonda Jordan	2/10/2018	Website	It is my humble opinion that the partners at Texas Central Rail are using the 'High-Speed Rail' project to disguise their real estate development project and the expense of Texas land. It is their intention to use Eminent Domain to take the land they do not own from honest hard working people who have invested either their forefather's dreams or their own dreams and dollars in this land. As for the financial viability of this project, the underground network of landowners have discovered that these same investors might have	Refer to ED-2, LU-14 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			intentions to use the ill-acquired high-speed rail land to lay fiber-optics to finance the entire project, or at least to regain their investments, and then some. Should this be the case, let them be honest with land-owners, ditch the high-speed rail farce, and offer this possibility of a positive return to the landowners. Were the fiber-optics laid and land repaired similar to pipelines are, it might be a mutually beneficial project while allowing our land to be returned to nearly its present state. Unless these ideas are enacted, the only option is the NO BUILD option.	
Rhonda Page Jordan	3/5/2018	Oral	My name is Rhonda Page Jordan. Gentlemen: 5,647 pages? I lack the patience and fortitude to read through a report of that magnitude. Fortunately I can rely on my neighbors who have the same interests in retaining the land they own. I'll leave the technical aspect of the FRA DEIS to them while I address the emotional ones. Having attended a number of the open houses the TCP and the FRA have offered, I must say, TCP has certainly done their homework at this meeting. They loaded the first 40 commenters to be positions of authority in the City and around the City of Houston and that still doesn't give any of the input of the private citizens of Houston. That's strictly public speakers. I prepared a talk and upon reading it, realized it was all about Texas Central. This is about us, the rightful owners of the property that these men and their foreign investors are attempting to take from our families. It is about the land that is farmed for vegetables and fruit and ranched with cattle for beef, all found in local grocery stores. It is our fight to retain ownership of land our forefathers toiled, the land they paid taxes to keep, the land they entrusted to us, their children, grandchildren and their children. It's about the land others saved for, worked for, homes they built along with legacies to pass to their children. There may be many here who are still in the urban rat race to prosperity. They were here. They've all gone. You may not feel the need to escape to peace and quiet except to the blue waters of an island once a year. But the need to watch the grandchildren play safely running across pastures and climbing trees will come. These men of Texas Central and their Japanese partners are determined to create the absolute largest construction project in the history of the United States, comparable to the mess in California, where the disastrous high-speed rail is stalled due to exorbitant cost overruns and to private landowners refusing to turn loose of their property, even in California. Texas Central is pandering to the legislators and candidates by donating ridiculous amounts to campaign funds. They have bought time on the evening news selling their glossy pictures and promises of a mass transportation bullet train to the unknowing public. They also elaborated on that a little here tonight. Texas Central partners has money to burn while we individual landowners scrape up the little we can struggling to keep what is ours; to keep our peace and quiet of chirping birds, buzzing bees, and grazing cattle. If this train will sustain itself, if it will make investors money, why do they need eminent domain to take our land? If a high-speed train were to be profitable, wouldn't the largest landholder in the United States, the freight rail, have jumped on it? The answer is that it is not financially sustainable without taxpayer subsidy. Are you willing to subsidize air travel which is faster and established? Then why would you agree to federal loans using taxes we paid to fund a train owned by a private company? MS. GATES: Thank you very much. MS. JORDAN: I'm not through. Are you passively -- there are not that many people waiting anymore. MS. GATES: Well, they would like their turn. You can finish your comment. MS. JORDAN: I will say that, to borrow Lieutenant Governor Dan Patrick's words, we won't back down. I thank the TCP and the FRA and the audience for listening.	Refer to ED-1, GN-4, NE-1, PI-1 and PI-6.
Stephen Jordan	2/5/2018	Oral	Good evening folks. My point -- Stephen Jordan. I live in Waller and Harris County. There was a bunch of us talking the other day, and we decided, you know, you need to follow the money. What are these people thinking donating or buying into this train situation for millions and billions of dollars. Bank of Japan? What are they getting out of it and how are they going to get it? They're going to get it from the taxpayers when this thing goes under. They're buying a project that has failed all over the world. No MTA is self-supported in any trains or anything else, so why don't they tell us, you know, like the PUC, taxpayers are going to pick it up when it fails. That's all I wanted to say. And Harris County did -- to answer this guy's question, Harris County did vote to tear the Astrodome down. Mr. Emmett decided not to.	Refer to GN-2, GN-4 and NE-1.
Paul Joyner	1/31/2018	Oral	You'll have to forgive me. I'm not a very good public speaker. In 2001, my wife and I moved down to this place. She's -- Her family has been in this community for a long time. We've had five generations -- We've had five generations live on the property that we're on now. We built our dream home there. My grandkids hunt, fish, and run around that area. My biggest problem is that they have lied to us from the start. They've told us that they are a railroad, and they're not. They told us that they are going to get an Environmental Impact Statement. They've gotten 20 percent of it. And I'm sure that part of it was not taken legally. There has been landowners that have complained about people coming on their property without permission. They were told that the company knew nothing about it, when in fact they did, because how else would they know what property to survey, unless they were told? So, we've been told lies, and lies, and lies from the start of this project. Another thing is, can they guarantee us that our tax dollars are not going to go into it? No. Can they guarantee us that the environment is not going to be impacted in some way? No. Can they guarantee us the price of a ticket? No. How much of this is going to benefit our communities? None of it. It's going to take away our infrastructure, it's going to destroy our county roads, bridges. What are they going to do to repair that? Probably nothing. I moved down in this area for the quietness and the peacefulness. Are you going to get this with the railroad coming through -- or, this so-called train coming through? Because it's not a railroad. No, sir. So, what -- what else do we have -- what else can we do about it? This is what we're doing about it, and I'm voicing my opinion, and I hope everyone else in here does, too. Thank you for your time.	Refer to GN-4, NE-1, NE-8, NE-9, SC-3, TR-7, TR-8 and SC-22.

Paul Joyner	1/31/2018	Oral	To me, the bottom line is trust. They have lied to us from the beginning. I don't trust anybody that's going to lie to me; whether it be to get on my property by telling them they have eminent domain, to saying that it's going to cost x-amount of money. Like I said, my family -- my wife's family has been on this property for six generations. I've raised my kids, and I've had my grandkids down there. My biggest thing is if you lie to me doing this, what else are you going to lie to me about? What else are you going to do? What other costs are you going to take shortcuts on, safety related? What contractors are you going to do, and lie to us about that? If you are lying to us now, what are you going to do to us in the future? If this does go through, what are you going to do to us in the future? Are you going to lie to us in the future, or are you going to tell us the truth? Because right now, the only thing that I've heard is lies and, you know, what I call smoking mirrors out there, because there's nothing out there that tells us anything concrete of information. Nothing. You can't tell us what it's going to cost, you can't tell us what the ticket is going to cost, you can't tell us how much property you're going to actually take. So, why should we trust anything that comes out of that, the companies that plan on doing this, or y'all? Because at this point right now, I don't trust either one of you. Thank you.	Refer to ED-1, LU-14, NE-1 and SC-3.
Christopher Juckins	2/7/2018	Website	I strongly support alternative forms of transportation besides automobiles and airplanes. Rail is a vital component to a balanced and modern US transportation network. I would much rather pay a higher price to ride a train from Dallas to Houston than to ride in a bus or pollute heavily via airplane. In addition to the ride being more enjoyable, I can get work done in a train unlike a car, bus or airplane. Please keep this project moving forward. I have friends in both cities and would love the ability to travel by train.	Comment noted.

Oumaru Kamara	2/22/2018	Website	Well this project has been in the air for some time now, and its way over due. Its going to be a new transport Technology in Texas meanwhile its becoming an old one in in Asia and other parts of the world. people are anticipating and wait to see it happen. yet its true that some people think the project is half way done but it has not even commence. this is becoming a procrastination. Its about time for Texas to be on the level of speed travel in the IT world. this is not just going to have immediate impact in job creation or create more alternatives for travelers to move around. its also going to bring a relief on our free ways/roads and adjust potential over flow of long distance traffic. Texas has finally gotten the opportunity to experience a form of technology that will introduce remarkable transformation and lead a generation of transportation technology. We are all set and ready to do what ever it takes to get this Technology in full front of Texas Transportation services. I approved and will sign any petition for this purpose.	Comment noted.
Kavita Kamdar	2/16/2018	Website	As a native texan who spent 5 years in a city build around public transportation (NYC), and a region connected by trains (Northeast), I feel its due time for Texas to pioneer a more effective and safe method of transportation between cities. Dallas and Houston are economic hubs, and I spend time in both cities for work in Finance. Having a train run between the both will CREATE LOCAL JOBS, SUPPORT GREEN TRANSPORTATION, AND FALL IN LINE WITH THE FUTURE TRENDS - the state needs to recognize that public transportation is increasingly popular among all age cohorts.	Comment noted.
Laura Kamrath	2/20/2018	Website	Texas needs more and better public transportation!! We should have trains between Houston, Dallas, Austin and San Antonio!! Building the Houston to Dallas train is certainly a step in the right direction. I grew up 5 years in England...Europe has great public transit, to the point you don't even need a car. Why can't we move in that direction too? Burning oil in cars is not the future. We need to be more responsible with our resources, and also recognize the fact that America and certainly Texas are WAY behind the eight-ball when it comes to public transportation. So let's build this train!!	Comment noted.
Raymond J Kane	3/7/2018	Letter	The main power that Texas Central intends to ultimately use against us landowners is that of eminent domain. But I say to you right now: the use of that power goes against the very original purpose eminent domain lvas even set up for. Imminent domain was a tool during the land grab back in the settlement and exploration period of United States history. It was never intended to be used as a way to find, acquire, and/or settle land. It was intended to be used for that for the railroads: other public utilities: purpose for the good of the country and its posterity. It was never designed or intended to be used as a tool to steal land the government or private companies or other individuals felt was theirs to take for the good of the country: and an instance: like this High-Speed Rail Project: is legalized theft as a man so graciously put it at last night's meeting the Madisonville. I and hope fervently that others do: too: that eminent domain and its powers of authority are now in this present day and time made obsolete because the settlement and the establishment of public utilities and frameworks of the United States is now complete. There should be no further use of this power and for any purpose against landowners without their understanding and willing consent: and that Imminent domain: if allowed to exist: should be reworked into a new policy or process both fair to the party exercising its power as well as the land and property owner. Only then can both sides of this bulkhead of an issue come to an agreement.	Refer to ED-1, ED-2 and PN-3.
Sam Kannappan	3/9/2018	Website	On behalf of the Kannappan Arts Museum, Pearland, I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be a economic driver for the region, the state and our county. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because in part it will: * Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational - at least 25% of them in rural counties along the route; * Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 240; * Bring the safest mass transpotation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation; * Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status; * Preserve land access for property owners - a mojority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; * Give travelers with disabilities a safe, comfortable alternative to driving or flying - system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035 - and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the United States - a transportation infrastucture project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review.	Comment noted.

Jeannie Keeney	1/31/2018	Oral	Hi my name is Jeannie Keeney and I'm a candidate for Freestone County treasurer. I've worked in county government for 22 years and what I would like to say is I'm totally against this high-speed rail. It offers nothing for our county and offers nothing for the counties around us. And I would like to take the remaining of my time because I thought I'm very open minded. I'd like to take the 2 minutes and 45 seconds and open this us to any employees of the Federal Railroad Administration or the Texas Central that is losing something because of this high-speed rail that you believe this is a good idea and I want you to sell it to me in my remaining two minutes and 30 seconds. Thank you.	Refer to SC-19.
Donald Kekich	2/23/2018	Website	I am in opposition to the current course of the High Speed Rail service which is projected to cut through the property of the Morgan Legacy Farm near FM 709 and 3194. This property includes migratory waters and a habitat for bald eagles not to mention the charitable benefits to those people who historically and continue to enjoy the beauty and natural surroundings of the farm. It should not be too much to ask that the Federal Railroad Association, exhibiting good stewardship of the land and understanding the negative social impact the current route would have; I move the proposed route north of the power lines. This move would only affect an approximately 6 mile stretch of the proposed rail line.	Refer to LU-5.
Donald Kekich	2/23/2018	Website	Regarding your planned route of the High Speed Rail service from Dallas to Houston, I take exception to the part of the route which is projected to run through the Morgan Legacy Farm near FM 709 and 3194. To run this line through this property would be a travesty! So much good work is being done by the owners of this farm regarding allowing our first responders access to this beautiful natural area in order to clear their minds and enjoy some quality down time. There is never any charge for anyone staying at this farm which is rare these days. To run a rail line through this farm and separate the main lodge from the stables, rodeo arena and guest houses would be criminal. You must reevaluate your decision since there is an easy fix to this problem by running the rail line a short distance to the north of the power lines.	Refer to LU-5.
Donald Kekich	2/24/2018	Website	I am opposed to the train running through a historical and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. I believe a move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the historical significance of the ranch to the community that will be destroyed with the proposed rail line.	Refer to LU-5.
Donald Kekich	2/24/2018	Website	The Morgan Legacy Farm has been providing a beautiful getaway and solace for a great number of people for years, which is not only uplifting but therapeutic for all those who have enjoyed the amenities of the Farm. It not only utilized by those from the DFW metroplex but also students from Japan who were treated to a free stay (as all people are) at the farm to escape the turmoil and shock of the Fukushima nuclear power plant disaster. This farm is not only a viable environmental resource on a local, state or national level, but an international level as well. Can we not do better and reroute the high speed rail line, instead of destroying such a lovely retreat?	Refer to LU-5.
Donald Kekich	2/24/2018	Website	Is it not ironic that several children from Japan were sent to the Morgan Legacy Farm near FM 709 and 3194 for therapeutic reasons after the nuclear disaster at the Fukushima Daiichi power plant; Japan being the home of the high speed mag-lev rail line. If your proposed route through the Morgan Legacy Farm would stand, where then should we send America's children after any disaster? Should it be Japan? Seems a bit silly, so let common sense be your guide and move the proposed line a short distance north of the power lines and save a valuable asset instead of trampling on it!	Refer to LU-5.

Donald Kekich	2/28/2018	Website	Destroying such a wonderful venue as the Morgan Legacy Farm by running a high speed rail line directly through the property is a travesty, especially when an alternative route lies a short distance away just north of the power lines. The Morgan Family has worked hard in the true spirit of altruism to provide a place where people can enjoy nature and relax in the beautiful surroundings which nature provides. Having a high speed train going through the property at over 100 miles per hour does not seem a public spirited or well thought out alternative to the projected route. Please reconsider your choice and help preserve such a welcoming and beautiful get away for everyone.	Refer to LU-5.
Donald Kekich	2/28/2018	Website	I find it incumbent upon me to strongly object to the current proposal to run the high speed rail line through the Morgan Legacy Farm near FM 709 and 3194. On the face of it, any impact statement which would ignore the damage to the current wildlife population of the farm, the destruction of the watershed which feeds lakes on the property, and the obvious destruction of buildings which are integral to the operation of the Farm; this impact statement is flawed. This Farm which has never charged guests to enjoy its facilities must not be destroyed when there is a viable alternative route readily available just north of the existing power lines. Ethical principles must prevail and a reevaluation of the route and subsequent 'changing of the route' must be a logical outcome.	Refer to LU-5.
Donald Kekich	2/28/2018	Website	The Federal Railroad Association must take into account the interests of the individuals affected by its pending decision to run a high speed rail service through the Morgan Legacy Farm near FM 709 and 3194. The individuals affected will be the hundreds of first responders, boy scouts, girl scouts, and members of the YMCA's who have enjoyed staying at the Morgan Family Farm at no cost. The pending decision of the FRA to run the rail line through this property would negate any future enjoyment of this area. A very viable alternative would be to simply move the line a short distance to the north of the existing power lines.	Refer to LU-5.
Donald Kekich	2/28/2018	Website	The daily loss of environmentally friendly acreage in this country makes it even more apparent that the Morgan Legacy Farm near FM 709 and 3194 should not be destroyed by the proposed path of the High Speed Rail system proposed which would run from Dallas to Houston. An easy and no more costly route could be to the north of the existing power lines which would be more environmentally friendly in not destroying the current watershed, wildlife or farm which has been enjoyed by many visitors free of charge.gdhr	Refer to LU-5.
Donald Kekich	3/4/2018	Website	The proposed rail line which would run through the Morgan Legacy Farm near FM709 and 3194 is very ill-advised as it will essentially destroy a valuable natural habitat and a refuge for people who find comfort in the solace of the Farm.	Refer to LU-5.
Donald Kekich	3/4/2018	Website	The Morgan Legacy Farm located near FM 709 and 3194 is a lovely retreat for the guests who stay free of cost. It is also a beautiful and necessary habitat for wildlife. It should not be considered for a possible route for the high-speed rail line.pw53	Refer to LU-5.
Donald Kekich	3/4/2018	Website	The Morgan Family Farm is an asset worth saving, not only for the benefit to visitors but also to the fauna and flora of this area near FM 709 and 3194. The proposed high speed rail line could easily run through an area to the north of the existing power lines.	Refer to LU-5.
Reese Kekich	2/27/2018	Email	I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared.	Refer to LU-5.
Reese Kekich	2/27/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provide. Especially to first responders, doctors and nurses that need a respite more than most. And no one is ever charged for the use of this special ranch that has opened itself up to the community and the world- even having tsunami victims seek comfort there! Do not rip that from the community and those who need it the most- not when another more suitable and less destructive route is possible!	Refer to LU-5.
Reese Kekich	2/27/2018	Email	This route through Morgan Legacy farm causes multiple issues that are truly detrimental to migratory waters, the bald eagle habitat and have a huge impact on the environment that is totally unnecessary. There is an alternate route along the power lines with an existing easement that would make much more sense and not destroy all that Morgan Legacy Farm protects. Destruction of this safe haven is deplorable.	Refer to LU-5.
Reese Kekich	2/27/2018	Email	Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. The charitable benefits are something that can truly not be found anywhere else in the area. The benefit the first responders are given at Morgan Legacy Farm is simply not available at any other venue and the value that providing all of it at no cost is immeasurable. There is a suitable alternate route that would not destroy all that the ranch has to offer the community. I highly oppose the current route and am so disappointed the destruction of such a community asset would even be considered.	Refer to LU-5.
Reese Kekich	2/27/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US.	Refer to LU-5.

Reese Kekich	2/27/2018	Email	By separating access on the Morgan Legacy Farm property from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term.	Refer to LU-5.
Reese Kekich	2/27/2018	Email	There couldn't possibly be a reason to destroy Morgan Legacy Farm in lieu simply moving the rail to north of the existing power line easement. It seems much more appropriate to run the train next to a high voltage power grid already existing. Making the environmental issues far less detrimental to the county. The property and environment that would be destroyed on Morgan Legacy Farm could not be replaced. I strongly oppose the current proposed route.	Refer to LU-5.
Reese Kekich	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Reese Kekich	2/28/2018	Email	I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. And by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables -the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel.	Refer to LU-5.
Reese Kekich	2/28/2018	Email	Morgan Legacy Farm cannot be destroyed. . If the proposed route is relocated to north of the utility lines the damage to water shed will be lessened and this irreplaceable ranch and it's charitable mission would be spared. So it would be beneficial environmentally, economically and charitably speaking.	Refer to LU-5.
Reese Kekich	2/28/2018	Email	Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line.	Refer to BA-5, BA-7, BA-8 and TR-8.
Reese Kekich	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term.	Refer to LU-5.
Reese Kekich	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.
Reese Kekich	3/1/2018	Email	I recently became aware of the possible loss of a property due to the proposed route of the HSR. This property listed as Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur.	Refer to LU-5.
Reese Kekich	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Reese Kekich	3/1/2018	Email	I strongly oppose the loss of watershed and loss of water for migratory waterfowl at Morgan Legacy Farms, given the topography construction go this rail would be better suited north of the ranch along the existing power lines.	Refer to LU-5.
Reese Kekich	3/1/2018	Email	Morgan Legacy Farm holds cultural, historical, economic and unique emotional benefits to the county, the state and also has international significance. It cannot be destroyed by the proposed route- I urge the rail to move the route north near the existing power lines and allow Morgan Legacy Farm to continue to serve the community.	Refer to LU-5.
Reese Kekich	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property	Refer to LU-5, WW-1 and WW-2.

			useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	
Reese Kekich	3/1/2018	Email	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory water fowl of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. Furthermore, I am concerned about The impact on limited areas for special charitable giving events.	Refer to BA-3 and WW-2.
Reese Kekich	3/1/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.

			Morgan Legacy Farm provided comfort to me and my family when we needed it most. To see it destroyed when there is a reasonable location to move the rail would be an absolute tragedy.	
Vashtai Kekich	2/26/2018	Website	I am writing this comment to oppose the location of the High Speed Rail. Currently the route cuts through Morgan Legacy Farm located on FM 709 and 3194. If the route was moved north of the existing power lines it would be saving Morgan Legacy Farm so it can continue to serve the community. Morgan Legacy Farm has been such a blessing to so many people, not just in the county but spanning even internationally. And to think that all of the things done by Morgan Legacy Farms has always been free of charge - it would be a travesty to take away all the future respite they could provide to those who really need it. First responders, victims of disasters, medical providers who deal with trauma, families who need help and many others. The route can be moved but this farm cannot be replaced.	Refer to LU-5.
Vashtai Kekich	2/26/2018	Website	Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used- the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur and Morgan Legacy Farm could continue the charitable work that is so important to so many.	Refer to LU-5.

If the proposed route is relocated to north of the utility lines the damage to water shed will be lessened and this irreplaceable ranch and it's charitable mission would be spared. So it would be beneficial environmentally, economically and charitably speaking.	Refer to LU-5.
Vashtai Kekich	2/28/2018	Email	Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line.	Refer to BA-5, BA-7, BA-8 and TR-8.
Vashtai Kekich	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term.	Refer to LU-5.
Vashtai Kekich	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.
Vashtai Kekich	3/1/2018	Email	I recently became aware of the possible loss of a property due to the proposed route of the HSR. This property listed as Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur.	Refer to LU-5.
Vashtai Kekich	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Vashtai Kekich	3/1/2018	Email	I strongly oppose the loss of watershed and loss of water for migratory waterfowl at Morgan Legacy Farms, given the topography construction go this rail would be better suited north of the ranch along the existing power lines.	Refer to LU-5.
Vashtai Kekich	3/1/2018	Email	Morgan Legacy Farm holds cultural, historical, economic and unique emotional benefits to the county, the state and also has international significance. It cannot be destroyed by the proposed route- I urge the rail to move the route north near the existing power lines and allow Morgan Legacy Farm to continue to serve the community.	Refer to LU-5.
Vashtai Kekich	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has	Refer to LU-5, WW-1 and WW-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about The impact on limited areas for special charitable giving events.	Refer to BA-3 and WW-2.
Vashtai Kekich	3/1/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.

Vashtai Kekich	3/1/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared.	Refer to LU-5.

			ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	
Beth Kelly	2/4/2018	Letter	The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 145, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. S 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Beth Kelly	2/4/2018	Letter	Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identifying the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1.
Beth Kelly	2/4/2018	Letter	FEASIBILITY OF PROPOSED HIGH SPEED RAIL A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere...	Refer to GN-3.
Beth Kelly	2/4/2018	Letter	The Waller Harris Emergency Services District No. 200 ("ESD") provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department Of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SS-12, SS-18, SS-23 and SS-26.
Beth Kelly	2/4/2018	Letter	The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add	Refer to LU-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			another 24,000 employees. There is Concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options."	
Beth Kelly	2/4/2018	Letter	IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Beth Kelly	2/4/2018	Letter	The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5.
Beth Kelly	2/4/2018	Letter	The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, SI .8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EJ-1, LU-4, SC-19 and VA-1.
Beth Kelly	2/4/2018	Letter	Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles Of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AS-1, NV-1, NV-5, TR-6 and TR-8.
Beth Kelly	2/4/2018	Letter	Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. ms issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-4.
Beth Kelly	2/4/2018	Letter	Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-3, LU-4, RF-1 and VA-1.
Beth Kelly	2/4/2018	Letter	The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was	Refer to PI-1 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Beth Kelly	2/4/2018	Letter	IMPACT ON WATERFOWL AND HUNTING Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Through the development of the Project, FRA and TCRR have taken steps to avoid, minimize and mitigate any impacts to wetlands. The Build Alternatives have been designed in accordance with compliance and mitigation measures outlined in Section 3.7.6 Waters of the U.S., Avoidance, Minimization, and Mitigation . TCRR is working with USACE through the permitting process to develop mitigation measures for unavoidable impacts. Additionally, mitigation measures to avoid impacts to migratory birds and comply with the Migratory Bird Protection Act are described in Section 3.6.6, Natural Resources, Avoidance, Minimization, and Mitigation . The construction and operation of the Project would not restrict hunting activities or add any regulations that would restrict hunting activities or indirect activities related to recreational hunting. Accordingly, no economic loss to the hunting industry would be expected.
Beth Kelly	2/4/2018	Letter	IMPACTS ON HISTORICAL SITES At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1, 100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre- historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-2 and CR-9.
Beth Kelly	2/6/2018	Handwritten	IMPACT ON PUBLIC SAFETY At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 -- 20,000 lbs released, and June 11, 2007 -- unknown quantity On August 9, 2011 , there was a planned Emergency Shutdown Simulation that released thousands Of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All Of this information was brought to the attention Of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-6.
Beth Kelly	2/6/2018	Handwritten	IMPACT ON KATY PRAIRIE CONSERVANCY Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more	Refer to RF-4, NR-2, WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.
Beth Kelly	2/6/2018	Handwritten	IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2.
Beth Kelly	2/6/2018	Handwritten	IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1, WW-8.
T.J. Kelly	2/6/2018	Oral	I really don't have a lot of the information that you-all have, and I greatly appreciate it all. Thank you for informing all of us on everything. I made it to the three meetings. She even knows my name. That's outstanding. I appreciate you listening to us. I know that's a lot of work. I know there's a lot of work going from both sides. It's emotional. Neighbors, brothers, I stand with you all, and I will stand with you all. If you make this happen, you are -- it sounds to me that you are throwing out the Constitution. It sounds to me you are throwing out the Bill of Rights, everything we fought to have. If you give a private company eminent domain, how can you sleep at night? How could you literally look at somebody and tell them they can't have what they worked for? I stand here as a neighbor, because if I don't stand with my neighbors, who's going to stand with me when you come for my land, too. When this private company you approve, if you give them this build that you approve, that our rights have a price, and those who have the money can tell us what to do, can take our rights from us, can take everything we worked for from us, not because we're not paying for it, not because we're not continuing to work for it; because they had more money. That is not what I moved here for. I accepted my commutes. I take them proudly. I ride past these scenic routes that you did not include. No, this train will not be good for us. Thank you.	Refer to AS-1, ED-1, GN-4, NE-1, NE-2, NE-6 and PI-7.
TJ Kelly	1/30/2018	Oral	It's actually TJ Kelly. You hear a lot about heritage. You hear a lot about people being here forever. I can't claim that. I'm from Georgia. I moved here almost four years ago to Houston, actually Spring. There is no more small town around that area, with my wife. She's actually from downtown Houston. Grew up there before they put the Am train in front of her mom's house. She's got a really big experience about trains being put up in places. We are both combat veterans. She's in the army. It's an interesting household. I came here to work with a security company in Houston. I patrol a few districts down there. I got here with stories of dad. He grew up here. I learned all about Texas from him. We married and that's how I came here. I got here and did not get to experience what my dad talked to me about Texas. So the plan came into play and we moved but we worked hard and my wife is 100% disabled because of injuries. The Texas land board finally after four years -- we just really just got here and we found out there is a train being built. A train station being built five, no 15 miles down the road. But it's my commute to College Station. It is the commute that everybody is trying to cut down. I commuted because I love the country way of life. People bring up this economy and the crime that will bring. That station that they are going to put there without asking anybody input about the crime it will bring. They put those trains down in front of my wives parent's house and people that had farms in those areas, their animals will get shot. That want shuttles to Huntsville or College Station. The mayor of College Station wants it so bad, he is pushing it on TV. If they want it so bad, tell them to put the train there. We enjoy the country way of life. We don't have to deal with those same things they have down to deal with down there. Those commuters, tell them to move to New York. These people don't want to preserve our way of life. In Iraq I never thought I would have to come home and defend my homeland from my own country.	Refer to GN-7, SS-1, SS-6 and TR-2.
TJ Kelly	2/5/2018	Oral	I'm TJ Kelly, I'm from Bettis, just recently moved there in November from Brenham. The moment I heard the mayor of College Station promoting this half way station that supposed to be a fast route from Houston to Dallas, I asked, why is there a stop here. So it's going to ruin everything we worked for to come. It's going to bring that crime that we left in Houston. It's going to ruin that country life that we worked to have. There are commuters complaining this is why they want this rail. I commuted. I commuted from Willis to College station with a camper because we moved from North Houston. We wanted to move closer to where I worked. If they want to work there, move. Don't make us pay for them to accommodate them. We worked for what we have. And like I said in Jewett, I spent many years in Iraq and never thought that I would have to fight for my own land, my neighbor's land by my own countryman. Don't bring this fight here.	Refer to GN-7 and SS-6.
Martye Kendrick	3/9/2018	Website	I am in favor of this groundbreaking project! I am so excited about connecting Dallas and Houston in this transformation way!	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Annette Kennedy	2/1/2018	Website	Please, please, please STOP the bullet train from cutting a path through our precious land of Navarro County. NOTHING good will come to our county from this invasion and I see only problems will result from it! Let the people affected VOTE on this and you will see NO, NO, NO!! Thanks for reading.	Refer to SC-19.
Beth Kennedy	2/5/2018	Website	I am adamantly OPPOSED to this high speed rail project because of the negative environmental impact it will have on the Katy Prairie, as well as other intact, environmental areas of land between Houston and Dallas. The Katy Prairie is the last remaining tract of land west of Houston where wildlife can abound with a minimum of human intrusion. Building a railroad just to the north of the prairie will not only disturb the birds and other wildlife living there, but will severely detract from the natural experience visitors have when they visit the area. Harris County and the surrounding area already has a bad enough reputation regarding treatment of the environment, and now you people want to take it one step further and begin the destruction of one of the last remaining areas where people can see a variety of wildlife. Another reason I oppose the rail line is because I don't think anyone will use it! People don't even use the train in downtown Houston very much; nor do they use the other mass transportation we have available around here - the bus system! Why in the world would millions of people addicted to their cars and driving want to bother to take the time to go to a train station, board the train, go to the trouble of getting a cab or car in Dallas, etc. etc.??? I think it's a ridiculous and wasteful idea! Texas pays little attention to preserving its natural areas, and this is just one more example of the burning desire you people have to keep developing this state until there is no wildlife left except grackles, pigeons, squirrels and a few scrawny coyotes!! Shame on you!!!	Refer to GN-4, NR-1, NR-2, PN-3 and RF-4.
Sandra Kennedy	3/1/2018	Website	I completely support this important project and pray it happens for continued progress and community development.	Comment noted.
Pamela Kersh	2/2/2018	Email	I am interested in receiving updates for the Texas Central High Speed Rail.	Refer to PI-1.
Pamela Kersh	2/6/2018	Email	I personally am HIGHLY OPPOSED to the high speed rail for the following reasons: 1 .1t is not economically viable 2.1t destroys peoples' property 3.11 cuts into all of central Texas destroying our beautiful state. 4,1t destroys churches, homes, ranches, farms, cemeteries, and historical landmarks. 5 Our property values will be decreased but our taxes will have to rise to meet the safely requirements for our county. 6. Information provided by the HSR to the public is too vague and will allow the project too much freedom	Refer to GN-4, NE-1 and VA-1.
Carol Keys	1/31/2018	Oral	My name is Carol Keys, K-E-Y-S; 300 FCR 976, Mexia. I also own land on 1366. It goes within about 1700 feet of that place. I am against it. I do not believe that people will ride it. I do not think it's necessary. We will not benefit in any way, shape, form, or fashion in this part of the country or any place in the country. Nobody benefits from it, and I am opposed to it.	Refer to GN-2, LU-7 and SC-19.
Julie Keyser	2/5/2018	Handwritten	If this was happening in your neighborhood or on your beloved land, would you still support this? Since so many are against this, the cost is exorbitant and the train is unnecessary. I respectfully ask all investors to cut their losses now, and for whatever investment funds can be returned, be returned and the project stopped before it starts and save all of us the incredible negative impact this project will have. Just because someone thought this would be cool and talked a lot of investors (most probably living no where near the train) into this investment doesn't mean this dream should come true. DON'T BUILD! NO BUILD! Pride cometh before the fall.	Comment noted.
Julie Keyser	2/5/2018	Handwritten	The rail will be constructed near the area where I live but potentially the sand won't affect me. However, for the next 20 years, while its being built our already terrible roads will only be worse. The California bullet train is WAY behind schedule and BILLIONS over budget forcing taxpayers to foot the rest of the bill. The way Texas does construction on its highways and freeways, and the way management of projects is regulated, leaves me with no FAITH that a bullet train will be any different. The amount of noise, destruction of open space and country, the incredible loss to anything property values during construction, the added light pollution, the cost to us (especially the majority of us who don't go to Dallas often), the construction burden on communities, I honestly can't understand how the destruction outweighs the benefits. The cost is astronomically higher than expected in California that makes me cringe enough. NOT HAPPY! Also, I doubt any investors live anywhere near the proposed lines.	Refer to NV-1 and TR-6. Lighting installed along the HSR corridor will be directed towards the rail tracks and will be designed to limit its projections outward to the community. Please see Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences of the Final EIS for a discussion of lighting impacts. The type of mitigation is not yet designed for specific cases but may include planting trees or vegetation to screen views.
Sam Khan	1/17/2018	Website	Its great that Dallas is bringing its A game to build a high speed train. When I think of this, "Grand Central NYC" station comes into my mind. A station that connects all the local NYC trains and trains from New Haven CT to this. I am hoping that this High Speed Train Station will be linked to other Dart services so folks from North TX(Prosper, McKinney, Plano, need to take uber or drive to this new "Rail Road Station". Since Dart train only goes up to Plano. I am hoping that this project will consider all the scenario for the folks living Dallas Suburbs.	Comment noted.
Brian King	2/16/2018	Website	Please build this train! We truly need this for the growth of our population, economy and much more. I would love to be able to visit my sister that lived in Dallas much more often as well. We need this now more than ever before!	Comment noted.
Chris King	2/16/2018	Website	If the high-speed rail line was slated to come through my backyard, divide my property and take my land I might feel similar to the way those who oppose it do. Reality is though it isn't. Reality is Texas is growing. It's prospering from this growth and it's time for Texas to take the lead	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			in building for the future. The high-speed rail service isn't going to benefit me with my daily 75 miles, hour and a half commute each way, from Navarro County to Plano where I work. I rarely go to Houston by any means of travel and I surely won't drive 50 miles north to catch a train to then travel 200 miles south. However, I am a big proponent of commuter train service as an alternative means of travel by car. I have been all over Europe and utilized their train services to get where I needed to go and not once stepped foot into a vehicle. I feel the US is light years behind other developed nations when it comes to commuter rail service and my hope is that the high-speed rail service from Dallas to Houston is just the beginning of further development for regionalized commuter rail service connecting Texas rural cities to metropolitan areas. As Texans, we rely too much on our vehicles to get us to where we want to go. Families spend thousands of dollars and maybe more annually on fuel, insurance, and maintenance of their vehicles. Imagine how much money we could save and redirect to other uses if we had transportation alternatives. If Texas continues to grow and prosper, there won't be room for all of our vehicles on the roads unless our government continues to spend millions and billions of dollars building bigger roads and then budgeting to maintain them in the future. Commuter rail service is the answer and building the electric high-speed rail service from Dallas to Houston is just the beginning.	
Christopher King	2/27/2018	Website	It's time that rural Texans wake up and start owning growth that is taking place right in our own backyards. The answer is not to always DENY growth so we can keep our way of life as we have known it the last 100 years! This is always the position our Navarro county leaders take any time growth wants to cross in to our borders! We have an opportunity to build something great that goes right through the heart of our county and a few overzealous county leaders think they are representing everyone in the county with puffed up chests denying access through our county. I commute on interstate 45 everyday to Plano for my job. I hate I have to travel 150 miles trip to earn a living, but I do and that is my choice. I experience the traffic on the highway night and day and over the last 5 years it has doubled! In 5 years it will probably double again! Navarro county leadership talks out both sides of their mouths! They have no problem taking in the millions of dollars in tax revenue from travelers off the interstate from those who frequent our restaurants and businesses. Yet they scoff at the idea of an opportunity like the bullet train. So what if there isn't a stop in Navarro county. Someday maybe there will be...did you ever think of that? Growth is coming south from the DFW whether they like it or not. We can either get on board with it and navigate our future in support of the growth or we can stand at our borders with DO NOT TRESPASS signs to keep everyone out. Wait and see where that gets us!	Comment noted.
Daphne King	2/28/2018	Website	I support the EIS findings and advancement of the Dallas to Houston High-Speed Rail project.	Comment noted.
Jackie King	1/29/2018	Oral	My name is Jackie King. Regarding Navarro County's surface or ground water resources, three features of the Navarro's landscape that will be impacted by any proposed rail in the past, marked utility lines sections 2-A and 3-A, include the Richland watershed, the flood plains, and the upper sources of water draining down Chambers Creek, Mills Creek, and Richland Creek, as well as all tributaries draining into those creeks. The design of any proposed rail through that area must allow more than normal and rapid drainage off the west side of the rail and normal flow on the Corsicana side of the rail to prevent collateral damage to Navarro County properties and towns outside the legal, east, and west property lines of said rail, because water, and lots of it, always finds a way to travel where it will. Not even a rail line can overcome it. If your client's rail line structure blocks and backs up massive amounts of water or, in the alternative, blocks needed water in times of drought, then the line will prevent the flow of surface water needed to recharge Richland Chambers Reservoir. As you know, the Tarrant County water district manages that reservoir for primarily the people of Tarrant County. Navarro County benefits as well. Questions for the record. If your client's rail design is a completely sealed rail corridor, how will that design mitigate loss of needed water to maintain necessary water levels for the people of Tarrant County? If your client's rail design allows for appropriate flow through the rail structure, how will that flow be channeled to prevent damage to towns and properties on the Corsicana side of the rail while complementing natural flows from traditional sources of surface water to continue their path to Richland Chambers reservoir? Thank you.	Refer to FP-1, WW-1 and WW-2. Approximately 59 percent of the Build Alternatives in Navarro County would be constructed on viaduct (bridge type structure) which allows for free movement of water in those areas and would avoid and/or minimize impacts to all waters (streams, ponds, and special aquatic sites such as wetlands and springs) crossed by the route.
Michael King	2/5/2018	Website	This company does not have eminent domain yet it continues to tell effected land owners that it does. This will cost all of the counties in its path major expenditures for roads that cross the railways path.	Refer to ED-1, ED-3 and TR-7.
Robert King	1/25/2018	Website	It's time Texas leads the nation by installing high speed rail. Houston to Dallas should be the beginning of such a plan. After that Houston to San Antonio and then San Antonio to Dallas.	Comment noted.
Rose Mary King	1/22/2018	Email	The proposed High-speed rail is a very bad idea. It is not necessary, is not beneficial to the majority of the population and will not result in true benefit to the state and detriment to those living along the 240 mile stretch of land. It is a huge threat to the farms and the rural way of life that it be rending asunder. The rail will have an extremely negative impact on the many citizens whose lives and lands would be impacted. Not only would the rail destroy the livelihood of numerous farmers, it would also impact the lives of those who buy from those farmers. Put the welfare of the citizens above the profit interest of some business. Thank you.	Refer to LU-11, NE-9 and SC-19.
Sandra King	1/29/2018	Letter	1. Concern for Texas counties Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and Wheeler and their endangered species such as bald eagles, monarch butterflies, woodpeckers, traveling pigeons, Red Wolf, Grey Wolf, migratory birds, for hunting, the wood stork, the water serpent, the Houston toad, and the white-faced Ibis, swallow of the interior, Cagle Map Turtle, the Ouachita, pocket rock mussel, also including the wild flowers of large-fruited sand Verbena, the Indian braids of Navasota.	Refer to NE-9, NR-1, NR-2, NR-3, NR-4 and NR-5. Passenger Pigeons are extinct. The Red Wolf and Gray Wolf are extirpated from Texas. The Monarch Butterfly is currently "Under Review" for listing by FWS and is not currently a protected species.

Patricia Kirby	2/14/2018	Website	Although I'm not a Texan, I believe this project is extremely important for a better future for America. High-speed rail is a key part of that better future. Cars are choking the highways all across the country -- with the typical car trip from Dallas to Houston projected to increase by several hours before long. Please, Texas, show your impressive roundup skills and herd off those cars. Make Dallas-Houston high-speed rail a reality.	Comment noted.
Camille Kirk	1/30/2018	Email	I am very interested in a Bullet Train to Dallas from Houston Area. However, I live in Katy; if the station for the Houston area involves getting anywhere near the Galleria area, I will NOT use it - I avoid that location by vehicle whenever possible. I believe it would be a mistake to send people to that area for the Train. Houston already made a HUGE mistake in not providing rail to downtown Houston - would have so enjoyed being able to hop the train into town to take advantage of festivals, concerts, theatres, museums but I will not drive in and deal with inner city traffic/parking. I believe this cost the city BIG TIME in commerce as they could have reaped from the vast suburban areas surrounding Houston opportunities. the traffic on 110 is intolerable - HUGE opportunity missed in not providing lite rail. I fear same kind of mistake Will be made with the bullet train.	Refer to GN-6, GN-7 and TR-4.
Camille Kirk	2/20/2018	Website	The area chosen for station, site of former Northwest Mall, is a high crime area - hence the demise of the mall. I would not want to drive in to catch the train and leave my car in this vulnerable area. perhaps a couple of stations on either side of Houston area or other option would better attract paying riders. I would utilize the train, but as it is, trying to find a ride to and from station rather than leave my car at the station would prohibit my using the train. would just be easier to drive it myself going straight up from Katy area to Dallas and then having my car to use rather than try to get transportation to and from Station here and in Dallas - that hassle would probably not end up saving me more than maybe an hour - not worth the trouble. what you are offering is not worth the expense. would rather have rail within the city and surrounding suburbs to utilize downtown offerings than a 'quickie' to Dallas ... or not so quickie after going through the effort.	Refer to GN-7 and NE-1.
Chance Kirk	2/24/2018	Website	The train will go through my in-laws's property; property that has been in the family for sixty years. It will not only impact my family, but many other residential properties. All of us depend on this property for our livelihood! Not only is this a residential issue, but there is a historical events that have occurred in the past. Furthermore, the train will disrupt migratory fowls and bald eagles. Progress is important, but it makes ethical sense to move the train where no one will be impacted. That can be done by moving it 945 feet to east where power lines are currently located.	Refer to LU-5 and NR-3.
Chance Kirk	3/8/2018	Website	I am opposed to the train entering the area around FM 709 and 3194 for many environmental reasons, bald eagle habitat, economic impact, and historical significance. Environmental concerns alone should be a sufficient enough reason to move the current proposal further north of the power lines. It is important to note that although the plans are in place, movement of the tracks north of the power lines would be a win-win situation for the current residents, community, environmental, and the state of Texas.	Refer to LU-5.

Jesse Kirkham	2/7/2018	Website	Providing high-speed rail is tantamount to moving our country into the future. Why? Because: - a 100% privately funded infrastructure unlocks more local investment - It will create 10,000 construction jobs each year and 1,000 permanent jobs. - Estimates show that it will inject \$36 Billion over next 25 years into the Texas economy. - It will diversify and enforce the importance of investment in a balanced transportation system. - It's cleaner transportation. N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas. - The current 4-hour, 240 mile trek up I-45 is expected to increase to 6.5 hours by 2035 - I-45 is the nation's 2nd deadliest interstate in the U.S.; rail keeps more cars off roads and saves lives - With a 90-minute travel time, be at your destination before you could board a flight after arriving at an airport. Let's move into the future by building the infrastructure for future transportation.	Comment noted.
Ken Kirklin	2/21/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

Jan Kish	2/16/2018	Website	We need the bullet train. If we want to be a State or the country of 21st century, We need to expand our mass transportation and infrastructure. Jan Kish	Comment noted.
Joseph Michael Kish	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Judy Klasing	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This property is a very special place for my family. Please save Morgan Legacy Farm.	Refer to LU-5.

Gilbert E Klefstad	2/6/2018	Handwritten	I oppose the high speed train. I question the economic viability of this venture. Ridership will not support the debt required to build and subsequently operate it. It is not right for a private company to gain eminent domain authority for a project that doesn't even have their funding lined up. The trains will be numerous and noisy with little plans to abate the noise and pollution. I vote regularly and will oppose any politician supporting this project either financial or regulatory, for this project. I support the NO BUILD OPTION!	Refer to ED-1, GN-2, NE-1 and NV-1.
Joseph Klein	2/6/2018	Oral	My comment is they talk about no impact to existing roads. This is not true. Who is going to provide service to the future roads? The county will be. We are not going to be able to do that on our own. We will need help. How about if it cuts our property in half. The environmental impact doesn't accurately depict what this will do. It does not really show the impact it will have. I know on my property it has not be surveyed. My property is located approximately 10 miles west of where the train station will be. The south side of the highway where the high-speed rail will run through. Imagine the noise, the pollution. Is it worth saving time on a commute? I would like to be on record that I have a well there and if that happens how will I go about getting the water to my cows if the high-speed rail runs straight through and over it. That is the only one I have and I run cattle on the top of the land, about 210 of them. It is the only water source of my cattle have. My pond dried up in the drought. Another comment I have is there is a new house directly across the road from my address and its isn't even on the map or drawing. It is out of the way of the right of the way so shouldn't by big deal. And sure that have a well too. The local newspaper had	Refer to LU-11, LU-14, NV-1, PN-3, TR-7 and TR-8.

			sited that the high-speed rail will have the right for anything within 2 miles of the right of way for construction. I could not find anything to that affect in the EIS. And I am wondering if that is true. Because I would be opposed if that is it. I am a land owner and I am extremely opposed to the high-speed rail. I don't want them hitting my land.	
Joseph Klein	3/9/2018	Website	Why is the Federal Railroad Commission (FRC) spending Federal tax dollars on this shaky Texas Central Railroad (TCR) project? Why did it start, and why is it still incurring costs when the legality and economic footing of the project is still unresolved or questionable. What public interest is there in continuing to expend our funds now? If I organize the Klein Beaumont-to-El Paso High Speed Railroad Company, will the FRC start preparing an Environmental Impact Statement for my company? If not, why not stop this expensive effort now until realistic feasibility has been established? Additionally, the environmental impact of the TRC is horribly understated, and, if it actually were completed, its ability to have any significant impact on Texas or the U.S. traffic growth problems would be insignificant. Federal tax funds spent would be unavailable for realistic plans to address such growth after wasting them on TCR's dream. When I worked for a major aircraft company, we had the knowledge and capability to produce supersonic passenger aircraft, but made the market decision not to for basic business reasons. The travel time savings by the higher speed in the air were only a part of other passenger travel times (travel to and from both departure and arrival terminals and time waiting in the terminals, etc.). Passengers were not expected to pay the much higher supersonic air time savings costs for the relatively small impact air time savings would have on their total travel time. The same issues apply to the high speed railroad project. In summary, the FRC should never have started this EIS work, and should immediately stop it until a real feasibility study has been presented which demonstrates both a legal and economic need for it. Why is the Federal Railroad Commission (FRC) spending Federal tax dollars on this shaky Texas Central Railroad (TCR) project? Why did it start, and why is it still incurring costs when the legality and economic footing of the project is still unresolved or questionable. What public interest is there in continuing to expend our funds now?	Refer to GN-4, NE-1, NE-5, PN-3 and SC-3.
Mary Ann Klein	3/9/2018	Website	I attended the entire hours long meeting in Navasota, Texas. The analysis of the FRA Draft Environmental Impact statement provided by many who attended the meeting revealed how flawed the study was. There were many engineers who spoke about the flaws in the study. The Sheriff of Grimes County spoke about the lack of consultation on safety issues. The Engineer in charge of Road and Bridges in Grimes County spoke about the many issues the engineers addressed which the study had not taken into account. He also spoke to the effects of the construction and operation of the proposed railroad on the county infrastructure. He supported the views of the engineers who had prepared a thorough analysis. The negative effects on county residents (noise pollution, devaluation of land,), wildlife, infrastructure, safety, schools, etc. were clearly revealed. So many topics were not addressed in the draft and so many that were addressed were done in a sloppy fashion. The effect on a parcel of land my siblings and I own was also of concern. The path of the proposed railroad would cross legal access we have to our land which we gained through a difficult and costly procedure. The damage to our parcel would be considerable. I do not understand why this study was undertaken when Texas Central's claim to have imminent domain is still not established. Why was this study done at tax payers expense when Texas Central is not a railroad.	Refer to NE-9 and SS-1.

John Knight	3/8/2018	Website	We urgently need the Dallas to Houston High Speed Rail project. Rail infrastructure for passenger service is woefully inadequate in the U.S. and Texas is a cutting edge part of the U.S Economy that would benefit greatly from an easier way to get between these two major population and business centers. We need to stop being behind the rest of the world on this and look to the future.	Comment noted.
Shawn Knox	2/2/2018	Email	<p>I am lodging an Objection to the proposed high speed rail line between Houston and Dallas for the following reason. Failure to consider Increased Acreage and Adverse Public Safety Impacts - "NO Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The No Build analysis totally skipped the huge increase in Impacted Acreage from 3000 acres as communicated in writing by TCRR to 8000 acres. That 167% increase has not been addressed by the FRA at all ; neither was it a part of the No Build Alternative Analysis.</p> <p>TCRR's current plan has caused the closure, rerouting, modification, and rebuilding over the HSR of many Private and Public Roads and increased the Road ROW land required Without any ACCOUNTABILITY FOR TCRR's Earlier Claims. The FRA simply glosses over those huge Changes. Why is that?</p> <p>What about the many Public Safety considerations that the FRA has Glossed Over, such as:</p> <ul style="list-style-type: none"> a) increased ER (Emergency Response) times, b) safety of traffic congestion around construction sites, c) lane closures, d) rerouting roads, e) road closures and t) more Public Road travel required just to get around from point A to point B due to the HSR)? <p>The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p> <p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason.</p> <p>Inadequate Documentation for elimination of "No Build" Alternative" (Ret DEIS Main Text I, Sect. ES.8, pg. 8). The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. No Build is actually the Correct Answer.</p> <p>First, the FRA DEIS understates the damage to the public and property but overstates/assumes the HSR need.</p> <p>Second, TCRR underestimates the project cost and overestimates the ridership. The FRA never considered the Reason Foundation's analysis (which clearly proved this project WILL FA IL); that analysis has not been mentioned in the FRA DEIS at all. That is NOTAN OBJECTIVE, UNBIASED ANALYSIS OF THE FRA DE'S.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p> <p>I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason.</p> <p>"NO Build Option" Must be Reconsidered - (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). Here are reasons the "No Build Alternative " MUST be reconsidered by the FRA.</p> <p>First, the claims by the FRA on 1-45 transportation predictions, traffic congestion, safety on 1—45, and transportation alternatives are not adequately supported with derailed facts. In fact, the opposite cases have been made with much more facts _</p> <p>Second, the "Public Need" has never been established in the DEIS by the FRA.</p> <p>Third, "Public Need" must clearly be established due to the huge negative impact on landowners' property, homes, cemeteries, livelihood, existing public roads, and county maintenance revenues. That has nor been adequately covered by the FRA DE'S. Further, it has no/ been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes.</p> <p>In Other words, the FRA 's DE'S is simply a "thumb on the scale for 'CRR 's benefit" Without the facts to back it I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement, I am lodging an Objection to the proposed high speed rail line between Houston and Dallas for the following reason.</p> <p>Inadequate/insufficient Documentation: "No Build Alternative" • (Ref DEIS Main Text I, Sect. ES_8, Pg. 8).</p> <p>The Public is NOT going to accept from the FRA general statements that support the HSR without the FACTS to back it up. The appropriate level of detail to support the FRA's claims about the No Build Alternative simply does nor exist in the DEIS Rationale is included in another comment on this subject due to space limitations. The FRA also mentions there would be no improvement of safety on with the No Build</p>	Refer to BA-3, BA-4, BA-6, EU-2,GN-2, GN-3, LU-9, LU-14, NE-1, NE-9, PN-3, SS-19, SS-23, TR-6, TR-7 and TR-8.

Ryu Kobayashi	1/25/2018	Email	Train station in Houston near 510West where most congested area can cause more trafiv to the area. I hope you have better location for the train station. Accessibility to the station is very important.	Refer to GN-6, GN-7, TC-4 and TR-5.
Justin Kockritz	2/20/2018	Letter	As described in the Draft EIS, the Federal Railroad Administration (FRA) is considering issuance of a Rule of Particular Applicability to establish safety regulations for the proposed Texas Central High-Speed Railway (TCRR) as a railroad operating at speeds greater than 150 miles per hour. Issuance of such a Rule constitutes a Federal undertaking subject to the National Environmental Policy Act, Section 106 of the National Historic Preservation Act, Section 4(f) of the Department of Transportation Act, and related environmental regulations. Although other Federal agencies, such as the U.S. Army Corps of Engineers, are cooperating in the project, FRA is the designated lead Federal agency for the preparation of the Draft EIS. THC staff, led by Justin Kockritz (History Programs Division), Rebecca Shelton (Archeology Division), and Alex	Refer to CR-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Toprac and Lydia Woods (Division of Architecture), have completed their review of the Draft EIS, and have some key comments that apply throughout the document and to the review of the project in general. Also, attached is a comment matrix of more specific Draft EIS comments, questions, and suggested revisions. First, THC understands that due to the scale and complexity of the project, and the lack of right-of-entry to much of the land within the Build Alternatives considered, the identification and evaluation of historic properties within the Areas of Potential Effect (APE) are a work in progress and will be phased over time. Approximately less than 50% of the historic-age aboveground resources within the APE have been evaluated, and only 12% of the limits of disturbance have been surveyed for archeological resources. Throughout the EIS, the current status of these identification efforts should be clearly noted, and it should be stated that the analysis of the Build Alternatives relies on the best available, though necessarily incomplete, information regarding historic properties in the project APE. Next, throughout the EIS, references are made to executing a project Programmatic Agreement (PA), which THC has long expected and fully supports. Please contact our office to begin consultation on this P A. THC hopes that we, FRA, cooperating Federal agencies, the Advisory Council on Historic Preservation, and the appropriate consulting parties can execute the P A prior to the issuance of the Final EIS, or at least come to agreement on its terms. The P A should include: the procedure for the continued identification and evaluation of historic-age properties and archeological sites within the APE as access is obtained and as the APE changes due to refining the alignment or to account for related ancillary features (staging areas, mitigation areas, temporary easements, etc.); procedures for unanticipated discoveries of potential historic properties; the assessment of effects of the project on historic properties; and, the resolution of adverse effects to historic properties. It is important to note that the state laws regarding cemeteries, including chapters of the Texas Health and Safety Code, the Administrative Code, and the Penal Code, apply to all cemeteries, not just those that are designated as a Historic Texas Cemetery or that are listed in, or eligible for listing in, the National Register of Historic Places. Throughout the Draft EIS, references to Texas cemetery laws and regulations should be revised to reflect that these state laws will be adhered to; several of the most relevant sections have been identified in the comment matrix. As the archeological survey work continues, please coordinate as early as possible with our Archeology Division to identify areas where additional investigations may be required to delineate cemetery boundaries or to determine the presence of previously unknown or unmarked burials. Finally, for several properties, the Draft EIS includes findings when THC has not yet formally concurred with FRA's evaluation of the property's eligibility for listing in the National Register and/ or its assessment of the project's effects. The Draft EIS errs on the side of caution and generally assumes that properties are eligible for listing in the National Register, and that any potential effects will be adverse, unless THC has previously concurred otherwise. If there are properties that FRA now proposes to determine eligible for listing in the National Register, or to treat them as eligible-such as Linfield Elementary (Dallas County site DA.11 Ob)-we request that FRA provide notice of this determination and any appropriate documentation for our review. For historic properties that the Draft EIS proposes a finding of effect that THC has not yet concurred with-for instance, the Cadiz Street Overpass and Underpass (Dallas County site DA.023), where THC requested engineering and architectural plans prior to concurring with FRA'S adverse effect finding, or the Furney Richardson School (Freestone County site FR.016a-g), where THC requested viewshed renderings prior to concurring with FRA's finding of no adverse effect-the subsequent assessment of effects should be detailed in the project PA.</p>	
Caroline Kofstad	2/27/2018	Website	It would really be nice to have this hassle free option to Houston and not sit behind the wheel for what often turns into an almost 6 hour trip. Also, really great that it will reduce emissions with less cars on the road.	Comment noted.
David Kofstad	1/24/2018	Website	Time savings vs. driving 4-5 hours on a good day	Comment noted.
Skyler Korgel	2/17/2018	Website	The Texas Central rail from Houston to Dallas will be an incredible improvement to Texas through the eased facility of travel between the state's two largest cities, improving our infrastructure, creating jobs, attracting the envy of the nation, reduce some congestion on Dallas and Houston roadways, and save lives of those that would normally risk the drive between the two cities. This is a well-thought out project that deserves to be supported and allowed for construction.	Comment noted.
Thomas Korkmas	2/5/2018	Oral	<p>My name is Thomas Korkmas. I live in west Houston. And with all due respect, I don't have a whole lot of respect or confidence in studies because I got flooded out when I was told I wouldn't. If the Army Corps of Engineers decides to flood, you're flooded. It is my opinion that the over 50-year-old technology proposed by TCR is not the best use of a corridor from Dallas to Houston. There is no reason to accept that the project will be profitable or that people will even use it. You've heard that already. I want to explain further. This project is known as a private public international project, as envisioned in the Trans Pacific partnership. How many of you remember that? It was one of the first things that Donald trump killed when he entered office. It is to sell our infrastructure to foreign companies so that they will buy our bonds. It's pretty easy to figure out. If the TCR process fails, there will be an effort to get the government to bail out the investors and then change the use of this project. That is my opinion. A possibility that the effort is to acquire the corridor, and that is the value of the corridor for another use. Is the highest and best use of the corridor high-speed rail?We don't know. Does this have anything to do with the new Interstate 14, which the press has predictably--well, maybe not predictably--understandably not wanting to tell you about, but we are about to have a new interstate highway that goes from east to west from El Paso all the way over to the Texas border across from Leesville. This train will go -- or this project</p>	Refer to ED-1, GN-4, TC-2 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			will go right over Interstate 14. Does this meet Department of Defense criteria? The answer is no. One of the reasons why we have such easy use for -- easy access for railroads has to do with what is found in this document right here. It's an unclassified copy of a Defense Department directive having to do with railroads. You can't use this to move military personnel, military equipment, or anything else. This is the basis for which railroads have the right of eminent domain. It doesn't match that. So I'm going to just skip through this real quick and ask you a question. Who are the investors in this project and what do they do for a living? You answer that question and you'll find out that what I've just laid out to you is the great possibility that what they are trying to do is make a land grab to grab a whole bunch of real estate for a future use that you don't know about because this is a dead duck. To use a metaphor, put a spike in it.	
Nik Koumoundouros	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. Please log on to the site listed below (and ask as many of your friends to do so as well) and repetitively make the negative comments about the rail location cutting through and destroying the ranch. All the time documenting numbers of complaints. We have been advised that if there are significant negative comments (your job) and significant concrete evidence presented (our job) that moving the route off the ranch will have a reasonable chance of success.	Refer to LU-5.
Charles Kowis	2/6/2018	Handwritten	We do not want the bullet railway train. This is bad for environment and what about the noise that make and also bad cattle and wildlife. If you put a fence around it you would mass put land and mass up road and bridges and were the people pipeline and the power lines and cemetery. Poeple that already there and also you have to put up fences all the way around it. We have a work shop right by there. I don't know would be in way are do have to move or not. [Sic] and my brother shop if we half move. Roans Prairie Wrangle Ln. 936-894-2850, 936-825-5896. [Sic].	Refer to CR-6, EU-2, LU-11, NR-1, NR-5, NV-1 and TR-8.
Joshua Kozel	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Frederick Kraft	2/26/2018	Website	I am concerned about the high speed rail project's proposed location in Navarro County near the intersection of 709 and 3194 - splitting the Morgan Legacy Farm. I believe the proposed location will cause significant damage to the environment, wildlife and the water shed of the Morgan Legacy Farm - which I understand is located at the highest elevation in Navarro County. I have personally observed an abundance of wildlife at the Morgan Legacy Farm. I understand that the proposed route will separate the farm's lodge from its rodeo arena, stables and guest houses and I believe that the damage the proposed route will cause to the farm's charitable mission to host and entertain groups like the Salesmanship Club, the staff of Children's Hospital, the Boy Scouts of America and others would be irreparable. I would ask that the 5-7 mile portion of the proposed route scheduled to parallel 3194 be moved north of the existing power lines to lessen the harmful environmental, economic, charitable and historic impact the proposed route will have on the Morgan Legacy Farm.	Refer to LU-5.
Chelsea Kramer	3/5/2018	Oral	Howdy. My name is Chelsie Kramer. Just real briefly, if it was 15 years ago, I'd be getting ready to get my show goats ready at the Houston Livestock Show and Rodeo, so I do empathize with a lot of the testimony that's been given thus far today. However, times change, and I can say that professionally and personally, I support this high-speed train. And today, I'm actually here in a professional capacity to represent the Texas Association of Business. The Texas Association of Business serves as your state chamber of commerce; and more importantly, represents thousands of members across the state. And these members are mainly made up of small business owners. We are the leading	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			voice for all the policy issues affecting business here in Texas. So with that being said, we do support any safe transportation infrastructure improvements and alternatives that will benefit Texas commerce, and also are in favor of projects that will bring good-paying jobs to the state of Texas and create positive economic impact. The high-speed train between Dallas and Houston will create thousands of jobs, inject millions of dollars of investment into the state economy, and potentially generate billions more in economic impact; and therefore, the Texas Association of Business, on behalf of all of our members across the state, are in -- fully support the Texas Central Partners	
Robert Kramp	2/19/2018	Website	We need a better way to get between the Metroplex and Houston than I-45 or a 3 hour flight all in. Two 21st century cities deserve 21st century travel.	Comment noted.
Chris Kratovil	1/17/2018	Website	I am the office managing partner of the Dallas office of a major national law firm. We have over 40 lawyers in our downtown Dallas office, many of whom regularly travel to Houston on business. Indeed, I personally travel to Houston 1-2 times per month. We would be regular users of the Texas Central Dallas-Houston high speed rail. The idea of being able to walk a couple blocks from our office, board a Texas Central train and be in Central Houston ready to conduct business just 90 minutes later has tremendous appeal to me and my colleagues. I believe we would be able to expand our client relationships and our number of engagements in Houston by using Texas Central's high speed rail, and we are excited about the prospect of doing so. Federal Railroad Administration	Refer to GN-7.
Kathy Kray	2/19/2018	Website	I am from the Midwest where trains are used daily. I fully support a rail system as I drive them Houston Dallas route often and think the bullet train is a necessary system.	Comment noted.
Edward Krejci	2/5/2018	Handwritten	How will first responders be properly trained to deal with a HSR incident?	Refer to SS-18.
Mike Krewson	3/1/2018	Website	I feel this project not only helps Waco but Texas as a whole. Jobs, economy and convenience.	Comment noted.
Eliza Krishnan	2/28/2018	Website	I am opposed to the train destroying a culturally, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5.
Peggy and George Krohn	2/5/2018	Letter	much as 8,000 acres) by a private entity is a "forever" taking that once done cannot be reversed regardless of whether the project succeeds or fails. What is the likelihood that a private entity with no prior experience in acquiring a rail system, let alone successfully operating one will succeed. What is Plan B? Business owners along IH-45 and in the small towns of the counties through which the rail will pass will suffer significant economic loss of trade if the rail project pulls as much highway traffic as it must to reach the ridership goal. Where has this impact been identified and quantified? COST/BENEFIT ANALYSIS: The EIS has not demonstrated a significant need for the project. Basic data such as the current number of people who travel between Houston and Dallas per day by car, air, bus or other means is not established. Projecting ridership based on the population growth expected in the metropolitan areas is unrealistic considering the barriers to public access.. The proposed station in Grimes County would appear to have been added to give the appearance of wider access to the rail system, but no realistic estimate was given for boarding at this location. The lack of local (public) access within the outlying counties could have been offset by stops in each county had speed not been the overlying criteria. Commercial, private and charter air transportation provides faster speed at the same or lesser cost; automobiles provide family friendly convenience at much lower cost; rail provides freight transport. All are readily available, easily upgradeable and can be readily accessed by the public. What more can this rail project provide? Based on the social, economic and environmental assessment CONCLUSION: prepared for the Dallas to Houston High-Speed Rail Project proposed by Texas Central Partners LLC, the NO-BUILD ALTERNATIVE is the only logical alternative. COMMENTS ON DRAFT ENVIRONMENTAL STATEMENT TEXAS CENTRAL HIGH-SPEED RAIL - DALLAS TO HOUSTON Thank you for the opportunity to participate in this important process of assessing the impact of this project. At this time, there are still many questions that the environmental statement has touched upon but not fully evaluated. Economic viability of the project is a prime example. Project ownership is another. The "answer sheet" provided touches on a few corporeal issues but begs for more answers. At this point, as a Texas Taxpayer, I would ask that you reinstate the no-build alternative due to lack of verifiable public information and lack of public support for all alternate routes presented at the public hearings. The public would like definitive answers to their concerns.	Refer to BA-4, BA-6, BA-8, BA-12, GN-2, GN-7, NE-1, NE-9, PN-3 and SC-15.
Charly Kronberger	1/12/2018	Email	This proposed HSR will directly affect me as a property owner by tremendously devaluing my property. The proposed line is just a bit over 2 miles away, so my property is out of the condemnation area, and will bear the full brunt of tremendous devaluation. As retirement approaches, the sale of this property that has invaluable sweat equity, is critical to supporting me in my retirement.	Refer to VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Charly Kronberger	2/5/2018	Website	Do not build this HSR. How will potential riders get to the station? They will DRIVE and have to PARK a vehicle. By the time they drive across the city to get on the HSR, they could be half way to the other city! How will potential riders get to the station? They will DRIVE and have to PARK a vehicle. By the time they drive across the city to get on the HSR, they could be half way to the other city!	Refer to GN-6, TR-3, TR-4 and TR-12.
Charly Kronberger	2/5/2018	Website	As proposed, this HSR does not make sense. Granted there may eventually be a need, but it aint there today. And if they build a terminal in Grimes county, but "bullet" aspect will be a mute point. The travel time will decrease.	Refer to PN-3 and TC-4.
Charly Kronberger	2/5/2018	Website	Potential riders will still have to get to a terminal . . . likely by car . . . and will have to pay to park. Just like going to the airport to fly. There is bound to be security that is similar to flying. Likewise, there will be limitations on what you can take with you, just as in air travel. Why would anyone pay a fare that is similar to flying, to ride a train that takes twice as long as air travel? Do not build this HSR. It does not make sense.	Refer to BA-12, GN-6, PN-3, SC-3, SS-9, TR-2, TR-3 and TR-4.
Charly Kronberger	2/5/2018	Website	My husband and I raise sheep on our property . . . these are "pastoral" animals and do not do well in a non-pastoral setting. The train is proposed to be close enough to our property that it will be rendered non-pastoral and our sheep will be in danger.	Refer to NR-1 and SS-2.
Charly Kronberger	2/5/2018	Website	As a hard-working taxpayer, I am alarmed that this proposed HSR could receive RRIF federal government loans. I understand that those are granted without the need for much of a viable business plan . . . and that upon "failure," there is no need to repay these RRIF loans? That is unacceptable! TCR seems to be hiding their business plan. The numbers do not cash flow, and this project as it has been presented appears doomed to failure . . . leaving all taxpayers left to deal with it. Building it is one thing . . . running and maintaining it is another. Where are the REAL numbers?	Refer to GN-4.
Charly Kronberger	2/5/2018	Website	Why / How could a typical family of 4 afford to go to any kind of event / venue by taking this train? Train tickets alone would be nearly \$1,000 and what the heck happens when you get dumped off the train at the other end? There is no infrastructure in place to take you across town to the final destination . . . especially in Houston. There are only so many uber drivers and taxis. There is no inter city lite rail and the buses are kind of a joke . . . I know that I would not take my family on a bus trip across town.	Refer to GN-6, SC-3, TR-3 and TR-4.
Charly Kronberger	2/5/2018	Website	How can a "bullet" train maintain it's true bullet speed if it has to stop half way there? The proposed stop in Grimes county will pretty much eliminate the purported travel time of 90 minutes!	Refer to TC-4.
Charly Kronberger	2/5/2018	Website	Deer, Woodpeckers, Owls, Bobcats and other . . . these are the wild animals in my neighborhood that will be severely devastated by this proposed train. We are their stewards, and this proposed HSR is not needed and is not feasible. Do not build it.	For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Charly Kronberger	2/5/2018	Website	Our community has viable development plans that this train will totally trash. This proposed train will not benefit anyone except the few wealthy proponents that appear to be ready to take the money and run after construction. I have not seen any viable business plan that shows how they will be able to cash flow this albatross after construction is finished.	Refer to LU-3, NE-1 and SC-19.
Charly Kronberger	2/5/2018	Website	Most folks travelling between Houston and Dallas have "stuff" that they need to carry with them. Conference calls are replacing the need for many business people to have to travel back and forth as often . . . I know this first hand as I used to do so in my work. Equipment, Suitcases, pets, Christmas presents, food for potluck dinners . . . all of this and other items are important things and "stuff" that travelers need to pack in their vehicles, and won't be able to take on a HSR. Do not build the HSR . . . not anywhere!	Comment noted.
Charly Kronberger	2/5/2018	Website	Do not build this HSR. What in the world will happen to the millions of people that are proposed to ride this thing? What will they do when they get off the train on the other end? There is no infrastructure to support it!	Refer to GN-6, TR-3, TR-4 and TR-12.
Charly Kronberger	2/5/2018	Website	What / How will PTSD veterans be affected by this HSR? The noise and vibrations will be unbearable for many. Do not build this HSR.	Refer to NV-1 and NV-5.
Charly Kronberger	2/5/2018	Website	I live close to the power line easement, which is in the process of being widened for other's benefit. The trucks that have been working on this project have torn up our roads and the shoulder of our roads, because they are too big to make the turns. Many very large trucks have been lost back in the woods and have created great havoc trying to get back out. Now the county is having to repair our roads. My taxes are going up to pay for this . . . who is gonna pay for the torn up roads that the HSR construction brings? Do not build this HSR, as it is not needed.	Refer to TR-6 and TR-7.
Charly Kronberger	2/5/2018	Website	Environmental impact? Yes. A very detrimental EI. Who is gonna pay for the adverse affect on our livestock? Spooking horses and injured riders . . . hospital and vet bills, and inability to get emergency help when needed. Do not build this HSR. It is not feasible and is not needed.	Refer to NR-1 and SS-23. Section 3.4.5.2.4, Noise and Vibration, HSR Operational Noise Impacts assesses the potential for noise from trains to startle or otherwise impact nearby animals. The noise levels required for this

				effect would only occur within 45 feet of project, inside the fenced right of way where no animals would be permitted.
Charly Kronberger	2/5/2018	Website	Do NOT Build this HRS. Everything that I read from around the world says that it will not cash flow. The population density at either end is not dense enough. There is "nothing" at either end . . . except for the vacant parcel of land in Dallas that the paper happens to own and who stand to "benefit" from a HSR terminal. What about Houston? There is no infrastructure to support the millions of proposed riders getting off at NW Mall. How are they going to get downtown or to the Medical center or to NRG or to Minute Maid or to the soccer stadium or to U of H or Rice or anywhere else? Riding a HSR is a novelty . . . so go to Disneyland and ride the rides there.	Refer to GN-2, GN-4, GN-6, GN-7, GN-9, NE-1, TR-4 and TR-12.
Paul Kronberger	2/5/2018	Oral	Hello. My name is Paul Kronberger. I got a couple of things I want to put into this. When I was in high school, my best friend, his favorite saying was a lie is as good as the truth if you can get somebody to believe it. The railroad group is real good about putting out press releases. They got lots of money, lots of people, lots of pretty pictures. And I don't know if there's any reporters left, but I would challenge them to go out and talk to the real people; don't take this press release they give to you and put it on the news and do that part of it. The other part is this train's going to go through northwest Harris County and Waller County. I lived in this area for 35 years. I remember when there was nothing out here. I was one of the few people that drove in to Houston to work. The city has come to this area. Waller County, we got Daikin with 4900 employees right now. They're looking at another 2,000. We got support people building their buildings and hiring their people to support them. HP's got their people. You know, I talked to real estate people. There's all kinds of stuff on the books. We're going to build this hospital, this big mall-type situation, apartment complexes, all this stuff all in that area where they want to put this dadgum train. And all that stuff's on hold. You know, Waller County's getting ready to boom, and this train has put a stop to all that. You know, and when you put this train in, the sad part about Waller County and northern Harris County, the Western side of the county has got a lot of people that probably can use better jobs, better opportunities, and this train's going to put a wall right through the middle of it and they're going to be left out again. Hempstead is struggling financially, Hempstead School District is struggling, and this thing is not going to help them at all. Don't build the train.	Refer to LU-4, SC-6, SC-11, SC-19, SC-21 and TR-8. Any additional property tax revenues would be applied according to existing taxing agencies within each county, including Hempstead ISD.
Randy Krueger	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Cathy Kuebler	2/16/2018	Website	This train is critical for the continued growth of both cities.	Comment noted.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would *beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community.	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.

			NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle Of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to GN-3, NE-1 and NR-1.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of Jobs, and businesses. But, none will be able to be completed Train Cuts through. which will also be Stifling to All Future Economics Development in this area. HC-4 route through Waller/Harris County: This route is some three miles west Of the original publicly notice route, and changed without any public input from those affected: Waller/Hams County. FRA Failed to Coordinate With The Local Waller County Government. No Build Option Should Be Chosen As The Only Viable Option FOR TEXAS	Refer to BA-3, PI-1, SC-13, SC-19 and TR-8.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS. Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to FP-1, WW-1, WW-2 and WW-8.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to AQ-7, GN-3, LU-4 and NE-1.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR.	Refer to LU-3, LU-4, RF-1 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/HARRIS County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to SC-5 and SC-8.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community Of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY". NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to CR-9.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON HEWLETT PACKARD DATA CENTER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property. FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area. As a resident of Waller/Harris County, I do not feel the "Need and Purpose" of this project has "not" been shown. It does not benefit our Waller County Community in any way. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to SC-11.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, the "Need and purpose" of this project has not been shown to date. A High Speed Train would not be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public	Refer to BA-3, PI-1, PI-8, PN-3, SC-7, SC-19 and SS-23.

			input from those affected. EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. Many of which are used for emergency vehicles that now service the District and provide an 8 — minute response time. This HSR goal is to service from only one city central to the next city central with a possible ONE stop in-between. This HSR will not benefit Waller residents in any way. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely from a Concerned Citizen of Waller/Harris County	
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This Is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile Stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to NR-2, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to NR-1, NR-2, RF-2 and WW-2.
Bella Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT OF PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as wemove from location to location within OUT community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! NO one has considered the lives of the residents that live in our community, or our safety Of an explosion, from the speed Of the train. Again FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen Of Waller/Harris County	Refer to EU-2, EU-6, EU-7 and PI-1.
Bella Kuhn	2/6/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. 			County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.
Bella Kuhn	2/6/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Bella Kuhn	2/6/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to NR-1, NR-2, RF-2 and WW-2.
Bella Kuhn	2/6/2018	Handwritten	REFERENCE: IMPACT OF PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as wemove from location to location within OUT community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! NO one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to EU-2, EU-6, EU-7 and PI-1.
Carson Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Carson Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to AQ-7, GN-3, LU-4 and NE-1.

			<p>As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR.</p> <p>Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land.</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS</p> <p>Sincerely From a Concerned Resident of Waller/Harris County.</p>	
Carson Kuhn	2/5/2018	Handwritten	<p>REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE</p> <p>NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY</p> <p>Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train.</p> <p>I feel our family has supplied generations to come with the lifestyle Of animal life, which so many never benefit from.</p> <p>As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world.</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS</p> <p>Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to GN-3, NE-1 and NR-1.
Carson Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON HISTORICAL SITES</p> <p>NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY</p> <p>Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY".</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS</p> <p>Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to CR-9.
Carson Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON HEWLETT PACKARD DATA CENTER</p> <p>NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY</p> <p>Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property.</p> <p>FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area.</p> <p>As a resident of Waller/Harris County, I do not feel the "Need and Purpose" of this project has "not" been shown. It does not benefit our Waller County Community in any way.</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS</p> <p>Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to PI-1, PN-3 and SC-11.
Carson Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200</p> <p>NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY</p> <p>As a resident of the Waller/Harris County Area, the "Need and purpose" of this project has not been shown to date. A High Speed Train would not be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public input from those affected.</p> <p>EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. 			<p>the speed of the train. Again FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	
Carson Kuhn	2/6/2018	Handwritten	<p>REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to NR-1, NR-2, RF-2 and WW-9.
Chris Kuhn	2/5/2018	Handwritten	<p>Reference: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would *beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.
Chris Kuhn	2/5/2018	Handwritten	<p>REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle Of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to GN-3, NE-1 and NR-1.
Chris Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of Jobs, and businesses. But, none will be able to be completed Train Cuts through. which will also be Stifling to All Future Economics Development in this area. HC-4 route through Waller/Harris County: This route is some three miles west Of the original publicly notice route, and changed without any public input from those affected: Waller/Hams County. 			No Build Option Should Be Chosen As The Only Viable Option FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	
Chris Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS. Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to FP-1, WW-1, WW-2 and WW-8.
Chris Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to AQ-7, GN-3, LU-4 and NE-1.
Chris Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to LU-3, LU-4, RF-1 and VA-1.
Chris Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to SC-5 and SC-8.
Chris Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community Of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well.	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.

Chris Kuhn	2/6/2018	Oral	<p>So I guess all this is going to be in response to the EIS, right? Or the draft EIS. And I guess my question is -- is they talk about the profitability of the project and they talk about that it's going to increase the tax dollars in the area and my question is -- or concern potentially is that there's already taxes being collected on the airfare between the two and they're expecting or hoping to get the airfare riders on the train. So I don't quite see or understand how we're going to get additional tax money from this project due to the fact that we're just stealing money from Peter to pay Paul, basically. So I still don't understand how this will be a gain. You know, I do have children within the county and we live out in the remote areas of the county. And so -- so getting first responders to our house is already a challenge. So by adding a -- a beam that would incur or inhibit the police or the emergency response from making it to our homes is definitely a concern. I don't want to increase our response time by the police. There's a lot of concerns, obviously, but those -- those are some of my larger concerns. I -- I mean, this will definitely impact the value of my home, which I have put everything into. I would hate to see that all of a sudden all my savings is no longer worth anything due to the value of my home being depreciated. And I guess that's all. I guess that's all. Thank you</p>	Refer to SS-23 and VA-1.
Chris Kuhn	2/6/2018	Oral	<p>So I'm here tonight to state no high-speed rail for Texas, and we need to save our Texas heritage and also save our land. But my family is in the indirect path of the rail and we're worried about the major impact due to the rail being our land, our homes, our property values, our tax base. We're concerned about the additional flooding in the area. We have lots of show animals and we're concerned about the impact on the animals with the vibrations. Emergency services is a big concern. My elderly grandmother lives with us and we're concerned about the response time due to the -- emergency response time. Our school district will be cut in half with the rail, which was a concern. We are worried about the unsightly, you know, visual impact of the rail itself and that we will be able to see it from our home and that will be our new view instead of the big, pretty fields. The project doesn't make any sense at all to us. We think this project will be a financial, environmental and cultural disaster for Texas. This project has been proven negative for cash flow from the beginning. There's not any private money. We know the next step is to apply for federal loans. We, the taxpayers, will pay that federal loan back. So the project will directly -- will not directly benefit the Waller area and the area that I live in and/or -- nor will it benefit the landowners in any way. Why would they ask the rural committee to suffer from the benefit of the large -- the large cities? And in conclusion, I think that the no rail option should be the only option chosen -- the only viable option for the high speed is the no build. Thank you.</p>	Refer to AS-1, BA-6, FP-1, GN-4, NE-1, NE-9, NR-1, SC-6, SC-16, SS-19, SS-23 and VA-1.

HC-4 route through Waller/Harris County: This route is some three miles west of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA Failed To Coordinate With The Local Waller County Government. No Build Option Should Be Chosen As The Only Viable Option FOR TEXAS	Refer to PI-1 and TR-8.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS.	Refer to FP-1, WW-1, WW-2 and WW-8.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 -a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Paikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS	Refer to AQ-7, GN-3, LU-4 and NE-1.
Chris Kuhn	2/6/2018	Website	IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, i feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to LU-3, LU-4, RF-1 and VA-1.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/HARRIS County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to SC-5.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY would be a huge devastating issue for the residents, and community Of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailling, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to AS-1, NV-1, SS-12 and SS-13.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON HISTORICAL SITES NO MGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community, we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED ro COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY". NO BUILD SHOULD BE CHOSEN AS THE OPTION FOR TEXAS	Refer to CR-3, CR-9, CR-11 and PI-1.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, the "Need and Purpose" of this project has not been shown to date. A High Speed Train would not	Refer to LU-4, PN-3, SC-5, SS-19, SC-23, TR-1, TR-7 and TR-8.

			be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public input from those affected. EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. Many of which are used for emergency vehicles that now service the District and provide an 8 — minute response time. This HSR goal is to service from only one city central to the next city central with a possible ONE stop in-between. This HSR will not benefit Waller residents in anyway. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident Of Waller/Harris County, am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs A 200 MPH train barreling within one miles Of this migratory bird sanctuaw is going to cause bird collisions and accidents. This is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile stone down, with an un-needed, un-wanted high speed rail. How can Waller County grow with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to NR-2, RF-4, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON WATER NO MGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet Of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONL Y VIABLE OPTION FOR TEXAS	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE ON FOR TEXAS	Refer to NR-1, NR-2, RF-2 and WW-2.
Chris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! No one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again, FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!!!! NO BUILD IS THE ONLY VIABLE OPTION FOR TEXAS	Refer to EU-2, EU-6, EU-7 and PI-1.
Chris Kuhn	2/21/2018	Email	REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value Of everyone's property, which is devastating to each individual and or piece of property of each resident. Chris Kuhn	2/21/2018	Email	As the public requested, or should I say: Houston Representatives that are in favor Of the High Speed Rail requested, you provided a meeting location, for the "masses" that were "in favor of" the High Speed Rail. FRA, I heard each speech, and I heard the points that best fit into their needs. So by hearing those points, please, please, place the rail along Interstate 1-45. Let them replace the needed lanes with the High Speed Rail. They want it, if, and when it fails, they can put up with the financial issues, the unsightly view Of the rails, deal with the unpleasant side effects, deal with the additional water issues (which will happen), deal with safety, emergencies, safety of their children, closed roads, etc., etc., etc. Since it was clearly noted at this Houston meeting, the "millennial" don't want to drive, (we know they also feel they deserve the world served on a silver platter), and they are in favor of this boondoggle, let them deal on a every 1 5 minute basis Of their world being turned upside down due to a train passing through at a un-godly speed. We the "rural" community are happy with our world, our land, our view, our safety, our homesteads. We Waller County will not benefit from this project, only the problems associated with this project.	Refer to BA-9, NE-9, PI-10 and SC-19.

Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Chris Kuhn	2/21/2018	Website	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of jobs, and businesses. But, none will be able to be completed If The High Speed Train Cuts through, which will also be Stifling to All Future Economics Development in this area. HC4 route through Waller/Harris County: This route is some three miles west of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA Failed To Coordinate With The Local Waller County Government. No Build Option Should Be Chosen As The only Viable Option FOR TEXAS	Refer to PI-1 and TR-8.
Chris Kuhn	3/5/2018	Oral	So I'm here tonight to state no high-speed rail for Texas, and we need to save our Texas heritage and also save our land. But my family is in the indirect path of the rail and we're worried about the major impact due to the rail being our land, our homes, our property values, our tax base. We're concerned about the additional flooding in the area. We have lots of show animals and we're concerned about the impact on the animals with the vibrations. Emergency services is a big concern. My elderly grandmother lives with us and we're concerned about the response time due to the -- emergency response time. Our school district will be cut in half with the rail, which was a concern. We are worried about the unsightly, you know, visual impact of the rail itself and that we will be able to see it from our home and that will be our new view instead of the big, pretty fields. The project doesn't make any sense at all to us. We think this project will be a financial, environmental and cultural disaster for Texas. This project has been proven negative for cash flow from the beginning. There's not any private money. We know the next step is to apply for federal loans. We, the taxpayers, will pay that federal loan back. So the project will directly -- will not directly benefit the Waller area and the area that I live in and/or nor will it benefit the landowners in any way. Why would they ask the rural committee to suffer from the benefit of the large -- the large cities? And in conclusion, I think that the no rail option should be the only option chosen -- the only viable option for the high speed is the no build. Thank you.	Refer to AS-1, BA-6, FP-1, GN-4, NE-1, NE-9, NR-1, SC-6, SC-19, SS-16, SS-23 and VA-1.
Christopher Kuhn	1/31/2018	Letter	I am reading "On Track" dated January 2018 published and mailed to me by you. I Object. First: I Object that the governments that Steal 3/4ths Of what I make are using a portion Of that to propagandize Second: The HSR is a "private" initiative. Without government, it has chance because it requires eminent Why does some of the 3/4ths Of the fruits Of my labor go toward you doing that when I have no way what-so-ever Of benefiting from it and it in no way what-so-ever is it a threat to my safety? Conclusion: Iterative secession' The time has corne. First, Texas must seceed from this fraudulently formed and continually corrupted union. Then Grimes county should seceed from Texas. Then I should seceed from Grimes county. Of course that can't happen. They tried it in the 1860s murdered thousands of boys and girls and their mothers and fathers and families destroyed their property put what remained in bondage and servatude. And why? Because they just wanted there own space and to be out out yours. I think we will do better this time. By the way why did WTC7 fall down? "In disgust" doesn't come close to my preferred valediction here. Why is it needed? If it is needed, what makes you think it is even close to a good Way, let alone the best way, to accomplish its (implied but never stated or justified) goals. Now I will dissect your propaganda: 1. Why is the FRA issuing the EIS? The FRA is not a party to the project. They are a government (i.e.	Refer to ED-2, GN-4, NE-1, NE-2, PI-1, PI-7 and PN-3.

			criminal) regulator (i.e. enforcer). They can have no impact Of any kind on environment or anything else 11. Has there ever been a case where a public comment has had any effect what you moronic worthless bureaucrats do? It hasn't has it! Only rioting in the streets gets your attention and then only when they're carrying pots Of hot tar and feather pillows. 12. You say you will respond to every comment received as part of this preparation. I have seen your robotic responses so these words ring empty. Without an answer to each Of these enumerated objections, I will consider you to have not responded to me. And should you respond, then that "opens the conversation". It goes both ways. I have every bit as much standing in this as the TCR more actually. I "am" a person. They are just a piece of paper. 13. Look back at what it took to create your FRA in the first place. It took absolutely nothing. And after that you are going to "issue a Record Of Decision (ROD) on the project"? Since you are a worthless agency, what is your decision worth?	
Harlie Kuhn	2/5/2018	Handwritten	<p>REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY</p> <p>Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Lacy Kuhn	1/31/2018	Letter	Dear Mr. Wright: The purpose of this letter is to request a ninety-day extension of the comment period for the pending Notice Of Availability Dallas to Houston High Speed Rail draft EIS, which was announced in the Federal Register on December u, 2017 at 82 FR 60723. This request to extend the comment period is made on behalf of Waller County, and the Waller County Sub-Regional Planning Commission ("WCSRPC"), a sub-regional planning organization that is comprised of several governmental organizations, including Waller County, in addition to the cities of Hempstead, Pine Island, Prairie View, Waller, Katy, and two school districts - Waller Independent School District and Hempstead School District, and a concerned land owner in the Waller/Harris County Area, Paula A. Kuhn. Both WCSRPC and WCAG have been involved with Waller County Area in responding to this project since 2014. All of these entities together represent thousands of property owners, including myself, business owners, and several elected officials from the Waller/Harris County area who share the belief that using eminent domain for a project that has questionable feasibility and presents a threat to taxpayers, like myself, in the event that tax-subsidized loans are used to construct this project. I am making this request to allow adequate time for the public, including Waller County, WCSRPC, and WCAG, and other local governments, organizations, and individual land owners, to properly review and provide usefr_l and meaningful comments on the Federal Railroad Administrations proposed Dallas to Houston High Speed Rail draft EIS. The current Notice Of Availability, which was published on December 22, 2017, allows a minimal 60-day comment period, With a deadline Of February 20, 2018. Meanwhile the US Army Corp of Engineers has published Public Notice for two wetland projects permit applications under Section 404 of the Clean Water Act for this same project, with exactly the truncated deadline for public comments of February 20, 2018. These simultaneous, short comment periods, which commended during the holidays, allow insufficient time for meaningful public participation in the NEPA process. NEPA requires that an agency prepare an EIS for any "Major Federal action significantly affecting the quality of the human environment" and EIS is a procedural obligation designed to assure that agencies give propeny consideration to the environmental consequences of their actions. The EISa1so insures that the public is informed about the environmental impact of proposed agency actions." To accomplish this purpose, NEPA regulations require that the agency prepare and submit public comment a draft EIS, and that the FRA takes into account those public comments in preparing the final	Refer to PI-3, PI-7 and PI-11.

			EIS. In addition to the inadequate time the FRA has allowed for public comment on the draft EIS, the process has been incredibly confusing and has changed so many times that full public participation has been nearly impossible. Notices that have been published by AECOM, the environmental contractor, listing locations, dates and times for public hearings in each of the 10 impacted counties, have With changes to the venues for Madison and Grimes County as listed in the January issue of On Tract, The Dallas to Houston HSR newsletter, and those changes have not been reflected on in the FRA's website as of January 19, Many property owners, including myself and many of my friends, own property in multiple impacted counties. The current public hearing schedule contains overlapping meetings for several counties and some will occur at the same time. This does not allow all landowners the opportunity to participate at the hearing for all of the counties that they own land in. Accordingly, on behalf Of myself a concerned citizen Of County , and particularly Waller County, WCSRPC and WCAG, please except this request for a ninety-day extension of the comment period to May z', 2018 on this critically important EIS. A Concerned Citizen of Waller/Harris County, Mrs. Lacy Kuhn (Mail; the [...] [...]	
Lacy Kuhn	2/5/2018	Handwritten	Reference: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would *beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.
Lacy Kuhn	2/5/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPL Y OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle Of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to GN-3, NE-1 and NR-1.
Lacy Kuhn	2/5/2018	Handwritten	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of Jobs, and businesses. But, none will be able to be completed Train Cuts through. which will also be Stifling to All Future Economics Development in this area. HC-4 route through Waller/Harris County: This route is some three miles west Of the original publicly notice route, and changed without any public input from those affected: Waller/Hams County. FRA Failed to Coordinate With The Local Waller County Government. No Build Option Should Be Chosen As The Only Viable Option FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County. 			As our community grows, with progress, why tear each mile Stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.
Lacy Kuhn	2/6/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Lacy Kuhn	2/6/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to NR-1, NR-2, RF-2 and WW-2.
Lacy Kuhn	2/6/2018	Handwritten	REFERENCE: IMPACT OF PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as wemove from location to location within OUT community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! NO one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to EU-2, EU-6, EU-7 and PI-1.
Paris Kuhn	2/6/2018	Letter	As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR.	Refer to FP-1, WW-1, WW-2 and WW-8.
Paris Kuhn	2/6/2018	Website	REFERENCE: FARM AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH, PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/HarHs County supplies numerous benefits as the pleasant viewing Of the farm animals, as well as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big Source Of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, 90 minutes due to the High Speed Train. our family has supplied generations to come with the lifestyle of animal life, which so many never beneat from. As we an know THE FEASIBILITY OF THE PROPOSED MGH SPEED RAIL, The Reason Foundation, concludes that the proposed could lose over \$500 Million a year. stop this madness, let todays, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to NR-1.
Paris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more doable, that will bring more residents to this area, as well of jobs, and businesses. But, none will be able to be completed If The High Speed Train Cuts through, which will also be Stifling to All Future Economics Development in this area. HC-4 route through Waller/Harris County: This route is some three miles west of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA Failed To Coordinate With the Local Waller County Government. No Build Option Should Be Chosen As The Only Viable Option For Texas.	Refer to PI-1 and TR-8.

Paris Kuhn	2/6/2018		REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. OPTION FOR TEXAS.	Refer to FP-1, WW-1, WW-2 and WW-8.
Paris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 -a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Paikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS	Refer to AQ-7, GN-3, LU-4 and NE-1.
Paris Kuhn	2/6/2018	Website	IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, i feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to LU-3, LU-4, RF-1 and VA-1.
Paris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/HARRIS County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to SC-5 and SC-8.
Paris Kuhn	2/6/2018	Website	REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES. LAND. HOMESTEAD. PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the Services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed coordinate with the local Waller County Government, and it is obvious it wou beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surroundirw homes in the close proximity of the proposed route. This proposed route Of HSRs goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in any way. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS	Refer to NV-5, PI-1, SC-19, SS-1, SS-12, SS-13, SS-23 and VA-1.
Paris Kuhn	2/6/2018	Website	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY would be a huge devastating issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight Of Waller/Harris County. HSR'S are known for derailling, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE FOR TEXAS	Refer to AS-1, NV-1, NV-5, SS-1, SS-12, SS-13 and TC-4.
Paris Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community, we are very fortunate to be able to drive by, admire, and learn the history of this community Of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED ro COORDINATE WITH THE LOCAL WALLER	Refer to CR-3, CR-9, CR-11 and PI-1.

Paula Kuhn	1/30/2018	Email	Request or Extension of Comment Period on Draft EIS The purpose Of this letter is to request a ninety-day extension Of the comment period for the pending Notice Of Availability Dallas to Houston High Speed Rail draft EIS, which was announced in the Federal Register on December e, 2017 at 82 FR 60723. This request to extend the comment period is made on behalf of Waller County, and the Waller County Sub-Regional Planning Commission ("WCSRPC"), a sub-regional planning organization that is comprised Of several governmental organizations, including Waller County, in addition to the cities Of Hempstead, Pine Island, Prairie View, Waller, Katy, and two school districts -- Waller Independent School District and Hempstead School District, and a concerned land owner in the Waller/Harris County Area, Paula A. Kuhn. Both WCSRPC and WCAG have been involved With Waller County Area in responding to this project since 2014. All of these entities together represent thousands of property owners, including myself, business owners, and several elected officials from the Waller/ Harris County area who share the belief that using eminent domain for a project that has questionable feasibility and presents a threat to taxpayers, like myself, in the event that tax-subsidized loans are used to construct this project. I am making this request to allow adequate time for the public, including Waller County, WCSRPC, and WCAG, and other local governments, organizations, and individual land owners, to properly review and provide useful and meaningful comments on the Federal Railroad Administrations proposed Dallas to Houston High Speed Rail draft EIS. The current Notice Of Availability, which was published on December 22, 2017, allows a minimal 60\8226 day comment period, with a deadline of February 20,	Refer to NE-6, PI-3, PI-7 and PI-11.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>2018. Meanwhile the U.S. Army Corp of Engineers has published Public Notice for two wetland projects permit applications under Section 404 Of the Clean Water Act for this same project, With exactly the truncated deadline for public comments of February 20, 2018. These simultaneous, short comment periods, which commended during the holidays, allow insufficient time for meaningful public participation in the NEPA process. NEPA requires that an agency prepare an EIS for any "Major Federal action significantly affecting the quality of the human environment" and "The EIS is a procedural obligation designed to assure that agencies give property consideration to the environmental consequences Of their actions. The EIS also insures that the public is informed about the environmental impact of proposed agency actions." To accomplish this purpose, NEPA regulations require that the agency prepare and submit for public comment a draft EIS, and that the FRA takes into account those public comments in preparing the final EIS. In addition to the inadequate time the FRA has allowed for public comment on the draft EIS, the process has been incredibly confusing and has changed so many times that full public participation has been nearly impossible. Notices that have been published by AECOM, the environmental contractor, listing locations, dates and times for public hearings in each of the 'o impacted counties, have conflicted with changes to the venues for Madison and Grimes County as listed in the January issue of On Tract, The Dallas to Houston HSR newsletter, and those changes have not been reflected on in the FRA's website as of January 19, 2018. Many property owners, including myself and many of my friends, own property in multiple impacted counties. The current public hearing schedule contains overlapping meetings for several counties and some Will occur at the same time. This does not allow all landowners the opportunity to participate at the hearing for all of the counties that they own land in. Accordingly, on behalf of myself a concerned citizen of Waller/Harris County, and particularly Waller County, WCSRPC and WCAG, please except this request for a ninety-day extension of the comment period to May 21, 2018 on this critically important EIS.</p>	
Paula Kuhn	1/31/2018	Letter	<p>REFERENCE: Request for Extension of Comment Period on Draft EIS Dear Mr. Wright: The purpose of this letter is to request a ninety-day extension of the comment period for the pending Notice of Availability Dallas to Houston High Speed Rail draft EIS, which was announced in the Federal Register on December 22, 2017 at 82 FR 60723. This request to extend the comment period is made on behalf of Waller County, and the Waller County Sub-Regional Planning Commission ("WCSRPC"), a sub-regional planning organization that is comprised of several governmental organizations, including Waller County, in addition to the cities of Hempstead, Pine Island, Prairie View, Waller, Katy, and two school districts - Waller Independent School District and Hempstead School District, and a concerned land owner in the Waller/Harris County Area, Paula A. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS. Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to FP-1, WW-1, WW-2 and WW-8.
Paula Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to AQ-7, GN-3, LU-4 and NE-1.
Paula Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.</p>	Refer to LU-3, LU-4, RF-1 and VA-1.
Paula Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.</p>	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Paula Kuhn	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY".</p>	Refer to CR-9.

Paula Kuhn	2/6/2018	Oral	Good evening. My name is Paula Kuhn. I am here to state: No high-speed rail for Texas. Save our Texas heritage. Save our land. My family is the Kuhns, and as well as all of our neighbors, we are worried about the major impact this high-speed train will have on our land, on our homes, on or property values, tax bases, the additional flooding in our area, all the show cattle and lambs, all of our livestock, emergency services for ourself and our elderly, independent school districts, the safety of all of our children with the bus crossings, quality of life, public safety in general, the unsightly visual of the rail itself, the impact felt from the rail itself. This project makes no sense. This project will be a financial, environmental, and cultural disaster for Texas. This project has been proven negative on cash flow from the beginning, not enough private money. We all know that the next step will be to apply for federal loans. We, the taxpayer, will pay. FRA, you are wanting to sell our Texas soil, our heritage, to the Japanese investors who have proven not to be successful again and again. To the Reason Foundation analysis and article, "Texas High-Speed Rail, Caution Ahead," was just published February the 6th, 2017, less than a year ago, in which they conclude the proposed high-speed rail will lose over \$500 million. Please hear our cry. Save our Texas heritage, save our land. In conclusion, the no-build option will be chosen for this project. Thank you.	Refer to FP-1, FP-4, GN-3, GN-4, LU-11, NE-1, NE-9, SC-6, SC-7, SC-8, SC-19, SS-1, SS-23 and VA-1.
Paula Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, the "Need and Purpose" of this project has not been shown to date. A High Speed Train would not be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public input from those affected. EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. Many of which are used for emergency vehicles that now service the District and provide an 8 - minute response time. This HSR goal is to service from only one city central to the next city central with a possible ONE stop in-between. This HSR will not benefit Waller residents in any way. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Refer to BA-8, LU-4, PI-1, PN-3, SC-5, SC-19 and SS-23.
Paula Kuhn	2/6/2018	Website	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Quality of Life would be a huge devastating Issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye of Waller/Harris County. HSR's are known for derailing, and that would add devastating Issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents In that existing surrounding area, as well. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the route.</p> <p>This proposed route of HSR's goal is to service from only city central to the next city central with a possible one stop in-between. This HSR will not benefit one resident in any way. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community.</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS</p> <p>Sincerely From a Concerned Citizen of Waller/Harris County</p>	Refer to NV-5, PI-1 and VA-1.
Paula A Kuhn	2/6/2018	Website	<p>NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY</p> <p>I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting.</p> <p>The route of the HSR cuts through and will destroy the North end of one of the major wetlands in this region, where duck hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN.</p> <p>Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!!!</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS</p>	Refer to NR-1, NR-2, RF-2 and WW-2.
Paula A Kuhn	2/6/2018	Website	<p>Our homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as well as the high dollar show lambs, my family enjoys on a day to day basis. Each one of these is a big part of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the high-speed train. I feel our family has supplied generations to come with the lifestyle of animal life, which so many never benefit from. As we know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high-speed rail project could lose over \$500 million a year. Stop madness, let today's, tomorrow's, and future generations enjoy this lifestyle of farm of nature, land and animals, which so many miss in today's world. No build option should be chosen as the only viable option for Texas.</p> <p>Sincerely From a Concerned Citizen of Waller/Harris County</p>	Refer to GN-3 and NR-1.
Paula A Kuhn	2/6/2018	Website	<p>I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more doable, that will bring more residents to this area, as well as jobs, and businesses. But, none will be able to be completed if the high speed train cuts through, which will also be stifling to all future economic development in this area.</p> <p>HC-4 route through Waller/Harris County: This route is some three miles west of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA failed to coordinate with the local Waller County government. No build options should be chosen as the only viable option for Texas.</p>	Refer to PI-1, TR-1 and TR-8.
Paula A Kuhn	2/6/2018	Website	<p>NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!!! No one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again, FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS</p>	Refer to EU-2, EU-6, EU-7 and PI-1.

			can Waller County grow with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS	Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.
Paula A Kuhn	2/25/2018	Email	As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents tha	Refer to LU-3, LU-4, RF-1 and VA-1.
Paula A Kuhn	2/25/2018	Email	Today in our community, we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps Of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY".	Refer to CR-9.
Paula A Kuhn	2/25/2018	Email	"Quality of Life", would be a huge devastating issue for the residents, and community Of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns Of safety for our Waller/Harris County residents in that existing surrounding area, as well.	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Paula A Kuhn	2/25/2018	Website	REFERENCE: IMPACT ON PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! NO one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again, FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY NO BUILD OPTION SHOULD BE CHOSEN AS THE OPTION FOR TEXAS	Refer to EU-2, EU-6 and EU-7.
Paula A Kuhn	3/6/2018	Email	I guess last nights meeting left me very disappointed in how the FRA operates. Please refer to attachment.	Refer to PI-6.
Paula A. Kuhn	2/6/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to GN-3, NE-1 and NR-1.
Paula A. Kuhn	2/6/2018	Website	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of jobs, and businesses. But, none will be able to be completed If The High Speed Train Cuts through, which will also be Stifling to All Future Economics Development in this area. HC4 route through Waller/Harris County: This route is some three miles west of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA Failed To Coordinate With The Local Waller County Government. No Build Option Should Be Chosen As The only Viable Option FOR TEXAS	Refer to PI-1 and TR-8.
Chris Kuhn	2/6/2018	Oral	So I guess all this is going to be in response to the EIS, right? Or the draft EIS. And I guess my question is -- is they talk about the profitability of the project and they talk about that it's going to increase the tax dollars in the area and my question is -- or concern potentially is that there's already taxes being collected on the airfare between the two and they're expecting or hoping to get the airfare riders on the train. So I don't quite see or understand how we're going to get additional tax money from this project due to the fact that we're just stealing money from Peter to pay Paul, basically. So I still don't understand how this will be a gain. You know, I do have children within the county and we live out in the remote areas of the county.	Refer to PN-4.

Richard Kuntz	2/16/2018	Website	I support the project and the projected alignment. It will greatly decrease the environmental impacts of auto and truck congestion, and ultimately lead to more dense housing patterns which also reduces environmental impact in urbanized areas. I am a member of the Texas Bar and frequently take business and sometimes pleasure trips in the area served by the project.	Comment noted.

Gary L.	1/29/2018	Letter	<p>1. Concern about Texas counties, Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and Wheeler. Endangered species-bald eagles, monarch butterfly, wood pecker, passenger pigeons, red wolf, gray wolf, migratory game birds, wood stork, Texas horn lizard, Brazos water snake, Houston toad, white face ibis, interior least tern, Cagle's map turtle, Ouachita, rock pocket mussel, including wildflowers of large fruited sand verbena, Navasota Indie tresses.</p> <p>2. Concerns about water shed impact of flow and drainage of water in flood event.</p> <p>3. Concerns about soil erosion.</p> <p>4. Concerns about livestock reproduction due to vibration and noise.</p> <p>5. Noise pollution.</p> <p>6. Re-routing roads and closing roads that are easier access for emergency situation.</p> <p>7. Electromagnetic currents that "High Speed Rail" radiates.</p>	<p>Refer to NR-1, NR-2, NR-3, NR-4, NR-5, SG-1, SS-23, WW-1 and WW-2.</p> <p>Passenger Pigeons are extinct. The Red Wolf and Gray Wolf are extirpated from Texas. The Monarch Butterfly is currently "Under Review" for listing by FWS and is not currently a protected species. Other species mentioned were assessed in Table 3.6-8: LSFV Habitat by Segment except for those not listed by TPWD or FWS such as the Brazos water snake, Cagle's Map Turtle, Ouachita, and Rock-Pocket Mussel. The Project does not radiate electromagnetic currents. Rather, the electric current used to power the Project does generate electromagnetic fields (EMFs), as discussed in Section 3.14.1, Socioeconomics and Community Facilities, Introduction. As discussed in Section 3.15.4, Electromagnetic Fields, Methodology: "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels.</p>
Anna Marie La Porte	2/6/2018	Website	<p>HSR will negatively impact every rural county in its path. Our way of life will be completely destroyed, including deer, horses and cattle. Our property value will be zero. We have worked all of our lives to have a peaceful retirement. Every rural county will pay the price, without receiving any benefit. This is immoral, unethical and wrong on any level.</p>	<p>Comment noted.</p>
Brandy Laakso	3/9/2018	Website	<p>I think this is an excellent idea and would significantly help reduce emissions in the future for commuters providing alternatives to air and car travel between two Texas hubs.</p>	<p>Comment noted.</p>
Brian LaFonte	3/9/2018	Website	<p>I do not want this project to move forward. We have an education budget shortfall in this state and we cannot afford to bail out any business that fails to pay for this train. Also, the state should not use the power of eminent domain for a private company.</p>	<p>Refer to ED-1, GN-5 and SC-19.</p>
Lynne Lager	2/5/2018	Handwritten	<p>REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY</p> <p>This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would not be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community.</p> <p>NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS</p> <p>Sincerely From a Concerned Citizen of Waller/Harris County.</p>	<p>Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.</p>

			NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	
Lynne Lager	2/6/2018	Handwritten	REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to LU-3, LU-4, RF-1 and VA-1.
Lynne Lager	2/6/2018	Handwritten	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to AQ-7, GN-3, LU-4 and NE-1.
Lynne Lager	2/6/2018	Handwritten	REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS. Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to FP-1, WW-1, WW-2 and WW-8.
Lynne Lager	2/6/2018	Handwritten	REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would not be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.
Lynne Lager	2/6/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting.	Refer to NR-1, NR-2, RF-2 and WW-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	
Lynne Lager	2/6/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Lynne Lager	2/6/2018	Website	REFERENCE: IMPACT ON PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! No one has considered the lives of the residents that live in our Community, or our safety of an explosion, from the speed of the train.	Refer to EU-2, EU-6, EU-7 and PI-1.
Lynne Lager	2/6/2018	Website	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more doable, that will bring more residents to this area, as well of Jobs, and businesses. But, none will be able to be completed Train Cuts through. which will also be Stifling to All Future Economics Development in this area. The route through Waller/Harris County: This route is some three miles west of the original publicly notice route, and changed without any public Input from those affected: Waller/Harris County. FRA Failed To Coordinate With The Local Waller County Government. No Build Option Should Be Chosen FOR TEXAS As The Only Viable Option	Refer to BA-3, PI-1 and TR-8.
Lynne Lager	2/6/2018	Website	REFERENCE: IMPACT ON PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! Stephen Laird	2/20/2018	Website	I do not support the dallas to houston high-speed rail, for it will directly impact my family and I. The high-speed rail will split our family land in half, rendering it useless to us. This will be hard because we make a portion of the income from the land.	Refer to ED-2 and LU-11.
Mark Lairson	3/5/2018	Website	I sure hope they build this train. It would be the greatest thing that happened to Texas in this century, especially considering all the red [sic]. I'm a native Houstonian, born here in Houston in 1955. Hope it happens in my lifetime.	Comment noted.
Brent Lamb	2/16/2018	Website	Congestion on I-45 between Houston and Dallas is so bad that driving times are growing longer. Approximately 50,000 people commute between Dallas and Houston each week to work. This would be a great way to travel to Texas A&M University events which cause congestion on US 290 and Highway 6 to College Station. Texas is ready to make this project a reality.	Comment noted.
Tom Lambert (Metropolitan Transport Authority of Harris County)	3/5/2018	Oral	Thank you very much. My name is Tom Lambert. I'm the President and Chief Executive Officer of the Metropolitan Transport Authority of Harris County, fondly known as Houston Metro. Let me thank the Federal Railroad Administration for having this hearing tonight and giving the community an opportunity to comment and give feedback on a project that we think is very instrumental to bring great economic value to the state and to our region. So we're excited to be here tonight. The plan to connect our state with high-speed rail is very exciting. We look forward to working with Texas Central Railway on this most important project. This is just the kind of bold and transformative change we need for our region and state to ensure we maintain our competitive edge. We're already working in Metro on how to redesign our local system to make sure that we're maintaining a system of multi-modal to really serve the growing region. And as you heard, our region is expected to grow to 10.4 million by 2040; and by 2025, the City of Houston will bypass the City of Chicago, becoming the third-largest city in the United States. If you look at unincorporated Harris County, and if it were a city today, and Houston being the fourth-largest city today, unincorporated Harris County would be the fifth-largest city. This is about looking at opportunities to move people in this state. And when we began talking to our community about updating our plan, there are four major themes we're hearing that I want to share tonight, because I think there's some similarities to the Texas Central Railway project. The four major things we're hearing is the community wants more connections; they want improved speed and reliability; they want improved customer experience; and they want to make sure that we're all using new around emerging technologies in the transportation system. Those things fall in line with Texas Central Railway's project. We know	Comment noted.

			that the efficient movement of goods, services, and people is critical to a strong Texas economy. When we look at linking high-speed rail to Metro's system, you can just imagine the type of economic opportunity; but more importantly, the multi-modal connections will provide people in this region to go to employment centers, to education, to all the things we need to do to make sure we're thriving as a community. We're looking ahead to a population that continues to grow. How do you keep up with that growth? Well, you keep up by planning, investing, and developing that infrastructure today for tomorrow. And we're excited to be a part of working with that, the City, Texas Central Railway, Harris County, the Federal Railroad Administration. We look forward to working this project forward	
Linda LaMotte	2/16/2018	Website	I voted for the Rail Project 2017 and will continue Voting for this Rail Project. This is excellent for the total outcome of the environmental projection for the future. Saving animal wildlife the air water supply and most important human lives! 1961 Hurricane Carla was beginning to destroy Galveston Island and human beings and wildlife The train carrying our cotton to the cotton Gin in Galveston called out to as many people as they could to get the word out to Get Aboard! SAVE YOUR SELVES it was that passing train that saved our lives! The world should never loose sight as to the importance and balance of transportation. Galveston built the causeway for tall ship to bring cargo from international waters. Train safely transport pregnant mom's Doctors Nurses Students Credical Patients to the World Renound Medical Centers families that cannot afford to stay by their side other wise! God for bid if an other Hurricane Carla should threaten the Gulf Coast! There will be a way out and not have senseless deaths on the freeways trying to escape like we had before. For the common good of the people build this Rail please	Comment noted.
Arthur Lancaster	2/27/2018	Website	In the late 40s, 50s & on into the 60s we had wonderful passenger service between Houston and Dallas. Rural people in my community could get on the Zephyr or the Rocket, go to Houston or Dallas, spend the day and be back home by dark thirty. The speed limits were much less then yet they were able to maintain a reasonably good schedule. Then the government allowed all of that to be broken up in favor of corporate profits. This new high speed train should be able to also serve the rural towns as well as the metro areas. With speeds at or above 200 mph, short pick-up stops are not going to hurt their schedule that much and it will be serving all of the people in the impact range, not just the city folks. I am for it if they do that. Against it if they do not. We need fast passenger service in Texas but it needs to be as inclusive as possible.DWRJ	Refer to GN-6, GN-7, PN-3, TC-4 and TR-4.
Arthur Lancaster	3/9/2018	Website	This comment is not so much about the Environmental Impact Statement as it is about the question of whether or not it should be constructed in the first place. If Eminent Domain is to be allowed to this company as builder then use of the facility should be made available to ALL of the citizens in reasonable access to the area of operations. This would include more rural area stops between the large metropolitan areas which would still make for a good schedule due to the 200 plus mph speeds they hope to achieve.	Refer to GN-7, NE-1, PN-3 and TC-4.
Duane S. Lancaster	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Kassie Lancaster	2/28/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property. We have known the Morgan family for 30 years. Bob and Brenda Morgan are among the most generous people I have ever met. My family and I had the opportunity to visit their ranch several years ago. Not only is it a breathtaking setting, but Bob and Brenda have left no stone unturned in making all beautifully furnished accommodations welcoming to the numerous visitors they are kind enough to host. As for my family, they went out of their way to ensure that our 3 boys had a memorable time exploring, climbing trees and riding horses. Recently, our oldest son - a college student in Waco - was invited out to Bob & Brenda's ranch for skeet shooting and relaxation. What a treat and a wonderful break for him! I urge you to reconsider your train route and leave the Morgan Creek Ranch out of your path so that countless family, friends, scouts, first responders, and others can continue to enjoy this beautiful property and the amazing Morgan family hospitality.	Refer to LU-5.

Ruben Landa	2/6/2018	Website	I am a firm supporter of this project. I sincerely believe this project will change how we look at transportation, not only in Texas, but in the United States. The economic and employment benefit, in addition to the benefit of alleviating traffic between the two major metropolitan areas of Dallas and Houston can not be understated. The TOD opportunities around the three rail terminals is huge for those regions. The construction of the alignment on an existing utility right-of-way is a great idea. The counties in the rural areas stand to gain billions of property tax revenue for years to come, providing revenue needed for the essential services of those counties residence and businesses. I have attended the public hearing in Jewett, Texas and I was shocked at the lies being fed the residence of these communities. It is very unfortunate that Texas Central Partners and the Federal Railroad Administration are providing real facts and information about the impacts of the project to the environment, while groups like the Texans Against High Speed Rail are communicating complete lies about the facts. They are scaring the rural communities into submission and it is a shame. This project has a huge benefit for our state. It is an example of progress. It is privately funded project that underscores the states commitment to innovation and economic development. This project must be allowed to happen. We must take care of our rural property owners, no question, but we also need to think about the future an do what is best for the state as a whole. We must do a better job of communicating the facts to the community to counter the constant sharing of misinformation by the opponents of this project. Thank you for letting share my thoughts on this very important project.	Comment noted.
Ruben Landa	3/5/2018	Website	On behalf of the North Texas Chapter of the Conference of Minority Transportation Officials (COMTO), I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be an economic driver for the region, the State and Our country. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because in part it will: Create jobs for Texans — more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational at least 25% of them in rural counties along the route; Increase tax rolls in ALL impacted counties — \$6.5-\$7 billion net positive tax impact by 2040; Bring the safest mass transportation technology in the world to Texas — Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation; Be a cleaner way to travel — an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status; Preserve land access for property owners — a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; Give travelers with disabilities a safe, comfortable alternative to driving or flying — system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, 1-45 will see an increase in vehicular traffic Of more than 200% between Dallas and Houston by 2035 — and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the united States — a transportation infrastructure project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review. Best Regards, Ruben Landa 1st Vice President	Comment noted.

Jodi Landry	2/13/2018	Website	I do not believe this venture is viable nor would it be successful with this route. Forcing private individuals to give all rights to their land is wrong and should be reconsidered.	Refer to ED-1, NE-1 and PN-3.
Steven Lange	2/16/2018	Website	First, as a resident, registered voter and tax payer in Dallas, Texas, I am in 100% support of the Dallas to Houston High-Speed Rail project and Texas Central. I have made the 4-hour drive and taken air flights from Dallas to Houston for pleasure and for work. I feel that a rail project like this would be a very valuable asset for the state of Texas, Dallas, Houston and any city stops in-between. It is faster than driving, less complicated in terms of check-in/security than an airport, and overall creates for a faster flow of people, ideas, commerce and human interaction. I also speak from the advantage point of having lived in Japan. I have also been back to Japan for travel. There is nothing better than buying a ticket and simply walking to the train platform to board a train that will move you very fast to your next destination. In addition, based on the smooth ride and seat space it is very easy to work, read or rest on such a trip. This project also puts Texas and its cities in the same class as other high-speed rail nations in the world. I see tremendous gain from having this project completed. I am in full support and will use it once completed. Sincerely, Steven Lange	Comment noted.
Kelly Langford	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Matthew Lannon	3/7/2018	Website	To Whom It May Concern, I fully support this game changing application of private solutions for public problems. The proposed bullet train will make an enormous positive impact on the Texas Economy, the U.S. economy, and will improve the quality of life for our citizens. I ask that you please consider those with medical conditions that cannot fly in airplanes. When needing medical attention from specialists in Houston it can be a terrifying and painful 4 hours in an automobile trying to drive to the medical district in Houston. A high-speed rail line would allow those folks to get between Dallas and Houston as quickly as possible. I ask that you please support the Texas Central bullet train and help our economy, environment, and citizens. Kind Regards, Matt Lannon	Comment noted.

Therefore, we ask that you expeditiously process the remaining steps in the review.	Comment noted.
Austin Larson	2/7/2018	Website	All in favor! Will reduce road and airport congestion, speed up travel time exponentially, inject billions of dollars into the economy, create thousands of permanent and temporary jobs. No reason not to!	Comment noted.
Cathy Larson	2/21/2018	Letter	Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property. FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area.	Refer to SC-11.
DeeAnn LaRue	1/12/2018	Email	We do not want a high speed train from Houston to Dallas. It will cost taxpayers and it's dangerous. Susceptible to accidents, terror attacks and criminals. No thanks!	Refer to GN-4, SC-19, SS-2, SS-6 and SS-12.
Adam Latham	3/9/2018	Website	I am extremely excited for this project to begin and cascade an effect of economic growth for both cities. Not only will this alleviate congestion on our highways but it will also help spur up more infrastructure development in both cities and surround areas. However, my main concern is the proposed location of the Houston rail station. It seems like a very odd location for a rail station; jammed between multiple highways with no kind of energy or district that many areas possess. The argument that "the rail station will bring in development" doesn't make sense because of the fact that its jammed between a school district yard and a highway. It certainly a dead area, and does not seem logical to place a high density rail station in that area. There are no links to the Metro rail lines, there are little to no nearby businesses besides small fast food chains and small business office. This also defeats the purpose of alleviating traffic, the location not having a link to the Metro Rail and its suburban-like area makes it extremely difficult not to use a car! This is our chance for Houston to create something special like	Refer to GN-6, GN-7, GN-8 and TC-4.

Submitted By	Date Submitted	Submission Type	Comment	Response
			New York's Grand Central Station and at this point we're leaning towards Mediocre North Western Station. There has got to be something else besides this location!	
Garl Latham	3/9/2018	Website	Please reconsider the use of Dallas Union Terminal (a.k.a. "Union Station") as the northern terminus. In part, the facility was preserved by the citizens of Dallas for just such an eventuality as this! The former site of Reunion Arena is available for the dedicated H.S.R. passenger facility - and that location would encourage common/shared concourses so that passengers could connect between the various rail-based services (including Amtrak, DART, the Trinity Railway Express, the Oak Cliff streetcar line, etc.). A currently unused parking garage is available, vacant land sits ready to be (re)developed, and hotels and restaurants and the convention center are essentially next door. One of the many flaws in Texas Central Partners' plan is their abject failure to include any direct connections with other forms of rail-based transport. For the record, I'm not saying T.C.P. should necessarily be required to pay for this "last mile" of line. The City of Dallas has failed here as much as anyone. I only wish that the F.R.A. was willing to go on record in support of interconnected railway services and true intermodalism! Why do I get the feeling you really don't care?!	Refer to GN-7, GN-8 and TR-3.
Michelle Latray	1/31/2018	Oral	Good evening. rm Michelle Latray. I'm an attorney in Groesbeck. I'm also a Municipal Judge in Riesel: and am a candidate for Limestone County Judge currently _ I just do not see the benefit of this high-speed rail: to begin with: but assuming there's some benefit: it is not to the majority of the residents of the counties that it passes through. The majority of the counties it passes through are rural: like Limestone County. It just seems to me that every impact that's listed in these frequently asked questions is a negative impact: and every impact in here brings me to more questions: questions about: who is going to bear the cost of all of these things And I agree with our current County Judge: that you: the taxpayers of Limestone County: and me: a taxpayer of Limestone County: are ultimately going to bear these costs. We're looking at things: like: the Increased impact on the electrical grid, the new power lines. We're going to have to move power lines. The gas and oil wells and pads that have to be relocated; endangered species: wildlife: livestock; the impact that's caused by the noise on the residents. There's all kinds of things in here about "Oh: some walls we could build" or different ways we could noise-proof our homes: I gather But who is going to bear all of these costs? The impact on emergency services and on our roads here in Limestone County. Those are all things that are provided by our tax dollars. The water lines are another one that I have big questions about: and I don't see that addressed in anything. And I believe someone else has mentioned about our water systems here. You know: by stone — about some water district has water lines out there in Personville: one of the proposed routes. So, I have a lot more questions: and a lot of my questions go back to who is going to bear the costs: and — when we bear no benefit — or, we receive no benefit. I, for one, as a taxpayer, don't want to bear the costs. Thank you	Refer to EU-1, EU-2, EU-4, EU-5, GN-4, GN-5, LU-11, NE-1, NR-1, NR-5, NV-1, SC-19, SS-23, SS-26, TR-7 and TR-8.
Bobby Lattimore	2/28/2018	Email	This project on current path will destroy the land of Morgan Legacy Farm. The Morgan Legacy Farm located near FM 709 and 3194 is an irreplaceable site that has hosted weddings (including my own) and hundreds of meetings, gathering, and reunions. Churches, hospitals, clinics and families utilize this land and its capacity as a venue to coordinate the fundamental components of their operations. I harshly oppose the destruction of this property by the HSR.	Refer to LU-5.
Stuart Laughton	3/8/2018	Website	Texas will be the nation's leader in transportation technology with the implementation of this project.	Comment noted.
Kim Lavalle	3/5/2018	Handwritten	I don't feel this is a needed project. Highway traffic between Houston & Dallas is fine - once you get out of the Houston area. No Delays unless there is an accident or construction. It's about a 3 1/2 hour trip between the cities. We do not need to destroy family farms or ranches for this. We don't need more pavement in the country. This is an expense we can't afford-since it will end up on the tax payers back. It would be better to put a double decker over I-45 thru Houston than build this. We have 2 airports that will take you between the 2 cities. A train will be the same hassle-parking at the facility, security garage,& getting transportation at the other end. (2&3 hours extra) it's - \$100 to fly, about \$30 to drive. Who wants to spend more to take the same amount of time to get there? *add in time for transportation to/from terminal parking etc.	Refer to GN-4 , BA-4, BA-12, LU-11 and PN-3.
Kim Lavalle	3/9/2018	Website	I attended 2 meetings on the HSR, one in Cypress and the last at the Sheraton in Houston. These comments are regarding what some of the speakers said during the meeting: Many of the speakers were either politicians, representatives of politicians, or leaders of a business that would benefit from the construction of the HSR. Not surprisingly, these folks were all in favor of the project. They didn't bother to stick around to hear from the regular citizens (the ones that will be adversely affected) that are NOT in favor of the HSR. They proudly told us how many permanent and temporary jobs would be generated, but they didn't take into account how many jobs will be lost due to businesses closing because of the construction. This is a very real concern, as it happens over and over every time any road construction occurs in Houston. The Metro rail construction, especially, has led to many businesses closing and those employees losing their jobs - and the owners losing much more. On the heels of all the infrastructure damage from Hurricane Harvey, the thought of this project being approved is ludicrous. Some of these folks also mentioned how the transfer of goods will benefit us all. I thought this was a passenger train... I've heard no mention of goods before this meeting. The positive economic impact to the DFW/Houston area was touted. Anyone that has been in Texas for a while knows that Dallasites and Houstonians don't generally like each other, and the 2 cities are rivals - not partners. And seeing as how they	Refer to GN-2, GN-4, PN-3, SC-3, SC-21 and SS-9. The Project would exclusively carry passenger trains, not freight trains. This designation would not preclude passengers from carrying personal items or supplies to be used in emergency recovery scenarios.

			<p>are far enough apart to need a HSR to reach each other, how or why are they going to work together on anything? Speaking of the distance between Dallas and Houston - I have driven that many times, both to visit family and for business as an outside sales rep. It's an easy 3 hour drive - once you get past The Woodlands, just north of Houston. Unless there's road construction or an accident, then it's no problem. I've driven it both during the week and on weekends, and I just haven't experienced the heavy traffic that the speakers were griping about. It's much more difficult to get through Houston, especially on a Friday afternoon, so I think the estimates of a 6.5 hour drive time in a few years is highly inflated. That brings up another question... who are all these folks going to Dallas? If the Houston population doubles as predicted, most of the new residents won't have family in Dallas, as so many Texas natives do. Newcomers tend to migrate to the same town for family support. Much business can now be conducted online or by Skype, so travel for meetings will decline as technology progresses. Much was made about the spiffy Japanese train, and how safe it is and how you can just walk on without any delays. Texas isn't Japan, and the Japanese people are extremely different from Americans. There will most certainly be security to contend with that will slow down the boarding process, necessary due to terror threats. This time will be added to all the delays due to the eternal road construction that is a part of Houston. 290 is still being worked on; Loop 610 West will be out of commission for ~7 years, and now they want to pile on by closing more roads for another train? The Metro train has been a bad deal from the get-go. Metro has not been a good steward of the taxpayers money, and this will just be more of the same old thing. The taxpayers will get stuck with the bill for another under-ridden train that will never be solvent. Lastly, "The Last Mile" was mentioned several times. Travel to and from the train stations will need to be taken into account when total time is calculated. Since a big portion of driving to Dallas involves getting out of Houston, that time must be added for accurate comparisons or the time savings is a false premise. Price also must be factored in. With some advanced planning (1-2 weeks), a plane ticket is about \$100, as are the luxury bus lines. To drive the distance is \$20-30. The HSR will be \$199. So basically, you spend 8 to 10 times the amount to take a train, that will take about the same amount of time when the "Last Mile" is added in, and you don't even get to stop at Buc-ee's. Ridiculous! And you still have to deal with baggage if you are staying overnight, which would be difficult when using the HSR if the Metro train or DART was used as a connection. All in all, this just isn't a good idea. More people are against it than for it. The unscrupulous tactics of the HSR representatives is shameful. If it truly affects half the state population and so many counties, then why on earth is this not being put to a vote so the people (Taxpayers!) can speak? Save our family farms and ranches; save our farmland and countryside; save our peace and quiet. We just don't need to spend money on something that will only tear up half the state. Thank you.</p>	
Richard Law	2/5/2018	Website	<p>I have heard multiple times on reporting of the high speed rail, that the construction will be paid for by private funds and that no public money will be used. The cost of operating the train is never addressed. It seems unlikely to me that operational costs can be covered by fares paid by riders. It seems very likely to me that the tax payers, most of whom will never be able to afford to ride will be forced to support it through their tax payments. Operational cost planning should be made public.</p>	Refer to GN-2, GN-4, GN-5, NE-1 and SC-3.
Ray Lawrence	1/24/2018	Website	<p>I'm writing in support of the proposed Texas Central High Speed Rail project linking Dallas and Houston. In doing so, I bring a unique perspective to the issue having lived in Frankfurt for three years and doing business in Western Europe, China and Japan for over 18 years. It's time that Texas and indeed the United States enters the 21st Century in terms of inter-city transportation. High speed rail has provided huge benefits to the developed countries of the world outside the U.S. It has: 1. Contributed significantly to economic development. It is doubtful that the European Central Bank would have been located in Frankfurt without the city having high speed rail service to other major cities in Europe. Businesses in smaller cities with stations on major high speed rail lines have also benefited. Cities and towns with high speed rail are quite literally "on the map" in terms of international business . 2. Reduced vehicular traffic on major highways, thereby lowering the levels of air pollution, stress, accidents, injuries and deaths that would have occurred otherwise. Thus, in many ways, it has promoted better public health. 3. Reduced numbers of short distance/commuter airline flights of less than 300 miles thereby reducing air pollution and freeing up much needed gates at major airports. Result: Existing gate capacity remains adequate for longer periods of time mitigating the need for costly expansions in future years. 4. Shortened overall travel times within 300 mile radii vs. both ground and airline alternatives. In the latter case, considering the time it takes to drive to IAH or DFW, check in, clear security and board. Same day round trip business flights become much more feasible. 5. Provide business travelers valuable time to work en route while seated comfortably in a smooth riding high speed train. 6. Provided all travelers with a much more enjoyable trip experience whether socializing, watching the passing scenery, dining or resting. I am completely mystified that there are local officials and property owners that are opposed to Dallas-Houston high speed rail when there are so many benefits awaiting them. The project will result in higher property tax revenues that will benefit local schools and local governmental services. For those living in the Bryan-College Station area. It will provide safe fast alternative transportation to Houston and Dallas for shopping, cultural events, medical services, pro sports games and other offerings. Right of way property owners will receive income from the sales of narrow strips of land for light rail use that will not affect their activities or way of life except to provide an occasional sighting that adds excitement to their lives and the lives of their children. The fear that the trains will be noisy thereby disturbing livestock and even sleep is without any merit. They are almost quiet as they flash by. Similarly, the argument that Texas Central will fail because everyone needs their</p>	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
			cars at their destinations will not prove to be the case, as a large proportion of travelers have friends or business associates picking them up or they will utilize the continually developing mass transit systems in Dallas or Houston to reach their final destinations. My conclusion is that many people that are against high speed rail are opposed simply because it is new, strange, different from what they are accustomed to. To address this issue, I suggest it would be highly beneficial to organize a tour of either Japan or Europe so they can see and experience high speed rail first hand, In the latter case, I might suggest the Eurostar from London to Brussels or Paris and the ICE from Frankfurt to Cologne. This would of course be expensive but it might be well worth it to gain political and property owner acceptance.	
Robert Lawrence	2/7/2018	Website	This HSR Project would be a transformative game changer for Texas and the US in general. The US is decades behind the rest of the developed world in high speed surface transportation.	Comment noted.
LCA Environmental, Inc.	3/6/2018	Website	<p>DEIS Comment I Dallas to Houston High-Speed Rail Project Wetland Impact Reduction I Navarro County Segment Re-examination Benefits of Feasible Alternative Segment 3Z, blended from vetted routes 3B and 3C Dear Mr. Wright: In addition to prior oral comments of 29 January 2018 at the Dallas County DEIS open comment meeting at Wilmer Hutchins High School, LCA Environmental, Inc. (LCA) respectfully presents this written comment presenting a project review in support of value-added wetlands impact reduction and environmental benefits through a feasible re-routing of the proposed high speed rail segment in Navarro County along alternative alignments already vetted and considered for the project (as presented on attached supporting exhibits).</p> <p>COMMENTER BACKGROUND Mark K. Boyd, PhD, PE, is a Texas Licensed Professional Engineer and Principal Engineer of LCA Environmental, Inc., a renowned Texas registered environmental engineering and geoscience firm in continuous service to the community for over 25 years. LCA's one page statement of capabilities is attached for reference. Dr. Boyd is an environmental engineer with over 25 years Of environmental engineering experience, including academic expertise, training and project background in hydrology, water resources, and evaluation of projects for waters of the US impacts in accordance with industry practices and applicable U.S. Army Corps Of Engineers jurisdictional determination procedures. Dr. Boyd has also served for over 15 years as an Adjunct professor of Environmental and Civil Engineering at Southern Methodist University Lyle School of Engineering providing environmental engineering instruction to Master and Doctoral candidates. Dr. Boyd's abbreviated one page résumé is attached to this comment letter.</p> <p>ALIGNMENT ROUTE SECTION 3Z (FEASIBLY BLENDED FROM VETTED ALIGNMENTS 3B AND 3C) The DEIS refers to alternative route segments 3A, 3B, and 3C located in Navarro County. Dr. Boyd collaborated with others in the development of a rail-feasible alternative route in Navarro County, which is named Route 3Z and shown on the attached location map and schematic exhibits. Route 3Z would diverge from Route 3A from a northern limit at the State Highway 31 crossing and converge to 3A at the southern limit of the section near County Road SW 2190. Route 3Z runs nearly parallel to the previously studied route 3C from its northern divergence from 3A and blends with vetted route 3B to the south to converge back to 3A. See attached exhibits showing general location and route schematics. This differential wetland impact evaluation was developed from review and analysis of the DEIS documents and other publicly available information about the project area.</p> <p>DIFFERENTIAL WETLAND IMPACT COMPARISON The following table presents the differential wetland impact comparison between Navarro County Segments along Route 3A and parallel Blended Route 3Z. Benefits of Route 3Z Reduced Wetlands Impacts (Includes Combined Temporary and Permanent Wetland Impacts) [...]</p> <p>The following environmental impact benefits would be achieved from selection of Navarro County blended segment alternative 3Z compared to the parallel segment along route 3A:</p> <ul style="list-style-type: none"> • 476 linear feet, 100% reduction, of the perennial streams affected by 3A would be saved by routing along 3Z • More than 6 acres, 93% reduction, in Freshwater Emergent Wetlands would be saved by routing along 3Z • In excess of 8 acres, 94% reduction, of Freshwater Ponds along the 3A alignment would also be saved. <p>A marginal increase in intermittent wetland impact of 180 linear feet may be experienced by selection of 32, which is negligible when compared to the reported total project alignment 3A impact of 8,743 linear feet for the same wetland category. This apparent increase in wetland impact may be mitigated during future project design refinements.</p> <p>An increase in Forested Shrub Wetland is a possibility, as tabulated. However, DEIS reporting of this wetland type is based on current national wetland inventory maps, not on actual field determinations of wetlands. The commenter strongly urges project planners make an effort to</p>	<p>The design is currently being modified to further minimize and avoid impacts to resources. Waters of the U.S. including wetlands would be avoided to the maximum extent practicable. As stated in the Executive Summary (ES.7) approximately 60 percent of the build alternatives would be constructed on viaduct (bridge type structure) that allows for free movement of water in those areas and would avoid and/or minimize impacting wetlands and other waters (streams, ponds, rivers). In the areas along the route that will be on embankment, culverts will be constructed to allow for movement of water. The construction, operation and maintenance of this project would not impede upstream/downstream flow of waters. TCRR is working with USACE through the permitting process to develop mitigation measures for unavoidable impacts to waters of the U.S., including wetlands. Best management practices and mitigation measures are outlined in Section 3.7, Waters of the U.S.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>field verify the mapped areas for confirmation, to thereby produce more effective project planning and improved reliability of environmental impact estimates.</p> <p>Finally, the commenter also reviewed catchment and drainage features along route 3A in this area. Several large and small ponds near route 3A may be affected by a change in drainage and runoff patterns and reduced catchment areas. The unintended tangential adverse environmental impacts from a reduction in available runoff water quantity and potential deterioration of water quality to these pond waters should be studied and considered by project planners before a final decision is made about rail routing along 3A in this segment of Navarro County. As noted by commenter Mr. Johnathan Zimmerer, PE, ponds in the vicinity of route 3A would experience reduced runoff catchment areas ranging from 16% to upwards of 62%. Even though not considered in the DEIS as wetland impact, the substantial drainage changes which would be caused by rail installation at or below existing grade could virtually dry up some ponds entirely, and would certainly affect the viability and environmental quality of others. The adverse impact to localized flood control caused by reduced pond catchment areas should also be considered.</p> <p>Similar unintended impacts to pond environments would not be associated with segment 3Z selection.</p> <p>CONCLUSION</p> <p>The following are the broad conclusions of this commenter's analysis:</p> <p>3Z saves about 500 linear feet of the most valuable streams/rivers (perennial year- round flow and healthy aquatic ecosystems)</p> <p>3Z saves over 6 acres Of high value natural Freshwater Emergent Wetland preserving flood control benefits, emerging wetlands areas, species habitats, and beneficial ecosystems.</p> <p>3Z has minimal impact to ponds</p> <p>3Z saves over 8 acres Of impact to environmentally valuable ponds compared to 3A impacts.</p> <p>Elevated construction along 3Z would cause no tangential adverse environmental impact to nearby ponds.</p> <p>3A has substantial tangential impact to pond drainage areas which would affect the quality and quantity of water as noted by another commenter, Johnathan Zimmerer, PE, demonstrating up to 62% reduction in watershed catchment areas for ponds near the 3A line within this segment interval.</p> <p>3Z's environmental impacts are minimally intrusive, with rail traversing above ground along the entire way in this interval.</p> <p>3A's wetland/environmental impacts are highly intrusive with predominant at or below grade rail installation and substantial rainfall runoff system impairment.</p> <p>The alternative route 3Z along vetted lines presents a relatively facile opportunity to engineer gains toward value-added environmental benefits. Selection of route segment 3Z would also eliminate unintended adverse water quality and quantity consequences to surface waters near I respectfully suggest the FRA and project planners reexamine the High Speed rail route through this segment of Navarro County to an approximate alignment more consistent with blended route 3Z as described in this comment.</p> <p>Thank you for your review and serious consideration of my comment.</p> <p>Respectfully Submitted LCA ENVIRONMENTAL, INC. Mark K. Boyd, PhD, PE principal Engineer</p>	
LCA Environmental, Inc.	3/6/2018	Website	<p>Dear Mr. Wright:</p> <p>Please consider the attached comment to reexamine a section of the rail route in Navarro County to plan the rail line along an alternative feasible and vetted alignment. The attached presents tangible environmental benefits and savings of environmentally valued wetlands areas compared to the existing preferred route in this area.</p> <p>Thank you for your consideration.</p> <p>Respectfully, LCA Environmental, Inc. Mark K. Boyd, PhD, PE, ENVSP, DWRE Principal Engineer</p>	Comment noted.
Huy Le	2/7/2018	Email	<p>To whom it may concern, My name is Huy Le and I live at [...], where the high speed train is expected to go through once the high speed bullet train Dallas-Houston project is operated. Though, my house is not located where the railroads will be built; however, it is within 20 feet of where the noise isolation wall is planned to built. I have a major concern where my house value will go down tremendously, and that the noises, vibrations, etc,... will impact my livings. I am willing to give up my house and move to different locations to live for the high speed bullet train project, if possible. I wanted to know what the compensations package will be and that if we can negotiate the deals. Please write</p>	<p>Refer to ED-2, LU-7, NV-1, NV-5, VA-1.</p> <p>This property is approximately 185 feet south of Segment 5 on the Preferred Alternative and would not be directly impacted by the limits of disturbance.</p>

			me back on here or you can call my work number at [...] during day time and my cell [...] during evening hours and weekend. Thank you, Huy Le	
Lyna Le	3/6/2018	Website	<p>On the published documents, I can't find any documents laying out which subdivisions / neighborhoods this project will impact. Traffic on I-45 is busy between north of 610 and 59/Downtown at certain times/day but not extended throughout a day, adding more lanes would be utmost.</p> <p>I discourage and would rather oppose the addition of railways that impact the properties' values and residence's quality of life unless there is a solution to this aspect.</p> <p>The tram/light rail running along Northline-Northside to 610/45 junction has caused significant amount of noise already to the adjacent neighborhoods.</p> <p>The cost of 1hr one-way flight between DAL and HOU is about \$100, to get home in downtown or inside 610 loop I would take Uber/Lyft and pay \$20-30. Considering this fact, how economical is it for someone destined to Downtown Houston, without giving more traffic to drivers, or adding more traffic to the roads.</p> <p>As resident, we would respect and expect that facts and concerns are seriously weighed in.</p> <p>Regards, Lyna Le</p>	Refer to BA-12, GN-4, LU-3, NE-1, NV-1, PN-3, TR-4, TR-5 and VA-1.
Allen Lea	2/21/2018	Website	The study was thorough. Now let them get on with construction and operation. Texas needs this train.	Comment noted.
Francis Leach	1/25/2018	Website	Texas is perfect for high speed rail: it is flat with few rivers. The high speed train will take cars off of I-45, a pavement subject to traffic delays due to expansion, repairs, and traffic wrecks. The U.S. is 40 years behind the rest of the world in high speed rail.	Comment noted.
Wes Leake	1/31/2018	Email	I have done a lot of research into your proposed project. Being that said, I can not find one benefit to anyone in Dallas county much less Navarro. The times estimated would still make Southwest Airlines cheaper and faster than your proposed project. Furthermore, telling people two miles away from the track that you will have full access to their lands for construction purposes is not very well thought out. These people who you are trying to run over are a proud group and I doubt this will go over very well. I would probably advise you to have police escorts for every vehicle, the risk of great bodily harm or death is a very high probability! Another point is the fact you will be going through a lot of hunting land. I hear it is proposed that a ban would be in effect for one mile away from the track for all hunting purposes. Do you honestly think you will be able to enforce that? There will be people slinging rounds in that direction constantly. Last but it least there has to be a million oxy-acedeline torches owned by the residents of this general area. I don't know how you can even plan securing a project of that size from vandals. I know a lot of the people and am almost sure if the deal goes through that they will retaliate in every way possible. In summary it is pretty easy to see that you are not wanted or needed	Refer to BA-12, LU-14, RF-2 and SC-19.
Anita Leakey	3/9/2018	Website	I think this is a great opportunity for our growing areas. I don't think it is a great idea to put the hub off 290. THE WORST highway traffic ever! It should be built in an area of town not already congested or bombarded with traffic and businesses. Putting it in an area not already developed or in an area that needs improvement will better benefit the area communities.	Comment noted.
Rob Leal	2/6/2018	Oral	Hi, folks. I'm Rob Leal. I live in Hockley, Texas. About year and a half ago, we had one of these guys come out to my gate. They were going to -- needed to talk to me about my property. Wanted to write me a check. From the beginning of this thing, it sounds fishy. Then you start doing some research. Thank goodness we got the Citizens. You guys have given me more information on this thing than I had in a year. And we got the judge out here doing what he's doing to give us information. But the only thing I can incorporate is common sense. Man, you look at what this thing is costing you, what it's going to charge. Who can afford to do this? It's business people. When you put in TSA, going through this, the time it would take to do that, parking -- even if it does go to Northwest Mall -- providing they don't get their car stolen -- the time it take to get to Dallas and back. Why not get on an airplane or do what I do when I have to travel to Dallas? And I get up early, I take my truck and I drive. And I have (inaudible) of traffic, and then I come back. Common sense tells me this thing makes no sense. We had people coming up to my gate wanting to take my property from me, just like some of y'all have. I just ask everybody here: Let's keep common sense going on. This is a farce. It makes no sense. And who gives anybody the right to come over here and even talk about taking my property? It's mine. I worked for it. It's mine. Stay off of it.	Refer to BA-4, BA-12, ED-2, PN-3 and SC-3.
Penny Leas	3/5/2018	Oral	I'm Penny Leas. I am a long-term resident of Oak Forest and a member of Houston High-Speed Rail Watch and, I mean, as far as I'm concerned, the train may or may not be happening. So everything is predicated on if it -- if it comes to pass. So prefacing this with a quote from the Dallas Morning News, the City of Dallas put itself in a position to develop a largely vacant site and it took land out of the floodplain by doing a bond sale in 2006 and 2012, and it says "The station will be a magnet for economic activity in an area ripe for development, and it will connect seamlessly with local roads and public transit," and that's a quote from -- from TCRR. Then a quote from the DART spokesman is "Connectivity to local transit is essential to the success of high-speed rail anywhere in the world." This quote about "The station will be a magnet for economic activity in an area ripe for development," that can certainly be said about Northwest Mall, but it's going to require	Refer to GN-7, GN-9 and TR-4.

Submitted By	Date Submitted	Submission Type	Comment	Response
			planning. It's not just going to happen, you know, because somebody thinks it might be a good idea. From my perspective, Dallas is proceeding as if the HSR train will happen, while Houston is mostly proceeding as if it will not happen. It seems that Dallas is planning strategically and holistically to incorporate high-speed rail into an overall mass transit strategy for the Dallas area, whereas, conversely, Houston is planning for a series of one-off unrelated events that should actually be related, such as planning for the high-speed rail to terminate at Northwest Mall, and planning for the north end of The Galleria bus rapid transit line to terminate at a revamped Northwest Transit Center 1.6 miles away, that doesn't make any sense. And for Houston, this kind of seems to be business as usual because there seems to be very little coordination, if any, between the different transportation entities in the Houston area. Northwest Mall was announced as a Houston terminus for high-speed rail the day of the Cypress meeting. So realistically, this is the first chance for Houstonians to respond to the planned terminus location and begin to ask questions about what other planning Houston is doing to coordinate with TCP's plans. These are some of my questions. Does Houston now plan to move the Northwest Transit Center to Northwest Mall so the planned Galleria uptown bus rapid transit will dovetail with high-speed rail? What other uses are planned for the current Northwest Mall complex in preparation for high-speed rail and local transportation to and from Northwest Mall? I've heard nothing about what the space will be used for, nor have I seen any artist renderings or drawings to depict the multiple uses that could be included in the space.	
Rena Lebron	3/9/2018	Website	Why is this train going to college station?? Stupid it would be easier to fly to Dallas!!!! Why is central location going to be North Houston and not downtown?? It would be much easier/cheaper to fly out of Hobby on Southwest Airlines! Looks like whoever planned the project didn't put a lot of thought into it!! I see a future Aggie joke coming up in the NEAR FUTURE! Stinks	Refer to GN-7, TR-2 and TR-4.
Jackie Leckey	2/6/2018	Website	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance. such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to BA-6, CR-4, ED-1, LU-2, LU-11, NE-1 and NE-9.
Andrew LeCody	1/22/2018	Website	I live in Dallas, having a high speed train to Houston would allow me to be productive when traveling to Houston, instead of driving my car in traffic.	Comment noted.
Peter J LeCody	1/31/2018	Website	As President of Texas Rail Advocates I would like to commend both Texas Central Partners and the Federal Railroad Administration for their diligent efforts in the Draft EIS for high speed rail between Dallas and Houston. Texas Rail Advocates, the largest grass-roots non-profit organization in Texas that encourages both passenger and freight rail development. supports the effort to enable our citizens to have travel choices, including a high speed rail link between our largest metropolitan areas. The Texas State Demographer has indicated that 86% of the citizens of Texas live either near or east of Interstate 35. That puts future population trends right in line with where Texas Central Railway plans to build their railroad. The time is right to build this railroad before it becomes increasingly difficult, highly disruptive and much too expensive to obtain the right of way needed for this project. We urge the FRA to move forward and approve this project, which will have immense social and economic benefits for the state of Texas.	Comment noted.
Marilyn Leday	3/9/2018	Website	It is time for Houston to enter into the mass transit arena. Not only should there be a mode of rapid transit from Dallas, but to other major Texas cities as well. If the good of our citizens and care for the environment (rather than individual/personal gain) are considered along the entire process, it will be a tremendous asset for everyone.	Comment noted.
Mike Lednický	3/5/2018	Email	I am a landowner in Central Texas. Not in the path of the high speed rail, but in the 1-35 corridor. My wife and I travel frequently and commute to either the Dallas or Austin airport for our travels. This high speed rail would not only not change that for all Of us folks in the middle Of Texas, it would negatively impact our day to day lives. We would be forced to have our land divided by a rail we do not want and cannot access. This rail will not economically benefit us in anyway. To the contrary, it will negatively impact us and Our environment. We already have the blight Of all Of the windmills in the Panhandle on the beautiful Texas landscape in the name Of "progress," please do not add this, which I'm not sure folks will utilize to its fullest. The only people that will benefit will be the ones building it. The rural Texans will be hung out to dry.	Refer to SC-19 and NE-9.

Catherine Lee	2/23/2018	Website	I understand that this high speed rail will go also along the route of I35 from San Antonio to Dallas/Ft. Worth. This is one of the worst stretches of congested highway I have ever seen, at all hours of the day and night. I think that getting cars off the roads in Texas will go a long way toward improving our quality of life. Removing hydrocarbon exhaust from the air, oil byproducts from roadways. Wonderful. I would be more likely to commute to another city at some distance from my home if I had high speed rail to depend on.	Refer to BA-2.
Gregory Lee	3/9/2018	Website	I am soo excited of the prospect of having this major project become a reality. I only wish we could somehow/someway, have the train come thru Killeen, Tx. But on a serious note, can not wait!!! Thanks to all the fine people initiating this project.	Comment noted.
Michael Lee	2/6/2018	Handwritten	No build - Michael Lee is currently a candidate for justice of the peace Anxiety - are you going to pay for the added anxiety your going to give my daughter - Whats going to be my alternative? Her quality of life matters - are you going to compensate me for her extra medical bills?	Impacts to human health are discussed in Section 3.14.5.2.4, Socioeconomics and Community Facilities, Impacts to Children's Health and Safety.
Michael Lee	2/6/2018	Oral	Like many of you, I've got a story to tell. But this story is for you and you. You have children? Yes or no. Okay. I don't tell many people this, and I -- it's not going to bother me to say it tonight. My daughter deals with severe anxiety, and I don't know why or how. She was created in that manner. So I moved out here to Waller County to get away from the noise. We all know what that noise is. I deal with the noise on a daily basis. I work in Harris County -- right here, as a matter of fact, too -- as a deputy sheriff for 21 years. I see conflict on a daily basis, and this is nothing more than conflict. Are we just have to come together and figure out how we're going to address it. Now, on top of that, my family's been here 183 years this March on 1,870 acres which used to be Grimes County. I live on the last remaining 2.5 acres that my four-time great-grandfather bestowed upon his son, and his son, and his son, to my mother, to me. I think that what you're doing should be done in your hometown to you, so you know what it feels like. UNIDENTIFIED SPEAKER: Take your house away. MR. LEE: Exactly. When it come across your land and interferes with your good times and your peace and quiet and your family, because I deal with a kid that has anxiety and medical bills. I can tell you, as a single parent, it costs me through the nose. And we all know cops don't make much money, right? We all know that. So what are you going to do for me? Whenever it causes my child to have a higher anxiety because of loud noises? That's exactly why I live out here. It's peaceful, it's quiet, nobody bothers us, and I have a sound room set up just for my kid just like they'd already talked about. But I can't contend with that noise. It's not going to happen. I won't let you. I won't let you. And I am running for Justice of the Peace right here in Waller County, Precinct 2 Yes, I'm going to ask for your vote. Because I'm going to be a thorn in this man's side. "Devil get behind me" is what makes me think of these people. Y'all need to go.	Refer to NV-1.
Wen Lee	2/9/2018	Website	Our country needs high-speed rail -- we are behind the rest of the world. As fossil-fueled air travel becomes prohibitively expensive due to climate impacts, we need a viable and practical alternative. Building high-speed rail is forward-thinking and increases resilience in the long-term. I wholly support the Dallas to Houston high-speed rail project. I hope it happens!	Comment noted.
Paul Leftwich	2/8/2018	Website	Please consider the NO BUILD option for this project! The FRA has a "Purpose and Need" definition that supports TCRR Functional Criteria. This criteria does not take into account the public's safety along with the lack of any relief for traffic congestion. They will in fact increase traffic congestion at the Houston station location. All current 3 locations proposed would greatly impact the safety of Houston and out of town drivers. TCRR has stated publicly that they have ZERO interest in traffic congestion in Houston! I request that you use the NO BUILD option for this disaster of a project!	Refer to BA-6, PN-3 and TR-5.
Paul Leftwich	2/8/2018	Email	In reviewing the subject of Emergency Response Time the statement "Impacts to ER times would not be anticipated to be significant" causes one to pause. Currently response time for ER requests for those who live in the country are at best just adequate. To add even more time to respond to any emergency due to a train that does not serve a public need for ALL citizens seems inappropriate. TCRR needs at least 8,000 acres and most of these acres are located in the country not the cities of Houston or Dallas.	Refer to SS-23.
Paul Leftwich	2/8/2018	Email	A more careful review of the HSR noise level should be done before any option is considered. FRA DEIS based noise analysis using the noise level of one train passing by. This noise level would not be the maximum which is actually two trains passing each other in opposite directions. The HSR operating plan shows a constant use of both tracks for up to 18 hours daily with 4 sets on each track. What noise level would it be with two trains passing by at the same time? Also, the HSR will be going by homes, businesses, schools and subdivisions. Yet the DEIS does not specify criteria for noise mitigation or abatement for TCRR until AFTER a more detailed design is completed. Why wait? Should this not be a minimum requirement since the preferred route is already known?	Refer to NV-1 and NV-10.

Robert Leilich	3/5/2018	Website	<p>This statement is in full support of Texas Central's proposed Houston to Dallas High Speed Rail (HSR). This statement represents my compelling arguments for the proposed operation that serves the greater public interest. It also reflects my view that many of the arguments opposing the service are in error or exaggerated. As background, I am a retired rail transportation consultant and a former part time faculty (High Speed Rail researcher) with the University of Illinois's Civil Engineering Dept. My expertise is in rail economics, operations, and costing. Former clients during my 45 years of professional experience include the FRA, Amtrak, commuter operators, and freight railroads. I have degrees in Mechanical Engineering, Industrial Management, and Transportation Economics. I have no financial interest in Texas Central and my views and research are the result of my own initiative and professional interest in seeing this proposed HSR line being built. I have conducted several HSR feasibility studies in the US and have studied and ridden HSR trains in China, Taiwan, and Europe. In 2014, I performed done my own independent research on the economic viability of HSR between Houston and Dallas and concluded that it could be a viable business. Though the cost of construction has increased and the route is now different than originally studied, I believe the venture still has the potential of being viable over time. I am dismayed and disappointed by the opposition to HSR displayed by local and Texas state governments, especially by those who do not or cannot offer more sensible or viable alternatives to solve growing traffic congestion problems on 1-45 between Houston and Dallas. Many elected officials wrongly believe that if Texas Central fails, Texas will be on the hook to pick up the pieces and be an unwilling operator by default. They simply don't understand the full difference between the pros and cons of HSR or the alternative of spending more public tax dollars to widen Interstate 45. With 100,000 neVv Texas residents each year, population in the Ft. Worth-Dallas-Houston metropolitan areas experiences one of the largest growth rates in the US. While Rome continues to burn, our State and local government leaders, unlike much of the rest of the world, stubbornly oppose rail solutions that can help mitigate mobility woes. How much more increasingly expensive and disruptive concrete must ;Texas pour to prove that this is a suboptimal way to reduce traffic congestion between Houston and Dallas? Texas already is unable to expand the highway network at a pace to keep, up with traffic growth let alone fully maintain what is already has. According to the Houston Chronicle, Interstate 45, between Houston and Dallas is ranked as the second-deadliest highway in U.S. (Dug Begley, Friday, October 14, 2016). According to the Texas DOT's Crash Records Information System data base, there were 93,720 reported crashes on 1-45 (Dallas to Galveston) in 2016, involving 268,838 people. Though the great majority of accidents were minor, it is indicative of the number of incidents on the full length of this 285-mile Interstate corridor. Mining the Texas DOT's Roadway Inventory Data Base, there were a total of 4.5 Billion non-truck vehicle miles and 1.2 Billion truck vehicle miles for a total of 5.7 Billion vehicle miles on Interstate 45 between Houston and Dallas in 2016. Total vehicle miles have grown by almost 45 percent between 2005 and 2016- a compound growth rate of 3.41 percent. Non-truck vehicle miles have grown by over 50 percent during the same period - a compound growth rate of 3.78 percent. If the 2016 Fatality Rate of 1.44 deaths per hundred million vehicle miles traveled on Texas roadways is reasonably applicable to 1-45, it means that there were approximately 44 deaths, and many times more injuries, on this Interstate highway between Houston and Dallas. Texas reported a total of 3,773 deaths in 2016. 1-45 has approximately 594.5 highway centerline miles between Houston and Dallas (including side feeder roads) or .19 percent of the state's total of 313,656.1 centerline miles. However, 1-45 experienced about 1.17 percent of all highway fatalities in Texas. If measured on a centerline mileage basis, 1-45 has 6.2 times the number of deaths per highway centerline-mile compared to the state average for all centerline miles. (Traffic density per centerline mile is probably even higher than 6.2 number, though this was not researched.) Using Texas DOT data, fuel consumption on 1-45 between Houston and Dallas was 405 million gallons in 2016 and 4.3 million tons of CO2 were dumped into the atmosphere. To estimate annual Houston - Dallas non-truck trips, Texas DOT reports that there were 3.62 million 2016 non-truck trips in both directions in Leon County, located midway between Houston and Dallas. If 80 percent of these trips represent non-truck Houston - Dallas vehicles travelling through Leon County and if there is an average of 1.5 persons per vehicle, this translates to roughly 2.9 million non-truck vehicle trips and 4.34 million travelers per year in both directions between these two cities. This also translates to 695 million non-truck vehicle miles, 31.5 million gallons of gasoline, and 315,000 tons of CO2 for non-truck Houston - Dallas trips. For each ten percent of traffic diverted to HSR, it means that approximately one death, plus many more</p>	Comment noted.

			<p>injuries and property damage would be avoided each year. Many local property owners, supported by local media and politicians, strongly oppose the HSR project. While not denying that there will be some adverse impacts to a few, many people attempt to confound the project with arguments that are significantly exaggerated. Public interests that support a HSR system linking Houston - Dallas - Fort Worth have much greater weight than the sum of opposing arguments that I have read or personally discussed with opponents. HSR, if done right, can be a solution that all but transportation experts, a few elected government officials, and many weary motorists seem to miss. Let's not pass up \$15+ billion in private transportation infrastructure investment which is nearly 2.5 times the total 2016 State expenditures for both new road construction and road maintenance. Let's not pass up the creation of work for thousands of construction workers and the creation of 1,000 plus permanent full-time jobs to run the railroad. Let's not pass up a unique opportunity to take hundreds of thousands of cars off 1-45 between Houston and Dallas, reducing traffic congestion, injuries, deaths, property damage and air pollution. Let's not pass up an opportunity to show that HSR can work in this country. There are many other benefits to HSR between these two cities that the FRA is fully aware of, such as a broader regional economic benefit, creation of induced travel between these two cities, traveler time saving, and traveler convenience and comfort. An Excel spreadsheet showing the derivation of numbers noted above is included as a separate electronic document. I would be pleased to answer any questions FRA may have.</p>

David Leister	3/9/2018	Website	<p>1. The way to Houston is vis San Antonio - Enhance the current Amtrak line - think of it as building a new line for the northeast part of the US. There is a rail system for freight and passenger from the east to west coast that passes through Houston and San Antonio. 2. Whatever you want to call it - taking private land is stealing - not eminent domain 3. If you want to really prevent stealing land then put the rail line smack dab in the middle of I-45 (assuming two or more government agencies can work together). You can expand I-45 (TxDot is going to do it anyway - four or more sets of tracks and I-45 expanded to at least 4 lanes each way - a win-win for the US government and the people of Texas. Kinda makes sense doesn't it and no stealing of land.</p>	Refer to BA-2, BA-9, ED-1, ED-2 and GN-8.
Ben Leman	2/5/2018	Oral	<p>Well, hello. Good evening. My name is Ben Leman. I am a former Grimes County judge, and I'm also chairman of Texans Against High-Speed Rail. You know, I'm encouraged tonight because I've seen more people now that we've gotten the word out, I see so many people getting educated on this project and rising up and demanding transparency and demanding accountability for this project. I'm going to talk a little bit about the imminent domain issue. What we have here is very similar to the Trans-Texas Corridor. This is a foreign entity, this is a foreign project, that's what it is, and they want to use the power of imminent domain without any state agency approval, without any federal agency approval, and without any authority from the statutes in the Texas Transportation Code. That's what we're dealing with. And Chapter 81 of the Texas Transportation Code, it specifically lays out there's two qualifiers that would give a railroad that would make it a railroad and give it the power of imminent domain, one of which is if they were incorporated for that purpose before 2009; and the other is if they are operating a railroad. Well, we've gone to bat with them in the court three times and they've lost three times. They tried to survey people's property, but were not allowed to survey the property because, obviously, they didn't have the power of imminent domain there. We passed two bills into law this last session, two bills that we got through the Texas legislature into law; one that prevents any state monies from being used to operate -- to subsidize the operation, the maintenance, the construction, the promotion, or the planning for this project. I think that has a lot to do with why TxDOT's not here tonight. We blocked them from getting the federal government to claim jurisdiction on this project. They were trying to get the federal government to claim jurisdiction so they could trump the state laws. Okay? But they were denied. And we fought that aggressively as an organization. We were leading that charge. They have less than one percent of the money raised. I'm going to take just one more minute. He said I could have his part this time. Okay. Let me wrap it up. All right. The financial feasibility. You're talking about \$400 round trip ticket, 7.2 million passengers, that's ten times the airline traffic, and it would be a joke except they're trying to use the power of imminent domain here with taxpayer-backed loans. My message to you tonight is that Texas Central Partners is losing. They've lost ground. We have beaten them at every turn. This is nothing more than you hear from them is marketing, marketing data. They haven't raised anymore money. They've lost in the courtroom. They get laws passed against them. They lost at the federal government. What we need is a united effort. We need our citizens to stand up, write your elected officials, and let them know that you don't want this high-speed rail. Thank you.</p>	Refer to ED-1, ED-2, GN-4, NE-1, PI-1 and SC-3.
Ben Leman	2/6/2018	Oral	<p>Okay. Good evening. My name is Ben Leman: and am chairman of Texans Against High-Speed Rail. I'm also the former Grimes County judge. And together with a lot of people in both of those organizations: we've been leading the fight to oppose this project the last three years. I don't know about you: but I'm tired of seeing private companies game the system over and over again by setting up a business plan where the private company uses eminent domain to place the taxpayers on the hook for a project that makes absolutely no financial sense. When are we going to stop this ? Imminent domain is a public power for a public benefit not a public power for the primary purpose of a private benefit</p>	Refer to BA-6, ED-1, ED-2, PN-3 and GN-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			Japan Central Railway is pushing this project via Texas Central Partners and wants to utilize the power of Imminent domain without any state agency approval: without any federal agency approval, without any statutory authority for doing so. And they want to place the taxpayer money to be on the hook. Inherent with the power of imminent domain is the right to survey other people's property _ Texas Central Partners has bullied their way up and down this corridor representing to the public that they have imminent domain: mailing letters to hundreds of landowners threatening lawsuits, intimidating landowners into signing option contracts, suing over 40 landowners in district courts: and claiming to have imminent domain authority and: therefore, the right to survey their land. Well: guess what. Our organization stood up to them and we fought back and we won two times in a district court where a judge sided with us and said they did not the right to survey _ And then as Grimes County judge, together with your commissioners court, we stood up for property rights when they tried to survey county property: and we won again in a different district court And all these cases indicate that they: in fact: do not the power of imminent domain Imminent domain is abused precisely when private entities to highjack this power and place the priority and benefit on the business instead of the public. This is not a get rich quick tool for private entities. I ask you to do two things when you here tonight. First: write every Single elected official you have at the federal: at the state: and at your local level. I'm talking the President: the Governor, Lieutenant Governor, senators, representatives, and all your elected officials: and ask them, "Do everything you can in your power to stop this project " And then you ask your family members to do the same and your friends. And second, I'm asking you to join me in this fight This is a tough fight: and ifs been three years: and ifs going to be a lot longer: but there's a lot more progress we can make. And I'm asking you to do it by supporting our organization, but I'm also asking you to do it by making sure we elect people into office that are effective at leading efforts to stand up against the abuse of imminent domain and stand up for private property rights. Thank you very much. I recommend a no build option.	
Jacquelyn Lemp	2/16/2018	Website	I support the Dallas to Houston High-Speed Rail and look forward to riding!	Comment noted.
Diane Lerma-Pfeifer	3/5/2018	Oral	Thank you. My name is Diane Lerma-Pfeifer, and I'm a local community leader, a resident of Lindale Park and member of the Houston High-Speed Rail Watch. It's our thought that should the Dallas to Houston high-speed rail project move forward, that we're concerned about the planning surrounding Houston's selection for the terminus. While I, too, am grateful about this Houston public meeting and that the FRA decided to stop the rail outside the 610, I-10 and 290 freeways and not go into downtown, I am very concerned more about its plan -- planning that hasn't been done to include the areas that specifically surround the project. There are local neighborhoods that have not been adequately educated on this project and, therefore, it will affect their areas and having -- including conversations about urban design is critical to their success and our success. For this reason, I believe quality public comments on the terminus for this public project can't really be given. So while it seems that our Ts have been crossed and your Is have been dotted to ensure public input, it also seems that local community due diligence has not really taken place. Focus for the TCRR representatives have been on the overall mission of the project but not necessarily on what it could mean for the Houston communities surrounding the area. Some may say that this isn't the FRA's job to look at the urban planning, but I disagree. The overall goal of the FRA is to make sure that the project is successful and, to use your own quotes, provide the public with reliable and safe high passenger rail transportation between Dallas and Houston. Think about those issues now is very critical. We want to surely agree, I think, that communities need to benefit from this development and not become a casualty of it. We need to openly think about what conversations are taking place now to ensure that this location will be more than just a five-story parking lot that houses trains. Surely, with an investment this large, we're not thinking, build it and they will come. That scenario just never pans out. We need to be sure that we have a reactive -- we are part of a reactive decision process. We also need -- we think we need to think about the things like traffic, the flooding, the proper drainage. Those things aren't a joke in this city any longer. It's been harsh. And adding more infrastructure may be a good thing for transportation, but is it a good thing overall? All we're saying is that while this project is something that could benefit and certainly we should be proud of the fact, if we're going to be part of something that is the first of its kind in the United States, then we should be the first of its kind in planning it properly and making sure that while I know that this is part of your project and you have something that you said earlier today was another day in your rule of applicability, we need to make sure it's not the last day of our rule of includability. Thank you.	Refer to NE-1, NE-9 and PI-1.
Cathy Levin	3/5/2018	Website	This project assumes a high volume of ridership which won't happen because: people will have to drive too far to get to the station when they could be a third of the way to Dallas 2) It would cost \$1600 for a family of four when we could get there and back for \$30 3) It will ruin rural Texas 4) It will go bankrupt, the taxpayers will have to bail it out 5)All the cement with bury northern Harris County in floodwaters as the path goes through low-lying areas in the floodplain 5) Construction workers are in short short supply rebuilding houses 6) Mass transit in and around Houston along with roads, bridges, and other infrastructure is much more important or nobody will want to come here	Refer to FP-1, GN-2, GN-6, NE-1, NE-9, PN-3, SC-3 and SC-4.
Stewart Levine	1/29/2018	Website	I am very much in favor of the proposed high speed train line between Dallas and Houston as both a growth engine and as a way to reduce traffic and auto emissions from 1-45.	Comment noted.

David and Regina Levoy	2/6/2018	Website	<p>Opposition Points:</p> <ol style="list-style-type: none"> 1. No accounting for damage incurred to country roadways used for transporting very large concrete and metal structures for railroad construction. 2. No accounting for traffic congestion caused by the transporting of said structure and materials. 3. Inadequate analysis of land/environmental disruptions and water quality impacted by railroad construction. 4. No accounting of expenses incurred to county taxpayers due to direct and indirect disruption/ and or damage. 5. No accounting of how much energy will be required to operate the train and all of its structure. Or where the energy will be coming from. How will this affect the county power grids, especially during the times of intensive use? 	Refer to EU-3, EU-4, GN-4, NE-1, NE-9, TR-1, TR-6, TR-7 and WW-1.
Jerold Levy	2/21/2018	Website	<p>I have concerns about the high speed rail in Navarro County travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.</p>	Refer to LU-5.
Carol Lewis	3/5/2018	Oral	<p>I'm going to speak to the FRA. Good evening. My name is Carol Lewis. I'm a professor at Texas Southern University. I also am a board member on the Gulf Coast Rail District. I serve as a co-chair of our Transportation Advocacy Group of Houston. I am an advocate of the high-speed rail project that connects Houston and Dallas for several reasons: Each of the metropolitan areas, as you've heard, will have populations in excess of 10.5 million people by 2040. It's a lot of people. More than 22 million, essentially. I do research in an area called mega-regions or jurisdiction. Mega-region is based on the fact that while we do decision-making independently and by jurisdictions, the world and many of the ecosystems are actually integrated. So our energy systems, our economic systems, our environmental systems are actually linked together, and so we could actually do more efficient decision-making and more cost-effective decision-making by putting those communities together and looking at them as one. The transportation foundation to make that occur would be seen by a part of this project. It's not by itself, but it would certainly be a contributor. In addition, this whole mega-region concept would be really advanced by considering the fact that Houston and Dallas could be linked more quickly -- I'm looking at that clock. Boy, it goes fast when you're standing here, talking. But beyond the people and the goods, you know, we've got lots of travel. You heard from university students. We've got five universities in Houston, at least, depending upon what size you want to count. They have the same number in Dallas. People will change their decision-making about travel once this is implemented if you should make this decision positively. We see that millennials, particularly, despite the fact that, you know, Houstonians are known and Texans are known for their pickups, et cetera, millennials don't necessarily want to drive, especially those in urban areas. And so this is going to give that kind of opportunity. Regrettably, as a nation, we're not investing in our transportation systems like we should. We're actually under-investing; and the fact that there's a private entity that's going to make that transportation investment, we really need to leverage that and take it to our advantage. So as my time ends, I am going to kind of cycle back real quickly to the fact that we've got 22 million people that are going to have to travel between Houston and Dallas, some portion of them, anyway, and people will change their decision-making and use the system, and we're looking forward to that. And I had a lot more on these two pages, but I'm going to stop and let the person behind me have 15 more seconds. So thank you. Supplement to Dr. Lindsay's statements: Again, regrettably, there is no public project that will proceed without someone being disadvantaged. Because a large part of my professional time has been spent in the area of public involvement, I know it is important for these individuals to be heard and, if possible, mitigate some portion of their concerns. As a bottom line, though, the potential for people to live, work and recreate between the two metropolises of Texas will be an advantage that will ripple through the state.</p>	Comment noted.
Carol A Lewis	3/9/2018	Website	<p>On behalf of the Transportation Advocacy Group (TAG), we ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be an economic driver for the region, the state, and our country. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion impact over its first 25 years. The release of the Draft Environment Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because, in part, it will: * Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational - at least 25% of them in rural counties along the route; * Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 2040; * Bring the safest mass transportation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in</p>	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
			operation; * Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where four of the counties served are already in an quality non-attainment status; * Preserve land access for property owners - a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; * Give travelers with disabilities a safe, comfortable alternative to driving or flying - the system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035, and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the United States. It is a transportation infrastructure project of national importance that will provide a safe, reliable, and convenient travel alternative between Houston and North Texas, and we ask that you expeditiously process the remaining steps in the review.

Christina Lindsay	3/5/2018	Oral	Good evening. My name is Christina Lindsay. I'm here tonight as the Executive Director of the American Council of Engineering Companies, Houston Chapter. We have over 200 engineering companies that make up our organization in the disciplines of civil, geotechnical, and structural engineering, and we are here to offer our support for this project as well as the location of the station at the Northwest Mall. This project provides us with an important solution to part of our transportation needs within our region and within our state. And it's also a -- another aspect of the multi-modal type of transportation that we need and that we've been working on for many years. We all know that travel (inaudible) does increase and has been increasing within our city, within our state, within our county, and this is a fantastic way to help address some of those congestion problems. The majority of the project is going to be built on elevated viaduct structures, which has a very small footprint and has very little environmental impacts. One of the things that I have yet to hear this evening has been the way that this project is being financed. It is being financed by private investors for this multi-billion-dollar project. That saves us taxpayers money. State of Texas is not putting dollars into it, nor is the City or the County or even the federal government. What this does is does allow for our state transportation department to therefore utilize dollars for more local projects in the various regions of the state. So I thought that was a positive note that could be brought forward and another example as to why we are supporting this project. We look forward to the final decision by the FRA, and hopefully that that would end in a Record of Decision in early 2019. Thank you.	Comment noted.
Christina Lindsey	3/5/2018	Handwritten	I support the High Speed Rail Project as being a wonderful project that is environmentally sound and providing a safe alternative to automobile travel between Houston and Dallas. This project will be an important part of the state's solution to solve our growing transportation challenges. The footprint of the HSR is minimal and will ensure a safer transportation alternative than other technologies. The sound level of the trains operation is another important factor ensuring that residents desire for quiet will be protected. Lastly - but perhaps most important, is that this is a privately developed & financed project thus providing us with a terrific project without using tax dollars.	Comment noted.
Deborah Ling	3/9/2018	Website	I am startled that this has been allowed to get this far in the process. My family is not in support of the Dallas to Houston High-Speed Rail. There does not seem to be enough public support to impact all of the lives, whose property you are taking against their will. Safety is a concern along the route; the rural areas are not equipped to handle disasters. Having a stop near Roans Prairie defeats the purpose of having a high speed rail. Overall, this is just a bad idea!	Refer to GN-7, SS-18, and TC-4.
Patrick Lingwall	2/24/2018	Website	I support the train bc it will improve the travel options between our cities, improve our regional economic competitiveness, remove cars from the highways, and create jobs. Once successful, I hope it will lead to a statewide HSR network, connecting residents and businesses in the largest state in the Continental US like never before.	Comment noted.
Jenny Linhoff	1/31/2018	Email	I live in Dallas and am very supportive of the high speed rail project. I'm proud to live in a city as forward thinking as ours is and am excited to use the train to go to Houston. I would visit for tourism, dining, shopping and entertainment, all things that I would like to do there very regularly but don't because of the hassles involved with driving or flying. I'm also very happy that the station will go to downtown Dallas and be connected to DART so that I can connect to the station Without worrying about my car. Thanks for working hard to bring this to our city!	Comment noted.
Link Houston	3/9/2018	Email	Dear Federal Railroad Administration and Texas Department of Transportation Representatives: I write on behalf of LINK Houston, an organization that advocates for transportation equity. LINK Houston is concerned about equity in the benefits to the Houston-to-Dallas high-speed rail (HSR) project, also known as the Texas Bullet Train. Should the proposed High Speed Rail (HSR) plans move forward, the HSR construction and resulting infrastructure will significantly impact communities for years, particularly the 29 environmental justice communities identified in the draft environmental impact study. Residential displacement in urban areas is not detailed in the draft environmental impact study; the environmental impact study should not only address these impacts in full but provide a mitigation strategy to minimize residential displacement and/or provide mitigation that accurately assesses the cost of housing and proximity to activity centers (housing + transportation costs). Additionally, as the draft environmental impact study (DEIS) recognizes, this project diminishes the visual impacts in environmental justice communities and yet, the underlying text implies that this detrimental visual impact does not further deteriorate the scenery in these communities. The environmental impact study must identify ways to improve - not lessen - the visual impact in all communities, especially the environmental justice communities. Noise impacts are projected to affect all communities, and recent studies for high speed rail indicate that ambient travel sound of high speed rail is generally between 80-90 dBa-a sound similar to shop tools or a power lawn mower. In contrast, the current standard by American Academy of Pediatrics regarding infants in nurseries limits sounds to 50 dB a. Studies have found that noise volumes that exceed that amount can affect hearing, speech, and language development. The FRA must require additional efforts on behalf of the Texas Central Partners to mitigate the noise impacts on all communities, but particularly those environmental justice communities within the half-mile buffer as defined in this DEIS. It is not enough for the DEIS to suggest that noise barriers and other mitigation efforts will be scattered, as this does not address the public health impacts for low-to-moderate income communities that exist immediately adjacent to some of the proposed alignments.	Refer to GN-3, NV-1, TR-4 and TR-5. The referenced 29 EJ communities are 29 US Census Bureau Block Groups that meet criteria outlined in Section 3.18.3, Environmental Justice, Methodology , to be considered a minority and/or low-income block group. Through further analysis and public outreach, the Final EIS has been updated to highlight potentially impacted minority and/or low-income communities throughout the Build Alternatives in addition to the identified minority and/or low-income US Census Bureau Block Groups. A discussion on Public Outreach can be found in Section 3.18.3.3, Environmental Justice, Criteria for Identifying Minority and/or Low-Income Block Groups and Communities . FRA has a regulatory obligation under NEPA to analyze potential impacts to EJ communities and provide mitigation measures that will be undertaken to minimize potential impacts. Information regarding residential displacements in EJ communities can be found in Section 3.18.5, Environmental Justice, Environmental Consequences and Appendix E. Environmental Justice Technical Memorandum . A full discussion on avoidance,

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Further, these public health impacts should be monetized in the costs and benefits analysis as such costs may find that an alignment along existing freeways, or other areas that already have high ambient sounds, would be justified.</p> <p>Finally, this DEIS fails to adequately address connectivity for multi-modal transportation options in Houston. The DEIS must address how communities in Houston will reach the HSR. The proposed design alternative must look beyond the limited capacity of a parking lot to accommodate passengers to remain consistent with the state's rail plan as well as current local considerations for enhancing mobility through public transportation for all communities and the Bike Plan approved by Houston's City Council. The Federal Highway Administration and Texas Central Partners should make every effort to work with local partners, including METRO and the City of Houston, to create connections from the proposed end terminus to other economic activity centers via active transportation options (such as sidewalk and separated bike lanes) as well as public transportation options, perhaps encompassing bus rapid transit lanes or otherwise. By prioritizing accessibility and mobility options - bike and pedestrian connections, public transit connections, and designated spaces to reach car-sharing and ride-sharing options - the DEIS will better address the impact this major construction project will have and could formulate opportunities for communities to reap more benefits of connectivity to reach opportunities.</p>	<p>minimization and mitigation information can be found in Section 3.18.6, Environmental Justice, Avoidance, Minimization and Mitigation. Additionally, specific mitigation measures regarding potential impacts to EJ communities can be found in Section 3.18.6.1, Environmental Justice, Mitigation Measures. As described in the Methodology (Section 3.10.4, Aesthetics and Scenic Resources, Affected Environment) the impact analysis includes evaluating natural and cultural components within typical viewsheds. In response to public comments, the impact analysis has been updated for the Final EIS Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences. Mitigation Measures, as described in Section 3.10.6 Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation, provide solutions for minimizing adverse impacts. FRA's evaluation of the potential aesthetic and visual impacts associated with the construction and operation of the Project includes mitigation measures appropriate for all communities; however, please also refer to Section 3.18.5.4.5, Environmental Justice, Construction and Operational Impacts for potential visual impacts to EJ communities. As described in Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences of the Final EIS there are areas around the stations in urban areas where visual impacts could provide improvements to visual quality for EJ and non-EJ residents. The project has been designed to follow existing infrastructure to the extent possible.</p>
Sonja Linsley	2/19/2018	Website	I like the idea of a bullet train and I would probably use it often. My question is: When the train bypasses the small communities which rely on the income of travelers, is that going to hurt the economy of those towns?	Refer to SC-15.
Charles Linthecum	3/6/2018	Email	<ol style="list-style-type: none"> 1.- Concern about Texas Counties, Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and wheeler endangered species- Bald Eagles, Monarch Butterfly, Wood Pecker, Passenger Pigeons, Red Wolf, Gray Wolf, Migratory Game Birds, Wood Stork, Texas Horn Lizard, Brazos Water Snake, Houston Toad, White Face Ibis, Interior Least Turn, Cagle's Map Turtle, Ouachita, Rock-Pocket Mussel, Including Wildflowers of large fruited sand verbena, Navasota Indie tresses. 2. Travis Liska	2/10/2018	Website	As a resident of the Dallas- Fort Worth metro area I support construction of the preferred alternatives for the Dallas to Houston High Speed Rail line as described in this draft EIS. As described by the document the construction of the HSR line will be important to quality of life in the state as our transportation needs continue to increase.	Comment noted.
Sharon Littell	2/13/2018	Email	This is a formal objection to this monstrosity based upon the following: 1. We as tax payers will have to shoulder this burden - has the representing "high speed rail" contractor even given a solid dollar cost on this yet? Or is it still lets guess what it will be this month? Have they reverted back to the original promise that they would pay for it yet? 2. The parent company is a Japanese company who set up these "Texas" companies to try to pull this off with their profit in mind only (usual with foreign interests and why do we allow this - other countries would not!) 3. People locally have been coerced, bullied and lied to by the above referenced to obtain the land for the rail - I live in the Plantersville/Waller area and have heard the reports personally from some of their victims 4. This type of thing has been done in California and is a huge liability for them and does not make a profit so we need to repeat the mistake here in Texas? 5. My understanding is that the train does not stop and start where it has been represented so people still have to drive - what is the point except to line more pockets - i.e. and fleece the taxpayers? 6. We will vote you out of office if you give us the shaft to support monied interests 7. This will spoil the countryside and if there is an accident as we see happens in the news - how safe are the people and livestock below this needless exercise in lets make money at the people's expense?	Refer to ED-2, GN-4, GN-5, GN-7, NE-1, PN-3, SS-12, SS-13 and SS-19.
Charles Little	1/31/2018	Oral	My name is Charles Little, and I have had the privilege to attend the meeting last night in Leon County, and the night before in Navarro County. And I would say to the group that's putting this meeting on, that there's a less number here tonight, and that's only because you're just catching the southeast corner of Limestone County. If you were going down through the middle of the county, you would have the same size crowd here as you had in the other meetings. I do realize that this meeting is, in fact, for us to have read your environmental impact draft, and ask questions about that. I recognize that we've had limited time to do that, where you've had the four years to prepare it. I would respectfully request additional time to review it so additional comments can be made. I would, in fact, be real interested in why the No-Build option was not considered, or put forward as the least environmental impact, because it would be, in fact, the least environmental impact. To the audience, I want to say thank you to Kyle and Christen, and for the work that Texans Against the High-Speed Rail are doing. If you haven't read their material, if you aren't involved with them, if you don't get the emails, if you haven't given them some money, you need to. Their activity is the only way that we're going to be successful in fighting this rail in Austin, and on the federal level. So, if you aren't aware of the work they're doing, you need to be, and thank you. By attending the meetings in Navarro and Leon County, I learned some things that -- and I thought I knew just about everything about this train, but I learned about the fact that it's such old technology. They're talking about 50-year old technology. And that doesn't sound like the things that are happening in today's time. They talked about initially needing the 3,000 acres, and now then, needing 8,000. I've got a comment about that in a minute. They also have indicated to all the property owners that they have the eminent domain, and we've heard tonight that they don't. We've had several people talk about how many generations live on the property. I'm going to run over. I'm the sixth generation of my family, my grandson is the eighth generation of our family to live on this property. I have a copy of some of the original Spanish land grant to some of the property. So, this property has no value that can be offered for it. I grew up going to the tank and fishing. I intend to take my grandson, do the same thing. I grew up hunting on the property, and taking care of it, and maintaining the wildlife. I intend to pass that on to my generation -- my grandkids. I grew up taking a walk during the evening	Refer to BA-6, BA-7, BA-8, ED-1, ED-2, LU-14, PI-3 and TC-2.

			and looking at the stars overhead, and the quiet. And, folks, that's important. And they're going to try to take it away from us in certain areas, and that's wrong. That's wrong. Thank you.	
Lori Little	1/30/2018	Email	Email: [...] I am against this railroad. It will impact the livelihood of many farmers and ranchers, impact the time it takes for schoolchildren to get to and from school and school activities, impact the services of police, fire, and ambulances, and impact the lives of the people of the county in general. One crossing in Ellis county is not enough. We will receive no benefits. Also, how many Texans are going to actually travel on this for the exorbitant cost of tickets. Plane travel is cheaper. In the estimation of vehicles traveling to and from Houston and Dallas, how many of those are trucks? There is no guarantee that it will be a success. Look at the supercollider failure. People lost their homes and properties for no reason.	Refer to BA-4, BA-12, LU-11, NE-1, PN-3, SC-6, SC-19, SS-23.
Lori Little	1/30/2018	Email	I am against this railroad. It will impact the livelihood of many farmers and ranchers, impact the time it takes for schoolchildren to get to and from school and school activities, impact the services of police, fire, and ambulances.	Refer to LU-11, SC-7, SC-8 and SS-23.
Merril Littlewood	2/16/2018	Website	I live less than five miles from the proposed rail line. While I sympathize with those who must sell their land, it has happened many times before to build public infrastructure. Not only will it bring some jobs to a rural county, but it will, I believe, attract people who will want to live here in order to have access to the station in Grimes county. These people will likely invest quite a bit in the county. That will make land prices go up and that benefits Grimes county residents by making their land more valuable. I really think Grimes county will experience a small boom in their economy as a consequence of the train line being built.	Comment noted.
Eugene Liu	1/30/2018	Email	Test	Comment noted.
Stephen Livingston	3/9/2018	Website	I have ridden high speed trains around the world. They are always pricey and never crowded. The estimated ridership for the Houston-Dallas train is way overblown. Taxpayers could end up footing a big bill if low ridership is low.	Refer to GN-2, GN-4 and NE-1.
William Lloyd	2/6/2018	Oral	I do not understand the need for this. There is not enough common business between Dallas and Houston to warrant this type of expenditure. Houston oilfield is offshore. Dallas oilfield is land drilling. Common product, but they don't have enough in common to warrant the passengers that are going to be required to pay for this. This morning -- this is February 6 -- there was a news article, high-speed train from Washington, D.C. to New York City uncoupled at 120 miles an hour. This is an established rail system, high speed, 120 mile an hour, between the nation's capital and the center of finance for our country. None of the 52 passengers were injured. Can this train pay for itself with 52 passengers per trip? I don't think so. Thank you.	Refer to GN-2, NE-1 and PN-3.
J. Sam Loft	3/5/2018	Oral	I want to thank the FRA for coming and listening to us and hear what we have to think about the project. I have lived in Harris County for 45 years. I have a lot of sympathy for those that are here from rural communities because I'm the first generation after 150 years that's not still on the farm in my family. So my father and grandfather certainly lived the life that is causing a good bit of anxiety for those that have spoken. But I will say this. I fully support the implementation. I'm a transportation engineer. I've done a number of studies, commuter rail, roadway systems, all types of transportation, and this is an essential project for our region and probably, I would say, for Dallas, but I'm speaking for Houston. Houston is facing a massive crisis in transportation. We can't -- we basically built our freeway system and yet we're going to double in size. I've done studies of the operational conditions of our regional roadway system in a manner that's more detailed than probably has been done before and I can say that we are facing massive congestion and that's with the inclusion of the benefits of technology to give greater capacity. We have to begin to shift people to other modes besides the roadways. I am serving right now on a special task force that is looking at many different high-capacity transit modes to be integrated into a multi-modal system here in Houston. That first mile/last mile is an essential part of that. So it is being addressed. I will say this, that the benefit of this location for the terminal at Northwest Mall is it's a large developable track. I've looked at many potential locations for intermodal rail stations around town. That is a good one. And I think we need to move forward with that. And so I think the DEIS is correct in identifying that. What it will do is it will give us an anchor for where the intermodal connections that are being imagined, planned, talked about and the various agencies that are responsible for transportation to actually occur. So the -- the terminal for high-speed rail will become one of the catalysts. As was mentioned by Tom Lambert, the head of Metro, they are very pleased to work with TCRR and develop the intermodal connections that will make this city work the way it has to for us to survive in the 2040 - 2050 time frame. And I will also say this. I served as the U.S. representative to an International Standards Committee about ten years ago that wrote the safety standards for automated urban guided transport systems that are being built all over the world, and I will tell you this, the safety credentials of the Japanese was head and shoulders as a delegation above any other delegation. I would gladly trust my personal safety and my family's safety to a Japanese designed high-speed rail system. And so there are no qualms for me in seeing the source of supply for this technology. Thank you very much.	Comment noted.
Susan Loftis	1/29/2018	Oral	Everyone, my name is Susan Loftis. Everyone's done an excellent job of speaking tonight. And I did want to touch on almost everything I talked about, but I'm going to change it. First of all, the route that they predict tonight will not effect me. Mine is the second choice, and by the second choice it will come through everything we have the catfish pond, the big barn, the little barn, right through my dining room, and right out the poolroom. There will be nothing left. Now, for the last my husband and I have been married 44 years, and we have had another place	Refer to GN-6, GN-7, TC-5, TR-3 and TR-4.

			in Houston and Wyoming for what? Forty-three of those forty-four years? Give or take. And even for the last 17 years we've had another home in West University in Houston. I have Pony Expressed my way back and forth to Corsicana at least once, two, three times a week on whatever it was need to be. And I can tell you exactly from the man who's traveled internationally how long it takes to get to every airport from Dallas to Houston, from Love Field to D/FW, George Bush. I have two kids in Orange County. I can get all the way to California. So as a driver no one has talked to you about who is actually going to get on this train. Where is it going to stop in Houston. To get to Reliant Arena it is going to cost them a fortune in taxi fare. Plus they're going to have to make one hell of a parking lot for those cars to be there. And there's going to have to be rental cars because, just like the airport, you may go pick up your friend once at the airport; you're not going to go pick them up every time they want to come to town. And that's going to be on both ends. And the same thing is true in Dallas. Other towns have hubs. New York. Boston. Both my kids did undergraduate work in those schools. They have hubs of all the transportation areas that come in. When you come into D/FW, if you don't have someone to pick you up you are out of luck if you're trying to get to Corsicana, and that train is not going to help. And all the people that I the other big difference is everybody in Houston and Dallas has a house. Why do you think I drove every week? Because in Corsicana I have a home, and everybody here has a home, and they plant their garden. They don't have an HOA or a gardener that does that for them. And we have a real blood bond with our property, and that's why we're here. Thank you.	
Susan Loftis	2/5/2018	Oral	Hello. Can you hear me? Hello. My name's Susan Loftis and I'm from Navarro County. And I'm really here to address Houston tonight, because I am from one of the rural communities. And I wanted to share with you that through 44 years of marriage, we have maintained dual residence. My husband was part of the Houston oil industry, and he worked endless hours, extensive travel, until January of 2017. We know exactly how long it takes to drive from West University to Dallas. We've done it for 41 years. We're not large landowners. We only have 10 acres. And the railroad won't commit to a route, and so we're their second choice. And by second choice, they want every square inch of our land--the pond, the barns, the house, and the house that we call our true home. The house and dual residence began with one phone call in 1977. "Corey's dead and Mama's dying." A drunk driver crossed over and hit them head on. Corey was 15 and died on site; and mama, after months of surgeries and intensive care was declared a miracle. Terry and I decided to build our home in Navarro County so I could take care of my family. My husband sacrificed money and time and drove home every weekend possible. The home was a haven. The kids had show animals, steers, heifers, swine, and did well at the Houston Livestock Show making the sales. The work was hard, but they were priceless. The kids learned discipline, the art of competition, how to handle stress, affection, loss, and they learned grief. When our 17-year-old collie dog Buddy died, His Lady, also 17, crawled on his fresh grave and within two hours also passed from grief. When my daughter trained her last puppy before she left home to be in her life in California, Bubbles was best friends with the same colt that grew up with our daughter. As Bubbles lay on a gurney here in Houston at the Gulf Coast Vet, a call came from California. Our daughter called at the last minute. Six weeks later Misty, who was 33 years, old stood at the same spot and dropped. We were there again, and a call from California in the last moment came. My husband and I thought this was surreal, but the connection was unmistakable and we were stunned. I eventually lost my mom, and within a year my father developed cancer. I've lost all my folks, aunts, and uncles, but I have the small things. I have my mother's rosebush, the gifts of trees, gardens, and buildings that were built that are loving memories of a family that's all gone. The railroad tells us the railroad needed transportation. However, their lawsuits, threats in their business dealings with landowners in these rural communities, would be labeled home invasion here in Houston. The effects of Harvey left not only a wake of destruction, but I'm sure extreme emotional distress; unthinkable prior to this act. Individuals, I account to you for the mental health. There is a thing called complicating grief, which is recognized as the leading psycho emotional casual factors in the genesis of cancer. It occurs in weeks and months. The property values have already dropped. We in the rural counties cannot fight this alone, and we are asking and begging of you in Houston tonight to fight out for our community and not just say a preferred route but say no build at all. Thank you.	Refer to BA-7.
Susan Loftis	2/6/2018	Oral	I am Susan Loftis, I'm from Navarro County, and the only alternative is no build, and I want this man to finish what he has to say.	Comment noted.
Susan Loftis	3/9/2018	Website	Abstract, 5th Page, immediately following Signature Page: 1st Para, 1st sentence: Within this FRA DEIS, TCR, Texas Central Railroad, Texas Central High-Speed Railway, TCRR, Texas Central Partners, Texas Central or TCP, or affiliated companies or abbreviates should be shown with their proper Limited Liability Corporation (LLC) extension as specified in the respective state rules of incorporation. Any genuine licensed abbreviation should be denoted as Doing Business As, or DBA. 3rd Para, 1st sentence: "This document evaluates a No Build Alternative...". This DEIS lacks any serious, detailed evaluation of any no-build alternatives. Dismissal of highway expansion alternatives as not meeting the 'purpose' of "high speed rail transportation" and dismissal of high speed airline transportation by unilaterally doubling the transit time based on subjective "pre-arrival time" is highly self-serving and biased. 3rd Para, 2nd sentence: No "visual impacts" specifically address the visual objection of the elevated, overhead powered, rail system itself. 3rd Para, 2nd sentence: No mitigation measures are proposed specific to the no build option, increased travel times of municipal and volunteer emergency response teams to and from the emergency event or their team muster site, flood planning, ALL endangered wildlife or visual objections. Executive Summary, Page ES-1: ES.1 Introduction, 4th Para, 1st sentence: Within this FRA DEIS, TCR, Texas Central Railroad, Texas Central High-Speed Railway, TCRR, Texas Central Partners, Texas Central or	Refer to AQ-1, AQ-10, AS-1, BA-4, BA-6, BA-8, BA-9, BA-12, ED-1, FP-1, GN-4, LU-14, NE-1, NE-4, NE-9, NR-2, NR-3, NR-5, NV-1, PI-1, PI-4, PN-3, PN-4, SG-1, SS-9, SS-23 and TC-4. Text descriptions of Segment 3A have been updated in Section 2.6.2.4, Alternatives Considered, Description of Alternatives, Build Alternatives , Segment 3A of the Final EIS to correctly reflect the location of the alignment west of Corbet. As noted in Section ES.2, Description of the Project in the Executive Summary, the HSR would also be expected to replace some air travel between Dallas and Houston, which would result in approximately a 50% reduction in GHG. In terms of the reduction in GHG found in the analysis, the net

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>TCP, or affiliated companies or abbreviates should be shown with their proper Limited Liability Corporation (LLC) extension as specified in the respective state rules of incorporation. Any genuine licensed abbreviation should be denoted as Doing Business As, or DBA. Executive Summary, Page ES-2: ES.2 Description of the Project, 1st Para, 6th Sentence: "Minimum ROW would be 100 feet..."; this statement is intentionally deceptive when the maps included within the DEIS methodically blanket 300 feet. If such statement is intended to be informative rather than biased, only stating the average ROW width measurement across the full 240 mile length would be appropriate. Executive Summary, Page ES-2: ES.4 Purpose of and Need for the Project, 1st Para, 1st Sentence: Contend that current records clearly indicate air travel exceeds the safety and reliability statistics of all US Rail traffic. Also contend that no FRA analysis was specifically conducted on Southwest Airlines operating performance uniquely between Dallas and Houston, Texas. Also contend that the "Need" of this project should not be unilaterally stated as providing " passenger rail transportation", which is unfairly and outrageously biased against the no build option! Executive Summary, Page ES-2: ES.4 Purpose of and Need for the Project, 2nd Para, 2nd Sentence: Object to the FRA reflecting and by inference supporting TCRR LLC opinion of the proposed Dallas to Houston route being "ideal". If the FRA intends to reflect such bias, such statement should be clearly noted and cited as a quotation from public TCRR LLC documents. Executive Summary, Page ES-2: ES.4 Purpose of and Need for the Project, 3rd Para, 2nd bullet: As the FRA DEIS later dismisses Southwest Airlines published 50 minute air travel by arbitrarily and unilaterally doubling that figure due to "pre-arrival time", contend that TCRR LLC should not be allowed to whimsically state there criteria as "approximately 90-minute travel time". ES.4 Purpose of and Need for the Project, 3rd Para, 3rd bullet: Further contend that truly minimizing impact in preference to maximizing existing public ROW would eliminate all but the I45 Corridor, which later in the DEIS will be unjustly and unilaterally deleted by FRA from consideration and evaluation! Executive Summary, Page ES-3: ES.4 Purpose of and Need for the Project, 5th Para, 2nd Sentence: Contend that this statement is speculative and meant only to bias opinions and benefit TCRR LLC. TXDOT studies indicate traffic growth as a concern which must be addressed. HSR is mentioned as feasible based solely on FRA studies, but does not concede IH-45 growth as a relief strategy. ES.4 Purpose of and Need for the Project, 5th Para, 5th Sentence: The bias of this statement is deplorable and reflects poorly on a US federal organization. Why would FRA seek to impugn the performance records of US airlines, while unquestionably accepting statements from a foreign entity? "...the overall trip duration when considering pre-arrival time, more than doubles". Furthermore, the statement is absurd; the travel time to either Dallas or Houston proposed HSR Station will face exactly the same intercity transportation challenge as their respective airport; potentially worse considering neither station currently exists! ES.4 Purpose of and Need for the Project, 5th Para, 6th Sentence: Again, contend no FRA analysis was done on historical travel records of Southwest Airlines' dedicated service between Dallas and Houston! Furthermore, on what basis was it determined that HSR would be immune to weather, personnel, scheduling and security events? Contend that this and the previous statement are used purely as an attempt by FRA to support their unilateral exclusion of air travel and the No Build alternative. ES.4 Purpose of and Need for the Project, 7th Para, 1st Sentence: "Previous passenger rail studies completed by FRA and TxDOT support the need..."; contend that the inclusion of this statement and its positioning within the DEIS is intentionally misleading in that the cited TxDOT studies uniquely referenced FRA HSR studies while offering none of their own. The cited TxDOT report in fact addressed the financial failings of existing Texas passenger rail variants and only attempted to offer possible changes to mitigate those failings. It also proposed HSR as "feasible" and a possible "privately financed" consideration, but highlighted the total lack of any state or federal funding. This statement clearly indicates the FRA bias in advancing TCRR financial objectives. Executive Summary, Page ES-4: ES.6 Alternatives Analysis, 2nd Para, 3rd sentence: "Additionally, FRA reviewed alternative transportation modes... and determined that these modes would not meet the purpose and need of the project." Contest this statement as the 'purpose and need' are clearly defined to bias all consideration toward HSR and TCRR. In intentional paraphrase 'the purpose is for FRA to promote TCR LLCs high speed passenger rail transportation between Dallas and Houston by unilaterally dismissing all other alternatives and the need is to self-promote FRA objectives while condemning privately owned land in order to patronize TxDOT by leaving existing plans and right of ways undisturbed'. The FRA biased construct of purpose and need within this DEIS is both absurd and undisturbed'. The FRA biased construct of purpose and need within this DEIS is both absurd and offensive for a US taxpayer funded report. Executive Summary, Page ES-4: ES.6 Alternatives Analysis, 3rd Para, 2nd & 3rd sentences: All these comments confirm the IH-45 Corridor received only a cursory glance by the FRA and was dismissed as predisposed by TCR LLC. Executive Summary, Page ES-7: ES.7 Design Considerations to Avoid and Minimize Impacts, 1st Para, 1st sentence: "...and avoid or minimize impacts to the socioeconomic, natural, cultural and physical environment". Contend this statement be deleted; had TCR LLC actually have considered such, the IH-45 Corridor would have been the overwhelming choice as it is already state owned land. If they were honest, their input would have stated its easier to bully and intimidate private land owners than it is TxDOT. ES.7 Design Considerations to Avoid and Minimize Impacts, 2nd Para, 1st sentence: "TCRR also engaged in early coordination with... the public, to collect feedback and coordinate on other planned projects". Unless FRA can unequivocally substantiate TCR LLC claims, such statements should be removed from the DEIS. Navarro County officials have repeatedly stated in public forum that representatives of the TCR LLC, FRA, and/or TxDOT have not approached them in an attempt to share concerns, views or information regarding HSR planning or</p>	<p>reduction of GHG was found to result in a benefit in terms of long-term GHG levels. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Mitigation Measures. NG vehicles were not specifically addressed in Section 3.2, Air Quality because the total number of natural gas vehicles (CNG + LNG) would not be significant compared to the number of total vehicles on US and Texas roadways. Therefore, potential air emissions from natural gas vehicles would not be significant when compared to emissions from all vehicles. The scope of NEPA analysis was to use available information to calculate emissions to assess potential environmental impacts, and not to assess the financial viability of the proposed project. This project is not a study of electric trains vs. electric vehicles. The project examines rail alternatives to remove vehicles (electric or gas) from I-45 to reduce future congestion and how the HSR system could accomplish that. Switching to electric vehicles in lieu of the HSR system would not accomplish the purpose and need of the project. When compared to other rail planning literature, the TCRR forecasted annual ridership represented train occupancy rates that were neither overly pessimistic or optimistic for purposes of calculating air emissions. TCRRs ridership study was also independently reviewed in 2018 and found to use reasonable travel demand market methodologies.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>operations. Executive Summary, Page ES-8: ES.8 No Build Alternative, 2nd Para, 1st sentence: "The No Build Alternative would not meet the specified Purpose and Need for this Project..." An absurd statement and biased interpretation considering the DEIS rhetorical construct of the "Purpose and Need". ES.8 No Build Alternative, 2nd Para, 2nd sentence: This statement ignores all current and future expansion plans of TXDOT, Southwest Airlines operations and performance, and that of its competing airlines. With respect to "an alternative transportation mode that would connect existing modes", the statement ignores the fact that all alternatives are already connected with the exception of the non-existing HSR and vehicular travel has always connected them. Executive Summary, Page ES-9: ES.9.3 Air Quality, 6th & 7th Paragraphs: Contend that this paragraph is in direct conflict with the previous paragraph and is included only in an attempt to validate the FRA unilateral dismissal of the No Build Alternative. Further contend the statement is subjective based on the rising popularity and numbers of electric, hybrid and LNG vehicles. Projecting again to a 2024-2040 scenario, the FRA arbitrarily implied increase of MSAT is unjustified. Executive Summary, Page ES-11: ES.9.5 Noise and Vibration, 2nd Para, 2nd sentence: Contend that the results of this section should be labeled as "Inconclusive" as no details of the FRA utilized "modeled noise levels" are disclosed and no mitigating actions are actually disclosed. To 'punt' mitigation into a preordained CTR LLC future scope of work is blatantly biased and unconscionable. Executive Summary, Page ES-13: ES.9.7 Natural Ecological Systems and Protected Species: This section does not address the Texas (Horny Toad) Horned Lizard, Red Tailed Hawk, Peregrine Falcon, Ferruginous Hawk, Sandhill Crane, Whooping Crane, Canadian Goose, Golden Eagle and Bald Eagle, several which are endangered, threatened, and frequent the area. endangered, threatened, and frequent the area. Executive Summary, Page ES-15: ES.9.9 Floodplain Hazards and Floodplain Management: Contend that at a minimum, rainfall and subsequent flooding of 2017 must be studied. Executive Summary, Page ES-17: ES.9.11 Aesthetics and Scenic Resources: Contend that this section is purely subjective and its inclusion again only depicts FRA's bias toward TCR LLC proposals. In the six (6) FRA Public Meetings attended, conclude that the proposed HSR would be a 240 mile visible abomination. Recommend the public objection to "seeing" a bullet train installation in Texas be stated in the DEIS. Executive Summary, Page ES-18: ES.9.12 Transportation, 1st Para, 3rd sentence: "There would be no permanent or long-term operational impacts associated with any of rail crossings as all Build Alternatives would be fully grade separated". This statement is blatantly misleading and false. ANY relocation or reroute, or closure and acquisition of a roadway could potentially lengthen the response time of rural volunteer fire and rescue teams. To unilaterally state otherwise is reckless and unconscionable. Executive Summary, Page ES-19: ES.9.12 Transportation, 2nd Para, 2nd sentence: "Transit services in Dallas and Harris counties, operated by DART and METRO respectively, could see increased ridership due to the Build Alternatives. Ridership increases would be a beneficial impact". Again, such statement is subjective. The FRA unilaterally decrees 'benefits' without assessment or recognition of increased taxation in both urban counties to fund transportation to/from nonexistent terminals and destinations. Executive Summary, Page ES-20: ES.9.14 Land Use, 1st Para, 3rd sentence: "Overall, between 7,957 and 8,218 acres (Build Alternatives A and D and Build Alternative F, respectively) of existing land would be converted". Recommend wording change "...of existing private land would be taken from rightful owners to implement this HSR Project". Executive Summary, Page ES-22: ES.9.15 Socioeconomics and Community Facilities: This paragraph is purely subject and intended to bias readership. Contend that all "would" wording be converted to "could", to limit the TCT LLC marketing aspect. Executive Summary, Page ES-28: ES.9.21 Soils and Geology: Contend that no local studies have been conducted on the blackland (gumbo) soils of Navarro County, and its inherent instability. The shrink and swell of this soil has thwarted construction in the county for decades, if not centuries. Executive Summary, Page ES-29: ES.9.22 Greenhouse Gas Emissions/Climate Change, Paragraphs 2-5: Again, contend that these paragraphs are highly speculative and included only in an attempt to validate the FRA unilateral dismissal of the No Build Alternative. Further contend the statements are subjective based on the rising popularity and numbers of electric, hybrid and LNG vehicles. Speculating that "future" standards for Power Plants will translate to HSR viability is certainly subjective if not deceitful. Numerous Texas lignite-fired plants are currently shutdown or being decommissioned in lieu of wind and solar alternatives, no credit is due HSR. Projecting again to a 2024-2040 scenario, the FRA arbitrarily implied reduction of GHG attributed to HSR is totally biased and unjustified. Executive Summary, Page ES-29: ES.9.22 Greenhouse Gas Emissions/Climate Change, Para 6: Contend this entire paragraph be deleted. To extrapolate subjective views on GHG to global climate change while extolling implied value to HSR is deplorable. I would further highlight that the HSR "safety features" are the same as those FRA has repeatedly failed to enforce implementation on for all existing US Railways. Chapter 1.0, INTRODUCTION, Page 1-5: 1.2.1.1 FRA Objectives, Para 1, 2nd Bullet: Contend this statement/bullet be stricken as purely self-promotional. This DEIS of itself, as well as the proposed HSR Project in of itself, do nothing to provide or facilitate safe connectivity of the stated existing rail and bus systems. In fact any future HSR only complicates the issue by creating another destination. Neither of the two rail systems will physically connect with HSR and bus service is certainly outwith FRA jurisdiction. Any and all intermodal transportation solutions within Dallas, Ft. Worth and/or Houston will be borne by their respective municipal government and tax-payers. 1.2.1.1 FRA Objectives, Para 1, 4th Bullet: Contend that truly avoiding, minimizing or mitigating impact would eliminate all but the IH-45 Corridor, which later in the DEIS will be unjustly and unilaterally deleted by FRA from consideration and evaluation! The IH-45 Corridor ROW already belongs to the State, which is completely ignored by the FRA.</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Chapter 1.0, Page 1-6: 1.2.2 Need, Para 1, Sentences 2-5: The bias of this statement is deplorable and reflects poorly on a US federal organization. Why would FRA seek to impugn the performance records of US airlines, while unquestionably accepting statements from a foreign entity? "...the overall trip duration when considering pre-arrival time, more than doubles". This statement is absurd; the intercity travel time to either Dallas or Houston proposed HSR Station will face exactly the same intercity transportation challenge as their respective airport(s); potentially worse considering neither HSR station currently exists! No FRA analysis was done on historical travel records of Southwest Airlines' dedicated service between Dallas and Houston! Furthermore, on what basis was it determined that HSR would be immune to weather, personnel, scheduling and security events? Also contend that the current inclusion of the Grimes County intermediate stop is not included in the FRA 90-minute transit purpose and projection. Contend that these statements are used purely as an attempt by FRA to support their unilateral exclusion of air travel and the No Build Alternative. Chapter 2.0, ALTERNATIVES CONSIDERED, Page 1-17: 2.1 Introduction, Para 1, Sentence 1: Highly object to the premature and highly biased description of TCRR as a "railroad company". TCRR does not operate any rail transportation services, nor do they own any railways or railway equipment. Contend that "As a private railroad company," be stricken from the FRA DEIS. 2.2 Proposed HSR Infrastructure and Operations, Page 2.2, 2.2.1 Technology, Para 1, Sentence 5: "Minimum ROW would be 100 feet..."; this statement is intentionally deceptive when the maps included within the DEIS methodically blanket 300 feet. If such statement is intended to be informative rather than biased, additionally stating the maximum ROW width, or only stating the average ROW width measurement across the full 240 mile length would be appropriate. 2.4 Development and Evaluation of Proposed Corridors, Page 2-19, 2.4.3 Corridor Screening Methodology, 3rd Para: Contend that no genuine technical analysis was 2.4.3 Corridor Screening Methodology, 3rd Para: Contend that no genuine technical analysis was conducted on any alternative which did not meet the FRA contrived definition of 'Need and Purpose'; in essence, if it doesn't provide the TCR LLC concept it isn't supported by the FRA. 2.4 Development and Evaluation of Proposed Corridors, Page 2-20, 2.4.3 Corridor Screening Methodology, 8th/Last Para: Based on FRA and TCR LLC contention that the minimum ROW size of 100 feet is feasible and 60% of construction would be by viaduct, this entire paragraph appears highly disingenuous and biased only to exclude the IH-45 Corridor. Otherwise, all supporting figures and tables should be included in the DEIS. 2.5 Development and Evaluation of Initial Alignment, Station and TMF Alternatives, Page 2-26, 2.5.1.2 Level II Screening, 3rd Paragraph, 1st Sentence: In their Level II, Stage I Environmental Constraints Screening, based on the data collected and prescribed scoring for each of the environmental evaluation criteria, the FRA eliminated Alignment Alternatives MD-4, BA-3 and CR-1. TCR LLC identified these three alternatives as being financially beneficial to their objectives ("...preferred alignments that best met its cost and construction goals"). The fact that the FRA preferentially carried forward the TCR LLC wishes is appalling and brings the FRA ethics and the veracity of the entire EIS campaign into question! 2.6 Description of Alternatives, Page 2-45, 2.6.2.4 Segment 3A (30.8 miles), 1st Paragraph, 3rd Sentence: "The alignment continues southeast, crossing FM 744 and SH 31 east of Corbet". This description is in error. The segment is definitely west of Corbet, which is located on Texas FM 2452. Correction must be made; '...SH 31 west of Corbet'. The change should be made uniformly to all such descriptions of Segment 3A throughout the DEIS. 2.7 Preferred Alternative, Page 2-55, 2nd Paragraph, 8th Sentence: "The alignment continues southeast, crossing FM 744 and SH 31 east of Corbet". This description is in error. The segment is definitely west of Corbet, which is located on Texas FM 2452. Correction must be made; '...SH 31 west of Corbet'. The change should be made uniformly to all such descriptions of Segment 3A throughout the DEIS. 3.0 AFFECTED ENVIRONMENT AND ENVIRONMENTAL CONSEQUENCES 3.2 Air Quality 3.2.3.2 Operational Emissions Methodology, Page 3.2-13 Reduction in Vehicle Miles Traveled, "Ridership information provided by TCRR (see Appendix F, TCRR Conceptual Engineering Design Report) was used to derive the expected numbers of cars no longer making the trip between Dallas and Houston". Basing a federally funded study on the unilaterally biased data of the sole beneficiary is technically if not ethically questionable. Extolling the merits of an electric train while completely ignoring the rising preference, availability and merits of electric automobiles is blatantly biased toward HSR. 9.0 PUBLIC AND AGENCY INVOLVEMENT 9.6 Next Steps, Page 9-12 Contend that the only 'next step' which should be undertaken is a genuine, unbiased, exhaustive, technical study and evaluation of the No Build Alternative without consideration or reference to any studies of Texas Central Partners, LLC or its entities. Susan M. Loftis Corsicana, TX 75110</p>	
Terry Loftis	1/29/2018	Oral	<p>Despite what you think, Susan and I don't always agree, so I have my own list. I want to kind of you-all know I'm against this, like everybody else in this room. I've been in Houston. I've been to Dallas. There's not a nickel's worth of difference in any of them, except the hockey team, and you know big time Navarro County is always about hockey, isn't it? Anyway, I want to address kind of the study that's been done. One of the things that it tells me is kind of the bias that I read into this; not the technical stuff, just the bias. One, I've been working in the engineering field for the past 30 years. Just retired in January, just last January. And I am willing to bet this is at least a half million study, but probably closer, if we knew the figures, it's probably a million dollar study just to do this. So I've been bullied by the Texas bullet train for four years, and I guess finally got around to bullying the federal government to spend that kind of money to create this list. So that means we as the taxpayers, all those other people unwittingly paid for this as well, because I doubt the Texas railroad the Texas bullet train paid for this thing.</p>	<p>Refer to BA-4, BA-5, BA-7, BA-8, BA-9, BA-10, BA-12, GN-4, NE-1, NE-5, PN-3, SS-9 and TC-5.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>And why was it undertaken without any disclosure of who's going to pay for what, or even if this is financially viable? That's something that galls me, too. In the valuation you dismissed air travel. You dismissed expanding 45 saying it's not viable. And even threw in on the flight saying, Well, you double that time just in waiting time in transportation to get there. Do you think this 90-minute bullet train, that you're not going to have to wait for that thing? There's not going to be any security? There's not going to be parking and stuff like that? So that's bogus. And then the other thing is, in some of these studies we eliminated by your study and the criteria that you set forth, you eliminated a bunch of segments, but in the final round you eliminated all but one primary route. And then at the request of the Texas bullet train, you threw three of them back in there because they said there were more financially viable. Well, what the heck does that have to do with the Environmental Impact Study? It was more beneficial for them, so let's throw those back in the mix. Those are back in the mix again. So all of those things just tend to say, Why was this done: Why was this driven? Basically we created a huge document over this study. I got ahold of this thing on my blazing 25 megabytes per second internet. It took me from breakfast from lunch just to download it. But I downloaded it, but this is a massive undertaking. This is a massive document. I'll give you kudos on that, but that's all. Thank you very much. 25</p>	
Terry Loftis	2/6/2018	Oral	<p>Good evening, ladies and gentlemen. My name is Terry Loftis. I'm privileged to stand and talk to you people from Grimes County tonight. I've only owned my land for 44 years, so I'm probably relatively a rookie to a lot of you people here. But I'm from Navarro County, your neighbor up north. And Navarro County is the third segment in this diabolical land grab scheme to steal 8,000 acres from Texas landowners and leave us with generations of multibillion dollar debt and leave us with a 240-mile scar down the heart of Texas. What I want is to implore you people to get active. Now, I know a lot of you are incensed, you're appalled, you're upset by this and angered by this, but I want to implore, get active, start a petition, sign a petition, by all means contact the Texans Against High-Speed Rail. Support them. Write your county commissioners, speak to your county commissioners, talk to your county representatives, talk to your state representative, your senators in the state, your federal representative, your federal senators, and your President. Reach out to all of them. Make them as uncomfortable as those people that call your telephone and want to talk to you about your IRS and tax reports and your credit card and your burial plan and windows and your car warranty. Stay after them. Be relentless. Like, if you're not doing those things -- unfortunately people, we're just not being heard, so you've got to do that. Now, the Federal Railroad Authority has been very gracious. They probably enjoyed a lot of Texas barbecue and Tex-Mex and whatnot over the past two weeks, but they've written this report very cleverly. It's objective is to study an alternative, a safe and reliable alternative that gets you from Dallas to Houston in 90 minutes. Now, what I want is the no build alternative, but they've eliminated that by basically saying, Well, airlines can't do 90 minutes because, you know -- I think Southwest is 45 or 50 minutes, but they double that because they said you have to go through security and you have to fight traffic and whatnot. I'm pretty dang sure that this railroad has the same thing, too. They've also eliminated the 45 expansion by just saying, Well, that's too complicated and unreliable, but I think that's probably because they can't get the land either. So reach out to them and fight them and stay active and stay engaged. No build option. Thank you.</p>	Refer to BA-6, BA-9 and PN-3.
Terry Loftis	2/26/2018	Website	<p>Abstract, 5th Page, immediately following Signature Page: 1st Para, 1st sentence: Within this FRA DEIS, TCR, Texas Central Railroad, Texas Central High-Speed Railway, TCRR, Texas Central Partners, Texas Central or TCP, or affiliated companies or abbreviates should be shown with their proper Limited Liability Corporation (LLC) extension as specified in the respective state rules of incorporation. Any genuine licensed abbreviation should be denoted as Doing Business As, or DBA. 3rd Para, 1st sentence: "This document evaluates a No Build Alternative...". This DEIS lacks any serious, detailed evaluation of any no-build alternatives. Dismissal of highway expansion alternatives as not meeting the 'purpose' of "high speed rail transportation" and dismissal of high speed airline transportation by unilaterally doubling the transit time based on subjective "pre-arrival time" is highly self-serving and biased. 3rd Para, 2nd sentence: No "visual impacts" specifically address the visual objection of the elevated, overhead powered, rail system itself. 3rd Para, 2nd sentence: No mitigation measures are proposed specific to the no build option, increased travel times of municipal and volunteer emergency response teams to and from the emergency event or their team muster site, flood planning, ALL endangered wildlife or visual objections. LAST ITEM THIS PAGE</p>	Refer to AS-1, BA-4, BA-6, BA-12, FP-1, NE-9, NR-5, PN-3, SS-9 and SS-23.
Terry Loftis	2/28/2018	Website	<p>Executive Summary, Page ES-1: ES.1 Introduction, 4th Para, 1st sentence: Within this FRA DEIS, TCR, Texas Central Railroad, Texas Central High-Speed Railway, TCRR, Texas Central Partners, Texas Central or TCP, or affiliated companies or abbreviates should be shown with their proper Limited Liability Corporation (LLC) extension as specified in the respective state rules of incorporation. Any genuine licensed abbreviation should be denoted as Doing Business As, or DBA. LAST ITEM THIS PAGE Executive Summary, Page ES-2: ES.2 Description of the Project, 1st Para, 6th Sentence: "Minimum ROW would be 100 feet..."; this statement is intentionally deceptive when the maps included within the DEIS methodically blanket 300 feet. If such statement is intended to be informative rather than biased, only stating the average ROW width measurement across the full 240 mile length would be appropriate.</p>	Refer to BA-6, BA-12, GN-2, GN-4, LU-14, NE-1 and PN-3. As discussed in ES.1 of the EIS, Texas Central High-Speed Railway's, LLC (TCR), Texas Central Railroad (TCRR) and Texas Central Partners (Texas Central or TCP) are affiliated companies involved in the development of the Project. TCR is responsible for planning with FRA for the NEPA regulatory approvals for the Project, which would include a Record of Decision for the EIS and related permits. TCRR submitted a petition for a Rule of Particular Applicability to FRA. Texas Central is the parent company of TCRR, and other corporate entities that are responsible for Project development and

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Executive Summary, Page ES-2: ES.4 Purpose of and Need for the Project, 1st Para, 1st Sentence: Contend that current records clearly indicate air travel exceeds the safety and reliability statistics of all US Rail traffic. Also contend that no FRA analysis was specifically conducted on Southwest Airlines operating performance uniquely between Dallas and Houston, Texas. Also contend that the "Need" of this project should not be unilaterally stated as providing " passenger rail transportation", which is unfairly and outrageously biased against the no build option!</p> <p>Executive Summary, Page ES-2: ES.4 Purpose of and Need for the Project, 2nd Para, 2nd Sentence: Object to the FRA reflecting and by inference supporting TCRR LLC opinion of the proposed Dallas to Houston route being "ideal". If the FRA intends to reflect such bias, such statement should be clearly noted and cited as a quotation from public TCRR LLC documents.</p> <p>Executive Summary, Page ES-2: ES.4 Purpose of and Need for the Project, 3rd Para, 2nd bullet: As the FRA DEIS later dismisses Southwest Airlines published 50 minute air travel by arbitrarily and unilaterally doubling that figure due to "pre-arrival time", contend that TCRR LLC should not be allowed to whimsically state there criteria as "approximately 90-minute travel time".</p> <p>ES.4 Purpose of and Need for the Project, 3rd Para, 3rd bullet: Further contend that truly minimizing impact in preference to maximizing existing public ROW would eliminate all but the I45 Corridor, which later in the DEIS will be unjustly and unilaterally deleted by FRA from consideration and evaluation!</p> <p>LAST ITEM THIS PAGE</p> <p>Executive Summary, Page ES-3: ES.4 Purpose of and Need for the Project, 5th Para, 2nd Sentence: Contend that this statement is speculative and meant only to bias opinions and benefit TCRR LLC. TXDOT studies indicate traffic growth as a concern which must be addressed. HSR is mentioned as feasible based solely on FRA studies, but does not concede IH-45 growth as a relief strategy.</p> <p>ES.4 Purpose of and Need for the Project, 5th Para, 5th Sentence: The bias of this statement is deplorable and reflects poorly on a US federal organization. Why would FRA seek to impugn the performance records of US airlines, while unquestionably accepting statements from a foreign entity? "...the overall trip duration when considering pre-arrival time, more than doubles". Furthermore, the statement is absurd; the travel time to either Dallas or Houston proposed HSR Station will face exactly the same intercity transportation challenge as their respective airport; potentially worse considering neither station currently exists!</p> <p>ES.4 Purpose of and Need for the Project, 5th Para, 6th Sentence: Again, contend no FRA analysis was done on historical travel records of Southwest Airlines' dedicated service between Dallas and Houston! Furthermore, on what basis was it determined that HSR would be immune to weather, personnel, scheduling and security events? Contend that this and the previous statement are used purely as an attempt by FRA to support their unilateral exclusion of air travel and the No Build alternative.</p> <p>ES.4 Purpose of and Need for the Project, 7th Para, 1st Sentence: "Previous passenger rail studies completed by FRA and TxDOT support the need..."; contend that the inclusion of this statement and its positioning within the DEIS is intentionally misleading in that the cited TxDOT studies uniquely referenced FRA HSR studies while offering none of their own. The cited TxDOT report in fact addressed the financial failings of existing Texas passenger rail variants and only attempted to offer possible changes to mitigate those failings. It also proposed HSR as "feasible" and a possible "privately financed" consideration, but highlighted the total lack of any state or federal funding. This statement clearly indicates the FRA bias in advancing TCRR financial objectives.</p> <p>LAST ITEM THIS PAGE AND DATE</p>	<p>implementation (i.e., design, construction, financing, and operation). As the entity responsible for the petition for a Rule of Particular Applicability, TCRR is used as the Project Proponent throughout this EIS.</p>
Terry Loftis	3/4/2018	Website	<p>Executive Summary, Page ES-4: ES.6 Alternatives Analysis, 2nd Para, 3rd sentence:"Additionally, FRA reviewed alternative transportation modes... and determined that these modes would not meet the purpose and need of the project." Contest this statement as the 'purpose and need' are clearly defined to bias all consideration toward HSR and TCRR. In intentional paraphrase 'the purpose is for FRA to promote TCR LLCs high speed passenger rail transportation between Dallas and Houston by unilaterally dismissing all other alternatives and the need is to self-promote FRA objectives while condemning privately owned land in order to patronize TxDOT by leaving existing plans and right of ways undisturbed'. The FRA biased construct of purpose and need within this DEIS is both absurd and offensive for a US taxpayer funded report.</p> <p>Executive Summary, Page ES-4: ES.6 Alternatives Analysis, 3rd Para, 2nd & 3rd sentences: All these comments confirm the IH-45 Corridor received only a cursory glance by the FRA and was dismissed as predisposed by TCR LLC.</p> <p>Executive Summary, Page ES-7: ES.7 Design Considerations to Avoid and Minimize Impacts, 1st Para, 1st sentence: "...and avoid or minimize impacts to the socioeconomic,</p>	<p>Refer to AQ-1, AQ-10, AS-1, BA-4, BA-6, BA-9, BA-12, ED-1, ED-2, FP-1, LU-1, LU-14, NE-1, NR-2, NR-3, NV-1, PI-1, PI-4, PN-3, SG-1 and SS-23.</p> <p>For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures. The referenced executive summary does not include detailed</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>natural, cultural and physical environment". Contend this statement be deleted; had TCR LLC actually have considered such, the IH-45 Corridor would have been the overwhelming choice as it is already state owned land. If they were honest, their input would have stated its easier to bully and intimidate private land owners than it is TxDOT.</p> <p>ES.7 Design Considerations to Avoid and Minimize Impacts, 2nd Para, 1st sentence: "TCRR also engaged in early coordination with... the public, to collect feedback and coordinate on other planned projects". Unless FRA can unequivocally substantiate TCR LLC claims, such statements should be removed from the DEIS. Navarro County officials have repeatedly stated in public forum that representatives of the TCR LLC, FRA, and/or TxDOT have not approached them in an attempt to share concerns, views or information regarding HSR planning or operations.</p> <p>Executive Summary, Page ES-8:</p> <p>ES.8 No Build Alternative, 2nd Para, 1st sentence: "The No Build Alternative would not meet the specified Purpose and Need for this Project..." An absurd statement and biased interpretation considering the DEIS rhetorical construct of the "Purpose and Need".</p> <p>ES.8 No Build Alternative, 2nd Para, 2nd sentence: This statement ignores all current and future expansion plans of TxDOT, Southwest Airlines operations and performance, and that of its competing airlines. With respect to "an alternative transportation mode that would connect existing modes", the statement ignores the fact that all alternatives are already connected with the exception of the non-existing HSR and vehicular travel has always connected them.</p> <p>Executive Summary, Page ES-9:</p> <p>ES.9.3 Air Quality, 6th & 7th Paragraphs: Contend that this paragraph is in direct conflict with the previous paragraph and is included only in an attempt to validate the FRA unilateral dismissal of the No Build Alternative. Further contend the statement is subjective based on the rising popularity and numbers of electric, hybrid and LNG vehicles. Projecting again to a 2024-2040 scenario, the FRA arbitrarily implied increase of MSAT is unjustified.</p> <p>Executive Summary, Page ES-11:</p> <p>ES.9.5 Noise and Vibration, 2nd Para, 2nd sentence: Contend that the results of this section should be labeled as "Inconclusive" as no details of the FRA utilized "modeled noise levels" are disclosed and no mitigating actions are actually disclosed. To 'punt' mitigation into a preordained CTR LLC future scope of work is blatantly biased and unconscionable.</p> <p>Executive Summary, Page ES-13:</p> <p>ES.9.7 Natural Ecological Systems and Protected Species: This section does not address the Texas (Horny Toad) Horned Lizard, Red Tailed Hawk, Peregrine Falcon, Ferruginous Hawk, Sandhill Crane, Whooping Crane, Canadian Goose, Golden Eagle and Bald Eagle, several which are endangered, threatened, and frequent the area.</p> <p>Executive Summary, Page ES-15:</p> <p>ES.9.9 Floodplain Hazards and Floodplain Management: Contend that at a minimum, rainfall and subsequent flooding of 2017 must be studied.</p> <p>Executive Summary, Page ES-17:</p> <p>ES.9.11 Aesthetics and Scenic Resources: Contend that this section is purely subjective and its inclusion again only depicts FRA's bias toward TCR LLC proposals. In the six (6) FRA Public Meetings attended, conclude that the proposed HSR would be a 240 mile visible abomination. Recommend the public objection to "seeing" a bullet train installation in Texas be stated in the DEIS.</p> <p>Executive Summary, Page ES-18:</p> <p>ES.9.12 Transportation, 1st Para, 3rd sentence: "There would be no permanent or long-term operational impacts associated with any of rail crossings as all Build Alternatives would be fully grade separated". This statement is blatantly misleading and false. ANY relocation or reroute, or closure and acquisition of a roadway could potentially lengthen the response time of rural volunteer fire and rescue teams. To unilaterally state otherwise is reckless and unconscionable.</p> <p>Executive Summary, Page ES-19:</p> <p>ES.9.12 Transportation, 2nd Para, 2nd sentence: "Transit services in Dallas and Harris counties, operated by DART and METRO respectively, could see increased ridership due to the Build Alternatives. Ridership increases would be a beneficial impact". Again, such statement is subjective. The FRA unilaterally decrees 'benefits' without assessment or recognition of increased taxation in both urban counties to fund transportation to/from nonexistent terminals and destinations.</p> <p>Executive Summary, Page ES-20:</p> <p>ES.9.14 Land Use, 1st Para, 3rd sentence: "Overall, between 7,957 and 8,218 acres (Build Alternatives A and D and Build Alternative F, respectively) of existing land would be converted". Recommend wording change "...of existing private land would be taken from rightful owners to implement this HSR Project".</p>	<p>analysis information. The full noise and vibration analysis is discussed in Section 3.4, Noise and Vibration, NG vehicles were not specifically addressed in Section 3.2, Air Quality because the total number of natural gas vehicles (CNG + LNG) would not be significant compared to the number of total vehicles on US and Texas roadways. Therefore, potential air emissions from natural gas vehicles would not be significant when compared to emissions from all vehicles. This statement is in reference to the four main rail lines of the following companies: BNSF, UPRR, TU Electric Big Brown Steam Electric Station Rail (TUEX), and Texas Utilities General Company (TEXU). Railroads would not be rerouted. Refer to 3.11.4 Affected Environment for a list of railroad crossings per county. As noted in Section ES.2, Description of the Project in the Executive Summary, the HSR would also be expected to replace some air travel between Dallas and Houston, which would result in approximately a 50 percent reduction in GHG. In terms of the reduction in GHG found in the analysis, the net reduction of GHG was found to result in a benefit in terms of long-term GHG levels. For information regarding impacts to wildlife and vegetation please see Section 3.6 Natural Ecological Systems and Protected Species and 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in 3.6.6, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Executive Summary, Page ES-22: ES.9.15 Socioeconomics and Community Facilities: This paragraph is purely subject and intended to bias readership. Contend that all "would" wording be converted to "could", to limit the TCT LLC marketing aspect.</p> <p>Executive Summary, Page ES-28: ES.9.21 Soils and Geology: Contend that no local studies have been conducted on the blackland (gumbo) soils of Navarro County, and its inherent instability. The shrink and swell of this soil has thwarted construction in the county for decades, if not centuries.</p> <p>Executive Summary, Page ES-29: ES.9.22 Greenhouse Gas Emissions/Climate Change, Paragraphs 2-5: Again, contend that these paragraphs are highly speculative and included only in an attempt to validate the FRA unilateral dismissal of the No Build Alternative. Further contend the statements are subjective based on the rising popularity and numbers of electric, hybrid and LNG vehicles. Speculating that "future" standards for Power Plants will translate to HSR viability is certainly subjective if not deceitful. Numerous Texas lignite-fired plants are currently shutdown or being decommissioned in lieu of wind and solar alternatives, no credit is due HSR. Projecting again to a 2024-2040 scenario, the FRA arbitrarily implied reduction of GHG attributed to HSR is totally biased and unjustified.</p> <p>Executive Summary, Page ES-29: ES.9.22 Greenhouse Gas Emissions/Climate Change, Para 6: Contend this entire paragraph be deleted. To extrapolate subjective views on GHG to global climate change while extolling implied value to HSR is deplorable. I would further highlight that the HSR "safety features" are the same as those FRA has repeatedly failed to enforce implementation on for all existing US Railways.</p> <p>LAST ITEM TO EXECUTIVE SUMMARY</p>	
Terry Loftis	3/9/2018	Website	<p>Terry Loftis Chapter 1.0, INTRODUCTION, Page 1-5: 1.2.1.1 FRA Objectives, Para 1, 2nd Bullet: Contend this statement/bullet be stricken as purely self-promotional. This DEIS of itself, as well as the proposed HSR Project in of itself, do nothing to provide or facilitate safe connectivity of the stated existing rail and bus systems. In fact any future HSR only complicates the issue by creating another destination. Neither of the two rail systems will physically connect with HSR and bus service is certainly out with FRA jurisdiction. Any and all intermodal transportation solutions within Dallas, Ft. Worth and/or Houston will be borne by their respective municipal government and tax-payers. 1.2.1.1 FRA Objectives, Para 1, 4th Bullet: Contend that truly avoiding, minimizing or mitigating impact would eliminate all but the IH-45 Corridor, which later in the DEIS will be unjustly and unilaterally deleted by FRA from consideration and evaluation! The IH-45 Corridor ROW already belongs to the State, which is completely ignored by the FRA. Chapter 1.0, Page 1-6: 1.2.2 Need, Para 1, Sentences 2-5: The bias of this statement is deplorable and reflects poorly on a US federal organization. Why would FRA seek to impugn the performance records of US airlines, while unquestionably accepting statements from a foreign entity? "...the overall trip duration when considering pre-arrival time, more than doubles". This statement is absurd; the intercity travel time to either Dallas or Houston proposed HSR Station will face exactly the same intercity transportation challenge as their respective airport(s); potentially worse considering neither HSR station currently exists! No FRA analysis was done on historical travel records of Southwest Airlines' dedicated service between Dallas and Houston! Furthermore, on what basis was it determined that HSR would be immune to weather, personnel, scheduling and security events? Also contend that the current inclusion of the Grimes County intermediate stop is not included in the FRA 90-minute transit purpose and projection. Contend that these statements are used purely as an attempt by FRA to support their unilateral exclusion of air travel and the No Build Alternative. Chapter 2.0, ALTERNATIVES CONSIDERED, Page 1-17: 2.1 Introduction, Para 1, Sentence 1: Highly object to the premature and highly biased description of TCRR as a "railroad company". TCRR does not operate any rail transportation services, nor do they own any railways or railway equipment. Contend that "As a private railroad company," be stricken from the FRA DEIS. 2.2 Proposed HSR Infrastructure and Operations, Page 2.2, 2.2.1 Technology, Para 1, Sentence 5: "Minimum ROW would be 100 feet..."; this statement is intentionally deceptive when the maps included within the DEIS methodically blanket 300 feet. If such statement is intended to be informative rather than biased, additionally stating the maximum ROW width, or only stating the average ROW width measurement across the full 240 mile length would be appropriate. 2.4 Development and Evaluation of Proposed Corridors, Page 2-19, 2.4.3 Corridor Screening Methodology, 3rd Para: Contend that no genuine technical analysis was conducted on any alternative which did not meet the FRA contrived definition of 'Need and Purpose'; in essence, if it doesn't provide the TCR LLC concept it isn't supported by the FRA. 2.4 Development and Evaluation of Proposed Corridors, Page 2-20, 2.4.3 Corridor Screening Methodology, 8th/Last Para: Based on FRA and TCR LLC contention that the minimum ROW size of 100 feet is feasible and 60% of construction would be by viaduct, this entire paragraph appears highly disingenuous and biased only to exclude the IH-45 Corridor. Otherwise, all supporting figures and tables should be included in the DEIS. 2.5 Development and Evaluation of Initial Alignment, Station and TMF Alternatives, Page 2-26, 2.5.1.2 Level II Screening, 3rd Paragraph, 1st Sentence: In their Level II, Stage I Environmental Constraints Screening, based on the data collected and prescribed scoring for each of the environmental evaluation criteria, the FRA eliminated Alignment Alternatives MD-4, BA-3 and CR-1. TCR LLC identified these three alternatives as being financially beneficial to their objectives ("...preferred</p>	<p>Refer to AQ-1, AQ-5, AQ-6, AQ-10, BA-6, BA-8, BA-9, GN-2, GN-4, LU-14, NE-1, NE-4, NE-5, PN-4, TR-3 and TR-4.</p> <p>Text descriptions of Segment 3A have been updated in Section 2.6.2.4, Alternatives Considered, Description of Alternatives, Build Alternatives, Segment 3A, of the Final EIS to correctly reflect the location of the alignment west of Corbet.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			alignments that best met its cost and construction goals"). The fact that the FRA preferentially carried forward the TCR LLC wishes is appalling and brings the FRA ethics and the veracity of the entire EIS campaign into question! 2.6 Description of Alternatives, Page 2-45, 2.6.2.4 Segment 3A (30.8 miles), 1st Paragraph, 3rd Sentence: "The alignment continues southeast, crossing FM 744 and SH 31 east of Corbet". This description is in error. The segment is definitely west of Corbet, which is located on Texas FM 2452. Correction must be made; '...SH 31 west of Corbet'. The change should be made uniformly to all such descriptions of Segment 3A throughout the DEIS. 2.7 Preferred Alternative, Page 2-55, 2nd Paragraph, 8th Sentence: "The alignment continues southeast, crossing FM 744 and SH 31 east of Corbet". This description is in error. The segment is definitely west of Corbet, which is located on Texas FM 2452. Correction must be made; '...SH 31 west of Corbet'. The change should be made uniformly to all such descriptions of Segment 3A throughout the DEIS. 3.0 AFFECTED ENVIRONMENT AND ENVIRONMENTAL CONSEQUENCES 3.2 Air Quality 3.2.3.2 Operational Emissions Methodology, Page 3.2-13 Reduction in Vehicle Miles Traveled, "Ridership information provided by TCRR (see Appendix F, TCRR Conceptual Engineering Design Report) was used to derive the expected numbers of cars no longer making the trip between Dallas and Houston". Basing a federally funded study on the unilaterally biased data of the sole beneficiary is technically if not ethically questionable. Extolling the merits of an electric train while completely ignoring the rising preference, availability and merits of electric automobiles is blatantly biased toward HSR. 9.0 PUBLIC AND AGENCY INVOLVEMENT 9.6 Next Steps, Page 9-12 Contend that the only 'next step' which should be undertaken is a genuine, unbiased, exhaustive, technical study and evaluation of the No Build Alternative without consideration or reference to any studies of Texas Central Partners, LLC or its entities. LAST ITEM	
Kevin Logan	2/26/2018	Website	I am concerned about the high speed rail project's proposed location in Navarro County near the intersection of 709 and 3194 - splitting the Morgan Legacy Farm. I believe the proposed location will cause significant damage to the environment, wildlife and the water shed of the Morgan Legacy Farm - which I understand is located at the highest elevation in Navarro County. I have personally observed an abundance of wildlife at the Morgan Legacy Farm on multiple occasions - including deer, small game, migratory waterfowl and at least one bald eagle. I understand that the proposed route will separate the farm's lodge from its rodeo arena, stables and guest houses and I believe that the damage the proposed route will cause to the farm's charitable mission to host and entertain groups like the Salesmanship Club, the staff of Children's Hospital, the Boy Scouts of America and others would be irreparable. I would ask that the 5-7 mile portion of the proposed route scheduled to parallel 3194 be moved north of the existing power lines to lessen the harmful environmental, economic, charitable and historic impact the proposed route will have on the Morgan Legacy Farm.	Refer to LU-5.
Melvin Logan	1/29/2018	Letter	Comment card contained only an attachment of NCTCOG's Statement of Support for the Project.	Comment noted.
Melvin Logan	1/29/2018	Handwritten	Please add me to the project mailing list.	Comment noted.
Otis and Olive Logan	1/29/2018	Handwritten	Please add me to the project mailing list.	Comment noted.
Thurman Logan	3/9/2018	Website	This train is very important to many because of the time it can save for travel between the two cities. Anyone opposed to it has no family to visit or business to conduct between the two cities. The minimum impact to the environment is offset by the total traffic that will be reduced on 45. This is a win win for both Houston and Dallas. Please let's get this done!	Comment noted.
Timothy Logan	3/1/2018	Website	I fully and strongly support the construction of the bullet train between Houston and Dallas. As a long time Texas resident I have made the drive between Dallas and Houston more times than I can count. Every single time I drove I would've taken the bullet train if it had been available. I have been working for Texas Instruments for my six years here in Dallas and have been to Houston several times for business. The bullet train would have made the Dallas to Houston commute significantly more convenient. I realize there are challenges as far as logistics to getting this project underway, however there are always a thousand excuses not to do something. We can either continue to make these excuses or join the rest of the world in the 21st century with an infrastructure project that would largely benefit all aspects of Texan life.	Comment noted.
Wade Logan	NA	Website	I support the comments listed below and offer them as evidence supporting the No Build Alternative 1. I support the No Build Alternative on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration. US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use Of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance. such as cemeteries, farms and buildings that may qualify as historical Sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation Of HSR results in land take. noise and air pollution, visual disruption and a high consumption of electricity.	Refer to BA-6, ED-1, NE-1 and NE-9.

Michael Lombardi	2/7/2018	Website	Why should a Texas Central HSR be built? 1). 100% privately funded infrastructure unlocks more local investment. 2). Creates 10,000 construction jobs each year and 1,000 permanent jobs. 3). Texas Central will be a tax-payer, not a tax-taker, paying \$2.5 Billion in taxes in 25 years. 4). Estimates injecting \$36 Billion over next 25 years into the Texas economy. 5). Re-enforces importance of investment in a balanced transportation system. 6). Creates vital piece of a 21st century transportation system. 7). N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas. 8). The current 4-hour, 240 mile trek up I-45 is expected to increase to 6.5 hours by 2035. 9). I-45 is the nation's 2nd deadliest interstate in the U.S.; rail keeps more cars off roads and saves lives. 10). With a 90-minute travel time, be at your destination before you could board a flight after arriving at an airport.	Comment noted.

Lone Star Legal Aid	3/9/2018	Email	<p>Dear Mr. Wright:</p> <p>The Environmental Justice Team of the Equitable Development Initiative of Lone Star Legal Aid submits the following comments regarding the Draft Environmental Impact Statement (D-EIS or Draft EIS) for the Dallas to Houston High-Speed Rail Project (Project) on behalf of Lone Star Legal Aid clients residing in the defined Project Area, which overlaps with at least eight counties in Lone Star Legal Aid’s service area in Texas, including Navarro, Limestone, Freestone, Leon, Madison, Grimes, Waller and Harris (the Impacted Counties). We hope that the Federal Railroad Administration (FRA) and the non- federal sponsor, Texas Central Railroad (TCRR), will consider and respond to these comments when refining the recommended plan and developing the Final Environmental Impact Statement (F-EIS) for the Project.</p> <p>A. Introduction Lone Star Legal Aid is a 501(c)(3) nonprofit law firm with a rich and deeply respected history of advocacy on behalf of low-income and underserved populations. While Lone Star Legal Aid does not take an ultimate position on this Project given the diversity of its client base, we offer the following general comments on behalf our represented clients in the Impacted Counties highlighting attributes of Project already reflected in the Draft EIS. Generally, proposed Build Alternative A avoids Segment 3C, which will likely have negative impacts on EJ communities in Freestone and Leon Counties. Build Alternative A also has fewer impacts to EJ residential housing than other Build options C, D, E, and F. Build Alternative A also has fewer impacts to EJ commercial structures than built options C and F. Build Alternative A has fewer residential EJ structure acquisitions than D, E, and F. Build Alternative A has fewer commercial EJ structure acquisitions than C and F. Build Alternative A has fewer community features impacted than Alternatives C and F. Based on these more generalized assessments based on the data presented in the Draft EIS, Build Alternative A likely provides the least potential impacts should the Project move forward. Our EJ team also met with community members and representatives of Super Neighborhood 86 – Spring Branch East, which covers an area nearest the three Terminal Station Options in Houston. Based on those discussions, the Northwest Mall Terminal Option presents an opportunity to revitalize the mall and create economic growth in the area while only posing moderate risks for hazardous waste remediation. This slightly preferred option contrasts sharply with the Industrial Site Terminal Option, which has high risk for hazardous waste risk, given that the proposed site is the Tex-Tube Complex and situated near a residential neighborhood. The third option is the Northwest Transit Center, which will end up displacing one more residential and seven more commercial structures than the other two options. Traffic impacts and road construction impacts for these three options were fairly similar, but the residents were most concerned about the Project’s potential impacts on traffic and the related construction.</p> <p>B. Applicable Legal Standards</p> <p>Under the National Environmental Policy Act (NEPA) —in every recommendation or proposal for a major federal action significantly affecting the quality of the human environment—federal agencies must include a detailed statement on: (1) the environmental impact of a proposed action; (2) any adverse environmental impacts which cannot be avoided should the proposal be implemented; (3) alternatives to the proposed action; (4) the relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity; and (5) any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.¹ This statement is called an Environmental Impact Statement (EIS). An EIS must include an analysis of the proposed action’s indirect effects and cumulative impact. A rule of reason governs preparation of an EIS, and, thus, every conceivable impact does not need to be considered. "Cumulative impact" is, "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions." "Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time." Id. "Indirect effects" are reasonably foreseeable effects caused by the proposed action later on in time or removed in distance.⁶ "Indirect effects may include growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems." Id. After reviewing the Draft EIS there are several potential environmental impacts associated with this Project that still require more investigation as discussed in this letter.</p> <p>C. Environmental Justice Impacts</p>	<p>Comment noted.</p> <p>Refer to AQ-8, EJ-1, EU-1, EU-2, FP-1, NV-5, NV-6, SC-2, SS-17, TR-5, TR-6, TR-8, WW-1 and WW-2.</p> <p>TCRR and its construction contractor shall complete all construction activities in compliance with the local noise and vibration regulations described in Section 3.4.2, Noise and Vibration, Regulatory Context. Refer to Compliance Measure NV-CM#1: Compliance with local regulations for more information about construction noise and vibration regulations. The Preferred Build Alternative A would not use Segment 3C and therefore would not impact Fort Boggy SP lands. FRA worked closely with TPWD in refining potential impacts and compliance and mitigation measures for the Final EIS. Additionally, the discussion regarding Fort Boggy SP in Section 3.17.5, Recreation Facilities, Environmental Consequences has been revised with updated information regarding potential impacts, classification of the entirety of the Fort Boggy as a recreational facility, and to include additional information provided through correspondence with TPWD regarding seasonal hunting activities held on the west side of Fort Boggy, as well as planned future trails and campsite locations.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Under Executive Order 12898, as amended “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, Feb. 16, 1994), the FRA, as an agency under the Department of Transportation, has undertaken to incorporate environmental justice into its policies and programs Executive Order 12898 requires each Federal agency to conduct its programs, policies, and activities that substantially affect human health or the environment, in a manner that ensures that those programs, policies, and activities do not have the effect of excluding persons from participation in, denying persons the benefit of, or subjecting persons to discrimination because of their race, color, or national origin or income level. Executive Order 12898 specifically requires federal agencies (or any local government or governmental agency in receipt of federal funding from a source such as the FRA) to evaluate its actions for disproportionately high and adverse effects on minority or low-income populations and to find ways to avoid or minimize these adverse impacts where possible. In preparing an EIS, agencies are required to consider the environmental justice impacts of their actions under Executive Order 12898. E.O. 12898 triggers an analysis by an agency when a proposed Federal action may produce disproportionately high and adverse impacts on “minority populations.” “Minority populations may consist of groups of culturally different subpopulations with potentially different impacts and outreach needs.” LSLA applauds the FRA’s considerations of impacts on low-income and minority populations, in accordance with Executive Order 12898. Nevertheless, LSLA has reservations about the methodology employed by the FRA to identify the EJ communities potentially impacted by this Project. It appears the FRA conducted only the Fifty-Percent Analysis based solely on census tract information. That is, the FRA identified minority populations for purposes of EJ analysis by only one of the following conditions defined in the Appendix to CEQ’s 1997 EJ Guidance: “The minority population of the affected area exceeds 50 percent [Fifty-Percent Analysis], or the minority population percentage of the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis [Meaningfully Greater Analysis].” However, recent guidance provided by the EPA suggests both the Fifty-Percent Analysis and the Meaningfully Greater Analysis are needed to fully analyze and identify EJ communities. Moreover, the FRA should also work with communities to identify appropriate geographic units for analysis in order not to overlook small areas with concentrated minority populations. Selecting a geographic unit of analysis without sufficient justification can artificially dilute the representation of minority populations within the selected unit. We suggest that the FRA must undertake more than one analysis to identify any and all EJ communities impacted by the Project or identified the exact methods it used to identify minority populations. Subject to LSLA’s objections to the flaws in the identification of the low income and minority population EJ communities in the Draft EIS, FRA still finds that at least 52% of the Project Area impacts Environmental Justice Block Groups (EJBG or EJ Communities). At least 29 of the EJBG in the Project Area are in Harris County.¹⁴ That’s a large number of EJBG that seem to be all treated as if they were the same just because they have Harris County in common. The Project’s avoidance of impacts on public housing is commendable, but it is still unclear from the Draft EIS which residence will be displaced due to construction. It is reported that there are 333-348 total residential, commercial and community structures impacted, and 101-111 are located in EJBG. That statistic means that almost 1/3 of the displacement impacts from the Project are to EJ Communities. It is important that the FRA revisit this analysis if the minority populations identified in the Project Area expands after applying the improved methodology suggested above. Moreover, many of these impacts are disproportional impacts compared to the greater population. For example, 76% of residential displacement impacts to Segment 3C in Leon County are in EJ communities, and 83% of residential displacement impacts to Segment 4 in Leon County are in EJ communities. Out of the three terminal options, Northwest Transit Center Option has the highest number of residential displacements (16 vs. 9) and requires the most long-term acquisitions to complete the terminal project. The Draft EIS only identified only six neighborhoods selected for mitigation in LSLA’s service area: (1) Saddle Creek Forest (Waller/Grimes County), (2) Plantation Drive (Waller/Grimes), (3) Mallard Crossing (Harris), (4) Stone Creek Ranch (Harris), (5) Stonegate (Harris), and (6) White Oak Falls (Harris). None of these are identified in the Draft EIS as EJ communities. However, based on the potential impacts from noise and vibration from the train, it is likely that additional mitigation will be needed in these EJ Communities.</p> <p>D. Noise and Vibration</p> <p>At the public meetings hosted by the FRA on this Project, one of the most frequently raised concerns by residents was potential noise and vibration from this Project. Noise is recognized as a major environmental issue, particularly in urban areas, affecting quality of life and well-being. According to the World Health Organization, noise ranks second among the environmental risk factors to public health, only behind ultra-fine particulate matter (PM2.5) air pollution. Environmental noise can also cause sleep disturbances, and residents should be genuinely concerned about loss of sleep because of this Project’s additional environmental noise impacts. Long-term exposure to environmental noise can lead to hearing loss, endocrine effects, cardiovascular diseases, and increased incidence of diabetes. It is clear that the combination of the two high-speed trains and Highway 290 near Houston will necessarily result in more noise in this area. The Draft EIS revealed that the noise and vibration study was based on a Japanese train going less than the projected 200 mph. It would seem that the data underlying the FRA’s noise assessment for this Project is incomplete as it not only does not properly account for the projected speed of the train since noise source levels of these trains operating at speeds above 90 mph are not currently available. It also does not identify impacts by distance away from</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>the proposed rail line to adjust for increased sound at over 90 mph, particularly given the elevation of the train in some areas to cross over existing freeways. These impacts need to be measured and calculated so that residents can recognize their potential impacts on their property and quality of life. The Draft EIS states that there will be severe noise impacts on seventeen residential receivers, which are not specifically identified in the Draft EIS. There is insufficient information provided to determine the location of these residential receivers, or the extent of the “severe” impacts from noise that may be felt on their property. However, they are generally identified as: o 1 severe noise impact in Segment 4 Leon County. o 1 severe noise impact in Segment 5 Grimes County. o 8 severe noise impacts in Segment 5 in Harris County. If the Project moves forward, the FRA should insist on sound barriers and other measures to mitigate the noise, such as building noise insulation. Similarly, the Draft EIS states that there will be “moderate” noise impacts on 247 residential receivers, which are not specifically identified in the Draft EIS. There is insufficient information provided to determine the location of these residential receivers, or the extent of the “moderate” impacts from noise that may be felt on their property. They are only referenced as follows: o 6 moderate noise impacts in Segment 4 Leon County. o 5 moderate noise impacts in Segment 5 Grimes County. o 175 moderate noise impacts in Segment 5 in Harris County. Even without more details concerning the exact location of these impacts, there are definitely disproportionate impacts on EJBGs that the FRA identified in the Project Area: o 90% of severe impacts are to EJ communities under Segment 5. o 73.4% of moderate impacts are to EJ communities under Segment 5. Because of these disproportionate impacts, the FRA must plan for noise mitigation for Build Alternative A. While the Draft EIS provides for acquisition of any residential property less than 50 feet away, what does mitigation look like for residences located more than 50 feet away if the owners decide to stay? The Draft EIS is not specific enough regarding appropriate measures to protect remaining residents. For this reason, we strongly recommend that an additional noise assessment prior to operation to refine noise impacts and determine mitigation strategies with property owner input. It is also possible that FRA may need to push for more evaluation to be done on the potential EMI impacts of this Project like a recent study done in Cal Train. Potential suggestions for the first year of operations might include monitoring EMI impacts for the first year of operations on at least a quarterly and sharing those reports with the general public. Requiring any identified disruption of electric equipment to be immediately remedied. Making TCR responsible for all costs to evaluate, design, monitor, and remediate any Project-related EMI disruption of sensitive electric equipment of other passenger or freight rail systems.</p> <p>E. Floodplain Hazards and Floodplain Management</p> <p>The Draft EIS appears insufficient in addressing floodplain hazards and floodplain management particularly in light of recent and severe flooding events in Harris, Grimes, and Waller Counties in 2015, 2016, and 2017. Given the recent impacts of Hurricane Harvey, Harris County residents particularly have expressed concerns about the resilience of any new development and the impact it would have on existing developments when confronted with a storm or flooding event like Harvey. First, it is not apparent from the Draft EIS whether the modeling done for this Project on floodplain hazards or flood plain management accounted for a storm like Hurricane Harvey. Section 3.8.4.3.1 of the Draft EIS only appears to rely on annual rainfall totals from 2016. It is imperative to re-evaluate annual rainfall totals for the Project Area in light of this recent set of storms. Moreover, more extensive modeling should be done to forecast rainfall and related impacts from these sorts of super storms. For example, the inundation flooding map from Hurricane Harvey created by the Harris County Flood Control District reflects severe flooding along the proposed Project route in multiple areas, including populated areas like Hockley, Cypress, and Jersey Village. Second, given the recent review of and potential revisions to the City of Houston’s flood plain ordinance, it would be important to understand what, if any, construction related to this Project will occur in a 100-year flood plain. The Draft EIS states that the “City of Houston requires that structures constructed in the Special Flood Hazard Areas shall be elevated to at least the minimum flood protection elevation measured at the lowest floor, which is equal to the base flood elevation plus 12 inches.” While this may have been true at the time the Draft EIS was distributed, this regulation is currently under review by the City of Houston. Further, there is no indication from the Draft EIS as to how certain floodplains may be impacted due to new construction related to this Project. As there is a combined 69 acres of construction proposed in the 100-Year Flood Plain in the Spring (56 acres) and Buffalo-San Jacinto Watersheds (13 acres), this analysis is important given that this area is already extremely prone to flooding. The Spring Watershed contains 8 different creeks.³¹ In the Tax Day Storm (April 16-17, 2016), communities in Spring experienced flooded homes, businesses and roads. Several neighborhoods along Little Cypress Creek in Harris County, which Segment 5 traverses, also saw secondary flooding after the creeks had drained local stormwater, and additional runoff from the upper watershed reached the lower reaches of the creeks. The secondary flood primarily affected roadways, which made it difficult for traffic to flow in the area. During the Memorial Day Storm of May 27-28, 2016, six weeks later, the ground was saturated and several of the creeks and tributaries were still carrying stormwater from this slow-draining part of Harris County. The heaviest rainfall occurred over northern Waller, southern Montgomery and Washington counties, and there were areas that got 8-13 inches of rain in north Harris County. It was simply too much rain in a short period of time falling on saturated ground, and some homes and roads that flooded previously in north and northwest Harris County flooded again. The Buffalo-San Jacinto Watershed includes four bayous and one creek that will be impacted by Segment 5 and the terminal options. This watershed was also heavily impacted by Hurricane Harvey. The Project must consider the impacts any new</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>construction associated with the Project will have on these frequently flooding watersheds to protect life and existing property.</p> <p>F. Traffic Congestion and Road Construction Transportation impacts caused as a result of the Build Alternatives would primarily affect EJ communities through roadway modifications. The Project touts its ability to remove traffic between Houston and Dallas and ease congestion by diverting those traveling from Houston to Dallas by car or plane to the HSR. However, this analysis forgets that the majority of traffic congestion exists in Houston and Dallas, not necessarily for those traveling to and from. For those that work in the area near Highway 290 and Hempstead Road near the three Terminal Options, this area is already extremely congested daily. Some part of Highway 290 has been under construction for the last seven years. While the highway project is to be mostly completed by the beginning of 2019, this Project seeks to start construction sometime in 2019 if the Final EIS stays on track. The congestion will just continue. Although TCRR has designed the Build Alternatives to avoid and minimize impacts to the maximum extent, they will still exist if this Project is implemented. The HSR System avoids roadway impacts through the use of viaduct, road over and under rail, relocation, rerouting and closure. Permanent changes to roadways occur when roadways are relocated, rerouted or closed. Even if EJ communities are not disproportionately affected by permanent roadway modifications, temporary road closures necessarily will affect EJBG residents as 29% of the temporary construction zones are located in EJ communities. If 52% of the Project is going to impact EJ communities it is hard to say that there will not be more traffic or road construction impacts in EJ areas than non-EJ areas as a result of this Project. Heavy equipment emissions and noise/vibration and traffic reroutes are going to impact these communities more. Several of the Project’s Build Alternatives have common segments (Segments 4 and 5) where the potential for EJ impacts are increased. TCRR still needs to mitigate these impacts to move forward with the Project even though the alternatives may be equal in these areas. There is still an adverse impact on these areas than if the Project was not built. Further, we agree that having to build 45 miles of adjacent rail and highway frontage roads for Build Alternative C is not recommended and would require safety barriers to prohibit vehicular drivers from impacting the track infrastructure. Build Alternative A that does not require the added safety barriers would be preferred from that perspective.</p> <p>G. Impact to Schools in the Project Area Leon High School is a high school in Jewett, TX, in the Leon ISD school district. As of the 2016- 2017 school year, Leon High School had 214 students. The school received an accountability rating of “met standard.” Slightly over 41% of students were considered at risk of dropping out of school, and 43.5% are economically disadvantaged. Students with limited English proficiency totaled 6.1% of students based on enrollment in bilingual and English language learning programs. Approximately 28% of the students identify with one or more minority groups. Highway 79 is two miles away from Leon High School which is a proposed construction site. Temporary construction impacts to Leon High School may include: (1) movement of vehicles and generation of dust and (2) school ingress and egress being impacted. The Project will require temporary road closures and impacts to school crossings to prevent impacts to pedestrians, vehicles and bus traffic given proximity to the school. These closures will be disruptive to school operations. The Project should also actively develop methods to reduce fugitive dust emissions and ensure that the health and safety of the students and staff at the school are protected throughout the Project.</p> <p>H. Other Concerns Raised by the Community Based on general community feedback to this Project, the FRA should also consider not approving Build Alternative Option C due to its potential impacts on Fort Boggy State Park, located in Centerville, Texas in Leon County. This park land provides a multitude of recreational activities like hiking, fishing, swimming, and mountain biking. The 15-acre lake easily accommodates small boats, canoes and kayaks with cabins for overnight stays. The Project should steer clear of this popular recreational asset and avoid Build Alternative C for this reason. The FRA should also undertake some investigation of the potential interplay between existing pipelines at the infrastructure required for this Project and its subsequent operations. There are 19 pipelines in Harris County identified in the Draft EIS. From the Draft EIS disclosures, it is not clear if the TCRR has consulted with regulatory authorities regarding conflicts and hazards from parallel pipelines. For example, is there potential vibratory damage caused by construction up to 500 feet? And it is not clear what, if any, such vibrations might have on gas pipelines that are near the train. LSLA agrees that the remediation of hazardous sites potentially could become a beneficial impact to EJ Communities from this Project. However, there are still disproportionate adverse impacts to EJ Communities from moderate risk hazardous impacts: (1) 53.7% of the moderate risk hazardous impacts in Harris County are to EJ communities, and (2) 62% of the moderate risk hazardous impacts in Segment 5 are to EJ communities.</p> <p>I. Conclusion On behalf of its clients and their communities impacted by this Project, Lone Star Legal Aid would like a complete response from the FRA to the comments and concerns raised in this letter. Please contact the undersigned counsel if you have any questions or need clarification regarding the comments contained herein. Sincerely, LONE STAR LEGAL AID</p>

Crystal Lopez	3/9/2018	Website	<p>I think this is a great idea . I have heard rumors before that the construction for this project would have been completed by 2020.I know it's not true but I think many people would benefit from this because it would cut the amount of time it takes to get from Houston to Dallas. I hope it will be safe and it wouldn't be too expensive like an airplane would be. I'm all for this idea ! Very excited for this to be finished and ready to go ! I hope as part of the design of the train there could be a mural that can reflect on the city of Houston and Dallas. I believe many Houstonians and Dallas civilians would appreciate that. Also one of the very important things to keep in mind would be the type of limitations of what to carry on to the train. There should definitely be a metal detector screening items that would be brought onto the train for safety reasons . No guns or knives or any sort of weapon since it will be a family train. Also would people be able to access the train like a Metro bus without an ID and paying a small fee or having a \$10 monthly card to pay to have access to they bus . Or would civilians have to be ID'd and sign up with there name before getting on the train, and paying online ? Back to the luggage ,every luggage should be tagged with the information of the owner of the luggage to prevent theft. No luggage on board without a proper identification tag. I believe luggage compartment should be above the seats so that way civilians can get that their selves . Also will the design of the train accommodate people with babies in a baby carrier ,service dogs,handicapped civilians?Also the design of the train should included a mini foldable table for the people . First Aid kit , emergency exit , belts ,fire extinguisher , automatic doors, retractable automatic sun shades , (We deal with plenty of Texas sun/ heat) , sun roofs (to save electricity during the day),I don't believe that television would be necessary since most people already have smart phones and that would add weight to the train ,is not really going to be a luxury train since it will be more focused on speed rather than comfort .</p>	<p>Refer to SS-9 and SS-18. Specific screening procedures regarding firearms or other potential weapons will be developed through the System Security Plan. The design of the Project will accommodate children, service dogs and handicapped civilians. There will be space to fit children in baby carriers and storage areas to stow strollers. The design will comply with the requirements to accommodate handicapped civilians and service animals as per the following Americans with Disabilities Act (ADA) regulations: 49 Code of Federal Regulations (CFR) 37 - ADA Transportation Services for Individuals with Disabilities; 49 CFR 38 - ADA Accessibility Specifications for Transportation Vehicles; and, 2010 ADA Standards for Accessible Design, dated September 15, 2010.</p>
Ernesto Lopez	3/9/2018	Website	<p>Looking forward to the train. Would love to cut the travel time to 90 min.</p>	<p>Comment noted.</p>
Nancy Lopez	1/29/2018	Letter	<p>1. Concern about Texas counties, Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and Wheeler. Endangered species-bald eagles, monarch butterfly, wood pecker, passenger pigeons, red wolf, gray wolf, migratory game birds, wood stork, Texas horn lizard, Brazos water snake, Houston toad, white face ibis, interior least tern, Cagle's map turtle, Ouachita, rock pocket mussel, including wildflowers of large fruited sand verbena, Navasota Indie tresses.</p> <p>2. Concerns about water shed impact of flow and drainage of water in flood event.</p> <p>3. Concerns about soil erosion.</p> <p>4. Concerns about livestock reproduction due to vibration and noise.</p> <p>5. Noise pollution.</p> <p>6. Re-routing roads and closing roads that are easier access for emergency situation.</p> <p>7. Electromagnetic currents that "High Speed Rail" radiates.</p>	<p>Refer to NR-1, NR-2, NR-3, NR-4, NR-5, SG-1, SS-23, WW-1 and WW-2.</p> <p>Passenger Pigeons are extinct. The Red Wolf and Gray Wolf are extirpated from Texas. The Monarch Butterfly is currently "Under Review" for listing by FWS and is not currently a protected species. Other species mentioned were assessed in Table 3.6-8 except for those not listed by TPWD or FWS such as the Brazos water snake, Cagle's Map Turtle, Ouachita, and Rock-Pocket Mussel. The Project does not radiate electromagnetic currents. Rather, the electric current used to power the Project does generate electromagnetic fields (EMFs), as discussed in Section 3.14.1, Socioeconomics and Community Facilities, Introduction. As discussed in Section 3.15.4, Electromagnetic Fields, Methodology: "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."</p>
Will Lopez	12/30/2017	Website	<p>Thank you for allowing this to happen.</p>	<p>Comment noted.</p>
Brian Lopresti	2/20/2018	Website	<p>I am a freight train conductor. I am a union employee, but I am against this project. Having given Amtrak roll byes and at least 2/3 of the train empty i can say this will be the case with this. I would hate to see people being displaced for something that will not work. Thanks</p>	<p>Refer to GN-2, NE-1 and PN-3.</p>

Amy Lou	1/18/2018	Email	FRA, I demand that you reply in writing with an explanation to the following question. You will send your response to [...]. Your HSR cuts my pasture in half. On one half is a pond where my cows drink out of. How do you propose that my cows stay hydrated and drink from the pond when the Japs are coming through with a train that has yet to succeed in most of its other countries? Do you like steak? Where do you suppose steak comes from? It is NOT dehydrated dead cows. thanks, Amy	Refer to LU-11.
Amy Lou	1/18/2018	Email	WHY DOES THE FRA DEIS SHOW A COMPLETELY DIFFERENT PLAN THAN PREVIOUSLY ADVERTISED BY TCRR	Refer to BA-8.
Amy Lou	1/18/2018	Email	Will you be using any state funds to fund your project? Also, will my taxes in Leon county increase? Obama takes enough of my money, about 1/3 of it every paycheck	Refer to GN-4 and VA-1.
Amy Lou	1/18/2018	Website	FRA, I demand that you reply in writing with an explanation to the following question. You will send your response to " _ ".	Refer to PI-1.
Amy Lou	NA	Website	FRA, I demand that you reply in writing with an explanation to the following question. You will send your response to " _ ". How do you plan to keep terrorists off of your high speed railroad?	Refer to SS-6, SS-2, SS-7 and SS-9.
Lonnie Love	NA	Website	Your proposed A route to the High Speed Rail goes through our property. The meeting that took place on January 5, 2018 in Madison County with the FRA and concerned citizens detailed concerns which have not been addressed. I am staunchly opposed to this project. It is my hope that the FRA will also see and hear the protest against this project. I can definitely see why this project will fail if Eminent Domain is not received by the High Speed Rail Commission.	Comment noted.
Lonnie Love	NA	Website	Dear Sir: Your Proposed A Route to the High Speed Rail goes through our property. The meeting that took place on January 5, 2018 in Madison County with the FRA and concerned citizens detailed concerns which have not been addressed. I am staunchly opposed to this project. It is my hope that the FRA will also see and hear the protest against this project. I can definitely see why this project will fail if Eminent Domain is not received by the High Speed Rail Commission. Lonnie Love Flynn, TX 77855	Refer to ED-1.
Dennis Loving	3/5/2018	Oral	Okay. I have no prepared statement other than I wanted to come and tell you guys that I'm fully in support of building this railway. It's going to be good for Texas. I'm in support of the Northwest Mall location for the terminal. It's going to be a good location. Come April the 1st, April Fool's Day, will be 40 years that I moved to Texas. I'm from a little area in the Ozarks. I know how everybody feels about your little quiet, peaceful existence. I had 59 kids in my class, okay, my high school graduating class. I understand where you're coming from. I sympathize with you. But this is good for the state. It's going to help us compete worldwide because that's the reality of today. I'm an engineer. I've worked on \$10 billion projects. I have two kids. My son is an environmental permitter. He has a master's in permitting -- what's it called -- environmental science -- environmental permitting -- environmental law. I finally get it. So we talk about -- I know exactly what you guys are going through in your permitting. We've talked about it. He wishes he could be here. He's in favor of the rail. I have a daughter that went to TCU. She is a NICU nurse now. She stayed in Dallas. So as far as for us, it's going to connect our family. It's going to help us. It's going to put us together where we can go up there in 90 minutes and visit my grandson, my two-and-a-half year old grandson. I'm fully in favor of this. Like I said, it's a good thing for Texas. It's going to help us compete worldwide. I know a lot of people -- I live a stone's throw across the freeway here and I've seen a lot of changes. When I first moved over here, there were chickens in people's yard. There were horses. I understand, you know, but progress is progress. And, like I said, we have to -- I guess I'll finish with this one. My fellow Texans, ask not what Texas can do for you, ask what you can do for Texas.	Comment noted.
Evan Lowe	1/29/2018	Email	No taxpayer backed loans or funding for this boondoggle. This project has no chance of ever being financially viable. The infrastructure to move people between Dallas and Houston already exists between multiple major airports and air carriers in both cities, as well as 1-45 and bus lines. \$20 billion that this project is claiming it will cost, would be better spent on improving the roads and airports. Jet aircraft are faster, safer, lower cost, and more flexible than an archaic fixed train.	Refer to BA-4, BA-12, GN-4, PN-3, NE-1, SS-12 and TC-2.
Kenneth Lowe	2/18/2018	Website	As a businessman who drives thousands of miles each year between Dallas, Houston, Austin, and San Antonio, I'm eager for options that give me more flexibility to meet my customers and put one less car on the road. Please help us connect and grow.	Comment noted.
Christina Lowry	2/6/2018	Website	I don't want to see this light rail come through cypress or Waller. I've lived here my whole life, was born here in the cypress area, and don't see who can spend \$400 on a round trip ticket from Houston to Dallas. I would rather drive then spend that much money. There are also busses that business people can take with WiFi and drinks or snacks to allow them to work on their commute in. These bus trips are way cheaper than the cost of this train trip. Also I don't want to see or hear the train from my home. Traffic along the barker cypress corridor is already bad, adding a train around this area would make it worse. Also our neighborhood has flooded three times in the past two years. Have any studies been done to see if this would make it worse? Additionally we have pipelines running through our yard. Have studies been done to see the effects on these pipelines? I don't want to lose my home to something like this because not enough research has been done. Prices have risen since I bought my home and due to my husbands illness I can't afford a home at the current prices. Prices have inflated drastically since I purchased here. I feel like not enough quality research has been done before this is going to be built. This private company is trying to line their pocket books and not look for what's beneficial for the community.	Refer to EU-2, FP-1, GN-1, NE-1, NE-9 and WW-1. Approximately 74 percent of the Build Alternatives in Harris County, including Houston, will be constructed on viaduct (bridge type structure) which allows for free movement of water and would avoid and/or minimize floodplain and waters impacts.

Lisa Loya	2/21/2018	Website	Build it!!! High-speed rail is desperately needed, not just in Texas, but across America. The United States is 50 - 60 years BEHIND the rest of the developed world in transportation. From what I have learned, the route for the Texas Bullet Train is the best, most sensible route and will have minimal environmental impact. Please BUILD THIS BULLET TRAIN !!!	Comment noted.
Alan LRoy	2/5/2018	Handwritten	1) Does not benefit rest of state for transportation. 2) Compensate land owners 8-9 times CAD value. 3) No one in USA can use this line like I45, I20 and I10. 4) Place rail on current row routes and we will not have these meetings 5) Run it down I45 center lane, no one gets hurt or loses land. 6) Must protect private property right.	Refer to BA-9, ED-1, ED-2, PN-3 and SC-19.
Jennie Lucky	1/22/2018	Email	I vote NO on this project and it's negative implications for Ellis County! There will be zero benefits for Ellis County, only negatives.	Refer to SC-19.
Ken Luebeck	2/28/2018	Website	I write in support of the preferred alignment presented at the exhibits in the public hearing. Upon learning that I was going to my 3rd DEIS public hearing, my 8 year old son promptly created the attached "concept model" for the Houston Station, complete with a LEGO(r) rendition of a high speed train. He wanted me to share it with the people building the railway. Contrary to some of the more negative comments heard in the hearing, my son equates riding trains with going to visit Grandpa and Grandma- something he's done using Amtrak many times. While his Grandpa and Grandma are not in Dallas, my son correctly observes that trains connect people, and that connecting people is generally good. Moreover, we know that trains connect people with less environmental impact than cars: less footprint, less pollution, far fewer/no traffic accidents,	Comment noted.
Ken Luebeck	3/5/2018	Oral	Hi. My name is Ken Luebeck. I'm here to state why the high-speed train, I feel, has intrinsic value even for rural people, even for ranch country, which is important. You all are important. I've been in three of these public hearings. This is the fourth. I've heard lots of you speak. I've sat in the audience in the back, trying to be quiet. Of course you feel strongly about this. I get that. It's your land, it's your piece of Texas. Upon learning I was heading to the third of the public hearings I went to, to the one in Waller -- no, the one in Cypress, my 8-year-old son quickly assembled a Northwest Station out of a construction toy and cardboard and bed sheets, that kind of stuff. And he took a picture of it and had mommy send it to me so I could show it to the railroad folks. Why does he like the train? Of course, we do things like riding Amtrak to see Grandma and Grandpa and that kind of stuff. He associates the track with connecting people and families. And, yeah, Grandma and Grandpa aren't in Dallas, they're up north of that, but that's what he sees. He's 8. Now, the next decades, as others have said, Houston and Dallas will grow. Both cities will have over 10 million people. They're going to travel. What do you do about that? Because the rural way of life is also about family. I understand you guys all have family. Some of you go back generations on your land. If all those people are restricted to cars, then what happens? Someone builds a Buc-ee's, a Flying-J, and then you get fast-food places and hotels, and people start detouring off the freeway because of an accident -- and I've been one of those folks, I confess. You get a linear city, or I suppose stuff like Plano or McKinney north of Dallas, which I imagine was ranch land 15, 20 years ago, and now it's, you know, city. So what do you do if you don't want to lose ranch country, yet the cities around you keep growing? That's a tough problem. I suggest you put them in a capsule and let them ride through your country. They wave at the cows as they go by, but they don't stay. I have good friends growing up in southwestern Minnesota. I get country life. It's wonderful. It really is. More highways doesn't do that for you. As this project continues, I encourage all of you to have an open mind, (inaudible) Texas. Hear what they have to say. They haven't answered every question yet, I get that. They haven't engineered the whole thing. That means you can negotiate if you're affected. Heck, ranch country does matter. You matter. I suggest the railway is the best way to preserve your way of life given the growth of the cities. I do support the FRA's preferred alternative. Thank you.	Comment noted.
Ken Luebeck	3/9/2018	Website	I am not aware what open questions or factors led the FRA not to recommend a preferred alternative for the Houston station site. This comment recommends the Northwest Mall site as the best site and with the least impacts. I note the Northwest Mall appears to be for sale, that most of it is vacant, and that it is commercial property surrounded by expressways and other commercial property. It has no residential impacts to speak of. It's a large brownfield that is begging for redevelopment— whereas the alternative sites do not share these features. I live under 5 miles from here and frequently am in the area of Northwest Mall.	Refer to GN-9.
Carolyn Lummus	2/28/2018	Email	We Own three hundred acres just north of OSR in Leon County. This land has been in our for more than fifty years. It's hard to explain to people who live in cities and those who govern our great State, to realize the impact this High-Speed Rail will have on those people who own land which will be taken to complete the route from Dallas to Houston. In our case, my and I started buying land not long after we got married and that was fifty years ago. It was not always easy to make those payments, but we did without other things to own some land. In other cases, land has been in families for generations. Like the early pioneers who settled in they came for land, even killing to own and keep land. We are basically like those pioneers. Please don't take our land. The route of the High-Speed Rail, if approved, will split our property in half, taking our barns, camp house, ponds and stock pens, etc. It will also take our access road to the property, which will be very difficult to obtain another easement from the adjacent landowner. It will almost be impossible to maintain a cattle operation on the property with the land split	Refer to LU-11, RF-2 and TR-10.

George Lumpkins	3/9/2018	Website	Due to the cost of land to make this project work, there, in my opinion, is NO WAY this can ever recover the cost of the project or be profitable. Don't waste the money.	Refer to GN-2, GN-4 and NE-1.
Gail Lundberg	1/29/2018	Oral	My name's Gail Lundberg. I typed this up on my phone and it just about died. I don't have anything really funny to say, so I'm sorry I can't be more entertaining. My concern is safety. You have provided a lot of information from your Environmental Impact Statement that gives the appearance that you are monitoring this project, but, in fact, the Federal Railroad Administration does not monitor the track maintenance and they do not see inspection reports. They are only given the word of the track owner that the track is inspected and safe. The reason I know this is because I did a request for information about a bridge in Corsicana. I emailed response from Denise Kollehlan I'm not sure how you say her last name the freedom of information officer that cites Code of Federal Regulation 49, Section 237.156 that states, "A track owner is expected to implement bridge maintenance and keep records. The Federal Railroad Administration did not have a copy of the maintenance plan or the results of the inspection. We have to rely on the track owner for safety and that is a concern to me." That's all. Thank you.	Refer to NE-1, NE-2 and SS-5.
Rick Lunsford	2/20/2018	Website	I support the plan for the Dallas to Houston High-Speed Rail project. The proposed plan will enhance mobility in a highly used transportation route between Dallas and Houston. The rail plan will be one component to alleviate congestion on IH 45.	Comment noted.
David Luther	2/6/2018	Oral	David Luther First off I got to say thank you very much. Thank you for the people who are still here because I feel really good that I made it finally, and there's people still here. Because I was a little worried about that at first. My name is David Luther. And I am one hundred percent against this train. So I am a no-build, for the record. Now, this other gentleman said there the Navy veteran: I appreciate you stealing my idea: but I'm going to do it again. You guys are just — everybody raise their hand here if you're against the train: okay? Now, somebody raise your hand if you're for the train. Please indicate that no one in this audience raised their hand, ma'am, that everyone in the audience raised their hand for they were against the train and no one raised they're hand for the UNIDENTIFIED SPEAKER: There's one. MR. LUTHER: wait, wait We got UNIDENTIFIED SPEAKER: I'm neutral. NIR_ LUTHER: Put your hand down. You're not for it. UNIDENTIFIED SPEAKER: I'm picking up a lot of vibes from you, but MR. LUTHER: Okay. I'm good. There's so many things that we could talk about here: but so many things have been said tonight so I'm not going to bore you anymore because you did have the fortitude to stay for all of this. But there's just so many things we can talk about. Obviously: the financial viability of this is very clear to just about everybody that's looked at it. Ifs not financially viable. And my wife: who's also great at coining things: told me: 'Don't forget to say this: 'If it doesn't make sense: it makes cents.' That covers it all, folks. If it doesn't make sense, it makes cents. Somebody's going to make cents from this at our expense. So I got a minute 14. You know, I was sitting back there with Cecil Bell. rm the Republican chair of this county: and I'm here because I support the county. I support everyone's right to do what they're doing tonight; but the most important thing I think that I could bring to the table is I'd like to just give you a political view. Because everybody else has talked about their land and this doesn't Impact me because I live in Waller County and it' s away from me: but I	Refer to GN-2, GN-4 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			want to talk about politics just for a second. I know that people start glazing their eyes over: but it's important: We are here because of politics. We're fighting this because of politics. They looked at us and said, "Oh, we can run through Waller County _ They don't have any real strength" Okay. When they went to Montgomery County, they saw all the people against it up in Montgomery County: they said: "No: let's just move it. "Okay? So we have to fight this as a cohesive unit, •which is what we're here doing tonight Let me say that this is not going to be decided between Houston and Dallas. This is going to be decided in Washington and Austin. And people like Cecil Bell, your representative if you live in Waller County: are helping us to fight. But there are a lot of politicians out there that are not. And we need to take notice of that when it comes down to it. We run our political operations. If we •.73te: if we call, if we write to our politicians, they will take notice. So folks: get involved in politics: get in voting. And please: support the Texas Citizens against the High-Speed Rail and the Waller County Advocacy Group here in Waller County; support your politicians like Cecil Bell and the judge back here who are fighting this fight for us every day. And I thank you very much.	
Zachary Lybrand	3/9/2018	Website	The high speed rail line that is being proposed between Dallas and Houston will be an absolute boon not only to the communities served directly by the train, but to the United States as well. We are being presented with an amazing opportunity to bring our rail system into the 21st century with this one small step, and we would be foolish to ignore the chance.	Comment noted.
Marian Lyde	2/20/2018	Website	I've been researching this plan for 4 years and TexasCentral still seems to be avoiding major concerns of many taxpayers. Example, for a rider from college station or Bryan Texas to drive 25 minutes to ride a train 35 minutes to Houston for the cost of an airline ticket or even less is ridiculous since a trip down Hwy 6 to 290 to station by car or shuttle is extremely cheaper and less miles so to include them in ridership data is a fabrication of data projections. To not make route extend entire IH45 is because TexasCentral does not want to pay the high cost of rightaways and loud sound barriers through populated areas. This cost of the proposed route is at the expense of ranches and landowners along the rural routes and should be denied. Private companies gaining profits (if that is possible based on their false ridership data) at the expense of private citizens should be against the law especially when the data is extremely skewed.	Refer to BA-7, BA-8, BA-9, ED-1, GN-2 and NE-1.
Bill Lynch	2/5/2018	Website	Texas does not have the funds to continue to build the highways necessary to reduce congestion or even to hold it at current levels. High Speed rail offers an alternative that is privately funded (with the possible addition of Federal infrastructure funds)that could provide significant reduction of traffic on Texas highways. Houston to Dallas is a great first step. Imagine a link from College Station to Austin. Imagine a link from Dallas through Arlington to Fort Worth and on to Oklahoma City. Imagine a link from Houston to San Antonio. All of these together would reduce traffic on I-45 and I-35. None of this will be possible without the Dallas-Houston link. The rail footprint will be smaller than another highway. If the train is largely elevated as the proponents promise, the impact on agriculture would be less than a highway right of way. This looks like a winner for everyone except the people living in the path.	Comment noted.
Bill Lynch	2/20/2018	Website	High Speed Rail has the potential to change the face of ground transportation in Texas from over crowded highways to fast, safe reliable transit. The long term project has the potential to connect all of the major population centers in the state with the possible exception of El Paso. No one wants rail built on their land, but the greater good of the state coupled with fair compensation has to override those concerns. Please approve the Texas Central Plan for service between Dallas and Houston.	Comment noted.
Bill Lynch	3/9/2018	Website	Our government relations agenda calls for you to approve the Bullet Train. The jobs created during construction and during operation will be a boon to our economy. The convenience of the train will be a great option for the traveling public. Having a train as a neighbor, having a train buy your land for right of way...neither is going to be well received by the people in the middle. On the other hand it is less intrusive in total than building more lanes on I-45.	Comment noted.
Larry Lynch	2/27/2018	Website	I am anxiously awaiting the completion of the rail. It is especially good that we will have the station in Roans Prairie so that Grimes County residents don't have to drive to Houston. It will help Grimes County to grow and grow their tax base.	Comment noted.
Marilyn Lynch	3/9/2018	Website	I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. I am a strong supporter of sustainable transportation methods, and I feel that the bullet train project will contribute significantly to providing viable, sustainable transportation alternatives to vehicles emitting fossil fuel pollutants. I am a resident of Ellis County and feel that the impacts of the train will be minimal for farmers, ranchers and developers. Please move this project forward for the benefit of our local economies as well as the entire state of Texas. Thank you for your consideration.	Comment noted.
Stanford Lynch	1/29/2018	Website	The Dallas to Houston High Speed Rail (HSR) project is good for Texas and for the united States to move citizens to and from Dallas to Houston in a very timely and environmentally safe manner. This will be the first HSR project in the U.S. and will provide safe and economical transit for the first time in the U.S. I have ridden HSR in Japan, France and Germany and have found it to be far superior to air flight. It is quiet, smooth and with respect to the Japanese HSR System being proposed, one of the most safe systems in the world. This will provide an alternate mode of transportation to both air flight and personal vehicle travel in Texas and will be an economic generator for the State of Texas. I urge the FRA and the USDOT to approve this Dallas to Houston HSR system and allow the Texas Central Partners to publicly finance and build this system as fast as possible.	Comment noted.

Joseph Lynes	3/8/2018	Website	I am very much in favor of development of the Dallas-Houston high speed rail line. I hope that it is the first segment in a state-wide network of high speed rail.	Comment noted.
Sherry Lynn	1/31/2018	Email	I am against the rail/train! It is an expensive project I do not think will survive. It will disrupt rural communities, and family farms. My daughter and her husband are 5th generation farmers and ranchers in Ellis County. It will go through the middle of my son in laws 95 year old grandfather's home. It will be less than 1/2 mile from my daughter and son in law's home, right through their pasture and farm. My fiancé is a retired Deputy Sheriff. My brother is a retired fireman, paramedic. Road closures would impede emergency response times in these rural areas. These are just 2 reasons I am personally against this train. I oppose this train, and I pray it NEVER comes.	Refer to BA-8, GN-4, LU-11, NE-1 and SS-23.
Sherry Lynn	2/19/2018	Website	I am against this project. It will have a devastating effect on my daughter, son in law and grand children as the proposed route will destroy their family farm and go thru the middle of it. What will happen to our farms? Our ranches? Our quality of life? What will happen to emergency response times? What will happen to land values? What impact will this have on our county governments? Road closures? Too many unanswered questions and concerns when you can fly from Dallas to Houston as fast and cheaper! One of the worse ideas/plans I've heard of since the Super Collider-and we all know what happened there. I pray this never happens.	Refer to BA-12, LU-11, PN-3, SC-3, SS-23, TR-7, TR-8 and VA-1.
Alastair Lyon	1/16/2018	Email	As a Dallas area resident, I support this project. It would create jobs, reduce greenhouse gas emissions, and improve the Texas economy. Federal	Comment noted.

Bobby M	2/26/2018	Website	I have strong opposition about the high-speed rail in Navarro County traveling through the intersection of 709 and 1394 destroying Morgan Legacy Farm along with the water habitats of several rare waterfowl species. With so many other potential sites with less impact on water and landowners I can't support the current path through this important land	Refer to LU-5.
Bobby M	2/27/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5, WW-1 and WW-2.
Bobby M	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Bobby M	2/28/2018	Website	I have strong opposition about the high-speed rail in Navarro County traveling through the intersection of 709 and 1394 destroying Morgan Legacy Farm along with the water habitats of several rare waterfowl species. With so many other potential sites with less impact on water and landowners I can't support the current path through this important land	Refer to LU-5, NR-2 and WW-9. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Bobby M	2/28/2018	Website	This project on current path will destroy the land of Morgan Legacy Farm. The Morgan Legacy Farm located near FM 709 and 3194 is an irreplaceable site that has hosted weddings (including my own) and hundreds of meetings, gathering, and reunions. Churches, hospitals, clinics and families utilize this land and its capacity as a venue to coordinate the fundamental components of their operations. I harshly oppose the destruction of this property by the HSR.	Refer to LU-5.
Bobby M	2/28/2018	Email	At a time when we should be protecting waterfowl and native species the HSR will condemn thousands of sensitive acres that are privately owned, but heavily utilized by the native and migratory species. The Morgan Legacy Farm located near FM 709 and 3194 serves as nesting grounds for Mexican Black-belly Whistling ducks as well as several other migratory species who winter here in Texas. The construction of the HSR will permanently destroy this habitat as the tunnel and rail will permanently occlude the watershed. I am opposed to this project!!!	Refer to LU-5.
Bobby M	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
L M	2/9/2018	Website	I am AGAINST the clear cutting of land for the building of the train in Texas. I am AGAINST the destruction of wildlife habitats, forested areas, wetlands, farms, ranches, businesses and neighborhoods. I am AGAINST the harming and killing of people and animals that may get in the path of the train if it's built. I say NO to this train. Thank you. - a native Texan.	Refer to NE-9 and SS-2.
L M	3/9/2018	Website	I am AGAINST the construction and use of any high speed train in Texas. I have strong concerns about noise, pollution, uses of private property, and harm to forested areas, wetlands, wildlife and wildlife habitats and harm to the pretty Texas scenery. I will NOT ride the train. I prefer road trips, stopping at Bucees convenience stores and stops at scenic places and cute restaurants and stores on my way to my destinations out of the Houston area. And sometimes I travel by car with lots of luggage and my pets. I live in a neighborhood right off of Highway 290 in Cypress. Daily, I drive over the railroad tracks on Fry Road at Hempstead Highway in Cypress. There have been times when I'm trapped in traffic because of a stuck railroad crossing bar. There is already lots of traffic in this area. We don't need another train track. There is already enough construction in this area because of the Highway 290 widening. Also, I don't want there to be injuries or deaths between a high speed train and people or animals. Lots of farm animals, wildlife and stray dogs and cats that could be hit by a high speed train. Don't build the train please. Thank you. - Lisa in Cypress Texas (a native Texan).	Refer to NE-9, PI-1, TR-5 and TR-7.

Also, I don't want there to be injuries or deaths between a high speed train and people or animals. Lots of farm animals, wildlife and stray dogs and cats that could be hit by a high speed train. And I may buy property in central Texas one day in the proposed train route area. Don't build the train please. Thank you. - Lisa in Cypress Texas (a native Texan) on Friday March 9, 2018.	Refer to NE-9, PI-1, TR-5 and TR-7.
Lisa M	2/9/2018	Website	I'm writing to say that I am AGAINST the high speed train. I hope that it is NOT built. I live by Highway 290 in Cypress Texas. There is already lots of traffic and noise in that area. Highway 290 has been under construction for a very long time and will continue to be for awhile. There is already too much construction, clear cutting, over development, pollution, deforestation and huge losses of wildlife and wildlife habitats in Cypress and other areas. Depressing! Thank you. - a native Texan - Lisa in Cypress Texas. Friday February 9, 2018	Comment noted.
Pete MacDonald	2/20/2018	Website	I think this a very stupid idea and waste of time and money. Bullet train to Oklahoma City, Sam Antonio, Galveston. New Orleans, Shreveport, LA, Why not buuld a train to China?	Comment noted.
David J. Machac	2/5/2018	Letter	I support the cornrænts Ested below and offer them as evidence supporting the No Build Alternative 1. I support the 'No Build Alternative' on the Texas Central Railway High Speed Rail Project from Dallas TO Houston. 2. I support the 'No Build Alternative' and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the 'No Build Altemative' and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citlzens of Texas. 4. I support the 'NO Build Alternative' because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the 'No Build Alternative' because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I Support the 'No Build Alternative' because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption Of electricity.	Refer to BA-4, BA-6, CR-4, ED-1, LU-2, LU-11 and NV-5.
Elizabeth Machac	1/24/2018	Website	The proximity of the train to our home will eventually crumble the structure due the rock and ground.	Refer to NV-1 and NV-5.
Elizabeth Machac	1/24/2018	Letter	My name is Elizabeth Machac and our property is slated to be divided in half by Texas Central Railroad's (TCR) High Speed Rail. My Family has owned this particular property since the 1960's and in 1997 we moved to Grimes County as our permanent residence. In 2002 we built our"dream/retirement" home and fully expected to live out our lives here. As it stands now, the TCR will run their train within a few hundred yards of our front door and destroy any property value for our 235 acres and home. Our residence is just south of Roans Prairie, Tx on Hwy 90. The noise and vibration alone will be intolerable not to mention the sight of 200 mph trains whizzing by our front door every 30 minutes or so.	Refer to AS-1, ED-2, LU-7, LU-11, NV-1 and VA-1. As summarized in Section 3.13.3.3 Land Use, Assessment and discussed in detail in Appendix E: Land Use Technical Memorandum , a structural displacement would occur when an impact from the Limits of Disturbance (LOD), either directly or indirectly, necessitates the removal of a structure. A review of the impacted businesses was conducted if the structure met a set of factors, including the following: the proximity of the structure to the LOD (within the LOD or within 50 feet), the percentage of the structure's parcel that would be impacted by the LOD (if parcel was affected by over 30 percent), or if access was impeded to the structure.
Elizabeth B. Machac	2/5/2018	Handwritten	Our property will be divided in half with no suitable area to move out of hearing, sight or vibration from the train. Our property is very historical in Grimes county. It is known to have historical significance in the early pioneer settlement of Roans Prairie. We have a Texas Historical community cemetery on our property which has a confederate [sic] There are so many things wrong with this plan it would be impossible to address all the issues. The only resolution to this: NO BUILD OPTION.	Refer to CR-4 and CR-6.
Jacob Machac	2/5/2018	Oral	My name is Jacob Machac. So I grew up in the city. My earliest years were spent in the bustling and growing metropolis of Houston, engrossed in the rich and the dangers of the sprawling growling monster of overpopulated civilization living under the limiting, transparent, and sometimes imperceptible confines of big city crime. By the time I was eight years old, it was no longer even deemed remotely by my parents	Refer to ED-1, ED-2 and BA-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			and the rest of my family to continue living in Houston in any way, shape, or form. After all, gruesome and heinous crime pretty much happened everyday and eventually became a common occurrence, so we moved to the country to get out of the big city. But now that plan and the plans that my parents made are null and void. Let me make this clear. We aren't moving back to the city. No, the big city is moving to us. How about that? You spend a great portion of your life trying to get away from something, and it just catches right back up, scratching at your heels, and eventually pinning you to the ground, just like before. I can testify to the growth of my own little piece of home, a once desolate, friendly little intersection with four blinking red lights; red lights which used to be the only thing you could see for miles from my room. Many a night I have sat viewing the intersection from the comfort of my own room; sometimes going out and just gazing up at the stars twinkling down at me. Just to see my parents build their dream house in which they would have retired, with the thought that this house and this land would assuredly be here to pass on to generations. The main power that Texas Central intends to ultimately use against us landowners is that of eminent domain. But I say to you right now, the use of that power goes against the very original purpose eminent domain was even set up for. Eminent domain was a tool invented during the land grab back in the settlement and exploration period of United States history. It was never intended to be used as a way to find, acquire, and/or settle land. It was intended to be used for that -- for the railroads, other public utilities, purpose for the good of the country and its posterity. It was never designed or intended to be used as a tool to steal whatever land the government or private companies or other individuals felt was theirs to take for the good of the country, and an instance, like this High-Speed Rail Project, is legalized theft, as a man so graciously put it at last night's meeting in Madisonville. I believe, and hope fervently that others do, too, that eminent domain and its powers of authority are now in this present day and time made obsolete because the settlement and the establishment of public utilities and frameworks of the United States is now complete. There should be no further use of this power and for any purpose against landowners without their understanding and willing consent, and that eminent domain, if allowed to exist, should be reworked into a new policy or process both fair to the party exercising its power as well as the land and property owner. Only then can both sides of this bulkhead of an issue come to an agreement. I believe that taking someone's land because it's good for a specific purpose or entity or country is wrong, and sincerely hope that everyone here will give this some thought and realize the errors of this whole method of proceedings. There is no clearer option until this uncivil design and unethical fiasco can be negotiated and dissolved, but to not build the high-speed rail at all. The no build option.	
Jacob Austin Machac	2/5/2018	Website	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative".</p> <ol style="list-style-type: none"> 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. <p>Destroy property values and makes undesirable for other residential locations.</p>	Refer to NE-9 and VA-1.
Elisa Macia Donovan	2/15/2018	Letter	<p>Comment #1: Disturbance to Public Visitors to the Katy Prairie Preserve. Visitors to the Katy Prairie Preserve's Warren Lake and the Matt Cook Wildlife Viewing Platform would be disturbed by the noise, vibration, and visibility of an elevated train. The disturbance of wildlife at Warren Lake not only affects the birds and other animals that frequent the area, but also is a loss to the visitors who come to observe them from the public viewing platform.</p> <p>Comment #2: Wildlife Disturbance on the Katy Prairie Preserve. Warren Lake teems with wildlife year-round, and many waterfowl gather at the north shore, which is the area closest to the proposed route. The Katy Prairie is in the Central Flyway, and the over 20,000 acres that the Katy Prairie Conservancy has protected have been designated a Global Important Bird Area by National Audubon. The proposed rail route is directly in the path of a birds' northern and northeastern flyway approach to the lake. Many birds of the prairie are sensitive to light, sound, and vibration and may be driven away. In addition to the proposed rail location, there is a maintenance facility proposed to be located just northeast of the Katy Preserve property. This facility, which is planned to occupy a footprint of approximately 120 acres and will be operated at night, will likely produce light pollution which can affect bird migration routes.</p> <p>Comment #3: Soundscape on the Katy Prairie Preserve. The proposed route would pass within half a mile of the northern boundary of the</p>	<p>Refer to NR-1, NR-2, NR-6 and RF-4.</p> <p>Through the development of the Final EIS, FRA and TCRR have taken steps to avoid, minimize and mitigate impacts to sensitive environmental lands. The Katy Prairie Conservancy lands are located south of the proposed Segment 5 and would not be directly impacted by the Build Alternatives. Additionally, the Matt Cook Wildlife Viewing Platform would be approximately 1.5 miles south of the Build Alternatives. As a response to public comments, please see Section 3.10.5, Aesthetics and Visual, Environmental Consequences, for new KVPs and simulations, which include the Matt Cook Wildlife Viewing Platform. For more information on noise and vibration impacts, please see Section 3.4, Noise and Vibration.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>Katy Prairie Conservano/s protected preserve properties, including the area where Warren Lake and the Matt Cook Wildlife Viewing Platform are located. A train thundering by every 30 minutes would be an intrusion on the natural setting and would seriously diminish this community asset for both people and wildlife. The Wildlife Viewing Platform at Warren Lake is open to the public seven days a week and is valued by birders and other visitors enjoying the natural setting of the lake, prairie, and wildlife. It is a serene place where one can hear the calls of native birds and insects. The soundscape is a very important feature that the Katy Prairie Conservancy is trying to preserve. Quiet places are few and far between these days, and keeping the Katy Prairie Preserve's Soundscape quiet should have high importance when considering the project's impacts.</p> <p>Comment #4: Land fragmentation along route. Many of the properties through which the bullet train is planned are large-acre tracts. Land fragmentation impacts not only the landowners, but also the many plants and animals that live on the prairie and other lands in rural areas. Smaller degraded fragments do not support the diverse wildlife communities that flourish on larger undeveloped and undivided areas. Connections between habitat patches are extremely important to maintaining healthy populations, and the high-speed train corridor will disrupt those connections.</p> <p>Comment #5: of habitat along route. Many of the lands through which the high-speed railway will be constructed on the prairie and throughout the rural counties - provide extraordinary habitat, which will be both destroyed and greatly altered.</p>	<p>Information regarding impacts to wildlife can be found in Section 3.6 Natural Ecological Systems and Protected Species, in the Final EIS. For information regarding the Migratory Bird Treaty Act (MBTA) please see Section 3.6.2, Natural Ecological Systems and Protected Species, Regulatory Context and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife, in the Final EIS. Mitigation measures to avoid impacts to migratory birds and comply with the MBTA are described in Section 3.6.6, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation. Additionally, the preserve is outside the range of where there would be noise impacts from HSR operations. For information regarding impacts to wildlife and vegetation please see Section 3.6 Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting, and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p>
Nicole Mack	1/29/2018	Website	I am for the railroad.	Comment noted.
Nicolás Macri	2/19/2018	Website	I think building a train between these two big cities with a connection to the Bryan/College Station community would be very beneficial. It would make traveling to Dallas and Houston so much easier and faster, and I believe that many people would take advantage of this resource. That would also reduce the number of cars on the road, helping clear traffic and reduce emissions. All in all, this train would be a great addition to east Texas.	Comment noted.
Allan Madar	2/18/2018	Website	I Got to say it is about time we have started seriously looking in to the idea of trains for transport in and out of Houston and Dallas! It will bring the two cities even closer together and I can see myself and co-workers putting this train to use for meetings and conventions. This would also mean the same for those in Dallas coming to Houston to places like GRB, Toyota center, reliant center and many more places. I also hope with this track that we adopt the UK rail road standards of no roads crossing the tracks. Amtrak is not a great example of how it should be built in my option.	Refer to TC-7.
Joan Madden	3/6/2018	Website	I am a citizen of an area that will be affected negatively. This train is to help with travel from Houston to Dallas, however at the expense of property owners of Leon Co as well as other counties. My main concern is the route is nearby Leon ISD school ...noise and safety issues.	Refer to SC-2, SC-19, SS-1 and NV-1.
Denise Madera	3/9/2018	Website	The environmental and social impacts of this project are not worth the few people who will actually utilize this train. The majority of commuters will still drive to Houston/Dallas because a car will still be required when you reach these large cities. Also, I think the project overestimates the number of people commuting between the two cities.	Refer to GN-2.
Madison County Historical Comm...	3/2/2018	Letter	<p>Dear Mr. Johnsen:</p> <p>As Chairman of the Madison County Historical Commission (2010-Present), I regret to inform you that this is the only communication I have received: Re: Continuation of Section 106 of the National Historic Preservation Act (36 CFR 800) for the Dallas to Houston High-Speed Rail Project Draft Environmental Impact Statement. Nor has the Madison County Historical Commission received any communication from any group requesting information or providing information for an environmental study. We have not been notified by the Texas High-Speed Railway for information regarding historical sites.</p> <p>The environmental information requested by the FRA from the Madison County Historical Commission will be listed as follows:</p> <p>I. Alternative Route: Segments 4 A, B, D</p> <p>A. ENDANGERED SPECIES: Navasota Lady Tresses - last seen in the fall of 2016 on bank of Kickapoo Creek that meanders across Strawther Road. Positive identification was made by a retired employee of Texas Department of Transportation who photographed Navasota Lady Tresses in Brazos County. These locations and photos changed the proposed highway route in Grimes County, Texas.</p> <p>B. AMERICAN BALD EAGLE: Bald eagles have been sighted on numerous occasions (2016-2017) on land belonging to Ms. Etta Pearl Rush. These eagles have been sighted numerous times in the last two years by Ms. Rush, Howard Rush, Robert Johnson, and Jack May. The Rush land is located on the north side of CR 1372 and joins Roger Demuth land (formerly known as the Jim West land).</p> <p>In Texas the greatest challenge for the future of the American Bald Eagle will be to prevent further destruction of the habitat and the</p>	<p>Refer to NR-3 and NR-4.</p> <p>No surveys were conducted where Kickapoo Creek crosses Strawther Road as this area is approximately 0.3 miles from the Project's Limits of Disturbance (LOD). The portion of the LOD that does cross Strawther Road was surveyed in 2016, 2017 and 2018. Findings from these surveys are summarized in Section 3.6, Natural Ecological Systems and Protected Species. Where the LOD does cross Strawther road was surveyed in 2016, 2017, and 2018. Impacts to NLT will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting, and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures, including, NR-CM#7, NR-CM#8, and NR-MM#2. The Federal Railroad Administration (FRA) has prepared this FEIS in compliance with all applicable federal and state historic preservation</p>

			<p>retention of creek and river flows to support a food base for breeding and wintering eagles in Madison County. The Texas Parks and Wildlife Department in cooperation with landowners and conservation groups are continuing to monitor the breeding and wintering Eagle population. Monitoring of nesting success is important in detecting any problems with feeding, loafing and breeding associates with the environment. Since 1981 the TPWD have conducted extensive aerial surveys to monitor Bald Eagle nestings.</p> <p>C. ARCHAEOLOGICAL SITES: Alternative A, B, D: Segments 4 and 5</p> <p>For more than fifty years Native American artifacts have been found along Kickapoo Creek on Strawther Road in Madison County. First reported by Mr. Hinds in the 1960's and last reported by Mr. Hinds in 1993 just before his death. In approximately 2005, Ms. Terri Peck brought to the Madison County Courthouse a number of artifacts she had found in Kickapoo Creek bed and that she had dug from the elevated land area above the creek. Artifacts viewed and verified by Ms. Etta Rush (936-348-8607), Michael Jeffries, Ms. Patsy Strawther, and others. The Creek was named by early Madison County settlers for the Kickapoo Indians who lived along its banks. (See Attachments)</p> <p>II. HISTORICAL: Madison County Cemeteries designated by the Texas Historical Commission Alternative A, B, D, C3: Segments 4 and 5</p> <p>All of these sites are the final resting place of American Veterans dating from the War for Texas Independence, Spanish American War, World War I, World War II, Korean Conflict, Vietnam Conflict, and through the present date. They are the final resting place of Texas pioneers and their descendents.</p> <p>A. Oxford Cemetery is located 7 miles west of Madisonville on Texas Highway 21. Oxford has been designated a historical cemetery by the Texas Historical Commission . This designation means the marker can never be moved except by the Texas Historical Commission.</p> <p>B. Bethel Cemetery is located in Grimes County, but an entrance is located in Madison County. It is the burial site of Sarah Dodson who designed and made the First Texas Flag in 1835. Both the cemetery and Mrs. Dodson's grave are designated by the Texas Historical Commission.</p> <p>Cd Ten Mile Cemetery is located 10 miles northwest of Madisonville on FM 2289. It has been designated a historical cemetery by the Texas Historical Commission. The City of Normangee has also designated the Union Church located beside the cemetery with a historical site.</p> <p>D. Whitfield Cemetery is located on Strawther Road six miles west of Madisonville. It dates back to the 18401s in Texas. When Center Pointe Entergy built the high-line through the area, they destroyed the cemetery and decimated the graves. There is a marker placed by Center Pointe to designate the location. but it does not restore dignity to those pioneers buried here</p> <p>Ed Farms and Ranches recognized by the Texas Agricultural Department in the Texas Land Heritage Program. Each property was awarded this honor after producing legal documentation of one hundred (100) years of continuous ownership by one family.</p> <p>Alternative A,B, D, Segment 4 and 3C</p> <ol style="list-style-type: none"> 1. AK Ranch : 1.2 miles West of North Zulch on Highway 21 2. Andrews Sandy Branch Farm: 1 mile West on FM 1372 3. Chimney Gully : 10 miles West of Madisonville on FM 978 4. Moses Rushton Fannin Ranch : 10 Miles West of Madisonville on FM 978 5. H & H Farms : 12 miles West of Madisonville on FM 978 6. Kankey Farms: 1 Mile West of Madisonville on Highway 21 7. Mathis Ranch: 7miles West of Madisonville on FM 1452 8. Rhodes Ranch: 6 Miles West of Madisonville on FM 2289 9. Roman 9 Ranch: 6 Miles Southeast Normangee on FM 3578 Poteet Road 10. Strawther Family Farm: 6 miles west of Madisonville on Strawther Road 11. The Wilson Farm: 4 Miles West of Madisonville on FM 978 12. Windy Hill Ranch: 3 Miles West of Madisonville on FM 1452 <p>IN CONCLUSION, Mr. Johnson, the requested information has been submitted within the required time frame.</p> <p>It references our environment, our lands, our homes, our history, and our heritage all of which are hard-earned through work and sacrifice and are precious to the people of Madison County.</p> <p>WE ASK THAT YOU DO NOT RECOMMEND THE BUILDING OF THE HIGH-SPEED RAIL PROJECT. IT WOULD RESULT IN THE DESTRUCTION OF HOMES, PROPERTY AND HISTORICA LOCATIONS THUS CHANGING MADISON COUNTY, TEXAS, FOR EVER.</p>	<p>regulations. While cultural resources surveys have been conducted for portions of the Project area, many areas have yet to be surveyed, including areas of the Limits of Disturbance (LOD) in Madison County. The current FEIS includes only the information that has been collected to-date. FRA will continue to identify and evaluate historic and archeological resources, including cemeteries and prehistoric archeological sites such as those along Kickapoo Creek in Madison County, through a phased approach in accordance with 36 C.F.R. &#167; 800.4(b)(2) as access to private parcels becomes available. In terms of the historic resource concerns raised in this comment, cemeteries in Texas are protected under provisions of the Texas Health and Safety Code in Chapters 711-715, Title 13, &#167; 2, Chapter 22 of the Texas Administrative Code; and in Section 28.03(f) of the Penal Code of Texas which prohibits the use of cemetery property for non-cemetery purposes. Therefore, cemeteries will be avoided and steps will be taken so that no unmarked burials are impacted.</p> <p>The Oxford Cemetery was identified in the FEIS and is reported as resource MA.019 (see Table 3.19-4: Previously Recorded and/or Designated Historic Resources within the APE). Based on the results of the Section 106 evaluation and in consultation with FRA and the Texas Historical Commission, Oxford Cemetery was determined eligible for the National Register of Historic Places (NRHP) (see Table 3.19-5: Historic Resources Interim Report Submittal and THC Response and Section 3.19.4.2.7, Cultural Resources, Cultural Resources by County in the FEIS). The Oxford Cemetery is not located within the current LOD and would not be directly impacted.</p> <p>The Bethel Cemetery (see section 3.19.4.2.8, Cultural Resources, Cultural Resources by County in the FEIS) has been designated as a Historic Texas Cemetery. FRA has determined the cemetery exhibits moderate potential to be eligible for listing in the NRHP. The Bethel Cemetery is not located within the current LOD and would not be directly impacted.</p> <p>The Ten Mile Cemetery was designated as a Historic Texas Cemetery in 2016 (see Table 3.19-4: Previously Recorded and/or Designated Historic Resources within the APE of the FEIS), and is within 40 feet of Alternative A. It is unknown whether the Project would directly impact any unmarked burials. Therefore, additional archeological investigations, which may include archival research, oral interviews, and ground scraping to locate unmarked burial grave shafts, will be required to verify the modern cemetery boundary is accurate within the area of ground disturbing activities, so that unmarked graves are not impacted.</p> <p>The current location of the Union Baptist Church was established around 1960, which is within the LOD of Alternative A. On-site observation and documentation of the physical characteristics of this resource, will include architectural style, materials, modifications, and integrity, and will be conducted during a subsequent phase of fieldwork prior to construction. Any NRHP-listed or NRHP-eligible</p>

				properties that would be impacted as a result of the Project will have a treatment plan developed in order to minimize, mitigate, or otherwise resolve any adverse effects. This process is discussed in Section 3.19.6.1, Cultural Resources, Programmatic Agreement of the FEIS. The information regarding the unrecorded Whitfield Cemetery will be investigated as FRA continues to assess potential impacts and develop avoidance measures to cemeteries. Additional archeological investigations, which may include archival research, oral interviews, and ground scraping to locate unmarked burial grave shafts, may be necessary to verify the location of these unmarked burials relative to the proposed Project LOD, so that unmarked graves are not impacted. FRA is committed to preserving and protecting important community institutions and ways of life, and will continue to assess potential impacts and avoidance measures to historic properties and cemeteries. In instances of historic farmsteads and land recognized as Texas Family Land Heritage, FRA will make determinations on whether or not a specific farmstead is considered eligible for listing in the NRHP, thereby determining the cultural landscape a historic property.
Felix Madrigal	1/29/2018	Oral	I would like to talk to the audience. My name is Felix Madrigal. My wife and I are Hutchins residents, life-long residents, and we've been fortunate enough to travel all over Europe and to ride the high-speed trains and it is just marvelous to be able to go from the downtown to one city to the downtown of another city with no problems and delays of any kind. It sure beats traveling on Interstate 35, Interstate 45, or any other interstate in any other city that's just jammed with traffic, and it's only gonna get worse. Second comment, all the routes that are on this that I've been able to look at really are just they have too many curves. They look like a jogging trail or a hiking trail and I hope you'll be able to straighten out a lot of those and make that a straightline shot. That's what that high rail speed needs to be. Third item, and, again, this is just you know, I was just saying I've always wondered why the railroad line's have not been dragged kicking and screaming into the 21st century. That's a big spot that I think can help out and high rail speed. And then the fourth item, as a life-long resident of Hutchins and a property owner, I never dreamed of seeing a large huge project like this that will enhance all of South Dallas and all the other counties between Dallas and Houston as this project will. And I never thought I'd see it being built in South Dallas first, before being built in North Dallas. And once it gets started every other county is gonna be kicking themselves saying doggone it why couldn't we be included, that's like North Dallas, Arlington, Fort Worth and, you know, they're beginning to do that now. Thank you very much. I'm, again, my wife, Aurora, and I are for this high rail speed.	Comment noted.
Emma Magers	2/21/2018	Website	Imagining... Train is an excuse for urban dwellers to support this shell game. It's a LAND GRAB. Google New Magellan Investment out of DC! Is directly involved w Japanese train investment company. Read the back ground of the top corporate board members. Ex-FBI, CIA; not a business major among them. Click on the names of at least the President and you are taken to Bloomberg site. READ this gentleman's list of government non business related adventures. Bloomberg is a great site. Click on anything and it leads you to more investments and related money making ideas. And Blackstone investment. They are in the know\$\$\$. Folks logic and arithmetic tell anyone this is a bad investment. Public tax dollars are already involve. Who do you think TXDOT gets their money from? Texans! There IS NO TRAIN! Repeat NO TRAIN. China has purchased land along I35, its rumored. The current path is BETWEEN I45 and I35. Hum...three huge long strips of Texas out of private ownership. I have theory that an oil line would fit nicely in the EXTRA WIDE rail line right of way. 2 miles either side of the NORMALLY required train path. IF A TRAIN , I say IF who pays for the extra high overpasses for east Texas to get to west Texas and home again ? Any money out of that \$199 ticket? Folks it's a long way from Dallas to Houston. Imagine a 14' high wall of dirt capped with tracks covered with chain link fence! How high will TXDOT have to build the over pass? Oh, tree huggers overpasses are made with CEMENT! Think CEMENT plants all along the path of said! Air pollution in Texas is bad enough. Too many reasons why there is NO TRAIN and too many money making ideas for the land !	Refer to GN-4, GN-5, LU-14, SC-3, TR-1 and TR-8.
Margaret Mahle	1/25/2018	Email	I am not at all in support of this train. I live in an area that would be severely impacted by this and our home values will plummet! There is no good reason to have a high speed rail. The other countries that have them have had many deaths from accidents and as we know from our own rail downtown, many, many accidents! I will not ever support his train.	Refer to NE-1, SS-12, SS-13 and VA-1.
Margaret Mahle	2/5/2018	Website	NO one wants this train! It will be too expensive for a family to use this as an alternate way to get to Dallas! GO AWAY!!!	Comment noted.

Tim Mahoney	2/25/2018	Website	Please reconsider your decision to locate the high speed rail in Navarro County at the intersection of 709 and 1394. This decision is likely to have profound environmental impacts on the watershed. It will also undermine the charitable purpose of the Morgan Legacy Farm. Please consider moving the 5-7 mile portion of the line scheduled to parallel 3194 north of the existing power links. Relocating the rail line just a few miles to the north would preserve the Morgan Legacy Farm and reduce the risk of environmental damage.	Refer to LU-5.
Sharon Mainka	12/20/2017	Email	Our community, nor I, are not in favor of this Rail Line. This proposal is not economically feasible. The amount of riders required to make this financially feasible is not comprehensible. Additionally running a train through our community and neighborhoods every 30 minutes is unconscionable. The proposed path runs right through neighborhoods. How can that even be considered? Please, reconsider this project. It will end up costing tax payers a fortune and more importantly cost people their homes. I can't believe this project is even being considered when it's so obviously a poor plan.	Refer to NE-1.
Sharon Mainka	1/30/2018	Email	Please consider our requests to extend the public comment period for the DEIS for AT LEAST 90 DAYS. The extension to March 9th is not sufficient.	Refer to PI-3.
Dominique Majon	2/27/2018	Website	A while back I visited Japan on a sightseeing trip and used their bullet train system called the Shinkansen. I visited Tokyo, Kyoto and Osaka. I was thrilled at the experience of using the bullet train. The distance between Tokyo and Kyoto is almost exactly the same as Dallas to Houston and the trip was under 2 hours. The trip was priced much better than a plane could ever do. The infrastructure around the train stations was built so that additional transportation around the city would be easy and I think this is something that has sorely been needed in Texas for a long time. Overall I kept thinking to myself during that trip that this is something that our area could really use. I have friends and occasionally do business in Houston and I have always made that 4 hour drive instead of using a plane. Having a access to a high-speed train would be my preferred mode of travel between the cities, even to Austin. One additional thought I would like to leave is that Texas cities are not particularly know for our mass transit systems. I used to live in the Chicagoland area in Illinois and remember it being so easy to just hop on a Metra train to get to the city. I feel that the addition of a high-speed rail line would help spur a better mass transit system in Dallas, Houston and Austin. This above all else would change the environmental impact of Texas cities the most. Texas is the largest producer of carbon dioxide in the country. By bringing our state to more acceptable pollution levels, we will help our country achieve better pollution levels. Just like Texas made a great initiative in developing wind power to help our environment I feel that a high-speed rail system will be the first step in building a mass transit system to further help our environment.	Refer to BA-2.
Brent Maldonado	1/4/2018	Website	I want to invest in the railroad pls send me details in how or were to do so.	Please contact Texas Central directly with this request. TCRR can be contacted at Email: info@texascentral.com or Phone: 1-844-TX-TRAIN for further information.
Brent Maldonado	2/27/2018	Email	I would like to invest in the project how can I do so pls email me the information. Prasanth Mallaya	1/25/2018	Website	I support build this program	Comment noted.
Pamela Malveaux	3/9/2018	Website	This is going to be great! I can't wait am looking forward to this i am ready to buy my tickets and the reason I say tickets because am going to ride back and forth because I want be the one driving	Comment noted.
Shadow Man	2/2/2018	Email	How wide is the right of way for the high speed rail going to be?	Refer to LU-14.
Rachel Mancilla	1/25/2018	Website	BUILD THE TRAIN! I cannot even tell you how much easier of a commute/trip this would be if we had a train from Houston to Dallas. Not only would it potentially save lives (because people in Houston and maybe Dallas (?) do not know how to drive), it's a time saver, an economic booster, and just downright brilliant. I have friends in Dallas that I don't get to see because of the 4 hour trip timing. It would just be awesome	Comment noted.

			to see friends on random weekends in 90 minutes! Also, 2 years ago - I bought my wedding dress in Dallas. I drove from Houston to Dallas because no one in Houston had it Yes, that was my choice but that was an 8 hour trip total to and from Dallas for a wedding dress. How amazing would it be, once again, come and go in 90 minutes?	
Glenn Mannina	2/17/2018	Website	Why Hasn't FRA stopped this project due to unrealistic and outdated (2014) safety and security data? Security needs have NOT Been properly assessed OR cordinated with local jurisdictions. How can "local jurisdictions" be expected to accept something that the TCR and FRA have purposely NOT provided them the information? How does the FRA expect these jurisdictions to perform this task? This is just another sign that the FRA in not objective in the process, but clearly, a vested partner in pushing this nonviable project on Texas taxpayers without Texas support. All of this putting the American rider at increased risk. This ONLY addresses the "construction" period. What about the "operational" period? What are the "local jurisdiction" responsibilities and when will the FRA inform the citizens how much their bill will be? Why has the FRA ignored the voice of our Texas leadership? Senate Bill 977. The law, stipulates that "the legislature may not appropriate money to pay for a cost of planning, facility construction or maintenance, or security for, promotion of, or operation of" the railway.	Refer to SS-8, SS-9 and SS-19. The Safety and Security assessment includes both construction period and operations. Potential safety impacts to passengers, employees, or others in the vicinity of the Project as a result of operational emergency are mitigated through SS-CM#1, SS-CM#2, SS-CM#3, SS-CM#4, SS-CM#5, and SS-CM#6 , as described in Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation . Operational Security is addressed through SS-CM#8 and SS-CM#9 .
Thomas Mann	2/16/2018	Website	Dear officials, Its time to make changings in public transportation. As an top class high developed country we are a third world country in transportation. We can't continue in building roads, interstates etc. Traffic is more and more increasing including negative environment impact. I am from Germany and drove High Speed trains for more than 15 years and the Bulltrain is the best what can happen to Texas. Trains are safe and create less accidents than all other traffic together. Its the best, safest and environmentally friendly way to travel!!! Give Texas a chance and all other railroad projects!!!	Comment noted.
Glenn Mannina	1/12/2018	Email	a. Question: DEIS Summary Statement is "Impacts to Emergency Response (ER) Times are NOT Anticipated to be Significant". i. Since the FRA study does indicate an increase in ER times, is even ONE Single Public Fatality due to Increased ER Times Acceptable by this FRA DEIS? ii. At what level Of extended ER times when a Public Life is in the balance, does the FRA consider it a "Significant" Impact? iii. Does T CRR supply its own ER Equipment and Personnel during the Construction Phase or will they rely on County resources? iv. Is the measure of Response Times by the DEIS based on the planned conditions at the time Of Construction, such as road and lane closures, road rerouting, road overpass reconstruction to go over the HSR, traffic due to Construction Employees, traffic due to Construction sites and its Operation, traffic due to movement of raw materials and permit loads of completed constructed components on Existing Roads? v. Since this FRA DEIS is not based on traffic modeling yet Of the above traffic increase, then how can the FRA with any credibility or accuracy make a claim that "Impact on ER Times is not anticipated to be Significant" b. Background The DEIS after showing High, Medium, and Low Risk levels of increased times (Quantified) only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant". They then state that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed ER times! If TCRR cannot submit a plan with modeling that shows ZERO increase in Emergency Response Times, the FRA MUST NOT approve the TCRR Plan. Additionally, the destruction Of many more roads than ever communicated to the public by TCRR is making the Construction Impacts twice as worse. The FRA should force TCRR to slow down the train, increase the vertical and horizontal train deviation restrictions, and MUST have ALL roads pass UNDER the HSR vs. reconstructing many roads OVER the HSR. This is ALSO causing a great deal more of land to be lost by Landowners due to increased ROW needs as well as more homes being destroyed. The is an extremely bad plan that has increased significantly the negative impacts on the Public, including potentially Additional Loss of Life due to ANY increase in Emergency Response Times.	Refer to LU-3, LU-4, RF-1 and VA-1. Additionally, Through the development of the EIS, FRA and TCRR have taken steps to avoid, minimize and mitigate any impacts to recreational facilities, including recreational equestrian trails. Data collection and analysis was completed using the most accurate data available at the time of analysis and in compliance with industry standards and best practices. Section 3.14, Socioeconomic and Community Facilities , has more information regarding the developments.
Glenn Mannina	1/12/2018	Email	Additionally, the destruction Of many more roads than ever communicated to the public by TCRR is making the Construction Impacts twice as worse. The FRA should force TCRR to slow down the train, increase the vertical and horizontal train deviation restrictions, and MUST have ALL roads pass UNDER the HSR vs. reconstructing many roads OVER the HSR.	Refer to TR-8.
Glenn Mannina	1/13/2018	Email	Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Will TCRR be allowed to drill water wells for the many Construction Sites or will they be required to use Surface Water available in the area for watering roads and Construction Sites to keep the Dust Down and the Air Quality Up? Question: Will TCRR be allowed to use City Water if available at the Construction Sites? Federal	Refer to WW-6.
Glenn Mannina	1/13/2018	Email	No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8).The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. No Build is actually the Correct Answer. First, the FRA DEIS Understates the Damage to the Public and Property but Overstates/Assumes the HSR Need. Second, TCRR Underestimates the Project Cost and Overestimates the Ridership. The FRA nevered	Refer to BA-6, GN-2, GN-3, NE-9 and SC-22.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			considered the Reason Foundation's Analysis (which clearly proved this project WILL FAIL) nor has it been mentioned in the FRA DEIS at all. That is NOT AN OBJECTIVE UNBIASED FRA DEIS ANALYSIS. _____ Federal	
Glenn Mannina	1/13/2018	Email	No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8).Here are reasons the "No Build Alternative" MUST be reconsidered by the FRA. First, the Claims by the FRA on I-45 Transportation Predictions, Traffic Congestion, Safety on I-45, and Transportation Alternatives are Not Adequately supported with Detailed Facts. In fact the opposite cases have been made with much more Facts. Second, The "Public Need" has never been established in the DEIS by the FRA. Third, "Public Need" must clearly be established due to the huge negative Impact of Landowner's Property, Homes, Cemeteries, Livelihood,Existing Public Roads, and County Maintenance revenues that has not been adequately covered by the FRA DEIS nor has it been Quantified by the FRA like the other things that support the HSR have been Quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the Facts to back it up	Refer to BA-6, GN-2, NE-9 and PN-3.
Glenn Mannina	1/13/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Comment: If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a Private Company to Construct and Operate an HSR a Green Light without the application of a Comprehensive Risk Management System, particularly since the Lives of the Public hinge on its Safe and Secure Construction and Operation. That sort of lack of credible Oversight by the FRA, a Federal Government Agency responsible for "RR Safety", could easily be considered "Negligent" to say the least.	Refer to SS-19 and TR-6.
Glenn Mannina	1/13/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Question: Were any Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in the middle of nowhere? Question: What Risk Management System has been applied or what Emergency Response Planning been has done to handle High Elevation Rescue of the Public in case of a shut-down or Incident in the middle of nowhere during operation? Question: The same question would apply to the Construction Phase also?	Refer to SS-3, SS-13, SS-18, SS-19, SS-23 and TR-6.
Glenn Mannina	1/13/2018	Email	Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue). Question: Has the FRA evaluated the answers provided to the Public in Open Forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? Question: If not, is the FRA interested in any false or misleading statements made to the Public by TCRR vs. what the FRA has included in the DEIS? Question: Is it important to FRA's analysis of the TCRR's capability to Operate a RR or not if TCRR has mislead the Public on a number of issues as compared to what the FRA has included in the DEIS	Refer to GN-1, GN-2 and NE-1.
Glenn Mannina	1/13/2018	Email	Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Who in the public will be negatively impacted by the large use of water by the HSR project? Comment: Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites	Refer to WW-6.
Glenn Mannina	1/13/2018	Email	Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting Existing Roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). Comment: The FRA should provide to the Counties via the DEIS an estimate of damage to their existing Road Infrastructure following 5 years of Construction related Traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards ALL Planned Construction Sites. These will be a magnet for Workers, Raw Materials, Equipment, Vendors, Lay down areas, etc..	Refer to TR-6 and TR-7.
Glenn Mannina	1/13/2018	Email	Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting Existing Roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27).Question: What is the Quantified impact of increased Traffic in general, Damage to Existing Roads, and Traffic Congestion over and above the current rural environment, as the result of Project construction worker travel, equipment and raw material hauling, particularly around all of the Construction Sites and Staging Areas along the route, congestion associated with Permit Loads, traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR	Refer to TR-6 and TR-7.
Glenn Mannina	1/13/2018	Email	Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: What is the Negative Impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically Traffic, Congestion, Housing, Medical facilities, Absorption of a portion of the Food Supply and Demand Chains, and the Negative Impact on Small Rural School ISDs	Refer to SC-4 and SC-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	1/13/2018	Email	Credibility of Land Survey Data (Ref: DEIS_MAIN TEXT III); Sect. 3.13.3, Pg. 3.13-6). There have been many Landowners who have refused to sign a Survey Permission Form, not allowing TCRR to access their property for a Land Survey. Many surveys were performed ONLY from State or some County ROW. It is obvious that ALL of the maps developed in the DEIS likely used other sources than actual surveys. The FRA should be held accountable for the sources used and should be responsible for assuring that All Land Survey Data was obtained under the authority of a Landowner approved Survey Permission Form. If not yet verified by the FRA, then there exists the potential or likelihood based on evidence that the FRA Produced the DEIS that incorporated data that was Illegally Obtained which could be then considered, the DEIS is an Illegal Document. IS THE FRA GOING TO REQUEST NEWLY SIGNED SURVEY PERMISSION FORMS FROM EVERY LANDOWNER WHOSE DATA IS USED IN THE FRA HSR DEIS	Refer to GN-1 and NE-8.
Glenn Mannina	1/13/2018	Email	Credibility of Land Survey Data (Ref: DEIS_MAIN TEXT III); Sect. 3.13.3, Pg. 3.13-6).Question: Has the FRA verified that there exists a Landowner Approved Survey Permission Form for ALL "Boots on the Ground" Obtained Survey Data Used in the DEIS? Question: If the FRA cannot verify that each and every piece of Land Survey data used was legally obtained, then there exists the potential or likelihood that the DEIS incorporated data that was Illegally Obtained. Does not that make the FRA DEIS an Illegal Document if it contains Illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign an Affidavit stating the data in the DEIS was obtained under their permission of s Signed Survey Permission Form.THE FRA SHOULD CEASE ALL WORK ON THE EIS UNTIL THIS STEP IS COMPLETED	Refer to GN-1 and NE-8.
Glenn Mannina	1/13/2018	Email	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: I note the DEIS states that some Regional data was also used for identification of Endangered Species vs. recent site specific inspections. The DEIS states 659 acres was inspected for Navasota Ladies Tresses (NLT). If one assumes only a 400' width inspection along the route (Maps actually show much wider inspection areas along the route), only 13.6 miles of the 240 would have been inspected for NLT using that figure. However, the Maps showing orange hatching for NLT is huge compared to just the calculated 13.6 miles based on the FRA DEIS statement. So based on DEIS figures, can we only assume that a huge amount of Regional Data was used?	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species of the EIS.
Glenn Mannina	1/13/2018	Email	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: Does the FRA possess, for each and every Environmental Endangered Species Piece of Data used in this DEIS, a Survey Permission Form signed by each and every Landowner whose data is included in the DEIS	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species .
Glenn Mannina	1/13/2018	Email	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question:Considering the Lack of "Boots on the Ground" for ALL survey work, how confident is the FRA that ALL Historical Locations and Cemeteries have been property mapped and adequate route adjustments have been made	Refer to CR-4.
Glenn Mannina	1/13/2018	Email	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: I have PROOF including Photos of Navasota Ladies Tresses on my property in Leon County, HOWEVER ORANGE HATCHING FOR THIS SPECIES IS NOT SHOWN ON MY PROPERTY? This FRA DEIS is INACCURATE to say the least, FULL OF MISSING INFORMATION, USES OLD DATA AND MAPS, AND NOT A CREDIBLE REPORT TO AUTHORIZE AN UNECONOMIC PROJECT LIKE the Dallas to Houston TCRR's HSR.	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species .
Glenn Mannina	1/13/2018	Email	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: How much (approximate %) of the total Endangered Species Environmental Survey Data that is shown on the DEIS Environmental Maps (namely Houston Toad and Navasota Ladies Tresses (NLT) Cross Hatching, Orange for NLT and Green for HHT) was actually obtained by using "Boots on the Ground" inspections by Environmental Experts? Question: Is any Data shown on the Maps where Landowners did not provide Environmental Surveyors the Permission to inspect their property? As an Example, my own property in Leon County shows the potential or existence of the Houston Toad, however, I never gave permission to TCRR for any surveyors, Land or Environmental, to have access to my property	Refer to NE-8 and NR-4.
Glenn Mannina	1/13/2018	Email	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8).The maximum noise level for any point along the HSR will NOT be just one train passing by, but actually two trains passing each other in opposite directions. Not only does the noise level of two trains exist, but also the addition of a Scientific Proven "Slapping Sound" as a result of two trains traveling at a high rate of speed in two opposite directions on adjacent tracks. In the DEIS where Property Tax and Property Value is discussed, the FRA says Noise is not anticipated to negatively impact Property Values because the HSR is "Electrified". But yet the FRA in another section discusses the potential need for Noise Abatement in some areas. This is a clear Contradiction within the same FRA DEIS Document.	Refer to NV-1 and NV-10.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	1/13/2018	Email	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Why does the FRA state that Noise Abatement should be studied after Detail Design for potential use in certain communities, BUT then in another section, the FRA states that Noise is not anticipated to negatively impact Property Values because the HSR is ""Electrified"? Question: Does not the FRA know/understand that a huge Electric Motor does in FACT make noise plus everything else are MECHANICAL MOVING PARTS that ALSO make noise so the only difference would be the noise of a diesel engine vs. the Electric Motor	Refer to NV-1.
Glenn Mannina	1/13/2018	Email	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Question: Since TCRR and the FRA are aware that the Route they Selected goes through or adjacent to many Subdivisions, Homes and Businesses, WHY has not the FRA DEIS set out specific specifications for the use of Noise Abatement Structures with minimum standards so TCRR is therefore required to put up Noise Abatement should those specifications not be met vs. leaving it up to TCRR once detailed Design is completed? For this issue, Preliminary Design with a Known Route and Known Noise Level is all that is needed to determine the location needs for noise abatement Specifications. _____ Federal	Refer to NV-1.
Glenn Mannina	1/13/2018	Email	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. Question: What is the additional Noise impact of the additional Scientifically Proven "Slapping Sound" as a result of the aerodynamics of two lead air flows from each train colliding with each other? The FRA Noise study MUST account for the Scientific Proven Aerodynamic "Slapping Sound". _____ Federal	Refer to NV-1 and NV-8.
Glenn Mannina	1/13/2018	Email	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). Contrary to previous TCRR Documented Statements, a number of FM and CR roads all across the counties are being closed and reconstructed with an overpass Over the HSR? Question: Will Texas State Eminent Domain powers for Road Construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that matter AND for the destruction of people's Homes that originally would not have been taken specifically due to the HSR? If so, THIS IS UNLAWFUL STEALING OF MORE LAND AND HOMES THAN NECESSARY AS THERE IS NO PROVEN PULIC NEED OR NECESSITY FOR THIS PROJECT. The FRA MUST CEASE ANY FURTHER WORK ON THIS TCRR HSR EIS!	Refer to ED-1, ED-3, NE-1 and TR-8.
Glenn Mannina	1/13/2018	Email	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR? Question: Who is to pay for maintenance of these Overpasses that did not exist before this project plan? Question: Who will pay for the future maintenance of the Access Roads built alongside the HSR route that will be used to get around many of the road closures and modifications	Refer to TR-7, TR-7 and TR-8. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See TR-MM#1: Traffic Control Plan in Section 3.11.6.2, Transportation, Mitigation Measures for more information.
Glenn Mannina	1/13/2018	Email	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). An Access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any Road built along the HSR would become a Public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. TCRR's Advertisements of a Viaduct providing this free movement was FALSE. Animals would have to be moved across a Public Road. Question: Will TCRR provide Culverts in any ditches alongside the access roads and Fence Gates as well as road shut-down/signaling methods at various locations so animals can be moved across the Public Roads?	Refer to LU-11, NR-6 and TR-8.
Glenn Mannina	1/13/2018	Email	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Question: viii. There exists documentation of TCRR stating the Impacted Acreage for the HSR would be around 3000 acres. The recently released DEIS shows around 8000 Impacted Acreage. The FRA should HAULT ANY FURTHER WORK on the DEIS until there is a clear understanding where all of the Increases took place. Question: Is it not the case, after looking at all of the Road Modifications including those reconstructed Over the HSR, that the significant increase of new Road work ROW is a significant part of that increase in Impacted Acreage?	Refer to BA-3, LU-9, LU-14 and TR-8.
Glenn Mannina	1/13/2018	Email	Regarding Emergency Response times during Construction of the Dallas to Houston HSR, the FRA DEIS Summary Statement in File TEXT III, 3.16-24, is "Impacts to Emergency Response (ER) Times are NOT Anticipated to be Significant". Question: At what level of extended Emergency Response times when a Public Life is in the balance, does the FRA consider it a "Significant" Impact? Question: Does TCRR supply its own ER Equipment and Personnel during the Construction Phase or will they rely on County resources? Question; Is the measure of Response Times by the DEIS based on the planned conditions at the time of Construction, such as road and lane closures, road rerouting, road overpass reconstruction to go over the HSR, traffic due to Construction Employees, traffic due to Construction sites and its Operation, traffic	Refer to SS-23 and TR-6. TCRR does not plan to supply separate emergency response vehicles or services beyond the private security force described in Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation .

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			due to movement of raw materials and permit loads of completed constructed components on Existing Roads? Federal	
Glenn Mannina	1/13/2018	Website	No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The Public is NOT going to accept from the FRA general statements that support the HSR without the FACTS to back it up. The appropriate level of Detail to support the FRA's claims about the No Build Alternative simply do not exist in the DEIS. Rationale is included in another Comments Page on this Subject. due to space limitations. The FRA also mentions there would be no improvement of Safety on I-45 with the No Build Alternative. The FRA must Quantify that claim BEFORE it can be used to support the FRA's conclusion that the No Build Alternative is Not an Option. Therefore, the FRA does NOT provide adequate documentation for elimination of the No Build Alternative.	Refer to BA-6 and BA-9.
Glenn Mannina	1/14/2018	Handwritten	(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199; Sect. 16.2.5, Pgs. 185-186). Comment: There is the issue of High Elevation Rescues from the top of the raised tracks in case of an Emergency or Breakdown that is omitted by the FRA DEIS Question: Who will develop the specifications for Emergency Response on top of a Viaduct or tall Berm including requirements for High Elevation Evacuation of the Train set customers? This was totally missing in the DEIS. Question: Will special Emergency Response Vehicles be purchased by TCRR along with trained personnel and kept along the route for fast emergency use including ladder trucks? Question: Where is this covered in the DEIS?.	Refer to SS-3, SS-18, SS-19, SS-23 and SS-26. TCRR does not plan to supply separate emergency response vehicles or staff beyond the private security force described in Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation, SS-CM#9 . TCRR will supply emergency equipment, such as fire suppression and first aid resources, consistent with the needs identified in its Emergency Preparedness Plan.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199; Sect. 16.2.5, Pgs. 185-186). Comment: There is the issue of High Elevation Rescues from the top of the raised tracks in case of an Emergency or Breakdown that is Omitted by the FRA DEIS. There must be a Risk Assessment performed on the ability for Emergency Vehicles to reach any remote area along the 240 mile route. There is no mention of this in the DEIS. In any wet or winter months, it will be next to impossible to reach the track in the middle of a very remote pasture along the route. This work must be done by the FRA for the Safety of those riding the train. Federal	Refer to SS-3, SS-18, SS-19 and SS-23.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 13.5, Pg. 148 of 199). Comment: Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. This Omission must be Corrected.	Refer to WW-2.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Comment: The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA?	The "slapping" sound is a phenomenon that only occurs in the area between the two passing trains and is only experienced by passengers on the trains, when it does occur. There is no effect on the noise at the wayside. Noise mitigation commitments have been made in Section 3.4.6.2, Noise and Vibration, Mitigation Measures . TCRR has committed to mitigation measures at locations where mitigation is feasible based on the detailed engineering design. FRA must approve all mitigation for the project. It is typical have mitigation commitments at the Draft EIS phase of the project, without specific measures such as noise barriers recommended, but to have detailed studies conducted during design to ensure that mitigation will be practical, feasible, and provide adequate mitigation at required locations. The cost for any mitigation measures will be a part of the project. The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24-hour period. The assessment is based on the reference noise level of a train passby at a known speed, the total number of trains per day and night, the length of each train, and the actual speed of the trains at a given location. The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24-hour period. The assessment is based on the reference noise level of a train passby at a known speed, the total number of trains per day

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				and night, the length of each train, and the actual speed of the trains at a given location.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT;Sect. 3, Pg. 22 of 34; Also Sect. 4, Pg. 23 of 34; Also, Sect. 5, Pg. 27 of 34). Comment: The FRA DEIS does not Quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre-Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision. <u>Federal</u>	Refer to TR-6.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT;Sect. 7.1, Pgs. 32-33 of 34). Comment: The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. The FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document	Refer to GN-2, GN-4 and NE-1.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 7.1, Pgs. 32-33 of 34). Comment: There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side of the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCRR.	Refer to LU-14.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT Sect. 6.5, Pgs. 29-30 of 34). Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the future; Question; Will the "New Roads ROW" be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. Question: How much of the increase of Impacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? <u>Federal</u>	Refer to ED-1, ED-2, ED-3, LU-14 and TR-7.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 2.4, Pg. 4 of 34). Comment: FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more	Refer to SG-4.
Glenn Mannina	1/14/2018	Email	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 2.4, Pg. 4 of 34). Comment: FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more.	Refer to SG-4.
Glenn Mannina	1/14/2018	Email	HSR Economic Viability, FRA DEIS Comments: TCRR's Economic Model includes Ridership numbers that would require them to take 100% of the air travel from SW airlines between Dallas-Houston and 100% of those who travel in cars between the two cities. The FRA does not really test any of TCRR's data on Ridership and Costs AND has not used external resources, such as the "Reason Foundation" (States this Project will Fail!), to determine whether all of this Wasted effort is necessary AT ALL. Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extremely unfair to the Public who the FRA is supposed to Protect. . <u>Federal</u>	Refer to GN-2 and GN-3.
Glenn Mannina	1/14/2018	Email	Applicability of FRA Current Regulations, FRA DEIS Comments:Current The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph?	Refer to NE-1 and NE-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA, Correct? _____ Federal	
Glenn Mannina	1/14/2018	Email	Lack of Land Survey Rights by TCRR, FRA DEIS Comments: The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case, TCR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit. Now, the FRA preferred Route does in fact still go through Mr. Miles Property, therefore, the FRA is now part of TCRR Deception and False Statement to Mr. Miles and to the Public who are ALL FULL aware of the status of this case. TCRR does clearly NOT possess ED Powers, is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE TCRR HSR. and STOP wasting Taxpayer money on this Uneconomic project. _____ Federal	Refer to ED-1, ED-3, GN-4, NE-1 and NE-8.
Glenn Mannina	1/14/2018	Email	Eminent Domain (ED) Status and County Permit Requirements/DEIS Comments: Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a Permit in order to construct a HSR. The Permit also requires that TCRR Prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. Question: Has TCRR proved to the FRA that they possess legally Eminent Domain? Question: If so, the FRA MUST share that rationale with the Public who are going to be hurt the Worst by the HSR. Question: If TRR has not proven ED to the FRA, then Why is the FRA working with TCRR on this Project as if they have no ED, and they certainly are not an Operating RR, and without ED, this project will Never be built	Refer to ED-1, ED-3, NE-1 and NE-8.
Glenn Mannina	1/14/2018	Website	Eminent Domain (ED) Status, FRA DEIS Support: Comment- In the Lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed to survey the property. This court judgement also sets a precedent against TCR's claim of possessing ED Powers. They subsequently dropped all cases against landowners and were unable to survey thousands of acres. Question: Why is the FRA working on this Project being executed by a company that Can't or Won't Prove they have ED AND is not an Operating Railroad AND does not have the authority to survey property without Landowner Permission? The FRA Must Cease work on this project IMMEDIATELY and stop wasting any Taxpayer money and time being used to support an Uneconomic Project.	Refer to ED-1, NE-1 and NE-8.
Glenn Mannina	1/14/2018	Website	Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue). Question: Why is the FRA spending US Taxpayer resources on this project when TCRR is NOT an Operating RR? What RR is TCRR Operating? If they are an Operating RR, Why was TCRR NOT Allowed to Survey most of the Route between Dallas and Houston due to lack of Signed Permission Forms and Why in Court did TCRR lose the House Case in Harris County with a Summary Judgement and TCRR was NEVER allowed by Court Order to Survey the House Property. Why did TCRR DROP around 40 Lawsuits (after seeing they were going to lose these also) instead of continuing to pursue the Land Survey Rights if they thought they had the Survey Right? The one case they claimed they won was a Default Judgement due to the Landowner not showing up to court, so NOT a Win of their Case which was NEVER heard entirely by the Court	Refer to ED-1, NE-1 and NE-8.
Glenn Mannina	1/15/2018	Handwritten	(Ref: DEIS MAIN TEXT I; Sect. 2.6, Pgs. 41-48; Sect. 2.7, Pgs. 54-56). Comment: Cost is not a parameter to dismiss a Route Alt. for a Private Project. The I45 Route would likely be less harmful to the Environment & Landowners and Must be Reconsidered. There is NO REGULATORY BODY TO HAVE ESTABLISHED A Credible PUBLIC NEED/NECESSITY as those who are hurt the worst will benefit ZERO The FRA MUST Stop ALL further work on this Project and wait until TCRR has proven its false claim of having Eminent Domain and Condemnation rights. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER Or in COURT THEY HOLD EMINENT DOMAIN POWERS. TCRR has run away from lawsuits that would have resolved this issue. Also, TCRR is required to obtain a County Permit from many Rural Counties & those Permits require Proof from TCRR of Eminent Domain Powers. Therefore, No further work Must be done until the Public Need issues and County Permits related to Eminent Domain are resolved.	Refer to BA-8, BA-9, ED-1, ED-3, NE-1, NE-8, PN-3 and SC-19.
Glenn Mannina	1/15/2018	Email	(FRA DEIS). Comment: I see nothing that clearly proves or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and certainly TCRR does not possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today. Question: Why is the FRA wasting Taxpayer money working at all on this Private Project that has not passed so many tests of required maturity at this point in time to support any Government support	Refer to ED-1, NE-1, NE-8 and PN-3.
Glenn Mannina	1/15/2018	Email	(Ref: DEIS MAIN TEXT III; Sect. 3.13.3, Pg. 3.13-6; Natural Resources Map 3 of 4 Appendix F TCRR FDCE v7 REPORT; Comment: Natural Resources Map (Natural Resources 3 of 4, Pg. 53 of 65, Intermittent Stream) shows a Creek on my property that is at a minimum, 150-200 yards too far to the WEST (It does not touch the Utility Corridor Opening vs. what is shown on the DEIS Map), so Where did this Survey Data come from that is INCORRECT? What other DEIS data is "INCORRECT". If Your Survey Data is 200 yards off on an Historical Cemetery, the FRA may not even know about such and historical locations that might Actually Be in the DirectPath of the HSR Route. The FRA Land and Environmental Survey Data is Fatally Flawed with Omissions, Inaccuracies and possibly Illegally Obtained Data. The FRA Must Cease all work on this HSR project until the data has been updated, completed, and purged of any Illegally Obtained	Refer to GN-1 and NE-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	1/15/2018	Email	(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14; File 3, TEXT III, Tables 3.11). Comment: TCRR has continuously communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The re-routing of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever	Refer to TR-1, TR-6, TR-7, TR-8 and TR-10.
Glenn Mannina	1/15/2018	Email	(Ref: DEIS Appendix D Environmental Justice). Comment: The FRA must communicate the results of the significantly Westward movement of the Cross Texas Transmission line a year or so ago away from the Leon County Utility Corridor due to Environmental Reasons and why that information did not influence the FRA on the selected Utility Corridor Route. The Utility Corridor was one of 64 shortlisted routes. Question: So FRA, why was this not included and how would this impact your route selection?	Refer to BA-5, BA-8 and BA-11.
Glenn Mannina	1/15/2018	Email	Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3-16-6, Pg. 3-16-31; Also Sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15). The Dallas to Houston FRA DEIS after showing High, Medium, and Low Risk levels of increased Emergency Response times (Quantified) only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant". The FRA then states that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed Emergency Response times! The FRA MUST not allow TCRR's HSR Project to move forward with ANY INCREASES IN ER TIMES??	Refer to SS-23.
Glenn Mannina	1/16/2018	Email	Ref: Houston to Dallas FRA DEIS; Public Safety) There exists a "Lack of Due Diligence" by the FRA and TCRR to apply a Comprehensive Risk Management System to the HSR in the Name of Public Safety. Must Apply to ALL Crossings of Transmission lines & Pipelines & anything that impacts PUBLIC SAFETY. Also applies to elements during Construction, particularly ALL of the TRAFFIC and TRAVEL road changes & travel among all the heavy equipment and permit loads. Elements are 1) Identification of Disaster Scenarios 2) Comprehensive Risk Assessments on those Scenarios using Qualified Risk Assessment Engineers 3) Quantification and Qualification of Risks 4) Mitigation Analysis of ALL Risks Identified 5) Elimination of Acceptable Risks vs. Further Study of Unacceptable Risks 6) Modify the Project's approach to Remove ALL Unacceptable Risk Levels. THE FRA MUST CEASE ALL FURTHER WORK ON THE HSR EIS UNTIL THIS RISK MANAGEMENT SYSTEM IS APPLIED IN A COMPREHENSIVE MANNER	Refer to EU-2, SS-19, TR-6, SS-23 and NE-1.
Glenn Mannina	1/18/2018	Email	(Ref: DEIS TEXT III; Chapter 3; Table 3.9-1 Summary of Utilities Crossings). This table is Inaccurate under Leon County and maybe other counties. My property is on the Utility Corridor just North of the HSR MAJOR Utility Corridor crossing from NW to SE just South of my property. That Utility Corridor has 2 Enterprise Pipelines and the Oncor/TXU utility line. I watched the 30" Enterprise pipeline installed next to a smaller Enterprise pipeline in 2014 and know it was installed past the point within the Utility Corridor that I can see from my south fence line where the HSR crosses the Corridor. This Table Shows NO Enterprise Pipeline Crossings in Leon County, the closest being further south in Grimes County? This report Inaccurate DEIS MUST be RETRACTED AND REDONE with a huge increase in Credibility.	Refer to EU-2.
Glenn Mannina	1/19/2018	Email	(Ref: Negative Impact on Hunting Industry Omitted in FRA DEIS). Except for the slight discussion on Lake Bardwell, the FRA DEIS has omitted this topic and the negative impact on Texas Hunting Jobs and Revenue. The total impact of the industry to the Texas economy, combining the breeding and hunting components, is \$1.6 billion annually. \u8226 The economic activity of the deer breeding industry supports 16,892 jobs, most of which are in rural areas of the state. If this industry did not exist, those jobs would have to be supported by some other economic activity. \u8226 These results continue to highlight the fact that the deer breeding industry is a growing and important segment of the Texas economy, contributing to the vitality of rural areas of the state. Question: Will the location of the train bring limitations to private landowners on ranches that earn much of their living via wild game hunting?	Refer to RF-2. The construction and operation of the Project would not restrict hunting activities or add any regulations that would restrict hunting activities or indirect activities related to recreational hunting. No significant impact to recreational hunting would occur therefore no economic significant impact to the hunting industry would be expected.
Glenn Mannina	1/19/2018	Email	(Ref: Historical Locations Not Adequately Addressed by the FRA DEIS) Question: How was this example adequately addressed by the FRA DEIS? Documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-12.
Glenn Mannina	1/19/2018	Email	(Ref: Safety Issues Not Addressed by the FRA DEIS) Example: At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which pressures up a 30 inch natural gas pipeline to 930 psi between Waxahachie and Katy Texas. Three known accidental releases of natural gas are: May 24, 2007 - 18,000 lbs released, May 30, 2007 - 20,000 lbs released, and June 11, 2007 - unknown quantity. On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby.	Refer to EU-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			Question: What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident?	
Glenn Mannina	1/19/2018	Email	(Ref: Historical Significance NOT Adequately Addressed by the FRA DEIS). Question: How is this example addressed exactly in the DEIS: At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery.	Refer to CR-2.
Glenn Mannina	1/19/2018	Email	(Ref: Historical Landmarks Negatively Impacted in Waller County NOT Addressed by FRA DEIS). How is this Example Addressed? When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two prehistoric/ historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve.	Refer to CR-2 and CR-9.
Glenn Mannina	1/19/2018	Email	(Ref: Flooding Issues NOT Addressed in the FRA DEIS ALL Across the Route). As an example, Local Environmental Impact in Waller County includes the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Glenn Mannina	1/19/2018	Email	(Ref: Economic Development and Planning Impact Omitted by FRA DEIS). The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-1 and TR-8. No public roads in Waller County would be closed as a result of the Project. Refer to Table 3.11-51: Waller County Roadway Modifications for more details about roads that would be modified as a result of the Project.
Glenn Mannina	1/19/2018	Email	(Ref: Structural Integrity Impact on Water Tower Omitted by FRA DEIS). G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Glenn Mannina	1/19/2018	Email	(Ref: Destruction of Economic Development Omitted by the FRA DEIS). Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-3, LU-4, RF-1 and VA-1. Additionally, through the development of the EIS, FRA and TCRR have taken steps to avoid, minimize and mitigate any impacts to recreational facilities, including recreational equestrian trails. Data collection and analysis was completed using the most accurate data available at the time of analysis and in compliance with industry standards and best practices. Section 3.14, Socioeconomic and Community Facilities , has more information regarding the developments.
Glenn Mannina	1/19/2018	Email	(Ref: Destruction of Economic Development Omitted by the FRA DEIS). Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	1/19/2018	Email	(Ref: Environmental Issue Omitted in FRA DEIS). Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-4.
Glenn Mannina	1/19/2018	Email	(Ref: Environmental Impact Omission by the FRA DEIS). Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. The FRA has failed to address these impacts in the draft EIS.	Refer to NR-2, RF-5 and WW-9.
Glenn Mannina	1/19/2018	Email	(Ref: Quality of Life Evaluation Omitted in the FRA DEIS). Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AS-1, NV-1, PI-1, TR-8 and VA-1. For information about the Noise and Vibration analysis including mitigation measures, see Section 3.4, Noise and Vibration .
Glenn Mannina	1/19/2018	Email	(Ref: FRA DEIS Omission of Impact to Waller County ISD). The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. This issue, however, APPLIES to all Counties particularly during HSR Construction along with a huge amount of Road Construction and Road Closures, Rerouting, Modified, and Closed/Rebuilt OVER the HSR. TCR's Plan Must be Rejected by the FRA as the Impact has not been Adequately Identified, Addressed, or Mitigated Satisfactory by the FRA DEIS.	Refer to SC-5, SC-6 and TR-8.
Glenn Mannina	1/19/2018	Email	(Ref: FRA DEIS Omission of Major Impact on Hewlett Packard Data Center in Waller, Tx). The Hewlett Packard Data Center facility, which houses 1,500 servers will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Glenn Mannina	1/19/2018	Email	(Ref: Project Economics and Feasibility Omission in FRA DEIS). A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts on our communities, we should NO BUILD a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere.	Refer to GN-2, GN-3 and NE-1.
Glenn Mannina	1/19/2018	Email	(Ref: FRA Unethical Tactics to Not Work With Local Governments while Developing the DEIS). Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), FRA failed to coordinate with any local govt. "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for planning future development of our community and is comprised of elected officials from several municipalities in Waller County, plus Waller County itself & two of its school districts. Without this coordination, impacts to the local community are not properly analyzed & conflicts are not resolved. The FRA incorrectly labeled the WCSRPC as a "public stakeholder", but is a political subdivision of the state of Texas. The FRA has not addressed impacts in the draft EIS.	Refer to PI-1.
Glenn Mannina	1/19/2018	Email	(Ref: DEIS Chapter 3; Executive Justice; Sect. 3.18.5.4.3).Noise pollution concerns mean that increasing speed is becoming more difficult. In Japan, the population density is high and there have been severe protests against the Shinkansen's noise pollution, meaning that its noise is	Refer to NV-10. Japanese noise limits are much more stringent than those in the US.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			now limited to less than 70 dB in residential areas.[27] Hence, improvement and reduction of pantograph, weight saving of cars, and construction of noise barriers and other measures have been implemented. Current research is primarily aimed at reducing operational noise, particularly the tunnel boom phenomenon caused when trains transit tunnels at high speed AND also when two trains pass each other in opposite directions. The FRA DEIS Failed to address this issue and the Entire Noise Study by the FRA is Unacceptable and Must be Totally restudied in several additional noise areas including more detail on Noise Abatement. .	Because of this, Japanese trains are much quieter than other similar trains. Since there are no tunnels proposed on the project, tunnel boom is not an issue.
Glenn Mannina	1/21/2018	Email	(Ref: FRA HSR Work Contrary to the Surface Transportation Board Ruling). TCRR requested a Jurisdictional review and finding on the HSR. The Surface Transportation Board ruled they did not have any jurisdiction over this project as it is NOT a planned Interstate RR but a planned Intrastate RR. Question: Why is the Federal RR Administration spending Taxpayer funds doing any work at all on this HSR Project, particularly since TCRR has not proven in the Texas courts that they are in fact a RR, certainly not an Operating RR, as well as owning no existing tracks, rolling RR equipment, stations, operating personnel, etc.? Also, the FRA cannot Recommend or Grant TCRR the power of Eminent Domain, so why is the FRA spending Taxpayer money on an unproven Company currently called a RR by themselves in name only, TCRR?	Refer to ED-1, NE-1, NE-2 and PN-3.
Glenn Mannina	1/21/2018	Email	(Ref: HSR Economics Not Covered in the FRA DEIS). Per the Reason Foundation, "Crucially, HSR also tends to be very expensive-for both travelers and taxpayers. Practically everywhere it operates, HSR is more expensive (and slower) than plane travel. Those on a very tight budget would be better off traveling by bus, while those seeking flexibility would likely stick with the automobile. And yet despite high prices, only two of the world's HSR rail lines have turned a profit. The rest lose substantial amounts of money and required taxpayer subsidy. Since there will be a Huge Loss and Damages for Landowners, it would be Negligent for the FRA to do any further work on this HSR EIS until these comments by the Reason Foundation are reconciled with those claims by TCRR which many believe Overstate Ridership and Understate Costs regardless whether or not there exists any Federal Funding.	Refer to GN-2, GN-3 and NE-1.
Glenn Mannina	1/21/2018	Email	(Ref: The Reason Foundation Article Reconciliation). The Reason Foundation States "The US lacks many of the factors that make HSR successful in other countries. For starters, the US has neither the population density nor the land-use regulations necessary to support the development of HSR. It lacks a pre-existing, successful passenger rail system, and spends far less on urban transit than Europe and Japan. The HSR cannot work in a vacuum-In the absence of large urban populations clustered around city center Rail Terminals and Extensive transit systems that allow passengers to easily complete their journeys, HSR will never be an appealing transportation choice to most travelers. Considering the Huge Loss and Damage being planned for Texas Landowners, the FRA would be Negligent to not address ALL differences between the Reason Foundation article and TCRR's Claims. The FRA must do this research and report findings to the Public before going any further with the FRA HSR EIS.	Refer to GN-2, GN-3 and NE-1.
Glenn Mannina	1/21/2018	Email	(Ref: Lack of Public Need/Necessity Proof in DEIS & No Build Alternative). The FRA does not mention nor prove to the Public a Public Need Exists for the HSR Project AND does not make or use the results of that evaluation a part of the No Build Alternative analysis. The FRA would be Negligent to smooth over and not address the Public Need Proof in order to completely, credibly, adequately, and Fairly address the No Build Alternative. The FRA Must Cease All further work on the HSR EIS process until that very important determination step is completed and reviewed with the Public.	Refer to BA-6, NE-1 and PN-3.
Glenn Mannina	1/21/2018	Email	(Ref: The "Reason Foundation" on Ridership). The "Reason Foundation" article states "One reason that HSR loses money is project sponsors overestimate the number of travelers who will switch from car to plane. A 1997 study on the feasibility of HS in the US conducted by the FRA determined that in most cases rail improvements would divert only 3%-6% on intercity automobile trips." The DOT Inspector General reached a similar conclusion in a Northeast Corridor. The IG examined two options also in the NE and found that improvements reduced automobile ridership along the NEC by less than 1%. Question: Because of the huge Losses & Damages Required by Texas Landowners for the HSR, has the FRA Thoroughly evaluated the Reason Foundation Study on this HSR and Reconciled any different findings or Claims by TCRR?	Refer to GN-2 and GN-3.
Glenn Mannina	1/21/2018	Email	(Ref: HSR vs No Build Not Covered in This Manner in the HSR). It is obvious the HSR Speed and the resulting horizontal and vertical deviation restrictions along with the actual Terrain has caused TCRR to not be able to keep to their original promise to the Public that they would "Fly" over existing roads, thereby minimizing impact. Now existing roads are being rerouted, modified, rebuilt OVER the HSR, and new roads being added for Access with more ROW being taken from Landowners. This is the root cause of the increase of Impact Acreage from 3000 acres to 8000 acres with an Avg. ROW width now of 275' vs. the original 100'. The FRA must Reject this Disastrous Plan, Slow down the HSR reducing restrictions, not disrupt existing roads, or Select the No Build Alternative. Emergency Response Time increases are unacceptable and only Negligence would allow approval. The FRA must not proceed any longer with the HSR EIS.	Refer to LU-14 and TR-8.
Glenn Mannina	1/21/2018	Email	(Ref: Lack of Public Need/Necessity Proof in DEIS & No Build Alternative). The FRA does not mention nor prove to the Public a Public Need Exists for the HSR Project AND does not make or use the results of that evaluation a part of the No Build Alternative analysis. The FRA would be Negligent to smooth over and not address the Public Need Proof in order to completely, credibly, adequately, and Fairly address the No Build Alternative. The FRA Must Cease All further work on the HSR EIS process until that very important determination step is completed and reviewed with the Public.	Refer to BA-6, NE-1 and PN-3.

This is the root cause of the increase of Impact Acreage from 3000 acres to 8000 acres with an Avg. ROW width now of 275' vs. the original 100'. The FRA must Reject this Disastrous Plan, Slow down the HSR reducing restrictions, not disrupt existing roads, or Select the No Build Alternative. Emergency Response Time increases are unacceptable and only Negligence would allow approval. The FRA must not proceed any longer with the HSR EIS.	Refer to LU-14 and TR-8.
Glenn Mannina	1/23/2018	Email	(Ref: DEIS Inaccuracies & Omissions of Cemetery Locations). The FRA MUST perform an independent review of the Land & Environmental Survey Data supplied by TCRR, Since TCRR was not allowed on much of the 240 mile route Land due to lack of Proof of being an Operating RR or possessing Eminent Domain powers & the resulting lack of Survey permission from Landowners, their work cannot be Accurate OR Credible. Several cemeteries within the destructive force of the HSR have been found by Landowners to not be identified by the DEIS, some possibly Historical Cemeteries. If this is WRONG, what else is also? Without accurate data, the FRA DEIS has ZERO Credibility as a Government Document by the FRA at BEST. The FRA has performed an Unacceptably inadequate verification of what TCRR supplied to the FRA. The FRA must CEASE ALL WORK on the EIS Until ALL Pertinent Data and Subjects are Independently verified by the FRA rather than accepting TCRR Data as FACT?.	Refer to CR-6, GN-1, GN-2, NE-1 and NE-8.
Glenn Mannina	1/30/2018	Oral	I am going to read this because I only got three minutes. Okay, my name is Glenn Mannina and I oppose this uneconomic project. My topic is ER times, emergency response times. Sometimes I use ER times. TCR is not only forcing onto the public a huge five year construction project but also a large road construction project and I got 36 years of construction and I know what one looks like. The DEIS states in the no bill alternative. That is where the HSR does not exist and that the ER times would remain steady. Any increase in times due to population growth would be more emergency equipment and workforce needs as population increases. The DEIS table 3.16-14-15 showing emergency service provider locations in the counties where they exist potential negative impacts of ER times state such as road closures, rerouting modifications and road rebuilds over the HSR. But there is no quantification of construction work, population, equipment, traffic increases and the roads just based on the road quantifications. That impact is qualified with out detail model impact in high levels of negative impact. The focus was mostly on the high impact. The local jurisdictions would have to review the permit authority over construction plans regarding emergency response. The predictions would be expected to ensure no adverse impact to ER times during the construction phase. So the responsibility is placed on the local jurisdictions. FRA says there will be a mitigation step that includes detailed modeling of ER times during construction after detailed design and changes to the construction if there were delays of over 10% over to the base ER Times. There will be a huge influx of workers and equipment traveling on our roads that are not here today particularly those in the many construction sites and every major	Refer to SS-23 and TR-6. Although the construction period for the Project is anticipated to last several years, construction activity on any individual roadway or rail segment would be shorter in duration. Temporary employment impacts described in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts include direct construction employment as well as employment in supporting industries. Many of these jobs could be filled by the existing labor pool anywhere in the larger Economic Analysis Area and would not necessarily result in additional traffic at or near the construction site.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			highway and corridor from 45. Like highway 79 and highway 7. I see nothing in the FRA or DEIS that even mentions the impact of the huge workforce along with all the traffic and so forth with all the road modifications itself. How are we supposed to accept the increases in time up to a certain level and only above that level? Are Texas Central's construction plan subject to change? The FRA DEIS summary impact states the impact to the emergency response time is not anticipated to be significant. Let me read that again. The impact to emergency response time would no be anticipated to be significant. This project is not worth a single loss of precious life as a result of any increase in emergency response times. The FRA DEIS released supporting a plan that could result is nothing less than the negligence. Certainly not in the name of the public safety. The FRA must seriously reconsider with hard facts not qualified comments the no bill.	
Glenn Mannina	1/30/2018	Oral	Okay. Getting back to what I was talking about before about roads. I want to repeat something that Judge said from Waller County this HSR may not go through your backward but it's going to go through your pocketbook. Let me explain to you how this is going to happen. The project is going to increase your county maintenance costs. Someone asked a while ago who is going to pay for all of that? U. We're going to pay for all of that. Not only this whole construction project that they have developed here and all of these increases and changes something else it's going do. It's going to take more private right-of-way because the road changes. I looked at several locations and the additional right-of-way that's being taken because of the road changes are taking homes that would've been sitting next to the high-speed rail. Not a good place to be but we're not taken by high-speed rail. And I have looked at a number of the places in Grimes County and that is the case not only high-speed rail about to have a lot more new right of ways and therefore new homes are being destroyed because of this road plan that they have got. So it's a domino effect that's happening so the result will be closed, modified, rerouted or rebuilt existing roads included now over the high-speed rail which TCR told us they would never do and that was those going over and that was it. You will see a huge increase in travel flow and damage to existing railroads. New roads and passes for the county to maintain and new congestion around construction sites. The administrator talked about the school and its location relative to the high-speed rail. Did ya'll understand him saying there is a several 100 acre construction site right here on 79. There is also a small one over on 7. Can you imagine all those people who are going to be working those sites getting on our highway here every morning and going home every evening? Along with all the trucked raw materials that have to be trucked all the way to the construction sites and then all of the complete concrete components that are going to be on permit loads going to the high-speed rail site. That's a huge problem. And this DEIS has not really understood what that means to the community. All this damage is going to occur and they say we are going to pay your taxes. We are going to talk money out of us so you know you can use that tax money. Let me tell you it ain't going to cover all the damage that they are going to do. Am I off?	Refer to TR-1, TR-4, TR-5 and TR-8.
Glenn Mannina	1/30/2018	Oral	Okay, I didn't prepare enough remark tonight I guess. One thing that I want to cover that I didn't cover last time. I was trying to beat a time limit. Is that this issue on the roads. Chris had mentioned 126 miles of new roads. That's access roads. Okay. I don't know if you understand this because of all the road modifications -- this is what I was talking about before. Because of all the road modifications, okay. Because of that plan by TCR they're going to have to have access roads alongside the HSR because people are going to have to go north and south in a lot of directions in order to cross the HSR because you are not going to have crossings everywhere because roads are going to be rerouted and changed. Now those 126-miles of roads beside it, that is going to be turned into public roads. It is going to have to give back to the county. The county is going to have to maintain that it since it becomes a public road. Let me explain what that means. TCR is going to put bio-ducts on all these ranches so that people can run that cattle back and forth underneath the bio-ducts. That is going to solve all of ya'lls problems. Now, there is a public road that runs alongside of it. Now, are you going to run your cattle alongside a public road? Is somebody going to have to fence that public road to make sure you keep your cattle on both sides if the thing goes right down the middle of the property? You are going to have to have fences on both sides of your property. You are going to have to negotiate it with TCR and get it in their deal or they are going to say to you, you do it and the county is certainly not going to do if for you. So to keep your cattle in on either side you are going to have to have fencing. You are going to be moving cattle through a gap across a public road and you are going to have to have people on the road to stop traffic. How do you like that folks? That is what this has turned into. The domino effect. Things have gotten worse and worse and worse. Kyle mentioned and talked about illegal surveys. Let me explain something to FRA. You were told you have illegal survey data in your report. You ignored it. You ignored it. I tell you how I feel. Illegal survey data in that report and TCR did not purge that report. Every land-owner that is in that report and get them to signan affidavit to say yes we allow them to survey and they didn't purge that document is illegal. The FRA has presented and released an illegal document. Its got illegal survey data in it. That is my position and I am not a lawyer but sounds pretty bad to me. Now, the last thing real quick. If the issue of whose going to speak for the land owner during the project? The federal railroad administration there goal is railroad safety. That's it folks. They look at the design and operation of it. It doesn't include who somebody you can go to say TCR told me this was not going to happen but its happening and I want you to do something with it. Who are you going to go to? There is nobody in the state nor department that is going to cover this and I guarantee you these folks aren't going to be answering the phone during the construction phase. That's the main thing I got to say with that.	Refer to ED-2, GN-1, NE-1, NE-2, NE-8 and TR-8.

Glenn Mannina	2/5/2018	Handwritten	<p>Good Evening, My name is Glenn Mannina and I have Opposed this Uneconomic Land Grab HSR Project for 3 years. I am hereby requesting the FRA to RESEND the DEIS Immediately. It is an extremely poorly prepared Document full of Inconsistencies, Inaccuracies, Omissions, and Fatally Flawed criteria or assumptions with smoothed over conclusions without quantification to back it up. It uses outdated Land, Environmental, and Cultural Resources Survey Maps, much of which was obtained without using Boots On the Ground including missing many residents that exist today but are not on the maps. We know about lots of other things missing but we will let you find them when you read our comments.</p> <p>I am not a lawyer, but In my view, the DEIS is also an Illegal Document as the FRA was notified Before Release that Evidence Existed proving some Survey Data was Obtained Illegally without Landowner Permission. If that Data was Illegally Obtained and used by the FRA, then in my view the DEIS is Illegal. Not to mention the FRA released the DEIS while having the Knowledge and that Back-Up in their hands. NOT cleansing the document by reconfirming ALL Survey Data used was obtained with Landowner permission is Unethical to say the least and the FRA is Implicated.</p> <p>Now Here are Just a Few Examples of What is Wrong with the DEIS: The HSR Noise Level used for design and Noise studies/analysis is INCORECT. FRA throws TCRR a soft ball by not specifically requiring Noise Abatement structures under specific criteria. Does anyone thing it is not necessary along 290 in front of AND down the middle of Subdivisions. Emergency Response Times not modeled with the Traffic and Road changes. Due to inability to access most Of the land, FRA used old studies and maps. No Abandonment Requirements mentioned at all. No Rescue at Heights or Emergency Response planning is mentioned for very remote areas without access roads. Water for the Construction Sites AND watering of all roads for dust mitigation, Air Quality, is Assumed to be Available at the Construction Sites. Bad Assumption. Hunting Regulations are not Expected to be changed but where is the Guarantee from the State TP&W agency? Very important Spring Fed Creeks are wrongly located. Homes are not shown on maps so what else is missing. No mention of Fencing that must be built for liability issues along 126 miles of Access Roads that will be tued into Public Roads and County maintained. Should TCRR somehow obtain Eminent Domain which they do not have today, there are no Environmental criteria or restrictions on TCRR should they decide to condemn up to a Four (4) mile swath along the route for the use of other landowners' Dirt or anything else they may want to steal from the Landowner. The FRA uses the excuse of the NO Build Alternative not solving Traffic and Congestion problems on 145. However there are recent traffic studies that prove the traffic or congestion problem is NOT between Dallas and Houston, but they did not look elsewhere in Texas as TCRR did not offer any other Texas Areas for their HSR project. The FRA Simply accepted this TCRR Assumption and only worked on TCRR's potential Routes. No FRA Independence whatsoever. No Risk Management System is being applied to the HSR crossing of Transmission Lines and Pipelines, in fact, not required of TCRR on any</p>	Refer to BA-8, EU-1, EU-2, GN-1, LU-14, NE-1, NE-2, NE-8, NV-1, PI-1, PN-3, RF-2, SS-5, SS-18, SS-19, SS-23, TR-7, TR-8, WW-2 and WW-6. Structures were labeled on the maps and used in the analysis if they were within 200 feet of the LOD. Aerials for the Draft EIS were NAIP 2014, while the Final EIS has been updated to use 2016 NAIP aerial imagery.

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>other Risk Topics.</p> <p>There is no mention of a State Regulatory Agency responsible for Oversight of TCRR as they implement the project. The FRA limit of oversight is RR Safety. Nothing exists like the Texas PUCT or RR Commission. The Texas Public has No One to Look to for HELP!</p> <p>The HSR traveling at 205 mph, and the subsequent HSR Vertical and Horizontal Deviation Restrictions along with a North-South Terrain has led to the huge explosion of Disturbed Existing Roads and New Road ROW Acreage being taken including roads being closed and rebuilt OVER the HSR along with a huge amount of additional County Maintenance cost. Robert Eckels' Flawed premise, of an N-S Route being Relatively Flat with the HSR Speed is a TCRR Fatal Flaw.</p> <p>Federal Energy Regulatory Commission (FERC) and Pipeline and Hazardous Material Safety Administration (PHMSA) NOT even mentioned in the DEIS.</p> <p>Pipelines missing from Alignment Sheets. What else is missing. We KNOW!!</p> <p>Some Tables of Data were marked with incorrect Segments in reverse order such as Labeled Segment 5 was actually Segment 1 data. Did anyone check this Document?</p> <p>FRA disregarded a Court Decision and simply assumed TCRR is a Railroad?</p> <p>FRA, Please Respond in Writing.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Good Evening, My name is Glenn Mannina and I have Opposed this Uneconomic Land Grab HSR Project for 3 years.</p> <p>Don't be fooled, the more I look at this Project AND the FRA's DEIS, the more I am convinced this is nothing more than a Land Grab Project AND a US Taxpayer Money Grab Scam. Many of us have said this, but the hard push by the FRA releasing this very poorly prepared document for a private company that can't even prove they are a RR IN COURT is Unethical and Fraudulent.</p> <p>I am convinced TCRR knows this project will Go Bankrupt, as they are just a shell company working as a Conduit for the Japanese to get their Proprietary Technology a foothold in the US.</p> <p>Touching also on the issue of FRA's non-independence, tell me FRA, why did you remove from the "Purpose and Need" Criteria list stated in the Stage 1 Screening, the requirement of this project to prove "Economic Viability"? Do you think it is fair to force on the Public the huge emotional, Unsafe, and Life Changing impacts of this Project that will forever Scar the Texas Landscape without requiring TCRR to prove "Economic Viability"?</p> <p>If TCRR was so sure about the solvency of this project, then why are they not willing to share all of their Economic Viability numbers came from, particularly Ridership? The Public is sacrificing a huge amount so let the Public take their numbers apart. What do they have to hide? TCRR also knows they will be stealing US Taxpayer Money (RR Loan) without reimbursement after Bankruptcy since the Japanese would be the largest controlling creditor and they will get the assets first. The same kind of model was used for SH 130 near Austin as the Taxpayers were left with 30%+ Of the ownership but they will not receive it for 10s of years as the other larger creditors were first in line. Those US Government RR Loans can be from 1/3 Of the Total Investment to up to 49% with Approved Exceptions, The Private Investors totaling only 1% of the investment will make out like bandits as a result of the station properties they sold to TCRR and the development around them.</p> <p>I will close this way: Here is the Definition of FRAUD folks: "FRAUD" per Webster is "An Intentional perversion of truth to induce another to part with some valuable thing belonging to him or to surrender a legal right".</p> <p>Now Tell Me, Does That Sound Familiar?</p> <p>IF THIS TCRR Land and Money Grab DOES NOT FIT THE DEFINITION OF "FRAUD" I DON'T KNOW WHAT DOES.</p> <p>Folks, this is what the FRA is supporting by allowing this non-RR to utilize the FRA system as the clear road map to the destruction of Texas Land, Landowner Families, and Private Property Rights!</p> <p>Folks, FOR ALL OF you OPPOSERS OUT THERE, FAILURE IS NOT AN OPTION!</p> <p>FRA and TCRR, we will not stop fighting and will not give up our Land nor Taxpayer money to a bunch of Fraudulent Thieves!</p> <p>"COME AND TAKE IT" TCRR AND FRA!!</p> <p>FRA Please Respond in Writing.</p>	Refer to BA-8, GN-2, GN-4, NE-1 and PN-3.
Glenn Mannina	2/5/2018	Handwritten	<p>Good Evening, My name is Glenn Mannina and I have Opposed this Uneconomic Land Grab HSR Project for 3 years.</p> <p>After review of much of this DEIS document, I am more convinced than ever the FRA is not acting in an independent capacity with TCRR, in fact is supporting this Project and is Disregarding the Safety of the Public in doing so.</p> <p>When I hear in a previous Public Hearing a FRA Direct Employee misleading the Public with the Statement "TCRR is a Private Company doing the project without use of Federal Funds", my antennas go up. After my challenge, that person corrected the statement by adding "No Federal Funds AT THIS POINT" to the public. Clearly a bias and misleading statement to the Public. We all know and have it well documented TCRR has told the public they will go after US RR Taxpayer supported Federal Loans.</p> <p>The FRA has artificially orchestrated a "Purpose and Need" definition that is not balanced, but bias by only supporting TCRR's Functional</p>	Refer to BA-6, BA-7, GN-1, GN-4, NE-1, NE-5, PN-3, PN-4, SC-2, SS-4, SS-12, SS-14, SS-23, PN-3, PN-4, TR-6 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Criteria, not the public's interest or safety and is clearly designed to eliminate the "NO BUILD" Alternative. They also say the No Build will not meet the Traffic and Congestion relief needs. TCRR has stated in Public the HSR is will NOT fix any City traffic problems and folks; there are no traffic issues without an accident between Houston and Dallas.</p> <p>Analogy: A boss at an equipment company tells his employee to bid out a number of skid steers for a construction project. The employee just happens to love a certain manufacturer's skid steer because they are so neat (might even go 205 mph or 240 miles in 90 minutes!) but there are several companies on the bid list. So, what does he do? He writes the bid package up with the specifications on that very manufacturer he likes with their unique criteria. Guess which skid steer company got the bid?</p> <p>TCRR's Functional Criteria is: Technological: bullet train vehicle and operating a N-7001 Tokaido Shinkansen system; Operational: 90-minute travel time between Dallas and Houston, with speeds exceeding 200 mph in a fully sealed corridor; Environmental: minimal impacts to natural and built environments by maximizing adjacency to existing infrastructure right-of-way (ROW). But one criteria eliminated from the Stage 1 Screening was the "Economic Viability". WOW, I wonder why?</p> <p>Per the DEIS, The FRA's mission, supports the development of safe and reliable intercity passenger rail. so tell me again where is the Independence?</p> <p>The FRA is just going through the motions and the answer is baked in.</p> <p>What Federal Agency with any Ethical Backbone, in the interest of Public Safety and a Strong Learning Environment for our kids & grandkids would Approve placing a HSR two blocks from Leon High School AND a couple hundred acre Construction Site at the same location along the only travel corridor for the school, Hwy. 79? Young High School kids will be driving on that corridor during 5 years of Construction. Is the FRA looking out for their SAFETY?</p> <p>The DEIS uses Sappy and unquantifiable Rationalization without the Data to back it up every time the FRA attempts to compare and convince us why the No Build is not the best answer vs. a Build Alternative. There is absolutely NO CREDIBILITY.</p> <p>For Example, just look at the subject of Emergency Response (ER) Times. There is no reason the No Build Alternative regarding ER did not win out over the Build Alternatives. The Current State of ER is STABLE. But for the Build Alternatives, the DEIS shows tables of High, Medium and Low potential negative Impacts to ER response times and summarize with the statement, "Impacts to ER Times would not be anticipated to be Significant". The FRA also says if the ER times do not increase by more than 10%, that issue at that location is not the place of focus when looking for mitigation steps? Tell the FRA "This Project is NOT WORTH One Single Loss of Life due to ANY increase in ER Times as a result of this HSR Project.</p> <p>Another Example of Non-Independence of the FRA, the Waller County Regional Planning Commission, A Legal Local Government Entity, had to sue TXDOT as they would not work with them because the FRA told them not to, stating they were an Advocacy group. TXDOT lost the case, then Appealed, and TXDOT lost again.</p> <p>TELL THE FRA TO PUT THE "NO BUILD" ALTERNATIVE BACK ON THE TABLE Rather than concluding it DOES NOT MEET THE PURPOSE AND NEED THAT WAS TCRR'S NEEDS. What about the Public's safety and Purpose and Need?</p> <p>Did you know the people used to prepare the DEIS are consultants paid for by TCRR? The FRA is responsible for managing the process.</p> <p>FRA. Please Respond in Writing:</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Constructability-Aggregates: Market and Supply Chain Impact on the local Areas taking into account other Construction Projects. Example: Construction concurrently in several counties currently Include even for a Rural area like Grimes County, the 249 to College Station, overpass over 1774 in Plantersville, and now the proposed HSR, Plus all being done in the Houston Area. FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it Impacts other Concurrent Construction Projects all along the route in multiple counties. The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials. (Dallas to Houston High-Speed Rail Draft Environmental Impact Statement (DEIS) Appendix F TCRR CONSTRUCT ABILITYv4 REPORT; Sect. 2.4, Pg. 4 of 34).</p> <p>Constructability-Highways and Roadways, Traffic, and Emergency Response: Public Daily Travel Increased traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, Negative Impact to the General Flow of Business and potentially Negative Impact of times for First Responders to reach required destinations. The FRA seems willing to accept the loss of One Life due to response time based on the Conclusion regarding Response times (Impact not Significant?). There Must Be Zero Impact to Emergency Response Times. Lessons Learned from Applicable Previous US HSR Projects under Construction providing the FRA with minimum Expectations to be provided to this HSR Project. The HSR is a Huge Construction Project. FRA's report is too General and not specific to Increases in Traffic Flow, Permit Loads, and not to mention First Responder Impact times for ALL Qualitative Levels of Impact to Response time. FRA Concludes "Impacts to Emergency Response Times Not Anticipated to be Significant". The</p>	<p>Refer to BA-5, BA-8, BA-9, BA-11, ED-1, ED-3, EU-2, GN-1, GN-2, GN-4, LU-10, LU-13, LU-14, NE-1, NE-2, NE-8, NR-4, NV-10, PI-1, SG-4, SS-2, SS-5, SS-6, SS-7, SS-10, SS-12, SS-18, SS-19, SS-21, SS-23, TR-1, TR-6, TR-7, TR-8, TR-10, VA-1, WW-2 and WW-6.</p> <p>NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>FRA Identified Low, Medium and High Impacts but focused only on the Red highlighted High scenarios. Not Good Enough. This Project Is Not worth a Single Public Life. ANY ADDITIONAL DELAYS OF FIRST RESPONDER times to reach required ultimate destinations as a result of this Project will be UNACCEPTABLE TO THE PUBLIC. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters, particularly when it comes to First Responders reaction times, must be provided to TCRR. The FRA must make sure the Environment of Travel and Conducting of Normal Business as well as the Public's Safety/Security is minimally negatively impacted to say the least by this project, but have Zero impact to First Responders. Will the Project furnish its own Emergency Response Vehicles & Personnel or will they use County Resources'? Have the Emergency Response times been calculated based on the identification of all road dosures, modifications, and lane closures that would be underway at that time or is it based on current undisturbed roads'? (Sect 2.5, Pgs. 5-6 of 34; Also Sect. 4.22, Pg. 24 of 34; Sect. 3.16.3.2.3, Pg. 3- 16-6, Pg. 3-16-31 Also Sect. 3.16.5.2. 2, Pg. 3.16-24 Also Tables 3.16-14 & 15 Also Sect. 5.1.1, Pg. 27 of 34).</p> <p>Constructability-Material Haul; Earthwork; Preconstruction Activities: Damage to Existing Private, City, County, State and Federal Road/Highway Infrastructures. The FRA must require TCRR to provide to Landowners, the City, Counties and the State, with their expectations of damage to Private, County, State or Federal Roads based on an increased traffic flow volume and transport weights vs. normal traffic prior to the HSR construction. The Government entities and the Public deserve to understand How much damage and where it can be expected (e.g., whether repair or total replacements should be expected.) Who will pay for the damage repairs? Will the Public have to wait 5+ years to see the damage repaired? Who will pay for the damages to the public vehicles as a result of having to use unsatisfactory roads for 5+ years? (Sect. 2.13, Pgs. 20-21 of 34; Also Sect. 2.3, Pgs. 3-4 of 34; Also Sect 6.2, Pg. 29 of 34).</p> <p>Constructability-Traffic: Construction Access will require the construction of new roads requiring the taking of more Private Property for roads. FRA needs to clarify who owns these newly constructed roads and who will be responsible for maintenance in the future. The FRA needs to also clarify if "New Roads" would fall under the normal Eminent Domain process, thereby this Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. How much of the increase of Impacted Acreage from 3000 to 8000 is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? (Sect. 6.5, Pgs. 29-30 of 34).</p> <p>Constructability-Material Quantities: There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or established parameters regarding the removal of Fill Material from Private Property. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site, Issues such as where to dig, are they the proper fill materials, will the hole be Sealed to hold water, will it be built in a place that would result in a Surface Water Source, will TCRR be required to use a Water Conservation Expert to design the Fill removal process, or will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? (Sect. 7.1, Pgs. 32-33 of 34).</p> <p>Constructability-Construction Material Quantities, Water Sources: Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and the use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the area? The FRA does not cover the use or source of water, but simply Assumes it will be available from "Somewhere" at the construction sites. Lots of water will be required continuously not only for concrete batch plants, for construction sites, for mitigating the dust levels during construction for Air Quality on all temporary construction dirt roads, but also for watering erosional control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. (Sect, 7.1, Pgs. 32-33 of 34).</p> <p>Constructability-Site Selection Criteria, Sites for Construction Stages Areas: The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming. For forested areas, will TCRR be required to replant trees? (Sect. 4.2, Pg. 23 Also Sect. S, Pg. 27).</p> <p>Constructability-Construction Cost Estimate and Schedule: Many Landowners will be making Huge Sacrifices as a result of the HSR Project. This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST. The FRA has a responsibility to ensure the economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers. Construction will be a huge Environmental challenge to say the least. The FRA</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction. The FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document. (Sect. 8, Pg. 34 of 34).</p> <p>Constructability--TCR Contractor Consturction Safety Expectations: The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how It applies to the Safety of the Public during Construction. s the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction whlle using a Comprehensive Personal and Operational Safety System should be provided by the FM and placed on TCR and its Contractors. As an example, Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? Nothing In the DEIS on Construction Safety.</p> <p>Construction Staging and Pre-cast Operations-# Permit Loads as a result of Construction Sites,Traffic around Construction sites; Quantification of increase of Permit Loads on local and community roads as well as the resulting changes In Traffic Flow and Congestion. he Construction Staging and Pre-cast sites will require the influx of Raw Materials and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees for ALL Construction Sites or otherwise for movement to the HSR site. Much of this will be associated with the Construction Staging and Pre-Cast Sites. Also, the Increase in Traffic around the newly built Construction sites should be communicated to the Public and local governments so they might plan for the new Traffic flow and Congestion. (Sect. 3, Pg. 22 of 34 Also Sect. 4, Pg. 23 of 34; Also, Sect. 5, Pg. 27 of 34).</p> <p>HSR Noise: FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect. Finally, there are no specific boundaries or conditions for Noise Mitigation place on TCRR except to state it will be looked at after more detailed design is completed. FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" affect That is giving way too much discretion to TCRR. Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design.</p> <p>Surface Springs & Creeks-Stream Crossings: Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Not Listed by the FRA in the DEIS) that provide valuable water to wild and domestic animals throughout a normally hot and dry Texas summer. The FRA failed to evaluate the Damage to many sources of extremely valuable water sources particularly in Leon Counties (but may extend to other nearby counties), This fact was not only ignored by the evaluations of surface water, but also the fact these Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. These water sources provide a valuable source of water where tanks are unavailable or normal tanks not around these sources are dried up. One can also see on the sides of hills where the hay fields are still green in the summer heat that is a result of water flowing just below ground. (Sect, 13.5, Pg. 148 of 199).</p> <p>HSR Safety & Security-Safety&Security, Safety Regulations, Maintaining Security on HSR Intrusion Protection: The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. Also, the safety of a train passing In rural Texas where Hunting is at the highest level was never mentioned. Finally, there is the issue of High Elevation Rescues from on top of the raised tracks in case of an Emergency or Breakdown. Rural Texas is significantly hunted. What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FRA was not specific on what type of monitoring system would be used to make sure every INCH of the route Is detected for any animals on the track. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use to keep Feral Hogs off the tracks. A train hitting a 300# Feral Hog would be devastating. It takes special fencing as well as a methodology to minimize the digging under the fences to keep Feral Hogs out of an area they are unwanted. More specifics specifications should be provided to TCRR. Who will develop the specifications for Emergency Response on tip of a Viaduct or tall Berm including requirements for High Elevation Evacuation of the Train sets? Again, an area totally missing in the DEIS. And Finally, there must be a Risk Assessment performed on the ability for Emergency Vehicles to reach any remote area along the 240 mile route. There is no mention of this in the DEIS. In any wet or winter months, it will be next to impossible to reach the track in he middle of a very remote pasture along the route. Will special Emergency Response Vehicles be purchased by TCRR and kept along the route for fast emergency use? Where is this covered in the DEIS? (Sect. 3.14,3.2.3, Pg, 5 Also Sect. 3.14.3.2.5, Pgs. 6-7).</p> <p>Property Tax Revenue-Property Premiums: No Discussion in the DEIS on the Significant Negative Impacts of Tax Revenues due to lower Private</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Property Values except around the stations. The DEIS includes evaluations about the Property Values around the HSR stations, but totally omits the Negative side of the evaluation, that is the LOSS of Tax Revenue all across the state as a result of the presence of the HSR. Property Values out several miles from the route must be evaluated to credibly and fully understand the Loss of Tax Revenue. Only then can a credible Cost/Benefit analysis be done regarding Tax analyses. (Sect. 3.14,3.2.3, Pg, 5 Also Sect. 3.14.3.2.5, Pgs. 6-7).</p> <p>Environmental Concerns of Previous Utility Corridor Project: Environmental Considerations Evaluation of Lessons Learned by the Public Utilities Commission of Texas regarding the use of the Utility Corridor in Leon County for a previously proposed Cross Texas Transmission Line. The FRA must communicate the results of the significantly Westward movement of the Cross Texas Transmission line a year or so ago away from the Leon County Utility Corridor due to Environmental Reasons and why that information did not influence the FRA on the selected Utility Corridor Route. The Utility Corridor was one of 64 shortlisted routes. So FRA, why was this not included and how would this impact your route selection?</p> <p>Environmental Studies of Endangered Species: The amount of Environmental Survey Inspection performed with "Boots on the Ground" vs. the use of Regional data or data taken from unidentified sources. Also, how much of the field data used in the DEIS is supported by Signed Landowner Survey Permission Forms. It seems there is an enormous amount of Regional non-specific data used in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without reconfirming all of the data from other sources by a comprehensive inspection program all across the proposed route, the data the FRA is using is Not Project Specific and is suspect of being Out of Data. The DEIS is Fatally Flawed because of this for the identification of endangered species. Also, It is obvious that considering the large areas in the Environmental Maps that show Navasota Ladies Tresses and the Houston Toad, that these areas were not recently inspected as there is no way TCRR had the permission to survey ALL those properties, one of which is mine so I know this to be a Fact!</p> <p>Risk Management Systems: The FRA is responsible for RR Safety & Security. But yet, the FRA was silent on any Comprehensive Risk Management System applied to Assess the Risk of Crossing Large Live Pipelines (2) and a Transmission Line in the Utility Corridor within Leon County. A Comprehensive Risk Management System must be applied including Specific Risk Assessments that identify disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce, eliminate or manage the risk. This must be done for the Utility Corridor Crossing and the crossing of any other potentially dangerous systems for a credible understanding of the safety risks associated with the HSR for the Public Safety. The FRA will be held accountable if this risk work is not performed. (Sect. 3.12, Pg. 49 of 199 Sect 4.1, Pg. 62 of 199 Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199).</p> <p>FRA Route Selection Process, Public Need, and Eminent Domain Applicability: The FRA Dismissed the Route along I-45 due to the need for a barrier for auto/train separation and Cost. This would be feasible but costly. Also, there seemed to be NO Cost/Benefit Analysis done evaluating the fact that Those who are hurt the worst and sacrificing the most, their lives the way they know it and their land, are those who will Benefit the Least or None At All from this project. In fact property values all across the region will be sacrificed. Because Cost should not be the controlling parameter to eliminate a Route Alternative, the dismissal of the 145 route that would likely be less harmful to the Environment, Must be Reconsidered. Also, because there is NO REGULATORY BODY TO HAVE ESTABLISHED A Credible PUBLIC NEED supported for this project in many ways that might be considered, and those who are hurt the worst will sacrifice the most and benefit basically none at all, the FRA should suspend any further work for TCRR on this Project and wait until TCRR has proven Its false claim of having Eminent Domain and Condemnation rights. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER THEY HOLD EMINENT DOMAIN POWERS. TCRR has run away from lawsuits that would have resolved this issue. Also, as the FRA should already understand, TCRR Is required to obtain a County Permit from many if not most of the Rural Counties AND those Permits require Proof from TCRR of Eminent Domain Powers. Therefore, No further work should be done towards the HSR DEIS for TCRR until the Public Need Issues and County permits related to Eminent Domain are resolved. (Sect. 2.6, Pgs. 41-48; Sect. 2.7, Pgs. 54-56).</p> <p>Private Road Closures Public Road Closures (1) and Modifications-Grade Separation Database: TCRR has continuously communicated to the public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closure might be left up to the Landowner to remedy themselves. TCRR has NOT applied for a County Permit as required by a number of the Counties being negatively impacted by this Project. Those Permits also require TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads may be performed without that Permit. The FRA Is Silent on this Issue and It should be displayed by FRA because it is the LAW. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The re-routing of roads will Just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. The sacrifices have just gotten much larger for those who will receive no benefit. TCRR has communicated in many meetings and has Advertised on FB many times that almost no roads would be modified as a result of their use of Viaducts so they could fly over</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>existing roads. The DEIS paints yet a different picture with major FM and CR being modified to go OVER the HSR vs. the Viaduct flying over the existing roads. TH IS PLAN MUST BE SCRAPPED AND RE-DONE. (Appendix C, Pg. 1 of 14 File 3, TEXT III, Tables 3.11).</p> <p>Land and Environmental Survey Data Landowner Permission Forms: Land and Environmental Survey Data use in development of this DEIS backed up by a Landowner Approved/Signed Survey Permission Form. There is a potential that some of the Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEIS, the FRA Must cease any further work on the DEIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Survey, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the pennission of a signed and executed Survey Pennission Fonn by the Landowner. Natural Resources Map (Natural Resources 3 of 4, Pg. 53 Of 65, Intermittent Stream) shows a Creek on my property that is at a minimum, 150-200 yards too far to the WEST (It does not touch the Utility Corridor Opening vs. what is shown on the DEIS Map), so Where did this Survey Data come from that is INCORRECT? What other DEIS data is INCORRECT. If Your Survey Data is 200 yards off on an Historical Cemetery, the FRA may not even know about such and historical location that might Actually Be in the Direct Line of the HSR Route, Your Survey Data Is "FATALLY FLAWED". (Sect. 3.13.3, Pg. 3.13-6; Natural Resources Map 3 of 4, Pg. 53 of 65.)</p> <p>Texas State Regulatory Agency Oversight: As described in the Abstract of the DEIS, the FRA has jurisdiction over all areas of RR Safety. However, the FRA is not accountable for the entire execution of this project nor how TCRR interacts with the Public in addressing what could be huge Issues and negative impact on the public during the Construction Phase. The FRA should suspend any further work for TCRR on this Project until the Texas Legislators can determine what State Regulatory Body would be responsible and accountable to provide Oversight on all aspects of this project except what is being overseen by the FRA, RR Safety. This would also require that a State Regulatory Body is ensuing the new State requirements on HSR Security are being appropriately carried out.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas to Houston High-Speed Rail — Draft Environmental Impact Statement (DEIS) HSR DEIS PUBLIC HEARINGS BY THE FEDERAL RAILROAD ADMINISTRATION MEETING QUESTIONS BY Glenn A. Mannina (January/February, 2018)</p> <p>1. Topic: Emergency Response Times Negative Impact During Construction (Ref: DEIS_MAIN TEXT sect. 3.16.3.2.3, pg. 3-16-6, pg. 3-16-31; Also sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15)</p> <p>a. Question: DEIS Summary Statement is "Impacts to Emergency Response (ER) Times are NOT Anticipated to be Significant".</p> <p>i. Since the FRA study does indicate an increase in ER times, is even ONE Single Public Fatality due to Increased ER Times Acceptable by this FRA DEIS?</p> <p>ii. At what level of extended ER times when a Public Life is in the balance, does the FRA consider it a "Significant" Impact?</p> <p>iii. Does TCRR supply its own ER Equipment and Personnel during the Construction Phase or will they rely on County resources?</p> <p>iv. Is the measure of Response Times by the DEIS based on the planned conditions at the time of Construction, such as road and lane closures, road rerouting, road overpass reconstruction to go over the HSR, traffic due to Construction Employees, traffic due to Construction sites and its Operation, traffic due to movement of raw materials and permit loads of completed constructed components on Existing Roads?</p> <p>v. Since this FRA DEIS is not based on traffic modeling yet of the above traffic increase, then how can the FRA with any credibility or accuracy make a claim that "Impact on ER Times is not anticipated to be Significant"?</p> <p>b. Background: The DEIS after showing High, Medium, and Low Risk levels of increased times (Quantified) only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant. They then state that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed ER times! The FRA would be NEGLIGENT if TCRR is allowed to proceed any further in this EIS process until a FULL Model of Emergency Response Times is performed including all of the traffic and material hauling associated with the HSR and Road Construction as well as construction and operation of the Construction Sites is performed. Also, a full Mitigation Step must be performed by TCRR, the FRA, and the local ER local, county, and state entities. Only then must TCRR be allowed to proceed with the FRA with the EIS Process. The DEIS itself PROVES there is more than enough information available today to perform a Detailed ER Times Model. If this is not done, the FRA Must Cease all further work in the EIS until that step is complete.</p> <p>2. Topic: Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect. 6.5, pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, pg. 1 of 14): File 3, TEXT III, Tables 3.11)</p>	<p>Refer to BA-3, GN-1, LU-7, LU-11, NE-1, NE-8, NV-1, NV-10, PI-4, SC-4, SS-5, SS-9, SS-19, SS-23,TR-6, TR-7, VA-1 and WW-6.</p> <p>TCRR does not plan to supply separate emergency response vehicles or services beyond the private security force described in Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation. Additionally, FRA does not have oversight regarding what TCRR does or does not say in a public forum. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See TR-MM#1: Traffic Control Plan in Section 3.11.6.2, Transportation, Mitigation Measures for more information. State Highway 8 would not be closed; the Project would travel underneath the highway through retention-cut (below-grade) designs. All parcel acquisition and structure displacements resulting from Build Alternatives would be negotiated between the landowner and TCRR. This analysis assumes that negotiated prices would reflect the fair market value of displaced residences and/or businesses, allowing for investment in new or similar areas outside the LOD. As detailed within Section 3.14.5.2, Socioeconomics and Community Facilities, Build Alternatives potential impacts to individual property valuations were beyond the scope of this analysis; it is not likely that these would produce a significant impact for the regional economy. Generally, the factors most cited in the literature that correlate to adverse property value impacts are near train tracks with the presence of potentially hazardous materials carried by freight rail, and nuisance factors like noise and vibration. This Project will be a passenger railroad only, with its own dedicated track, therefore no freight or hazardous materials will be transported. Section 3.4.6,</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>a. Question: TCRR has told the public on a number of occasions at multiple meetings that hardly any roads would go over the HSR requiring modifications and has advertised using a Color Drawing of HSR Viaduct over a major highway with no modifications necessary on the public road to give the impression that existing roads would be virtually untouched.</p> <p>i. Why does the FRA DEIS show a completely different plan than M1 previously advertised by TCRR with a number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR?</p> <p>ii. Who is to pay for maintenance of these Overpasses that did not exist before this project plan?</p> <p>iii. Who will pay for the future maintenance of the Access Roads built alongside the HSR route that will be used to get around the right-of-way of the road closures and modifications?</p> <p>iv. Per the of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually BE CLOSED during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR?</p> <p>v. Will all Road Construction be completed before, at the same time, or after the HSR Construction is completed?</p> <p>vi. What priority will be placed on repairing and replacing roads vs. construction of the HSR?</p> <p>vii. Will Texas State Eminent Domain powers for Road Construction be used to acquire the additional ROW necessary to reconstruct roads over the HSR or for any road rerouting or modifications for that matter?</p> <p>viii. There exists documentation of TCRR stating the Impacted Acreage for the HSR would be around 3000 acres (Averages 100' Width of Private Property Taken from Landowners). The recently DEIS shows around 8000 Impacted Acreage (Averages 275' Width of Private Property Taken from Landowners). The 350' limits of Environmental Studies has nothing to do with this subject and many roads have been added and modified due to TCRR's current execution plan. The FRA should HALT ANY FURTHER WORK on the EIS until there is a clear understanding where all of the Increases took place. Is it not the case, after looking at all the Road Modifications including those reconstructed over the HSR, that the significant increase of new Road work ROW is a significant part of that increase in Impacted Acreage? Documentation also exists TCRR told the public that they only needed around 100' ROW Width for the HSR. In many places along the route that has increased to 400' at a minimum. Is it not the case, after looking at all of the HSR Route Maps ROW, the significant increase of ROW might be also a significant part of that increase in Impacted Acreage? Also, the FRA Should require TCRR to perform a Mitigation study to reduce the number of roads modified and/or being rebuilt over the HSR AND/OR SLOW down the train so the vertical and horizontal deviations might be relaxed resulting in much less Road work and destruction of less land and fewer homes. TCRR originally told the Public the HSR would be Flying OVER existing roads, not the Opposite that is the case now as we see it in the DEIS. The Public is suffering Undue hardships as a result of TCRR's current Plan. THE FRA MUST HALT ANY FURTHER WORK ON THE EIS until TCRR has developed a NEW Plan to mitigate the wasteful placement of roads OVER the HSR, the additional loss of ROW Property, and Additional Loss of Private Homes.</p> <p>ix. An Access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any Road built along the HSR would become a Public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowners property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. TCRR's Advertisements of a Viaduct providing this free movement was FALSE. Animals would have to be moved across a Public Road. Will TCRR provide Culverts in my ditches alongside the access roads and Fence Gates as well as road shut-down/signaling methods at various locations so animals can be moved across the Public Roads? Contrary to TCRR's Claims and as a result of TCRR's Plan, Landowner's property IS BEING CUT IN HALF WITH NO FREE MOVEMENT!</p> <p>b. Background: TCRR has stated in a Public Forum that only road going over the HSR is Beltway 8. Well, the DEIS shows 66 Private Road Closures, 43 Private Roads Rerouted, 161 Private Road Crossings, 1 Public Road Closure, 139 Public Roads Rerouted, 463 Public Road Crossings, and many roads, FM and CR, going over the HSR vs. the Viaduct going over the roads to minimize destruction of our road system. DEIS states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or New access if it is PROPOSED as part of the ROW construction??? So what if it NOT Proposed, meaning TCR actually gets to decide? TCRR has also advertised for years using color drawings all over Face Book that the Viaduct would allow for movement freely of equipment and animals under the HSR and therefore would not "Land Lock" Landowners or "Cut their Property in half".</p> <p>3. Topic: Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos set 1 of 2; Pgs. 4-8)</p> <p>a. Question: TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response.</p> <p>i. What is the maximum Noise Level in dBA of two trains, NOT ONE, passing each other any point along the HSR Route while traveling in opposite directions on adjacent tracks?</p> <p>ii. What is the additional Noise impact of the additional Scientifically Proven "Slapping Sound" as a result aerodynamics of two lead air flows from each train colliding with each other?</p>	<p>Noise and Vibration, Avoidance, Minimization and Mitigation identifies a number of avoidance, minimization and mitigation measures to minimize impacts to properties in areas where higher noise or vibration levels may be present. As a result of minimal noise and vibration impacts and the absence of freight traffic on the proposed right-of-way, adverse effects on the values of adjacent properties would likely be minimal and could be offset by the additional tax revenue generated by TCRR's property on the proposed right-of-way. The Project is unlikely to result in a loss of property tax income to the jurisdictions it operates in. The potential for negative property value impacts would be limited and would be offset by an equally likely potential for a positive station area impacts that would exceed expectations. As a result, no macro-level economic effects are anticipated.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>iii. Since TCRR and the FRA are aware that the Route they Selected goes through or adjacent to many Subdivisions and Businesses, why has not the FRA DEIS set out specific specifications for the use of Noise Abatement Structures with minimum standards so TCRR is therefore required to put up Noise Abatement should those specifications not be met vs. leaving it up to TCRR once detailed Design is completed? For this issue, Preliminary Design with a Known Route and Known Noise Level is all that is needed to determine the location needs for noise abatement Specifications.</p> <p>iv. Why does the FRA state that Noise Abatement should be studied after Detail Design for potential use in certain communities, BUT then in another section, the FRA states that Noise is not anticipated to negatively impact Property Values because the HSR is "Electrified"?</p> <p>iv. Did FRA not compare its own comments or perspectives between different sections but on a similar topic in order to prepare a much higher quality and coherent DEIS report?</p> <p>b. Background: The maximum noise level for any point along the HSR will NOT be just one train passing by, but actually two trains passing each other in opposite directions. Not only does the noise level of two trains exist, also the addition of a Scientific Proven "Slapping Sound" as a result of two trains traveling at a high rate of speed in two opposite directions on adjacent tracks. TCRR has been unwilling to address this issue since Public Meetings in 2015-2016. The DEIS only covers the Noise impact of One Train in One Direction (87 dBA at 50') AND leaves the Sound Mitigation Actions to after detail design, basically leaving Noise Abatement up to TCRR, however today, the FRA knows where Residents and Businesses are located including many Subdivisions so they could provide TCRR minimum Expectations NOW, but did not do so. In the DEIS where Property Tax and Property Value is discussed. the FRA says Noise is not anticipated to negatively impact Property Values because the HSR is "Electrified" _ But yet the FRA in another section discusses the potential need for Noise Abatement in some areas. This is a dear Contradiction within the same FRA DEIS Document.</p> <p>4. Topic: The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice)</p> <p>a. Question:</p> <p>i. How much (approximate %) of the total Endangered Species Environmental Survey Data that is shown on the DEIS Environmental Maps (namely Houston Toad and Navasota Ladies Tresses (NLT) Cross Hatching, Orange for NLT and Green for HHT) was actually obtained by using "Boots on the Ground" inspections by Environmental Experts?</p> <p>ii. Is any Data shown on the Maps where Landowners did not provide Environmental Surveyors the Permission to inspect their property? As an Example, my own property in Leon County shows the potential or existence of the Houston Toad, however, I never gave permission to TCRR for any surveyors, Land or Environmental, to have access to my property?</p> <p>iii. How is so much Endangered Species Data shown on these Environmental Maps knowing that very few Private Landowners actually signed over Permission to TCRR to access their property?</p> <p>iv. Considering the Lack of "Boots on the Gromd" for ALL survey work, how confident is the FRA that ALL Historical Locations and Cemeteries have been property mapped and adequate route adjustments have been made?</p> <p>v. Does the FRA possess, for each and every Environmental Endangered Species Piece of Data used in this DEIS, a Survey Permission Form signed by each and every Landowner whose data is included in the DEIS?</p> <p>vi. If the FRA cannot verify that each and every piece of data used was legally obtained, then there exists the potential or likelihood based on evidence above that the DEIS incorporated data that was Illegally Obtained. Does not that make the FRA DEIS an Illegal Document if it contains Illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign Affidavit stating the data in the DEIS was obtained under their permission of a Signed Survey Permission Form.</p> <p>i. What percentage of Land Survey Data of the total used in the DEIS actually was obtained by "Boots on the Ground" working specifically for this project vs. obtaining data from other sources or other projects in the area?</p> <p>ii. What percentage of Land Survey data Used in the report is backed up by a Landowner Approved Land Survey Permissim Form?</p> <p>iii. Has the FRA verified that there exists a Approved Survey Permission Form for ALL "Boots on the Ground' Obtained Survey Data used in the DEIS?</p> <p>iv. If the FRA cannot verify that each and piece of Land Survey data used was legally obtained, then there exists the potential or likelihood that the DEIS incorporated data that was Illegally Obtained. Does not that make the FRA DEIS an Illegal Document if it contains Illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign an Affidavit stating the data in the DEIS was obtained under their permission of a Signed Survey Permission Form.</p> <p>v. On my property in Leon County, the DEIS Natural Resources Map (Natural Resources 3 of 4, Pg. 53 Of 65, Intermittent Stream) shows a Creek on my property that is at a minimum, 150-200 yards too far to the West (It does not touch the Utility Corridor Opening vs. what is shown on the DEIS Map), so Where did this Survey Data come from that is INCORRECT? ALSO, I NEVER GAVE TCRR PERMISSION TO BE ON MY</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>PROPERTY ALTHOUGH IT WAS REQUESTED AND I RECEIVED IMMEDIATELY A VERBAL THREAT OF "LEGAL ACTION" via Future Letter BY Mr. Ken Williams with Contract Land Services (TCRRs Landowner Coordination Representative), August 16, 2016 at 4:00 p.m., WHEN I DENIED THERE REQUEST. What other SURVEY DATA IS INCORRECT IN THE DEIS?</p> <p>b. Background: There have been many Landowners who have refused to sign a Survey Permission Form and therefore have not allowed TCRR to access their property for a Land Survey. Some surveys were performed from State highways but TCRR was not allowed to survey from County ROW. It is obvious that ALL of the maps developed in the DEIS likely had support of more survey information from some other sources. The FRA should be held accountable for the sources used for Land Survey Data and should be responsible for assuring that All Land Survey Data was obtained under the authority of a Landowner approved Survey Permission Form. If the FRA cannot verify that each and every piece of data used was legally obtained, then there exists the potential or likelihood based on evidence that the DEIS incorporated data that was Illegally Obtained which could be then considered, the DEIS is an Illegal Document.</p> <p>6. Topic: Personal Safety Expectations During Construction (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Construction Safety Topic)</p> <p>a. Question:</p> <p>i. Does the FRA's responsibility of ensuring RR Safety include the Safety of the Public and the Contractors' Employees during the Construction Phase of this HSR?</p> <p>ii. Does the FRA understand the Safety Risks associated with not only Construction of the HSR. but also the risks of the public safety and employees during the many road construction modifications being executed alongside the HSR construction?</p> <p>iii. The DEIS is absent of any Personal Safety Expectations being provided to TCRR for a safe execution of the very large HSR Project. Is the FRA not concerned about the Public's Safety during the Construction phase where there will be very close interactions between motorists and Construction of the HSR & Roads?</p> <p>iv. Is the FRA OK with fatalities of the public as a result of this project construction to the extent of not even discussing it or placing expectations on TCR for a required comprehensive Safety System with Management Involvement with Construction Personnel while also ensuring that Motorists' Safety is maintained at a very high priority?</p> <p>b. Background: The work by TCRR's Contractors' will be in close proximity to the Public. A lack of a comprehensive Personal Safety Program as well as Management Commitment and Leadership in Safety could lead to more danger on the Public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the Public off guard. These must be executed in a safe manner with lots of warnings issued to the Public for route changes.</p> <p>7. Topic: Additional Traffic and Congestion Due to Permit Loads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 3, Pg. 22 of 34; sect. 4, Pg. 23 of 34; sect. 5, Pg. 27 of 34)</p> <p>a. Question:</p> <p>i. What is the quantity of Permit Loads the public should expect being to their traffic now over and above the norm prior to the execution of this Project? No figures on Permit Loads is included in the DEIS?</p> <p>b. Background: There are Constructim Sites all almg the route that will be used for staging of materials and for the construction of Pre-Cast concrete structural components. Many of those constructed structural are very large likely qualifying as Permit Loads that must transverse existing roads to transport them to the HSR installation site.</p> <p>8. Topic: Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction)</p> <p>a. Question:</p> <p>i. What is the Negative Impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically Traffc, Congestion, Housing, Medical facilities. Absorption of a portion of the Food Supply and Demand Chains, and the Negative Impact on Small Rural School ISDs?</p> <p>ii. There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including Education, particular in very small ISDs?</p> <p>b. Background: Past Projects such as Road, Transmissøn Line, and Pipeline projects normally employ a very significant contingent of workers from Outside Texas and certainly from Outside the Local Areas. This will result in additional pressure on County services and infrastructure. The Counties must have Time and Funding to be able to adequately respond to these large challenges.</p> <p>9. Topic: Texas State Regulatory Agency/Body (Ref. DEIS_MAIN TEXT I; DEIS Abstract)</p> <p>a. Question:</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>i. What Texas State Regulatory Agency/Body with the current Authority to do so is Responsible and can be held Accountable by the Public to provide Oversight on ALL aspects of this Project that are not under the FRAs Scope of "RR Safety"?</p> <p>ii. Does RR Security fall under responsibility of the FRA?</p> <p>iii. Where in the DEIS does the FRA address the new State Expectations for Security of HSRs?</p> <p>b. Background: A number of when an HSR was being considered, the State of Texas established a Regulatory Board for HSR Oversight. However, the Project never happened and the State Board was eliminated. Currently, whenever there is a Project that ultimately is used by the Public, there exist State Regulatory Agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide Oversight Responsibility to protect the interest of the Public Taxpayers.</p> <p>10. Topic: Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting Existing Roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27)</p> <p>a. Question:</p> <p>i. What is the Quantified impact of increased Traffic in general, Damage to Existing Roads, and Traffic Congestion over and above the current rural environment as the result of Project construction worker travel. equipment and raw material hauling, particularly around all of the Construction Sites and Staging Areas along the route, congestion associated with Permit Loads, traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR?</p> <p>b. Background: Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic now and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The Public has no idea of the potential negative impacts to their local communities and roads as a result of this Project. The DEIS is not complete without the FRA advising the Public what they should expect as well as changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project Construction Phase</p> <p>11. Topic: Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect. 7.1, Pgs. 32-33 of 34)</p> <p>a. Question:</p> <p>i. Will TCRR be allowed to drill water wells for tie many Construction Sites or will they be required to use Surface Water available in the for watering roads and Construction Sites to keep the Dust Down and the Air Quality Up?</p> <p>ii. Will TCRR be allowed to use City Water if available at the Construction Sites?</p> <p>iii. Will water be used almost constantly during dry times (Almost all the time in Texas) to water all of the temporary dirt roads along the HSR construction route and at road modifications?</p> <p>iv. What is the volume of water usage for this project, including during Construction and how does it fit into Texas' focus on water conservation programs?</p> <p>v. Who in the public will be negatively impacted by the large use of water by the HSR project?</p> <p>b. Background: Due to water conservation in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites.</p> <p>12. Topic: Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue)</p> <p>a. Question:</p> <p>i. Has the FRA evaluated the answers provided to the Public in Open Forums by TCRR on a host of questions as compared to what has been included now in this DEIS? If not, is the FRA in any false or misleading statements made to the Public by TCRR vs. what the FRA has included in the DEIS?</p> <p>ii. Is it important to FRA's analysis of the TCRR's capability to Operate a RR or not if TCRR has mislead the Public on a number of issues as compared to what the FRA has included in the DEIS?</p> <p>iii. What basic FRA Principles must be met by TCRR to convince the FRA that this company, TCRR, is Ethical and Capable enough to Operate a RR with the Safety and Security of the PUBLIC in the FRA's and TCRR's hands?</p> <p>iv. TXDOT was unwilling to work with a Local County Government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an advocacy group, but a true County Government body. The County sued TXDOT and it was found during the court case that the FRA had told TXDOT NOT to work with ;this local Government body, and not attend the meetings. Waller County won the case, TXDOT then appealed, and lost the appeal. Did the FRA Break Federal Law by telling a Texas State Government Body not to work with a</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>County Government Body and not to attend the meetings? Why would the FRA not want input from a County Government Body? Since the Public is full aware of this case, does this not destroy the Public Trust in what the FRA has done regarding the HSR DEIS?</p> <p>v. is the FRA spending US Taxpayer resources on this project when TCRR is NOT an Operating RR?? What RR is TCRR Operating? If they are an Operating RR, Why was TCRR NOT Allowed to Survey most of the Route between Dallas and Houston due to lack of Signed Permission Forms and Why in Court did TCRR lose the House Case in Harris County with a Summary Judgement and TCRR was NEVER allowed by Court Order to Survey the House Property. Why did TCRR DROP around 40 Lawsuits (after seeing they were going to lose these also) instead of continuing to pursue the Land Survey Rights if they thought they had the Survey Right? The one case they claimed they won was a Default Judgement due to the Landowner not showing to court, so NOT a Win of their Case which was NEVER heard entirely by the Court!</p> <p>b. Background: The Public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. The Public is sick Of this type of an Unethical Business Model by TCRR Also, contrary to TCRRS advertisements, TCRR has done everything to mistreat the Public and disregard Private Property Rights and to be an extremely Non-Transparent Company with the Public. Lots of questions have gone unanswered for years As an example, personally provide four (4) pages of Questions to Bob Eckels, President of TCRR at that time, in early 2015 at the Madisonville TCRR Open House, and after promising every one of my questions would be answered within 3-4 weeks, and none were ever answered. Another employee, Travis Kelly, a year later after telling him my story, also promised me the answers. After finally telling me his lap top was stolen and he had to recreate the answers, I never received any answers from him. The FRA is financed by us, Public, the Taxpayers. It is the FRA's responsibility to protect the Public.</p> <p>Also in the court case between TXDOT (TXDOT Lost the original case and the Appeal) and the Waller County Regional Planning Committee, it was discovered that the FRA told TXDOT to NOT attend meetings of this County Governmental Body and to not provide any information or planning support This sounds like the FRA is NOT looking out for the Public's Interest regarding the TCRR HSR, but that of TCRR's.</p> <p>I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. Beware FRA, TCRR will likely not fulfill many of the commitments included in the DEIS and when they don't, the FRA will be held accountable. There are also questions about TCRR's Unethical Actions during the collection of Field Data and it looks like the FRA has NO Problem Implicating themselves in potentially Illegal activity against the very people they being paid to Protect?</p> <p>13. Topic: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref. DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; sect 4.1, Pg. 62 of 199; sect. 4.2, Pg. 63 of 199; sect. 4.4, pg. 64 of 199)</p> <p>a. Question:</p> <p>i. Why does the DEIS NOT mention any Risk Management System to be applied to the crossing or close of HSR with other hazardous facilities such as O&G Facilities, Pipelines, or Transmission Lines?</p> <p>ii. Does the FRA NOT consider Pipelines being crossed by the HSR a Risk Management Issue considering Pipeline Explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or ARE the FRA's Safety processes VOID OF A RISK MANAGEMENT SYSTEM?</p> <p>iii. Have Risk Event Scenarios been developed on any activity of the HSR Construction and Operation along with performing risk assessments by qualified Risk Engineers for those Events/Scenarios?</p> <p>iv. Has the FRA applied any Risk Management System to the highly congested traffic flows along with road and lane closures, modifications and rerouting of roads. as well as any Risk Management situations associated with construction of the HSR?</p> <p>v. Has a Risk System been applied to the Security of HSR during Construction and Operation?</p> <p>vi. Since the FRA is responsible for RR Safety, including that of the Public, and would be the Federal Agency to allow TCRR to Operate a RR in the Future with the FRA's Oversight, why is there no mention in the DEIS of Risk Management systems being applied to Public Safety Security?</p> <p>vii. Were any Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in the middle of nowhere?</p> <p>viii. What Risk Management System has been applied or what Emergency Response Planning has been done to handle High Elevation Rescue of the Public in case of a shut-down or Incident in the middle of nowhere during operation?</p> <p>ix. The same question would apply to the Construction Phase also?</p> <p>x. Has a Risk Management System and associated Risk Assessments been applied/performed associated with the Co-occupancy of a Huge Texas Hunting Industry with high powered rifles including Wild Hogs with HSR?</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>b. Background: The HSR remote route with its crossings being routed very close to O&G and Utility Facilities is "Screaming" for application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those Scenarios followed by Mitigation Actions/Planning. If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a Private Company to Construct and Operate an HSR a Green Light without the application of a Comprehensive Risk Management System, particularly since the Lives of the Public hinge on its Safe and Secure Construction and Operation. That sort of lack of credible Oversight by the FRA a Federal Government Agency responsible for "RR Safety", could easily be considered "Negligent" to say the least.</p> <p>FRA, Please Respond to my Questions above in Writing to:</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail FRA DEIS Public Hearings (January/February, 2018) TOPIC: PERSONAL STORY AND RELATED QUESTIONS TO FRA My Story 1. My name is Glenn Mannina and I am a Landowner in Leon and Montgomery Counties. Texas Central Railway's (TCR) Managing of External Affairs, Holly Reed, made the statement on August 15, 2016 to Shannon Register of Real Estate Radio when asked about the TCR's strained relationship with Landowners, we are each and every single day on a personalized basis and making sure we answer questions and address concerns, and like I said, it is going well in those conversations". I beg to differ with this "False Narrative" as well as challenge TCR's Guiding Principles. As a Landowner on the "Utility Corridor Route", my relationship directly with TCR began in April, 2015 at the Madisonville, TX T CR Open House. At that meeting, I was seeking lots of information to help me make an informed decision regarding the feasibility, the reasonableness, and the necessity of TCR's High Speed Rail (HSR). Being prepared, I presented Four (4) pages of questions to TCRs Mr. Robert Eckels, at that time TCR's President, and asked if TCR would respond in writing with answers to my questions. In front of at least Ten (10) other attendees, Mr. Eckels promised TCR would respond within a couple to three weeks and he also gave me his Email and Cell phone number. After four (4) weeks, I began attempting to contact Mr. Eckels by Email and phone with never a single response. Additionally, after attending another Open House in late 2015, TCR's Mr. Travis Kelly also promised me a response. After saying he was close to sending me a response in writing by Email, he finally told me his computer was stolen with the file he was about to send me and would have to recreate the file. That was the last communication to me from Mr. Kelly after me attempting to contact him a number of times for a number of weeks. 2. My property is less than 500' from the HSR preferred route and have never received a written Invitation to a single Open House, but I have attended Five (five) of them and never received any direct communication from TCR until August, 2016. On August 9, 2016, I attended a Grimes County Press Release event regarding the new County Rule requiring a Permit and Proof of Eminent Domain prior to approval of a HSR to cross County property. On that Day, I did an interview with KTBX TV. Then on August 16, 2016, I received a phone call from Mr. Ken Williams with Contract Land Services (CLS) representing TCR asking for permission to get on my property to survey, even though I was not on the route but three other properties converged at my same property corner and they were in fact on the route. I suspect they had Denied TCR's request for a Survey. After abit of conversation, I DENIED the request. Immediately, Eighteen (18) months with no personal contact with me regarding specifically my property from TCR, Mr. Williams told me I might receive a Legal Letter from TCR followed by a Legal Injunction Filed Against me personally. I considered this a "Threat" and told Mr. Williams so and stated I am prepared to defend against TCR's request to access my property. Finally, I was removed from commenting on TCR's Facebook because I asked the same questions too many times, all except one of course, without a single TCR response/answer. This kind of initial contact treatment in 18 months along with the 40 plus lawsuits of Landowners by TCR proves the aforementioned false narrative communicated by TCR's Holly Reed as well as TCP's Guiding Principle's Statement "TCP is committed to treating landowners from whom it seeks to acquire the needed property with respect". TCP also stated "Early Notification: TCP pledges that it will provide the landowners that might be impacted by the high speed rail project with an introductory letter the project. " I have received no such notification at any time including to any Open House or August, 2016 "Threatening" phone call from Contract Land Services. Comments/Questions for All Texas Legislators: 1. Question Regarding Eminent Domain (ED): have three (3) Transmission Lines and (5) Pipelines across my two properties and am very well experienced with Eminent Domain including along the targeted TCR route of the "Utility Corridor". What gives TCR the Authority or the Right to force or require me under the threat of legal action, a private property Landowner, to accept, anything less regarding ED Authority Documentation/proof from TCR than I am willing to accept, deserve or expect based on experience of receiving such documentation/proof on several Occasions (in all applicable cases) from Other truly qualified companies (Companies for whom TCR claims they have similar ED authority) who have been sponsored correctly by a third party Government/Regulatory Agency or Entity? Important Note: TCR's previous response to this question by me on several occasions has been "That is a Legal Question". Be aware, that in NO cases, have any of the other ED companies I have dealt with responded in that manner when faced with the responsibility of providing</p>	Refer to ED-1, EU-2, GN-2, GN-4, NE-1, SS-2, SS-6, SS-7 and SS-10.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Private Property Landowners with the proper ED documentation/proof, particularly since it involves taking land for supposedly the common good of the "Public" from a Landowner who has worked hard to obtain and enjoy the land they own. TCR advertises their intent is not to use ED powers over Landowners. TCR has shown no proof of this through any written agreements with Landowners that they will not bring ED powers to any negotiating table nor will it be used in any way to form a purchase agreement with the Landowner.</p> <p>2. Question Regarding TCR's Claim of Being an "Operating Railroad": What makes TCR an authorized State of Texas "Operating Railroad"? Has TCR produced proof that they have passed ALL Texas State Law Requirements to be legitimately registered in Texas as an "Operating Railroad"? Where are TCR's Tracks, Operating Rolling Equipment, Land, Stations, Operating Personnel, etc.? Can I personally form an LLC within Texas, call my company a Railroad, and proceed to take private property owners' land under the authority of ED as well as access people's property for surveying rights simply because I call my company a Railroad?</p> <p>3. Question Regarding Safety and Security: What safety and security measures will Legislators require TCR to use since much of this TCR HSR route is in rural Texas with a great deal of wild game hunting taking place and lots of areas that may be accessed by those wanting to do harm but without being noticed? Do Legislators understand TCR's HSR will actually cross over the Utility Corridor that includes not only transmission lines but also at least two (2) Operating O&G Pipelines?</p> <p>4. Question Regarding "Public Necessity", HSR Project Economics, and TCR's Unwillingness to Release Pertinent Information to the Public: Have State Legislators received proof from TCR of "Public Necessity" since TCR claims they have ED Powers? TCR has gone on the record to say this Project will not fix any Traffic Congestion problems between Dallas and Houston. Also, recently, the "Reason Foundation" published a study proving the extreme Caution that is required for authorization of TCRs HSR as well as showing a possible much higher cost estimate for the Project. The Author had asked TCR for information but TCR required a Non-Disclosure Agreement Since the "Reason Foundation" wanted to report its findings to the Public, they did not sign the agreement and received no information from TCR Have State Legislators received details of TCR's economics including Ridership and Cost figures proving that TCR will be able to pay back the Construction cost/Loans as well as meet & Depreciation cost requirements while making a profit (Particularly needs to be proven since only 2 HSRs in the entire World can make a profit without a Subsidy)? TCR is not a totally Privately Funded Project Do State Legislators understand that TCR has stated in writing that they Will Require Federal Government Backed Loans to fund the construction as well as understand the scenarios that could create the need for Federal Taxpayers to pick up the tab in case TCR cannot pay back the loan(s)? FRA. Please Respond in Writing.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail FRA DEIS Public Hearings (January/February, 2018) TOPIC: PERSONAL STORY - NON TRANSPARENCY AND LACK OF A GOOD RELATIONSHIP WITH LANDOWNERS BY TEXAS CENTRAL</p> <p>* Good Evening, My name is Glenn Mannina and I have been Opposed this Uneconomic HSR Project for almost 3 years since the Opposition Meeting in Montgomery, TX of February, 2015, when 800 people showed up at the Montgomery Lone Star Community Center.</p> <p>* It is Obvious "Those who will be Hurt the Worst by this Project will be Those Who Will Benefit NONE at all" AND there is no "True Broad Public Need/Necessity" for the HSR Project.</p> <p>* My Topic is My Personal Story and TCRR's lack of transparency and Lack of a Credible Relationship with Landowners.</p> <p>* In April, 2015 at theTCRR Madisonville Open House, I presented Four (4) pages of questions to TCR's Mr. Robert Eckels, at that time TCR's President, and asked if TCR would respond in writing with answers to my questions. In front of at least Ten (10) other attendees, Mr. Eckels promised TCR would respond within a couple to three weeks and he also gave me his Email and Cell phone number, but never to respond. This is what Holly Reed Calls "Working Closely With Landowners".</p> <p>* At another TCRR Open House in late 2015, TCRR's Mr. Travis Kelly also promised me a response to my Written Questions. After saying he was close to sending me a response in writing by Email, he finally told me his computer was stolen with the file he was about to send me and would have to recreate the file. That was the last communication to me from Mr. Kelly. No returned phone calls or Emails.</p> <p>* On August 9, 2016, I attended a Grimes County Press Release event regarding the new County Rule requiring a Permit and Proof of Eminent Domain prior to approval of a HSR to cross County property. On that Day, I did an interview with KTBX TV regarding what I receive from other companies who can prove Eminent Domain.</p> <p>* Then on August 16, 2016, I received a phone call from Mr. Ken Williams with Contract Land Services (CLS) representing TCRR asking for permission to get on my property to survey, even though I was not on the route but three other properties converged at my same property corner and at least two were in fact on the route. I suspect they had Denied TCRR's request for a Survey. After a bit of conversation, I DENIED the request. Where are TCR's Tracks, Operating Rolling Equipment, Land, Stations, Operating Personnel, etc.?</p> <p>* Holly Reed also said, "We are working each and every single day on a personalized basis and making sure we answer questions and address concerns, and like I said, it is going well in those conversations". Mrs. Reed, your company has proved the opposite.</p> <p>FRA. Please Respond in Writing.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail FRA DEIS Public Hearings (January/February, 2018) TOPIC: NOISE AND ABATEMENT</p> <p>* Good Evening, My name is Glenn Mannina and I have Opposed this Uneconomic Land Grab HSR Project for 3 years.</p> <p>* My Topic is HSR Noise & Abatement Mitigation and I ask the FRA to finally fix your INCORRECT Maximum Noise Level you used in all of your Noise analysis. The FRA DEIS Incorrectly bases ALL of its NOISE Analysis Work using Only noise levels (87 dBA) for one train passing by. That is NOT the Maximum. The DEIS FAILS to use the Larger Noise Level of Two Trains passing each other in opposite directions WHICH IS REALITY. The Normal HSR Operating Plan is the constant use of both tracks for 16-18 hours a day by 4 sets on each track so this is a reality. I had included this blatant Omission in a Letter to the FRA, Dated August 8, 2016, to the Attention of Jerry Smiley, Nancy Gates AND Copied Michael Johnsen.</p> <p>* What part of this simple design criteria does FRA Not Understand. When one designs a wide two lane structural Bridge, do you assume the load of only one 18 wheeler passing? Of course not because two 18 wheelers can pass going in opposite directions on that bridge at the same time. The same is true about the Noise from these two sets of trains running in opposite directions passing each other.</p> <p>* Additionally, the FRA DEIS FAILS to disclose the Scientifically proven Fact of a "Slapping Sound" or popping noise as a result of the two air flows that are pushed by each train colliding and then bouncing between the sides of the trains. This was found after studying HSR's going through tunnels creating the loud popping sound.</p> <p>* The DEIS does not specify criteria for Noise Mitigation or Abatement for TCRR except provide some general guidelines and state it will be looked at After more detailed design is completed. The FRA knows TODAY where the HSR passes closely by homes, businesses, schools, through, in front of, and alongside of Subdivisions. So Why has the FRA DEIS NOT set out specific Abatement use requirements vs. leaving it up to TCRR After Design is done? This MUST beat a minimum In the Detailed Design. Preliminary Design with a Known Route, Known Residents & Schools, and Known Maximum Noise Level is all that is needed to determine the need for noise abatement and where.</p> <p>* Proven by a Cornell University Study, In Children, persistent noise (such as that from a HSR train) causes impaired reading comprehension, and long term memory problems. Noises from Elevated trains lead to reading difficulties and negative academic performance.</p> <p>* Direct damage to hearing occurs in children from upwards of 80dba (note — the proposed HSR minimum is 85 dba). The more often kids are exposed, the greater the effect. Long term results mean that HSR near children = hearing loss, speech impediments, learning difficulties, attention disorders and emotional problems.</p> <p>* Even the Japanese recognize the impact of HSR noise, and it is HEAVILY regulated near residential areas, and is not permitted above 70 dba.</p> <p>* Multiple studies have been conducted on children learning or living within 500' of a High Speed Train, and every study's results prove that the effects are disastrous to the health of not only children, but also the elderly.</p> <p>* Children under 13 years of age and those with pre-existing challenges, including ADD, ADHD, or Dyslexia, will be affected. Where is the FRA's study of the HSR noise effects on Children's hearing? It is Unacceptable to not address this in the DEIS.</p> <p>* So the entire FRA DEIS Noise evaluation is Fatally Flawed as they used the Incorrect Maximum Noise Criteria for Two HSR Trains Passing each other and missed the Slapping Noise all together.</p> <p>FRA. Please Respond in Writing.</p>	Refer to NV-1 and NV-10.

Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail FRA DEIS Public Hearings (January/February, 2018) TOPIC: ROAD DAMAGE, MAINTENANCE, CHANGING TRAFFIC FLOWS/CONGESTION/TRAVEL CORRIDORS, INCREASED TRAVEL TIMES AND PUBLIC ACCESS ROAD WALL</p> <p>* Good Evening, My name is Glenn Mannina and I have Opposed this Uneconomic Land Grab HSR Project for now 3 years. * My Topic is ROADS. Texas Central is Forcing onto the Public not only a Huge 5 Year HSR Construction Project, but also a Large Road Construction Project resulting in increases to County Maintenance Costs AND loss of more Private Property to Road ROW. This Project is the size of which you have never seen before or will ever see again. * The Results will be Closed, Modified, Rerouted or Rebuilt existing roads including now Over the HSR. You will see a huge increase in Traffic Flow, Congestion, Longer Travel times, Required New travel routes, Damaged existing roads, New roads and Overpasses for the County to maintain and treat in cold icy weather conditions, and New Congestion around Construction Sites non-existent today. More Private Property will be taken by TXDOT for New ROW required for the Road Changes (In some cases now taking homes that were not originally taken for the HSR itself). In many places an ACCESS Road, 126 miles of it, to become a PUBLIC Road is added alongside the HSR on your property cutting off the "Free Movement Of Cattle and Equipment" once promised by Texas Central as a justification for the Viaduct. * Over One Hundred Acre size Construction Sites, located on just about every major East-West travel Corridor from 145, will be a magnet for Workers, Raw Materials, Batch Plants & Concrete Trucks, Equipment, Large Heavy Trucking, Permit Loads, Vendors, & Staging areas. Suburban and Rural communities all along roads in the vicinity of the HSR GTOFORHARRIS' COUNÜO (For Example, from 145 through Jewett) (For Example, from 145 through Montgomery and Plantersville) will see lots of activities around, to and from these Sites, in particular one just west of Jewett on Hwy. 79 & Also on Hwy. 7 at Hwy. 39. In particular one just west of Plantersville on 105. Yes, that includes much of Montgomery County who will not receive a PENNY from any HSR Tax money but will see the devastation. Just imagine the traffic types and volumes moving through our small communities like Montgomery and Plantersville, particularly with the 249 construction and the annual Renaissance Festival? * The FRA must Cease any Further Premature DEIS progression and show the Public a third party view of Quantified impact on Traffic, Quality of Life, Community issues and Damage to ALL Existing Infrastructure. FRA, we CANNOT ALLOW these Quality of Life and Cost impacts to be a BIG Surprise to us once you have given Texas Central a Record of Decision. * Other concerns not Quantification include impacts on Housing, Medical facilities, , Emergency Response Times, and the Negative Impact on Small Rural School ISDS? * The FRA Must Seriously Reconsider With Hard Facts, not qualified comments, the NO BUILD ALTERNATIVE". The benefits for a very few select elite business people is significantly outweighed by the Public At Large Loss of Quality of Life, Loss in Property Values, Potential Loss of Lives due to longer ER times, and the Additional Cost Burdens being placed on the Counties and Taxpayers. FRA. Please Respond in Writing.</p>	<p>Refer to AS-1, BA-5, GN-1, NE-1, NV-1, SC-4, SC-6, SC-19, SS-23, TR-2, TR-6, VA-1 and VA-4. FRA's analysis was unbiased and conducted in compliance NEPA and all related laws and regulations. Future State Highway 249 would be crossed by the Project approximately 2.5 miles south of State Highway 105. For information about traffic impacts around the proposed Brazos Valley Intermediate Station in Grimes County, see Table 3.11-49: Brazos Valley Intermediate Trip Direction and Mode and Table 3.11-50: Brazos Valley Intermediate Terminal Impacts 2040 LOS (Delay in Seconds per Vehicle). It is expected that the Build and modified Build conditions would result in increased traffic delays by about 5 seconds. Transit service could be provided by the Brazos Transit District or other entities to serve the Brazos Valley Intermediate Station. At this time, the Brazos Transit District does not have consistent service to this proposed station, but the agency is currently developing a service plan SH 105 would be crossed by the Project on viaduct, as shown in Table 3.11-26: Roadway Crossings in Grimes County. The Project would be built over the road which would not require SH 105 to be rerouted, closed, or reconstructed.</p>
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail FRA DEIS Public Hearings (January/February, 2018) TOPIC: EMERGENCY RESPONSE TIMES</p> <p>Good Evening, My name is Glenn Mannina and I OPPOSE this Uneconomic Project. My Topic is Emerqencv Response (ERI Times. Texas Central is Forcing onto the Public not only a Huge 5 Year HSR Construction Project, but also a Large Road Project. The DEIS states in the "No Build" Alternative, where there is NO HSR, the ER Times would REMAIN STEADY. Any increase in times & hazards due to population growth could be mitigated with more Emergency equipment and workforce needs as Population increases. DEIS Tables 3.16-14,-15 show Emergency Service Provider locations in the counties where there exists Potential negative impacts to ER times taking into account Road Closures, Rerouting Modifications and Road Rebuilds Over the HSR. BUT, there is no Quantification of Construction Worker Population/Equipment Traffic increases on the Roads, just based on Road Modifications. That impact is Qualified WITHOUT detailed modeling and is categorized in Low, Localized, and High Levels of negative impact. The focus qualitatively was mostly on the High Impacts. The local jurisdictions would have the review and permitting authority over Construction Plans regarding Emergency Response. Then, Local jurisdictions would be expected to ensure there are no adverse impacts to ER times during the Construction phase, so the Responsibility is placed on the Local Jurisdictions. The FRA says there will be a Mitigation Step that includes detailed modeling of ER times prior to Construction after Detailed Design AND changes to Construction plans would occur IF there are delays of over 10% more than the baseline ER Tmes. There will be a huge influx of workers and equipment traveling on our roads that are not here today, particularly those at the many</p>	<p>Refer to SS-23, SS-26, TR-6 and VA-1. Although the construction period for the Project is anticipated to last several years, construction activity on any individual roadway or rail segment would be shorter in duration. Temporary employment impacts described in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts include direct construction employment as well as employment in supporting industries. Many of these jobs could be filled by the existing labor pool anywhere in the larger Economic Analysis Area and would not necessarily result in additional traffic at or near the construction site.</p>

			<p>Construction Sites on every major Highway Corridor from 145, like Hwys. 79 & 7 (Like Hwy. 105). I see nothing in the FRA's DEIS that even mentions the impacts of the combined huge "Temporary Work Force and Equipment trucking Increases of Traffic" on the Roads with the Road Modifications.</p> <p>So the Public is supposed to ACCEPT Increases to ER Times up to a certain level, and only above that level are Texas Central's Construction Plans subject to change.</p> <p>The FRA's DEIS summary states "Impacts to Emergency Response Times Would Not be Anticipated to be Significant</p> <p>My Summary Statement is This: This Project is Not Worth a Single Loss of Precious Life as a Result of ANY Increases in Emergency Response Times.</p> <p>The FRA's DEIS release supporting a plan that could result in ANY increase of ER Times is nothing short of Negligence by the FRA, certainly not in the name of the Public's Safety.</p> <p>The FRA Must Seriously Reconsider With Hard Facts, not qualified comments, the "NO BUILD ALTERNATIVE". The benefits for a very few is significantly outweighed by the Public At Large Loss of Quality of Life, Loss in Property Values, Potential Loss of Lives, and the Additional Cost Burdens being placed on the Counties and Taxpayers.</p> <p>FRA. Please Respond in Writing.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Road and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect 6.5, pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) An Access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any Road built along the HSR would become a public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. Contrary to TCRR's Claims and as a of TCRR's plan, Landowner's property IS BEING CUT IN HALF WITH NO FREE MOVEMENT! This Plan MUST BE REJECTED BY THE FRA IMMEDIATELY DUE TO THIS HARM TO LANDOWNERS</p> <p>Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY REPORT: Sect. 6.5, pgs. 29-30 of 34', Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). An Access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed, As any Road built along the HSR would become a public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. TCRR's Advertisements of a Viaduct providing this free movement was FALSE. Animals would have to be moved across a Public Road Question: Will TCRR provide Culverts in any ditches alongside the roads and Fence Gates as well as road shut-down/signaling methods at various locations so animals can be moved across the Public Roads?</p> <p>Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCT ABILITY v4 REPORT. Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3 _ 11) An Access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any Road built along the HSR would become a Public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. TCRR's Advertisements of a Viaduct providin this free movement was FALSE. Animals would have to be moved across a Public Road. Question: Will TCRR provide Culverts in any ditches alongside the access roads and Fence Gates as well as road shut-down/signaling methods at various locations so animals can be moved across the Public Roads?</p> <p>Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Page 29-30 of 34; Also Appendix F TCRR FDCE v7 Report; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Question: Documentation exists TCRR told the public that they only needed around 10(Y' ROW Width for the HSR In many places that has incrsned to 400' at a minimum. Question: Is it not the case, after looking at all of the HSR Route Maps ROW, the significant increase of ROW might be also a significant part of that increase in Impacted Acreage?</p> <p>Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE REPORT; Appendix C, 1 of 14): File 3, TEXT m, Tables 3 _ 11) Question: viii. There exists documentation of TCRR stating the Impacted Acreage for the HSR would be around 30m acres. The recently released DEIS shows around 8000 Impacted Acreage. The FRA should HAULT ANY FURTHER WORK on the DEIS until there is a clear understanding where all of the Increases took place Question: Is it not the case, after looking at all of the Road Modifications including those reconstructed Over the HSR, that the significant increase of new Road work ROW is a significant part of that increase in Impacted Acreage?</p> <p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen FIRST NAME: Glenn</p>	<p>Refer to BA-3, CR-4, GN-1, LU-9, LU-14, NE-8, NR-4, SC-4, SC-6, SS-5, SS-9, SS-19, SS-23, TR-6 and TR-8.</p> <p>NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species of the Final EIS.</p>

			<p>LAST NAME: Manmna EMAIL ADDRESS: [...] Regarding Emergency Response times during Construction of the Dallas to Houston HSR, the FRA DEIS Summary Statement in File TEXT III, 3.16-24, is "Impacts to Emergency Response (ER) Times are NOT Anticipated to be Significant" Question: Since the FRA study does indicate an increase in ER times. is even ONE Single public Fatality due to Increased ER Times Acceptable by this FRA DEIS? Question Since this FRA DEIS is not based on traffic modeling yet of the traffic increase, particularly during Construction with many Roads under construction ALSO, then how can the FRA with any credibility or accuracy make a claim that "Impact on ER Times is not anticipated to be Significant? There is more than enough data including Raw Material Quantities, Road modifications and closures, traffic levels prior to any project mobilization, location of Construction sites and all ofthe traffc associated with them, for the FRA to compl& a Detailed Model for Emergency Response Times NOW. The FRA Must Cease work on this DEIS until that is performed and the impact ffly and communicated to the Public. THIS PROJECT IS NOT WORTH NOT ONE SINGLE LOSS OF LIFE AS A RESULT OF WORK ON THE HSR and Increased Emergency Response Times. The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref DEIS Appendix D Environmental Justice).Question: I have PROOF including Photos of Navasota Ladies Tresses on my property in Leon County, HOWEVER ORANGE HATCHING FOR THIS SPECIES IS NOT SHOWN ON MY PROPERTY? This FRA DEIS is INACCURATE to say the least, FULL OF MISSING INFORMATION, USES OLD DATA AND MAPS, AND NOT A CREDIBLE REPORT TO AUTHORIZE AN UNECONOMIC PROJECT LIKE the Dallas to Houston TCRR's HSR. The use in the DEIS by the FRA of Regional Environmental Survey Data Or data from other project sources vs. obtaining recent data by using "Boots the Grounef' Inspections (Ref DEIS Appendix D Environmental Justice). Question: How is so much Endangered Species Data shown on these Environmental Maps knowing that very few Private Landowners actually signed over Permission to TCRR to access their property? The use in the DEIS by the FRA ofRegional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Groud' Inspections (Ref DEIS Appendix D Environmental Justice).Question: Considering the Lack of "Boots on the Ground" for ALL survey work, how confident is the FRA that ALL ffstorical Locations and Cemeteries have been property mapped and adequate route adjustments have been made?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concemed Citizen FIRST NAME: Glenn LAST NAME: Mannina Business Ethics Public Trust, and TCRR Competence Level (Ref Nothing In the DEIS on This Issue). Question: Has the FRA evaluated the answers provided to the public in Open Forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? Question: If not, is the FRA interested in any false or misleading statements made to the Public by TCRR vs. what the FRA has included in the DEIS? Question: Is it important to FRA's analysis of the TCRR' s capability to Operate a RR or not if TCRR has mislead the Public on a number of issues as compared to what the FRA has included in the DEIS? Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect. 7.1, 32-33 of34). Comment: The FRA Must Quantify the Water neals over 5 years Of Construction and reconciles that with the State or County Water Conservation agencies to determine the for permits or approvals for the use of Source Water. Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures Road Modifications, and Rerouting Existing Roads (kef: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect. 4.2, Pg. 23;Sect. 5, pg. 27).Question: What is the Quantified impact of increased Traffic in general, Damage to Existing Roads, and Traffic Congestion over and above the current rural environment, as the result of Project construction worker travel, equipment and raw material hauling, particularly around all of the Construction Sites and Staging Areas along the route, associated with Permit Loads, traffic associated with the road closures and road modifications or building and that associated with construction of the HSR? Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Road Modifications, and Rerouting Existing Roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILIIY v4 REPORT: sect. 4.2, Pg 23;Sect. 5, pg. 27). Comment: Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The Public has no idea of the potential negative impacts to their local communities and roads as a result of this Project. The DEIS is not complete without FRA advising the Public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project Construction Phase</p>	<p>Refer to NE-1, PI-4, TR-6, TR-7, TR-8 and WW-6. FRA does not have oversight regarding what TCRR does or does not say in a public forum. State Highway 8 would not be closed; the Project would travel underneath the highway through retention-cut (below-grade) designs. Design details, ownership, and maintenance responsibilities would be closely coordinated with the appropriate Project stakeholders during more advanced design during the design and construction phase.</p>

			<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen FIRST NAME: Glenn LAST NAME: Mannina Water Supply for Use at All Construction Sites and During Construction A1] Along the HSR Route (Ref DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect. 11, Pgs. 32-33 of34). Question: Who in the public will be negatively impacted by the large use of water by the HSR project? Comment: Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites. Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: See 7.1, Pgs. 32-33 of34) Question: Will water be used almost constantly during dry times (Almost all the time in Texas) to water all of the temporary dirt roads along the HSR construction route and at road modifications? Question. What is the volume of water usage for this project, including during and how does it fit into Texas' focus on water conservation programs? Significant changes to the magnitude, congestion, and make-up of Tramc Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting ExistingRoads(Ref: DEISAppendixF TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). Comment: The FRA should provide to the Counties via the DEIS an estimate of damage to their existing Road Infrastructure following 5 years of Construction related Traffc wear and tear, particularly along all equipmentJmaterial travel corridors from major highways towards ALL Planned Construction Sites. These will be a magnet Workers, Raw Materials, Equipment, Vendors, Lay down areas, etc. Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and ReroutingExistingRoads(Ref DEIS Appendix F TCRRCONSIRUCTABILITYv4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, pg. 27). Comment: Rural communities & all roads in vicinity ofthe HSR will see a significant increase and change in type oftramc flow and volumes. Existing roads will be damaged as a result ofthat increased traffic, particularly with lots of loads than normal. The Public has no idea of the potential negative impacts to theis local commurities & roads as a result of this Project. The DEIS is not commplete without the FRA advising the Public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate many negative impacts of the HSR Construction Phase.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Significant changes to the magnitude, congestion and make-up of Traffc Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting Existing Roads(Ref: DEISAppendixFTCRR CONSTRUCTABILITY v4 REPORT: sect. 4.2, Pg. 23;Sect_ 5, Pg. 27).Question: What is the Quantified impact of increased Traff1C in general, Damage to Existing Roads, and Tramc Congestion over and above the current rural environment, as the result of Projæet construction worker travel, equipment and raw material hauling particularly around all of the Construction Sites and Staging Areas along the route, congestion associated with Permit Loads, traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR? Texas State Regulatory Agency/Body (Ref DEIS_MAIN TEXT DEIS Abstract). Question: Does RR Security fall under the responsibility of the FRA? Question: Where in the DEIS does the FRA address the new State Expectations for Security of HSRs? A number of ago when an HSR was being considered, the State of Texas established a Regulatory Board for HSR Oversight. However, the Project never happened and the State Board was eliminated. Currently, whenever there is a Project that ultimately is used by the Public, there exists State Regulatory Agencies such as the public Utility Commission of Texas or the Railroad Commission that provide Oversight Responsibility to protect the interest of the Public / Taxpayers. Who willprotect the public's Interest outside of any FRA RR Safety Responsibilities during Execution of this Project? Texas State Regulatory Agency/B0dy (Ref DEIS_MAIN TEXT I; DEIS Abstract), Question: What Texas State Regulatory Agency/Body with the current Authority to do so is Responsible and can be held Accountable by the Public to provide Oversight on ALL aspects of this Project that are not covered under the FRA'S scope of "RR Safety"? Adverse Impact ofthe Added Construction Personnel on the traffc, schools, and housing Infrastructure (Ref DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction. Comment: Past Projects such as Road, Transmission Line, and Pipeline projects normally employ a very significant contingent of workers from Outside Texas and certainly from Outside the Local Areas. This will</p>	Refer to TR-6 and TR-8.

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>result in additional pressure on County services and infrastructure. The Counties must have Time and Funding to be able to adequately respond to these large challenges.</p> <p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref. DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including Education particular in very small ISDs?</p> <p>Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: What is the Negative Impact due to increased construction personnel over and above those normally in the areas and their traveling as it impacts specifically Traffic, Congestion. Housing. Medical facilities, Absorption of a portion of the Food Supply and Demand and the Negative Impact on Small Rural School ISDs?</p> <p>Additional Traffic and Congestion Due to Permit Loads (Ref. DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT-. sect. 3, pg. 22 of 34; sect. 4, Pg. 23 of 34; Sect. 5, pg. 27 of 34). Question: What is the quantity of Permit Loads the public should expect being added to their traffic flow over and above the norm prior to the execution of this Project? No figures on Permit Loads is included in the DEIS? There are Construction Sites all along the route that will be used for staging of materials and for the construction of Pre-Cast concrete structural components. Many of those loads going to the Construction Sites as well as constructed structural components are very large likely qualifying as Permit Loads that must transverse existing roads to transport them to the HSR installation site.</p> <p>Personal Safety Expectations During Construction (Ref DEIS Omission; are no Specific Expectations forced on TCRR regarding Personal Construction Safety. The work by TCRR's Contractors' will be in close proximity to the Public. A lack of a comprehensive Personal Safety Program as well as Management Commitment and Leadership in Safety could lead to more danger on the public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the Public off guard. These must be executed in a safe manner with lots of warnings issued to the Public for route changes. The FRA should provide to TCRR a set of Construction Safety System Expectations not only for Safety, but for the safety of Motorists.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Question: Since TCRR and the FRA are aware that the Route they Selected goes through or adjacent to many Subdivisions, Homes and Businesses, WHY has not the FRA DEIS out specific specifications for the use of Noise Abatement Structures with minimum standards so TCRR is therefore required to put up Noise Abatement should those specifications not be met vs. leaving it up to TCRR once detailed Design is completed? For this issue, Preliminary Design with a Known Route and Known Noise Level is all that is needed to determine the location needs for noise abatement Specifications.</p> <p>Applicable Noise Measurements and Science Omitted by the DEIS (Ref DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. Question: What is the additional Noise impact of the additional Scientifically Proven "Slapping Sound" as a result of the aerodynamics of two lead air flows from each train colliding with each other? The FRA Noise study MUST account for the Scientific Proven Aerodynamic "Slapping Sound".</p> <p>Applicable Noise Measurements and Science Omitted by the DEIS (Ref. DEIS Appendix E Combined Tech Memos Set 1 of 2; pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. Question: What is the maximum Noise Level in dBA of TWO trains, NOT ONE, passing each Other at any point along the HSR Route while traveling in opposite directions on adjacent tracks? The DEIS only covers the Noise impact of One Train in One Direction (87 dBA at 50').</p> <p>Road Closures and Modifications (Ref DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect 65, Pgs. 29-30 of 34; Also Appendix F TCRR v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. Well, the DEIS shows 66 Private Road Closures, 43 Private Roads Rerouted, 161 Private Road Crossings, 1 Public Road Closure, 139 Public Roads Rerouted, 463 Public Road Crossings, and many roads, FM Rnd CR, going OVER the HSR vs. the Viaduct going over the roads to</p>	<p>Refer to ED-1, ED-3, NE-1, NV-10 and TR-8.</p> <p>The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24-hour period. Because of this, the noise assessment is using the total number of trains per day in the assessment. Whether or not the trains occur at the same time or not does not matter in the cumulative assessment. The assessment is based on the reference noise level of a train passby at a known speed, the total number of trains per day and night, the length of each train, and the actual speed of the trains at a given location. The criteria for noise impacts are based on a comparison of the existing noise and project noise, which is defined in Section 3.4.3.2, Noise and Vibration, Impact Criteria.</p>

			<p>minimize destruction of our road system. DIES states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or New access if it is PROPOSED as part of the ROW construction? Question: What if it is NOT Proposed, meaning TCR actually gets to decide?</p> <p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>Road Modifications (Ref DEIS Appendix F TCRR CONSTRUCTABILITYv4 REPORT: sect. 6.5, pgs. 29-30 of34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). Contrary to previous TCRR Documented Statements, a number of FM and CR roads all across the counties are being closed and reconstructed with an overpass Over the HSR? Question: Will Texas State Eminent Domain powers for Road Construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that nutter AND for the destruction of peoples Homes that originally would not have been taken specifically due totheHSR? Tso, THIS IS UNLAWFUL STEALING OF MORELAND AND HOMES THAN NECESSARY AS THERE IS NO PROVEN PULIC NEED OR NECESSITY FOR nus PROJECT. The FRA MUST CEASE ANY FURTHER WORK ON THIS TCRR HSR EIS!</p> <p>Road Closures and Modifications(ReE DEIS Appendix F TCRR CONSTRUCTABILITYv4 REPORT: sect. 6.5, Pgs. 29-30 of34; Also Appendix F TCRRFDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3. I I). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR? Question: Per the description ofTCR's plan in the Tables of 3.11, will the FM or CR Roads actually BE CLOSED during reconstruction ofthe overpass or will bypass roads at that site be provided for flow on that FM or CR? Question: Will all Road Construction be completed before, at the same time, or after the HSR Construction is completed? Question. What priority will be placed on repairing and replacing roads vs. construction of the HSR?</p> <p>Road Closures and Modifications(Ref: TCRR CONSTRUCTABILITY v4 REPORT: Sect 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT IL Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR? Question: Who is to pay for maintenance of these overpasses that did not exist before this project plan? Question: Who will pay for the future maintenance of the Access Roads built alongside the HSR route that will used to get around many of the road closures and modifications?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT' Sect, 3.12, pg. 49 of 199; Sect 4. I, pg. 62 Of 199; Sect. 4.2, Pg 63 of 199; Sect. 4.4, Pg. 64 of 199). Comment: The HSR remote route with its crossings being routai close to O&G and Utility Facilities is "Screaming" for application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being paformed by qualified Risk Engineers on those Scalarios followed by Mitigation Actions/Planning.</p> <p>Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety(Ref: REPORT: sect. 3.12, Pg 49 of 199; sect 4.1, pg 62 of 199; sect. 42, Pg. 63 of 199; sect. 4.4, Pg. 64 of 199). Question: were any Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in the middle of nowhere? Question: What Risk Management System has been applied or what Emergency Response Planning been has done to handle High Elevation Rescue of the Public in case of a shut-down or Incident in the middle of nowhere during operation? Question: The same question would apply to the Construction Phase also? Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3 12, pg. 49 of 199; sect 4_1, pg. 62 of 199; sect. 4.2, Pg. 63 of 199; sect. 4.4, Pg. 64 of 199). Question: Has a Risk Management System been applied to the Security ofthe HSR during Construction and Operation? Question: Since the FRA is responsible for RR Safety, including that of the Public, and would be the Federal Agency to allow TCRR to Operate a RR in the Future with the FRA's Oversight, why is there no mention in the DEIS of Risk Management System being applied to Public Safety or Security?</p> <p>Topic: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref. DEIS Appendix F TCRR FDCE v7 REPORT. Sect 3.12, pg. 49 of 199; Sect 4.1, pg. 62 of 199; sect, 4.2, pg. 63 of 199; sect. 4.4, Pg. 64of199). Question: Have Risk Event Scenarios been developed on any activity ofthe HSR Construction and Operation along with performing risk assessments by qualified Risk Engineers for those Events/Scenarios? Question: Has the FRA applied any Risk Management System to the highly congested traffc flows along with road and lane closures, modifications and rerouting of roads, as well as any Risk Management situations associated with construction ofthe HSR?</p>	Refer to EU-2, GN-1, NE-8, SS-3, SS-18, PI-1, SS-19 and TR-6.

			<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 49 of 199; sect 4.1, 62 of 199; sect. 4.2, Pg. 63 of199; sect 4M, Pg 64 of199). Question: Why does the DEIS NOT mention any Risk Management System to be to the crossing or close proximity of the HSR with other hazardous facilities such as O&G Facilities Pipelines. or Transmission Lines? Question: Does the FRA NOT consider Pipelines being crossed by the HSR a Risk Management Issue considering Pipeline Explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or ARE the FRA's Safety processes VOID OF A RISK MANAGEMENT SYSTEM? Business Ethics, Public Trust, and TCRR Competence Level (Ref Nothing In the DEIS on This Issue). The Public has documented a number of misleading or answers to questions Or Statements by TCRR about the HSR for almost three years. I suggest the FRA 100k seriously at all of the DEIS topics that the FRA has glossed over, leaving many ofus the impression of minimizing any negative evaluation results of TCRR's Plan. Beware FRA, TCRR based on its track record for 3+years, will likely not fillfill many of the commitments in the DEIS and when they don't, the FRA will be held accountable. There are also questions about TCRR' s Unethical Actions during the collection of Field Data and it looks like the FRA has NO Problem Implicating themselves in potentially Illegal activity against the very people they are being paid to Protect? Business Ethics, Pubhc Trust, and TCRR Competence Level (Ref: Nothing in the DEIS on This Issue). TXDOT was unwilling to work with a Local County Government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an Advocacy group, but a true County Government body The County sued TXDOT and it was found during the court case that the FRA had told TXDOT NOT to work with this local Government body, and not attend the meetings. Waller County won the case; TXDOT then appealed, and lost the appeal. Question: Did the FRA Break Federal Law by telling a Texas State Government Body not to work with a County Government Body and not to attend the meetings? Question: Why would the FRA not want input from a County Government Body? Question: Since the Public is full aware of this case, does this not destroy the public Trust in what the FRA has done regarding the HSR DEIS?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen "No Build Alternative". (Ref. DEIS Main Text I, Sect. ES.8, Pg 8).The No Build analysis totally skipped the huge increase in Impacted Acreage from 3000 acres as communicated in writing by TCRR to 8000 acres has not been addressed by the FRA at all nor was it a part of the No Build Alternative Analysis. current plan has the Closure, Rerouting Modification, and Rebuilding over the HSR of many Private and Public Roads and increased the Road ROW land required without any ACCOUNTABILITY FOR TCRR's Fat-lier Claims. The FRA simply glosses over those huge changes. Why is that? What about the many Public Safety considerations that the FRA has Glossed Over (Increased ER Times. Safety of Traffic Congestion around Construction Sites, Lane closures, rerouting roads, road closures and more Public Road Travel required just to get around from point A to point B due to the ILSR)? The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. "No Build Alternative". (Ref DEIS Main Text I, Sect. ES_8, Pg. 8). TIE FRA does NOT provide adequate documentation for elimination of the No Build Alternative No Build is actually the Correct Answer. First, the FRA DEIS Understates the Damage to the Public and Property but Overstates/Assumes the HSR Need. Second, TCRR Underestimates the Project Cost and Overestimates the Ridership. The FRA never considered the Foundation's Analysis (which clearly proved this project WILL FAIL) nor has it been mentioned in the IRA DEIS at all. That is NOT AN OBJECTIVE UNBIASED FRA DEIS ANALYSIS. "No Build Alternative". (Ref DEIS Main Text I, Sect. ES.8, Pg. 8). Here are reasons the "No Build Alternative" MUST be reconsidered by the FRA. First, the Claims by the FRA on 1-45 Transportation Predictions, Tramc Congestion, Safety on 1-45, and Transportation Alternatives are Not Adequately supported with Detailed Facts. In fact the opposite cases have been made with much more Facts. Second, The "Public Need" has never been established in the DEIS by the FRA. Third, "Public Need" must clearly be established due to the huge negative Impact of Landowner's Property, Homes, Cemeteries, Livelihood, Existing Public Roads, and County Maintenance revenues that has not been adequately covered by the FRA DEIS nor has it been Quantified by the FRA like the other things that support the HSR have been Quantified for comparison purposes. FRAs DEIS is simply a "Thumb on the Scale for Benefit" without the Facts to back it up. Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen "No Build Alternative". (Ref DEIS Main Text I, Sect. ES.8, Pg 8). The Public is NOT going to accept from the FRA general statements that support die HSR without the FACTS to back it up. The appropriate level of Detail to support the FRA's claims about the No Build Alternative simply do</p>	Refer to BA-3, BA-6, GN-2, GN-3, LU-9, LU-14, NE-1, NE-9, PN-3, SC-22, SS-23, TR-6 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>not exist in the DEIS. Rationale is included in another Comments Page on this Subject. due to space limitations. The FRA also mentions there would be no improvement of Safety on 1-45 with the No Build Alternative. The FRA must Quantify that claim BEFORE it can be used to support the FRA's conclusion that the No Build Alternative is Not an Option. Therefore, the does NOT provide adequate documentation for elimination of the No Build Alternative.</p> <p>"No Build Alternative". (Ref. DEIS Main Text I, Sect. ES.8, Pg. 8). The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. First, any claim regarding this project being a Traffic solution or Congestion Relief has been Contradicted by TCRR many times and we have that documented. TCRR has stated this Project will NOT solve any perceived Tramc issues, particularly near the big cities. Second, the FRA must show more data regarding future estimates of tramc volume. Researching past predictions, today the tramc volumes of 1-45 have in no way even come close reaching those predictions, in fact, it has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that No Build would provide No Alternative Transportation Needs. Where is the FRA Proof statistically that the "NEED" exists as no data is shown by the FRA?</p> <p>Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public safety (Ree DEISAppendixFTCRRFDCEv7 REPORT: Sect. 3.12, Pg. 49 of 199; sect 4.1, pg 62 of 199; sect. 4.2, pg. 63 of 199; sect 4.4, Pg. 64 of 199).</p> <p>Comment: if the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a Private Company to Construct and Operate an HSR a Green Light without the application of a Comprehensive Risk Management System, particularly since the Lives of the Public hinge on its Safe and Secure Construction and Operation. That son of lack of credible Oversight by the FRA, a Federal Government Agency responsible for "RR Safety, could easily be considered "Negligent" to say the least.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>The use in the DEIS by the FRA of Regional Environmental Survey or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref DEIS Appendix D Environmental Justice).Question: Does the FRA possess, for each and every Environmental Endangered Species Piece of Data used in this DEIS, a Survey Permission Form signed by and iandowner whose data is included in the DEIS?</p> <p>The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent by using 'Boots on the Ground' Inspections (Ref DEIS Appendix D Environmental Justice).Question: Ifthe FRA cannot verify that each and every piece of data used was legally obtained, then there exists the potential or likelihood based on evidence above that the DEIS incorporated data that was Illegally Obtained. Doe not that make the FRA DEIS an illegal Document if it contains illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign an Affidavit stating the data in the DEIS was obtained under their permission of a Signed Survey Permission Form. THE FRA MUST ENSURE THE FRA DEIS IS PURGED OF ANY ILLEGALLY OBTAINED SURVEY DATA.</p> <p>The use in the DEIS by the ofRegional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: note the DEIS states that Regional data was also used for identification of Endangered Species vs. recent site specific inspections. The DEIS states 659 acres was inspected for Navasota Ladies Tresses (NLT). If one assumes Only a 400' width inspection along the route (Maps actually show much wider inspection areas along the route), only 13.6 miles of the 240 would have been inspected for NLT using that figure. However, the Maps showing orange hatching for NLT is huge compared to just the calculated 13.6 miles based on the FRA DEIS statement. So based on DEIS figures, can we only assume that a huge amount of Regional Data was used?</p> <p>The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref DEIS Appendix D Environmental Justice).Question: On my property, I see only the evidence of the Houston Toad ONLY on the Maps, however in 2013, a Master Naturalists found two locations in November that Navasota Ladies Tresses existed on my property. However, No orange hatching is shown on my property? The Credibility AND Accuracy, and Legality ofthe FRA DEIS al a minimum is in question. as well as has Property been or surveyed without the Landoumer's written permission for access? THE FRA MUST SHOW THE PUBLIC PROOF OF SIGNED LANDOWNER PERMISSION FORMS FOR EVERY PIECE OF SURVEY DATA USED.</p> <p>Dallas-Houston High speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>Credibility ofLand Survey Data(Ref: DEIS MAIN TEXTUI, sect. 3.133, 3.13-6). Question: What percentage ofLand Survey Data of total used in the DEIS actually was obtained by "Boots on the Ground" working specifically for this project vs. obtaining data from other sources or other projects in the area? Question: What percentage of Land Survey data Used in the report is backed up by a Landowner Approved Land Survey</p>	<p>Refer to GN-1, NE-1, NR-4 and PI-1. Properties with granted access were field surveyed but do not reflect the entirety of the suitable habitat present for the species.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Permission Form? credibility of Land survey Data (Ref DEIS_MAIN TEXT 111; sect 3.13.3, pg. Has the FRA verified that there exists a Landowner Approved Survey Permission Form for ALL "Boots on the Ground" Survey Data Used in the DEIS? Question If the FRA cannot verify that each and every piece of Land Survey data used was legally obtained. then there exists the potential or likelihood that the DEIS incorporated data that was Illegally Obtained. Does not that make the FRA DEIS an illegal Document if it contains Illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign an Affidavit stating the data in the DEIS was under their permission of Signed Survey Permission Form. THE FRA SHOULD CEASE ALL WORK ON THE EIS UNTIL THIS STEP IS COMPLETED. (Ref FRA Unethical Tactics to Not Work With Local Governments while Developing the DEIS)_ Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), FRA failed to coordinate with any local govt. "prior to identifying the alternative alignments to be in the dran ELS" as the FRA stated it would do Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for planning future development of our community and is comprised of elected officials from several municipalities in Waller County, plus Waller County itself & two of its school districts. Without this coordination, impacts to the local community are not properly analyzed & conflicts are not resolved. The FRA incorrectly labeled the WCSRPC as a "public stakeholder", but is a political subdivision Of the state of Texas. The FRA has not addressed impacts in the dran EIS.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Adverse Impact of the Added Personnel on the area traffic, schools, and housing Infrastructure (Ref DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including Education, particular in very small ISDs? Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction. Comment: Past Projects such as Road, Transmission Line, and Pipeline projects normally employ a very significant contingent of workers from Outside Texas and certainly from Outside the Local Areas. This will result in additional pressure on County services and infrastructure. The Counties must have Time and Funding to be able to adequately respond to these large challenges. Texas State Regulatory Agency/Body (Ref DEIS MAIN TEXT I; DEIS Abstract). Question: What Texas State Regulatory Agency/Body with the current Authority to do is Responsible and can be held Accountable by the Public to provide Oversight on ALL aspects of this Project that are not covered under the FRA's Scope of "RR Safety"? Texas State Regulatory Agency/Body (Ref DEIS_MAIN TEXT I; DEIS Abstract). Does RR Security fall under the responsibility of the FRA? Question: Where in the DEIS does the FRA address the new State Expectations for Security of HSRs? A number of years ago when an HSR was being considered, the State of Texas established a Regulatory Board for HSR Oversight. However, the Project never happened and the State Board was eliminated. Currently, whenever there is a Project that ultimately is used by the Public, there exists State Regulatory Agencies such as the public Utility Commission of Texas or the Railroad Commission that provide Oversight Responsibility to protect the interest of the Public / Taxpayers. Who will protect the Public's Interest outside of any FRA RR Safety Responsibilities during Execution of this Project? Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting Existing Roads (Ref DEIS Appendix F TCRR CONSTRLUABILITY v4 REPORT: Sect. 4.2, Pg. 5, pg. 27). Comment: The FRA should provide to the Counties via the DEIS an estimate of damage to their existing Road Infrastructure following 5 years of Construction related Traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards ALL Planned Construction Sites. These will be a magnet for Workers, Raw Materials, Equipment, Vendors, Lay down areas, etc. Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref. DEIS Appendix F TCRR CONSTRUCTABLILITY v4 REPORT: sect. 7.1, Pgs. 32-33 of 34). Comment: The FRA Must Quantify the Water needs Over 5 years of Construction and reconciles that with the State or County Water Conservation agencies to daermine the need for permits or approvals for the use of Source</p>	Refer to NE-1, SC-4, SC-6, SS-4, SS-5, SS-6, TR-6, TR-7 and WW-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Water. Business Ethics, Public Trust, and TCRR Competence Level (Ref Nothing In the DEIS on This Issue). Question: Has the FRA evaluated the answers provided to the public in Open Forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? Question: If not, is the FRA interested in any false or misleading statements made to the Public by TCRR vs. what the FRA has included in the DEIS? Question: Is it important to FRA's analysis of the TCRR's capability to Operate a RR or not if TCRR has mislead the Public on a number of issues as compared to what the FRA has included in the DEIS? Business Ethics, Public Trust, and TCRR Competence Level (Ref. Nothing In the DEIS on This Issue) Question: What basic FRA Business Ethics Principles must be met by TCRR to convince the FRA that this company, TCRR, is Ethical and Capable enough to Operate a RR with the Safety and Security of the PUBLIC in the FRA's and TCRR's hands?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Credibility of Land Survey Data (Ref: DEIS_MAIN III; Sect 3.13.3, Pg. 3.13-6). Question: On my property in Leon County, the DEIS Natural Resources Map (Natural Resources 3 of 4, Pg. 53 Of 65, intermittent Stream) shows a Creek on my property that is at a minimum, 150-200 yards too far to the West (It does not touch the Utility Corridor Opening vs. what is shown on the DEIS Map), so Where did this survey Data come from is so INCORRECT? Question: I NEVER GAVE TCRR PERMISSION TO BE ON MY PROPERTY ALTHOUGH IT WAS REQUESTED AND I RECEIVED IMMEDIATELY A VERBAL THREAT OF "LEGAL ACTION" via Future Letter BY Mr. Ken Williams with Contract Land Services (TCRR's Landowner Coordination Representative), August 16, 2016 at 4:00 p.m., WHEN I DENIED THERE REQUEST. What other SURVEY DATA IS INCORRECT IN THE DEIS? Credibility of Land survey Data (Ref. DEIS_MAN TEXT III; Sect. 3.13.3, Pg. 3.13-6). There have been many Landowners who have refused to sign a Survey Permission Form, not allowing TCRR to access their property for a Land Survey. Many surveys were performed ONLY from State or some County ROW. It is obvious that ALL of the maps developed in the DEIS likely used other sources than actual surveys. The FRA should be held accountable for the sources used and should be responsible for assuring that All Land Survey Data was obtained under the authority of a Landowner approved Survey Permission Form. If not yet by the FRA, then there exists the potential or likelihood based on evidence that the FRA Produced the DEIS that incorporated data that was illegally obtained which could be then considered, the is an illegal Document. IS THE FRA GOING TO REQUEST NEWLY SIGNED SURVEY PERMISSION FORMS FROM EVERY LANDOWNER WHOSE DATA IS USED IN THE FRA HSR DEIS. Personal Safety Expectations During Construction (Ret: DEIS Omission; I Could Find No Personnel Safety Specific Expectations To TCRR on a Construction personnel Safety Topic. Question: Does the FRA' s responsibility of ensuring Safety include the Safety of the Public and the Contractors' Employees during the Construction Phase ofthis HSR? Question: Does the FRA clearly understand the Safety Risks associated with not only Construction of the HSR, but also the risks of the public safety and employees during the many road construction modifications being executed alongside the HSR construction? Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concemed Citizen Personal Safety Expectations During Construction (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Construction Personal Safety Topic). Question. The DEIS is absent Of any Personal Safety Expectations being provided to TCRR for a safe execution ofthe very large HSR Project. Is the FRA not concerned about the Public' s during the Construction phase where there will be very close interactions between motorists and Construction of the HSR & Roads? Question: Is the FRA OK with fatalities of the public as a result of this project construction to the extent of not even discussing it or placing expectations on TCR for a required comprehensive Safety System with Management Involvement with Construction Personnel while also ensuring that Motorists' Safety is maintained at a very high priority? Personal Safety Expectations During Construction (Ref. DEIS Omission; There are no Specific Expectations forced on TCRR regarding Personal Construction Safety. The work by TCRR ' s Contractors' will be in close proximity to the public. A lack of a comprehensive Personal Safety Program as well as Management Commitment and Leadership in Safety could lead to more danger on the Public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the Public off guard. These must be executed in a safe manner with lots of warnings issued to the Public for route changes. The FRA should provide to TCR a set of Construction Safety System Expectations not only for Personnal Safety, but for the safety of Motorists. Additional Traffic and Congestion Due to Permit Loads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 3, Pg. 22 of34; Sect. 4, Pg. 23 of34; Sect. 5, Pg 27 of 34). Question: What is the quantity of Permit Loads the public should expect being added to their tramc flow</p>	Refer to NE-8, SC-4, SC-6, SS-19, SS-23 and TR-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>over and above the norm prior to the execution of this Project? No figures on Permit Loads is included in the DEIS? There are Construction Sites all along the route that will be used for staging of materials and for the construction of Pre-Cast concrete structural components Many of those loads going to the Construction Sites as well as constructed structural components are very large likely qualifying as Permit Loads that must transverse existing roads to transport them to the HSR installation site.</p> <p>Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: What is the Negative Impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically Traffic, Congestion, Housing. Medical facilities, Absorption of a portion of the Food Supply and Demand Chains, and the Negative Impact on Small Rural School ISDs?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen (Ref Environmental Impact Omission by the FRA DEIS). Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area, Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties Owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. The FRA failed to address these impacts in the draft EIS. (Ref Environmental Issue Omitted in FRA DEIS). Kickapoo Preserve is a high-end development for 500 new homes for DaikenJGoodman employees that is under construction development. The alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. (Ref Destruction of Economic Development Omitted by FRA DEIS). Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines — all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination and the FRA has failed to address these impacts in the draft EIS. (Ref Structural Integrity Impact On Water Tower Omitted by FRA DEIS). G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen (Ref. Economic Development and Planning Impact Omitted by FRA DEIS)_ The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has to address these impacts in the draft EIS. (Ref: Flooding Issues NOT Addressed in the FRA DEIS ALL Across the Route). As an example, Local Environmental Impact in Waller County includes the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has to address these impacts in the draft EIS. (Ref. Environmental and Economic Impact NOT Addressed by the FRA DEIS). Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high</p>	<p>Refer to CR-2, CR-9, EU-2, FP-1, LU-3, LU-4, NR-1, NR-2, RF-1, RF-4, SS-17, TR-1, TR-8, WW-1, WW-2, WW-8 and WW-9. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has to address these impacts in the draft EIS.</p> <p>(Ref Historical Landmarks Negatively Impacted in Waller County NOT Addressed by FRA DEIS). How is this Example Addressed? When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the Archeological Survey Report of April, 2010." For this report, the was to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads. stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>(Ref Historical Significance NOT Adequately Addressed by the FRA DEIS). Question: How is this example addressed exactly in the DEIS: At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, bom in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840' s. He ended up in the area that is now northeast County where he bought 1,100 acres. On this land, he built a stagecoach Inn that became a famous stagecoach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery.</p> <p>(Ref Safety Issues Nm Addressed by the FRA DEIS) Example: At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which pressures up a 30 inch natural gas pipeline to 930 psi between Waxahachie and Katy Texas. Three known accidental releases of natural gas are: May 24, 2007 — 18,000 lbs released, May 30, 2007 — 20,000 lbs released, and June 11, 2007 — unknown quantity. On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors over a mile away. Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. Question: What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident?</p> <p>(Ref Historical Locations Not Adequately Addressed by the FRA DEIS) Question: HOW was this example adequately addressed by the FRA DEIS? Documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went north through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has to address these impacts in the draft EIS.</p> <p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen</p> <p>(Ref. Negative Impact on Hunting Industry Omitted in FRA DEIS)_ Except for the slight discussion on Lake Bardwell, the FRA DEIS has omitted this topic and the negative impact on Texas Hunting Jobs and Revenue. The total impact of the industry to the Texas economy, combining the breeding and hunting components, is \$1.6 billion annually.</p> <p>The economic activity of deer breeding industry supports 16,892 jobs, most of which are in rural areas of the state. If this industry did not exist, those jobs would have to be supported by some other economic activity.</p> <p>These results continue to highlight the fact that the deer breeding industry is a growing and important segment of the Texas economy, contributing to the vitality of rural areas of the state. Question: Will the location of the train bring limitations to private landowners on ranches that earn much of their living via wild game hunting?</p> <p>(Ref HSR vs No Build Not Covered in This Manner in the HSR)_ It is obvious the HSR Speed and the resulting horizontal and vertical deviation restrictions along with the actual Terrain has caused TCRR to not be able to keep to their original promise to the Public that they would "Fly" over existing roads. thereby minimizing impact. Now existing roads are being rerouted, modified, rebuilt OVER the HSR. and new roads being added for Access with more ROW being taken from Landowners. This is the root cause of the increase of Impact Acreage from 3000 acres to 8000 acres with an Avg ROW width now of 275' vs. the original 100'. The FRA must Reject this Disastrous plan, Slow down the HSR reducing restrictions, not disrupt existing roads, or the No Build Alternative Emergency Response Time increases are unacceptable and only Negligence would allow approval. The FRA must not proceed any longer with the HSR EIS.</p>	Refer to CR-2, EU-6, LU-14, SS-2, SS-10 and TR-8.

			(Ref HSR vs. No Build Alternative Analysis does Not Covered This Area). Risk Management Issues: Because TCRR is no longer doing what they promised the Public and taking the HSR OVER most existing roads now doing the opposite, there is the issue of "Dropped Objects" when the HSR goes under a road. Question: What requirement will the FRA put in place to mitigate this huge risk. Also, there is the issue of the HSR crossing heavily hunted areas Texns. Question-. What Risk Assessments are being required by the FRA for TCRR to perform for rifle shots all around the HSR (since there is no warning to hunters) and for the aforementioned Dropped Objects concern when passing under existing or newly built roads.	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen (Ref The "Reason Foundation" on Ridership). The "Reason Foundation" article states " One reason that HSR loses money is project sponsors overestimate the number of travelers who will switch from car to plane. A 1997 study on the feasibility of HS in the US conducted by the FRA determined that in most cases rail improvements would divert only on intercity automobile trips." The DOT General reached a similar conclusion in a Northeast Corridor. The IG examined two options also in the NE and found that improvements reduced automobile ridership along the NEC by less than Question: Because of the huge Losses & Damages Required by Texas Landowners for the HSR, has the FRA Thoroughly evaluated the Reason Foundation Study on this HSR and Reconciled any different findings or Claims by TCRR? (Ref: Lack of Public Need[Necessity Proof in DEIS & No Build Alternative). FRA does not mention nor prove to the Public a Public Need Exists for the HSR Project AND does not make or use the results of that evaluation a part of the No Build Alternative analysis. The FRA would be Negligent to smooth over and not address the Public Need Proof in order to completely, credibly, adequately, and Fairly address the No Build Alternative. The FRA Must Cease All further work on the HSR EIS process until that very important determination step is completed and reviewed with the Public. (Ref HSR Security Omission in the FRA DEIS). Question: In view of the recent new Texas State Bill on HSR Safety and Security, what Security Requirements are being placed on TCRR by the FRA to meet those additional State and Requirements? Based on lots of advertisements by TCRR, it is obvious their Plan is to minimize any loss time due to security during loading, while under way, and unloading the HSR in stations. Also, please address what is being done to eliminate mitigate any Terrorists attacks of the HSR either while in the stations or while in the middle of nowhere all along the rural remote route? How will EMS vehicles reach very remote if there is an issue, particularly in wet months? Does TCRR have a "Righ Elevation Rescue at Heights" Plan to remove riders off the elevated tracks? (Ref The Reason Foundation Article Reconciliation). The Reason Foundation States "The US lacks many of the factors that make HSR successfull in other countries. For starters, the US has neither the population density nor the land-use regulations to support the development of HSR. It lacks a pre-existing, successfull passenger rail system, and spends far less on human transit than Europe and Japan. The HSR cannot work in a vacuum. In the absence of large urban populations clustered around city center Rail Terminals and Extensive transit systems that allow passengers to easily complete their journeys, HSR will never be an appealing transportation choice to most travelers Considering the Huge Loss and Damage being planned for Texas Landowners, the FRA would be Negligent to not address All differences between the Reason Foundation article and TCRR's Claims. The FRA must do this research and report findings to the Public before going any further with the FRA HSR EIS. Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concemed Citizen (Ref HSR Economics Not in the FRA DEIS). the Reason Foundation, "Crucially, HSR also tends to be very expensive-for both travelers and taxpayers. Practically everywhere it operates, HSR is more expensive (and slower) than plane travel. Those on a very tight budget would be better off traveling by bus. while those seeking flexibility would likely stick with the automobile And yet despite high prices, only two of the world's HSR rail lines have turned a profit. The rest lose substantial amounts of money and required taxpayer subsidy. Since there will be a Huge Loss and Damages for Landowners, it would be Negligent for the FRA to do any further work on this HSR EIS until these comments by the Reason Foundation are reconciled with those claims by TCRR which many believe Overstate Ridership and Understate Costs regardless whether or not there exists any Federal Funding. (Ref FRA HSR Work Contrary to the Surface Transportation Board Ruling). TCRR requested a Jurisdictional review and finding on the HSR The Surface Transportation Board ruled they did not have any jurisdiction over this project as it is NOT a Interstate RR but a planned Intrastate RR. Question: Why is the Federal RR Administration spending Taxpayer funds doing any work at all on this HSR Project, particularly since TCRR has not proven in the Texas courts that they are in fact a RRs certainly not an Operating RR, as well as owning no existing tracks, rolling RR equipment, stations, operating personnel, etc.? Also, the FRA cannot Recommend or Grant TCRR the power of Eminent Domain, so why is the</p>	Refer to BA-6, ED-1, GN-1, GN-2, GN-3, GN-4, NE-1, NE-8, PN-3, SS-3, SS-6, SS-7, SS-9 and SS-18.

			<p>FRA spending Taxpayer money on an unproven Company currently a RR by themselves in name only, TCRR? (Ref DEIS Inaccuracies & Omissions of Cemetery Locations). The FRA MUST perform an independent review of the Land & Environmental Survey Data supplied by TCRR, Since TCRR was not allowed on much of the 240 mile route Land due to lack of Proof of being an Operating RR or possessing Eminent Domain powers & the resulting lack of Survey permission from Landowners, their work cannot be Accurate OR Credible. Several cemeteries within the destructive force of the HSR have been found by Landowners to not be identified by the DEIS, some possibly Historical Cemeteries. If this is WRONG. what else is also? Without accurate data- the FRA DEIS has ZERO Credibility as a Government Document by the FRA at BEST. The FRA has performed an Unacceptably inadequate verification of what TCRR supplied to the FRA. The FRA must CEASE ALL WORK on the EIS Until ALL Pertinent Data and Subjects are Independently verified by the FRA than accepting TCRR Data as FACT?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Business Ethics, public Trust, and TCRR Competence Level (Ref Nothing In the DEIS on This Issue). Question Why is the FRA spending US Taxpayer resources on this project when TCRR is NOT an Operating RR? What RR is TCRR If they are an Operating RR Why was TCRR NOT Allowed to Survey most Of the Route between Dallas and Houston due to lack of Signed Permission Forms and Why in Court did TCRR lose the House Case in Harris County with a Summary Judgement and TCRR was NEVER allowed by Court Order to Survey the House Property. Why did TCRR DROP around 40 Lawsuits (after seeing they were going to lose these also) instead of continuing to pursue the Land Survey Rights if they thought they had the Survey Right? The one case they claimed they won was a Default Judgement due to the Landowner not showing up to court, so NOT a Win of their Case which was NEVER heard entirely by the Court! Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue). The Public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. The Public is sick of this type of an Unethical Business Model by TCRR. Business Ethics, Public Trust, and TCRR Competence Level (Ref Notting In the DEIS on This Issue). Contrary to TCRR's advertisements, TCRR has done everything possible to mistreat the Public and disregard Private Property Rights and to be an extremely Non-Transparent Company with the Public. Lots of questions have gone unanswered for years. As an example, I personally provide four (4) pages of Questions to Bob Eckels, President of TCRR at that time, in early 2015 at the Madisonville TCRR Open House, and after promising every one of my questions would be answered within 3-4 weeks, and none were ever answered. Another employee, Travis Kelly, a year later after telling him my story, also promised me the answers. After finally telling me his lap top was stolen and he had to recreate the answers, I never received any answers from him. (Ref project Economics and Feasibility Omission in FRA DE-IS). A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts on our communities, we should NO BUILD a project that does not meet feasibility requirements under NEPA and other laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere. Dallas-Houston High speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen (Ref FRA DEIS Omission of Major Impact on Hewlett Packard Data Center in Waller, TX).The Hewlett Packard Data Center facility, which houses 1 servers will be within 1 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property, If we determine that is the case, then we would have no choice, but to vigorously oppose this route" This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. (Ref FRA DEIS Omission of Impact to Waller County [SD]). The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the HSR project. This issue was brought to the</p>	Refer to AS-1, AQ-7, ED-1, GN-2, GN-3, GN-4, NE-1, NE-5, NE-8, NV-1, NV-5, PI-1, PI-4, SC-5, SC-11, SC-22, TR-6 and TR-8.

			<p>attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. This issue, however, APPLIES to all Counties particularly during HSR Construction along with a huge amount of Road Construction and Road Closures, Rerouting, Modified, and Closed, Qebuilt OVER the HSR TCRs Plan Must be Rejected by the FRA as the Impact has not been Adequately Identified, Addressed, or Mitigated Satisfactory by the FRA DEIS. (Ref Quality of Life Evaluation Omitted in the FRA DEIS). Quality of Life issues include people living within noise and vibration distance, well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination mwtings, and the FRA has failed to address these impacts in the draft EIS.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Lack of Eminent Domain Power by TCRR, FRA DEIS Comments: The Federal Surface Transportation Board (STB) denied Texas Central Railway (TCR) Eminent Domain (ED) Powers and proclaimed they do not have oversight jurisdiction over TCR's Project. Despite TCR trying to bypass the State of Texas regarding regulatory guidance, the STB ruled that they must go back to Texas for regulation and oversight. TCRR has not proven with the State Legislature (2017 Session) or in Court suits that they possess ED or that they are an Operating RR_ So, TCRR does not possess ED at either the Federal or State Level. TCRR is NOT an operating RR or TCRR would have been allowed to Mr Miles Property. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of-way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. Lack of Eminent Domain Powers by TCRR, FRA DEIS Comments: The Federal Railroad Administration (FRA) does not have the authority to grant ED, only the STB or the state The FRA clearly states they CANNOT give an entity ED powers. Question: So, if TCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's scope of "RR Safety"? THE FRA MUST CEASE DOING ANY FURTHER WORK WITH TCRR ON THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. Dallas-Houston High Speed Rail DEIS FRA DEIS Public Hearing Comments Impacted Landowner & Concerned Citizen Applicability of FRA Current Regulations, FRA DEIS Comments: The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph? Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA. Correct? Applicability of FRA Current Regulations, FRA DEIS Comments: The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To developing, approving, and publishing the new</p>	Refer to ED-1, NE-1, NE-2, PI-1, SS-4, SS-18 and SS-23.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>regulations for speeds of up to 205 mph?.</p> <p>FRA's Abuse of Federal Power Over a State Agency. DEIS Comments: TCRR and the FRA have not worked with local County Emergency Response entities to understand the safety and security needs of TCR which will be paid for by the local Counties. In fact, it was discovered via a Lawsuit against TXDOT by the Waller County Regional manning Committee, a True local County Government Body, the the FRA had TXDOT to no longer meet or work with this local government body for any activities associated with the TCRR HSR. TXDOT/TCRR LOST that Court Case, Appealed. and LOST again. Question: Is this not overstepping the FRAs Power over local Governments? Question: Is this not the reason that the FRNs detail of Ernergency Response Impact was void of mitigation details in order that there was ZERO increase in ER Times? Should not the FRA CEASE ALL further work on this project until a Full Investigation is performed regarding this Abuse of Power by the FRA?</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>(Ref: HSR Economics Not Covered in the FRA DEIS). Per the Reason Foundation, "Crucially, HSR also tends to be very expensive-for both travelers and taxpayers. Practically everywhere it operates, HSR is more expensive (and slower) than plane travel. Those on a very tight budget would be better off traveling by bus, while those seeking flexibility would likely stick with the automobile. And yet despite high prices, only two of the world's HSR rail lines have turned a profit. The rest lose substantial amounts of money and required taxpayer subsidy. Since there will be a Huge Loss and Damages for Landowners, it would be Negligent for the FR.A to do any further work on this HSR EIS until these comments by the Reason Foundation are reconciled with those claims by TCRR which many believe Overstate Ridership and Understate Costs regardless whether or not there exists any Federal Funding.</p> <p>(Ref: FRA HSR Work Contrary to the Surface Transportation Board Ruling). TCRR requested a Jurisdictional review and finding on the HSR. The Surface Transportation Board ruled they did not have any jurisdiction over this project as it is NOT a planned Interstate RR but a planned Intrastate RR. Question: Why is the Federal RR Administration spending Taxpayer funds doing any work at all on this HSR Project, particularly since TCRR has not proven in the Texas courts that they are in fact a RR, certainly not an Operating RR, as well as owning no existing tracks, rolling RR equipment, stations, operating personnel, etc.? Also, the FRA cannot Recommend or Grant TCRR the power of Eminent Domain, so why is the FRA spending Taxpayer money on an unproven Company currently called a RR by themselves in name only, TCRR?</p> <p>(Ref: DEIS Inaccuracies & Omissions of Cemetery Locations). The FRA MUST perform an independent review of the Land & Environmental Survey Data supplied by TCRR, Since TCRR was not allowed on much of the 240 mile route Land due to lack of Proof of being an Operating RR or possessing Eminent Domain powers & the resulting lack of Survey permission from Landowners, their work cannot be Accurate OR Credible. Several cemeteries within the destructive force of the HSR have been found by Landowners to not be identified by the DEIS, some possibly Historical Cemeteries. If this is WRONG, what else is also? Without accurate data, the FRA DEIS has ZERO Credibility as a Government Document by the FRA at BEST. The FRA has performed an Unacceptably inadequate verification of what TCRR supplied to the FRA The FRA must CEASE ALL WORK on the EIS Until ALL Pertinent Data and Subjects are Independently verified by the FRA rather than accepting TCRR Data as FACT?</p> <p>Eminent Domain (ED) Status and County Permit Requirements/DEIS Comments: Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a Permit in order to construct a HSR. The Permit also requires that TCRR Prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. Question: Has TCRR proved to the FRA that they possess legally Eminent Domain? Question: If so, the FRA MUST share that rationale with the Public who are going to be hurt the Worst by the HSR. Question: IfTRR has not proven ED to the FR.A. then Why is the FRA working with TCRR on this Project as if they have no ED, and they certainJy are not an Operating RR, and without ED, this project will Never be built?</p> <p>Eminent Domain (ED) Status, FRA DEIS Support: Comment- In the Lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed to survey the property. This court judgement also sets a precedent against TCR's claim of possessing ED Powers. They subsequently dropped all cases against landowners and were unable to survey thousands of acres. Question: Why is the FRA working on this Project being executed by a company that Can't or Won't Prove they have ED AND is not an Operating Railroad AND does not have the authority to survey property without Landowner Permission? The FRA Must Cease work on this project IMMEDIATELY and stop wasting any Taxpayer money and time being used to support an Uneconomic Project.</p> <p>Lack of Land Survey Rights by TCRR, FR.A DEIS Comments: The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case, l'CR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit. Now, the FRA preferred Route does in fact still go through Mr. Miles Property, therefore, the FRA is now part of TCRR Deception and False Statement to Mr. Miles and to the Public who are All FUIL aware of the status of this case. TCRR does clearly NOT possess ED Powers, is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRA MUST CEASE</p>	Refer to CR-6, ED-1, ED-8, GN-1, GN-2, GN-3, NE-1, NE-2 and PN-3.

			IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE TCRR HSR. and STOP wasting Taxpayer money on this uneconomic project.	
Glenn Mannina	2/5/2018	Handwritten	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITYv4 REPORT; Sect. 7.1, Pgs. 32-33 of34). Comment: There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal process; Question: Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 7.1, Pgs. 32-33 of 34). Comment: Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 4.2, Pg. 23; Also Sect. 5, Pg. 27). The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DEIS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming? Question: For forested areas, will TCRR be required to replant trees? (Ref: DEIS Appendix F TCRR CONSTRUCT ABILITY v4 REPORT; Sect. 8, Pg. 34 of34). Many Landowners will be making Huge Sacrifices as a result of the HSR Project. This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need/Necessity? The true I-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view. (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 7.1, Pgs. 32-33 of34). Comment: The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. The FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document. (Ref: DEIS Appendix F TCRR CONSTRUCT ABILITY v4 REPORT; Sect. 3, Pg. 22 of 34; Also Sect. 4, Pg. 23 of 34; Also, Sect. 5, Pg. 27 of 34). Comment: The FRA DEIS does not quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre-Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision.	Refer to LU-14 and SG-4.
Glenn Mannina	2/5/2018	Handwritten	Ref: DEIS Appendix D Environmental Justice). Comments: There is a large amount of Regional non-specific data in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without reconfirming the data from other sources by a comprehensive inspection program, the FRA DEIS data Not Project Specific and is suspect of being Out of Data. Your Route Maps are clearly Out of Date. The DEIS is Fatally Flawed for endangered species, historical property, cemeteries, or other environmental topics. A Spring Fed Creek on my property is incorrectly located some 250 yards on my property. Considering the large areas in the Environmental Maps that show Navasota Ladies Tresses (vs. your only 657 acres of inspection) and the Houston Toad, these areas were not recently inspected as there is no way TCRR had the permission to survey ALL those properties, one of which is mine! So FRA must restore the Credibility of this Data with Boots on the Ground.	Refer to GN-1.
Glenn Mannina	2/5/2018	Handwritten	Ref: DEIS Appendix D Environmental Justice). Comments: There is a large amount of Regional non-specific data in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without reconfirming the data from other sources by a comprehensive inspection program, the FRA DEIS data Not Project Specific and is suspect of being Out of Data. Your Route Maps are clearly Out of Date. The DEIS is Fatally Flawed	Refer to GN-1.

			for endangered species, historical property, cemeteries, or other environmental topics. A Spring Fed Creek on my property is incorrectly located some 250 yards on my property. Considering the large areas in the Environmental Maps that show Navasota Ladies Tresses (vs. your only 657 acres of inspection) and the Houston Toad, these areas were not recently inspected as there is no way TCRR had the permission to survey ALL those properties, one of which is mine! So FRA must restore the Credibility of this Data with Boots on the Ground.	
Glenn Mannina	2/5/2018	Handwritten	<p>Premature Applicability of FRA Process, FRA DEIS Comments: TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure 200/o of the Distance in Miles of controlled Land to lay track down on? The FRA Must Cease ALL Work on TCRR's HSR EIS until TCRR has proven they can acquire the Land that TCRR MUST Own in order to build this Project. Without that, TCRR and the FRA are wasting time and money. But in the FRA's case, Taxpayer Money!</p> <p>HSR Economic Viability, FRA DEIS Comments: TCRR' s Economic Model includes Ridership numbers that would require them to take 100% of the air travel from SW airlines between Dallas-Houston and 100% of those who travel in cars between the two cities. The FRA does not really test any of TCRR's data on Ridership and Costs AND has not used external resources, such as the "Reason Foundation" (States this Project will Fail!), to determine whether all of this Wasted effort is necessary AT ALL. Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extremely unfair to the Public who the FRA is supposed to Protect.</p> <p>(REF: DEIS Appendix F TCRR CONSTRUCT ABILITY v4 REPORT; Sect. 2.4, Pg. 4 of 34). Question: What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials. (Ref: DEIS Appendix F TCRR CONSTRUCTABILITYv4 REPORT; Sect. 2.4, Pg. 4 of34). Comment: FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more.</p> <p>(Ref: DEIS Appendix F TCRR CONSTRUCTABILITYv4 REPORT; MAIN TEXT III; Sect. 2.5, Pgs. 5-6 of34; Also Sect. 4.22, Pg. 24 of 34;Also Sect. 5.1.1, Pg. 27 of 34). COMMENT: The Negative Impact of Increased Public Travel traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, and Negative Impact to the General Flow of Business has not been Quantified by the FRA. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters must be provided to TCRR.</p> <p>(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 2.13, Pgs. 20-21 of34; Also Sect. 2.3, Pgs.3-4 of34; Also Sect. 6.2, Pg. 29 of34). Comment: Based on the size of Raw Materials and Structural components being moved on existing roads, there will be significant Damage to Existing Private, City, County, State and Federal Road/Highway Infrastructures. The Government entities and the Public deserve to understand How much damage to roads and infrastructure and where it can be expected. Question: Who wi)) pay for this damage repairs?Question: Will the Public have to wait 5 years to see the damage repaired? Question: Who will pay for damages to the public vehicles as a result of having to use unsatisfactory roads for 5 years?</p> <p>(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT Sect. 6.5, Pgs. 29-30 of34). Construction Access roads alongside the HSR with require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads: Question: Who will be responsible for maintenance in the future; Question: Will the "New Roads ROW" be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. Question: How much of the increase o fImpacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR?</p>	Refer to ED-1, ED-2, GN-2, GN-3, LU-14, NE-1, NE-8, SG-4, TR-6, TR-7 and TR-8.
Glenn Mannina	2/5/2018	Handwritten	<p>(Ref; DEIS)Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Comment: The FR.A only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between</p>	Refer to NV-1, NV-10, SS-3, SS-10, SS-12, SS-18, SS-19, SS-23, VA-1 and WW-2. The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24-hour period. The assessment is

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis. (Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 13.5, Pg. 148 of 199). Comment: Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FR.A failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. This Omission must be Corrected.</p> <p>(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199; Sect. 16.2.5, Pgs. 185-186). Comment: The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. The safety of a train passing in rural Texas where Hunting is at the highest level was never mentioned. Question: What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FR.A was not specific on what type of monitoring system would be used. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use. A train hitting a 300# Feral low center of gravity Hog would be devastating. More specifics specifications should be provided to TCRR for both fencing and monitoring systems.</p> <p>(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199; Sect. 16.2.5, Pgs. 185-186). Comment: There is the issue of High Elevation Rescues from the top of the raised tracks in case of an Emergency or Breakdown that is Omitted by the FRA DEIS Question: Who will develop the specifications for Emergency Response on top of a Viaduct or tall Berm including requirements for High Elevation Evacuation of the Train set customers? This was totally missing in the DEIS. Question: Will special Emergency Response Vehicles be purchased by TCRR along with trained personnel and kept along the route for fast emergency use including ladder trucks? Question: Where is this covered in the DEIS?</p> <p>(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199; Sect. 16.2.5, Pgs. 185-186). Comment: There is the issue of High Elevation Rescues from the top of the raised tracks in case of an Emergency or Breakdown that is Omitted by the FRA DEIS. There must be a Risk Assessment performed on the ability for Emergency Vehicles to reach any remote area along the 240 mile route. There is no mention of this in the DEIS. In any wet or winter months, it will be next to impossible to reach the track in the middle of a very remote pasture along the route. This work must be done by the FRA for the Safety of those riding the train.</p> <p>(Ref: DEIS_MAIN TEXT ID: Sect. 3.16.3.2.3, Pg. 3-16-6, Pg. 3-16-31; Also Sect. 3.16.5.2.2, Pg. 3 .16-24; Also Tables 3 .16-14 & 1 S). The Dallas to Houston FRA DEIS after showing High, Medium, and Low Risk levels of increased Emergency Response times (Quantified) only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant". The FRA then states that Modeling would be performed prior to Construction in order to develop Mitigation Steps/ Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed Emergency Response times! The FRA MUST not allow TCRR's HSR Project to move forward with ANY INCREASES IN ER TIMES??</p> <p>(Ref: DEIS_MAIN TEXT III; Sect. 3.14.3.2.3, Pg. 5; Also Sect. 3.14.3.2.5, Pgs. 6-7). Comment: No Discussion in the DEIS on the true Significant Negative Impacts of Tax Revenues due to lower Private Property Values except around the stations. The DEIS includes evaluations about the Property Values around the HSR stations, but totally omits the Negative side of the evaluation, that is the LOSS of Tax Revenue all across the state as a result of the presence of the HSR The FRA does NOT prove that simply The HSR footprint will offset the tax revenue losses of huge amounts of lower property values. Property Values out several miles from the route must be evaluated to credibly and fully understand the Loss of Tax Revenue. Only then can a credible Cost/Benefit analysis be done regarding Tax analyses. FRA Must Correct this Miscalculation.</p>	<p>based on the reference noise level of a train passby at a known speed, the total number of trains per day and night, the length of each train, and the actual speed of the trains at a given location.</p>
Glenn Mannina	2/5/2018	Handwritten	<p>Dallas to Houston FRA DEIS Public Comments; Abstract). As of this date, January 16, 2018, a number of the public that I know have been unable to get a DEIS comment to the FR.A Web successfully through the Comment Section as they continue to receive "Undelivered" Emails from the FRA. They have copies of those Emails. The FRA has done everything possible to minimize involvement by the Public on this HSR from starting the 60 day Comments Period before Christmas through the holidays to scheduling two County meetings every night there is a FR.A Public Hearing to now providing an electronic Comments Section for Public Comments that DOES NOT WORK. Because of this problem, the FR.A, MUST modify the Comments Period and Extend it due the inability of people to use it successfully for almost the first month of the 60 day Comment Period .. (Ref: DEIS Comments AND Meeting Schedules). As of this date, January 17, 2018, a number of the public that I know have been unable to get a DEIS comment to the FR.A Web successfully through the Comment Section as they continue to receive "Undelivered" Emails from the FRA. They have copies of those Emails. The FRA has done everything possible to minimize involvement by the</p>	<p>Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, EU-2, NE-1, NE-8, NE-9, NV-9, NV-10, PI-1, PI-3 and PI-11. For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com) or</p>

			<p>Public on this HSR from starting the 60 day Comments Period before Christmas through the holidays to scheduling two County meetings every night there is a FRA Public Hearing to now providing an electronic Comments Section for Public Comments that DOES NOT WORK. And Third, the FRA has now changed the location of the Madison County Meeting and correct addresses AFFER. the Public has advertised the location of these meetings. The FRA, MUST modify the Comments Period and Extend it since people can't use it t successfully for almost the first month of the 60 day Comment Period.</p> <p>(Ref: DEIS TEXT ill; Chapter 3; Table 3.9-1 Summary ofUtilities Crossings). This table is Inaccurate under Leon County and maybe other counties. My property is on the Utility Corridor just North of the HSR MAJOR Utility Corridor crossing from NW to SE just South of my property. That Utility Corridor has 2 Enterprise Pipelines and the OncorfTXU utility line.I watched the 30" Enterprise pipeline installed next to a smaller Enterprise pipeline in 2014 and know it was installed past the point within the Utility Corridor that I can see from my south fence line where the HSR crosses the Corridor. This Table Shows NO Enterprise Pipeline Crossings in Leon County, the closest being further south in Grimes County? This report Inaccurate DEIS MUST be RETRACTED AND REDONE with a huge increase in Credibility.</p> <p>(Ref DEIS Chapter 3; Executive Justice; Sect. 3.18.5.4.3).Noise pollution concerns mean that increasing speed is becoming more difficult. In Japan, the population density is high and there have been severe protests against the Shinkansen's noise pollution, meaning that its noise is now limited to less than 70 dB in residential areas. [27] Hence, improvement and reduction of pantograph, weight saving of cars, and construction of noise baniers and other measures have been implemented. Current research is primarily aimed at reducing operational noise, particularly the tunnel boom phenomenon caused when trains transit tunnels at high speed AND also when two trains pass each other in opposite directions. The FRA DEIS Failed to address this issue and the Entire Noise Study by the FRA is Unacceptable and Must be Totally restudied in several additional noise areas including more detail on Noise Abatement ..</p> <p>The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) without conducting the necessary comparative analysis of alternatives pursuant to NEPA. The FRA Must Cease Further work on the EIS and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, I-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in many counties. (40 C.F.R § 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	<p>sending a letter to FRA. Japanese noise limits are much more stringent than those in the US. Because of this, Japanese trains are much quieter than other similar trains. Since there are no tunnels proposed on the project, tunnel boom is not an issue.</p>
Glenn Mannina	2/5/2018	Handwritten	<p>(Ref DEIS_ MAIN TEXT ill;Sect. 3.13.3, Pg. 3.13-6; Natural Resources Map 3 of 4 Appendix F TCRR FDCE v7 REPORT; Comment: Natural Resources Map (Natural Resources 3 of 4, Pg. 53 of 65, Intermittent Stream) shows a Creek on my property that is at a minimum, 150-200 yards too far to the WEST (It does not touch the Utility Corridor Opening vs. what is shown on the DEIS Map), so Where did this Survey Data come from that is INCORRECT? What other DEIS data is "INCORRECT". If Your Survey Data is 200 yards off on an Historical Cemetery, the FRA may not even know about such and historical locations that might Actually Be in the Direct Path of the HSR Route. The FRA Land and Environmental Survey Data is Fatally Flawed with Omissions, Inaccuracies and possibly Illegally Obtained Data. The FRA Must Cease all work on this HSR project until the data has been updated, completed, and purged of any Illegally Obtained.</p> <p>(Ref DEIS MAIN TEXT I; DEIS Abstract). Comment: As described in the DEIS Abstract, the FRA has jurisdiction over all areas of "RR Safety". However, the FRA is not accountable for the entire execution of this project nor how TCRR interacts with the Public in addressing issues and negative impacts on the public during the Construction Phase. The FRA Must suspend any further work on this HSR Project until the Texas Legislators can determine what State Regulatory Body would be responsible and accountable to provide Oversight on all aspects of this project, except what is being overseen by the FRA, "RR Safety". This would also require that a State Regulatory Body is ensuing the new State requirements on HSR Safety & Security are being appropriately planned, designed, and applied.</p> <p>(FRA DEIS). Comment: The FRA has published a very Sloppy, Inaccurate, and Incomplete One Sided DEIS that JEOPARDIZES PUBLIC SAFETY BY NOT PLACING TRUE LIMITATIONS, PARAMETERS, AND CLEAR CONCRETE EXPECTATIONS WITH TEETH on TCRR and its Execution Plan. Since the FRA is not responsible for execution of anything OUTSIDE of "RR Safety" this DEIS is full of simply Guidelines" to TCRR without the ability for the FRA to hold TCRR Accountable. So who will protect the Public? The last time I checked, the FRA was financed by Taxpayer Dollars and is responsible for the Safety of the Public, NOT THE PROMOTION OF A PRIVATE COMP ANY THAT WILL BE PRIMARILY JAPANESE FUNDED? The FRA leaves MOST to be dealt with between Local Governments and TCR (PER FRA's Actual Words in the DEIS), and is NOT Accountable for POOR actual Execution Methods of TCR's huge Construction Plan that could harm the Public's Quality of Life Tremendously, including and Mostly their Safety?</p> <p>(FRA DEIS). Comment: I see nothing that clearly proves or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and</p>	<p>Refer to ED-1, EU-2, FP-1, GN-4, NE-1, NE-2, NE-8, PN-3, SS-4, SS-9, SS-19, SS-23, TR-6 and TR-8.</p> <p>Data collection and analysis was completed using the most accurate data available at the time of analysis and in compliance with industry standards and best practices. Multiple documentary resources including the Texas Historical Commission's Sites Atlas, United States Geological Survey topographic maps, and historical aerial imagery were consulted during the Cultural Resources background research phase of the Final EIS to preliminary identify cultural resource locations. In accordance with Section 106 of the National Historic Preservation Act and pursuant to 36 C.F.R. Part 800.4(b)(2) and 5(a)(3), FRA, TCRR, Texas Historical Commission, and other Signatories are developing and will execute a Programmatic Agreement (PA) that allows for the continued phased identification, evaluation and assessment of effects to historic and archeological resources, including cemeteries, as access to private land holdings becomes available and after publication of the Final EIS. Cultural resources surveys have been conducted for portions of the Project area, though many areas remain to be surveyed and will be subject to the methodology outlined in the PA.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>certainly TCRR does not possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today. Question: Why is the FRA wasting Taxpayer money working at an on this Private Project that has not passed so many tests of required maturity at this point in time to support any Government support? (Ref: Danas to Houston FRA DEIS Public Safety). Due Diligence by the FRA MUST include a Comprehensive Risk Management System applied to a Number of components of this huge project. For example, Risk Assessments must be performed on the topics of HSR Project, the Routes including Crossings of Transmission Lines and Pipelines, the Traffic and Congestion during Construction including impacts of unfamiliar closed, rerouted or modified roads and Lane Changes. Without applying such a system, the FRA has not done its "Due Diligence" to protect Public Lives. (Ref: Houston to Dallas FRA DEIS; Public Safety) There exists a "Lack of Due Diligence" by the FRA and TCRR to apply a Comprehensive Risk Management System to the HSR in the Name of Public Safety. Must Apply to ALL Crossings of Transmission lines & Pipelines & anything that impacts PUBLIC SAFETY. Also applies to elements during Construction, particularly ALL of the TRAFFIC and TRAVEL road changes & travel among all the heavy equipment and permit loads. Elements are 1) Identification of Disaster Scenarios 2) Comprehensive Risk Assessments on those Scenarios using Qualified Risk Assessment Engineers 3) Quantification and Qualification of Risks 4) Mitigation Analysis of ALL Risks Identified 5) Elimination of Acceptable Risks vs. Further Study of Unacceptable Risks 6) Modify the Project's approach to Remove ALL Unacceptable Risk Levels. THE FRA MUST CEASE ALL FURTHER WORK ON THE HSR EIS UNTIL nns RISK MANAGEMENT SYSTEM IS APPLIED IN A COMPREHENSIVE MANNER (Ref: HSR Safety & Security; DEIS Appendix F TCRR FDCE v7 Report; Sect. 3.12, Pg. 49 of 199). Omission by the FRA: Texas Senate Bill 975 passed in the 2017 Texas State Legislature provides for increased Security and Safety standards more closely resembling TSA Airport standards. The DEIS fails to apply these Requirements. These rules were also not taken into account when formulating TCRR's trip time of 3.5 hours. TCRR attributed these security guidelines when calculating airport trip times but not their own thereby FALSIFYING support for a PUBLIC NEED/NECESSITY". THE NO-BUILD ALTERNATIVE MUST BE RECONSIDERED BY THE FRA AND NO FURTHER WORK MUST BE DONE ON THE EIS UNTIL THAT STEP IS COMPLETED. There should be no further taxpayer funding for a company that has not even proven they are a railroad.</p>	
Glenn Mannina	2/5/2018	Handwritten	<p>(Ref: DEIS Appendix D Environmental Justice). Comment: The FRA must communicate the results of the significantly Westward movement of the Cross Texas Transmission line a year or so ago away from the Leon County Utility Corridor due to Environmental Reasons and why that information did not influence the FRA on the selected Utility Corridor Route. The Utility Corridor was one of 64 shortlisted routes. Question: So FRA, why was this not included and how would this impact your route selection? (Ref: DEIS Appendix D Environmental Justice). Comments: There is a large amount of Regional non-specific data in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without reconfirming the data from other sources by a comprehensive inspection program, the FRA DEIS data Not Project Specific and is suspect of being Out of Data. Your Route Maps are clearly Out of Date. The DEIS is Fatally Flawed for endangered species, historical property, cemeteries, or other environmental topics. A Spring Fed Creek on my property is incorrectly located some 250 yards on my property. Considering the large areas in the Environmental Maps that show Navasota Ladies Tresses (vs. your only 657 acres of inspection) and the Houston Toad, these areas were not recently inspected as there is no way TCRR had the permission to survey ALL those properties, one of which is mine! So FRA must restore the Credibility of this Data with Boots on the Ground. (Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Comment: The FRA is responsible for RR Safety & Security. But yet, the FRA was silent on any Comprehensive Risk Management System applied to Assess the Risk of Crossing Large Live Pipelines (2) and a Transmission Line in the Utility Corridor within Leon County. A Comprehensive Risk Management System must be applied including Specific Risk Assessments that identify disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce, eliminate or manage the risk. This must be done for the Utility Corridor and any other potentially dangerous systems for a credible understanding of the Public Safety risks associated with the HSR. The FRA will be held accountable if this risk work is not performed. (Ref: DEIS MAIN TEXT I; Sect. 2.6, Pgs. 41-48; Sect. 2.7, Pgs. 54-56). Comment: Cost is not a parameter to dismiss a Route Alt. for a Private Project. The 145 Route would likely be less harmful to the Environment & Landowners and Must be Reconsidered. There is NO REGULATORY BODY TO HAVE ESTABLISHED A Credible PUBLIC NEED/NECESSITY as those who are hurt the worst will benefit ZERO The FRA MUST Stop ALL further work on this Project and wait until TCRR has proven its false claim of having Eminent Domain and Condemnation rights. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER Or in COURT TIIBY HOLD EMINENT DOMAIN POWERS. TCRR has run away from lawsuits that would have resolved this issue. Also, TCRR is required to obtain a County Permit from many Rural Counties & those permits require Proof from TCRR of Eminent Domain Powers. Therefore, No further work Must be done until the Public Need issues and County Permits related to Eminent Domain are resolved. (Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14; File 3, TEXT ID, Tables 3 .11). Comment: TCRR has continuously</p>	<p>Refer to BA-5, BA-8, BA-7, BA-11, ED-1, EU-2, GN-1, LU-14, NE-8, NR-4, PN-3, SS-18, SS-19, TR-1, TR-6, TR-7, TR-8 and TR-10. In Leon County, Segment 3C is proposed along the 1-45 corridor and would not affect transmission lines any more than the existing infrastructure. Where Segment 4 crosses transmission lines south of Concord, TX, engineering refinements will be conducted in consultation with the utility provider to address any hazard controls identified through TCRR's Hazard Analysis (See Section 3.16.6, Cultural Resources, Avoidance, Minimization and Mitigation, SS-CM#4).</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed.</p> <p>And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The re-routing of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. (Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14; File 3, TEXT ill, Tables 3 .11). Comment: TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. Those Permits also require TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads can be done without that Permit. The FRA is Silent on this issue and it must be recognized by FRA because it is the LAW. The current TCRR Plan is clearly a larger sacrifice by the Public. TCRR has told the Public previously in meetings & Advertised on FB that almost no roads would be modified as a result of their use of Viaducts so they could fly over existing roads. The DEIS paints yet a different picture with major FM and CR being modified to go OVER the HSR THUS PLAN IS UNACCEPTABLE & MUST BE SCRAPPED AND RE-DONE BY THE FRA. Releasing such a document would be Negligent to say the least. (Ref: DEIS_ MAIN TEXT ill AND Natural Resources Map 3 of 4; Sect. 3.13.3, Pg. 3.13-6; Natural Resources Map 3 of 4, Pg. 53 of 65). Comment: There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA' s DEIS, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility.</p>	
Glenn Mannina	2/5/2018	Oral	<p>Okay. My name is Glenn Mannina, and I have opposed the uneconomic land grab High-Speed Rail Project for three years. After review of much of the DEIS--and there's a number of us that are looking at that; we've been doing it for six weeks--we know a lot more about what's in the DEIS than you-all, do and we're going to try to help you understand what's in there tonight. After review of it, I'm more convinced than ever the FRA is not acting in an independent capacity with TCR. In fact, they're supporting this project, and is disregarding the safety of the public in doing so. When I hear a person from FRA, who works for FRA, misleading the public with the statement, TCR is a private company doing the project without use of federal funds, just like what I heard a few minutes ago, well, my antenna goes up. After my challenge, that person corrected the statement--not here tonight but the other night's statement--saying, No federal funds at this point. This person tonight, Kevin, didn't say that. It's at this point. We know it's going to happen, because TCR has already documented it. We've got videos, we got things written down, we got all kinds of stuff that we know what they said. They will go after the RRIF railroad loans. That is your tax money, people. It didn't just come up there from somewhere else. It's your tax money. The FRA has artificially orchestrated a purpose and need definition that is not balanced, but it's biased by only supporting TCR's functional criteria, not the public's interest or safety and is clearly designed to eliminate the no build alternative. They also say that no build will not meet the traffic and congestion relief needs. As we've already heard tonight, we've got information--obviously they don't; I don't know--but we've got information there is no traffic between Dallas and Houston. And TCR has already said, unless you've got an accident -- I'll qualify that. Unless you've got an accident. But TCR has already gone on record saying they are not helping one single bit the congestion and traffic anywhere near the cities of Houston. We've got them on record saying that. Now, you talk about this purpose and need. Okay? Let me give you an analogy. A boss comes into his employee. He owns an equipment company, and he needs the bid out a bunch of skid-steers because there's a big construction job about ready to happen. So he tells his employee, I need you to bid out, and I need ten skid-steers bid out to equipment. It's going to be a while. I've got a lot to say, though. Thank you. Okay. So you got this guy and you got an employee. But all the sudden the employee figures out, Okay. I've got to get 10 skid-steers, but I got five competitors that want to bid on it. And you know what? I really one. It's really neat. It's got all kinds of fancy accessories to it. It goes 205 miles an hour, can make it from Houston to Dallas in 90 minutes. Okay? So what am I going to do? Well, what I'm going to do is I'm going to write down the specifications to that specific skid-steer that I know only that skid-steer company can meet. So he writes those specifications. Who wins the bid? That skid-steer. You've got the same analogy what's happening right now and what the FRA produced. TCR's spokesman criteria, the technological part says you use the Shinkansen system; operationally 90-minute travel time between Dallas and Houston with speeds over 200; and environmentally making sure it meets all environmental requirements. Well, one criteria they eliminated,</p>	Refer to BA-6, GN-4, PN-3, PN-4, NE-1, SS-1 and TR-5.

			folks, from the stage one screening they took out economic viability. Now, you're going to go out here and destroy these people's property without knowing whether this project can be economical? Give me a break. They remove economic viability. Wow! I wonder why.	
Glenn Mannina	2/5/2018	Oral	<p>I'm going to pick up where I left off before. Per the DEIS, the FRA's mission is to support the development of safe and reliable inner-city passenger rail. To support the development of safe and reliable inner-city passenger rail. So tell me where the independence is, folks. The FRA is just going through the motions. I've been through this DEIS. I've read enough of it. I understand what's going on. There's so much wrong with it, there's no way a credible company would put out a piece of trash that they put out. There is so much wrong with it, it's unbelievable. And we know what's wrong with it, and we're going to try to tell everybody what's wrong with it. The federal agency -- let me tell you something else. This is what really gets me. They're supposed to look out for our safety and the safety of our kids and our grandkids. Who would put a high-speed rail two blocks from Leon High School on one major corridor, 79, that is the only major corridor that goes in and out east and west from Marquez to Jewett with a 150-acre construction site right next to it?</p> <p>Now, let me tell you, I'm a civil engineer. I looked at the details of the amount of materials in this project, and I finally understood this project is bigger than anybody has ever seen in their entire lives or will ever see. It's a monster. And the way they're implementing, their screwing up all the roads and the county's going to be left paying the bill. They're changing a lot of roads, modifying, re-routing, detouring building roads over the high-speed rail they told us they weren't going to do. They're closing private roads, a bunch of them, a whole bunch of them. Let me tell you about private roads. What they say in there is that, if we're buying your property, we'll get you way out; but if we're not buying your property, well, it depends on whether it's proposed for us to get you out. Who's going to determine whether it's proposed or not? They are. Emergency response. Okay? Very important. Talk about the no build versus the build options. Okay? You would have thought that if they had come up in the DEIS and said that there are going to be increases in emergency response times, but we'll go through a mitigation step, and because we're going to go through a mitigation step, well, it will probably be okay. In fact, the exact comment is, "Impacts to emergency response times would not be anticipated to be significant." Give me a break. They also say, if it's not over ten percent increase in emergency response times, that they don't worry about a mitigation step on it. Look, this project is not worth one single loss of life due to any increase in emergency response times, any increase. And if they do this, if they approve the Record of Decision with emergency response times that are over what they are today, then they're just as negligent as TCR. Am I done?</p>	Refer to GN-1, NE-1, NE-8, NE-9, SC-2, SS-23, TR-7, TR-8 and TR-10.
Glenn Mannina	2/5/2018	Oral	<p>Only 30. Thank you. Okay. Back on the roads issue. A lot of re-routing, a lot of modifications, a lot of rebuilds over the high-speed rail, which TCR told us they weren't going to do. Why is that? Because they can't get high enough on this thing. The elevation doesn't allow them to do that. The terrain is not flat, Mr. Eckels. It's not even relatively flat, Mr. Eckels. So at 205 miles an hour and a deviation and -- vertical and horizontal deviation limits that they got, they'd wind up going into the dirt, they'd wind up running into roads, they'd wind up not being able to go over roads, so we got a huge road construction project on top of a high-speed rail project. Those of you that have the high-speed rail through your property, out of 240 miles there's 126 miles of what they call access road. You know why that is? Because all the roads are being changed, people are going to have to go north and south to get anywhere in this county. To get across the high-speed rail, you're going to have to go north and south. They gonna make you go around 15 to 20 miles versus the two miles you might have gone before. That's what's going to happen. So now this access road, guess what. The access road is being turned back to the counties. Don't you-all really --you-all really love the counties paying for more access -- for making some more access roads. Right? Yeah. You can't take care of the roads you got right now. So 126 miles along the route, that access road is going to become public road. For those of you who were told that, We're putting viaducts across this thing so your farmers and ranchers can run the cattle back and forth, equipment back and forth, that was a lie. That's gone now. You know why? It's a public road. What are you going to do? You gonna let your cattle run on a public road? You're gonna have to fence it. Now you got to go through fences back and forth. Who's going to handle the fencing. Okay? Who's going to pay for that? If you got a high fence, you better negotiate it with TCR. All right. I still got a lot more, folks.</p>	Refer to LU-11, TC-7, TR-7 and TR-8.
Glenn Mannina	2/5/2018	Website	<p>(Ref: DEIS_MAIN TEXT III AND Natural Resources Map 3 of 4; Sect. 3.13.3, Pg. 3.13-6; Natural Resources Map 3 of 4, Pg. 53 of 65). Comment: There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEIS, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility.</p>	Refer to GN-1 and NE-8.
Glenn Mannina	2/5/2018	Website	<p>(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14; File 3, TEXT III, Tables 3.11). Comment: TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. Those Permits also require TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads can be done without that Permit. The FRA is Silent on this issue and it must be recognized by FRA because it is the LAW. The current TCRR Plan is clearly a larger sacrifice by the Public. TCRR has told the Public</p>	Refer to ED-1, ED-3 and TR-8.

			previously in meetings & Advertised on FB that almost no roads would be modified as a result of their use of Viaducts so they could fly over existing roads. The DEIS paints yet a different picture with major FM and CR being modified to go OVER the HSR. THIS PLAN IS UNACCEPTABLE & MUST BE SCRAPPED AND RE-DONE BY THE FRA. Releasing such a document would be Negligent to say the least.	
Glenn Mannina	2/5/2018	Website	(Ref: DEIS_MAIN TEXT III; Sect. 3.14.3.2.3, Pg. 5; Also Sect. 3.14.3.2.5, Pgs. 6-7). Comment: No Discussion in the DEIS on the true Significant Negative Impacts of Tax Revenues due to lower Private Property Values except around the stations. The DEIS includes evaluations about the Property Values around the HSR stations, but totally omits the Negative side of the evaluation, that is the LOSS of Tax Revenue all across the state as a result of the presence of the HSR. The FRA does NOT prove that simply The HSR footprint will offset the tax revenue losses of huge amounts of lower property values. Property Values out several miles from the route must be evaluated to credibly and fully understand the Loss of Tax Revenue. Only then can a credible Cost/Benefit analysis be done regarding Tax analyses. FRA Must Correct this Miscalculation.	Refer to VA-1.
Glenn Mannina	2/5/2018	Website	(Ref: DEIS Appendix F TCRR FDCE v7 REPORT; Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199; Sect. 16.2.5, Pgs. 185-186). Comment:The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. The safety of a train passing in rural Texas where Hunting is at the highest level was never mentioned. Question: What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FRA was not specific on what type of monitoring system would be used. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use. A train hitting a 300# Feral low center of gravity Hog would be devastating. More specifics specifications should be provided to TCRR for both fencing and monitoring systems	Refer to SS-2, SS-10 and SS-12.
Glenn Mannina	2/5/2018	Website	(Ref; DEIS)Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Comment: The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis.	Refer to NV-1 and NV-10.
Glenn Mannina	2/5/2018	Website	(Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Comment: The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA?	Refer to NV-1 and NV-10. The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24-hour period. The assessment is based on the reference noise level of a train passby at a known speed, the total number of trains per day and night, the length of each train, and the actual speed of the trains at a given location.
Glenn Mannina	2/5/2018	Website	Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Nothing In the DEIS on Construction Safety). The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how it applies to the Safety of the Public during Construction. Question: Is the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction Safety while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and required to be Implemented by TCRR and its Contractors. Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project?	Refer to SS-19, SS-21, SS-23 and TR-6.
Glenn Mannina	2/5/2018	Website	Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 2.13, Pgs. 20-21 of 34; Also Sect. 2.3, Pgs.3-4 of 34; Also Sect. 6.2, Pg. 29 of 34). Comment: Based on the size of Raw Materials and Structural components being moved on existing roads, there will be significant Damage to Existing Private, City, County, State and Federal Road/Highway Infrastructures. The Government entities and the Public deserve to understand How much damage to roads and infrastructure and where it can be expected. Question: Who will pay for this damage repairs? Question: Will the Public have to wait 5 years to see the damage repaired? Question: Who will pay for damages to the public vehicles as a result of having to use unsatisfactory roads for 5 years?	Refer to TR-7.
Glenn Mannina	2/5/2018	Website	Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; MAIN TEXT III; Sect. 2.5, Pgs. 5-6 of 34; Also Sect. 4.22, Pg. 24 of 34;Also Sect. 5.1.1, Pg. 27 of 34). COMMENT: The Negative Impact of Increased Public Travel traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, and Negative Impact to the General Flow of Business has not been Quantified by the FRA. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters must be provided to TCRR.	Refer to TR-6.

Glenn Mannina	2/5/2018	Website	(REF: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 2.4, Pg. 4 of 34). Question: What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials.	Refer to SC-4 and TR-8.
Glenn Mannina	2/5/2018	Website	(REF: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 2.4, Pg. 4 of 34). Question: What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials.	Refer to SG-4.
Glenn Mannina	2/5/2018	Website	Premature Applicability of FRA Process, FRA DEIS Comments:TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure 20% of the Distance in Miles of controlled Land to lay track down on? The FRA Must Cease ALL Work on TCRR's HSR EIS until TCRR has proven they can acquire the Land that TCRR MUST Own in order to build this Project. Without that, TCRR and the FRA are wasting time and money. But in the FRA's case, Taxpayer Money!	Refer to ED-1, ED-2, NE-1 and NE-8.
Glenn Mannina	2/5/2018	Website	FRA's Abuse of Federal Power Over a State Agency. DEIS Comments. TCRR and the FRA have not worked with local County Emergency Response entities to understand the safety and security needs of TCR which will be paid for by the local Counties. In fact, it was discovered via a Lawsuit against TXDOT by the Waller County Regional Planning Committee, a True local County Government Body, the the FRA had instructed TXDOT to no longer meet or work with this local government body for any activities associated with the TCRR HSR. TXDOT/TCRR LOST that Court Case, Appealed, and LOST again. Question: Is this not overstepping the FRA's Power over local Governments? Question: Is this not the reason that the FRA's detail of Emergency Response Impact was void of mitigation details in order that there was ZERO increase in ER Times?	Refer to PI-1 and SS-23.
Glenn Mannina	2/5/2018	Website	Applicability of FRA Current Regulations, FRA DEIS Comments:Current The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: There exist NO Texas State Regulatory Body to OVERSEE EXECUTION OF THE TCRR HSR PROJECT. FRA's responsibility is limited to Design/Operating "RR Safety", NOT Execution, leaving the Public without a body to refer too if commitments are not met by TCRR.. Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To the State putting in place a State Regulatory Body over HSRs operating at speeds of 205 mph?	Refer to SS-4 and SS-5.
Glenn Mannina	2/5/2018	Website	Applicability of FRA Current Regulations, FRA DEIS Comments:Current The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To developing, approving, and publishing the new regulations for speeds of up to 205 mph?	Refer to NE-2.
Glenn Mannina	2/5/2018	Website	Lack of Eminent Domain Powers by TCRR, FRA DEIS Comments: The Federal Railroad Administration (FRA) does not have the authority to grant ED, only the STB or the state. The FRA clearly states they CANNOT give an entity ED powers. Question: So, if TCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's narrow scope of "RR Safety"? THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1 and NE-1.
Glenn Mannina	2/5/2018	Website	Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of-way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, ED-3, GN-4, NE-1 and NE-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	2/5/2018	Website	Lack of Eminent Domain Power by TCRR, FRA DEIS Comments: The Federal Surface Transportation Board (STB) denied Texas Central Railway (TCR) Eminent Domain (ED) Powers and proclaimed they do not have oversight jurisdiction over TCR's Project. Despite TCR trying to bypass the State of Texas regarding regulatory guidance, the STB ruled that they must go back to Texas for regulation and oversight. TCRR has not proven with the State Legislature (2017 Session) or in Court suits that they possess ED or that they are an Operating RR. So, TCRR does not possess ED at either the Federal or State Level. TCRR is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, NE-1 and NE-8.
Glenn Mannina	2/5/2018	Website	"No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8).The No Build analysis totally skipped the huge increase in Impacted Acreage from 3000 acres as communicated in writing by TCRR to 8000 acres has not been addressed by the FRA at all nor was it a part of the No Build Alternative Analysis. TCRR's current plan has caused the Closure, Rerouting, Modification, and Rebuilding over the HSR of many Private and Public Roads and increased the Road ROW land required without any ACCOUNTABILITY FOR TCRR's Earlier Claims. The FRA simply glosses over those huge changes. Why is that? What about the many Public Safety considerations that the FRA has Glossed Over (Increased ER Times, Safety of Traffic Congestion around Construction Sites, Lane closures, rerouting roads, road closures and more Public Road Travel required just to get around from point A to point B due to the HSR)? The FRA does NOT provide adequate documentation for elimination of the No Build Alternative	Refer to BA-3, BA-6, LU-9, LU-14, TR-6 and TR-8.
Glenn Mannina	2/5/2018	Website	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Comment: The HSR remote route with its crossings being routed very close to O&G and Utility Facilities is "Screaming" for application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those Scenarios followed by Mitigation Actions/Planning	Refer to EU-2, SS-18 and SS-19.
Glenn Mannina	2/5/2018	Website	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Question: Has a Risk Management System been applied to the Security of the HSR during Construction and Operation? Question: Since the FRA is responsible for RR Safety, including that of the Public, and would be the Federal Agency to allow TCRR to Operate a RR in the Future with the FRA's Oversight, why is there no mention in the DEIS of Risk Management systems being applied to Public Safety or Security	Refer to SS-19 and TR-6.
Glenn Mannina	2/5/2018	Website	Topic: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Question: Have Risk Event Scenarios been developed on any activity of the HSR Construction and Operation along with performing risk assessments by qualified Risk Engineers for those Events/Scenarios? Question: Has the FRA applied any Risk Management System to the highly congested traffic flows along with road and lane closures, modifications and rerouting of roads, as well as any Risk Management situations associated with construction of the HSR?	Refer to SS-19 and TR-6.
Glenn Mannina	2/5/2018	Website	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Question: Why does the DEIS NOT mention any Risk Management System to be applied to the crossing or close proximity of the HSR with other hazardous facilities such as O&G Facilities, Pipelines, or Transmission Lines? Question: Does the FRA NOT consider Pipelines being crossed by the HSR a Risk Management Issue considering Pipeline Explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or ARE the FRA's Safety processes VOID OF A RISK MANAGEMENT SYSTEM?	Refer to EU-2, SS-18 and SS-19.
Glenn Mannina	2/5/2018	Website	Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue). The Public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. Beware FRA, TCRR based on its track record for 3 years, will likely not fulfill many of the commitments included in the DEIS and when they don't, the FRA will be held accountable. There are also questions about TCRR's Unethical Actions during the collection of Field Data and it looks like the FRA has NO Problem Implicating themselves in potentially illegal activity against the very people they are being paid to Protect	Refer to NE-1, NE-2 and NE-8.
Glenn Mannina	2/5/2018	Website	Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue). Contrary to TCRR's advertisements, TCRR has done everything possible to mistreat the Public and disregard Private Property Rights and to be an extremely Non-Transparent Company with the Public. Lots of questions have gone unanswered for years. As an example, I personally provide four (4) pages of Questions to Bob Eckels, President of TCRR at that time, in early 2015 at the Madisonville TCRR Open House, and after promising every one of my questions would be answered within 3-4 weeks, and none were ever answered. Another employee, Travis Kelly, a year later after telling him my story,	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			also promised me the answers. After finally telling me his lap top was stolen and he had to recreate the answers, I never received any answers from him.	
Glenn Mannina	2/5/2018	Website	Business Ethics, Public Trust, and TCRR Competence Level (Ref: Nothing In the DEIS on This Issue). TXDOT was unwilling to work with a Local County Government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an Advocacy group, but a true County Government body. The County sued TXDOT and it was found during the court case that the FRA had told TXDOT NOT to work with this local Government body, and not attend the meetings. Waller County won the case, TXDOT then appealed, and lost the appeal. Question: Did the FRA Break Federal Law by telling a Texas State Government Body not to work with a County Government Body and not to attend the meetings? Question: Why would the FRA not want input from a County Government Body? Question: Since the Public is full aware of this case, does this not destroy the Public Trust in what the FRA has done regarding the HSR DEIS?	Refer to PI-1.
Glenn Mannina	2/5/2018	Website	Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Will water be used almost constantly during dry times (Almost all the time in Texas) to water all of the temporary dirt roads along the HSR construction route and at road modifications? Question: What is the volume of water usage for this project, including during Construction and how does it fit into Texas' focus on water conservation programs	Refer to WW-1 and WW-2.
Glenn Mannina	2/5/2018	Website	Significant changes to the magnitude, congestion, and make-up of Traffic Flows in small rural areas as a result of newly built Construction Sites on major Road arteries, Road Closures, Road Modifications, and Rerouting Existing Roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). Comment: Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The Public has no idea of the potential negative impacts to their local communities and roads as a result of this Project. The DEIS is not complete without the FRA advising the Public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project Construction Phase.	Refer to TR-6, TR-7 and TR-8.
Glenn Mannina	2/5/2018	Website	Texas State Regulatory Agency/Body (Ref: DEIS_MAIN TEXT I; DEIS Abstract). Question: Does RR Security fall under the responsibility of the FRA? Question: Where in the DEIS does the FRA address the new State Expectations for Security of HSRs? A number of years ago when an HSR was being considered, the State of Texas established a Regulatory Board for HSR Oversight. However, the Project never happened and the State Board was eliminated. Currently, whenever there is a Project that ultimately is used by the Public, there exists State Regulatory Agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide Oversight Responsibility to protect the interest of the Public / Taxpayers. Who will protect the Public's Interest outside of any FRA RR Safety Responsibilities during Execution of this Project?	Refer to NE-1, NE-2 and SS-5.
Glenn Mannina	2/5/2018	Website	Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction. Comment: Past Projects such as Road, Transmission Line, and Pipeline projects normally employ a very significant contingent of workers from Outside Texas and certainly from Outside the Local Areas. This will result in additional pressure on County services and infrastructure. The Counties must have Time and Funding to be able to adequately respond to these large challenges	Refer to SC-4 and TR-6.
Glenn Mannina	2/5/2018	Website	Adverse Impact of the Added Construction Personnel on the area traffic, schools, and housing Infrastructure (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Infrastructure Topic during Construction). Question: There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including Education, particular in very small ISDs?	Refer to SC-4 and TR-6.
Glenn Mannina	2/5/2018	Website	Personal Safety Expectations During Construction (Ref: DEIS Omission; Nothing I could Find In the DEIS on This Construction Personal Safety Topic). Question: The DEIS is absent of any Personal Safety Expectations being provided to TCRR for a safe execution of the very large HSR Project. Is the FRA not concerned about the Public's Safety during the Construction phase where there will be very close interactions between motorists and Construction of the HSR & Roads? Question: Is the FRA OK with fatalities of the public as a result of this project construction to the extent of not even discussing it or placing expectations on TCR for a required comprehensive Safety System with Management Involvement with Construction Personnel while also ensuring that Motorists' Safety is maintained at a very high priority	Refer to SS-19, SS-23 and TR-6.
Glenn Mannina	2/5/2018	Website	Credibility of Land Survey Data (Ref: DEIS_MAIN TEXT III); Sect. 3.13.3, Pg. 3.13-6). Question: On my property in Leon County, the DEIS Natural Resources Map (Natural Resources 3 of 4, Pg. 53 Of 65, Intermittent Stream) shows a Creek on my property that is at a minimum, 150-200 yards too far to the West (It does not touch the Utility Corridor Opening vs. what is shown on the DEIS Map), so Where did this Survey Data come from that is so INCORRECT? Question: I NEVER GAVE TCRR PERMISSION TO BE ON MY PROPERTY ALTHOUGH IT WAS REQUESTED AND I RECEIVED IMMEDIATELY A VERBAL THREAT OF "LEGAL ACTION" via Future Letter BY Mr. Ken Williams with Contract Land Services (TCRR's Landowner Coordination Representative), August 16, 2016 at 4:00 p.m., WHEN I DENIED THERE REQUEST. What other SURVEY DATA IS INCORRECT IN THE DEIS	Refer to GN-1 and NE-8.

Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	2/5/2018	Website	Credibility of Land Survey Data (Ref: DEIS_MAIN TEXT III); Sect. 3.13.3, Pg. 3.13-6). Question: What percentage of Land Survey Data of the total used in the DEIS actually was obtained by "Boots on the Ground" working specifically for this project vs. obtaining data from other sources or other projects in the area? Question: What percentage of Land Survey data Used in the report is backed up by a Landowner Approved Land Survey Permission Form?	Refer to GN-1, LU-1 and NE-8.
Glenn Mannina	2/5/2018	Website	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: On my property, I see only the evidence of the Houston Toad ONLY on the Maps, however in 2013, a Master Naturalists found two locations in November that Navasota Ladies Tresses existed on my property. However, No orange hatching is shown on my property? The Credibility AND Accuracy, and Legality of the FRA DEIS at a minimum is in question. as well as has Property been inspected or surveyed without the Landowner's written permission for access? THE FRA MUST SHOW THE PUBLIC PROOF OF SIGNED LANDOWNER PERMISSION FORMS FOR EVERY PIECE OF SURVEY DATA USED	Refer to NR-4. NEPA does not require 100% of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species of the Final EIS.
Glenn Mannina	2/5/2018	Website	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question:If the FRA cannot verify that each and every piece of data used was legally obtained, then there exists the potential or likelihood based on evidence above that the DEIS incorporated data that was Illegally Obtained. Does not that make the FRA DEIS an Illegal Document if it contains Illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign an Affidavit stating the data in the DEIS was obtained under their permission of a Signed Survey Permission Form.THE FRA MUST ENSURE THE FRA DEIS IS PURGED OF ANY ILLEGALLY OBTAINED SURVEY DATA	Refer to NE-8 and NR-4.
Glenn Mannina	2/5/2018	Website	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice). Question:How is so much Endangered Species Data shown on these Environmental Maps knowing that very few Private Landowners actually signed over Permission to TCRR to access their property	Refer to NR-4. NEPA does not require 100% of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species of the Final EIS.
Glenn Mannina	2/5/2018	Website	The use in the DEIS by the FRA of Regional Environmental Survey Data or data from other project sources vs. obtaining recent data by using "Boots on the Ground" Inspections (Ref: DEIS Appendix D Environmental Justice).Question: How much (approximate %) of the total Endangered Species Environmental Survey Data that is shown on the DEIS Environmental Maps (namely Houston Toad and Navasota Ladies Tresses (NLT) Cross Hatching, Orange for NLT and Green for HHT) was actually obtained by using "Boots on the Ground" inspections by Environmental Experts? Question: Is any Data shown on the Maps where Landowners did not provide Environmental Surveyors the Permission to inspect their property? As an Example, my own property in Leon County shows the potential or existence of the Houston Toad, however, I never gave permission to TCRR for any surveyors, Land or Environmental, to have access to my property?	Refer to NR-4. NEPA does not require 100% of the Project to have field surveys conducted. The amount surveyed can be found in Section 3.6, Natural Ecological Systems and Protected Species of the Final EIS.
Glenn Mannina	2/5/2018	Website	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8).The maximum noise level for any point along the HSR will NOT be just one train passing by, but actually two trains passing each other in opposite directions. Not only does the noise level of two trains exist, but also the addition of a Scientific Proven "Slapping Sound" as a result of two trains traveling at a high rate of speed in two opposite directions on adjacent tracks. In the DEIS where Property Tax and Property Value is discussed, the FRA says Noise is not anticipated to negatively impact Property Values because the HSR is "Electrified". But yet the FRA in another section discusses the potential need for Noise Abatement in some areas. This is a clear Contradiction within the same FRA DEIS Document.	Refer to NV-1 and NV-10.
Glenn Mannina	2/5/2018	Website	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Question:Since the FRA states that Noise Abatement should be studied after Detail Design for potential use in certain communities, BUT then in another section, the FRA states that Noise is not anticipated to negatively impact Property Values because the HSR is ""Electrified", Did the FRA not compare its own comments or perspectives between different sections but on a similar topic in order to prepare a much higher quality and coherent DEIS report.	Refer to NV-1 and VA-1.
Glenn Mannina	2/5/2018	Website	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. Question: What is the maximum Noise Level in dBA of TWO trains, NOT ONE, passing each other at any point along the HSR Route while traveling in opposite directions on adjacent tracks? The DEIS only covers the Noise impact of One Train in One Direction (87 dBA at 50').	Refer to NV-1.
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. Well, the DEIS shows 66 Private Road Closures, 43 Private Roads Rerouted, 161 Private Road Crossings, 1 Public Road Closure, 139 Public Roads Rerouted, 463 Public Road Crossings, and many roads, FM and CR, going OVER the HSR vs. the Viaduct going over	Refer to ED-2, TR-8 and TR-10.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			the roads to minimize destruction of our road system. DIES states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or New access if it is PROPOSED as part of the ROW construction? Question: What if it is NOT Proposed, meaning TCR actually gets to decide.	
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR? Question: Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually BE CLOSED during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Question: Will all Road Construction be completed before, at the same time, or after the HSR Construction is completed? Question: What priority will be placed on repairing and replacing roads vs. construction of the HSR?	Refer to TR-6, TR-7 and TR-8. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See TR-MM#1: Traffic Control Plan in Section 3.11.6.2, Transportation, Mitigation Measures for more information.
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) TCRR has told the public on a number of occasions at multiple meetings that hardly any roads would go over the HSR requiring modifications and has advertised using a Color Drawing of the HSR Viaduct over a major highway with no modifications necessary on the public road to give the impression that existing roads would be virtually untouched. Question: Why does the FRA DEIS show a completely different plan than previously advertised by TCRR with a number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR	Refer to BA-3 and TR-8.
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) TCRR has told the public on a number of occasions at multiple meetings that hardly any roads would go over the HSR requiring modifications and has advertised using a Color Drawing of the HSR Viaduct over a major highway with no modifications necessary on the public road to give the impression that existing roads would be virtually untouched. Question: Why does the FRA DEIS show a completely different plan than previously advertised by TCRR with a number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR?	Refer to BA-3 and TR-8.
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) An Access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any Road built along the HSR would become a Public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. Contrary to TCRR's Claims and as a result of TCRR's plan, Landowner's property IS BEING CUT IN HALF WITH NO FREE MOVEMENT! This Plan MUST BE REJECTED BY THE FRA IMMEDIATELY DUE TO THIS HARM TO LANDOWNERS.	Refer to BA-3, LU-9, LU-14 and TR-8.
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Question: Also, the FRA should require TCRR to perform a Mitigation study to reduce the number of roads modified and/or being rebuilt over the HSR AND/OR SLOW down the train so the vertical and horizontal deviations might be relaxed resulting in much less Road work and destruction of less land and fewer homes. The Public is suffering Undue hardships as a result of TCRR's current Plan. THE FRA MUST HALT ANY FURTHER WORK ON THE EIS until TCRR has developed a NEW Plan to mitigate the wasteful use of Private Property due to placement of roads OVER the HSR, the additional loss of ROW Property due to rerouting or modifying roads, and destruction of Additional Private Homes	Refer to BA-3, LU-9, NE-1 and TR-8.
Glenn Mannina	2/5/2018	Website	Road Closures and Modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Question: Documentation exists TCRR told the public that they only needed around 100" ROW Width for the HSR. In many places that has increased to 400' at a minimum. Question: Is it not the case, after looking at all of the HSR Route Maps ROW, the significant increase of ROW might be also a significant part of that increase in Impacted Acreage.	Refer to BA-3 and LU-14.
Glenn Mannina	2/5/2018	Website	Regarding Emergency Response times during Construction of the Dallas to Houston HSR, the FRA DEIS Summary Statement in File TEXT III, 3.16-24, is "Impacts to Emergency Response (ER) Times are NOT Anticipated to be Significant". Question: Since the FRA study does indicate an increase in ER times, is even ONE Single Public Fatality due to Increased ER Times Acceptable by this FRA DEIS? Question: Since this FRA DEIS is not based on traffic modeling yet of the traffic increase, particularly during Construction with many Roads under construction ALSO, then how can the FRA with any credibility or accuracy make a claim that "Impact on ER Times is not anticipated to be Significant."	Refer to SS-23.
Glenn Mannina	2/5/2018	Website	The Dallas to Houston FRA DEIS after showing High, Medium, and Low Risk levels of increased Emergency Response times (Quantified) only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant". The FRA then states that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then	Refer to SS-23.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed Emergency Response times.	
Glenn Mannina	2/6/2018	Handwritten	Good Evening, My name is Glenn Mannina and I have Opposed this Uneconomic Land Grab HSR Project for 3 years. Don't be fooled, the more I look at this Project AND the FRA's DEIS, the more I am convinced this is nothing more than a Land Grab Project AND a US Taxpayer Money Grab Scam. Many of us have said this, but the hard push by the FRA releasing this very poorly prepared document for a Private company that can't even prove they are a RR IN COURT is Unethical and Fraudulent. I am convinced TCRR knows this project will Go Bankrupt, as they are just a shell company working as a Conduit for the Japanese to get their Proprietary Technology a foothold in the US. Touching also on the issue of FRA's non-independence, tell me FRA, why did you remove from the "Purpose and Need" Criteria list stated in the Stage 1 Screening, the requirement of this project to prove "Economic Viability"? Do you think it is fair to force on the Public the huge emotional, Unsafe, and Life Changing impacts of this Project that will forever Scar the Texas Landscape without requiring TCRR to prove "Economic Viability"? If TCRR was so sure about the solvency of this project, then why are they not willing to share all of their Economic Viability numbers, particularly Ridership? The Public is sacrificing a huge amount, so let the Public take their numbers apart. What do they have to hide? TCRR also knows they will be stealing US Taxpayer Money (RR Loan) without reimbursement after Bankruptcy since the Japanese would be the largest controlling creditor and they will get the assets first. The same kind of model was used for SH 130 near Austin as the Taxpayers were left with 30%+ of the ownership but they will not receive it for 1 Os of years as the other larger creditors were first in line. Those US Government RR Loans can be from 1/3 of the Total Investment to up to 49% with Approved Exceptions, The Private Investors totaling only 1 % of the Investment will make out like bandits as a result of the station properties they sold to TCRR and the development around them. I will close this way: Here is the Definition of FRAUD folks: "FRAUD" per Webster is "An Intentional perversion of truth to induce another to part with some valuable thing belonging to them or to surrender a legal right". Now Tell Me, Does That Sound Familiar? IF THIS TCRR Land and Money Grab DOES NOT FIT THE DEFINITION OF "FRAUD" I DON'T KNOW WHAT DOES. Folks, this is what the FRA is supporting by allowing this non-RR to utilize the FRA system as the clear road map to the destruction of Texas Land, Landowner Families, and Private Property Rights! Folks, FOR ALL OF YOU OPPOSERS OUT THERE, FAILURE IS NOT AN OPTION! FRA and TCRR, we will not stop fighting and will not give up our Land nor Taxpayer money to a bunch of Fraudulent Thieves! "COME AND TAKE IT" TCRR AND FRA!! FRA, Please Respond in Writing.	Refer to NE-1 and PN-4.
Glenn Mannina	2/6/2018	Handwritten	I have Opposed this Uneconomic Land Grab HSR Project for 3 years. My Topic is HSR Noise & Abatement Mitigation and I ask the FRA to finally fix your INCORRECT Maximum Noise Level you used in all of your Noise analysis. The FRA DEIS Incorrectly bases ALL of its NOISE Analysis Work using Only noise levels (87 dBA) for one train passing by. That is NOT the Maximum. The DEIS FAILS to use the Larger Noise Level of Two Trains passing each other in opposite directions WHICH IS REALITY. The Normal HSR Operating Plan is the constant use of both tracks for 16-18 hours a day by 4 sets on each track so this is a reality. I had included this blatant Omission in a Letter to the FRA, Dated August 8, 2016, to the Attention of Jerry Smiley, Nancy Gates AND Copied Michael Johnsen. What part of this simple design criteria does FRA Not Understand. When one designs a wide two lane structural Bridge, do you assume the load of only one 18 wheeler passing? Of course not because two 18 wheelers can pass going in opposite directions on that bridge at the same time. The same is true about the Noise from these two sets of trains running in opposite directions passing each other. Additionally, the FRA DEIS FAILS to disclose the Scientifically proven Fact of a "Slapping Sound" or popping noise as a result of the two air flows that are pushed by each train colliding and then bouncing between the sides of the trains. This was found after studying HSR's going through tunnels creating the loud popping sound. The DEIS does not specify criteria for Noise Mitigation or Abatement for TCRR except provide some general guidelines and state it will be looked at After more detailed design is completed. The FRA knows TODAY where the HSR passes closely by homes, businesses, schools, through, in front of, and alongside of Subdivisions. So Why has the FRA DEIS NOT set out specific Abatement use requirements vs. leaving it up to TCRR After Design is done? This MUST be at a minimum In the Detailed Design. Preliminary Design with a Known Route, Known Residents & Schools, and Known Maximum Noise Level is all that is needed to determine the need for noise abatement and where. Proven by a Cornell University Study, In Children, persistent noise (such as that from a HSR train) causes impaired reading comprehension, and long term memory problems. Noises from Elevated trains lead to reading difficulties and negative academic performance. Direct damage to hearing occurs in children from upwards of 80dba (note - the proposed HSR minimum is 85 dba). The more often kids are exposed, the greater the effect. Long term results mean that HSR near children = hearing loss, speech impediments, learning difficulties, attention disorders and emotional problems. Even the Japanese recognize the impact of HSR noise, and it is HEAVILY regulated near residential areas, and is not permitted above 70 dba. Multiple studies have been conducted on children learning or living within 500' of a High Speed Train, and every study's results prove that the effects are disastrous to the health of not only children, but also the elderly.Children under 13 years of age and those with pre-existing challenges, including ADD, ADHD, or Dyslexia, will be affected. Where is the FRA's study of the HSR noise effects on Children's hearing? It is Unacceptable to not address this in the DEIS. So the entire FRA DEIS Noise evaluation is Fatally Flawed as they used the Incorrect Maximum Noise Criteria for Two HSR Trains Passing each other and missed the Slapping Noise all together.	Refer to NV-1, NV-6 and NV-10.

Glenn Mannina	2/6/2018	Handwritten	<p>I have been Opposed this Uneconomic HSR Project for almost 3 years since the Opposition Meeting in Montgomery, TX of February, 2015, when 800 people showed up at the Montgomery Lone Star Community Center.</p> <p>* It is Obvious "Those who will be Hurt the Worse by this Project will be Those Who Will Benefit NONE at all" AND there is no "True Broad Public Need/Necessity" for the HSR Project.</p> <p>* My Topic is My Personal Story and TCRR's lack of transparency and Lack of a Credible Relationship with Landowners.</p> <p>* In April, 2015 at the TCRR Madisonville Open House, I presented Four (4) pages of questions to TCR's Mr. Robert Eckels, at that time TCR's President, and asked if TCR would respond in writing with answers to my questions. In front of at least Ten (10) other attendees, Mr. Eckels promised TCR would respond within a couple to three weeks and he also gave me his Email and Cell phone number, but never to respond. This is what Holly Reed Calls *Working Closely With Landowners'.</p> <p>* At another TCRR Open House in late 2015, TCRR'S Mr. Travis Kelly also promised me a response to my Written Questions. After saying he was close to sending me a response in writing by Email, he finally told me his computer was stolen with the file he was about to send me and would have to recreate the file. That was the last communication to me from Mr. Kelly. NO returned phone calls or Emails.</p> <p>* On August 9, 2016, I attended a Grimes County Press Release event regarding the new County Rule requiring a Permit and Proof of Eminent Domain prior to approval of a HSR to cross County property. On that Day, I did an interview with KTBX TV regarding what I receive from other companies who can prove Eminent Domain.</p> <p>* Then on August 16, 2016, I received a phone call from Mr. Ken Williams with Contract Land Services (CLS) representing TCRR asking for permission to get on my property to survey, even though I was not on the route but three other properties converged at my same property corner and at least two were in fact on the route, I suspect they had Denied TCRRs request for a Survey. After a bit of conversation, I DENIED the request. Immediately, Eighteen (18) months with no personal contact with me regarding specifically my property from TCRR, Mr Williams told me I might receive a Legal Letter from TCR followed by a Legal Injunction Filed Against me personally. I considered this a "Threat" and told Mr. Williams so.</p> <p>* TCP also stated "Early Notification: TCP pledges that it will provide the landowners that might be impacted by the high speed rail project with an introductory letter explaining the project." I have received no such notification at any time including prior to any Open House or the August, 2016 *Threatening" phone call from Contract Land Services.</p> <p>* What gives TCR the Authority or the Right to force or require me under the threat of legal action, a private property Landowner, to accept, anything less regarding ED Authority Documentation/Proof from TCR than I am willing to accept, deserve or expect based on experience of receiving such documentation/proof on several occasions (in all applicable cases) from other truly qualified companies (Companies for whom TCR claims they have similar ED authority) who have been sponsored correctly by a third party Government/Regulatory Agency or Entity?</p> <p>* Important Note: TCR's previous response to this question by me on several occasions has been "That is a Legal Question".</p> <p>* Regarding TCR'S Claim of Being an "Operating Railroad", What makes TCR an authorized State of Texas "Operating Railroad"? Has TCR produced proof that they have passed ALL Texas State Law Requirements to be legitimately registered in Texas as an "Operating Railroad"? Where are TCR's Tracks, Operating Rolling Equipment, Land, Stations, Operating Personnel, etc.?</p> <p>* Holly Reed also said, "We are working each and every single day on a personalized basis and making sure we answer questions and address concerns, and like I said, it is going well in those conversations". Mrs. Reed, your company has proved the opposite.</p>	Refer to ED-1, ED-2, NE-1, NE-8, PI-4 and SC-19.
Glenn Mannina	2/6/2018	Handwritten	<p>I am a Landowner in Leon and Montgomery Counties. Texas Central Railway's (TCR) Managing Director of External Affairs, Holly Reed, made the statement on August 15, 2016 to Shannon Register of Real Estate Radio when asked about the TCR's strained relationship with Landowners, "We are working each and every single day on a personalized basis and making sure we answer questions and address concerns, and like I said, it is going well in those conversations". I beg to differ with this "False Narrative" as well as challenge TCR's Guiding Principles. As a Landowner on the "Utility Corridor Route", my relationship directly with TCR began in April, 2015 at the Madisonville, TX TCR Open House. At that meeting, I was seeking lots of information to help me make an informed decision regarding the feasibility, the reasonableness, and the necessity of TCR's High Speed Rail (HSR). Being prepared, I presented Four (4) pages of questions to TC R's Mr. Robert Eckels, at that time TCR's President, and asked if TCR would respond in writing with answers to my questions. In front of at least Ten (10) other attendees, Mr. Eckels promised TCR would respond within a couple to three weeks and he also gave me his Email and Cell phone number. After four (4) weeks, I began attempting to contact Mr. Eckels by Email and phone with never a single response. Additionally, after attending another Open House in late 2015, TCR's Mr. Travis Kelly also promised me a response. After saying he was close to sending me a response in writing by Email, he finally told me his computer was stolen with the file he was about to send me and would have to recreate the file. That was the last communication to me from Mr. Kelly after me attempting to contact him a number of times for a number of weeks.</p> <p>My property is less than 500' from the HSR preferred route and have never received a written invitation to a single Open House, but I have attended Five (five) of them and never received any direct communication from TCR until August, 2016. On August 9, 2016, I attended a</p>	Refer to ED-1, ED-2, NE-1, NE-8, PN-3, SS-1, SS-6, SS-7 and SS-10.

			<p>Grimes County Press Release event regarding the new County Rule requiring a Permit and Proof of Eminent Domain prior to approval of a HSR to cross County property. On that Day, I did an interview with KTBX TV. Then on August 16, 2016, I received a phone call from Mr. Ken Williams with Contract Land Services (CLS) representing TCR asking for permission to get on my property to survey, even though I was not on the route but three other properties converged at my same property corner and they were in fact on the route. I suspect they had Denied TC R's request for a Survey. After a bit of conversation, I DENIED the request. Immediately, Eighteen (18) months with no personal contact with me regarding specifically my property from TCR, Mr. Williams told me I might receive a Legal Letter from TCR followed by a Legal Injunction Filed Against me personally. I considered this a "Threat" and told Mr. Williams so and stated I am prepared to defend against TCR's request to access my property. Finally, I was removed from commenting on TCR's Facebook because I asked the same questions too many times, all except one of course, without a single TCR response/answer. This kind of initial contact treatment in 18 months along with the 40 plus lawsuits of Landowners by TCR proves the aforementioned false narrative communicated by TCR's Holly Reed as well as TCP's Guiding Principle's Statement "TCP is committed to treating landowners from whom it seeks to acquire the needed property with respect". TCP also stated "Early Notification: TCP pledges that it will provide the landowners that might be impacted by the high speed rail project with an introductory letter explaining the project." I have received no such notification at any time including prior to any Open House or the August, 2016 "Threatening" phone call from Contract Land Services.</p> <p>Comments/Questions for All Texas Legislators:</p> <p>1. Question Regarding Eminent Domain (ED): I have three (3) Transmission Lines and (5) Pipelines across my two properties and am very well experienced with Eminent Domain including along the targeted TCR route of the "Utility Corridor". What gives TCR the Authority or the Right to force or require me under the threat of legal action, a private property Landowner, to accept, anything less regarding ED Authority Documentation/Proof from TCR than I am willing to accept, deserve or expect based on experience of receiving such documentation/proof on several occasions (in all applicable cases) from other truly qualified companies (Companies for whom TCR claims they have similar ED authority) who have been sponsored correctly by a third party Government/Regulatory Agency or Entity?</p> <p>Important Note: TCR's previous response to this question by me on several occasions has been "That is a Legal Question". Be aware, that in NO cases, have any of the other ED companies I have dealt with responded in that manner when faced with the responsibility of providing Private Property Landowners with the proper ED documentation/proof, particularly since it involves taking land for supposedly the common good of the "Public" from a Landowner who has worked hard to obtain and enjoy the land they own. TCR advertises their intent is not to use ED powers over Landowners. TCR has shown no proof of this through any written agreements with Landowners that they will not bring ED powers to any negotiating table nor will it be used in any way to form a purchase agreement with the Landowner.</p> <p>2. Question Regarding TCR's Claim of Being an "Operating Railroad": What makes TCR an authorized State of Texas "Operating Railroad"? Has TCR produced proof that they have passed ALL Texas State Law Requirements to be legitimately registered in Texas as an "Operating Railroad"? Where are TCR's Tracks, Operating Rolling Equipment, Land, Stations, Operating Personnel, etc.? Can I personally form an LLC within Texas, call my company a Railroad, and proceed to take private property owners' land under the authority of ED as well as access people's property for surveying rights simply because I call my company a "Railroad"?</p> <p>3. Question Regarding Safety and Security: What safety and security measures will Legislators require TCR to use since much of this TCR HSR route is in rural Texas with a great deal of wild game hunting taking place and lots of areas that may be accessed by those wanting to do harm but without being noticed? Do Legislators understand TCR's HSR will actually cross over the Utility Corridor that includes not only transmission lines but also at least two (2) Operating O&G Pipelines?</p> <p>4. Question Regarding "Public Necessity", HSR Project Economics, and TCR's Unwillingness to Release Pertinent Information to the Public: Have State Legislators received proof from TCR of "Public Necessity" since TCR claims they have ED Powers? TCR has gone on the record to say this Project will not fix any Traffic Congestion problems between Dallas and Houston. Also, recently, the "Reason Foundation" published a study proving the extreme Caution that is required for authorization of TCR's HSR as well as showing a possible much higher cost estimate for the Project. The Author had asked TCR for information but TCR required a Non-Disclosure Agreement. Since the "Reason Foundation" wanted to report its findings to the Public, they did not sign the agreement and received no information from TCR. Have State Legislators received details of TCR's economics including Ridership and Cost figures proving that TCR will be able to pay back the Construction cost/Loans as well as meet O&M & Depreciation cost requirements while making a profit (Particularly needs to be proven since only 2 HSRs in the entire World can make a profit without a Subsidy)? TCR is not a totally Privately Funded Project. Do State Legislators</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			understand that TCR has stated in writing that they Will Require Federal Government Backed Loans to fund the construction as well as understand the scenarios that could create the need for Federal Taxpayers to pick up the tab in case TCR cannot pay back the loan(s)?	
Glenn Mannina	2/6/2018	Handwritten	"No Build Alternative". (Ref DEIS Main Text I, Sect. ES.8, pg. 8).The No Build analysis totally skipped the huge increase in Impacted Acreage from 3000 acres as communicated in writing by TCRR to 8000 acres has not been addressed by the FRA at all nor was it a part NO Build Alternative Analysis. TCRR's current plan has caused the Closure, Rerouting Modification, and Rebuilding over the HSR of many Private and Public Roads and increased the Road ROW land required without any ACCOUNTABILITY FOR TCRR's Earlier Claims. FRA simply glosses over those huge changes. Why is that? What about the many Public Safety considerations that the FRA has Glossed Over (Increased ER Times, Safety of Congestion around Construction Sites, Lane closures, rerouting roads, road closures and more Public Road Travel required just to get around from point A to pint B due to the HSR)? The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. 'No Build Alternative". (Ref DEIS Main Text L Sect. ES .8, Pg. 8).The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. No Build is actually the Correct Answer. First, the FRA DEIS Understates the Damage to the Public and Property but Overstates/Assumes the HSR Need. Second, TCRR Underestimates the Project and overestimates the Ridership. The FRA never considered the Reason Foundation's Analysis (which clearly proved this project WILL F AIL) nor has it been mentioned in FRA DEIS at all. That is NOT AN OBJECTIVE UNBIASED FRA DEIS ANALYSIS. "NO Build Alternative". (Ref DEIS Main Text I, Sect. ES.8, Pg. 8). Here are reasons the 'No Build Alternative" MUST be reconsidered by the FRA. First, the Claims by the FRA on 1-45 Transportation Predictions, Traffic Congestion, Safety on 1-45, and Transportation Alternatives are Not Adequately supported with Detailed Facts. In fact the opposite cases have been made with much more Facts. Second, The "Public Need" has never been established in the DEIS by the FRA. Third, "Public Need" must clearly be established due to the huge negative Impact Of Landowner's Property, Homes, Cemeteries, Livelihood, Existing Public Roads, and County Maintenance revenues that has not been adequately covered by the FRA DEIS nor has it been Quantified by the FRA the other things that support the HSR have been Quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the Facts to back it up. "No Build Alternative" _ (Ref DEIS Main Text I, Sect. ES.8, Pg. 8). The public is NOT going to accept from the FRA general statements that support the HSR without the FACTS to it up. The appropriate level of Detail to support the FRA's claims about the No Build Alternative simply do exist in the DEIS. Rationale is included in another Comments page on this due to space limitations. The FRA mentions there would be no improvement of Safety on 1-45 with the No Build Alternative. The FRA must Quantify that claim BEFORE it can be used to support the FRA's conclusion that the No Build Alternative is Not an Option. Therefore, the FRA does NOT provide adequate documentation for elimination of the NO Build Alternative. "No Build Alternative". (Ref DEIS Main Text L ES.8, Pg. 8). The FRA does NOT provide adequate being a Traffic solution or Congestion Relief has been Contradicted by TCRR many times and we have that documented. TCRR has stated this Project will NOT solve any perceived Traffic issues, particularly near the big cities. Second, the FRA must show more data regarding future estimates of traffic volume. Researching past predictions, today the traffic volumes of 1-45 have in no way even come close those predictions, in fact, it has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that NO Build would provide No Alternative Transportation Needs. Where is the FRA Proof statistically that the "NEED" exists as no data is shown by the FRA?	Refer to AQ-2, BA-6, BA-9, CR-6, GN-2, GN-3, LU-14, NE-1, NE-9, PN-3, SS-23, TR-6, TR-7, TR-8.
Glenn Mannina	2/6/2018	Oral	Okay. My name's Glenn Mannina. I'm a landowner in Montgomery County. Also in Leon county. The train comes within 300 feet of my fence line. I can see where it's going to enter into the utility corridor just south of my property. I live in Montgomery County, just barely in Montgomery County, though. The first thing I'd like to say is, I really hope I don't hear the Federal Railroad Administration again repeat what Texas Central keeps saying, which is nothing but a lie, and that is TCR's a private company doing the project without use of federal funds. We know how they're going to do this. Folks, I hate to say this, but TCR knows they're going to go bankrupt. That's part of the plan. Okay? The whole idea is to get the Japanese proprietary safety management system into the United States because nobody can connect to that. Okay? So, therefore, if you get it going from Dallas to Houston and you want to go from Houston to San Antonio all of the sudden, the Japanese are going to say, Yeah, that's a great idea, but we're going to have to do it because you can't connect to us unless you use our system. Okay? That's what it's all about. In addition to the land scam, and we've called it a land grab--okay? But it's also a money scam. It's a U.S. tax loan that's going to go bankrupt. It's the same thing that happened on State Highway 130. Okay? The lowest creditors was the public, the taxpayers. So in the bankruptcy court that basically -- for the loan that was made from the taxpayers, the court said, You're out of luck; you're not the high creditor. Okay? And you'll get your money, you'll get your 30 percent, but you probably won't start getting that until 50 years down the road. State Highway 130 is a toll road. Okay? This is the exact same model. They don't care about defaulting on that loan because we're the ones going to hold it. So when the Japanese get it, because they're going to be the biggest creditor, they're going to get the assets, and when they get the assets, all they have to do is operate out of positive to be able to make some money, or not even make any money; just pay for O&M. That's all it is. So it truly is, people, a land grab and it's also a money scam. I'm part of a group that has been drilling through the DEIS for six weeks now, going through every bit of detail, and this is nothing but a piece of trash. That's exactly what it is. I'm a civil engineer, got 36 years construction experience, and we've gone through this thing. The errors, the omissions, the inaccuracies, the false statements that	Refer to GN-1, GN-4, NE-1, NE-5, NE-8, NV-1, NV-10, PI-1, PI-7 and PN-3.

			<p>are in there, a lot -- some of which came from TCR, but also came from the engineers. Oh, by the way, all third-party engineers are being paid for by Texas Central Railway. I hope you-al know that. So the FRA doesn't put a lot in here except to manage it, manage the process. It's a piece of trash. And I'm calling on the FRA not to just take this document and take our comments and maybe look at them. Okay? What I'm calling you to do is to stop this process right now dead in its tracks, because this is a piece of trash, the amount of stuff we found that's wrong with it, there's no way, no way. It would take you forever to fix the thing, because you won't fix it, you want listen to our comments. I know that because I sent some comments in on August 8th, 2016, and none of those comments were even looked at as far as noise. They got the wrong noise data in here, people. You know, they assume one train traveling on the tracks. They don't even look at the what's called the slapping sound--okay?--of two trains hitting each other going in opposite directions. Those frontal lobes of air collide with each other, and then they bounce along in between the trains. They make a huge amount of popping noise. They found this with HSRs going through tunnels. I asked three people out there, does the -- is the noise level -- I don't care if it's two decibels more or three or whatever it is. Does the noise level that you did all this analysis on, is it based on two trains passing or one, and the answer I got was one. Now, these trains are passing by every 15 minutes going in opposite directions. Okay? So that can't be the case. MS. HILLARY ROSS: Mr. Mannina, I'm going to have to cut you off there. We're not even halfway through and we've got about an hour and a half left. You can speak after everybody has gone. UNIDENTIFIED MALE: I'll donate my three minutes to this.</p>	
Glenn Mannina	2/6/2018	Oral	<p>Okay. rm going to first talk about — the very beginning of the DEIS talks about purpose and need: and also the criteria. Basically the purpose and need that the FRA put in there is the same purpose and need as TCR_ There's nothing in there about the needs of us. Okay? I want to make sure you understand that Then they measure all of the different alternatives against that purpose and need. So if I want to if I'm going to bid out some skid-steers and I want a certain person to win that bid: rm just going to take the specifications of that skid-steer and put it in the bid package. And guess who' s going to win the bid. That's exactly what's happening here: folks; exactly what the FRA is doing. Now: there's three components of the — and: by the way: for the no build: they state that the no build does not meet traffic and congestion and relief needs. Okay? So basically it goes away. Its off the table. It does never meet the needs of the traffic relief. FRA: you-all can use your studies: but go read your studies, because if you look at those studies that were done a long time ago—we looked at them--and then you look at todays at 2017, and then go look at the traffic that the prescription was made. It's not — it's way off If you make a prediction: I can guarantee you one thing -it's going to be wrong. So today's traffic is much less than the study that they're using today. Okay? They're way off And we've got this other data: and we're going to send it to you: by Amtrak that says there's no problem between Dallas and Houston. If you want a problem: go to San Antonio; where: by the way: the land is flatter. Eckels was wrong in 2014 that north-south from Dallas to Houston is relatively flat. That's baloney. I've got on 4700 feet across my property: we got a 130-foot change in elevation: and that is more than one percent the train can handle. Okay? So ifs not relatively flat. Back on this economic liability In the stage one screening study that says at the beginning of this by the FRA: there was a fourth item. Other than technological: operational: and environmental: there was a fourth item. Guess what it was. Economic viability. It was taken out. The DEIS was not studied with economic viability in it Now, you're going to come out here and destroy these people's property, their lives for five years of construction — and I'll talk about that in a second. You folks don't understand construction. It's huge. Ifs bigger than anything you've seen. So you're going to do that without asking or telling TCR: You got to prove your economic viability before you go forward. Tell these people no build is the option. Now: on roads: this affects you-all right here. The first thing I did: I looked at the constructability study. It has all the quantities of materials that are going to go into this construction. There are construction sites up and down the entire route coming from 1-45 all the way over and past the high-speed rail route. Okay? There are construction sites on each one of those mayor corridors. There's a 300-acre site at 99 and 290. And guess what. 105 there's a 200-acre site. And you-all probably know where it's going to go. Now: let me tell you: the amount of people that are going to be working in that 200-acre construction site that is going to be precasting concrete sections: all the raw materials have to come from 1-45 They're not going to come from Navasota. They're going to come from 1-45 all the way through Montgomery and Plantersville: and it' s such a huge amount of raw materials you can't believe it. Now: those have to come into those construction sites: then the precast concrete gets built: then they have to use permit loads to get it up and down to the route. I need to finish this: please. This is extremely important for these people to hear. Folks, I'm telling you: these roads are going to be dangerous: they're going to be tore up: you're going to pay the bill Montgomery County is just a pass-through county: unfortunately. I live in Montgomery County _ They're going to come to me for the money because TCR is not paying Montgomery County any taxes. Grimes County is getting at least the taxes out of them. But the roads are going to be destroyed. You take 1097: 105: 2854: all of those roads are going to have to be used to get from 45 to over here. And then just think what 105 is going to be like with 249 going on at the same time, with the renaissance festival in October and November. You will not be able to travel on that road: there's going to be problems with people just getting on that road and going down the road. One more thing. Emergency response times. You-all need to know what's in DEIS because -</p>	<p>Refer to BA-6, BA-8, BA-10, NE-1, PN-3, PN-4, TR-6, TR-7 and TR-8. Future State Highway 249 would be crossed by the Project approximately 2.5 miles south of State Highway 105. For information about traffic impacts around the proposed Brazos Valley Intermediate Station in Grimes County, see Table 3.11-48: Brazos Valley Trip Direction and Mode and Table 3.11-49: Brazos Valley Terminal Impacts 2040 LOS (Delay in Seconds per Vehicle). It is expected that the Build and modified Build conditions would result in increased traffic delays by about 5 seconds. Transit service could be provided by the Brazos Transit District or other entities to serve the Brazos Valley Intermediate Station. At this time, the Brazos Transit District does not have consistent service to this proposed station, but the agency is currently developing a service plan SH 105 would be crossed by the Project on viaduct, as shown in Table 3.11-26: Roadways in Grimes County Study Area. The Project would be built over the road which would not require SH 105 to be rerouted, closed, or reconstructed.</p>

Glenn Mannina	2/6/2018	Oral	<p>Okay. There's a lot of qualification in this study. It's just a lot of boiler plate. Okay? We've read a lot of it. A lot of boiler plate. A number of things that they haven't looked at all is quantifying what are the other impacts with all these people moving into this area and driving on the highways. Okay? Now, I've got property that I've had pipelines and power lines cross. Every one of those people that have gotten on my property, I've asked them where they are from, every one of them, on purpose. I haven't found one from the state of Texas. Arkansas, Alabama, Mississippi, Kansas, all over the place. Now, those people are going to come here, they're going to live temporarily. What about our medical facilities? What about our housing? What has been looked at? Where's the quantification on that? There is none. Now, let me tell you about emergency response time. They compare the no build--okay?--in the area of emergency response time, and they say today the -- How'd it get that far? Today the emergency response timing is stable. Okay? And it says in there that if population goes up in a slight manner over time, they can keep up with it with resources and equipment. Okay? Then that's measured against the other build alternatives. You know what they come up with? They come up with a bunch of tables that have high, medium, and low increases in emergency response times. Okay? Increases in emergency response times. Then they say, Well, if it's not over 10 percent increase, that's okay. We won't look at that detail. We won't look at the mitigation of that increase in times. We'll only look at those that are above the 10 percent. And then they say, Well, there's going to be a mitigation step, and we're going to turn it over to the jurisdictions to figure out how to fix those mitigation steps. Okay? So they're going to turn it back over to us to fix the problems of the emergency response times that they caused. People, this project is not worth a loss of a single life for any increase in emergency response times as a result of this stupid project. Not one. Not one. And I'm telling you, I'm really worried about the kids on our roads. I'm really worried. Someone talked -- Mr. Miles talked about Jewett. One thing he didn't mention is that in Jewett, not only is the high-speed rail two blocks from them, there is a 150-acre construction site right at the high-speed rail on 79. Can you tell me how all those people and trucks of raw materials and then permitted roads leaving out of that site is going to get around and out, how school kids, high school kids, young kids learning how to drive, how are they going to get in and out of that school up and down the roads safely? I'm telling you, this is a danger not only for us; it's a danger for our kids and our grandkids.</p>	<p>Refer to EU-2, SC-8, SS-18, SS-19, SS-23 and TR-6.</p>
Glenn Mannina	2/6/2018	Oral	<p>Okay. What I'm going to do is cover real quick: and I kind of call this rapid fire on trash DEIS document_Basica11y I'm first of all: I want to make sure you understand: my recommendation is that you-all withdraw this document Okay? Make sure that's documented. Not just continue working on it. Now: it was mentioned before. I'm going to say it a little bit more directly. If this document has illegally obtained data: survey data in it, in my view and rm not a lawyer, but in my personal view it's an illegal document Okay? And by the way, folks, the FRA was notified a week before it was released with supporting documentation that there was illegal data: survey data in this document: and these people one week later released it without going back and re-verifying from every landowner whose sun-eyed data was put in there that they: in fact: gave permission for people to survey. I want to make sure you remember that. Now: real quick I talked about noise before. Noise abatement; another item. These people basically put in the DEIS that, We're going to look at that in the end of detail design whether we need any noise abatement They know where all the subdivisions are: they know every subdivision they run through. Let me tell you: I can tell you where they need noise abatement All right? I don't need to study it too hard. But let me tell you something else. This is a design build project. If you don't understand that, what that means is they will start construction with about 50 to 60 percent of the design done. Okay? Design I will not be complete until 30 percent until the construction is around 30 percent At that point the design will be completed That means anything they tell you that's going to be done at the end of the detail design means it won't be done until after the construction has already started. Now: tell me that they're going to go back and retrofit noise abatement on top of the superstructure that's already been put up there right next to the train where are they are they going to do that after the project starts? NO: They're not going to do that. They're not going to retrofit it. The mitigation and the noise abatement study needs to be done. It needs to be done with the right data. Talk about emergency response time. Inability to access most of the land. You know: they've got a lot and people talked about all the information: and that's right. You know: they tell us: Oh, they got it from other studies. We've got maps in there that are three to four years old. Three to four years old are the maps. There are maps where houses are right now there that are not there One other thing I forgot to tell you. On all those road modifications and building over the high-speed rail and so forth: everything that's going to change. Guess what. You know how it got from 3,000 to 8,000 acres? Because they're taking more of the land with the modifications of the roads because they're taking more right of way: private property right of way for those modifications on the roads. It's just a domino effect You see what this is turning into? It's a monstrosity. So there's going to be a lot there are houses that were missed. I've got - I've looked at the drawings. There are houses just about every county that were missed by the high-speed rail that are now taken by the extra right of way from the road work. Can you that? Okay. No abandonment requirements mentioned at all in DEIS_ I'm from the oil industry. Let me tell you: every time we installed a facility: we have to have a how you are going to abandon it You don't install something if you don't know how you are going to abandon it. Have these guys even looked at how ifs going to be abandoned by TCR? No: not at all. Rescue advise. I got a point I can look out at the southwest part of my property. There is no road access. There will not be any road access. I've looked at the drawings. And I can tell you: if there's an incident and that train is right there and those people have to get off the train: how are they going to get off? And how are the ambulances going to get to</p>	<p>Refer to GN-1, LU-14, NE-2, NE-8, NV-1, RF-2, SS-18, SS-19, SS-23, PI-1, WW-2 and WW-6. Through coordination with local emergency responders (as required by several safety and security and transportation compliance measures), locations with limited off-road or over-creek access would be determined as well as plans for continued access during Project construction and operations.</p>

			<p>them in the middle of winter in the middle of a pasture somewhere that's got spring-fed creeks got a spring-fed creek on my property that's 30 feet deep. They can't cross that with an emergency How are they going to get those people off? Have they even looked at that? Not at all. They haven't looked a lot about the safety part of this thing. Water. Oh my gosh: water. You know what they assume with water? How many people have trouble drilling extra wells and so forth because of the surface water versus ground water issue? Okay. We go through all the ramifications of that. You know what they say about water? And guess what In the middle of the summer well, from April all the way through November they're going to have to water a lot of roads-- okay? Because there's going to be dust and there's going to be air quality issues. How are they going to water all those roads? about all the water they're going to need for the concrete at the construction sites? You know what their assumption is? The water will be available to us at the Construction site. Isn't that interesting. How are you going to get that water? Hunting regulations. They say they don't expect hunting regulations to change. You-all know what the ballistic test is on the high-speed rail? No: truly. They've got a ballistic test on it. It can handle a .22 bullet. Let me tell you: I don't shoot a 300-pound hog with a 22 bullet And I've shot through a hog and the angles changed 45 degrees: so when that bullet comes out of that hog you have no idea what direction It hit the bottom of my game camera and tore it up. I wasn't shooting that direction. We've got up in Leon county there are a lot of spring-fed creeks. Folks: there's a lot of animals get water from those spring-fed creeks. They haven't even looked at these. We got a spring-fed creek that's 250 feet — this goes back to the bad mouth. Ifs 250 yards: 250 yards in a different location on my property. They don't even know where it is. Homes are not shown on the map; talked about that</p>	
Glenn Mannina	2/6/2018	Oral	<p>Okay. Back with the issue of the bullet. Okay? Look. It's -- they -- basically DEIS says that they are just -- you know, there's no problems with hunting regulations. Okay? Let me tell you, unless I see it in writing from the Texas Parks and Wildlife, I am not going to believe that one bit whatsoever, not at all. Okay. State regulatory agency. Are you listening? Okay. Tell me who am I going to go to when I've got a problem with TCR? I have had pipelines and power lines cross my property. I have used the Public Utilities Commission of Texas, and let me tell you, telling a utility company that the next phone call is to the PUCT or the Railroad Commission, you get action. Now, who am I going to say that to? Nobody. There is no state regulatory agency, folks. TCR wants to build this thing without any regulatory requirements. Are we going to let them do that? And who are we going to go to when we have a problem? The FRA's responsibility is, quote, railroad safety. Now, if you've got a safety issue or a problem with TCR because they didn't fulfill the requirements that you had negotiated with them or whatever, who are you going to go to? Nobody. There's no state body. That's a big issue. Okay. Omission. In the DEIS there's no mention of FERC, no mention of the Hazardous Material Safety Administration. There's a lot of pipelines around. Let me tell you, there's 121 hazardous materials, hazardous waste sites along 290. Did you hear that? This thing's going through all kinds of hazardous waste sites. That's not covered. They just have qualitative stuff. They're not looking at it specific. No specifics at all. There are pipelines missing off the maps. Okay? Let me tell you something else. Over on 290, and I know it doesn't bother you-all too much here, but over on -- this just goes to show the trash that TCR and these people have put out. There are pipelines right along 290. You know how tight it is. Right? And going against all those subdivisions there are pipelines right there where the high-speed rail is going to be built. They're going to dry -- I looked at it yesterday, and I read it five times because I couldn't believe it. They're going to dry piling on either side of the pipelines that are operating, and they're going to put a 40-by-40-foot concrete base to support the superstructure on top of it. Now, if I were those pipeline companies because, you know, some of those are FERC, which are international pipelines. If I was them, I would not allow a 40-foot base to put on it, because when they run smart pigs--that's a pig that goes through the line that determines what the wall thickness is, how much it's changed, and they have to run that pretty regularly. Okay? If I have an anomaly there, as a pipeline owner I'm supposed to go dig it up and look at it and do ultrasonic or X-ray on it. Okay? How are they going to get to it with a 40-foot block of concrete on top of it and a superstructure of the rail that's already built? Give me a break. It won't happen. One more thing. Just to show you how trashy this document is, we found tables in there that segment five data is listed under segment one. Segment one data is listed under segment five. They didn't think we'd find that, though.</p>	<p>Refer to EU-1, EU-2, GN-1, RF-2 and SS-5. Section 3.5 Hazardous Material and Solid Waste of the Final EIS details hazardous waste sites within the limits of disturbance of the Project.</p>
Glenn Mannina	2/6/2018	Oral	<p>I just have one more thing to say, and I got to say it. Sorry. It may not sound good and the FRA folks might not like it, but when I talked earlier about what the plan is as far as going bankrupt and stealing federal funds, taxpayer funds, let me read something to you. What does this sound like? "An intentional perversion of truth to induce another to part with some valuable thing belonging to them or to surrender a legal right." THE AUDIENCE: Fraud. Fraud. Exactly right. That's all I want to say. Thanks everybody who donated their time.</p>	<p>Comment noted.</p>
Glenn Mannina	2/6/2018	Oral	<p>I got to say one more thing. Judge Duhon in Waller County would like for me to probably say this. Waller County, there's a Waller County Regional Planning Committee. It's a legal, local government entity. You-all need to know this. This organization had to sue TxDOT. You in Grimes County may not know that. They had to sue TxDOT because TxDOT would not cooperate with them to let them know anything about this high-speed rail so that they could put it in their plan. They were getting information from the FRA and were not sharing it with the county. So they sued TxDOT. TxDOT lost. TxDOT appealed. TxDOT lost again. They've been to one meeting from what I understand. The FRA told TxDOT not to talk to the regional planning commission because they were an agency that was trying to promote opposition to the high-speed rail. Okay? They didn't see them as a legal government entity, but they were, and they proved it in court, and TxDOT lost. But FRA was trying</p>	<p>Refer to PI-1.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			to keep TxDOT from talking with the counties. And we have this problem all across the entire -- every meeting I've been to, some county official has got up, including the superintendent at Leon High School, who has never been contacted or talked to. So how can a county plan for something they don't know what's coming their way?	
Glenn Mannina	2/10/2018	Website	For the Record, I OPPOSE the Dallas to Houston TCRR HSR. Many Counties across the proposed 240 mile route have now established a Legal County Permit Requirement for high speed rails wanting to cross or use in any manner County Property ROW. How is it that the FRA has developed this Inaccurate DEIS that Realigns Many County Roads WITHOUT proper approval from the Counties? Since this is the Basis for TCRR's Design/Construction Plan, the DEIS is Fatally Flawed. The County Permit Process Must be respected by and obeyed by the FRA. The DEIS has many Fatal Flaws and MUST be WITHDRAWN IMMEDIATELY and the Public Comments portion of the FRA DEIS Process CEASE also Immediately.	Refer to NE-1, NE-6, TR-1 and TR-8.
Glenn Mannina	2/11/2018	Website	I oppose the Dallas to Houston Texas Central HSR. The FRA must first Resend the DEIS, then must reinstate the "NO BUILD" Alternative and seriously consider No Build using accurate Data. The FRA Unethically Adopted totally TCR's Functional Criteria and added a requirement for Alternatives to meet fixing traffic that does NOT Exist between Dallas and Houston. The FRA also did not compare today's prediction of Traffic in their Traffic Study compared to today's ACTUAL Traffic. This theory by the FRA is Fatally Flawed and is a False Narrative. See the attached AMTRAK Study an see there is NO Traffic between Dallas to Houston. It is between Houston and San Antonio and from San Antonio to Dallas. Texas Central is also on the record stating this train will NOT Solve any Traffic or Congestion issues near the Cities. The FRA Must Start over AND ALSO Cease all further work as The Courts have proven TCR is NOT a Railroad as they could not survey Private Property.	Refer to BA-2, BA-6, GN-1, GN-3, NE-1, PN-2 and PN-3.
Glenn Mannina	2/11/2018	Website	Why does not the FRA discuss in detail the 121 Hazardous Waste Sites along Hwy. 290 in direct alignment with the HSR?	Refer to HZ-1.
Glenn Mannina	2/11/2018	Website	The FRA during the Scoping meetings said they would work with all Federal, State, and Local Governments in the determination of Route Alternatives. Yet the FRA told TXDOT not to work with the Waller County Regional Planning Commission. The Courts ultimately ruled TXDOT they must work with Local Government Entities. There are many many local Law Enforcement Groups that have not even been contacted by Texas Central or the FRA. Case in point were the Testimonies by Sheriff Don Sowell at the Grimes County Public Hearing in Navasota Tx. on February 6, 2018. Also following the Leon County Public Hearing in Jewett Tx. on January 30, 2018, the Leon County Sheriff also gave an interview that basically said the same thing as Sheriff Don Sowell. Is the FRA and Texas Central practicing "Conflict of Interest" and has the FRA made False Statements and Commitments during the Scoping Study? The FRA MUST CEASE ANY FURTHER WORK ON THIS UNETHICAL FRA DEIS PROCESS.	Refer to NE-1, PI-1 and PI-4.
Glenn Mannina	2/11/2018	Website	Why does the FRA NOT mention at all in the DEIS the Federal Energy Regulatory Commission (FERC) when the HSR route along Hwy. 290 is right on top of at least Six (6) O&G Pipelines, some of which are Interstate Pipelines under the Jurisdiction of FERC as well as the Pipeline and Hazardous Material Safety Administration (PHMSA)? The FRA must CEASE all further Work on the sloppy DEIS and first prove that Texas Central is in fact a RR. The Courts have already provided the Proof to the Public that Texas Central is NOT a Railroad.	Refer to EU-1 and NE-1.
Glenn Mannina	2/11/2018	Website	Why is the FRA working at all on a proposed HSR with Texas Central Railway First, has proven through the Courts that Texas Central is NOT a true Railroad and Second, the FRA has not even written yet the Regulations that cover Speeds of High Speed Rails from 150 mph to over 200 mph?	Refer to NE-1.
Glenn Mannina	2/11/2018	Website	Texas Central Railway's NOISE DESIGN CRITERIA IS 1005 WRONG, INCORRECT, AND FALSE. I have verified while talking with Texas Central Engineers have used the the incorrect Assumption of the Noise of ONE (!) Train Passing. There are TWO TRACKS Adjacent to each other with sets of trains running on each track simultaneously, Therefore, the Noise Level of Two (2) Trains passing each other in opposite directions and any point along the track as it is a reality. Also, the "Slapping Sound" was NOT INCLUDED AND ADDED TO THE TWO TRAINS PASSING. This is a loud popping or Slapping Sound that was first discovered by HSRs going through Tunnels. The analysis was then performed using the scenario of Two Trains on Adjacent Tracks traveling at high speeds in opposite directions, the EXACT SAME CASE AS THE TEXAS CENTRAL HSR. The FRA must CEASE all further work on the DEIS as the ENTIRE NOISE Analysis is Wrong, Inaccurate, and FALSE. No matter how much difference in noise level would result from correcting this work, IT MUST BE DONE ACCURATELY AND CORRECTLY or the HSR Engineering is Fatally Flawed. Then the FRA must place specific and stringent requirements and criteria on Texas Central to immediately include NOISE ABATEMENT equipment in the Detailed Design ALL ALONG THE 240 MILES OF THE ROUTE. To NOT Do so would be NEGLIGENT ON THE PART OF THE FRA AND Design Negligence on the part of Texas Central and its Design Contractors.	Refer to NV-1 and NV-10.
Glenn Mannina	2/11/2018	Website	The FRA DEIS Contains Illegally Obtained Landowner Survey Data. US Representative, Kevin Brady advised the Department of Transportation one week before release of FRA DEIS that his constituents had hard data showing Survey Information being used in the DEIS by Texas Central and the FRA that was in FACT OBTAINED WITHOUT LANDOWNER PERMISSION. From the first day Texas Central began surveying properties, they submitted to the General Public who had land along the route a Survey Permission Form. So it was clear they knew they needed Signed Permission to go on Private Property. The Evidence surfaced and was submitted at the Federal level, but the FRA took NO ACTION to cleanse	Refer to BA-6, GN-1, NE-1, NE-8, PN-3, SS-1, SS-12 and SS-13.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			the DEIS of any Illegally Obtained Survey Data and Released the DEIS in just 7 days following the notice. The ONLY way to make the DEIS a Legal Ethical Document is for the Independent FRA to go back to each and every Landowner whose data was used and ask them to submit an Affidavit Stating they in Fact had given Permission to survey OR NOT. If any Landowners communicate they had given NO Permission to Survey, then Texas Central and its Contractors should be criminally held liable and I am sure those Landowners will take further action as necessary in the Courts. Because of this and so much Unethical, Incorrect, False or Omitted information type Issues in the DEIS, the FRA Must Cease ALL Further work on the Texas Central HSR DEIS until ALL of its issues, including Texas Central's rights with the FRA as a NON-Railroad. The NO BUILD Must also be Reinstated and Studied Seriously and accurately against Criteria by the Public including the HSR Safety issues and those that clearly do not support a General Public Necessity of this Project, nor is it supported by a Traffic or Congestion problem.	
Glenn Mannina	2/12/2018	Website	THE FRA must seriously consider moving the route of the high speed rail away from the Leon High School in Jewett, TX along with the 150 acre Construction Site that exists along Hwy. 79, the only E-W travel corridor from miles for young kids and school buses to access the school. Not only will it be a fatal danger to our very young high school drivers during Construction, but the sound will have a lasting negative impact to our children from the constant jet engine noise from the HSR. Obviously the FRA does not even know that the Japanese recognize the impact of HSR noise as it is heavily regulated near residential areas such as the largest school in the area for miles. A Cornell University Study clearly states Noises from Elevated Trains lead to reading difficulties and negative academic performance. The FRA is supposed to be looking out for the Safety of the Public, and that includes our Children. This HSR Route is all WRONG. The FRA needs to START OVER WITH THE DEIS ANALYSIS AND LOOK AT OTHER ROUTE ALTERNATIVES RATHER THAN JUST WHAT TEXAS CENTRAL TOLD THE FRA TO LOOK AT! If not, this is in NO WAY and Independent Analysis.	Refer to NV-1, SS-23 and TR-6.
Glenn Mannina	2/13/2018	Website	I oppose the TCRR HSR Project. Due to the Following Evidence, I am calling for the FRA to Immediately Rescind the HSR DEIS and for the Immediate Cease of any Further work by the FRA towards completion of an EIS or ROD for this Project. The "Dallas to Houston High-Speed Rail Draft Environmental Impact Statement" dated December 2017 uses Texas Central's proprietary documents as a basis for ridership. Texas Central refuses to release these proprietary documents. These documents are described in the DEIS as the "proprietary market demand study undertaken by TCRR" and the "TCRR ridership and revenue report", NOT OPEN Government. The FRA could have chosen several different public documents, such as the Reason Foundation's February 2017 report "Texas High Speed Rail: Caution Ahead", or TxDOT's December 2013 "Statewide Ridership Analysis Report: Statewide Analysis Model—Version 2.5" for ridership numbers. Why did they choose a proprietary report instead? Because the FRA DEIS is NOT an Independent FRA review but one full of Bias and Made Up numbers. The proprietary report is an extreme outlier, with 7.2 million riders per year, compared to Reason's 1.4 million and TxDOT's 700,000 to 2.7 million. The ridership numbers are not unimportant as they inform such things as reduction of vehicle miles traveled (VMT) which informs emissions calculations. Using Texas Central's proprietary documents, the DEIS says 14,630 cars per day will be taken off the road. Using Reason's numbers only 816 cars per day would be taken off the road. The proprietary report's ridership numbers give 18 times the number of cars per day taken off the road as using publicly available numbers. The emissions removed and reduction in traffic could inform many people's opinion of the HSR, both members of the public and public officials. Another instance the DEIS uses ridership from the proprietary report is calculating sales tax revenue. The DEIS states \$20 million a year for Houston and Dallas combined. Based on the DEIS table 3.14-22, this number could be overstated by 2.5 to 10 times, compared to publicly available sources. This could easily influence both the public and public officials. Additionally, Texas Central is saying the \$199 average fare is a "rumor" (implying it will be lower but not saying what the average train fare will be) used to calculate the sales tax revenue while simultaneously promoting the sales tax revenue of \$10 million for Dallas. This is unethical to say the least and the FRA has Implicated itself in a Scam. Another private project, All Aboard Florida, does include a ridership and revenue study in its DEIS - Appendix 3.3 F Ridership and Revenue Study Summary. FRA cannot use a secret, proprietary report as its basis for ridership in the DEIS. This is not open government. If Texas Central wants to keep its ridership and revenue report secret, that's fine, but the DEIS must use another source for ridership and revenue. As a result, the DEIS is fatally flawed and must be rescinded Immediately. FRA should immediately issue a decision of "NO BUILD" based on FALSE Unsupported Ridership Figures coupled with Inaccurate Traffic/Congestion Criteria (See the true story in the recent AMTRAK study showing NO traffic from Dallas to Houston once outside the cities). The FRA DEIS is Fatally Flawed and "NO BUILD" IS THE ONLY ETHICAL ANSWER.	Refer to AQ-3, AQ-7, BA-6, GN-2, GN-3 and NE-1.
Glenn Mannina	2/13/2018	Website	I oppose the TCRR HSR Project and I am not buying the Unethical DEIS that uses TCRR's Criteria to measure against for No Build vs. Build Alternatives. There is ZERO in the DEIS about building a case for Public Necessity or Public Safety? In addition to adopting word for word TCR's Functional Criteria, the FRA attempts to Eliminate the "NO BUILD" ALTERNATIVE up front in the DEIS stating it does not fix the Traffic or Congestion issues without Proving what are Those Traffic Issues. Folks, without an accident on I-45, there are NO Traffic Issues in Huntsville, Madisonville, Centerville, Buffalo, etc. except if this Train is allowed to move forward. The FRA did not look into the details of the Traffic Study they used to come up with this FALSE Traffic/Congestion Narrative. If you look at the Actual Traffic Today vs. this study it is way off with today's traffic being much lighter than the traffic study stated. I can guaranteed you ANY PROJECTION, WILL BE WRONG! Also, look at the	Refer to BA-2, BA-6, BA-8, GN-1, GN-3, NE-1, PN-3 and SS-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			recent AMTRAK traffic/congestion study of Texas. It shows NO Traffic between Houston and Dallas outside of the cities, but a fair amount of congestion between Houston and San Antonio and between San Antonio and Dallas. Because of the flatter Terrain and the HSR vertical/horizontal deviation limitations, there would be FAR LESS ROAD MODIFICATIONS in a E-W Route like Houston to San Antonio. The FRA did not force TCRR to look at these other potential Routes, but chose to ACCEPT TCRR's recommendations and is now wanting to APPROVE the exact same Route TCRR WANTED ALL ALONG!! Tell me what is Ethical and Independent ABOUT THAT? THE FRA Must BRING BACK THE 'NO BUILD' ALTERNATIVE, REOPEN THE ROUTE ALTERNATIVES FOR OTHER PARTS OF TEXAS, AND TAKE A SERIOUS LOOK AT THE "NO BUILD"! The FRA Must STOP THE UNETHICAL BUSINESS ARRANGEMENT WITH Texas Central Railway, throw this version of the DEIS IN THE TRASH and become INDEPENDENT the way the FRA is supposed to be while also looking out for the Public's interest and safety!	
Glenn Mannina	2/13/2018	Website	The Ridership information in the FRA DEIS is Fatally Flawed and NOT Independently Verified so therefore is of Zero USE in the DEIS. TCRR supplied the data (at least ridership info) to the FRA and Tx Dot. FRA did not use any other figures except for the numbers TCRR gave them which are not supported by factual data without a FRA Independent Analysis or evaluation and use of validated Third Party Ridership data. I ask the FRA to Rescind this DEIS Immediately, STOP any further work towards an EIS or ROD and reconsider the FRA's work with TCRR, a company who is a railroad IN NAME ONLY. In fact, results of Court Decision has proven TCRR is NOT a Railroad and does not even have the right to survey Private Property. In fact, the proof provided to US Representative Kevin Brady and who subsequently advised the Department of Transportation one week before the DEIS was released of Illegally Obtained Private Property Survey Data is further proof that TCRR also knows they are NOT a Railroad as they had to resort to unethical and illegal actions in order to get some survey data since they were Unable to prove to Landowners they in fact had that Authority. The FRA is part of this Unethical Business Arrange if they continue to work with TCRR in his matter.	Refer to ED-1, GN-2, NE-1 and NE-8.
Glenn Mannina	2/14/2018	Website	The FRA's Attempt to use a FALSE Narrative to eliminate the "NO BUILD" Alternative by saying it does not fix Traffic/Congestion problems is totally destroyed by data presented by the Federal Highway Administration, the very data TCRR was supposed to have used and submitted to the FRA. The FRA obviously did not even look at the data as it proves the exact Opposite and that there is NO TRAFFIC between Dallas and Houston to support this Uneconomic and Unethical Attempt to steal Texas Land and to steal US Taxpayer Money through US Government Loans that TCRR seeks to obtain. Look up under Federal Highway Administration the Traffic map, 2012 HPMS AADT and SEE the traffic is between Houston and San Antonio as well as San Antonio and Dallas, NOT Houston to Dallas. The FRA is attempting to pull the wool over the eyes of the Public while helping TCRR steel Land and US Taxpayer money by continuing this Falsely Applied DEIS Process. The FRA MUST CEASE ALL WORK ON THE TCRR DEIS IMMEDIATELY as it is based on Fraudulent Assumptions and Methodology.	Refer to BA-6.
Glenn Mannina	2/14/2018	Website	The FRA's Attempt to use a FALSE Narrative to eliminate the "NO BUILD" Alternative by saying it does not fix Traffic/Congestion problems is totally destroyed by data presented by the Federal Highway Administration, the very data TCRR was supposed to have used and submitted to the FRA. The FRA obviously did not even look at the data as it proves the exact Opposite and that there is NO TRAFFIC between Dallas and Houston to support this Uneconomic and Unethical Attempt to steal Texas Land and to steal US Taxpayer Money through US Government Loans that TCRR seeks to obtain. Look up under Federal Highway Administration the Traffic map, 2012 HPMS AADT and SEE the traffic is between Houston and San Antonio as well as San Antonio and Dallas, NOT Houston to Dallas. The FRA is attempting to pull the wool over the eyes of the Public while helping TCRR steel Land and US Taxpayer money by continuing this Falsely Applied DEIS Process. The FRA MUST CEASE ALL WORK ON THE TCRR DEIS IMMEDIATELY as it is based on Fraudulent Assumptions and Methodology.	Refer to BA-6.
Glenn Mannina	2/14/2018	Website	TCRR has a Traffic Video on their Facebook page advertising a Projected Traffic Increase of over 200% b 2035. This video has had, as of now, 29,000 views. This information comes from the DEIS, page 1-10: "According to the Texas Transportation Institute's 2010 report, even taking into account forecasted improvements, vehicular traffic on IH-45 between Dallas and Houston will increase more than 200 percent by 2035, resulting in average speeds decreasing from 59 to 39 mph." However, when I look at the source data in the footnote, https://static.tti.tamu.edu/tti.tamu.edu/documents/0-5930-2.pdf , Table 3. Corridor Traffic Data & Projections 2002 and 2035, FHWA Freight Analysis Framework 2.2, shows a 126% increase in traffic, which is not greater than 200% (it is less than 200%). This is a simple math issue. If the people creating the DEIS can't do math, then every number in the DEIS is called into question. This is not a minor error. If it were insignificant, it would not be in Texas Central's video. Members of the public and public officials both could very well be influenced by a greater than 200% increase in traffic FALSE STATEMENT. The DEIS and the DEIS comment period are fatally flawed. FRA should immediately issue a decision of NO BUILD or CEASE ALL further work on this very Flawed Inaccurate full of discrepancies and false assumptions and statements, FRA DEIS Process.	Refer to NE-1.
Glenn Mannina	2/15/2018	Website	The FRA DEIS entire plans for road modifications as it pertains to County Roads is Inaccurate and False without the input by the Texas Counties which there is no evidence whatsoever presented in the DEIS that the Counties had any input. The County ROW is theirs and any changes or modifications MUST be done using requirements, design parameters or criteria furnished by the Counties and the DEIS is presumptuous to even think that their detailed County road modifications are Acceptable with the Counties, particularly considering the HSR	Refer to ED-3, PI-1, TR-6, TR-7 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			County permitting requirements. The FRA shows no proof of any planned modifications being vetted or in consultation with the Counties, yet again, another DEIS Fatal Flaw. The FRA must remove ALL Plans from the DEIS that involve modifications to ANY County ROW at least until TCRR works with the Counties and has obtained the proper County Approvals for ANY Crossing of County ROW, not to mention the specific requirements, design, and criteria for crossing County ROW as well as the County Permit to do so.	
Glenn Mannina	2/17/2018	Website	The EIS has not incorporated the analysis of independent economic studies that reveal the negative economic affects on the counties between Dallas and Harris. Studies show that these communities will experience at or above a -20% t their respective economic base. Existing businesses will be dramatically impacted and the respective county tax review will be reduced. This impacts all services and operations of the EACH county. The disruptive impacts throughout the counties have not been incorporated into the financial risk assessment. Higher property tax revenues have NOT been offset by the negative impacts to other county tax revenue generators. This lack of analysis and disclosure by the FRA is a clear indication of the FRA's bias in making a "Rush To Approval" for the TCR's benefit. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	Refer to GN-3, NE-1 and SC-19.
Glenn Mannina	2/17/2018	Website	The EIS is relying upon the information provided to the FRA by TCR. The FRA does NOT explain how it has validated or confirmed the information provided by TCR as being accurate. TCR information has proven to be incomplete and inaccurate. These deficiencies will have a significant negative affect on the economic impact analysis and comparisons of proposed routes, including the "No Build" option. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	Refer to GN-1, GN-2, NE-1 and NE-8.
Glenn Mannina	2/17/2018	Website	The EIS has not incorporated the analysis of independent economic studies that reveal the negative economic affects on the counties between Dallas and Harris. The impacts on School Districts, Police, Fire, Medical first responders, utilities and energy operations will require counties to raise property taxes on all property owners within the counties. This cost is not distributed among the benefiting counties (Dallas & Harris). The impacted residents will be left to pay without any compensation from the true benefactor, the TCR and the Japanese investors. The costs have not been calculated into the true cost of the project. This means the financial projections are not accurate. The disruptive impacts throughout the counties have not been incorporated into the financial risk assessment presented by the FRA. This lack of analysis and disclosure by the FRA is a clear indication of the FRA's bias in making a "Rush To Approval" for the TCR's benefit. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	Refer to ED-2, GN-2, NE-1, SC-6, SC-19, SS-23 and VA-1.
Glenn Mannina	2/17/2018	Website	The EIS does not present a projection of the operational sales tax revenue that the TCR will be required to pay to the impacted counties. The lack of transparency precludes counties from being able to determine the financial reimbursement to be projected for this project's operations. How can counties be expected to support a private project that purports to be for the public benefit but will not present what the tax base impacts will be for the respective counties. Simple questions about the "Tax Dollar Per Mile Per Trip" has not be presented to county leaders. Consequently, the full negative impacts on county financial impacts have not been completed. This lack of analysis and disclosure by the FRA is a clear indication of the FRA's bias in making a "Rush To Approval" for the TCR's benefit. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	Refer to GN-2, PI-1, SC-3 and SC-19.
Glenn Mannina	2/17/2018	Website	The TCR has revealed their financial projections for this project to the FRA. While the claim this is a "Public" project, they refuse to reveal their financial data that supports their projections to the public. This breeds suspicion into the motives of TCR. As a public project, all profits derived from the public must be disclosed. TCR claims the "lack of transparency" is do to competition. At last look, there is NO COMPETITION. The public would welcome competition in this projects design, construction and operation. The lack of scrutiny of the TCR financial projects is extremely risky and further demonstrates the FRA's bias in making a "Rush To Approval" for the TCR's benefit. The Public is asked to sacrifice a huge amount including their Land, their Lives, their families, their property values, the Environment they enjoy today, and 5 years of a huge construction project with destruction of Public and Private roads, so TCR MUST be required toprove its Economic Viability. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	Refer to GN-2, GN-4 and NE-1.
Glenn Mannina	2/17/2018	Website	This FRA statements in ES.9.12 and ES.9.17 are incorrect and misleading. It implies a harmonious relationship with the "no build" baseline. This is not accurate. "Roadway reconfigurations" should be properly stated as "CLOSURES". The EIS lacks any detail assessment of the cost the taxpayers will have to endure as part of rebuilding resources to maintain legally mandated response times for 1st responders and school districts. Also, the term "aviation infrastructure mitigation" requires a better explanation of the its meaning. These statements are just another example of the FRA's biased position which has compromised their objectivity	Refer to SC-6, SC-7, SS-23, TR-8 and TR-11.
Glenn Mannina	2/17/2018	Website	This train is projected to travel at 205 MPH. Based upon the FRA regulations, it can NOT perform an adequate SAFETY assessment of this project. This project can ONLY be assessed against a "Rule of Particular Applicability" after it is prepared and released. This EIS can not be approved as "Safety Acceptable" under the FRA's own regulations.	Refer to SS-4.
Glenn Mannina	2/17/2018	Website	The FRA preferred route "A" traverses an area of Texas which is very prone to tornadoes (Up to Level 5), hurricanes, ice and snow. The FRA assessment says there is "Little Risk" of Level 3 tornados. Many tornados have been witnessed in these rural areas that are not captured in your desktop data that was used for the assessment. This incomplete data puts all TCR travelers at risk. The FRA EIS must be rejected because	Refer to SS-15, SS-16 and SS-17.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			of the incomplete safety assessment. Will FRA be updating the evaluation with more current data and the results of Hurricane Harvey? Has the FRA modeled the Flooding potential due to the large amount of Berms being placed along the route as they will channel much water in directions never looked at before as flooding potentials?	
Glenn Mannina	2/17/2018	Website	The FRA preferred route "A" traverses an area of Texas which is very prone wild hogs up to 700 lbs each, or more. This is not a problem encountered in Japan. Chain link fences have proven inadequate in keeping out these wild animals. The EIS fails to assess the overall risk of these animals finding their way to the rai service or the potential impact analysis of a train traveling at speeds up to 205 MPH and one or more 700lbs wild hogs. Three(3) people were killed in Uvalde, Texas in December 2017 due to hogs on the road. Loop 130 around Austin has been plagued with some many hog issues that drivers are selecting alternate routes. The FRA EIS must be rejected because of the incomplete safety assessment. A "desktop" assessment is not adequate for determining the real Texas threat to public safety.	Refer to SS-2 and SS-12.
Glenn Mannina	2/17/2018	Website	The FRA has shown that a three year study about the endangered species will not complete until June 2019. This is 60 days prior to the projected release of the final FRA decision report. This implies bias in the anticipated conclusions of the study without a proper review to ensure authenticity, accuracy and relevance. Based upon this, the final FRA decision must be delayed until a proper review period can be completed. Why has the FRA ignored the existence of "Bald Eagles Habitat" within the preferred FRA route failed to identify the existence of these endangered species? On the ground photos and evidence is available, but it appears that FRA investigators are ONLY relying on the web browsers. This requires "boots on the ground". This project should be stopped due to current laws that protect endangered species.	Refer to NR-3 and NR-4. The information gathered from the endangered species studies performed for three years will be further assessed when FRA enters into formal Section 7 consultation with USFWS. The studies conducted to date have been in coordination with USFWS and will continue to include the service in planning and reporting findings. The Final EIS outlines the steps being taken to evaluate the species in anticipation of formal consultation with USFWS. All properties where field studies are required will be surveyed for threatened and endangered species prior to construction. NEPA does not require 100% of the Project to have field surveys conducted.
Glenn Mannina	2/17/2018	Website	The FRA DEIS states "The No Build Alternative would not meet the specified Purpose and Need for this Project, but is retained in the EIS as a basis for comparison. The No Build Alternative would not provide congestion relief, improve safety on IH-45, meet current and future transportation needs between Dallas and Houston and would not offer an alternative transportation mode that would connect to existing modes." The FRA used only TCR's Purpose and Need, not anything regarding the Pubic including their Safety. Also, the FRA Traffic data that was used to eliminate the No Build Alternative is NOT Credible as other documents have surfaced showing there is no traffic issue between Dallas and Houston. Additionally, the FRA's own Traffic study was not looked at in detail. Comparing the prediction for Today vs. the Actual, the Predicted Study was WAY OFF as the traffic today is not anywhere near that value. So while using Fatally Flawed data, the FRA has displayed the bias to the TCR project. Based upon the above statement, the FRA has already ruled out any "No Build" conclusion. This statement demonstrates a lack of the FRA's responsibility to the public that they are supposed to support. The FRA's elimination of the No Build Alternative is Unethical, Irresponsible, and Fraudulent to say the least. The FRA must Rescind the HSR DEIS in its entirety and MUST investigate all of the other Fatally Flawed issues within the DEIS and with TCR before considering for one second the continuation of this Unethical Process the FRA is involved in with TCR.	Refer to BA-6, GN-1, NE-1 and PN-3.
Glenn Mannina	2/17/2018	Website	The DEIS states, The FRA reviewed alternative transportation modes to high-speed rail service that included higher-speed and conventional speed rail services, direct bus service and expansion of IH-45 and determined that these modes would not meet the purpose and need of the Project. What were the specific Higher-Speed and Conventional Speed rail services? Where are the details of that Analysis? The Purpose and Need are only TCR's Purpose and Need which Disqualifies this analysis as Fair and Independent! Lets see the details and results of the other modes of transportation while using correct Traffic predictions such as the recent AMTRAK study. The FRA has been sent this study. The FRA's statement confirms the FRA bias by removing the "No Build" Alternative from their consideration or valid comparison for the public. This option is not provided the proper consideration or comparison disclosure throughout the DEIS. Specifically, how did the FRA perform this analysis and what are the sources of the data used to perform this analysis? There appears to be no assessment of the size of traveling parties. Most travelers between these cities are in family sized groups. HSR pricing will not remove them from traveling. The advantages of destinations in the cities has NOT been assessed against the single downtown terminal locations. These single terminal locations is a deterrent to attracting HSR travelers.	Refer to BA-4, GN-1, GN-3, NE-1 and PN-3.
Glenn Mannina	2/17/2018	Website	ES.4 states "TCRR identified the Dallas to Houston corridor as an ideal location and distance to implement high- speed intercity passenger rail that is financially sustainable, constructible and connects two of the largest urban centers in the country." AND " In order to meet the needs of growing travel demand spurred by population growth and a decrease in the level of service of existing transportation systems, both cities are addressing much needed infrastructure improvements. Intercity and intracity transportation infrastructure will require significant expansion and maintenance in the future; a reliable multimodal option to alleviate the strain on this existing infrastructure is needed to accommodate growing demand. " Where is the FRA's Third Party Analysis of the Financially Sustainability as well as the basic up front	Refer to GN-2, GN-4, NE-1 and SC-19.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			Economic Viability of this Project? IT DOES NOT EXIST AS THE FRA has taken the TCR statements as being fact, without scrutiny. Growth projections, congestion, traffic capacities are all presented from a biased perspective of "Selling". This project is NOT "Financially Sustainable" without significant taxpayer underwriting. Unfortunately, the FRA has failed to provide the proper level of judiciary oversight for the American public. All "data" provided by TCR must be verified by outside, independent sources. If the FRA is going to help TCR progress this project, the FRA MUST PUT OUT THE ENTIRE ECONOMIC ANALYSIS FOR ALL TO TAKE APART AND ANALYZE FOR ACCURACY AND PUBLIC SCRUTINY SINCE ALMOST 200 MILES OF THIS ROUTE OF THE PUBLIC ARE THOSE MAKING THE BIGGEST SACRIFICE AND WHO WILL BE HURT THE WORSE WITHOUT ANY BENEFIT OF THIS PROJECT	
Glenn Mannina	2/17/2018	Website	DEIS ES.2 states, To minimize risk and enhance passenger safety, the Project is proposed to be operated in a fully sealed corridor. The lack of crossings and other non-HSR traffic would enable trains to safely achieve speeds exceeding 200 mph and attain an approximate 90-minute travel time between Dallas and Houston.""Approximately 60 percent of the HSR line would be constructed on viaduct. "Economic and Social environments are negatively impacted by these conflicting statements. TCR has attempted to sell the FRA on the environmental acceptability by saying that 60% o the rail surface will be "viaducts". The benefits of viaducts is the ability to traverse under the viaduct; HOWEVER, TCR makes the statement that the system will be "FULLY SEALED CORRIDOR". Which is it? Functional viaducts or fully sealed? Can't have it both ways. The fully sealed corridor negates the "selling" image of the viaducts and exponentially impacting the case studies with negative economic and social impacts. This basic premise has a catastrophic affect on the financial viability of the project. Why has the FRA not scrutinized these inconsistencies? The FRA has demonstrated its lack of "objectivity" in this process.	Refer to NE-1, TC-7 and TR-8.
Glenn Mannina	2/17/2018	Website	The DEIS Opening Statement is : "This document evaluates a No Build Alternative and six Build Alternatives. Potential environmental impacts of the Build Alternatives include displacement of commercial, residential and agricultural properties; community and neighborhood disruption; increase in noise; increase in traffic at each of the stations; impacts on historic and archaeological sites; impacts on park and recreational resources; visual impacts; impacts on sensitive biological resources and wetlands; and use of energy. " However, I find simply Qualitative analysis in my places the truly do not evaluate properly the No Build Alternative. Seriously, HOW CAN IN THE AREA OF NOISE THE NO BUILD ALTERNATIVE NOT BEAT OUT ANY OTHER BUILD ALTERNATIVES AS THESE FOR SURE ARE ADDING NOISE THAT DOES NOT EXIST TODAY???? A review of the Draft EIS fails to reveal a comprehensive comparison of the "No Build" to the FRA preferred "A" route. Comparisons are shown of various proposed routes against each other; however, the EIS fails to show a side-by-side comparison of "A" to "No Build". Under a No Build Alternative growth over time is not projected.	Refer to BA-5, BA-7 and NE-9.
Glenn Mannina	2/17/2018	Website	A review of the Draft EIS fails to reveal a comprehensive assessment of the affects on school districts has NOT be performed. Due to road closures and relocations, additional resources (Buses, Drivers, Schools and Teachers) may be required by all counties to meet the needs of the communities. This is driven by the transportation time changes and realignment of school district responsibilities. The lack of a proper assessment is just another example of a faulty financial impact statement on all of the rural communities. Additionally, the FRA is obviously not interested in the Safety of our school kids, particularly those very young new drivers, when the FRA supports placing the HSR AND a 150 acre Construction Site not 2 Blocks from the Leon High School in Leon County, TX. The EIS should be rejected due to a lack of a complete financial assessment and project risk on the citizens of Texas, in particular our school kids when placing them in harms way with all of the Construction Site workers on the roads and heavy haul equipment and materials just two blocks from a High School.	Refer to SC-6, SC-7 and SC-8.
Glenn Mannina	2/17/2018	Website	EIS 9.17 states Road closures, detours and localized automobile congestion caused by construction could increase the response time for law enforcement, fire and emergency services personnel and school buses. However, closures and reroutes would be closely coordinated with local jurisdictions and both a construction transportation and traffic control plan would mitigate impacts." Considering TCR has NEVER spoken to Law Enforcement throughout the Route (Eight County Sheriffs have formed a group already to address their being totally disregarded by TCR), a review of the Draft EIS fails to reveal a comprehensive assessment of the affects on police, fire and medical operations have NOT be performed. Due to road closures and relocations, additional resources (substations, vehicles, officers, firemen, ambulances, paramedics, etc.) may be required by all counties to meet the needs of the communities. This is driven by the transportation time changes and realignment of first responder operations. The lack of a proper assessment is just another example of a faulty financial impact statement on all of the rural communities. The EIS should be rejected due to a lack of a complete financial assessment and project risk on the citizens of Texas.	Refer to PI-1, SS-18, SS-23, SS-26, TR-6 and TR-8.
Glenn Mannina	2/17/2018	Website	EIS 3.16.3.2.2 Opening Statements: "... The potential security risk from terrorist activities was analyzed. This analysis describes terrorist activity at the state level based on the University of Maryland's Global Terrorism Database which logs terrorist activity occurring between 1970 and 2014. An activity was categorized as terrorism if it met criteria established by the National Consortium for the Study of Terrorism and Responses to Terrorism: " This borders on "Gross Negligence" and "Collusion" by TCR and the FRA. Why is the FRA using outdated security threat data as the basis of their evaluation? Many new threats (ISIS, Lone Wolves, etc.) have appeared on homeland soil since the 2014 security reports (that are the FRA's baseline) were written. This "Old" data puts TCR riders and the community at additional risk. Why hasn't	Refer to SS-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			FRA performed a cyber-threat analysis? This is the biggest threat, but FRA has remained silent and nothing has been included in the EIS. Again, this borders on "Gross Negligence" and "Collusion" by TCR and the FRA.	
Glenn Mannina	2/17/2018	Website	3.2.3.2 Statements: "... Operational emissions of the Build Alternatives would occur from power plants supplying electricity to operate the HSR system ("train operation emissions"), which would represent an increase in emissions, and from reduction in vehicle travel ("vehicle emissions reduction") due to use of the HSR system, which would represent a decrease in emissions." TCR's inflated ridership and reduction of I45 vehicles substantially changes this conclusion. The combination of increase power plant emissions and a less reduction of vehicle emissions, as presented by TCR, will reveal that the HSR benefits have been overstated by TCR with FRA's full cooperation. Power plant expansion is being planned to accommodate other growth in our communities and NOT for the HSR. TCR's using that capacity as being planned for the HSR use is not correct. Additional expansion will be required to support the HSR higher demand. TCR has not included this new capitalization cost in their financial projects. TCR is "Selling" and FRA is "Buying".	Refer to AQ-3, EU-4 and GN-2.
Glenn Mannina	2/17/2018	Website	Sec. 81.002. APPLICABILITY. In this title, a reference to a railroad company includes: (1) a railroad incorporated before September 1, 2007, under former Title 112, Revised Statutes; or (2) any other legal entity operating a railroad, including an entity organized under the Texas Business Corporation Act or the Texas Corporation Law provisions of the Business Organizations Code. Added by Acts 2009, 81st Leg., R.S., Ch. 85 (S.B. 1540), Sec. 2.02, eff. April 1, 2011. A Huge Hurdle for TCR: They Don't OPERATE A Railroad. Has TCR verified where are TCR's Operating Tracks, or Operating rolling stock, or Operating stations, or Operations Employees, or Operating Trains are actually in existent today? If not, then why is the FRA doing work and spending for sure Federal Funds working with a NON-RAILROAD COMPANY? If the FRA has seen this PROOF, then the FRA is Obligated to show the PUBLIC AS THEY ARE THE PEOPLE MAKING THE LARGEST SACRIFICES AND LOSING THE MOST WITH NO BENEFIT FROM THIS UNECONOMIC PROJECT.	Refer to NE-1.
Glenn Mannina	2/17/2018	Website	Where will the HSR trains (Cars) be manufactured? How will they come into the United States and where will the final assembly be located? Who will perform the final assembly and what are their contractual arrangements with TCR and the Japanese? Are any of the manufacturing processes subject to import or export restrictions, and why?	Refer to TC-6
Glenn Mannina	2/17/2018	Website	What is the net effect of the increased property tax revenues for each and every County along the route when offset by the negative impacts of lost sales tax revenue from local business, those losses due to lower Property Values miles away from the Route itself, Additional County Costs for additional Roads (HSR Access roads turned into County Public roads)and Overpasses being built over the HSR, farmers and ranchers reduced taxes?	Refer to SC-14, SC-19 and VA-1.
Glenn Mannina	2/17/2018	Website	How will FRA/TCR bridge the energy requirement gap between first operations and the FRA projected on-line date of 2029? Where will the TCR be placed in the priority for energy during brown out periods and why? Will any Private Property Owners be subject to more land being taken by electrical companies as a result of Eminent Domain due to the Electricity use by the HSR?	Refer to ED-1, EU-3 and EU-4.
Glenn Mannina	2/17/2018	Website	Why hasn't the FRA incorporated independent economic analysis that reflect a negative 20%+ mpact to all the counties between Dallas and Harris? What negative economic impacts has the FRA incorporated into their analysis? If any, what are they and how was these values determined? Who did the FRA coordinate with at the county levels to obtain the financial impacts in the local communities?	Refer to PI-1 and SC-20.
Glenn Mannina	2/17/2018	Website	If an Electrical disruption occurs during normal operations, what are the procedures to halt all trains and to recover all passengers to safety? What happens if loss of power occurs during 100-degree summer days and passengers are stranded in remote locations away from emergency responders and on an elevated viaduct? How long can passengers survive when suspended above ground, without electricity? Are there systems included in the Viaduct Design to facilitate "Rescue at Heithts" from the top of Viaducts or Berms? There will be locations along the route in the rural Counties where there will be NO road access. How will emergency vehicles reach a remote location without Roads to do so. After looking at the maps, I know of those kinds of locations along the route so no need to tell me the entire route will have access by road?? Has the FRA or TCR tried to take Road type Emergency vehicles across Creeks 10' deep in the middle of the woods during the winter wet weather periods in Texas? What backup electrical resources will be installed nd where will they be located? What will trigger their usage?	Refer to EU-2, EU-3, EU-4, SS-3, SS-18 and SS-23.
Glenn Mannina	2/17/2018	Website	What are the minimum quality standards of the steel used to manufacture the rails that will be used on the railway? What is the source of this steel and from Where in the World?	Refer to TC-6.
Glenn Mannina	2/17/2018	Website	The executive summary states that the "No Build" alternative does not meet the criteria of the "purpose" of the study. This means this option is not a possible outcome of this EIS. Why has the FRA already ruled out an alternative that rural Texas favors? The FRA Traffic Study did not even compare what that study said about today's traffic vs. the Actual traffic today. Had the FRA done a complete analysis on all of the TCR data, they would have seen the Prediction was WRONG and the Traffic today is much less than the prediction. Had the FRA looked at other data such as a recent AMTRAK study, they would have seen there is no traffic between Houston and Dallas, but there is between San Antonio and Dallas. THERE IS NO TRAFFIC OUT IN THE MIDDLE OF THE ROUTE BETWEEN HOUSTON AND DALLAS ONCE ONE GETS OUTSIDE THE CITIES. TCR IS ON THE RECORD stating their HSR does not help congestion close to the cities. The FRA's COMPLETE DISREGARD AND TOTAL ELIMINATION OF THE NO BUILD ALTERNATIVE IS A FALSE NARRATIVE, UNETHICAL, AND NEGLIGENT to say the least.	Refer to BA-2, BA-6, GN-3, NE-1, PN-2, PN-3.

Glenn Mannina	2/17/2018	Website	With federal funds comes federal procurement and acquisition rules. What federal mandates will be placed on this project for hiring Americans, veterans, small business, women owed business, minority owned business, unions, etc.? If none, then why not? How will the American's Disabilities Act be enforced in the design, construction and operation of this railroad? Are any of these requirements being waived? If so, which ones and why? Do these exemptions provide the Japanese with a competitive advantage in the American marketplace? Why and how? Will TCR's Contractors be obligated to hire and fill positions at ALL LEVELS FIRST from the use of long time Texas Residents or will TCR allow their contractors to bring in workers from all over the US?	Refer to EH-1, GN-4, NE-6 and SC-4.
Glenn Mannina	2/17/2018	Website	What are the responsibilities of FRA employees to report misleading and incorrect information presented by the TCR? To whom are they required to report this information? What incorrect or misleading information have FRA employees reported to date? How does the FRA determine what data provided to them by TCR is to be independently Verified? Or Does the FRA Accept all data provided by TCR to the FRA as FACT?	Refer to GN-1, NE-1 and NE-8.
Glenn Mannina	2/17/2018	Website	If TCR is found to have presented false or misleading information to the FRA as part of their application with the sole purpose of obtaining permits and, or, federal funding, what are the penalties for TCR and their respective executives? What are the legal consequences for the Japanese (Foreign Corporation)?	Refer to NE-1 and NE-6.
Glenn Mannina	2/18/2018	Website	I am very concerned about the mitigation of vibration damages to pipelines running near the proposed tracks, particularly along Highway 290. Stress waves created by the vibration results in dynamic stress (fatigue) on pipelines, causing misalignment, and damage such as crack propagation, which can result in the failure of the pipeline. Since the FRA completely left FERC and PHMSA off the 2 1/2 year planning process this is a grave concern for public safety. For the FRA to Ignore this grave Public Safety Issues would be Negligence on the part of the FRA AND TCRR.	Refer to EU-1, EU-2 and NV-5.
Glenn Mannina	2/18/2018	Website	The FRA DEIS Noise work is ALL Incorrect and this DEIS must be Withdrawn in its entirety considering all of the omissions, contradictions, and inaccuracies. First the Noise from the HSR will be from TWO trains passing each other in opposite directions, NOT ONE train as admitted too by Engineers during the Open House portion of the recent FRA DEIS Public Hearings. Second, the "Slapping Noise" is excluded from the Noise Calculations. Although this phenomenon was discovered for HSRs going through a Tunnel, it was further studied specific to TCRR's HSR situation with two trains passing in opposite directions on Adjacent Tracks. Third, Incorrectly, the noise impacts from the TCRR HSR were measured at 125-175 mph. We don't know which ones were measured at 125 and which ones measured at 175 mph but none are at the 200 mph or even at the 186 mph it will start out with. For all I know, the FRA and TCRR might have done most of the noise impact study on 125 mph which will greatly skew the data. The Entire Noise study in the FRA DEIS is Wrong, Incorrect, Inaccurate, and Fatally Flawed with BAD ASSUMPTIONS.	Refer to NV-1, NV-6 and NV-10.
Glenn Mannina	2/23/2018	Website	This is in regard to the "FLAWED" FRA Public Hearing Process with a failed attempt to follow the NEPA Process. THE FRA HAS IMPLEMENTED AN UNFAIR, UNETHICAL, AND FATALLY FLAWED PUBLIC HEARING PROCESS THAT MUST BE DONE OVER WHILE FOLLOWING TO THE LETTER OF THE LAW THE NEPA PROCESS WHILE HAVING AT LEAST ONE MEETING IN EVERY COUNTY ON SEPARATE NIGHTS. First, the FRA set up Public Hearing Meetings while at two Counties per meeting night. Many Landowners have property on the borders of Two Counties and having lots of questions, and they would have attended both County meetings that were purposely placed by the FRA on the Same Night Clearly to "DIVIDE AND LIMIT LANDOWNER ATTENDANCE AT ONE HALF OF THE PUBLIC MEETINGS". Then the FRA Announced a meeting location in Madisonville, TX when that Venue WAS NOT EVEN BOOKED BY THE FRA BECAUSE THAT LOCATION, THE MADISONVILLE HIGH SCHOOL WAS ALREADY BOOKED THAT NIGHT REQUESTED. Yes, FRA, we have ALL of those Records Documented. The FRA then Booked a new Location Facility that would only Handle One Half of the amount of people the original location would have provided in Madisonville, TX. The FRA then at the Grimes County Public Hearing in Navasota USED THE LARGE GYMNASIUM FOR THEIR POSTERS, THEN FORCED ALL SPEAKERS AND ATTENDEES FOR THE OPEN COMMENTS SECTION IN A VERY SMALL CAFETERIA WITH PEOPLE STANDING ALL OVER AND ANYONE SITTING WAS ON AS SMALL ROUND KID STOOL AT A SMALL KIDS TABLE. Lastly, the FRA now has ALLOWED ONE COUNTY, AND ONLY ONE COUNTY, TO HOLD TWO FRA PUBLIC HEARING MEETINGS in a Single County and that IS HARRIS COUNTY. It just so happens that ALL of the County Public Hearing meetings, including the Dallas County and the Harris County meeting in Cypress, TX, have BEEN OVERWHELMINGLY CLEARLY DOCUMENTED TO BE AGAINST THE HSR. But I am sure the FRA has done this at One Last Ditch effort to find SOME RESEMBLANCE OF SUPPORT BY ALLOWING HARRIS COUNTY TO HOLE TWO MEETINGS, THE ONLY COUNTY ALLOWED TO DO SO BY THE FRA. The FRA has clearly shown Bias towards Texas Central and the HSR in many many ways and has implemented an Unethical and Crooked attempt at the NEPA process. You FRA, will be held Accountable for this for sure by over 80% o the Landowners across the 240 mile HSR Route. START OVER AND FOLLOW THE LAW WITH A NEW PLAN OF FAIR PUBLIC HEARINGS TO CORRECT YOUR PREVIOUSLY FATALLY FLAWED PUBLIC HEARING PROCESS. There is No Acceptable Excuse the FRA could make to support the Unethical FRA Behavior AGAINST A PARTICULAR BLOCK OF THE GENERAL PUBLIC.	Refer to PI-8, PI-10 and PI-11.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
Glenn Mannina	2/23/2018	Website	The FRA DEIS states that the HSR Project will generate 1576 permanent Jobs. It goes on to say that business will be displaced by the location of the HSR and that number is quoted as 1051 jobs that would be displaced. Since many of these business will not be able to reopen based on regulations and new higher affordable higher costs, it is Possible none of those "Displaced" jobs will be recreated. Therefore, using TCRR's and the FRA DEIS numbers, that would result in a Net Increase of Jobs ALL along the 240 mile route of ONLY 525 JOBS. So, for all of the Pain, Suffering, Sacrifices, Loss of Private Property, Loss of Family Lives as they know it today, Continuous Threats by TCRR to Landowners, Huge Stress Level, and construction of a devastating Loss of Habitat, degrading of the Environment, Noisy Eyesore HSR running by every 15 minutes, and one where the Economic Viability has NEVER been Proven and the DEIS Eliminated that requirement to Artificially Eliminate the "NO BUILD" Alternative, and for an Entity that as Disproved in the Courts that it is a True "Operating RR", the benefit to the Public is POTENTIALLY ONLY 525 HOBS? The FRA Must Acknowledge AND CONCLUDE that this Cost/Benefit Analysis is Fatally Flawed and FAILS MISERABLY AND AGAINST ANY HSR "BUILD" ALTERNATIVE AND CLEARLY ON THE SIDE OF THE "NO BUILD" ALTERNATIVE. THE FRA must resurrect the "No Build" Alternative and Ethically, Accurately, and Credibly Reevaluate the "NO BUILD" Alternative. The Traffic Relief Criteria has been Disproved by Credible Traffic Information submitted to the FRA through this Comments Section process, so that Criteria MUST BE ELIMINATED WHEN REEVALUATING THE "NO BUILD" ALTERNATIVE.	Refer to BA-6, NE-1, PN-3, PN-4 and SC-21.
Glenn Mannina	2/23/2018	Website	The FRA DEIS states obviously without checking or Verification of TCRR's Tax Revenue claims that the HSR will mean a positive Sales Tax Impact of \$15 BILLION-\$39 BILLION back to the State. So using the Ridership of either over 5 Million Annual Riders or over 7 Million Annual Riders PER THE FRA DEIS, and a Sales Tax Rate of 6.25% AD a Local Tax of 2% (otal of 8.25%) ith a Ticket Price of \$199 per ticket per the FRA DEIS, Please Tell me how the FRA's Numbers recreates the \$15 BILLION-\$39 BILLION of Sales Tax Revenue to the State. In fact, just in case the FRA/TCRR is claiming this Revenue for the 'LIFE OF THE HSR" VS. ANNUALLY, by simple back calculating, depending on which above numbers in combination are used, this amount of SALES TAX Revenue would take from over 200 to over 400 YEARS TO Collect those Billions of Dollars of estimated Revenue. I don't think the HSR will Operate for that amount of time??? DID THE FRA NOT DO A SIMPLE CALCULATION OR Like IN SO MANY OTHER CASES, NOT DO A VERIFICATION CHECK ON TOTALLY FALSE NUMBERS PROVIDED TO THE FRA FROM TCRR? Does the FRA call that process an "INDEPENDENT STUDY" OF TCRR's Claims OBVIOUSLY WITHOUT INDEPENDENT VERIFICATION? Just like TCRR's Overestimated Ridership Estimates NOT INDEPENDENTLY VERIFIED BY THE FRA AND TCRR's UNDERESTIMATED COST ESTIMATE NOT VERIFIED BY THE FRA. the FRA and TCRR Sales Tax Revenue Claim is FALSE being accepted by a Federal Government Agency, the FRA. Try to calculate it yourselves, as it DOES NOT COMPUTE! Only Incompetence and False Data can Explain this Inability to Recreate!	Refer to GN-2 and SC-3.
Glenn Mannina	2/24/2018	Website	The Calculation of Vehicle Emissions Reduction in Section 3.2.3.2.2, Table 3.2-4 is FALSE and uses a Fraudulent Calculation Methodology AND FALSIFICATION OF DATA that even a High School Student would never have done in an attempt by the FRA/TCRR to PURPOSELY OVERSTATE by a FACTOR OF TWO THE VEHICLE EMISSIONS REDUCTION in the FALSE Favor of the HSR THAT HAPPENS TO BE A KEY COMPONENT OF THE NEPA PROCESS. So the NEPS Process has been used in a Fraudulent manner by BOTH the FRA and TCRR. First, ASSUMING as a GIVEN the FRA's DEIS 7.2 million riders (which includes all the riders, if I go to Dallas and come back 2 days later, I am TWO of the 7.2 million Riders but if I do not come back to my desination, Only a One way Trip, I am only ONE of the 7.2 Million Riders) This is IMPORTANT to my Claim but Consistent with the DEIS). Per the DEIS, you then multiplies by .89 because the car passengers make up 89% o the existing market to get the number car passengers diverting to the train. Then per the DEIS, you divide by 1.2 passengers per car to get the number of cars taken off the road per year like so: 7,200,000 * .89 = 6,408,000 passengers diverted from cars 6,408,000 / 1.2 = 5,340,000 cars removed from road So, per the DEIS, 5,340,000 cars per year are taken off the road. This is total, a single one way trip woul make up ONE of the 5,340,000 cars BUT a Round trip would make up TWO of the 5,340,000 cars. SO to get VMT removed, you would multiply 5,340,000 One Way Single cars per year by the 239 miles between Dallas and Houston, like so: 5,340,000 * 239 = 1,276,260,000 VMT removed. THIS IS THE CORRECT ANSWER of VMT Removed. BUT Your DEIS states "Because IH-45 is the principle and practical route used for Dallas-Houston travel, a city center-to-city center distance of 239 miles was assumed for the trip distance. Consistent with the average length of stay assumption of two days (see Appendix F, TCRR Conceptual Engineering Design Report), temporary stays with round trips back to the origin was assumed. The round trip distance and calculated cars/year were used to calculate the VMT that would have been traveled in the absence of the Build Alternatives, as shown in Table 3.2-4. SO the FRA/TCRR used ROUND TRIP distance X Single Trip Cars/year = VMT". This is not a simple Math Error, BUT IS A CALCULATION ON PURPOSE BY THE FRA DEIS TO FALSIFY THE RECORDS in the ADVANTAGE OF THE HSR REMOVING EMISSIONS TO ARTIFICIALLY SKEW THE ENTIRE HSR EMISSIONS DATA. THIS IS IN VIOLATION OF THE NEPA PROCESS, FALSIFICATION OF DATA, AND UNLAWFUL TO SAY THE LEAST. SO IN SUMMARY, the FRA/TCRR Falsely Uses SINGLE CAR SINGLE RIDER SINGLE ONE WAY TRIP RIDER USING TWICE THE SINGLE MILEAGE that actually exists between Dallas to Houston or 478 miles. So the FRA DEIS is saying the 5,340,000 Single Car SINGLE WAY Trips uses up 478 Miles PER ONE WAY TRIP between Dallas and Houston (since it states the use of a Round TRIP MILEAGE) if the DEIS concludes the Car Mileage Removed is 2,552,520,000, or DOUBLE THE CORRECT ANSWER. Remember, per the DEIS, the 7.2 million riders already counts a Round Trip as TWO in the 7.2 Millions Ridership figure so a Single One Way Trip is ONE Rider AND only 239 miles in Distance. The FRA and TCRR CANNOT	TCRR was consulted to verify what passenger ridership numbers meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The calculation for Table 3.2-4: Calculated VMT was revised with one-way trip distance instead of round-trip distance. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate and is summarized in tons per year below for the largest emission alternative (A). This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for same as before, sulfur dioxide. Therefore, the conclusion of no adverse long-term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS. Previous assumption: Trip distance = 478 miles; VMT avoided = 2,552,520,000 miles Revised assumption: Trip distance = 239 miles; VMT avoided = 1,276,260,000 miles For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6.0, SO2=113.6, CO = 38.9, CO2eq = 132,316 CO2eq Metric Tons 120,035 Vehicle Emissions: NOx=81.55, VOC=73.46, PM10=23.98, SO2=1.36, CO=1,401.09, CO2eq=203,250, CO2eq Metric Tons=184,385 Net Emissions: NOx = -38.0, VOC = -68.1, PM10=-17.9, SO2=112.2, CO = -

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			DOUBLE THE NUMBER AGAIN BY USING THE ROUND TRIP FIGURE. This is NOT a Simple Math error that a even a High School Student would not make, but an attempt by the FRA and TCRR to Falsify the Emissions Reduction for the use of the HSR vs. cars and is considered to be in Violation of the NEPA Process and FRAUD. This is not to mention the Falsification of a US Government Document, the FRA DEIS. The FRA HSR DEIS Process Must be CEASED and SHUT DOWN Immediately as this is NOT an isolated incident or example as we have found many of these sorts of Fuzzy Unsubstantiated or Unverified data throughout the Document. This evidence clearly PROVES the FRA DEIS is NOT an Independent Report/Document but a clear Attempt by the FRA to Fraudulently support and sell the TCRR HSR Project as Better than the "NO BUILD" Alternative AND AGAINST THE SAFETY of the Pubic as there are many UNSAFE activities that occur as a result of the HSR project ALONE such as Increases in Emergency Response Times for example.	1,362, CO2eq = 70,934, CO2eq Metric Tons = -64,350 For 2040: HSR Operation Emissions: NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96,747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 35.33, VOC = 82.91, PM10 = 46.39, SO2 = 1.88, CO = 1045.2, CO2eq = 278,074, CO2eq Metric Tons = 252,264 Net Emissions: NOx = -18.5, VOC = -78.5, PM10 = -43.3, SO2 = 32.2, CO = -1015, CO2 equivalent = -181,327, CO2eq Metric Tons = -164,497
Glenn Mannina	2/25/2018	Website	Federal Rail Administration February 25, 2018 RE: TCR DEIS - Noise pollution impact I live in the Stone Gate neighborhood that will abut the proposed high speed rail project. Homes here range from one story to two stories in height and trees average about 30 +/- feet. There is nothing above forty feet that would block or limit noise. As I stated in the public hearing on February 5th, 2018, the noise disturbance was grossly under stated in the DEIS. I live 1,665 feet from the UPRR tracks. I hear the train in my house with the TV on and the windows closed. This train is not traveling faster then 35 mph. On any given day of the week, I also hear the daily activities from a business that is 7,872 feet from my house. This company which is at ground level drops pipe, moves metal and uses forklifts. In front of the Stone Gate neighborhood off of Highway 290 and Barker Cypress road, the proposed super structure will be 65 to 70 feet above the ground. According to the DEIS, "when trains are on elevated structures, the noise is increased, partially due to the loss of sound absorption by the ground and partially due to the extra sound radiation from the bridge structure". In the Appendix E Combined Tech Memo Set 1 of 2, the construction of the structure will involve the use of pile drivers (Pile Hammer & ACC. D46-32: 100-125K-ft-lb PILE HMR 252 (64), 350HP VIB HMR/EXT I416 264 (65) and SWINGING LEADS 252 (64)), hydraulic hammers, backhoes, dozers, excavators, graders, loaders, cranes, rollers, compactors, man-lifts, trucks, air compressors, generators and welders. According to the study, the noise generated by these activities will not go beyond 220 feet during the day and up to 600 feet away during the night. There is absolutely no way these activities and the use of heavy construction equipment will be contained in the limits of disturbance as set out in the Tech Memo. According to the report "Dealing with Vibration and Noise from Pile Driving" by W. Allen Marr P.E., states "vibrations and noise may extend thousands of feet away from the pile driving activities". In addition to this report, independent research was conducted of sound sampling for pile driving activities, hammer drivers and other heavy construction equipment stated above. The noise impacts as indicated in the DEIS are completely false, flawed and a misrepresentation to get a favorable decision from the Federal Rail Administration. As I stated above, I clearly hear daily operations from Howco Group that is 7,872 feet away as a crow flies. When cars are racing at ground level on Highway 290, traveling at speeds of 100 mph or more, that sound can clearly be heard inside my home with the TV on and windows closed at approximately 1,700 feet away. Not only is the results of noise disturbance in the DEIS a flat out lie, it is so incredibly misleading to say that the noise disturbance of construction activities will just stop at 600 feet when heavy construction equipment will be used. It is also a fabrication to facts to say the daily operations would not be heard beyond 220 feet when the high speed rail will be elevated 65 feet in the air traveling at 185 to 200 mph, metal on metal, with no natural or manmade barrier to absorb the noise. Up to sixty eight (68) times a day from 5:30 am to 11:00 pm. And we are being told essentially the sound waves will just fall out of the air at the distance of 220 feet. Sound waves can't possibly go beyond that point. This is preposterous. So when people bought their homes they had an expectation of relative peace. We purchased not only our home but the atmosphere surrounding it, thus setting a precedent of what was to be expected. Our homes are surrounded by a golf course and other residential structures, not a monstrous massive super structure that would generate a noise nuisance to our environment. The prolonged construction phase of 3 to 5 years and daily operations of the proposed high speed train will have detrimental affects on home values, quality of life and peaceful entitlement. This is extremely unreasonable to expect residences to endure this type of nuisance. I request the Federal Rail Administration to consider the No Build Alternative. Also I request a response in writing to this statement and to others statements I have submitted. Respectfully, Connie Shivers	Refer to AQ-3.
Glenn Mannina	2/27/2018	Website	In the name of Safety of TCR's HSR riders as well as security of the HSR Fencing while on Berms or at Natural Grade Level, I see nothing in the Fence design that indicates it will be "Predator" Fence? Additionally, I see nothing that states that at least the 200 miles of the very rural portion of the HSR route will be Visually Inspected on a Daily Basis for holes under the security fencing? In case the FRA does not know what "Predator" Fencing is, it is at a minimum a Three-Four foot section of horizontal fencing pinned at the outside edge as well as strongly wired to the bottom of the vertical fencing, preferably on both sides of the security fence. In case the FRA is not aware of rural wild animal habits, Coyotes, known to exist ALL up and down the route, will easily dig under your fencing if there is no Predator Fencing. After that happens, the Wild Hogs will easily exploit the situation left for them by the Coyotes and will end up on top of the HSR. I would suggest the FRA test the Safety of the HSR and its Riders for at least the collision of a 350#-400# hog while the train is traveling at or near 205 mph. Or, of course the FRA can disregard this potential important Safety Hazard and risk the lives of many riders on the HSR as Wild Hogs and Coyotes will find a way onto the HSR's Tracks one way or other. This subject of Wild Hogs is covered by the DEIS but relies only on the vertical security fencing.	Refer to SS-2, SS-12 and SS-13.

Glenn Mannina	2/27/2018	Website	The calculation of the VMT removed in the DEIS is Falsification of DATA by TCRR AND the FRA, not a simple Math Error that a High School Student would not make! Since the 7,200,000 passengers already contains all trips, using roundtrip distance is incorrect. Using the DEIS data, the correct calculation would be One-way distance X cars/year = VMT: 239 X 5,340,000 = 1,276,260,000 VMT removed. The VMT removed is also used to calculate the gallons of gasoline saved - which is, of course, doubled in the DEIS - it states 81.5 million gallons - using the DEIS data and the correct VMT removed calculation it would be 40.8 million gallons saved. This mistake is inexcusable. Air Quality is a main component of NEPA. None of the numbers in the DEIS can be trusted. The DEIS is fatally flawed and the FRA Must Cease ALL further work on this EIS until this DEIS Document is Rewritten, Resubmitted to the Public with a NEW set of FRA Public Hearings.	Refer to AQ-3.
Glenn Mannina	2/27/2018	Website	The NEPA Process as Described by Kevin Wright at the Harris County FRA DEIS HSR Public Hearing DID NOT show a "Comments Period" after the EIS is submitted. Due to the fact the DEIS is not even worthy of being considered a "Draft" because of all of its Omission, Errors, Contradictions, Old Outdated Environmental and Lineal Survey data Maps that does not even include apartment buildings and homes or updated locations of Endangered Species, as well as being a document prepared by a Company, TCRR, who has been unable in court to prove they are a RR and has not proven to ALL Landowners that they do in fact currently possess ED, this is a formal request for the FRA to hold another "Comments Period" AND another round of FRA EIS Public Hearings along with the release of the EIS version and before a Final EIS Release and before ANY issuance by the FRA of a ROD to TCRR.	Refer to ED-1, GN-1, NE-1, NE-8 and PI-1.
Glenn Mannina	3/4/2018	Website	The Dallas to Houston HSR is being planned on a "Fatal Flaw", the selection by the FRA of the Utility Corridor Route nor any route that goes North-South between Dallas and Houston. The combination of the HSR speed of 205 mph, its relatively light weight, that results in extreme horizontal and vertical Deviation Limitations of 1% or 1 degree, and the Terrain between Dallas and Houston IS THE FATAL FLAW. The results are over 200 Existing Roads being crossed and 69% having to be modified. Technically, the HSR CANNOT fly over ell roads at the correct elevation to minimize impact because of its technical limitations coupled with the Terrain. Also, recent Traffic studies by AMTRAK clearly show there is no traffic or congestion problem predicted between Dallas and Houston, but there is between Houston and San Antonio as well as San Antonio and Dallas. The best Terrain for this HSR is running it East-West, not North-South, such as down I-10 that is relatively FLAT AND STRAIGHT. The FRA has RECOMMENDED THE WRONG LOCATION FOR THIS UNECONOMIC HSR BY Texas Central. Given the current FRA DEIS RECOMMENDATION, I CALL FOR THE FRA TO CHOOSE THE "NO BUILD' ALTERNATIVE and/or Cease further work on this TCR HSR DEIS.	Refer to BA-2, BA-3, BA-5, BA-7, NE-1, PN-3, TC-3 and TR-8.
Glenn Mannina	3/5/2018	Oral	Okay. My name is Glen Mannina: and I oppose this project I'm going to talk a little about an interview held by the regional vice-president of external affairs of Texas Central Railway on March 1st at the Grimes County meeting or press conference where the sheriffs talked about their coalition First of all: Mr. Hagy, who's the regional vice-president: as I mentioned: made a statement: "We have never had a reported case of surveyors trespassing without permission." False: Mr. Hagy. We got the proof here tonight. Mr. Richards over here on the side, they've already talked about that. The Waller County right-of-way sorry on there was a saw-boring done illegally performed on Waller County right-of-way. They went and — Texas Central asked for permission. They were denied that permission: but yet they went ahead and did it anyway. And after being called on it: they had to return the soil _ Damages by surveyor markings to several county roads authority to work on county right-of-way as well as surveyors being removed in Leon County I was involved in this personally — while working on county right-of-way without approval Mr. Hagy also stated, "We are grade-separated. We do not cross a road. We do not cross a road. And we are always over the road." From the DEIS, the number of roads crossed varies from 212 to 226. 50 percent are the crossings would be located beneath the high-speed rail viaduct Of those crossings: approximately 69 percent would require limited road modifications. Those road modifications: limited, would include: Building under the rail: building over the rail: rerouting: and closure. The number of roads that will be modified is from 144 to 242, and the route they're talking about is over 200 roads will be modified. Mr. Hagy commented, "DEIS says we would have very minimal impact to emergency response. Let me tell you what it actually says. "The DEIS does only a qualitative analysis based on road changes with no understanding of the increased traffic load during construction" five years construction: folks but concludes: "There will be ER time impacts of high: medium, and low by emergency service areas." It says, "Times will be" — "will increase and modeling would occur before construction _ 'So Texas Central delivers to the public — because it says the local jurisdiction is going to be left with fixing the problem. So Texas Central delivers to the public increases in emergency response times, and we have to fix it ourselves. Folks: this project is not worth a single loss of life for any increase in emergency response times than what we have today out in the country. Not one.	Refer to NE-8, SS-23 and TR-8.
Glenn Mannina	3/7/2018	Website	I Formally Request the FRA SHOULD START OVER WITH THE FRA DEIS PUBLIC HEARINGS WITH AN Associated EXTENDED DEIS COMMENTS PERIOD as a result of the FRA's Violation of the NEPA Process. First, the FRA scheduled Two County Hearings on a Single Night not allowing those who bordered two counties to attend BOTH County Public Hearings. Second. the FRA ANNOUNCED the location of all Public Hearings in December, in particular a 600 attendee capacity venue for Madison County which we now have the proof at that time was not even Booked by the FRA as it was Known in December that location was Unavailable. This also caused Public Confusion in Madison County when the location was later changed in mid-January to a new venue with One Half the Capacity, 300 attendees. Third, the FRA allowed Two Meetings in Harris County, ONE ON A SINGLE NIGHT WHICH WAS THE ONLY CASE OUT OF 11 MEETINGS, but did not give that luxury or Option to ANY	Refer to PI-3, PI-8, PI-10 and PI-11.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			OTHER COUNTY. THAT PROVED THE FRA IS BIAS AND NOT FAIR AND BALANCED THROUGHOUT ITS EXECUTION OF THE DEIS REVIEW PERIOD. THIS IS AGAINST THE LAW FOR A GOVERNMENT BODY TO DO THIS, IS IN VIOLATION OF THE NEPA PROCESS, AND THE FRA WILL BE HELD ACCOUNTABLE AT THE PROPER TIME UNLESS THIS HORRIBLE TREATMENT OF A CERTAIN BLOCK OR RURAL COMMUNITIES INCLUDING MANY MINORITY AND INDIGENOUS NEIGHBORHOODS. THIS IS TOTALLY UNFAIR, AND UNETHICAL ON THE PART OF THE FRA WHO IS SUPPOSED TO BE PERFORMING AN INDEPENDENT ANALYSIS OF THIS PROJECT. THE FRA HAS PROVEN THAT TO BE INCORRECT IN MANY WAYS. START OVER FRA and do it correctly and fairly without bias the next time!	
Glenn Mannina	3/7/2018	Website	This is a FORMAL REQUEST for the FRA to, in the name of Total Transparency for what is supposed to be an Unbias Independent Analysis, PUBLISH TO THE PUBLIC THE NUMBERS OF SPEAKERS AT EACH FRA DEIS PUBLIC HEARING WHO SPOKE "FOR" AND WHO SPOKE "AGAINST" THE TCRR HSR. The public is due this information if the FRA is truly an Independent Government Agency. It is my estimation that AT LEAST 80% of the Public Hearing Speakers out of Eleven Public Hearings (one of which, the second Harris County Public Meeting was in Violation of the NEPA Process as compared to the rights given to all of the other Counties) SPOKE AGAINST THE DALLAS TO HOUSTON TCRR HSR AND THE PUBLIC OUT OF TRANSPARENCY SHOULD BE COMMUNICATED THOSE EXACT FIGURES. That means NO MORE than 20% spoke In Favor of the TCRR HSR Project. The FRA would have all of those records through the Court Recorder. I call on the FRA to release this information to the General Public Immediately.	Refer to PI-1.
Glenn Mannina	3/7/2018	Website	Texas Central states "Tickets sold could amount to \$15 billion to \$39 billion in sales tax for the state, in addition to \$5 billion to \$12 billion in local tax revenue for Dallas and Harris counties." This is a false statement and anything associated with this statement must be corrected in the DEIS. The State of Texas Does NOT collect Sales Tax on Transportation Tickets. Nor does it collect Sales Tax on Plane Tickets. So, the Sales Tax Collected on Ticket Sales will be ZERO. FEDERAL excise tax of 7.5% on plane tickets are charged but ZERO State or local tax. Instead of about 60 million dollar net sales tax impact it becomes a negative 40 mil loss to the state and federal government. This false but Important information must be corrected in the DEIS and must be communicated to the Public. If not, the FEIS will be issued on FALSE DATA. Also Please look at the 15-39 bil number. Even if Sales taxes were collected this number is miscalculated and Wrong by a HUGE amount. Even using Texas Centrals ridership figures at \$199 for a one way ticket, the math does not work and no one can verify the numbers Texas Central has fed to the FRA for the DEIS.	Refer to SC-3 and SC-16.
Glenn Mannina	3/9/2018	Website	I understand there is a Clause in the NEPA Process that requires the FRA to Vet a company's Project Economic Viability should there be a potential they will be seeking Federal Funds. Texas Central (TCRR) is on the record stating many times and putting it in writing that they plan on seeking one or both of the US Government Railroad Loans (e.g., RRIF). Texas Central's total Funding Sources other than the current 1% of Private Investors are the Japanese Entities AND the US Government Federal Railroad Loan. Therefore it is obvious that the FRA is attempting to Circumvent the NEPA Process in the favor of Texas Central by removing Economic Viability from the Purpose and Need Criteria. This is yet another example of the FRA attempting to tip the scales towards Texas Central's HSR Project and is totally Unacceptable. The FRA must cease all work on this DEIS and start over with an Ethical and Accurate Comprehensive Purpose and Need, one that fully takes into account in the appropriate manner the "No Build" Alternative as well as a Purpose and Need that accurately proves Public Necessity, not just the needs of Texas Central.	Refer to GN-4, NE-1 and PN-4. USDOT loan programs (RRIF and TIFIA) have a robust application process that includes a credit-worthiness review from a lender's perspective. This type of financial evaluation is separate from the NEPA process and is not required for NEPA.
Glenn Mannina	NA	Website	(Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT; Sect. 8, Pg. 34 of 34). Many Landowners will be making Huge Sacrifices as a result of the HSR Project. This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need/Necessity? The true I-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view	Refer to GN-3.

Glenn Mannina	1/30/2018	Oral	Okay. I don't know if you understand this because of all the road modifications -- this is what I was talking about before. Because of all the road modifications, okay. Because of that plan by TCR they're going to have to have access roads alongside the HSR because people are going to have to go north and south in a lot of directions in order to cross the HSR because you are not going to have crossings everywhere because	As outlined in Section 3.11, Transportation , Build Alternative A includes approximately 16.8 miles of new Public Roads. Reconfiguration of some intersections due to the Build Alternatives

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			roads are going to be rerouted and changed. Now those 126-miles of roads beside it, that is going to be turned into public roads. It is going to have to give back to the county. The county is going to have to maintain that it since it becomes a public road. Let me explain what that means. TCR is going to put bio-ducts on all these ranches so that people can run that cattle back and forth underneath the bio-ducts. That is going to solve all of ya'lls problems. Now, there is a public road that runs alongside of it. Now, are you going to run your cattle alongside a public road? Is somebody going to have to fence that public road to make sure you keep your cattle on both sides if the thing goes right down the middle of the property? You are going to have to have fences on both sides of your property. You are going to have to negotiate it with TCR and get it in their deal or they are going to say to you, you do it and the county is certainly not going to do it for you. So to keep your cattle in on either side you are going to have to have fencing. You are going to be moving cattle through a gap across a public road and you are going to have to have people on the road to stop traffic. How do you like that folks? That is what this has turned into. The domino effect. Things have gotten worse and worse and worse.	would require the acquisition of property, descriptions of those intersections can be found in Section 3.11, Transportation , and a discussion of acquired property can be found in Section 3.13, Land Use .
Glenn Mannina	2/14/2018	Website	TCRR is violating Texas State Law by its use of the Detention and Retention drainage basins all along the HSR Route on both sides of the route. The Project is not disposing of the water on TCRR's own property, but is pushing the water onto adjacent Landowner's property. Since the Detention basins are planned to have a pumping system to remove the water, the water is not being retained on HSR property through any kind of a closed drainage system, but is pushing the water on top of the ground in an Open Drainage system that is not guaranteed to be retained within the Property of TCRR. This is a violation of Law that every other Texan must abide by when any Soil Disturbance is performed for any type of development or Construction. The FRA must force TCRR on an Environmental Basis to change their drainage system to Detain and Dispose of all water produced due to the building of the HSR all within TCRR Property.	Refer to WW-1.
Glenn Mannina	2/17/2018	Website	The FRA's statement confirms the FRA bias by removing the "No Build" Alternative from their consideration or valid comparison for the public. This option is not provided the proper consideration or comparison disclosure throughout the DEIS. Specifically, how did the FRA perform this analysis and what are the sources of the data used to perform this analysis? There appears to be no assessment of the size of traveling parties. Most travelers between these cities are in family sized groups. HSR pricing will not remove them from traveling. The advantages of destinations in the cities has NOT been assessed against the single downtown terminal locations. These single terminal locations is a deterrent to attracting HSR travelers.	Refer to BA-4, ED-1, NE-1 and PN-3.
Monica Manning	2/19/2018	Website	I do not support the present plan and path. Yes, the transportation will be wonderful for a very few and impact even more negatively with the current proposal. My family and community are directly effected by this project as it stands now. The tradition of Texas matters. The desires and needs of the metro areas do not out weigh the livelihood and work of our rural and farming communities. This state is founded on the rural areas. It is disrespectful and cruel to so callously make decisions based on what high rise dwellers desire with no concern for humans. This plan as set forth will destroy the worship at a brand new church and the quiet cemetery where my father is buried. I urged you to find a better way.	Refer to CR-4 and CR-6. Section 3.14.5, Socioeconomics and Community Facilities, Environmental Consequences includes potential impacts to churches. Mitigation information can be found in Section 3.14.6, Socioeconomics and Community Facilities, Avoidance, Minimization and Mitigation .
Kelly Mann-Kekich	2/24/2018	Website	Your current route for the high speed rail service from Dallas to Houston is projected to cut through the Morgan Creek Ranch near FM 709 and 3194. This is a travesty. This ranch is and has been a place where people from all walks of life have been welcomed to experience the beauty and peace afforded by these surroundings. Cutting through this property, which would separate the lodge from the rest of the facilities is not necessary. Instead, would it not make more sense to move the rail line just a short distance north of the power lines? This would enable the farm to continue to provide a respite and enjoyable place to unwind for the many people who have enjoyed its surroundings.	Refer to LU-5.
Yahya Mansour	2/25/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.
Ashley Marcinkowski	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

Donovan Maretick	12/26/2017	Email	When reviewing the DEIS, I noticed that the sound pollution portion did not cover the "slapping effect or Bernoulli principle" which will have a significant impact on my property. When two trains pass by each other at high speed, the wavefronts collide between the trains, adding together. The sides of the trains, as they are moving quickly, invoke the Bernoulli principle, resulting in low pressure between the trains to contrast with the high pressure around the fronts of the trains. If the trains are moving fast enough and are the right shape, then a sound similar to a slapping sound will be produced between the trains as they pass. If they are each moving at about half the speed of sound, then the resulting slapping sound would actually be similar to a sonic boom.	Refer to NV-10.
Donovan Maretick	12/26/2017	Email	I have property in Waller County, Lot 12399. The projected route will be built on a berm on the lot close to mine 12392. Where the berm ends is on an elevation higher than mine. The drain off from the elevated portion will directly have a negative impact on my land. I am already in the 100 and 500 year floodplains and the berm on the drawings will cause the run off to completely flood my land and render it useless for building a home which is the whole purpose for me buying this piece of property. As Texas Central or its contractors have not been allowed to physically survey lots 12392 and lots 12399, then I question the validity of this survey. In order to prevent serious damages due to the footprint, it is imperative that this gets addressed.	Refer to FP-1 and WW-2. The route is elevated in this area. Construction of the route will comply with all floodplain regulations in order to avoid impacts to flooding.
Donovan Maretick	12/26/2017	Email	I have property in Waller County, Lot 12399, that should have not been surveyed as I did not give permission. I do not see where there was any research conducted on Brushy Creek which is a major drain off for our area. I understand the line will be elevated but any obstructions can cause increased flooding depending on where it is placed. In order to accurately study the true impact of this floodplain, then a survey needs to be conducted. I can also provide a list of over 50 other Waller residents that have not allowed surveys.	Refer to FP-1, WW-1 and WW-2. The route is elevated in this area. Construction of the route will comply with all floodplain regulations in order to avoid impacts to flooding.
Donovan Maretick	12/26/2017	Email	I am one of the many landowners that is being negatively impacted by the project. I refused to allow them to survey my land and have spoken to many others who also refused. I call into question the validity of this DEIS as how could the results be accurate considering no actual surveying has been done. I would ask that Texas Central be required to submit signed survey permission forms. If they did not receive permission, then I believe they should be charged with criminal trespass. I would like you to determine if my property lot 12399 was surveyed as I will press charges. I discovered a lock cut on my gate and a roll of some fencing material at my entrance. Neighbors reported a survey truck but did not see the name.	Refer to GN-1 and NE-8.
Donovan Maretick	12/26/2017	Website	I have property in Waller County, Lot "_", that should have not been surveyed as I did not give permission. I am an amateur historian and have found many historical artifacts when running my metal detector. I believe this to be part of an old stagecoach route. It is my understanding that a historical dig should be performed as part of the DEIS. How was this accomplished considering that many along the route have not been surveyed?	Refer to CR-12.
Donovan Maretick	1/8/2018	Email	The Wyman Gordon warehouse located to the northwest side of Telge in between 290 and the Northwest Lake Dr. in Cypress covers what was a pond that was potentially contaminated. Environmental Justice Segment 5 of 5 Sheet 47 of 53 shows the pond but currently there is a warehouse being built there. If you research the property deeds, you will see that the seller does not guarantee that it is free of contamination. This needs to be investigated by the EPA prior to EIS.	Refer to HZ-3.
Donovan Maretick	1/10/2018	Email	The high speed rail is slated to go through my property in Waller county. Table 25 of the estimated stream impacts for Waller County on page 101 shows zero temporary or permanent impact. Please note that the earthen berm area essentially funnels the water through this area. It does not take into consideration the fact that the water will be backed up by the berm. The blue circle below is what I have worked for two years to clear and build a home on. Based on prior flooding, this restriction between the two earthen berms will create additional flooding on my land and make it useless for the intent of building a home. The earthen berms will cause additional flooding and this area should be on a viaduct if not built at all.	Refer to FP-1, WW-1 and WW-2.
Donovan Maretick	1/14/2018	Email	The DEIS calls out for closing (99 roads) and rerouting of a lot of public/ private roads. The delay created by these closures and delays due to rerouting will equate to a delay in emergency response time. Ambulances have to have the ability to quickly respond to an emergency call. Any minute of delay could be a life or death situation. In Waller county, no one was contacted to help determine whether there would be a delay or not which is unacceptable. They had to sue TXDOT to even get them to coordinate with the local 391 commission. The FRA would not even coordinate at all which is simply unacceptable.	Refer to PI-1, SS-23 and TR-8.
Donovan Maretick	1/14/2018	Email	The DEIS calls out for closing (99 roads) and rerouting of a lot of public/ private roads. The delay created by these closures and delays due to rerouting will equate to a delay in emergency response time. Police have to have the ability to quickly respond to an emergency call. Any minute of delay could be a life or death situation.	Refer to SS-23 and TR-8.
Donovan Maretick	1/14/2018	Email	The DEIS calls out for closing and rerouting of a lot of public/ private roads. The delay created by these closures and delays due to rerouting will equate to increased travel times. This increased travel time will lengthen the current school bus routes and increase the amount of gas expended which will have to be recouped by increased taxes. Bus drivers will have to extend their hours and students will have to be picked up earlier and dropped off later. If taxes are to be increased along the line, then the public should vote on this and not be forced to accept all of these additional costs.	Refer to SC-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Donovan Maretick	1/14/2018	Email	Waller County Emergency Services. This project will delay the current response time of emergency services due to closing and rerouting public and private roads. Texas Central/ TCR/ TCP/ TCRI has not worked with Waller County officials to discuss impacts or coordinate a route that will not cost lives up and down the line.	Refer to PI-1, SS-23 and TR-8.
Donovan Maretick	1/14/2018	Email	In ES.9.17 Public safety and security, it states "However, closures and reroutes would be closely coordinated with local jurisdictions and both a construction transportation and traffic control plan would mitigate impacts." This has not happened to date as all counties besides Harris and Dallas county has not worked with Texas Central nor have they allowed them to survey any county roads. I attended both Waller County meetings with TXDOT and TXDOT stated they were only a co lead agency to the FRA and could only pass along information. None of Waller Counties concerns have been addressed.	Refer to SS-23.
Donovan Maretick	1/14/2018	Email	In regards to financial feasibility, the executive summary ES.I states "Should DOT provide credit or other financial assistance, this activity would also constitute a major federal action." I would like a response in writing as to what this "Major Federal Action" means. Does this mean that the federal loan would provide them with the power of eminent domain?	Refer to ED-1 and GN-4. Major federal action as defined by 40 C.F.R. Section 1508.18. Updated reference in the Final EIS.
Donovan Maretick	1/15/2018	Email	Emergency Response Times Negative Impact During Construction (Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3-16-6, Pg. 3-16-31; Also Sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15) Since this FRA DEIS is not based on traffic modeling yet of the above traffic increase, then how can the FRA with any credibility or accuracy make a claim that "Impact on ER Times is not anticipated to be Significant?"	Refer to SS-23.
Donovan Maretick	1/15/2018	Email	Emergency Response Times Negative Impact During Construction (Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3-16-6, Pg. 3-16-31; Also Sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15) Is the measure of Response Times by the DEIS based on the planned conditions at the time of Construction, such as road and lane closures, road rerouting, road overpass reconstruction to go over the HSR, traffic due to Construction Employees, traffic due to Construction sites and ts Operation, traffic due to movement of raw materials and permit loads of completed constructed components on Existing Roads? I would like this response in writing.	Refer to SS-23.
Donovan Maretick	1/15/2018	Email	Emergency Response Times Negative Impact During Construction (Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3- 16-6, Pg. 3-16-31; Also sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15) Does TCRR supply its own ER Equipment and Personnel during the Construction Phase or will they rely on County resources? If so, has this been factored in the DEIS? Considering that not all counties have been involved thus far, it is important to know.	Refer to PI-1, SS-23 and SS-18. TCRR does not plan to supply separate emergency response vehicles or services beyond the private security force described in Section 3.16.6, Avoidance, Minimization and Mitigation.
Donovan Maretick	1/15/2018	Email	Emergency Response Times Negative Impact During Construction (Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3- 16-6, Pg. 3-16-31; Also sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15) At what level of extended ER times when a Public Life is in the balance, does the FRA consider it a "Significant" Impact? I would like this response in writing. The public deserves the data that may negatively impact someone's life in the future. No build if it negatively causes any deaths based on delay of response.	Refer to SS-23.
Donovan Maretick	1/15/2018	Email	Emergency Response Times Negative Impact During Construction (Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3-16- 6, Pg. 3-16-31; Also sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15) Question: DEIS Summary Statement is "Impacts to Emergency Response (ER) Times are NOT Anticipated to be Significant". Since the FRA study does indicate an increase in ER times, is even ONE Single Public Fatality due to Increased ER Times Acceptable by this FRA DEIS?	Refer to SS-23.
Donovan Maretick	1/15/2018	Email	TCR's Economic Model includes cost estimates that have grown from an original \$10B to \$12B to \$15B (recently stated by TCR's President, Tim Keith in the 2017 Legislative Session) to an estimate by TXDOT of \$18B and an estimate by the Reason Foundation, third party think tank, of \$20B plus. As this project seeks to use federally secured loans which will cost us taxpayers if they aren't paid, then the public should be able to review both the ridership calculations as well as the feasibility since Texas Central cant even come close to calculating these costs. This project should be given a NO Build.	Refer to GN-3, GN-4, GN-2, BA-6 and NE-1.
Donovan Maretick	1/15/2018	Email	TCR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Their continuous use of having 30% of parcels needed is a marketing ploy and the FRA should see right through this. fthey have to use eminent domain for over 80% of that route, then the issue of whether they have that authority should be resolved prior to giving a record of decision for this project.	Refer to ED-1, NE-1 and NE-2.
Donovan Maretick	1/15/2018	Email	TCR claims they are a Privately Investor Funded Project. However, approximately two thirds of their required funds will come from Japanese Loans or Investors, while one third will come from a US Government Loan normally offered to railroad companies. TCR is supported by less than 1% of US Private Investors. Similar large loans such as this from Japan has come with stipulations and sourcing riders stating that at least 30% of project costs must go to Japanese firms. If they cannot provide the financial support for this project, then it should be a no build.	Refer to GN-4 and NE-1.
Donovan Maretick	1/15/2018	Email	At present there is no governing authority to regulate high speed trains in the USA. There needs to be a regulatory body in place that holds Texas Central to their word and ensures the safety of the general public and hold Texas Central accountable for their actions and promises made. Until then, it should be a no build.	Refer to NE-1, SS-4 and SS-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Donovan Maretick	1/15/2018	Email	Recently developed FRA Equipment Safety Standards are not met by TCR's Japanese Equipment, therefore, would require a waiver of the current standards. These standards and regulations should be put in place before a record of decision is given. There should be no cart before the horse on this project especially when it comes to safety.	Refer to SS-4.
Donovan Maretick	1/15/2018	Website	Emergency Response Times Negative Impact During Construction(Ref: DEIS_MAIN TEXT III: Sect. 3.16.3.2.3, Pg. 3-16-6, Pg. 3-16-31; Also Sect. 3.16.5.2.2, Pg. 3.16-24; Also Tables 3.16-14 & 15) The DEIS after showing High, Medium, and Low Risk levels of increased times (Quantified) only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant". They then state that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed ER times!	Refer to SS-23.
Donovan Maretick	1/16/2018	Email	Also in the court case between TXDOT (TXDOT Lost the original case and the Appeal) and the Waller County Regional Planning Committee, it was discovered that the FRA told TXDOT to NOT attend meetings of this County Governmental Body and to not provide any information or planning support. This sounds like the FRA is NOT looking out for the Public's Interest regarding the TCRR HSR, but that of TCRR's. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. Beware FRA, TCRR will likely not fulfill many of the commitments included in the DEIS and when they don't, the FRA will be held accountable. There are also questions about TCRR'S Unethical Actions during the collection Of Field Data and it looks like the FRA has NO problem implicating themselves in potentially Illegal activity against the very people they are being paid to protect?	Refer to GN-1, NE-1, NE-8, NE-9 and PI-1.
Donovan Maretick	1/16/2018	Email	Is it important to FRA's analysis of the TCRR's capability to Operate a RR or not if TCRR has mislead the Public on a number of issues as compared to what the FRA has included in the DEIS? What basic FRA Principles must be met by TCRR to convince the FRA that this company, TCRR, is Ethical and Capable enough to Operate a RR with the Safety and Security of the PUBLIC in the FRA's and TCRR's hands?	Refer to NE-1, NE-2, SS-6 and SS-19.
Donovan Maretick	1/16/2018	Email	The Public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. The Public is sick of this type of an Unethical Business Model by TCRR. Also, contrary to TCRR's advertisements, TCRR has done everything possible to mistreat the Public and disregard Private Property Rights and to be an extremely Non-transparent Company with the Public. Lots of questions have gone unanswered for years. Should the FRA not work in the best interests of the public and not scrutinize TCRR	Refer to ED-2 and NE-1.
Donovan Maretick	1/16/2018	Email	Why is the FRA spending US Taxpayer resources on this project when TCRR is NOT an Operating RR?? What RR is TCRR Operating? If they are an Operating RR, Why was TCRR NOT Allowed to Survey most of the Route between Dallas and Houston due to lack of Signed Permission Forms and Why in Court did TCRR lose the House Case in Harris County with a Summary Judgment and TCRR was NEVER allowed by Court Order to Survey the House Property. Why did TCRR DROP around 40 Lawsuits (after seeing they were going to lose these also) instead of continuing to pursue the Land Survey Rights if they thought they had the Survey Right? The one case they claimed they won was a Default Judgment due to the Landowner not showing up to court, so NOT a Win of their Case which was NEVER heard entirely by the Court!	Refer to NE-1, NE-5 and NE-8.
Donovan Maretick	1/16/2018	Email	TXDOT was unwilling to work with a Local County Government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an advocacy group, but a true County Government body. The County sued TXDOT and it was found during the court case that the FRA had told TXDOT NOT to work with ;this local Government body, and not attend the meetings. Waller County won the case, TXDOT then appealed, and lost the appeal. Did the FRA Break Federal Law by telling a Texas State Government Body not to work with a County Government Body and not to attend the meetings? Why would the FRA not want input from a County Government Body? Since the Public is full aware of this case, does this not destroy the Public Trust in what the FRA has done regarding the HSR DEIS?	Refer to PI-1.
Donovan Maretick	1/16/2018	Email	Has the FRA evaluated the answers provided to the Public in Open Forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? If not, is the FRA interested in any false or misleading statements made to the Public by TCRR vs. what the FRA has included in the DEIS?	Refer to GN-1, GN-2 and NE-1.
Donovan Maretick	1/16/2018	Email	What Texas State Regulatory Agency/Body with the current Authority to do so is Responsible and can be held Accountable by the Public to provide Oversight on ALL aspects of this Project that are not covered under the FRA's Scope of "RR Safety"? Does RR Security fall under the responsibility of the FRA? Where in the DEIS does the FRA address the new State Expectations for Security of HSRs? Background: A number Of years ago when an HSR was being considered, the State of Texas established a Regulatory Board for HSR Oversight. However, the project never happened and the State Board was eliminated. Currently, whenever there is a project that ultimately is used by the public, there exist State Regulatory Agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide Oversight Responsibility to protect the interest of the Public / Taxpayers.	Refer to NE-1, NE-2 and SS-5.
Donovan Maretick	1/16/2018	Email	What Texas State Regulatory Agency/Body with the current Authority to do so is Responsible and can be held Accountable by the Public to provide Oversight on ALL aspects of this Project that are not covered under the FRA's Scope of "RR Safety"? Does RR Security fall under the responsibility of the FRA? Where in the DEIS does the FRA address the new State Expectations for Security of HSRs? Background: A number Of years ago when an HSR was being considered, the State of Texas established a Regulatory Board for HSR Oversight. However, the project	Refer to NE-1, NE-2 and SS-5.

			never happened and the State Board was eliminated. Currently, whenever there is a project that ultimately is used by the public, there exist State Regulatory Agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide Oversight Responsibility to protect the interest of the Public / Taxpayers.	
Donovan Maretick	1/16/2018	Email	Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the Counties view of the increased resources and infrastructure that will be required of them including Education, particular in very small ISDs? Background: Past Projects such as Road, Transmission Line, and Pipeline projects normally employ a very significant contingent of workers from Outside Texas and certainly from Outside the Local Areas. This will result in additional pressure on County services and infrastructure. The Counties must have Time and Funding to be able to adequately respond to these large challenges.	Refer to PI-1, SC-5, SC-10, SC-19, TR-6 and TR-7.
Donovan Maretick	1/16/2018	Email	The work by TCRR's Contractors' will be in close proximity to the Public. A lack of a comprehensive Personal Safety Program as well as Management Commitment and Leadership in Safety could lead to more danger on the Public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the Public off guard. These must be executed in a safe manner with lots of warnings issued to the Public for route changes.	Refer to SS-19 and TR-6.
Donovan Maretick	1/16/2018	Email	Is the FRA OK with fatalities of the public as a result of this project construction to the extent of not even discussing it or placing expectations on TCR for a required comprehensive Safety System with Management Involvement with Construction Personnel while also ensuring that Motorists' Safety is maintained at a very high priority?	Refer to SS-19 and TR-6.
Donovan Maretick	1/16/2018	Email	The DEIS is absent of any Personal Safety Expectations being provided to TCRR for a safe execution of the very large HSR Project. Is the FRA not concerned about the Public's Safety during the Construction phase where there will be very close interactions between motorists and Construction of the HSR & Roads?	Refer to SS-19 and TR-6.
Donovan Maretick	1/16/2018	Email	Does the FRA clearly understand the Safety Risks associated with not only Construction of the HSR, but also the risks of the public safety and employees during the many road construction modifications being executed alongside the HSR construction? You are accountable for the public's safety	Refer to SS-19 and TR-6. All references in the Final EIS to construction period impacts include roadway modifications associated with the Project as well as construction of the Project itself.
Donovan Maretick	1/16/2018	Email	Does the FRA's responsibility of ensuring RR Safety include the Safety of the Public and the Contractors' Employees during the Construction Phase of this HSR?	Refer to SS-13 and TR-6.
Donovan Maretick	1/16/2018	Email	There have been many Landowners who have refused to sign a Survey Permission Form and therefore have not allowed TCRR to access their property for a Land Survey. Some surveys were performed from State highways but TCRR was not allowed to survey from County ROW. It is obvious that ALL of the maps developed in the DEIS likely had support of more survey information from some other sources. The FRA should be held accountable for the sources used for Land Survey Data and should be responsible for assuring that All Land Survey Data was obtained under the authority of a Landowner approved Survey Permission Form. If the FRA cannot verify that each and every piece of data used was legally obtained, then there exists the potential or likelihood based on evidence that the DEIS incorporated data that was Illegally Obtained which could be then considered, the DEIS is an Illegal Document.	Refer to GN-1 and NE-8.
Donovan Maretick	1/16/2018	Email	Many people live next to the proposed rail line that are living hand to mouth. Part of the study needs to include the possibility of what will happen with home owners insurance rates if this line goes through. It would make sense that home insurance rates will increase on homes in close proximity based on the possibility of derailment. No citizen should have to pay more out of their pocket for a high speed rail	Refer to SS-12, SS-13 and SS-21. Although an assessment of insurance premiums is outside the scope of NEPA requirements, there is no reason to assume reduced insurability for properties adjacent to a Project which meets FRA's safety criteria.
Donovan Maretick	1/16/2018	Email	The DEIS states that some Regional data was also used for identification of Endangered Species vs. recent site specific inspections. The reason for the question is DEIS states 659 acres was inspected for Navasota Ladies Tresses (NLT). If one assumes only a 400' width inspection along the route only 13.6 miles of the 240 would have been inspected for NLT using that figure. However, the Maps showing orange hatching for NLT is huge compared to just the calculated 13.6 miles based on the FRA DEIS statement. So based on DEIS figures, can we only assume that a huge amount of Regional Data was used vs. doing recent updated "Boots on the Ground" type inspections Specifically for this TCRR Project? The Credibility of the DEIS at a minimum is in question as well as has Property been inspected or surveyed without the Landowner's written permission for access.	Refer to GN-1, NE-8 and NR-4. Properties with granted access were field surveyed but do not reflect the entirety of the suitable habitat present for the species.
Donovan Maretick	1/16/2018	Email	I am one of the many landowners impacted and I have never given them permission to survey. vi. If the FRA cannot verify that each and every piece of data used was legally obtained, then there exists the potential or likelihood based on evidence above that the DEIS incorporated data that was Illegally Obtained. Does not that make the FRA DEIS an Illegal Document if it contains Illegally Obtained Data? The ONLY way for FRA to restore the credibility on this issue is to ask for ALL Landowners whose data was included in the DEIS to sign an Affidavit stating the data in the DEIS was obtained under their permission of a Signed Survey Permission Form.	Refer to GN-1 and NE-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Donovan Maretick	1/16/2018	Email	Is any Data shown on the Maps where Landowners did not provide Environmental Surveyors the Permission to inspect their property? As an Example, my own property in Waller County has potential or existence of the Houston Toad, however, I never gave permission to TCRR for any surveyors, Land or Environmental, to have access to my property? have personally laid my eyes on a Houston Toad by Brushy Creek.	Refer to NE-8 and NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Donovan Maretick	1/16/2018	Email	The maximum noise level for any point along the HSR will NOT be just one train passing by, but actually two trains passing each other in opposite directions. TCRR has been unwilling to address this issue since Public Meetings in 2015- 2016. The DEIS only covers the Noise impact of One Train in One Direction (87 dBA at 50') AND leaves the Sound Mitigation Actions to after detail design, basically leaving Noise Abatement up to TCRR\u8222 however today, the FRA knows where Residents and Businesses are located including many Subdivisions so they could provide TCRR minimum Expectations NOW, but did not do so. In the DEIS where Property Tax and Property Value is discussed, the FRA says Noise is not anticipated to negatively impact Property Values because the HSR is "Electrified". But yet the FRA in another section discusses the potential need for Noise Abatement in some areas. This is a clear Contradiction within the same FRA DEIS Document.	Refer to NV-1 and NV-10.
Donovan Maretick	1/16/2018	Email	Why does the FRA state that Noise Abatement should be studied after Detail Design for potential use in certain communities, BUT then in another section, the FRA states that Noise is not anticipated to negatively impact Property Values because the HSR is "Electrified"? This needs to be studied further before a record of decision is given or no build.	Refer to NV-1.
Donovan Maretick	1/16/2018	Email	Applicable Noise Measurements and Science Omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8) Since TCRR and the FRA are aware that the route they selected goes through or adjacent to many Subdivisions and Businesses, why has not the FRA DEIS set out specific specifications for the use of Noise Abatement Structures with minimum standards so TCRR is therefore required to put up Noise Abatement should those specifications not be met vs. it up to TCRR once detailed Design is completed? For this issue, Preliminary Design with a Known Route and Known Noise Level is all that is needed to determine the location needs for noise abatement specifications. This needs to be regulated by a state agency or no build.	Refer to NV-1.
Donovan Maretick	1/16/2018	Email	Marketing materials released by TCRR states that the Impacted Acreage for the HSR would be around 3000 acres. The recently released DEIS shows around 8000 Impacted Acreage. The FRA should HAULT ANY FURTHER WORK on the DEIS until there is a clear understanding where all of the Increases took place. Is it not the case, after looking at all of the Road Modifications including those reconstructed Over the HSR, that the significant increase of new Road work ROW is a significant part of that increase in Impacted Acreage? Documentation also exists TCRR told the public that they only needed around 100" ROW Width for the HSR. In many places that has increased to 400' at a minimum. Is it not the case, after looking at all of the HSR Route Maps ROW, the significant increase of ROW might be also a significant part of that increase in Impacted Acreage?	Refer to LU-14 and NE-1.
Donovan Maretick	1/16/2018	Email	Senate Bill 975 passed in the 2017 Texas State Legislature provides for increased Security and Safety standards more closely resembling TSA Airport standards. The DEIS fails to apply these principles and we cannot leave this up to a private company that has shown to bypass rules when true regulations were passed. These rules were also not taken into account when formulating their trip time of 3.5 hours. They attributed these security guidelines when calculating airport trip times but not their own thus proving once again why the purpose and need for this project is not justified and the no build option should be the outcome of this current study with no further taxpayer funding for a company that has not even proven they are a railroad.	Refer to GN-4, NE-1, PN-3 and SS-9.
Donovan Maretick	1/16/2018	Website	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public safety (Ref: DEIS Appendix FTCRR FDCE v7 REPORT: sect. 3.12, Pg. 49 of 199; sect 4.1, Pg. 62 of 199; sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199) Does the FRA NOT consider Pipelines being crossed by the HSR a Risk Management Issue considering Pipeline Explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or ARE the FRA's Safety processes VOID OF A RISK MANAGEMENT SYSTEM?	Refer to EU-1, EU-2 and SS-19.
Donovan Maretick	1/16/2018	Website	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public safety (Ref: DEIS Appendix FTCRR FDCE v7 REPORT: sect. 3.12, Pg. 49 of 199; sect 4.1, Pg. 62 of 199; sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199) Why does the DEIS NOT mention any Risk Management System to be applied to the crossing or close proximity of the HSR with other hazardous facilities such as O&G Facilities, Pipelines, or Transmission Lines?	Refer to EU-1, EU-2 and SS-19.
Donovan Maretick	1/16/2018	Website	All Refr DEIS Appendix F TCRR CONSTRUCTABILITY va REPORT: sect. 7.1, Pgs. 32-33 of 34) Will TCRR be allowed to use City Water if available at the Construction Sites? Will water be used almost constantly during dry times to water all of the temporary dirt roads along the HSR construction route and at road modifications? What is the volume of water usage for this project, including during Construction and how does it fit into Texas' focus on water conservation programs? Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water Will be made available at the construction sites.	Refer to WW-6.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Donovan Maretick	1/16/2018	Website	Will TCRR be allowed to drill water wells for the many Construction Sites or will they be required to use Surface Water available in the area for watering roads and Construction Sites to keep the Dust Down and the Air Quality Up?	Refer to HZ-5, WW-1 and WW-6.
Donovan Maretick	1/16/2018	Website	Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The Public has no idea of the potential negative impacts to their local communities and roads as a result of this Project. The DEIS is not complete without the FRA advising the Public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project Construction Phase.	Refer to TR-6, TR-7 and TR-8.
Donovan Maretick	1/16/2018	Website	Additional Traffic and Congestion Due to Permit Loads (Refr DEIS Appendix F TCRR CONSTRUCTABILITY REPORT: Sect. 3, Pg. 22 of 34; sect. 4, Pg. 23 of 34; sect. 5, Pg. 27 of 34) Question: What is the quantity of Permit Loads the public should expect being added to their traffic flow over and above the norm prior to the execution of this Project? No figures on Permit Loads is included in the DEIS? Background: There are Construction Sites all along the route that will be used for staging of materials and for the construction of Pre-Cast concrete structural components. Many of those constructed structural components are very large likely qualifying as permit Loads that must transverse existing roads to transport them to the HSR installation site.	Refer to TR-6 and TR-8.
Donovan Maretick	1/16/2018	Website	DEIS Appendix F TCRR CONSTRUCTABILITY REPORT: Sect. 3, Pg. 22 of 34; Sect. a, Pg. 23 of 34; Sect. 5, Pg. 27 of 34 What is the quantity of Permit Loads the public should expect being added to their traffic flow over and above the norm prior to the execution of this Project? No figures on Permit Loads are included in the DEIS?	Refer to TR-6.
Donovan Maretick	1/16/2018	Website	DEIS Appendix D Environmental Justice: How is so much Endangered Species Data shown on these Environmental Maps knowing that very few Private Landowners actually signed over Permission to TCRR to access their property? Considering the Lack of "Boots on the Ground" for ALL survey work, how confident is the FRA that ALL Historical Locations and Cemeteries have been property mapped and adequate route adjustments have been made? Does the FRA possess, for each and every Environmental Endangered Species Piece of Data used in this DEIS, a Survey Permission Form signed by each and every Landowner whose data is included in the DEIS? How can this be accurate without	Refer to CR-4, NR-4 and NE-8. NEPA does not require 100% of the Project to have field surveys conducted.
Donovan Maretick	1/16/2018	Website	DEIS Appendix D Environmental Justice How much (approximate %) of the total Endangered Species Environmental Survey Data that is shown on the DEIS Environmental Maps (namely Houston Toad and Navasota Ladies Tresses (NLT) Cross Hatching, Orange for NLT and Green for HHT) was actually obtained by using "Boots on the Ground" inspections by Environmental Experts? The maps released are not accurate and the only way to truly analyze is to physically survey.	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Donovan Maretick	1/16/2018	Website	TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. Well, the DEIS shows 66 Private Road Closures, 43 Private Roads Rerouted, 161 Private Road Crossings, 1 Public Road Closure, 139 Public Roads Rerouted 463 Public Road Crossings, and many roads, FM and CR, going over the HSR vs. the Viaduct going over the roads to minimize destruction of our road system. DIES states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or New access if it is PROPOSED as part of the ROW construction??? So what if it is NOT Proposed, meaning TCR actually gets to decide? TCRR has also advertised for years using color drawings all over Face Book that the Viaduct would allow for movement freely of equipment and animals under the HSR and therefore would not "Land Lock" Landowners or "Cut their property in half".	Refer to TR-8 and TR-10. State Highway 8 would not be closed. The Project would travel underneath the highway through retention-cut (below-grade) designs.
Donovan Maretick	1/16/2018	Website	I would believe that an access road would need to be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any Road built along the HSR would become a Public Road that must be fenced off due to Liabilities as well as keeping animals in the Landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a Viaduct. TCRR's Advertisements of a Viaduct providing this free movement was FALSE. Animals would have to be moved across a Public Road. I have a cattle lease on my land, would I be responsible to pay to have a new fence built.	Refer to LU-11, NR-6 and TR-8. Culverts, fencing, and fence-gates would be included as possible negotiation measures to allow livestock crossings. This would be conducted on a case-by-case basis between TCRR and the landowner.
Donovan Maretick	1/16/2018	Website	The FRA should require TCRR to perform a Mitigation study to reduce the number of roads modified and/or being rebuilt over the HSR AND/OR SLOW down the train so the vertical and horizontal deviations might be relaxed resulting in much less Road work and destruction of less land and fewer homes. The Public is suffering Undue hardships as a result of TCRR'S current Plan. THE FRA MUST HAULT ANY FURTHER WORK ON THE EIS until TCRR has developed a NEW Plan to mitigate the wasteful placement of roads OVER the HSP the additional loss of ROW Property, and Additional Private Homes. No build should be granted.	Refer to BA-3, LU-9, NE-1 and TR-8.
Donovan Maretick	1/16/2018	Website	DEIS Appendix F TCRR CONSTRUCTABILITY va REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11 What priority will be placed on repairing and replacing roads vs. construction of the HSR? If there is any delay for repairing or replacing existing public roads, then it should be voted on by the taxpayers. If there is no vote, then a no build option should be granted.	Refer to TR-7.
Donovan Maretick	1/16/2018	Website	DEIS Appendix F TCRR CONSTRUCTABILITY REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11 Who will pay for the future maintenance of the Access Roads built alongside the HSR route that will be used to	Refer to TR-6 and TR-7.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			get around many of the road closures and modifications? If this is the taxpayers, then this should be voted on as it will increase taxes. If it is the public, then a no build should be granted until voted on.	
Donovan Maretick	1/16/2018	Website	DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: sect. 6.5, pgs. 29-30 of 34; Also Appendix F TCRR FDCE v? REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually BE CLOSED during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Who will be paid for supervising these closures and traffic, if taxpayer money are required then this should be voted on as recent law states no state funds to be used. No build.	Refer to TR-6 and TR-7.
Donovan Maretick	1/16/2018	Website	DEIS Appendix FTCRR CONSTRUCTABILITY REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11 Who is to pay for maintenance of these Overpasses that did not exist before this project plan? Who will pay for the future maintenance of the Access Roads built alongside the HSR route that will be used to get around many of the road closures and modifications? If the counties are required to maintain these roads after built, then this should be voted on by the existing city and county governments and not forced upon them by a private for profit company.	Refer to TR-6 and TR-7.
Donovan Maretick	1/16/2018	Website	DEIS Appendix FTCRR CONSTRUCTABILITY REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Why does the FRA DEIS show a completely different plan than previously advertised by TCRR with a number of FM and CR roads all across the counties being closed and reconstructed with an overpass Over the HSR? This has been marketed for 4 years one way and not the DEIS comes out and we have only 60 days to comment. No build option should be granted	Refer to BA-3 and TR-8.
Donovan Maretick	1/16/2018	Website	The DEIS calls out for closing (99 roads) and rerouting of a lot of public/ private roads. The delay created by these closures and delays due to rerouting will equate to a delay in emergency response time. Fire fighters have to have the ability to quickly respond to an emergency call. Any minute of delay could be a life or death situation not to even mention property damage.	Refer to SS-23, TR-6 and TR-8.
Donovan Maretick	1/16/2018	Website	Maintenance on new construction of roads built over the rail. The DEIS states that Texas Central will pay to build overpasses where necessary but after complete, the cost to maintain will be turned over to the county/ city. The cost to maintain a blacktop road is much cheaper than maintaining an elevated overpass. The additional cost of maintenance will cost the taxpayers more and place an undue burden on us financially. A no build should be issued based on the increased cost to the taxpayer.	Refer to TR-7.
Donovan Maretick	1/17/2018	Email	Referencing the 2.4.4 Selected corridor analysis, you state "FRA also determined that portions of the IH-45 Corridor should be retained for further investigation in the event that constraints arise along the Utility Corridor." How does a private company define what they want to spend on a project so the FRA finds them what they requests. If this is such a good thing for Texas then initial costs to go down 145 should not be a factor nor a requested speed of 200MPH. Why cant it run down 145 at a slower rate of speed so that existing right of ways can be used?	Refer to BA-4, BA-9 and NE-1.
Donovan Maretick	1/17/2018	Email	The DEIS does not touch the negative economic impact that the rail will have on properties that subsidize the income with hunting leases (Deer, Hog, Dove and Duck). A study must be done to gauge the economic impact. Below are some facts about this industry in Texas recently released. The total impact of the industry to the Texas economy, combining the breeding and hunting components, is \$1.6 billion annually. The economic activity of the deer breeding industry supports 16,892 jobs, most of which are in rural areas of the state. If this industry did not exist, those jobs would have to be supported by some other economic activity. These results continue to highlight the fact that the deer breeding industry is a growing and important segment of the Texas economy, contributing to the vitality of rural areas of the state. https://texasdeerassociation.com/wp-content/uploads/2017/06/Economic-Impact-Texas-Deer-Breeding-and-Hunting-Operations.pdf	Refer to NR-1, NR-2 and RF-2. No significant impact to game animals would be anticipated therefore no significant impacts would be expected to the deer breeding industry.
Donovan Maretick	1/17/2018	Email	The DEIS does not take into consideration that this rail will cut through prime hunting land which is what supplements a lot of farmers and ranchers income. Has the DEIS considered the safety aspect of people hunting and shooting game in or around the proposed tracks? I for one generally feed my family with the wild hog and venison that I kill throughout the year. My land in Waller county is loaded with Hogs and wild game which will be negatively impacted. Many lower income residents will lose their ability to feed their family either from directly taking away their hunting land or through subsidizing their income by allowing paid hunters on their land. This is a serious socioeconomic impact that has not been addressed.	Refer to NR-1, NR-2, RF-2, SS-2 and SS-10.
Donovan Maretick	1/17/2018	Email	Noise and vibration level studies. The DEIS does not do an adequate job at looking at all available research and just picks and chooses. Below is a perfect example refuting the DEIS findings. In 2004, the measurements of vibrations from the Shinkansen and conventional railway were conducted in the same area to estimate the vibration exposure to each house. As a result it was found that the vibration levels from Shinkansen were significantly higher than those from conventional railways. Thus, the above hypothesis regarding the importance of vibration on noise annoyance was verified. Community response to Shinkansen noise and vibration: A survey in areas along the Sanyo Shinkansen Line (PDF Download Available). Available from: https://www.researchgate.net/publication/228505468 Community response to Shinkansen noise and vibration A survey in areas along the Sanvo Shinkansen Line [accessed Jan 17 2018].	The projections of vibration from the proposed HSR trains were based on measurements of source vibration from similar existing HSR trains, combined with the results of ground vibration propagation measurements along the proposed HSR corridor. This source data, from the FRA high-speed rail guidance manual, is in terms of "force density level" (FDL), a format that can be applied at locations where the soil conditions are different from those at the location where the measurements were made. Ground vibration data for existing Shinkansen trains is site-specific, and, because it is

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				not available in terms of FDL, it cannot be applied to locations along this HSR corridor.
Donovan Maretick	1/17/2018	Email	Section 3.14- Socioeconomic and Community Facilities- Data is less clear regarding the potential effects on property values near rail corridors without nearby station access. Where the effects were studied, some projects resulted in a minor impact or temporary negative impacts prior to operations that dissipated as project details were refined. However one study in San Francisco showed a possible negative relationship for residential properties within 984 feet of the Caltrain rapid/commuter rail line ROW. At the time of the study, the Caltrain rapid/commuter rail line was diesel powered and produced more noise ¹⁹ than other projects studied, and would not be comparable to the proposed HSR system. There are many studies in Japan in regards to this same technology and the noise and vibration complaints yet they are omitted here. WHY IS THAT? You should not pick and choose data that just supports this.	Refer to NV-6 and VA-1. The assessment of potential noise and vibration impacts discussed in Section 3.4.5, Noise and Vibration, Environmental Consequences are based on design features, adjacent land uses, and mitigation strategies specific to the TCRR high-speed rail.
Donovan Maretick	1/17/2018	Email	Table 3.14-22 shows the Annual Ticket Revenue impact at a ridership of 5,000,000 riders and a state tax impact at \$62,187,500. What kind of financial risk assessment has been done to show if their ridership numbers aren't reached and the estimated \$199 average ticket price falls, what will happen to this rail? There are many assumptions made here that simply cannot be supported. The data should not be withheld if federally secured loans are to be used. The financial calculations should be given to the public so that we can protect our interests and not simple hidden so a private entity can make money.	Refer to BA-4, BA-6, BA-12, GN-1, GN-2, GN-3 and SC-3.
Donovan Maretick	1/17/2018	Email	Ridership calculations are based on studies that Texas Central has paid for on cell phone data. This data needs to be able to be reviewed by the public and not just the entity choosing to take land by eminent domain. Has FRA scrutinized the data? How many of the cell phones registered were to people who drove through that Dallas and Houston wasn't their final destination that should be excluded. How many were truckers or hauling commercial goods that should be omitted. How many people carry more than one phone (personal and work) which should be excluded. The ridership should be based on factual data that can be scrutinized, this project has none. No Build!	Refer to ED-1 and GN-2.
Donovan Maretick	1/18/2018	Email	6.4.1 Ridership Forecasts and Passenger Profiles "According to the travel survey undertaken by TCRR, the majority of people travelling between Dallas and Houston currently travel by car. The profile of passengers traveling between the two cities is predominately non-business users. Based on the travel survey conducted as part of the market demand assessment, non-business journeys was projected to be 76% in year 2040." This data should be made public so we can confirm that this is correct. This survey was conducted by a company that TCR hired and paid for so its in their best interests to skew the numbers. This needs to be made public.	Refer to GN-2.
Donovan Maretick	1/18/2018	Email	The DEIS is based on ridership data and the projected growth and congestion. The projects are already proven wrong by the growth between when this study was done and 2018 statistics. This cannot be ignored as the foundation of this project. Look at what was predicted for 2017 and what the actual growth is today. This should be called to question as the growth and ridership projections are certainly overinflated and should be subject to investigation.	Refer to GN-1, GN-2 and GN-4.
Donovan Maretick	1/18/2018	Email	FIRST, Who Gave the FRA the RIGHT TO CHOOSE THE PURPOSE/NEED OF A PRIVATE COMPANY OVER THE RIGHTS OF LANDOWNERS And Their Needs? SECOND, a Public Need/Necessity has NEVER been established by TCR or the FRA. THIRD, TCR already said in Public Meetings this project is NOT to solve Congestion, particularly around the Cities and there is NONE in Buffalo Texas. FOURTH, Transportation Predictions have already proven WRONG as of Today, just look at that predicted for 2017 vs. what it actually is today,	Refer to GN-3, NE-1 and PN-3.
Donovan Maretick	1/18/2018	Email	Ridership Forecasts and Passenger Profiles As estimated by the proprietary market demand study undertaken by TCRR, the build year forecast for HSR ridership in 2025 is 4.4 million passengers per year. The long-term forecast for HSR ridership in the 2040 analysis year is 7.2 million passengers per year. As this project is seeking to use both eminent domain as well as Tifia and RRIL loans, this information should be public and not proprietary to protect the public.	Refer to ED-1, GN-2, GN-4 and NE-1.
Donovan Maretick	1/18/2018	Website	Appendix F: Dallas to Houston High-Speed Rail Final Draft Conceptual Engineering Report -- FDCEv7Set 1 of 2 on page 36 there is the following statement: Ownership and maintenance responsibilities for new roads constructed for the purpose of HSR maintenance or private property access may be retained by the Project or transferred to an adjacent property owner or to an appropriate roadway authority. Who will regulate whether they maintain or the county maintains. This needs to be worked out prior to approval.	Refer to TR-7.
Donovan Maretick	1/19/2018	Email	What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-2.
Donovan Maretick	1/19/2018	Email	Waller county has documents that show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the	Refer to CR-12.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Donovan Maretick	1/19/2018	Email	When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve.	Refer to CR 2 and CR-9.
Donovan Maretick	1/19/2018	Email	At the Waller County meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery.	Refer to CR-2.
Donovan Maretick	1/19/2018	Email	Recreational and Sport duck hunting in Waller County will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train.	Refer to NR-1, NR-2, RF-2 and WW-9.
Donovan Maretick	1/19/2018	Email	Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to ED-2, LU-3 and RF-1.
Donovan Maretick	1/19/2018	Email	In Waller County we have Kickapoo Preserve which is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. This would negatively impact the home values and future developments of our county. This demands coordination, which just hasn't happened.	Refer to LU-3 and ED-2.
Donovan Maretick	1/19/2018	Email	Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. This would kill our county if built.	Refer to ED-2 and LU-4.
Donovan Maretick	1/19/2018	Email	In Waller County we now have the Goodman Manufacturing facility that offers a very positive impact on Waller County. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "..., we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Many have not been consulted and the interests of Waller County have not been taken into consideration in the development of the DEIS. The DEIS should be amended after TCR and FRA work with the local counties to include our future growth plans, until then, no build.	Refer to ED-2, LU-4 and PI-1.
Donovan Maretick	1/19/2018	Email	The DEIS does not address the negative economic impact that the project will have on the hunting industry nor the combined the breeding and hunting components, is \$1.6 billion annually. The economic activity of the deer breeding industry supports 16,892 jobs, most of which are in rural areas of the state. If this industry did not exist, those jobs would have to be supported by some other economic activity. These results continue to highlight the fact that the deer breeding industry is a growing and important segment of the Texas economy, contributing to the vitality of rural areas of the state. This needs to be addressed in the DEIS https://texasdeerassociation.com/wp-content/uploads/2017/06/Economic-Impact-Texas-Deer-Breeding-and-HuntingOperations.pdf	Through the development of the Project, FRA and TCRR have taken steps to avoid, minimize and mitigate any impacts to wildlife and natural habitats. Mitigation measures to avoid impacts to the deer population are described in Section 3.6.6, Natural Ecological Systems and Protected Species, Avoidance, Minimization, and Mitigation . The construction and operation of the Project would not restrict hunting activities or add any regulations that would restrict hunting activities or indirect activities related to recreational hunting. Accordingly, no economic loss to the hunting industry would be expected.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Donovan Maretick	1/19/2018	Email	HC-4 passes within 4,000 feet of the Daikin/Goodman facility in Waller currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources.	Refer to ED-2 and LU-4.
Donovan Maretick	1/19/2018	Email	The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. None of this has been addressed with the county officials nor is it in the DEIS	Refer to ED-2, LU-4 and PI-1.
Donovan Maretick	1/19/2018	Email	The Waller Harris Emergency Services District No. 200 has Hundreds of ambulances, life flights, and emergency services that will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1 and SS-18.
Donovan Maretick	1/19/2018	Email	The Waller Harris Emergency Services District No. 200 is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency.	Refer to SS-12, SS-18, SS-23 and SS-26.
Donovan Maretick	1/19/2018	Email	IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 The Waller Harris Emergency Services District No. 200 ("ESD") provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels.	Refer to SS-23.
