Donovan Maretick	1/19/2018	Email	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$537 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not build a project that does not meet feasibility requirements under NEPA and other federal laws.	Refer to GN-3.
Donovan Maretick	1/19/2018	Email	Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The FRA has also erred in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the TXDOT as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1.
Donovan Maretick	1/19/2018	Email	Despite 2 written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April 2015. The WCSRPC purpose is to plan future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved.	Refer to PI-1.
Donovan Maretick	1/19/2018	Email	The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA Specifically, we are requesting that your	Refer to BA-3, BA-5, BA-8, BA-9, BA-10 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. S 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings and the FRA has failed to address these impacts in the draft EIS.	
Donovan Maretick	1/19/2018	Email	If noise needs to be mitigated then what will be done for future development near tracks? Who will pay for that mitigation? If noise has to be mitigated then doesn't that tell you the property nearby is damaged? If this is the case, then Texas Central should be responsible for paying these damages.	Refer to NV-5. TCR is only responsible for mitigating impacts created as a result of the project to existing receptors and is not responsible for mitigating noise impacts for future developments.
Donovan Maretick	1/19/2018	Website	In Waller County, Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1 and WW-8.
Donovan Maretick	1/19/2018	Website	The proposed alignment will impact all future road and thoroughfares through the northern portion of Waller County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-1 and TR-8. No public roads in Waller County would be closed as a result of the Project. Refer to Section 3.11, Transportation for a review of roadways affected by the Project in Waller County.
Donovan Maretick	1/19/2018	Website	G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. No build.	Refer to EU-2.
Donovan Maretick	1/22/2018	Email	These mistakes demonstrate gross negligence. The FRA should extend the comment period. Anything less is a public injustice The January 2018 issue of On Track, the Dallas to Houston High-Speed Rail newsletter, is attached for your information. Please note that it contains updated information on three public hearing venues: Madisonville (venue updated) Navasota (venue updated) Fairfield (address correction)	Refer to PI-3. The hearings in Madison and Grimes counties were unintentionally flipped, and the meeting location was changed in Madison County because of the lack of availability of the initial venue on the preferred date. However, these issues were quickly remedied and the public was re-notified. On the night of the Madison County meeting, project team members were stationed at the original location to redirect people to the correct location.
Donovan Maretick	1/24/2018	Email	The Weiser airport is a valuable resource for our community. Many live around the airport so they can fly. - Weiser Air Park is closing the air field in any study on impacts? Maybe be nice to put flyer out at airport with this highlighted. Not telling anyone until after its closed is a travesty. Survey those people impacted. Many don't know that it will close this airfield.	Refer to TR-11.
Donovan Maretick	1/24/2018	Email	1 Dallas to Houston High speed Rail DEIS MAIN TEXT I.pdf Table 3.9-19 5.340 mil cars a year saved but that should be 236 miles vs the charts 478 miles. Increasing the BTU by 2. The math doesn't work here. If 5.3 mil is for RT then passenger count would be 5.3mil X 1.2 (pass per car) that would be 35,000 passengers a day. Huge inflated number.	Refer to AQ-3.
Donovan Maretick	1/24/2018	Email	Regarding 1 Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf Section 3.4.5.2 The impact to animals at 45 ft. is concerning, so how do you move brahman cattle when a train comes? This is a huge risk. They list crossings underground will insulate the noise but that's once inside the culvert 151 100dba so what is the sound near the lower end of viaducts closer to the ground. We need this information as cattle ranchers as it could cause a life or death incident to occur. We need more data or no build.	Refer to NR-1. For crossings under the viaduct, there would be the potential for startle effects for animals for a total of approximately 30 seconds per hour during peak operations.
Donovan Maretick	1/24/2018	Email	1 Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf Table 3.2.4 If you assume this is VMT in the metro area and with a 16.8% increase where above it states 200% (should be 100% double to 106k avg AADT) it does not add up. If cars are removed from the highway in 2040 is 5.3 mil then 240 miles is not 2.5 bil miles appears to be taking the cars removed from highway in passenger counts and doubling it. i.e. you have 5.3 mil passengers that remove 3.8 mil cars that should be 3.8 times 240 and the chart almost appears to be taking the cars removed from highway in passenger counts and doubling it. This needs to be investigated as it is false.	Refer to AQ-2.
Donovan Maretick	1/24/2018	Website	Regarding 3 Dallas to Houston High Speed Rail DEIS MAIN TEXT III.pdf Table 3.11.25 CR 313 and CR123 for sure missing. Maybe lots more but data might be on the other pages as crossings are not this chart. It is obvious that the data is not accurate and needs to be reviewed. No build	CR 313 and CR 123 would be crossed by the Project in Grimes County. The Project would be constructed over the roads. See the Project Footprint in Appendix D, Mapbooks . CR 313 can be found on page 455. CR 123 can be found on page 419.

Donovan Maretick	1/24/2018	Website	Regarding 2 Dallas to Houston High Speed Rail DEIS MAIN TEXT II.pdf Visual Impact Survey Table 3.10-34 #27 You state that there is a moderate visual after build and no change. This is a wedding venue that would have to be completely closed. Do you really think someone would want to have their wedding with a high speed rail flying by. This is a ridiculous assumption. Someone from the FRA needs to go to the site and lay their eyes on this. No Build! I want a written response on this.	Refer to AS-1.
Donovan Maretick	1/24/2018	Website	Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf Are the increase in electrical vehicles factored in on the emissions data? This should absolutely be included and if not, then no build.	Refer to AQ-5.
Donovan Maretick	1/24/2018	Website	If a high- speed train runs at 185 mph through small urbanized areas, it is possible that some animals will be surprised in their path, including magpies, pigeons, crows and buzzards. These collisions have not been scientifically analyzed or quantified to date. A new study now reports obtaining the first estimates in Spain. The development of high-speed rail poses new ecological challenges. The thousands of kilometers of railways with trains operating at speeds of more than 155 mph can generate unwanted effects, such as the mortality of birds, a fact that until now had not been analyzed or quantified. ' Texas has a large population of birds and this disruption has not been addressed in this study. Read more at: https://phvs.org/news/2018-01-birds-collide-hieh-speed-rail.html#iCp https://phvs.org/news/2018-01-birds-collide-hieh-speed-rail.html	Refer to NR-2, GN-3. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Donovan Maretick	1/25/2018	Email	Regarding the below 16.2.6 Overpasses "Overpasses are typically employed along roadways to reduce traffic mortality for wildlife, to provide safe passage for large-bodied mammals, and to improve roadway safety. However, given that the majority of the HSR line would be constructed on an embankment or on an elevated viaduct with overhead catenary, the use of overpasses would likely be cost prohibitive except in select locations. In locations where topography or soils would not support culverts below track level, the use of overpasses would be considered." Who determines where these wildlife crossings are. If left up to a private entity, they will look at reducing cost rather than being environmentally friendly. I want this answer in writing.	Refer to NR-6 and TR-8.
Donovan Maretick	1/26/2018	Email	DEIS Appendix F TCRR CONSTRUCTABILITY va REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11 Will Texas State Eminent Domain powers for Road Construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that matter? I would like this answered by mail.	Refer to ED-1, ED-3 and LU-14.
Donovan Maretick	1/29/2018	Email	Let me ask you a question, can you review a 5,647 page document in 75 days that took three/ four years to put together. I can tell you as a taxpaying citizen who stand to lose their life's investment, I cannot. Why is the FRA rushing this through the system and giving us the minimal amount of time to review. How is this fair process. We need more time to digest and review for the publics safety. Please extend the comment period to 120 days so we have adequate time to review with our lawyers. There are so many inconsistencies in the document and 75 days is simply not enough time to do it.	Refer to PI-3.
Donovan Maretick	1/30/2018	Oral	Can everyone hear me? My wife says I am already loud enough. So lets start this out right. My name is Donavan Maretick and for the record I am dead set against the high-speed rail. I am a US veteran. I served the country for eight years. I fought for our rights and right now I was threatened by Texas Central about three years ago that they wanted to come and take my property and if I didn't like it they would condemn it and take it. They picked the wrong person to fight with. As of right now they plan on closing 56 private roads and rerouting 43 private roads. Rerouting 139 public roads. To me your going to build overpasses over them and then the DEIS which is 5,647 pages. How do you expect somebody to do that in 60 minutes --or 60 day comment period. Yes, you spread it to 75 days. It's not right. They had three years to develop this. We have 75 days to review 5,647 pages. It's not fair. We should have fair and equitable time to review something that is going to take our life away. For me I bought 25 acres in the country. I raise an autistic son and I am building it out in the country for a reason. He can't deal with the noise, the stress and too many people. Now they are going to render my property useless. I have been clearing it for three years, by hand. All of the farmers, they can appreciate that. One of the other things they list in the DEIS is they are going to build overpasses. They are going to turn these overpasses over to the county and local governments without giving them input into the project. So what's cheaper to maintain? A paved road or an overpass? We all know that that's the case. I got 56 seconds. I will end with this. I watched the Dallas meeting last night. There might of been 150 to 200 people. Out of that maybe six spoke for the train. The rest of them, maybe 80% were against it. In Corsicana we were 300 strong and they all spoke against the high-speed rail. I just like to ask for a quick show of hands, who is against this? Let the record reflect that a vast majority of the people in here today are dead set against this. Not many people. There isn't a demand. There isn't the ridership and they won't provide us the ridership documents. We need to stand up for our rights. We need the ridership information. It should not be hidden from the public. FRA, Texas Central, I would appreciate everybody standing beside me to protect my little people.	Refer to GN-2, PI-3, TR-7 and TR-8.
Donovan Maretick	1/30/2018	Oral	Thank you folks very much for sticking around. I just want everybody to be careful. This is the country we leave in. We all come together to do this. We stay strong together and fight this together. It's incredible the people we meet at these meetings with one objective in mind. One goal in mind. With that we can beat this. I want to speak to a bit of the sound mitigation and some of the fact for the DEIS that we ascertained	Refer to NV-1 and NV-10. The FRA noise criteria are designed to account for the annoyance effects of noise on people, including children. With regard to the

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>one of the things in all of the studies are done about one train going one direction. None of the studies have been about two trains passing each other and if you look at some of the studies that have been conducted and don't quote me on this, but I believe it is called the "Bernoulli principle" and what it is it is a sound when two trains pass -- this is on the record in the books on the Japanese studies. We don't have one in the US. Those studies haven't been reviewed by the DEIS anywhere. One of the things is we actually contacted the normal high-speed rail operation plan and its --use -- because we are going to go 16 or 18 hours a day by four sets of trains, so it's a reality. We had a friend that actually submitted a letter to the FRA to the attention of Jerry Smiley and copied Michael Johnson and got nothing back. According to the FRA. Okay, there is a study from Cornell University in children persistent noise from the high-speed rail can cause impaired reading comprehension and long-term memory problems. Noises from elevated trains lead to reading difficulties and negative academic performance. All prove scientifically. None in the DEIS. The more exposed the more long term effects the high-speed rail can affect children's hearing loss, speech impairment, learning difficulty, and attention disorder and emotional problems. We need to learn from these studies and us land-owners have a say in what the noise is going to be. This again has not been addressed and it needs to be. Thank you and have a nice ride home in your cars.</p>	<p>effects of noise on reading problems and academic performance, the noise analysis did not identify any impacts to schools as a result of the proposed project. Prior studies of classroom noise from elevated trains are not applicable to this high-speed rail project as such studies have typically focused on older urban transit systems with high volumes of trains on steel elevated structures in close proximity to school buildings.</p>
Donovan Maretick	2/5/2018	Oral	<p>My name's Donovan Maretick and I'm against the high-speed rail. I had a big speech here to give. I was going to go over a bunch of comments. Don't want to bore you. I live just right down the road here, right across from the White Oak Falls subdivision. That's a subdivision that would level if they were to build the train. Right there on the other side you got Weiser Airport. I don't know if you-all read the DEIS, but they'll close it. How many residents moved here to go and fly their planes. You're affecting many lives. I also -- I live, like I said, right down the road. I'm going to have to see this every time I go into work. I'm going to have to drive into downtown Houston, which is a parking lot at 290 and 610, which they're already promoting. Also, one of the things that I don't know if's been brought up, but according to DEIS, they're proposing 126 miles--let that sink in--126 miles of new public roads. So they're offering to build these roads, they'll pay for them, no problem. Afterwards, it states that they will turn that over to local and county authorities. What does that mean? Me and you are going to have to pay to maintain those roads. On top of that, they're going to build some overpasses. You tell me what's cheaper to maintain--a paved road or an overpass? How's that going to affect us in our taxes? You know, it's really discouraging -- and I'm glad the media showed up tonight, but it's really discouraging because all we see on the media consistently is pro-marketing from Texas Central, pro-marketing this. I'm a veteran, served the country, went eight years, served in Iraq and Afghanistan, and was proud to set here and protect my country. And I'll be danged--however I can say it--that I'm not going to stand here and protect my little part of the country. I have an autistic son, goes to Dorothy Carlton Centre right down the street. This train is going to just We bought 25 acres in Waller so I could raise my son so he could be in the peace and quiet. We've cleared with our hands. We've been out with the chainsaw, clearing land so I could build a home for my son. And now Texas Central walks in and says, Guess what. We're going to build a train through there. What am I going to do with 25 acres of land I can't raise my son on? I can't raise him here it's going to be loud here. I'm killed in two different spots. I'm just going to leave on one little note. And I might get in trouble for this. I just want to point this out; that if you go in and you look at Texas Central's structure--do some research on their staff--if anybody knows who Sylvester Stallone's [sic] chief of staff is, it's Marvalette Hunter. I'll let you-all take a guess where she works today -- where she worked before. Excuse me. She worked for Texas Central. Now, you tell me that's not biased.</p>	<p>Refer to LU-3, TR-6, TR-7 and TR-11.</p>
Donovan Maretick	2/6/2018	Oral	<p>Good evening. This will actually be my third meeting to attend. I've listened to all of them. I've watched them all online, every single one of them. The first meeting I attended, I asked for -- to put on the record by a show of hands -- I think I would have liked to have everybody here before, but just show of hands, how many people are against the train? (Hands raised.) All right. So, again, like I said in the Leon County meeting, everyone that's spoken so far -- I've watched them all -- it's been a total of 12 people that have got up and spoken for the train. Okay. Twelve. There have been hundreds of us speaking against it. Where is the support? Where is the need? There just simply isn't any, and that should go on the record. The one thing I want to say is howdy, I'm new to Waller County. I appreciate everybody coming out. The last time that I've been in a fight like this was on the global war of terrorism on an aircraft carrier, so it's great to see everybody get together and serve one cause and fight for one thing that is worth it. And that's our land. I mean, we fought for our country; we are damn sure going to fight for our land. Excuse my language. I'd also ask -- I mentioned it earlier, we -- everyone needs to have Mr. Kevin Wright here -- he's given us his number on the packet -- we need to e-mail him, we need to ask. This document's 5,647 pages long. It's broke up into 55 sections. I know. We've downloaded them all, merged them into one document so we could search it because you just can't pull it up off the Internet and really get to it..Me -- and my wife will speak next -- we spent 21 hours putting together a Google Earth map so we can actually see it instead of in 250 pages. One lady, I saw a picture, she it spread out through her living room just to see the map. So we do have that. Again, great, great job of Texans Against High-Speed Rail..We need to support them. That's a grassroots effort. That's who we're all joining to support. Let's see how much time I got. I got 50 seconds. Hey, I'm doing good. So I'm going to go off of that. One thing that hasn't been mentioned a lot today is the \$199 each way. My wife -- I'm not going to steal her thunder. It's in the chart. Texas Central goes against it. It's in there. We could provide you the chart, the number. They can't deny it. So one last thing, one thing that hasn't been mentioned I want to bring</p>	<p>Refer to NE-1, PN-3 and SC-3.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			you up new is the effect of hunting. Hunting in Texas is a \$1.6 billion annual industry. This is going to create -- 126 miles of new roads are going to split the land and keep our farmers and ranches that bring our food to the table and keep them from supplementing their income by farming out, leasing it to hunters. That's a huge industry. That's not addressed anywhere in the DEIS.	
Donovan Maretick	2/11/2018	Website	The DEIS does not discuss the negative impacts of the noise of the High Speed Rail although it has many references to the sound where the present line runs in Japan even referencing the rice fields. I am attaching a sheet with many references that speak to the negative impact that these high speed rails have on both health and learning. As a landowner at present Texas Central will not tell you what will be on your land and the impact by medical concern. My son is autistic and extremely sensitive to noise and this will adversely affect him. The attached references should be reviewed and the issues should be mitigated through a comprehensive risk analysis or NO BUILD.	Refer to NV-1.
Donovan Maretick	2/11/2018	Website	3.14.5.2.3 Economic Impacts states "Permanent Impacts: Property Premiums Operation and maintenance of the Build Alternatives could also lead to induced development and changes to property values around station areas. Economies of agglomeration would result from improved transportation efficiency between the Dallas Terminal Station option, the Brazos Valley Station and the three Houston Terminal Station options. Fast, reliable and economically competitive transportation could increase the supply of skilled workers available, decrease the costs of work-related travel, and improve supply chains for an overall positive impact to the Study Area." What the study does not cover in the negative effect to all of the other property along the 240 mile route. Where is the study does it cover the negative impact to property values that are not located close to a station location? Is it not part of the study to protect low income residents and account for their well being? The negative impact of the proximity of a high speed rail on someone's land should be studied and researched. People who do not have the money to afford appraisers should be protected from being taken advantage of.	Refer to ED-2, EJ-1, LU-12 and VA-1.
Donovan Maretick	2/12/2018	Website	According to Forbes Magazine article " https://www.forbes.com/sites/salvatorebabones/2018/02/11/lone-star-shinkansen-wide-open-spaces-make-texas-the-perfect-market-for-japans-bullet-train/#4fc4ad987bf5 " Texas Central "The Texas Central railway has reportedly raised more than \$100 million from investors, mapped out a route, and begun purchasing options on the necessary land. It has an environmental green light from the Federal Railroad Administration and in-principle agreements for its three planned stations. It even has a design concept for its Dallas terminal." So they have only raised 100 million for a 15 to 18 BILLION dollar project. Based on the fact that this project is so heavily financed, it is critical that the economic feasibility be reviewed and released much like the similar project Brightline Florida did. Brightline also released their ridership calculations which Texas Central has done none of. Why are these omitted unless they are problematic and shed a negative light on this project. The EPA's website states: "Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. EPA has this goal for all communities and persons across this nation. It will be achieved when everyone enjoys: -the same degree of protection from environmental and health hazards, and -equal access to the decision-making process to have a healthy environment in which to live, learn, and work. This project is not coordinating with the local counties and cities to ensure that they are involved in this process. The meetings held for environmental justice were released at the last second in small publications that many knew about including myself. There are many people up and down the line that are land rich and cash poor. They do not have the money to fight a large corporation to ensure their land is protected and they receive the full value. Now we see that this project has raised less than one percent of the funds needed so they may not even be able to afford to pay people the fair market value plus the damage to the remaining land. Why should someone have to hire lawyers and pay for appraisers for a project that is not economically viable. Many people are suffering because of this and it should not proceed until a full independent investigation is done on the ridership calculations as well as the financial feasibility. Until then No Build!	Refer to ED-2, GN-2, GN-3, GN-4, GN-7, GN-9, NE-1 and SC-22.
Donovan Maretick	2/13/2018	Website	Section 8.1 Roadway Categories in the DEIS states the following: Public Roads - Roads that would be accessible to the general public. Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority. Design details, ownership, and maintenance responsibilities for these roads would be closely coordinated with the appropriate Project stakeholders during more advanced design. - Proposed Public Roads - New public roadways. In many cases proposed roads were designed to facilitate ROW access for TCRR and emergency access needs, but would also improve connectivity or provide access to properties along the ROW. As such, they were not designated as HSR MOW Access roads. - Realigned Public Roads - Realignment or reconfiguration of existing public roadways. In some cases, public roads are rerouted along the HSR alignment to achieve grade separation and would also serve to provide access to the HSR ROW. So by reviewing the roads in the maps outlined in blue the total proposed mileage for new public roads is 126.82 miles or just over half the entire route in new roads for the taxpayers. These would be new roads that have to be maintained as stated	Refer to TR-7. Private access roads (that would be maintained by TCRR), would be built along many portions of the Project to allow for maintenance. Additional public roads would be created through reroutes and realignments and would range from 16.6 to 46.9 miles, depending on the Build Alternative. The Preferred Build Alternative (Build Alternative A) would include 16.8 miles of new public road. For the mileage of proposed public roads, please see Section 3.11

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			in the DEIS by "Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority." This is unacceptable as it forces costs on these agencies that have not been voted on or budgeted for by these entities. If we look at the Houston Segment (section 45) Harris, Waller, Grimes County then there are 43.3 miles in this segment alone. These costs should not be forced on an entity but should go through the standard process of approval by the local governments that would be assuming these costs. Until this is done, it should be a "no build"	Transportation , specifically Table 3.11-62: Summary of Transportation Impacts by Build Alternative .
Donovan Maretick	2/13/2018	Website	Section 8.1 Roadway Categories in the DEIS states the following: Public Roads - Roads that would be accessible to the general public. Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority. Design details, ownership, and maintenance responsibilities for these roads would be closely coordinated with the appropriate Project stakeholders during more advanced design. - Proposed Public Roads - New public roadways. In many cases proposed roads were designed to facilitate ROW access for TCRR and emergency access needs, but would also improve connectivity or provide access to properties along the ROW. As such, they were not designated as HSR MOW Access roads. - Realigned Public Roads - Realignment or reconfiguration of existing public roadways. In some cases, public roads are rerouted along the HSR alignment to achieve grade separation and would also serve to provide access to the HSR ROW. So by reviewing the roads in the maps outlined in blue the total proposed mileage for new public roads is 126.82 miles or just over half the entire route in new roads for the taxpayers. These would be new roads that have to be maintained as stated in the DEIS by "Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority." This is unacceptable as it forces costs on these agencies that have not been voted on or budgeted for by these entities. West of Teague Segment (section 46) Madison, Leon, Limestone, Freestone shows 64.2 miles of new roads. A private entity should not be allowed to force the public to maintain new roads built exclusively to support a private project. This should go through the local entities standard procedures for approvals or else "No Build".	Refer to TR-7. Private access roads (that would be maintained by TCRR), would be built along many portions of the Project to allow for maintenance. Additional public roads would be created through reroutes and realignments and would range from 16.6 to 46.9 miles, depending on the Build Alternative. The Preferred Build Alternative (Build Alternative A) would include 16.8 miles of new public road. For the mileage of proposed public roads, please see Section 3.11 Transportation , specifically Table 3.11-62: Summary of Transportation Impacts by Build Alternative .
Donovan Maretick	2/13/2018	Website	Section 8.1 Roadway Categories in the DEIS states the following: Public Roads - Roads that would be accessible to the general public. Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority. Design details, ownership, and maintenance responsibilities for these roads would be closely coordinated with the appropriate Project stakeholders during more advanced design. - Proposed Public Roads - New public roadways. In many cases proposed roads were designed to facilitate ROW access for TCRR and emergency access needs, but would also improve connectivity or provide access to properties along the ROW. As such, they were not designated as HSR MOW Access roads. - Realigned Public Roads - Realignment or reconfiguration of existing public roadways. In some cases, public roads are rerouted along the HSR alignment to achieve grade separation and would also serve to provide access to the HSR ROW. So by reviewing the roads in the maps outlined in blue the total proposed mileage for new public roads is 126.82 miles or just over half the entire route in new roads for the taxpayers. Submitted By	Date Submitted	Submission Type	Comment	Response
			federal authority." This is unacceptable as it forces costs on these agencies that have not been voted on or budgeted for by these entities. Dallas Segment- (section 52) adds 2.5 miles of new roads. A private entity should not be allowed to force the public to maintain new roads built exclusively to support a private project. This should go through the local entities standard procedures for approvals or else "No Build".	
Donovan Maretick	2/13/2018	Website	The "Dallas to Houston High-Speed Rail Draft Environmental Impact Statement" dated December 2017 uses Texas Central's proprietary documents as a basis for ridership. Texas Central refuses to release these proprietary documents. These documents are described in the DEIS as the "proprietary market demand study undertaken by TCRR" and the "TCRR ridership and revenue report". This is not open government. The FRA could have chosen several different public documents, such as the Reason Foundation's February 2017 report "Texas High Speed Rail: Caution Ahead", or TxDOT's December 2013 "Statewide Ridership Analysis Report: Statewide Analysis Model-Version 2.5" for ridership numbers. Why did they choose a proprietary report instead? The proprietary report is an extreme outlier, with 7.2 million riders per year, compared to Reason's 1.4 million and TxDOT's 700,000 to 2.7 million. The ridership numbers are not unimportant as they inform such things as reduction of vehicle miles traveled (VMT) which informs emissions calculations. The approval of the EIS based on misleading data should be considered illegal representation and should not be released until factual data is provided that is more realistic to the project at hand. Until then, "No Build" is the only option.	Refer to GN-2 and GN-3.
Donovan Maretick	2/13/2018	Website	Using Texas Central's proprietary documents, the DEIS says 14,630 cars per day will be taken off the road. Using Reason's numbers only 816 cars per day would be taken off the road. The proprietary report's ridership numbers give 18 times the number of cars per day taken off the road as using publicly available numbers. The emissions removed and reduction in traffic could inform many people's opinion of the HSR, both members of the public and public officials. Another instance the DEIS uses ridership from the proprietary report is calculating sales tax revenue. The DEIS states \$20 million a year for Houston and Dallas combined. Based on the DEIS table 3.14-22, this number could be overstated by 2.5 to 10 times, compared to publicly available sources. This could easily influence both the public and public officials. Based on the fraudulent data provided to AECOM from Texas Central, the only option is "No Build".	Refer to AQ-6, BA-6, GN-2 and SC-3. Regarding the use of other political organization's ridership numbers, which appear to be the source of the statement that 18 times the number of cars per day are taken off the road as using publicly available numbers, using numbers from an organization that is not politically neutral would not be appropriate for a Federal NEPA document.
Donovan Maretick	2/13/2018	Website	Texas Central is saying the \$199 average fare is a "rumor" (implying it will be lower but not saying what the average train fare will be) used to calculate the sales tax revenue while simultaneously promoting the sales tax revenue of \$10 million for Dallas. This is unethical. Another private project, All Aboard Florida, does include a ridership and revenue study in its DEIS - Appendix 3.3 F Ridership and Revenue Study Summary. FRA cannot use a secret, proprietary report as its basis for ridership in the DEIS. This is not open government. If Texas Central wants to keep its ridership and revenue report secret, that's fine, but the DEIS must use another source for ridership and revenue. As a result, the DEIS is fatally flawed and must be rescinded. FRA should immediately issue a decision of NO BUILD.	Refer to BA-6, GN-2, NE-1 and SC-3.
Donovan Maretick	2/14/2018	Website	The DEIS states Cypress Falls High School located in Harris County would be located approximately 150 feet from a temporary construction zone and large drainage area necessary for the HSR System. The school is separated by Huffmeister Road and outdoor sports facilities would be located more than 13,000 feet from the LOD. Impacts to children's health and safety could include: localized air quality impacts due to the movement and operation of construction vehicles, potential exposure to toxic fumes used during the construction of the Build Alternatives and increased traffic on Huffmeister Road. Air quality and hazardous materials impacts would be handled through BMPs and mitigation measures outlined in Section 3.2.6, Air Quality and Section 3.5.6, Hazardous Materials. Increased traffic congestion due to the construction of the Build Alternatives around Cypress Falls High School would be mitigated through a traffic control plan established before construction. Additionally, Cypress Falls High School has multiple ingress and egress routes leading from the main buildings, however pedestrian facilities are not visible in aerial imagery. Traffic control plans would need to account for potential children walking to school from adjacent neighborhoods. Placing a High Speed Rail right next to a school is a disaster waiting to happen. This will disrupt school and access to school. By placing the water retention pond next to the high school, you will generate more mosquitos that will increase the chances of our children being infected with insect borne illnesses. The path of the high speed rail should never be right next to a school. No Build!	Refer to HZ-5, SC-7, SC-8 and TR-6. As discussed in Section 3.2.6, Air Quality, Avoidance, Minimization and Mitigation , construction of the Build Alternatives would increase local and regional emissions of particulate matter (fugitive dust) and pollutant emissions from fuel combustion. However, construction emissions associated with temporary construction areas or construction of drainage areas would be temporary and transient in nature occurring only during periods with active construction in the immediate area. The short-term emissions increases during the construction period would be reduced through Best Management Practice (BMP) mitigation measures as discussed in Section 3.2.6, Air Quality, Avoidance, Minimization and Mitigation . As a result, short-term and localized air quality impacts from construction would not be significant and would not exceed any National Ambient Air Quality Standard (NAAQS) designed to protect human health. Section 3.5.6.2, Hazardous Materials and Solid Waste, Avoidance, Minimization and Mitigation, Mitigation Measures, HM-MM#2 outlines hazardous materials management indicating that prior to construction a Hazardous Materials Plan and a Spill Prevention Control and Countermeasures Plan would be prepared and implemented. In addition, HM-MM#4 , outlines waste management indicating that a Waste Management Plan would be prepared and implemented prior to construction. The comment provides

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				insufficient detail to address the proximity of the Project to a specific school. Drainage infrastructure necessary for the Project would be constructed in accordance with state and local regulations. Best management practices would be used to mitigate temporary impacts related to construction. Drainage requirements of the project are summarized in TCRR final Conceptual Engineering Design and Constructability Reports, Appendix F, Section 2.6, Drainage.
Donovan Maretick	2/19/2018	Website	The FRA energy assessment indicates that ERCOT has a 13% reserve capacity that can be used by TCR. If ERCOT has a 13% reserve, then how is it the Texas is experiencing so many "Brown Outs" during both Winter and Summer months? The EIS states that additional energy resources will be required, and on-line, by 2029. Who will pay and how much will the added capacity requirements cost? How much of the added capacity will be dedicated to this project? Texas uses coal fired plants, so how much greenhouse gases will be generated by these plants in order to support this project? If nuclear power plants are the source of future energy, when will new plants be available and at what cost? How will FRA/TCR bridge the energy requirement gap between first operations and the FRA projected on-line date of 2029? Where will the TCR be placed in the priority for energy during brown out periods and why?	Refer to AQ-1, EU-3 and EU-4.
Donovan Maretick	2/19/2018	Website	What is the net effect of the increased property tax revenues for Waller County when offset by the negative impacts of lost sales tax revenue from local business, farmers and ranchers?	Refer to SC-14 and SC-15. The net effect on tax revenues in Harris County, as reported in Table 3.14.28, Net Tax Impact through 2040 (2019 millions) , is estimated to be between \$567 million and \$805 million through 2040.
Donovan Maretick	2/19/2018	Website	Who in the federal Department of Transportation will be the final decision maker for each federal grant that TCR/TCRR is applying? When are these grants projected to be awarded? What is the application and decision process and timeline for these grants? How does the timing of these grants relate to the proposed construction time table for this project? What are the values of these federal grants? What are the "matching" fund requirements of the private TCR/TCRR before construction begins? What federal requirements will be in effect to ensure that the private funds are deposited before the construction can begin?	Refer to GN-4.
Donovan Maretick	2/19/2018	Website	How can the FRA present a draft security statement in the EIS that is based upon data that hasn't been updated since 2014? Why hasn't this evaluation been updated with the current threat assessment? We have seen multiple terrorist attacks on public transit systems including the metro rail in St Petersburg Russia. This needs to be addressed prior to the EIS as public safety is vitally important.	Refer to SS-8.
Donovan Maretick	2/19/2018	Website	The EIS says that 60% of this project will be viaduct. The EIS also states that the entire system will be enclosed. True viaducts allow for traveling under the viaduct; however, a fully enclosed system negates any benefits of the viaducts. Which is it? Viaducts, or fully enclosed? If both, then why is TCR attempting to sell Texans with photos of viaducts without the enclosure fencing?	Refer to NE-1, TC-7 and TR-8.
Donovan Maretick	2/19/2018	Website	Identify Where Data Is Questionable And/ Or NOT Accurate -EIS Opening Comment: TCR is responsible for planning and coordinating with FRA for the NEPA regulatory approvals for the Project, which would include a Record of Decision for the EIS and related permits. TCRR submitted a petition for a Rule of Particular Applicability to FRA. Texas Central is the parent company of TCRR, and other corporate entities that are responsible for Project development and implementation (i.e., design, construction, financing, and operation) Comment: The EIS is relying upon the information provided to the FRA by TCR. The FRA does NOT explain how it has validated or confirmed the information provided by TCR as being accurate. TCR information has proven to be incomplete and inaccurate. These deficiencies will have a significant negative affect on the economic impact analysis and comparisons of proposed routes, including the "No Build" option. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	Refer to GN-1, GN-2, NE-1 and NE-8.
Donovan Maretick	2/19/2018	Website	EIS 3.14.4.2.2 Comment: "... Various property tax exemptions apply to existing properties within the LOD. Properties used for agricultural production are assessed based on their productivity rather than the full appraised value of the property. As shown in Table 3.14-7, over half of properties within the LOD in intermediate counties involved some kind of agricultural use. State- and county-owned properties are completely exempt and contribute no property tax, while properties owned by other local jurisdictions may be exempt from select jurisdictional property taxes. The highest rates of exempt properties within the LOD occur in Dallas and Harris Counties. Homestead exemptions, including additional exemptions for disabled, over- 65, or widowed homeowners, allow the deduction of a portion of the homes assessed value from the taxable value. " Comment: The EIS has not incorporated the analysis of independent economic studies that reveal the negative economic affects on the counties between Dallas and Harris. Studies show that these communities will experience at or above a -20% t their respective economic base. Existing businesses will be dramatically impacted and the respective county tax revenue will be reduced. This impacts all services and operations of the EACH county. The disruptive impacts throughout the counties have not been incorporated into the financial risk assessment. Higher property tax revenues have NOT been offset by the negative impacts to other county tax revenue generators. This lack of analysis and	Refer to GN-4 and SC-20.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			disclosure by the FRA is a clear indication of the FRA's bias in making a "Rush To Approval" for the TCR's benefit. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data.	
Donovan Maretick	2/19/2018	Website	EIS 3.14.4.2.2 "The State of Texas does not collect a personal income tax,so the bulk of funding for local jurisdictions comes from a combination of sales and property taxes. " Comment: The EIS has not incorporated the analysis of independent economic studies that reveal the negative economic affects on the counties between Dallas and Harris. The impacts on School Districts, Police, Fire, Medical first responders, utilities and energy operations will require counties to raise property taxes on all property owners within the counties. This cost is not distributed among the benefiting counties (Dallas & Harris). The impacted residents will be left to pay without any compensation from the true benefactor, the TCR and the Japanese investors. The costs have not been calculated into the true cost of the project. This means the financial projections are not accurate. The disruptive impacts throughout the counties have not been incorporated into the financial risk assessment presented by the FRA. This lack of analysis and disclosure by the FRA is a clear indication of the FRA's bias in making a "Rush To Approval" for the TCR's benefit. This EIS can not be approved if the FRA has not independently verified the validity and accuracy of the TCR data. NO BUILD	Refer to EU-2, GN-2, NE-1, SC-3, SC-6, SC-19, SC-20, SS-23, VA-1 and VA-3.
Donovan Maretick	2/19/2018	Website	EIS Statement: ES.9.12: All Build Alternatives would interact with existing transportation networks by necessitating roadway reconfigurations, freight rail crossings, aviation infrastructure mitigation, and bicycle/pedestrian improvements. ES.9.17: "... Road closures, detours and localized automobile congestion caused by construction could increase the response time for law enforcement, fire and emergency services personnel and school buses. However, closures and reroutes would be closely coordinated with local jurisdictions and both a construction transportation and traffic control plan would mitigate impacts." COMMENTS: This FRA statement is incorrect and misleading. It implies a harmonious relationship with the "no build" baseline. This is not accurate. "Roadway reconfigurations" should be properly stated as "CLOSURES". The term "aviation infrastructure mitigation" requires a better explanation of the its meaning. These statements are just another example of the FRA's biased position which has compromised their objectivity.	Refer to TR-8 and TR-11.
Donovan Maretick	2/19/2018	Website	EIS Opening Comments: "Current FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations." Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. This regulatory action(s) constitutes a federal action and triggers the environmental review under the National Environmental Policy Act (NEPA). COMMENTS: This train is projected to travel at 205 MPH. Based upon the FRA regulations, it can NOT perform an adequate SAFETY assessment of this project. This project can ONLY be assessed against a "Rule of Particular Applicability" after it is prepared and released. This EIS can not be approved as "Safety Acceptable" under the FRA's own regulations. NO BUILD	Refer to SS-4.
Donovan Maretick	2/19/2018	Website	EIS Opening Comments: "Current FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations." Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)),impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. This regulatory action(s) constitutes a federal action and triggers the environmental review under the National Environmental Policy Act (NEPA). The FRA preferred route "A" traverses an area of Texas which is very prone wild hogs up to 700 lbs each, or more. This is not a problem encountered in Japan. Chain link fences have proven inadequate in keeping out these wild animals. The EIS fails to assess the overall risk of these animals finding their way to the rail service or the potential impact analysis of a train traveling at speeds up to 205 MPH and one or more 700lbs wild hogs. Three(3 people were killed in Uvalde, Texas in December 2017 due to hogs on the road. Loop 130 around Austin has been plagued with some many hog issues that drivers are selecting alternate routes. The FRA EIS must be rejected because of the incomplete safety assessment. A "desktop" assessment is not adequate for determining the real Texas threat to public safety. No Build	Refer to SS-2, SS-4 and SS-12.
Donovan Maretick	2/19/2018	Website	EIS Statement: Operational energy consumption would include the electricity needed to power the HSR trains, stations, TMFs and MOW facilities. The Build Alternatives would obtain electricity from the major electrical service providers in the Study Area. Due to the size and expected electrical demand of the Build Alternatives, it is likely that statewide electricity reserves and electrical transmission capacity would be affected. COMMENTS: Resource expansion is very costly. This is an additional burden that Texas taxpayers are being required to pay. The costs of this capitalization requirement is included in the FRA's assessment of the economic impact; however, these existing plans did NOT include the possibility of the TCR. Therefore, capacity expansion will not be enough to carry the additional burden of the TCR. How much will this cost Texans? When will this expansion be complete to meet the requirements of the TCR construction and operations demand? The EIS says the ERCOT has "planned" expansions; however, planned is not "committed" expansion. Furthermore, they are looking at 2029 for the planned coming on line. There is NO CONFIDENCE that this will occur by these dates and these dates do NOT synchronize to the requirements of the TCR. The FRA approval should be rejected based upon the lack of operational reliability and negative economic impacts on Texans.	Refer to EU-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Donovan Maretick	2/19/2018	Website	EIS Statement: FRA reviewed alternative transportation modes to high-speed rail service that included higher-speed and conventional speed rail services, direct bus service and expansion of IH-45 and determined that these modes would not meet the purpose and need of the Project. COMMENTS: This statement confirms the FRA bias by removing the "No Build" option from their consideration or valid comparison for the public. This option is not provided the proper consideration or comparison disclosure throughout the EIS. Specifically, how did the FRA perform this analysis and what are the sources of the data used to perform this analysis? There appears to be no assessment of the size of traveling parties. Most travelers between these cities are in family sized groups. HSR pricing will not remove them from traveling. The advantages of destinations in the cities has NOT been assessed against the single downtown terminal locations. These single terminal locations is a deterrent to attracting HSR travelers. No BUILD!	Refer to BA-4, ED-1, NE-1 and PN-3.
Donovan Maretick	2/19/2018	Website	EIS ES.4: "TCRR identified the Dallas to Houston corridor as an ideal location and distance to implement high- speed intercity passenger rail that is financially sustainable, constructible and connects two of the largest urban centers in the country." AND " In order to meet the needs of growing travel demand spurred by population growth and a decrease in the level of service of existing transportation systems, both cities are addressing much needed infrastructure improvements. Intercity and intracity transportation infrastructure will require significant expansion and maintenance in the future; a reliable multimodal option to alleviate the strain on this existing infrastructure is needed to accommodate growing demand. " Comments: FRA has taken the TCR statements as being fact, without scrutiny. Growth projections, congestion, traffic capacities are all presented from a biased perspective of "Selling". Unfortunately, the FRA has failed to provide the proper level of judiciary oversight for the American public. All "data" provided by TCR must be verified by outside, independent sources. No build	Refer to GN-1, GN-2, NE-1, NE-8 and PN-3.
Donovan Maretick	2/19/2018	Website	EIS 9.17 Statements : "... Road closures, detours and localized automobile congestion caused by construction could increase the response time for law enforcement, fire and emergency services personnel and school buses. However, closures and reroutes would be closely coordinated with local jurisdictions and both a construction transportation and traffic control plan would mitigate impacts." Comment: A review of the Draft EIS fails to reveal a comprehensive assessment of the affects on police, fire and medical operations have NOT be performed. Due to road closures and relocations, additional resources (substations, vehicles, officers, firemen, ambulances, paramedics, etc.) may be required by all counties to meet the needs of the communities. This is driven by the transportation time changes and realignment of first responder operations. The lack of a proper assessment is just another example of a faulty financial impact statement on all of the rural communities. The EIS should be rejected due to a lack of a complete financial assessment and project risk on the citizens of Texas.	Refer to PI-1, SS-18, SS-23, SS-26, TR-6 and TR-8.
Donovan Maretick	2/19/2018	Website	EIS Statements : "... Road closures, detours and localized automobile congestion caused by construction could increase the response time for law enforcement, fire and emergency services personnel and school buses. However, closures and reroutes would be closely coordinated with local jurisdictions and both a construction transportation and traffic control plan would mitigate impacts." Comment: A review of the Draft EIS fails to reveal a comprehensive assessment of the affects on school districts has NOT be performed. Due to road closures and relocations, additional resources (Buses, Drivers, Schools and Teachers) may be required by all counties to meet the needs of the communities. This is driven by the transportation time changes and realignment of school district responsibilities. The lack of a proper assessment is just another example of a faulty financial impact statement on all of the rural communities. The EIS should be rejected due to a lack of a complete financial assessment and project risk on the citizens of Texas.	Refer to SC-6.
Donovan Maretick	2/22/2018	Website	On AECOM TECHNICAL MEMORANDUM NOISE AND VIBRATION it states "With regard to the effects of noise from passing trains on animals, noise impact would be expected to occur only within about 15 feet from the tracks for HSR trains operating on viaduct at the maximum speed of 205 mph. Because no animals would be this close to the tracks, noise impact on wildlife is not anticipated. Similarly, increased annoyance due to the startle effect of noise from rapidly passing trains at the maximum train speed of 205 mph would only occur within about 45 feet from the tracks, which is within the ROW. Therefore, increased noise annoyance due to startle should not be an issue." The word "should" in the last sentence does not provide someone who is moving cattle on horse back under a viaduct or tunnel in a berm much comfort. This should be a definitive answer and not "should". If safety is paramount, then Texas Central should be held to a higher standard to protect not only those riding the rail but those working beside it. No Build!	Refer to NR-1.
Donovan Maretick	2/23/2018	Website	IT WAS ANNOUNCED THAT A SECOND HARRIS COUNTY MEETING WOULD BE HELD ON MARCH 5TH. IT IS CLEAR AND EVIDENT THAT THE ONLY TWO COUTIES THAT SUPPORT THIS PROJECT ARE HARRIS AND DALLAS COUNTIES. ALL COUNTIES IN BETWEEN WERE ONLY GIVEN ONE PUBLIC COMMENT PERIOD AND MANY WERE HELD THE SAME NIGHT SO RESIDENTS WHO OWNED PROPERTY IN BOTH COUNTIES WERE NOT ABLE TO SPEAK ON THE PROJECT IN BOTH COUNTIES. THIS IS A FLAWED AND UNFAIR FRA PUBLIC HEARING PROCESS WHEN THE FRA SETS TWO RURAL COUNTY MEETINGS PER NIGHT LIMITING RURAL LANDOWNER ATTENDANCE SINCE SOME PEOPLE LIVE ON THE BORDER OF COUNTIES AND THEN THE FRA GIVES HARRIS COUNTY TWO FULL PUBLIC HEARING MEETINGS, NOT TO MENTION THE LATE CHANGE IN A MEETING LOCATION THAT HELD FEWER PEOPLE IN MADISONVILLE. This process has been seriously flawed and hasn't been in the best interest of the public. No Build.	Refer to PI-8, PI-10 and PI-11.

Donovan Maretick	2/25/2018	Website	In an article titled A Study of the development and issues concerning High Speed Rail (HSR) by Yong Sang LEE (Visiting Scholar, Korea Railroad Research Institute) http://www.tsu.ox.ac.uk/pubs/1020-lee.pdf they state: "Moreover, Sands (1993) analyzes the development effects of HSR stations, focusing on Shinkansen, TGV and ICE. He indicates the effects of HSR networks on employment and population, in particular, in areas close to HSR networks Ishigawa (1985) contends that the Shinkansen had an effect on regional development. However the effects mainly depend on regional power not just on high speed linesiv. Givoni (2006) concludes that HSR is the best designed to substitute conventional railway services on routes where much higher capacity is required and to reduce travel time, further improving the railways service, also against other modes, therefore leading to mode substitution. However, the high investment in HSR infrastructure could not be justified based on its economic development benefits since these are not certain." This route does not follow where an existing passenger rail line is so there is no definitive proof that there is a demand for this service like in Japan. Texas Central also touts about how it will create economic development but this paper states the fact well because an infrastructure investment of this size simply cannot be justified based on economic development benefits that are uncertain. No build option.	Refer to GN-2, GN-3, NE-1 and SC-19.
Donovan Maretick	2/26/2018	Website	Reference ES.0 EXECUTIVE SUMMARY ES.1 Introduction Texas Central is planning to apply for Railroad Rehabilitation and Investment Financing (RRIF) loans. These loans have very weak taxpayer protections, could be awarded to entities that do not have the resources to repay them. Why does Texas Central refuse to release the financial feasibility study in the DEIS. Why is this kept from the public when it states on Texas Central's website that they will actively be seeking them. https://www.texascentral.com/rumors-vs-reality/project-financing/ Texas Central has not released a business plan, nor has it provided any verifiable, objective data to support its ridership projections or cost estimates. Given that this multi-billion dollar project unlike anything that has been built in the U.S., we feel it is imperative to closely scrutinize the project to make sure it is feasible, and that it can be privately funded and financed. We do not want the first U.S. high-speed rail line to fail. The economic welfare of those individual people whose property would be taken as well as the taxpayers who could be on the hook if TCR does not pay back the federal loans should be considered. The ridership and financial feasibility should be released to the public so that they can make an informed decision.	Refer to GN-4.
Donovan Maretick	2/26/2018	Website	According to an independent analysis conducted by the Baruch Feigenbaum https://reason.org/wp-content/uploads/files/texas_high_speed_rail.pdf As we noted back in 2013 in our study titled "High-Speed Rail in Europe and Asia: Lessons for the United States," only two high-speed train lines, anywhere in the westernized world, make money-Tokyo to Osaka and Paris to Lyon, and one breaks even-Hakata to Osaka-with the potential to make money if it remains in operation for at least 10 more years. ⁴ All other high-speed rail lines throughout Europe and Japan lose money. High-speed rail lines in these countries were built to relieve crowding on conventional rail lines and to connect central cities with extremely high residential and commercial population densities, low rates of car ownership, and large subway systems with high rates of usage. These cities also lack robust toll-free roadway systems and nearby airports with low-cost air service. In contrast, among major U.S. regions, Dallas and Houston have some of the highest rates of car ownership, smallest transit systems and percentage of transit usage, and lowest population densities. ⁵ As a result, even by U.S. standards, the Dallas to Houston corridor is far from ideal for high-speed rail. References: ⁴ Feigenbaum, Baruch. High Speed Rail in Europe and Asia: Lessons for the United States. Reason Foundation. 2013. Web. < http://reason.org/news/show/high-speed-rail-in-europe-and-asia >. December 14, 2016. ⁵ "Commuting Characteristics by Sex," and "Population, Housing Units, Area and Density." U.S. Commerce Department. U.S. Census Bureau. census.gov. Jan. 1, 2017. Web. < https://www.factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_15_5YR_S0801&prodType=table > and < https://www.factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=DEC_10_SF1_GCTPH1.ST10&prodType=table > Jan. 17, 2017. How does a company with no Railroad background hope to defy the odds of almost every other high speed train in the world. This is beyond reason and should be a no build!	Refer to GN-3 and NE-1.
Donovan Maretick	2/26/2018	Website	It states on the FRA site the below: NEPA Planning Benefits: *Identifies potential challenges prior to selection of actual routes or station locations. *Properly completed NEPA reviews reduce or eliminates mitigation risk. *The NEPA process enhances involvement of cooperating agencies and increases coordination for multimodal projects Why has TXDOT, FRA and Texas Central not coordinated with Waller County? This is absolutely disgraceful and a violation of NEPA. The DEIS is not accurate unless if cooperates with all agencies involved so as to take into consideration municipalities concerns for our environment. This factor alone should require a No Build as this process is being rushed to completion!	Refer to PI-1.
Donovan Maretick	2/26/2018	Website	Table 2 in the attached document display the key comparisons between major world cities, including population density, transit usage, automobile ownership, gas tax and square kilometers of rail line. The table examines three categories of cities: 1) Tokyo and Paris, both endpoints for profitable high-speed rail lines; 2) New York City and Washington, D.C., considered to be the two U.S. cities most conducive to	Refer to BA-6, GN-2, GN-3 and GN-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			high speed rail (presently, the Acela higher-speed rail line connects these two endpoints); and 3) Dallas and Houston, Texas Central's proposed endpoints for its project. As shown in the table, Dallas and Houston lag behind in high-speed rail-friendly infrastructure. What assurances do we have that would dispute the data that the Reason Foundation submitted as a 3rd party independent agency submitted? Why does Texas Central believe that they could be profitable when others have failed? The cards are stacked against this high speed rail being self supporting before it is even built, therefore, No BUILD!	
Donovan Maretick	2/26/2018	Website	Ridership Projections 3.2.3.2 Vehicle Emissions Reductions Texas Central has released several different sets of ridership projections. Initially, Texas Central projected annual ridership of four million passengers by 2035.6 More recently, Texas Central upped this projection to five million annual passengers by 2025. And now in the DEIS it shows the long term forecast for annual ridership in 2040 would be 7.2 million passengers per year. TCRR estimates that 89 percent of the existing travel for the Dallas-Houston corridor currently occurs by car (private vehicle), while the remaining 11 percent occurs by air or bus. Table 3 reflects an independent study conducted by the Reason Foundation in regards to ridership forecast for Texas Central's project. High-speed rail ridership comes from many different modes including conventional rail, aviation, personal automobile, buses and "induced travel.7" Texas Central's ridership numbers seem to change like the wind and for a project that will cost billions of dollars and put peoples homes, businesses and land at risk, there simply isn't enough proof in regards to their calculated ridership projections. No Build! References 6 "Facts." Texas Central Rail. Texas Central Partners. Jan. 1, 2017, < http://www.texascentral.com/about/ >. Accessed Jan. 15, 2017. 7 Induced travel consists of trips that would not have been taken before, but now that high-speed rail is available, residents make the trip. Induced travel has been documented in both Europe and in the Northeast corridor.	Refer to GN-2, GN-3 and NE-1.
Donovan Maretick	2/26/2018	Website	There was a recent study conducted and article written titled "When birds collide with high-speed rail" released on January 24th 2018 by Plataforma SINCR. https://phys.org/news/2018-01-birds-collide-high-speed-rail.html If a high-speed train runs at 185 mph through small urbanized areas, it is possible that some animals will be surprised in their path, including magpies, pigeons, crows and buzzards. These collisions have not been scientifically analyzed or quantified to date. A new study now reports obtaining the first estimates in Spain. According to the article, "The development of high-speed rail poses new ecological challenges. The thousands of kilometers of railways with trains operating at speeds of more than 155 mph can generate unwanted effects, such as the mortality of birds, a fact that until now had not been analyzed or quantified." What causes collisions? According to the report, about a third of the rail crossings of the road occur below catenaries, which corresponds to birds that risk being run over. "In addition, more than 25 percent of the crossings in front of the train have birds that were perched on the ground, roads or cables of the infrastructure just before the train passes, as protagonists," says the researcher. The video record also confirms that the birds generally react at a distance of 200 to 445 feet of the train, so the train's speed leaves them little time to escape. "As a result, a small fraction of the birds that can be seen from the front of a train end up dying," he adds. There is nothing in the DEIS to address this issue and as you are aware, Texas is known for its vast population of birds and a large part of our tourism population that come are avid bird watchers. This could negatively impact both the bird population as well as the tourism generated by bird watchers. More research needs to be completed and a plan to reduce the risk of bird mortalities should be included or No Build!	Refer to GN-3 and NR-2. The construction and operation of the HSR system would not restrict bird watching activities or add any regulations that would restrict bird watching activities or indirect activities related to recreational bird watching. Because the Project would not restrict bird watching activities, no impacts to the bird watching industry are anticipated and therefore tourism generated by bird watchers would not be adversely impacted. Additionally, Section 3.6.5, Natural Ecological Systems and Protected Species and Section 3.4, Noise and Vibration outline potential impacts to wildlife in regard to noise and vibration from the construction and operation of the Build Alternatives. The Project is located within the migration corridor for several species; however, impacts to their migratory patterns are not expected as a result of the Project. For information regarding the Migratory Bird Protection Act please see Section 3.6.2, Natural Ecological Systems and Protected Species, Regulatory Context . Mitigation measures to avoid impacts to migratory birds and comply with the MBTA are described in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and NR-CM#1: MBTA Compliance .
Donovan Maretick	2/26/2018	Website	The DEIS does not address the negative impacts on our bird populations especially the Bald Eagle which is protected under the Bald and Golden Eagle Protection Act which I am including below. Studies have shown that birds are negatively impacted along thousands of kilometers of railways with trains operating at speeds of more than 155 mph and can generate unwanted effects, such as the mortality of birds, a fact that until now had not been analyzed or quantified. I am including this study here. The High Speed Rail will most certainly impact this species based on the population of bald eagles along this route. In 2018 alone, a total of 24 Bald Eagles have been reported in the first two months of the year in Harris, Dallas, Waller, Navarro, Freestone, Limestone, Ellis and Leon Counties all of which are along the path of the high speed rail. The Bald and Golden Eagle Protection Act (16 U.S.C. 668-668c), enacted in 1940, and amended several times since then, prohibits anyone, without a permit issued by the Secretary of the Interior, from "taking" bald eagles, including their parts, nests, or eggs. The Act provides criminal penalties for persons who "take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle ... [or any golden eagle], alive or dead, or any part, nest, or egg thereof." The Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." "Disturb" means: "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its	Refer to NR-2 and NR-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior." In addition to immediate impacts, this definition also covers impacts that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle's return, such alterations agitate or bother an eagle to a degree that interferes with or interrupts normal breeding, feeding, or sheltering habits, and causes injury, death or nest abandonment. A violation of the Act can result in a fine of \$100,000 (\$200,000 for organizations), imprisonment for one year, or both, for a first offense. Penalties increase substantially for additional offenses, and a second violation of this Act is a felony. No Build#	
Donovan Maretick	2/26/2018	Website	The DEIS does not address the negative impacts on our bird populations especially the Bald Eagle which is protected under the Bald and Golden Eagle Protection Act which I am including below. Studies have shown that birds are negatively impacted along thousands of kilometers of railways with trains operating at speeds of more than 155 mph and can generate unwanted effects, such as the mortality of birds, a fact that until now had not been analyzed or quantified. Penalties increase substantially for additional offenses, and a second violation of this Act is a felony. No Build#	Refer to NR-2 and NR-3.
Donovan Maretick	2/26/2018	Website	According to the Federal Governments paper titled "Birding Economics and Birder Demographics Studies Conservation Tools. by Paul Kerlinger." Birders are the primary user-group of neotropical migratory birds. In the United States, birders number in the tens of millions and spend upwards of \$20 billion dollars per year on bird seed, travel, and birding paraphernalia. Average yearly spending by active birders averages between \$1,500 and \$3,400, with travel being the major expenditure. Research needs include studies of birder demographics and birding economics at the national and state levels, as well as at specific birding sites. According to the Texas Almanac(texasalmanac.com/topics/environment/wildlife), Texas has many native animals and birds, as well as introduced species. More than 540 species of birds - about three fourths of all different species found in the United States - have been identified in Texas. Some 142 species of animals, including some that today are extremely rare, are found in Texas. This makes "Birding" a large source of income to our local economies here in Texas. The DEIS in Table 3.4-4: FRA Interim Criteria for Train Noise Effects on Animals reflects 100dba. Figure 6 in the attached California (Caltrans) study show : Threshold Shift in Birds Exposed to Noise. The growth and decay of threshold shift in four budgerigars exposed to four different levels of a 1/3rd octave band of noise for 72 hours. Threshold shift reaches an asymptote after 12-24 hours regardless of the exposure level. Exposure to a 76 dB noise results in a threshold shift of 14 dB which recovers within a few hours following the termination of the noise. Exposure to a 106 dB noise, however, leads to longer recovery time and a permanent threshold due to damage to the inner ear. Based on the high populations of birds and the economic impact that it has on Texas Tourism, more studies should be conducted much like the Caltrans. According to the The development of high-speed rail poses new ecological challenges. The thousands of kilometers of railways with trains operating at speeds of more than 155 mph can generate unwanted effects, such as the mortality of birds, a fact that until now had not been analyzed or quantified. According to the attached study just conducted in January 2018 titled "when Birds Collide with High Speed Rail" which I have attached, they calculate that a high-speed rail underway crosses birds in the vicinity of its frontal approximately every nine miles of travel, and runs over a bird every 225 miles. "On the Madrid- Levante line, on which the work has been carried out, some 60 birds per kilometer between Madrid and Motilla del Palancar, and 26 birds per kilometer on the stretch between Motilla del Palancar and Albacete, can be run over every year," Malo says. The DEIS covers very little on the effect that the High Speed Rail will have	Refer to NR-1 and NR-2. The construction and operation of the HSR system would not restrict bird watching activities, or add any regulations that would restrict bird watching activities or indirect activities related to recreational bird watching. Because the Project would not restrict bird watching activities, no impacts to the bird watching industry are anticipated. Additionally, Section 3.6.5, Natural Ecological Systems and Protected Species and Section 3.4, Noise and Vibration outline potential impacts to wildlife in regard to noise and vibration from the construction and operation of the Build Alternatives. The Project is located within the migration corridor for several species; however, impacts to their migratory patterns are not expected as a result of the Project. For information regarding the Migratory Bird Protection Act please see Section 3.6.2, Natural Ecological Systems and Protected Species, Regulatory Context . Mitigation measures to avoid impacts to migratory birds and comply with the MBTA are described in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and NR-CM#1: MBTA Compliance .

Submitted By	Date Submitted	Submission Type	Comment	Response
			on Texas's bird habitat which is alarming considering the size of our Bird Watching community. An independent study should be conducted and mitigation steps should be addressed or no build!	
Donovan Maretick	2/26/2018	Website	In the name of Safety of TCR's HSR riders as well as security of the HSR Fencing while on Berms or at Natural Grade Level, I see nothing in the Fence design that indicates it will be "Predator" Fence? Additionally, I see nothing that states that at least the 200 miles of the very rural portion of the HSR route will be Visually Inspected on a Daily Basis for holes under the security fencing? In case the FRA does not know what "Predator" Fencing is, it is at a minimum a Three-Four foot section of horizontal fencing pinned at the outside edge as well as strongly wired to the bottom of the vertical fencing, preferably on both sides of the security fence. In case the FRA is not aware of rural wild animal habits, Coyotes, known to exist ALL up and down the route, will easily dig under your fencing if there is no Predator Fencing. After that happens, the Wild Hogs will easily exploit the situation left for them by the Coyotes and will end up on top of the HSR. I would suggest the FRA test the Safety of the HSR and its Riders for at least the collision of a 350#-400# hog while the train is traveling at or near 205 mph. Or, of course the FRA can disregard this potential important Safety Hazard and risk the lives of many riders on the HSR as Wild Hogs and Coyotes will find a way onto the HSR's Tracks one way or other. This subject of Wild Hogs is covered by the DEIS but relies only on the vertical security fencing. If this isn't addressed, then NO BUILD	Refer to SS-2 and SS-12.
Donovan Maretick	2/28/2018	Website	There are serious safety issues that are simply not addressed in the DEIS. There is no mention of TCR working with FERC on working with the pipeline company to ensure the public safety. According to the Dallas News: "A meeting that opened with a moment of silence for the 12-year-old girl who died in a house explosion quickly turned contentious Tuesday night when northwest Dallas residents worried about their safety voiced their fears and frustrations to city and Atmos Energy officials." Atmos has gas lines running within a matter of feet from the proposed rail and they do leak. According to the story, "While the meeting was occurring, Atmos discovered another gas leak at Fire Station 43 in the 2800 block of Lombardy Lane, less than two miles from the school, and firefighters were evacuated, Dallas Fire-Rescue spokesman Jason Evans said." A risk mitigation plan should be included with the EIS so as to ensure the safety of the public and environment or NO BUILD! https://www.dallasnews.com/news/dallas/2018/02/27/city-leaders-meet-northwest-dallas-neighbors-worried-gas-leaks-after-deadly-blast	Refer to EU-1 and SS-19.
Donovan Maretick	3/5/2018	Oral	Good evening. Thanks for everybody sticking around. One of the things I wanted to mention, I'm Donovan Maretick and I'm no build option. Can't tell by the shirt? Table 3.14-22 states the average one-way ticket price is \$199 each way. We've had a lot of people come out here, talk about the millennials, college students. I went to college. I lived on Ramen noodles. I don't know anyone that could spend \$199 to go each way, \$400 round trip, not going to happen. Also, if you noticed, Kevin Wright, at the very beginning of it, stated they had not applied for federal funding at this point. At this point. Let that sink in. So on Texas Central's website it states: As for federal loans, the project will explore all forms of capital available to private companies to finance debt for the project, including federal loan programs like RRIF and TIFIA. These programs are specifically designated to promote private investment to improve and innovate U.S. infrastructure. We've heard this before, people. SH 130. If anybody knows of the tollway between, I think it's San Antonio and Austin, this was a partnership between Spain-based Cintra and San Antonio Zachry, opened a 41-mile length road, highway between -- Cintra received a \$438 -- \$438 million TIFIA loan. It's the exact same loan that Texas Central is applying for based on its projections it submitted on how many cards it would use and their toll fee projections. Sound familiar? After the first year of operation, they had lower-than-expected traffic, which led to shortfalls in revenues. In less than three years after it was opened, the company filed for bankruptcy. According to the terms that emerged from bankruptcy court, all the private entities, \$1.4 billion debt was wiped away, leaving federal taxpayers left holding the bag for the \$430 -- 430 million federally backed Transportation Infrastructure Finance and Innovation Act. This is all too familiar. They've also stated that pension funds fund these infrastructure projects. Cintra managed to convince the Dallas fire and police pension fund to invest in its expensive risky IH-20 and I-635 toll roads. Who's risking whose money here? It isn't the private corporations. Do you think any government will let their roads fail when its public employee pensions and such vast amounts of public money are at risk in these deals? This is yet another way to guarantee a taxpayer bailout. So they may not at this point apply for them. Once they get the DEIS release, we all know what's going to happen. They're going to apply for the federal loans, they're going to default and we're going MR. HUMPHREY: Yeah, Mr. Scofield gave me his time. Can I take it? MS. GATES: So you're speaking for yourself and Mr. Scofield? MR. HUMPHREY: Yes. I'm speaking for Randy Scofield. My name is Bob Humphrey. I live in Harris County. He works for and represents people in Harris County that have land in that area. A lot has been said tonight about all the different issues, about the DEIS, about all the conflicts, all the things that are bad, but the thing that really strikes me tonight is the fact that I cannot believe that after we've heard all that's gone on about how TCRR has treated the landowners and everybody else, that they have, once again, stooped to one more low in the fact that they've paraded all of these associations through here for their benefit, okay? And then on top of that, that makes it worse, is the fact that they bring children, our young adults in here, who really don't have a clue about what's going on, and tell them lies that they come up here and repeat and those lies are the fact. There's a young lady here tonight, a very nice lady, said it's private. It's private. Private money. We also had Sylvester Turner's representative up here say, it is private money. It's private money. That's a	Refer to BA-6, ED-1, ED-2, GN-2, GN-4, NE-1, PN-3, PN-4 and SC-3.

			lie. And when they tell us that they oted for the -- or pushed for the 977 House Bill where no state money could be used, they fought us every step of the way to the last minute. They lied and they're lying now. When they say they -- they have eminent domain, they was -- they sued Calvin House in court, in District Court 333, September 2016. They got a summary judgment against them. Calvin did. They lied. They do not have eminent domain, but you would make these young people here believe all of those lies. I -- it's beside me how these people can come and stand to look at us. They're our own neighbors and our own -- the people we see every day. How can they, for money, stand up and lie like this? The ridership. They claim they're going to haul 13,000 people a day. Well, Southwest Airlines, we're told, carries 1800 a day. Okay? They're going to put 13,000 people and take them out of their cars at a ridership of \$200 one-way trip? That's not possible. You've taken out of the EIS the financial viability aspect of it because if you look -- took a hard look at it, we, as Americans in Texas, are going to be paying for this, all of us. It's coming out of our pocketbook. And finally, they've been to -- they've been three or four years trying to raise private money, private. \$18 billion is what they claim. That's not the acquisition of the land. That's the property. I mean, that's the building of the rail. They've been able to raise about 300 million, 150 million of that is cash. The rest of it is in kind. That's less than 1 percent. They've been to the hedge funds in New York. They will not put any money up with them. They will put money with anything, but they won't put it with this. Now they're in Washington, D.C. and they're looking for a safety net from the federal government. If they can get that, then they can get these other people in because they'll have a guarantee. We need to stop them and stop them now. This is a no build. Thank you.	
Donovan Maretick	3/5/2018	Oral	Good evening. Thanks for everybody sticking around. One of the things I wanted to mention, I'm Donovan Maretick and I'm no build option. Can't tell by the shirt? Table 3.14-22 states the average one-way ticket price is \$199 each way. We've had a lot of people come out here, talk about the millennials, college students. I went to college. I lived on Ramen noodles. I don't know anyone that could spend \$199 to go each way, \$400 round trip, not going to happen. Also, if you noticed, Kevin Wright, at the very beginning of it, stated they had not applied for federal funding at this point. At this point. Let that sink in. So on Texas Central's website it states: As for federal loans, the project will explore all forms of capital available to private companies to finance debt for the project, including federal loan programs like RRIF and TIFIA. These programs are specifically designated to promote private investment to improve and innovate U.S. infrastructure. We've heard this before, people. SH 130. If anybody knows of the tollway between, I think it's San Antonio and Austin, this was a partnership between Spain-based Cintra and San Antonio Zachry, opened a 41-mile length road, highway between -- Cintra received a \$438 -- \$438 million TIFIA loan. It's the exact same loan that Texas Central is applying for based on its projections it submitted on how many cards it would use and their toll fee projections. Sound familiar? After the first year of operation, they had lower-than-expected traffic, which led to shortfalls in revenues. In less than three years after it was opened, the company filed for bankruptcy. According to the terms that emerged from bankruptcy court, all the private entities, \$1.4 billion debt was wiped away, leaving federal taxpayers left holding the bag for the \$430 -- 430 million federally backed Transportation Infrastructure Finance and Innovation Act. This is all too familiar. They've also stated that pension funds fund these infrastructure projects. Cintra managed to convince the Dallas fire and police pension fund to invest in its expensive risky IH-20 and I-635 toll roads. Who's risking whose money here? It isn't the private corporations. Do you think any government will let their roads fail when its public employee pensions and such vast amounts of public money are at risk in these deals? This is yet another way to guarantee a taxpayer bailout. So they may not at this point apply for them. Once they get the DEIS release, we all know what's going to happen. They're going to apply for the federal loans.	Refer to GN-2, GN-4, NE-1 and SC-3.
Donovan Maretick	3/6/2018	Website	On the day of the Cypress Public Hearing, Mayor Turner along with Texas Central announced the preferred station as the Northwest Mall. This was a clear and evident violation as the FRA should decide the route and not the Mayor of Houston. This process has been fraught with political corruption stemming from Mayor Turner and his affiliations. His own Chief of Staff Marvalette Hunter worked for Texas Central prior to working with the mayor which placed her in a position to sway the Mayors vote. Also in recent emails that were released Trent Seibert March 1, 2018, it shows that Mayor Turner himself helped a family friend Maya Ford to negotiate a contract with Texas Central to help push the train to the City of Houston and himself. She was paid \$5000 a month under this contract which is a clear ethical violation. Below is the article in its entirety: HOUSTON - Four months after City Hall sent out requests for proposals for engineering firms to study a downtown connection to a bullet train that would zip from Houston to Dallas, a close family friend of Mayor Sylvester Turner secured a \$5,000 per month contract with bullet train company, Texas Central. The family friend even asked Turner for advice on negotiating the contract. From the email of close family friend Maya Ford: "Hi there Pops," she wrote to Turner on Aug. 16, 2016. "I received the contract from Texas Central today. Can you please see attached and let me know if there's anything I should push back on? Also it shows that it's for one year. I recall you mentioned I should try to sign a multi-year deal. Should I approach it one year at a time, or negotiate that now?" The email raises questions if Turner is working two sides of the street: Helping a close family friend negotiate a contract with a company that was also trying to negotiate a deal with Houston as part of its bullet train plan. In August 2017, Turner and Texas Central signed a deal on the development of high-speed train passenger station connections. Texas Central needs Houston's help to provide its stations access to highways and public transit. Turner described Ford as a "low level employee" in a Wednesday press conference, but did not elaborate. He walked out of the press conference	Refer to BA-4, GN-4, GN-7, GN-9, NE-1, NE-6 and PI-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			without answering questions about whether he played any role in securing Ford her contract. The "low level employee" comment belies Ford's high-level work with Turner. Not only was she a co-chair for Women for Turner during Turner's run for mayor, she also co-chaired his transition team after his election and has been described as a very close family friend in news reports. Keith Gross is a Houston-area attorney and former public official. He has also represented several elected officials in Harris County. "I have read the email," Gross said. "And I believe the transaction does not pass a smell test. The email correspondence between the mayor and a close family friend about negotiating the agreement shows she clearly looked to the mayor when negotiating the terms of the agreement. The email leads us to believe the mayor would have some influence on the hiring or on the terms of their agreement. There is simply no other explanation for the email." Ford did not return a call seeking comment. "I would be interested to know if Texas Central had been seeking to hire an employee, or did it create a position for her?," Gross said. Michael Moore, regional vice president with Texas Central, also did not return a call seeking comment. State records show that Ford filed the paperwork to create her company, Ford Momentum, three days after Turner's inauguration. The Ford Momentum website showcases work the company has done with other entities. Many are closely linked to the city, such as Houston First, Midtown Houston, Hire Houston Youth, and the Houston Health Department. The status of Ford Momentum is also unclear. State records show that just last month the Texas Secretary of State declared the company "inactive" and said it had a "forfeited existence" citing the Texas tax code. "The Secretary has received certification from the Comptroller of Public Accounts under Section 171.302 of the Texas Tax Code indicating that there are grounds for the forfeiture of the taxable entity's charter, certificate or registration," the letter the Secretary of State to Ford Momentum reads. "The Comptroller of Public Accounts has determined that the taxable entity has not revived its forfeited privileges Within 120 days after the date that the privileges were forfeited." The bullet train has been a long-talked about project designed to transport passengers between Houston and Dallas in 90 minutes. The \$12 billion project will be privately funded. Texas Central says the train system is expected to start its build-out this year. It is expected to generate \$36 billion to the economy over the next 25 years, create more than 10,000 jobs per year during construction and more than 1,000 jobs each year after that. Texas Central has made progress in Dallas, too. In January, plans for the North Texas Station in Dallas were released. It will be located on the west side of The Cedars with pedestrian walkways connecting to Kay Bailey Hutchison Convention Center. The project has its critics. Late last year, the Federal Railroad Administration narrowed the potential paths for the train down to one likely route. Homeowners in rural areas between Houston and Dallas are concerned that train might possibly cut through their property. The actual emails are attached https://texasmonitor.org/sylvester-turner-family-friend-secured-5k-month-job-company-wanted-houston-bullet-train-deal/	
Donovan Maretick	3/8/2018	Website	The FRA initially announced 10 public comment periods and then at the last second held an 11th in Harris County for no reason other than to garner additional support. The majority of the county meetings were held two in one night which did not allow a person who owns property in both counties to participate in both meetings. Why did the FRA allow an additional hearing in one county and not the others?	Refer to PI-1.
Donovan Maretick	3/8/2018	Website	I would hope that placing a comment on the impact on our environment would be as a result of being a result of looking out for our planet, and countryside. Why is it that Texas Central is allowed to bribe the public with a chance to win a free toy if a comment is entered. If a politician offers me a gift for my vote, then its called bribery. This should be a violation of the NEPA process.	Refer to PI-4.
Donovan Maretick	3/8/2018	Website	I have been working to clear my land (Tract number TX-WA-01-024.000)over the past three years and while doing such I have found multiple arrow heads as well as pottery which I am attaching a picture of here. As Texas Central has never been allowed to survey my property, they could not perform any historical digs as required by NEPA. There have been many tribes of Indians in the Waller County area and as such, I do not know if I may have a Indian Burial ground or some other historical relics on my property but this should have been investigated prior to the release of a DEIS.	Refer to CR-5.
Donovan Maretick	3/9/2018	Website	Critical Health Effects Noise pollution can result in adverse impacts on health and well-being. The impacts on humans of noises above the acceptable range have been studied extensively. At extreme levels, hearing itself can be impacted. Other problems related to noise include compromised learning, stress, high blood pressure, sleep loss, distraction and lost productivity, and a general reduction in the quality of life and opportunities for tranquility. ¹ Fewer studies have been done on impacts to wild and domesticated animals, but environmentalists are concerned with impacts such as interference with communication, masking predation, startle and fright. ² Studies indicate that children are more sensitive than adults to loud noise. Humans (and animals) are more sensitive to noise when they are sleeping. More than 30 years ago a researcher, Dr. Arline Bronzaft, found that students in a school next to a elevated train in NYC were one year behind in reading ability if they had been on the noisy side of the school. We have multiple schools in Leon County by the construction zone as well as Cy Falls High School which will be right under the rail off Huffmeister and 290. That same researcher found that a couple years after the noise was reduced, the reading abilities of students on the formerly noisy side of school improved. ³ The community, train riders, and train operators & employees have different types of exposure to the "noise climate" and the climate will be different after build out than during construction. During construction, the noise levels are typically greater. Workers constructing the train, as well as members of the community adjacent to the tracks, must be protected from the adverse impacts of excessive noise. The FRA is obligated to mitigate noise issues that exceed the current	Refer to NR-1, NV-1 and PI-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			situation. However, the EIS might not address specific concerns in your community unless members of your community provide very specific comments to the FRA detailing areas of concern (e.g., schools, hospitals, etc.), location, details of land use (e.g., hours of use, typical ages), desired dB levels (see chart below), accepted standards, etc. As many neighborhoods especially around the Houston station locations were not informed and will not get any input due to the lack of the FRA and TCR to work with local communities as per the NEPA requirement. Sources Noise Pollution Clearinghouse High Speed Train Noise Effects on Wildlife and Domestic Livestock, C.E. Hanson A Quieter School: An Enriched Learning Environment, Quite Classrooms	
Donovan Maretick	3/9/2018	Website	<p>High Speed Rail Implications We need to consider the change in noise pollution between High Speed Rail and the existing situation. Some of these changes are positive and others need to be mitigated. According to the HSRA, High Speed trains "generate lower noise levels than conventional trains at speeds with which most people are familiar [under 125 mph]. At higher speeds, however, HST shows a noise increase over conventional trains due to aerodynamic effects. A mitigating factor is that the high speeds enable HST noise to occur for a relatively short duration (a few seconds at the highest speeds)." In addition, "the total noise generated by a train is the combination of sounds from several individual noise generating mechanisms, each with its own characteristics, including location, intensity, frequency content, directivity, and speed dependence... These noise sources can be grouped into three categories according to the speed of the train."⁸ For low speeds, below about 40 mph (64 kph), noise emissions are dominated by the propulsion units, cooling fans, and under-car and top-of-car auxiliary equipment, such as compressors and air conditioning units. The HST would be electrically powered and considerable quieter at low speeds than conventional trains, which are usually diesel powered. In the speed range from 60 mph to about 150 mph (98–241 kph), mechanical noise resulting from wheel-rail interactions and structural vibrations dominate the noise emission from trains. In the existing rail corridors in California, conventional trains seldom exceed 79 mph (127 kph), so this speed range, which represents a medium range for HST, is the top end of noise characteristics for trains with which most people are familiar. Speed has a strong influence on noise in the medium speed range. Above approximately 170 mph (274 kph), aerodynamic noise sources tend to dominate the radiated noise from the HST. Conventional trains are not capable of attaining such speeds. HST noise in the transition speeds between each of the three foregoing ranges is a combination of the sources in each range. In addition, the noise onset is very rapid with higher speeds. Instead of a slowly approaching noise that gradually gets louder as the train approaches and then dissipates as it leaves, the velocity of a high speed train means that the noise is more sudden. Typically, rapid onset noise is considered more disruptive. The following graph demonstrates the areas of impact of rapid noise onset as a function of distance and train speed. In areas where HSR will share an existing rail corridor (e.g. Caltrain, Metrolink), grade separations should eliminate noise from horns at the existing grade crossings as well as the warning bells of the crossing guards. (Note: horns may still be used at stations.) HSR found that these sources currently dominate the noise climate in areas within a .25 mi radius of the grade crossings.⁹ However, they appear to have assumed in their analysis that this benefit would outweigh all other impacts: the potential noise impact ratings from screening were adjusted to account for segments where at-grade crossings would be eliminated for existing passenger and freight trains as part of the implementation of HST service along that alignment. A reduction in one impact rating level (high to medium or medium to low) was made only for alignments where HST speeds would be less than medium or medium to low) was made only for alignments where HST speeds would be less than 150 mph (241 kph) Train operations have an impact on noise pollution as well. Obviously, the frequency of trains increases the cumulative impact of noise. The HSR anticipates running 19 trains per hour (tph) at peak service.¹⁰ In addition, for corridors with existing commuter trains, it is important to understand the future plans for those services as well. For example, UP, BNSF, 290. 2025 anticipates an increase to 12 tph during peak hours.¹¹ (Note: the rail documentation usually talks about a tph number in each direction: eg. 6 tph in each direction. The numbers here are for both directions because that seems to make more sense to the average person.) Vertical Alignments According to HSRA, the vertical alignment of the train has an effect. "Noise from elevated trains travels twice as far as noise from trains that are 'at grade' (at ground level). The noise of underground alignment is concentrated at tunnel entrances and at vent locations."¹² The FRA provides a useful diagram that shows comparisons of the shielding corrections associated with various types of track geometries (alignments). [insert image pg 56, http://www.fra.dot.gov/downloads/RRDev/final_nv.pdf] Power Stations In addition to noise of the trains themselves, other operational structures should also be considered, such as the electric substations, venting of tunnels, transformers and catenary lines. Construction Noise Noise during construction includes similar factors as any heavy construction site. Trucks, heavy equipment, etc. will all create noise pollution as the train system is built. Early morning and nighttime operations could impact community sleep, and loud construction in sensitive areas (eg around schools) can impact the learning environment. OSHA regulations are expected to protect the people working on construction. Sources Noise Pollution Clearinghouse High Speed Train Noise Effects on Wildlife and Domestic Livestock, C.E. Donovan Maretick	3/9/2018	Website	Here is the one showing how ALT A is not the best in impacts. All along I was putting takings above charts and highlighting the lowest or best ALT . Just did a find for takings and this is what I came up with Is Alt A the least impact based on Takings of property and such? Table 12: Summary of Land Use Impacts per Build Alternative Alt A ties or beats others on 3 items out of 15 items. Alt C BEATS in 3 and ties in 1. Table 18: Comparison of Build Alternatives A, B and C Alt C is lower in 10 out of 17 items while ALT A is lower or ties on 3 items Table 3.7-83: Estimated Impacts to Wetlands by Build Alternative Alt A is actually the HIGHEST total of wetland crossings. Alt A is HIGHEST in number of acres temp perm Table 3.9-20: Comparison of Utility Impacts by Build Alternative Alt A is not the lowest in any of the 4 categories Table 3.13-17: Summary of Land Use Impacts by Build Alternatives Alt A is lowest only one 1 subject and tied for lowest in 2 others. Alt C Lowest in 3 and tied at zero for the 4th Table 3.18-10: Estimated Parcel and Structure Acquisitions by Build Alternative Alt A does not even have a single item its the lowest out of 10 items. ALT F is the lowest in 3 of them The above is all the items that ALT A is not the best option. Even with the bad data on noise impacts being wrong (Nothing noted in Stone gate and White Oak Falls the indicators for the house same distance one has noise marker and other one does not) We need, DEMAND, an accurate DEIS so that an informed decision can be made on impacts to local stakeholders. Current DEIS is nothing better than thrown together to get the result desired vs true and accurate (as good as it can be) to let the data dictate the projects fate. No build is the only option until these above items are corrected and a true route based on true impacts can be looked at	Comment noted.
Donovan Maretick	3/9/2018	Website	Please see the attached comment sheet. It is clear and evident that the choice for the preferred route and station location was chosen prior to the DEIS and the study was conducted to approve this route. I find it hard to believe that a private company can come in and draw lines on a map and say, FRA pick which one of these that will meet our purpose and need. I can choose six routes and pick five that are terrible and one that is good, does that justify the FRA to pick the one that is good when the six routes were selected erroneously from the beginning? This process is fatally flawed and allows a 3rd party the opportunity to selectively choose what land they want no matter what the consequences are. FRA has been pushing this project for Texas Central going against the very people that they are supposed to protect. No Build! The I-45 corridor was eliminated by the FRA before the DEIS partly due to travel time (this appears to be a violation of NEPA also as it places travel time over all other NEPA considerations, including the Clean Air Act, Historic Preservation, Environmental Justice, and Noise and Vibration): "To roughly parallel I-45 would require slower speeds around curves and would not achieve the TCR's technical requirement of a 90-minute travel time." Dallas to Houston High-Speed Rail Project Corridor Alternatives Analysis Technical Report - August 10, 2015 - p 14 The DEIS contains speed charts for the proposed HSR system: However, these times are based on "The train operates between Houston and Dallas without encountering any speed restrictions other than those imposed at the stations" DEIS 234180- AFN-REP-Conceptual Engineering Report.Docx Page 26 of 199 Noise and Vibration is a NEPA issue. One way to control the noise of the HSR is to lower the speed of the trains. Do any of the routes meet the purpose and need of 90 minutes travel time if speed has to be decreased to combat noise issues? Also, it appears that the rural counties may reject Texas Central re-routing roads over rail, or rerouting roads at all. Will this change the inclines and curves and slow the HSR down? The Travel Times must be recalculated allowing for 1) slower speeds in residential areas and 2) any changes in incline or curve due to not being able to re-route roads. If any alignment then fails the 90-minute travel time, it must be rejected as the I-45 corridor was.	Refer to BA-7, BA-8, GN-9 and NE-1.
Donovan Maretick	3/9/2018	Website	High Risk of Federal Loan Default Texas can't afford another SH-130 Bankruptcy Scenario Texas Central states on their website: "As for federal loans, the project will explore all forms of capital available to private companies to finance debt for the project, including federal loan programs like RRIF and TIFIA. These programs are specifically designed to promote private investment to improve and innovate US infrastructure." SH-130 Background: The SH 130 Concession Company, a partnership between Spain-based Cintra and San Antonio-based Zachry American Infrastructure, opened the 41-mile-long southern portion of the State Highway 130 toll road, from north of Mustang Ridge to Seguin, in October 2012 to much fanfare. Cintra received a \$438 million dollar TIFIA Loan based on its projections it submitted on how many cars would use it and their toll fee projections (Sound Familiar?). After the first year of operation they had lower-than-expected traffic which led to shortfalls in revenue. In less than three years after it was opened, the company filed for bankruptcy. According to the terms that emerged from bankruptcy court, all of the private entity's \$1.4 billion debt was wiped away, leaving federal taxpayers left holding the bag for the \$430 million federally-backed Transportation Infrastructure Finance and Innovation Act (TIFIA) loan given to the private entities. This means that us the taxpayers are on the hook. Cintra even managed to convince the Dallas Fire & Police Pension Fund to invest in its expensive, risky I-820 and I-635 toll projects. Who's risking whose money here? It sure isn't the private corporations. Do you think any	Refer to GN-4 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			government will let these roads fail when its public employee pensions and such vast amounts of public money are at risk in these deals? This is yet another way to guarantee a taxpayer bailout. So you can be sure this is by design to set-up a system too big to fail. Other cases The first TIFIA loan went to the South Bay Expressway in San Diego, CA, that went bankrupt in less than years. The rosy traffic projections were off by nearly 40,000 cars a day. When the San Diego Association of Governments took over the road after it emerged from a Chapter 11 bankruptcy, the taxpayers had to take an almost \$80 million loss on the loan. No matter what, taxpayers are the 'big losers,' and unlike the reality TV show, there's no upside. On Cintra's two projects in Dallas-Ft. Worth, not only did it grab two TIFIA loans that combine to equal \$1.5 billion, it secured over \$1 billion in Private Activity Bonds (PABs, tax-exempt bonds), and \$1 billion in gas taxes for a combined project cost totaling \$4.7 billion. Indeed, on I-820, the taxpayers put more cash into the deal than Cintra. So there is simply no way any person confronted with the facts can call P3s free market in ANY way. They're a form of corporate welfare that socializes the losses while the special interests walk away with all the profits.	
Donovan Maretick	3/9/2018	Website	High Speed Rail Implications We need to consider the change in noise pollution between High Speed Rail and the existing situation. Some of these changes are positive and others need to be mitigated. According to the High Speed Rail Association, High Speed trains "generate lower noise levels than conventional trains at speeds with which most people are familiar [under 125 mph]. At higher speeds, however, HST shows a noise increase over conventional trains due to aerodynamic effects. A mitigating factor is that the high speeds enable HST noise to occur for a relatively short duration (a few seconds at the highest speeds)." In addition, "the total noise generated by a train is the combination of sounds from several individual noise generating mechanisms, each with its own characteristics, including location, intensity, frequency content, directivity, and speed dependence... These noise sources can be grouped into three categories according to the speed of the train."8 For low speeds, below about 40 mph (64 kph), noise emissions are dominated by the propulsion units, cooling fans, and under-car and top-of-car auxiliary equipment, such as compressors and air conditioning units. The HST would be electrically powered and considerable quieter at low speeds than conventional trains, which are usually diesel powered. In the speed range from 60 mph to about 150 mph (98–241 kph), mechanical noise resulting from wheel-rail interactions and structural vibrations dominate the noise emission from trains. In the existing rail corridors in California, conventional trains seldom exceed 79 mph (127 kph), so this speed range, which represents a medium range for HST, is the top end of noise characteristics for trains with which most people are familiar. Speed has a strong influence on noise in the medium speed range. Above approximately 170 mph (274 kph), aerodynamic noise sources tend to dominate the radiated noise from the HST. Conventional trains are not capable of attaining such speeds. HST noise in the transition speeds between each of the three foregoing ranges is a combination of the sources in each range. In addition, the noise onset is very rapid with higher speeds. Instead of a slowly approaching noise that gradually gets louder as the train approaches and then dissipates as it leaves, the velocity of a high speed train means that the noise is more sudden. Typically, rapid onset noise is considered more disruptive. The following graph demonstrates the areas of impact of rapid noise onset as a function of distance and train speed. In areas where HSR will share an existing rail corridor (e.g. Caltrain, Metrolink), grade separations should eliminate noise from horns at the existing grade crossings as well as the warning bells of the crossing guards. (Note: horns may still be used at stations.) HSR found that these sources currently dominate the noise climate in areas within a .25 mi radius of the grade crossings.9 However, they appear to have assumed in their analysis that this benefit would outweigh all other impacts: the potential noise impact ratings from screening were adjusted to account for segments where at-grade crossings would be eliminated for existing passenger and freight trains as part of the implementation of HST service along that alignment. A reduction in one impact rating level (high to medium or medium to low) was made only for alignments where HST speeds would be less than 150 mph (241 kph) Train operations have an impact on noise pollution as well. Obviously, the frequency of trains increases the cumulative impact of noise. The HSR anticipates running 19 trains per hour (tph) at peak service.10 In addition, for corridors with existing commuter trains, it is important to understand the future plans for those services as well. For example, Caltrain 2025 anticipates an increase to 12 tph during peak hours.11 (Note: the rail documentation usually talks about a tph number in each direction: eg. 6 tph in each direction. The numbers here are for both directions because that seems to make more sense to the average person.) We should learn from the California High Speed Rail study which I am providing the link to below. We do not have an accurate representation in the DEIS for sound studies. 			Newsletter, Summer 2009 (here) HST Noise and Vibration Technical Evaluation, Bay Area to Merced Sound Walls: Absorptive versus reflective design and effectiveness	
Donovan Maretick	3/9/2018	Website	<p>Attached are comments that I support from Anastasia Norton. No Build. Children High Speed trains produce both noise and vibrations. Numerous studies show that the noise and vibration associated with these high speed trains damage children's learning, hearing and speech development. The more frequent the noise and vibrations, the bigger the effect. Children under 13 will be particularly impacted, and children with pre-existing challenges, including ADD, ADHD, or Dyslexia, will be particularly affected. Some studies have shown that there may actually be a link between the noise/vibrations and ADD/ADHD. The speech disturbances also lead to emotional problems, and long-term behavioral problems. Multiple studies have been conducted on children learning or living within 500ft of a High Speed Train, and every study's results prove that the effects are disastrous to the health of not only children, but also the elderly. For example, the Journal of Biological Psychology stated that "Background acoustic noise is detrimental to brain's auditory and speech functions. Children... are particularly vulnerable to the effects of background noise on language functions. Ongoing background noise impairs speech perception... and attention control" (pg. 142, T. Kujala, E. Brattico / Biological Psychology 81 (2009) 135--143) Children are more heavily impacted by noise and vibrations in their environment, and the noise & vibrations of HSR can lead to lifelong impairment of learning and education. In children, persistent noise (such as that from a HS train) causes impaired reading comprehension and long term memory problems, and noise negatively impacts cognitive development (especially in school age children). Noises from trains, especially elevated ones, also leads to reading difficulties and adversely affects children's academic performance. This was proven by a Cornell University study. Additional studies showed that noise impacts attention and response to stimuli, sound processing and attention control. There is a link between ADD/ADHD and children living near high speed trains. Direct damage to hearing occurs in children from upwards of 80dba (note --the proposed HSR minimum is 85 dba). The more often kids are exposed, the greater the effect. Long term results mean that HSR near children = hearing loss, speech impediments, learning difficulties, attention disorders and emotional problems. Even the Japanese recognize the impact of HSR noise, and it is HEAVILY regulated near residential areas, and is not permitted above 70 dba (https://www.env_po_ip/en/air/noise/railwav.html) SOME ADDITIONAL HEALTH CONCERNS FOR ADULTS High frequency noise and vibrations from trains can also lead to sleep disturbances in adults, and leads to cardiovascular risks in adults. Adults living near high speed rail have as much as a 35% greater chance of heart problems, including heart attacks and cardiovascular disease.</p> <p>PROPERTY VALUES A study was done called "Impacts Of Rail Transit On Property Values" that studied property values. The result - property values only increased near stations, and those rare areas that experienced an increase in value only saw at most a 5% increase in sales value. Worse yet, "For every 100 feet a property was closer to the [rail] Line, property values dropped by \$965." It was noted that the negative effect was due to such factors as noise, perceptions of crime, and visual intrusion. When the HSR was proposed in California, realtors noted properties that were unable to be sold as a result of the announcement. One property deal fell through because an appraiser noted a property along the rail corridor as being in an "area of diminishing value." and that the buyer was subsequently unable to secure a loan for that reason. FAMILIES WILL LOSE THEIR LIVELIHOOD THE LINE PROPOSED BY TCR GOES THROUGH PROPERTIES THAT, IN SOME CASES, HAVE BEEN IN THE FAMILY FOR 5 GENERATIONS. TCR has stated they intend to take only the land absolutely necessary for the project... even though this means that some land owners will no longer be able to use their property at all. There are MULTIPLE properties along the proposed route which will be cut in half and useless as a result of this project. As an example, Calvin House runs a wedding facility on his land in Waller County. TCR wants to run the train through his property, purchase only the strip where the rail line will go, and has sued him in court for refusing to allow their staff on his property. If the HSR is built, he will not be able to conduct weddings on his property with a HSR with 100 feet, which is his only source of income. Additionally, he will have no way to access the part of his land where the wedding facility is, and the value of his property will plummet. He won't be able to ever sell his property, and his livelihood will be destroyed. He was planning to pass the land to his children, like his father before him.</p> <p>In Japan, the Bullet trains operate at a loss, and are required to be supported by the government, due to a lack of riders. The company that owns/operates the Shinkansen trains has had financial difficulties from day 1, and had to be federally funded by the government of Japan in order to continue to run. Why? Because as Ken Burton Director for the Center of Transportation Policy, George Mason University noted in Urban Issues, 6th "...public transport usually underestimates cost and overestimates ridership." Because Texas Central proposes to use eminent domain, it would mean Texas homeowners, farmers and ranchers face condemnation of their private property if the HSR is permitted. This is a problem because: 1) The railroad is speculative, since there is no US market for HSR. 2) If the HSR is built, revenue for the rail would go to Japanese investors. This means the Texas government would give TCR the power to seize land from Texas landowners to support a foreign economy.</p>	Refer to ED-1, GN-1, GN-2, NE-1, NV-1, VA-1 and VA-4.
Donovan Maretick	3/9/2018	Website	NO BUILD SPEECH The DEIS says that "The No Build Alternative would not meet the specified Purpose and Need for this Project". The DEIS says that "The purpose of the privately proposed Project is to provide the public with reliable and safe high speed passenger rail	Refer to BA-6, GN-3, NE-1, NE-9 and PN-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>transportation between Dallas and Houston." The DEIS lists THREE functional criteria to support the Purpose and Need: Technological: bullet train vehicle and operating procedures based on the N-700I Tokaido Shinkansen system Operational: approximate 90-minute travel time between Dallas and Houston, with achievable speeds exceeding 200 mph in a fully sealed corridor Environmental: minimal impacts to the natural and built environments by maximizing adjacency to existing infrastructure ROW" So basically use a particular brand of train that should take a certain amount of time and the route selected should have minimal impacts compared to other routes studied. You could make up a Purpose and Need statement for any project anywhere and declare that NO BUILD doesn't meet the Purpose and Need statement because the Purpose and Need is to build the project. However, The Step 1 Screening of Corridor Alternative Report which was created before the DEIS and used to select the Utility Corridor, says that "The purpose of the privately proposed Project is to provide reliable, safe, and economically viable passenger rail transportation using proven high-speed rail technology between Houston and Dallas." The difference between the two statements is that the Step 1 Report includes "economically viable". In the Step 1 Report, there is a FOURTH item listed to "support the Project Purpose and Need of the Project": Economic: Achieve a favorable return on investment when weighing expected ridership and revenue against estimated project capital investments, real estate requirements, project delivery schedule, and long-term operations and maintenance expenses. Tim Keith, the CEO of Texas Central prepared a list of Frequently Asked Questions attached to the Step 1 report. In this he says "Additionally, the FRA must carry forward potential corridor alternatives that meet the Project's purpose and need, which includes the requirement that the project be "economically viable." As such, the various elements of the project's construction, including those directly impacting overall cost and the Project's impact on the human and natural environment must be considered at this and future stages of the EIS. " This criterion was used in the Step 1 Report to eliminate at least one proposed route from further study because it was "financially unviable ". The Reason Foundation Report "Texas High Speed Rail: Caution Ahead" concludes that the project will lose over \$500 million dollars a year. There is nothing in the DEIS to show that the project will be economically viable. It's telling that Texas Central and the FRA dropped the economic viability criterion for this project. Not only is NO BUILD an option, it is the only option. NO BUILD!</p>	
Donovan Maretick	3/9/2018	Website	<p>I would like all of the attached questions answered and explained by mail. This project has too many things that are being kept hidden from the public and we deserve more or NO BUILD! Ken Cope Candidate for U. S. Representative, TX District 6 www.CopeTexas.com Questions For Federal Railroad Administration (FRA) Dallas – Houston High Speed Rail (HSR) – Draft Environmental Impact Statement. My name is Ken Cope and I am a candidate for Congress representing this community. A review of the EIS has identified my anomalies that indicate either collusion between TCR and the FRA, or gross incompetence of the FRA. 1. The foundational question is who owns the EIS, the FRA or TCR? How much did the FRA rely upon information provided by TCR? 2. If TCR is found to have presented false or misleading information to the FRA as part of their application with the sole purpose of obtaining permits and, or, federal funding, what are the penalties for TCR and their respective executives? What are the legal consequences for the Japanese (Foreign Corporation)? 3. What are the responsibilities of FRA employees to report misleading and incorrect information presented by the TCR? To whom are they required to report this information? What incorrect or misleading information have FRA employees reported to date? 4. What are the legal consequences and liabilities of FRA employees that fail to fulfill their respective judiciary responsibilities for American citizens? 5. What prohibitions are in place that preclude FRA employees from working for the any entity that is involved in this project? How long must a FRA employee that leaves the FRA employment wait before taking a position with any entity that is involved in this project? Please explain any specifics that Texas citizens should be aware of. 6. What is the final decision process for the FRA EIS? Who is the final decision maker for the FRA EIS? What is the FRA EIS decision timeline of events from February 2018 through August 2019? 7. What is the organizational structure of TCR? What is the ownership structure of TCR? How much financial funding has the Japanese provided to TCR to date? What is the total level of financial support is the Japanese committed to providing to this project and when? 8. Is TCR exempt from any American law because it is majority owned by a foreign Japanese corporation? If so, what exemptions with the TCR enjoy? 9. What are the political action committees organized by the Japanese, TCR, TCRR? Who have these organizations made contributions to, when and how much? 10. Who in the federal Department of Transportation will be the final decision maker for each federal grant that TCR is applying? When are these grants projected to be awarded? What is the application and decision process and timeline for these grants? How does the timing of these grants relate to the proposed construction time table for this project? What are the values of these federal grants? What are the "matching" fund requirements of the private TCR before construction begins? What federal requirements will be in effect to ensure that the private funds are deposited before the construction can begin? Are these grants subject to Congressional oversight? Have the federal funds been appropriated for these grants? When? What federal appropriation(s) has approved the funding of these grants? 11. How can the FRA present a draft security statement in the EIS that is based upon data that hasn't been updated since 2014? Why hasn't this evaluation been updated with the current threat assessment? 12. Where did the FRA establish that the TCR ridership projections were accurate and feasible? What is the detail of this analysis and how much was based upon TCR provided data? 13. Why hasn't the FRA, or TCR, performed any coordination with local government officials about TCR's security or emergency reaction plans? How can the FRA approve a plan that it and/or TCR has failed to coordinate? What evidence has TCR provided that</p>	<p>Refer to AQ-1, BA-4, BA-6, ED-1, ED-5, EH-1, EU-2, EU-3, EU-4, GN-1, GN-2, GN-4, NE-1, NE-2, NE-4, NE-6, NE-8, PI-1, SC-6, SC-7, SC-20, SG-4, SS-3, SS-5, SS-18, SS-21, SS-23, TC-2, TC-6, TR-8 and WW-1. The economic analysis described in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Environmental Consequences, Economic Impacts assesses potential tax revenue impacts for five defined economic analysis areas (see Section 3.14.3, Socioeconomics and Community Facilities, Methodology.) Economic activity is not confined to jurisdictional boundaries and, as such, this analysis does not include county-specific impacts. Black panthers do not occur in the United States. The Florida panther, a sub species of the mountain lion (Puma concolor) is considered endangered but only occurs in Florida and is spotted. "Black Panther" typically refers to a color morph of the jaguar (Panthera onca). They comprise a small percentage of the Jaguar population, generally restricted to South America, and have never been documented within the United States. Spotted jaguars once occupied much of Texas but have been extirpated from the state since the 1940s. The last jaguar known in Texas was shot and killed in 1948 near Kingsville. There are only a few individual jaguars known to exist north of the Mexican border, discovered recently in southern Arizona. None are known to occur in Texas (Schmidly and Bradley's "The Mammals of Texas" copyright 2016 by the Texas Parks and Wildlife Department). The Bald Eagle is listed as threatened by the Texas Parks and Wildlife Department. For information regarding the Bald and Golden Eagle Protection Act and this species, please see Section 3.6.2, Natural Ecological Systems and Protected Species, Regulatory Context. Maps include locations of Bald Eagle records provided by the Texas Parks and Wildlife Department's (TPWD) Texas Natural Diversity Database (TXNDD).</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>detail coordination has been completed? How much will the added levels of local emergency responders be reimbursed for the increased levels of required support? Who will be paying for these costs? 14. Why hasn't the TCR, or FRA, briefed local school districts about the impacts of FRA preferred route A on each of the communities between Dallas and Harris counties? How much will the local school districts have to pay for the reorganizing of school districts driven by proposed road re-routing and closures? 15. This project is being sold as a "Public" project. When will TCR release the basis of their financial projections, ridership, funding sources, risks, opportunities, return on investment analysis, etc.? Who will this information be provided to for independent validation? 16. The FRA energy assessment indicates that ERCOT has a 13% reserve capacity that can be used by TCR. If ERCOT has a 13% reserve, then how is it the Texas is experiencing so many "Brown Outs" during both Winter and Summer months? The EIS states that additional energy resources will be required, and on-line, by 2029. Who will pay and how much will the added capacity requirements cost? How much of the added capacity will be dedicated to this project? Texas uses coal fired plants, so how much greenhouse gases will be generated by these plants in order to support this project? If nuclear power plants are the source of future energy, when will new plants be available and at what cost? How will FRA/TCR bridge the energy requirement gap between first operations and the FRA projected on-line date of 2029? Where will the TCR be placed in the priority of energy during brown out periods and why? 17. Why hasn't the FRA incorporated independent economic analysis that reflect a negative 20%+ impact to all the counties between Dallas and Harris? What negative economic impacts has the FRA incorporated into their analysis? If any, what are they and how was these values determined? Who did the FRA coordinate with at the county levels to obtain the financial impacts in the local communities? 18. The FRA preferred route A appears to violate federal law by impacting habitat of endangered species. Why hasn't the FRA addressed these missing endangered species? These include bald eagles and black panthers. 19. Use of eminent domain will generate landowner lawsuits that would not have occurred except for this project. How much with TCR fund to support the local governments who will be required to pay for legal services for landowners? When will this funding be provided to the local governments and how? 20. Wild hogs are a real safety concern for Texas. Who performed a safety threat analysis of wild hogs getting on the HSR rails and impacting a train traveling 205 MPH? 21. The EIS says that 60% of this project will be viaduct. The EIS also states that the entire system will be enclosed. True viaducts allow for trans versing under the viaduct; however, a fully enclosed system negates any benefits of the viaducts. Which is it? Viaducts, or fully enclosed? If both, then why is TCR attempting to sell Texans with photos of viaducts without the enclosure fencing? 22. The TCR has publicly stated that it will not need government funds. The FRA EIS says that federal grants will be pursued by TCR. Which is it? If federal funds are being pursued, how much funds are being requested and why? What is the true level of financial investment from the Japanese? How much of the Japanese investing pool is from the Japanese government? 23. What is the net effect of the increased property tax revenues for Ellis County when offset by the negative impacts on sales tax revenue? 24. Where will the HSR trains (Cars) be manufactured? How will the come into the United States and where will the final assembly be located? Who will perform the final assembly and what are their contractual arrangements with TCR and the Japanese? Are any of the manufacturing processes subject to import or export restrictions, and why? 25. What are the materials used to manufacture the trains and are they subject to technology restrictions? 26. How much of the trains will be "Made in America"? Explain. 27. What intellectual property rights are being reserved by the Japanese and why? 28. How many trains will be required from day 1 through full capacity? 29. What are the minimum quality standards of the steel used to manufacture the rails that will be used on the railway? What is the source of this steel? 30. If a disruption occurs during normal operations, what are the procedures to halt all trains and to recover all passengers to safety? What happens if loss of power occurs during 100-degree summer days and passengers are stranded in remote locations away from emergency responders and on an elevated viaduct? How long can passengers survive when suspended above ground, without electricity? 31. What backup electrical resources will be installed and where will they be located? What will trigger their usage? 32. Can the TCR still obtain federal eminent domain authority? If so, how? Who would have to approve federal eminent domain? 33. What is the maximum downward force of a fully loaded train traveling at 205 MPH? 34. How much will the Japanese and TCR place in a "performance bond" to protect the citizens of Texas through full construction? 35. What are the financial arrangements of insurance and warranties the TCR will be required to maintain and protect the citizens of Texas from the risk of failures? 36. Texas is considering additional taxes on railroads that travel in excess of 125 MPH to protect its citizens from unexpected costs that are not covered in the TCR plan. What affect will an additional 25% sales tax on every ticket have on the viability of this project? 37. Electrical power lines will be required to be "relocated". What is the financial costs of these relocations by county? Who will be required to pay for these relocations? Will these costs flow through to the citizens of Texas? 38. Plumbing and Water lines will be required to be "relocated". What is the financial costs of these relocations by county? Who will be required to pay for these relocations? Will these costs flow through to the citizens of Texas? 39. Fiber optics and communication lines will be required to be "relocated". What is the financial costs of these relocations by county? Who will be required to pay for these relocations? Will these costs flow through to the citizens of Texas? 40. What is the minimum composition ingredients (materials) of the railroad roadway base? What are the sources of these materials? How much is required for the construction of the roadway base? 41. What kind of water retention structures will be built along the railway? Where will these be constructed (identify whether it will be on the</p>	<p>Additionally, for mitigation information please see Section 3.6.6.1 Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and NR-CM#2: Bald and Golden Eagle Protection Act Compliance. Detailed schedules for the Project have not yet been finalized, however it is anticipated that vehicles would make between 20 to 30 trips per day, with between 30 and 60 minutes between departures. Emergency access to trains would be provided at station areas, maintenance facilities, and at vertical access points placed periodically along elevated track at an interval consistent with the federal rule making process. All public roads would either be built over the Project (road over rail), maintained under the Project (road under rail), or would be rerouted to cross the Project. Temporary construction of a road is not considered a closure. If the road is modified by a reroute or road over rail, it would remain open but realigned. Design and locations of retention structures will be developed during detailed design. Preliminary locations for retention structures occur along northbound and southbound sides of the railway, as applicable to minimize and avoid impacts to existing drainage.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			northbound or southbound sides of the railway)? 42. What international manufacturing quality standards is the train manufacturer certified to perform? What is the quality record of the train manufacturer? 43. Why did the FRA present aerial maps of proposed routes that are outdated? Who prepared these maps? How did the FRA validate the impacts of the preferred route A against these aerial maps? 44. How did FRA validate the road closures, by county? How did the FRA validate TXDOT data to aerial overviews of the proposed routes? Why did the FRA not conduct 100% helicopter surveys and impact analysis of each proposed route? If the FRA did, where are the results of these inspections? 45. Why are “re-routes” not considered “closures”? FRA road closures and reroutes appear to be significantly understated when compared to actual physical characteristics. Why is this? 46. How will the FRA remedy over/under pass design characteristics (14’) that do not meet the needs of the farm & ranching equipment requirements of the local residents? 47. The executive summary states that the “No Build” alternative does not meet the criteria of the “purpose” of the study. This means this option is not a possible outcome of this EIS. Why has the FRA already ruled out an alternative that rural Texas favors? 48. What design alternatives to the N700 Japanese rail system has the FRA investigated and weighed in this EIS? Why have all newer technologies been ruled out of this EIS? What DARPA alternative plans would potentially meet the criteria of the “Purpose” of this EIS and why have they been ruled out? 49. With 53-Year-old technology and designs, how is the N700 designed? Via paper drawings or by computer generated design tools? If computer generated design tools, which ones and what software versions are the current designs controlled? 50. Are the N700 trains currently being manufactured in Japan? If not, then when was the last one manufactured? Where? What is their manufacturing history and how many have they produced annually for the last five years? Will the Japanese be required to re-tool their factories to manufacture the trains for Texas? If so, why and how much capitalization funding must they perform to achieve these manufacturing requirements? What is the timeline for these modifications and how does this relate to the TCR operational commitments? When did the FRA observe the manufacturing process? Who represented the FRA and what manufacturing experience did these individual possess? 51. What manufacturing oversight will the FRA possess of the Japanese manufacturing operations? Is there an organization similar to the Federal Aviation Administration (FAA) which will have international safety, quality and operational control of this project? If so, then who and explain their roles & responsibilities. If not, then why not and how will the FRA guarantee the safety of Texans? 52. How does the TCR structure shield the Japanese from product liability claims? Catastrophic claims? How are Texans being protected from the Japanese washing their hands of financial and insurance claims? 53. What will be the minimum financial reserve requirements that will be placed upon the TCR? How was this figure determined? If none, then why not? As a foreign held corporation, TCR must be required to maintain federally mandated financial reserves and quarterly independent audits must be required. 54. As a “private” project for “PUBLIC” use, what are the projected profit margins of the TCR and how will they be monitored going forward? As a public project, this private foreign entity should be required to meet corporation requirements for publicly traded corporations. If not, then why not? 55. What level of automated manufacturing techniques is currently in operation for the manufacture of the N700? What are these automated tools and how are they used to control the quality of the N700 products? 56. What is the vehicle density of Japan versus the vehicle density of Texas? How was this information used in the FRA investigation of the TCR ridership projections? 57. How does maglev technology design, construction and operational costs compare to that of this EIS proposal? Why hasn’t the FRA performed this comparison? If they did, what are the results of their study? 58. How does “loop” technology design construction, security and operational costs compare to that of this proposal? Why hasn’t the FRA performed this comparison? If they did, what are the results of their study? 59. How much financial assistance, conception to date, has been provided by Texas Department of Transportation for this project? To whom have they provided this support? 60. How much financial assistance, conception to date, has been provided by Councils of Governments (For each individual Texas COG) for this project? How much was federal funds? How were proceeds derived from Texas toll roads? Which toll roads provided funds to support the COG study and marketing activities? 61. How much of this project will meet the criteria of a “public private partnership” (P3)? If any, what are the terms and conditions of the proposed P3 agreement? What are the proposed financial distribution of the respective parties? 62. With federal funds comes federal procurement and acquisition rules. What federal mandates will be placed on this project for hiring Americans, veterans, small business, women owed business, minority owned business, unions, etc.? If none, then why not? 63. How will the American’s Disabilities Act be enforced in the design, construction and operation of this railroad? Are any of these requirements being waived? If so, which ones and why? Do these exemptions provide the Japanese with a competitive advantage in the American marketplace? Why and how? 64. More to come.....	
Donovan Maretick	3/9/2018	Website	Who owns this EIS statement? Is it the FRA or TCR? How much did the FRA rely upon information provided by TCR? What information did the FRA generate? This is important because of the errors and misstatements that are in the EIS. Next, has TCR made any false or misleading claims? If so, what are they and what are the penalties for TCR and their executives? What are the responsibilities of FRA employees to report misleading and incorrect information presented by the TCR? What is the final decision process for the EIS? Who is the final decision maker and what is the EIS decision timeline from now until August 2019? Is TCR exempt from any American law because it is majority owned by a Japanese corporation? If so, what exemptions will TCR enjoy? When it comes to the massive electrical usage required by the HSR, where will	Refer to EU-3, EU-4, GN-1, GN-4, NE-1, NE-2, SC-14 and SC-15. TCR is not exempt from any U.S. federal, state or local laws. A summary of the permits, approvals and authorizations; the agency responsible for the permit and/or approval; the permit, compliance or review required; and the relevant laws and regulations is included in Table 8-1: Applicable Laws, Permits and Authorizations. The

			the train be placed in the priority list for energy during brownout periods and why? What is the net effect of the increased property tax revenues for Ellis County when offset by the negative impacts of lost sales tax revenue from local businesses, farmers, and ranchers? Does the TCR structure shield the Japanese from product liability claims, and if so how? How are Texans protected from the Japanese washing their hands of financial losses and insurance claims? Are the federal grants that the TRC is applying for subject to Congressional oversight? Have federal funds been appropriated for these grants? If so, how much and when?	economic analysis described in Section 3.14.5.2.3, Socioeconomics and Community Facilities, Build Alternatives assesses potential tax revenue impacts for five defined economic analysis areas. See Section 3.14.3.2, Socioeconomics and Community Facilities, Economic Conditions , economic activity is not confined to jurisdictional boundaries and, as such, this analysis does not include county-specific impacts.
Donovan Maretick	3/9/2018	Website	Tract number TX-WA-01-024.000 which is my land in Waller County has Brushy Creek running through it. Texas Central wishes to run their high speed rail over Brushy Creek on a viaduct but on either side of our land they plan on placing it on berms which could greatly impact my property and cause the floods to worsen and make it where I can no longer build a home there due to flood waters. Attached is a picture of how bad the flooding can be at brushy creek. It is known to go outside its banks up to four to five feet. We do not need to increase our chances of flooding because of this rail. No build	Refer to FP-1, WW-1 and WW-2. The route crossing Brushy Creek would be constructed on viaduct and no berm would be placed adjacent to the route in those areas.
Donovan Maretick	3/9/2018	Website	According to sections listed below the FRA has an obligation to vet the presumed financial aspects of the applicant. "Section 1501.6. Section 1501.7 on "scoping" also provides that all affected Federal agencies are to be invited to participate in scoping the environmental issues and to identify the various environmental review and consultation requirements that may apply to the proposed action. Further, Section 1502.25(b) requires that the draft EIS list all the federal permits, licenses and other entitlements that are needed to implement the proposal. These provisions create an affirmative obligation on federal agencies to inquire early, and to the maximum degree possible, to ascertain whether an applicant is or will be seeking other federal assistance or approval, or whether the applicant is waiting until a proposal has been substantially developed before requesting federal aid or approval" Since the FRA and Kevin Wright know that TCR will be seeking federal funding, then additional economic studies and requirements will be necessary during this NEPA process. The FRA should have already ascertained this to be the case and Kevin Wright has told people that they will be seeking federal funding. He stated that they wanted to get through this environmental process before asking for federal funds to skip necessary steps in the NEPA process. If the FRA knows that they will seek federal funding the entire process needs to be completed including necessary economic studies. Otherwise this violates NEPA and provides the groundwork for litigation. It is the responsibility of the FRA to assess the likelihood of an entity seeking federal dollars and to take the appropriate steps in the NEPA process with this information. The DEIS should be rescinded and started over. If not NO BUILD	Refer to GN-4 and NE-1.
Donovan Maretick	3/9/2018	Website	Currently I live in Cypress Texas close to Cypress Creek which is extremely prone to flooding. With the recent widening of US 290 and now the project to build a train that runs along 290 at Huffmeister, this will increase our chances of flooding which is simply unacceptable. Houston needs flood prevention infrastructure. According to Brock Long with FEMA, the federal government says that local and state agencies must provide funding for flood prevention as they only handle disaster relief. All levels of government should contribute, but the state should help fund some flood control. Over 60 inches of rain in some areas SHOULD qualify as enough rain to tap into the Rainy Day Fund. Without flood prevention, we will stay in a constant rebuilding mode. Local property taxes are collected from structures built in the floodways, flood pools, etc., then FEMA (federal) money pays billions. This system is not sustainable without change. Flood prevention would be cheaper than rescuing citizens, paying for temporary housing and clothing, debris removal, and rebuilding. The Cypress Creek Watershed has been ignored despite its tremendous population growth. We need a third reservoir, but that would require buying land from many owners, and land is quickly being developed. Since the county has not purchased a large land area for a third reservoir, we need several detention ponds dredged before spring 2018. Detention basins could be dredged in low-lying flood-prone areas in western and northern Harris County. This could be completed before the next hurricane season and would be fiscally responsible. Some Cypress Creek reservoir or levee proposals would retain the water in the Cypress Creek watershed. That may help the Addicks area, but it would devastate the Cypress Creek area. We need solutions for everyone. Take a look at our neighborhood during the recent Hurricane Harvey event that was not addressed in the DEIS study. The old floodmaps that are used are no longer applicable just like the maps used that were from 2014. This project needs to use the latest and greatest data and boots on the ground which it has not or NO BUILD!	Refer to FP-1, SS-17, WW-1 and WW-2. Cypress Creek and the majority of the surrounding route will be constructed on viaduct minimizing/avoiding impacts to waters and floodplains in this area.
Kelly Maretick	12/27/2017	Email	In executive summary (ES-II) is states "FRA compared these baseline noise measurements against modeled noise levels for both construction and operation of the HSR system." No where in the sound studies does it reflect the noise experienced due to the Bernoulli principle when two trains pass each other at 200 plus MPH. The sides of the trains, as they are moving quickly, invoke the Bernoulli principle, resulting in low pressure between the trains to contrast with the high pressure around the fronts of the trains. https://physics.stackexchange.com/questions/259639/slapping&#8226;sound-when-trains-pass-each-other .	Refer to NV-1 and NV-10.
Kelly Maretick	12/27/2017	Email	In the Executive Summary (ES-7) you state "Coordination with other municipalities, businesses and community groups along the Build Alternatives allowed TCRR to consider and coordinate the design with future corridor development plans." Texas Central has not coordinated	Refer to PI-1.

			with any county besides Harris and Dallas. Texas Central is not even allowed to survey on any of their county roads unless they get a permit proving eminent domain authority which they have not.	
Kelly Maretick	1/18/2018	Email	Will you make the "proprietary market demand study undertaken by the TCRR" information public so that all parties involved can trust that the information is not skewed in the best interest of TCRR?	Refer to GN-2.
Kelly Maretick	1/18/2018	Email	In Section ES.8 of the Executive Summary (pg ES-8) it is stated that the "No Build Alternative" is provided as a baseline to compare to the Build Alternatives. My first concern is who enabled the FRA with the right to make the choice on the purpose/need of a private company over those of the land owner and their needs and rights. Also there was never a public need/necessity established by TCRR or the FRA. Lastly, TCRR stated in public meetings that the project would NOT solve congestion issues between Dallas and Houston, especially around the cities.	Refer to GN-2, NE-1 and PN-3.
Kelly Maretick	1/18/2018	Website	Appendix F: Dallas to Houston High-Speed Rail Final Draft Conceptual Engineering Report - FDCEv7Set 1 of 2 Section 3.3 Right of Way (ROW) page 36 of 199 In this section the statement was made that "Ownership and maintenance responsibilities for new roads constructed for the purpose of HSR maintenance or private property access may be retained by the Project or transferred to an adjacent property owner or to an appropriate roadway authority." Who will be the regulative authority to determine what party will maintain the roads after construction is complete?	Refer to TR-7.
Kelly Maretick	1/23/2018	Email	1 Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf Section 3.2.3.2.2 Regarding vehicle emissions. 14,630 vehicles per day at 7.2 mil passengers 89% car at 1.2 per car it states 14% of the 2035 AADT of 106,475 from the 59-39 mph chart used in STB taking 14,630 off the road In the middle which is a larger market share than that shows not feasible. So, iftoday service at 5 mil and 89% is by car that would equate to about 10,205 cars a day. That is well over 30 of traffic counts on middle 45 also that is total traffic counts for semi and local feeder traffic. Federal Railroad Administration	Refer to AQ-3.
Kelly Maretick	1/23/2018	Email	1 Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf Section 1.2.2.5 TCR used bus in doorto door travel times but here we have Vonlane is 3.5 hours and the Greyhound bus at more than 4 hours weighted in the door to door to capacity or equal weight for mode of travel? Goes back to the 59-39 from 2002 and in 2017 the Vonlane is 3.5 hr. The data Texas Central poses to the FRA is flawed and needs to be investigated. It is clear they are skewing the results.	Travel times for both Greyhound and Vonland bus services are based on the published and ticketed travel times between their respective Dallas and Houston stations. This information can be found at https://www.greyhound.com/en/ecommerce/schedule and https://www.vonlane.com/user/booking/index/
Kelly Maretick	1/23/2018	Email	Regarding 1 Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf 2.2.2.4 Looking at the TxDOT traffic deaths by type of road the Dallas and Harris counties has over 2/3rd of total deaths vs the middle counties. Middle only had 45. Harris and Dallas have lots of interstates so its hard to compare.	Comment noted.
Kelly Maretick	1/23/2018	Email	Regarding 1 Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf 2.2.2.3 59 to 39 mph. from STB that chart it referred too was 2002 actual to 2035 projected we are 15 years into this and speeds are still 59 or better avg. Traffic increase should be 100% vs 200%? It doubles and its weighted by AADT traffic length stations the middle 83h34 station (might be 82/h34) is going up less than 1% from 2000 to 2015 bad data.	Refer to NE-1.
Kelly Maretick	1/23/2018	Website	Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf Section 3.2.3.2.2 Are 1.2 people per car an accurate reflection for vehicle emissions. Where is the support for this evidence?	Refer to AQ-4.
Kelly Maretick	2/5/2018	Oral	Good evening, everybody. And my name is Kelly Maretick. Yes, that was my husband. Anyway, so I'm opposed to the Texas Central High-Speed Rail Project. I feel that the information in the draft environmental impact study is flawed and is a patchwork of outdated surveys as well as data not indicative to Texas but to Japan. Specifically, Section 17.2.2 of the DEIS in regards to the noise level data uses data gathered from the Shinkansen train to support TCRR's analysis of potential noise impacts. According to the International Journal of Environmental Research and Public Health, many of the inhabitants along the area of railways have been disturbed by noise and ground vibrations from the trains. Additionally, the Shinkansen railway emits a higher level of ground vibration than conventional railways at the same noise level. These findings imply that the vibrations affect living environments as significantly as the associated noise. Therefore, it is imperative to quantify the effects of noise and vibration exposures on the annoyance of simultaneous exposures. There are seven schools in the path of the train, and that included Cy Falls High School. As a student, our son is autistic, and studies have shown that the noise and vibrations associated with these high-speed trains damage children's learning, hearing, and speech development. Children under 13 will be particularly impacted, and children with pre-existing challenges, including ADD, HDD, and dyslexia will also suffer. Speech disturbances also lead to emotional problems and long-term behavioral problems. Multiple studies have been conducted on children living within 500 feet of a high-speed rail, and these studies prove that the effects are disastrous to the health of not only the children but the elderly. Talking about the noise leading to sleep disturbances and cardiovascular results, we have North Cypress Hospital right up the road. How is that going to be affected by the train? Thank you.	Refer to GN-1, NV-1, NV-5, NV-6 and SC-8.
Kelly Maretick	2/12/2018	Website	The DEIS states that once new roads/ overpasses are built that they will be turned over to the local authority be it city county or state so that they could maintain them in the future. This is forcing these entities to maintain roads that were not there previously which will increase costs in these regions which will be passed on to the taxpayers. The closest thing we have to compare to this is the recently constructed private	Refer to GN-3, PI-1, SC-6, SC-7, SC-8, SS-23 and TR-7.

			<p>Railroad Brightline. In the below article: http://www.thsrc.com/single-post/2018/01/23/Florida-senator-says-Brightline-high-speed-rail-is-not-taxpayers-responsibility "State Sen. Debbie Mayfield (R-Melbourne) said All Aboard Florida's Brightline trains will cost taxpayers. Specifically, more trains on the tracks means more maintenance, especially at rail crossings. When maintenance is done on public at-grade crossings, FEC passes all of those costs onto local municipalities, counties and the state. "It's inappropriate," Mayfield said. "All Aboard Florida should bear the cost of maintaining the equipment they've installed to run their trains and not push that cost off on the taxpayer." On the same day News 6 met with Mayfield, she had just finished a meeting with a representative of one municipality that had recently received a \$400,000 bill from FEC for track maintenance. "That's a cost that a lot of the taxpayers don't understand," Mayfield said. "The railroad kind of just gives them a bill and says, 'Here's your bill, this is what you owe us.'" We need to learn from their mistakes and hold Texas Central accountable for all costs that are associated with what is in place today. If they alter routes which cause a rise in maintenance, school routes, emergency response times or anything that will add a financial burden to the taxpayer, then these costs should be borne by Texas Central. These need to be accounted for in the DEIS rather than just pushed upon the state and local municipalities.</p>	
Kelly Maretick	2/12/2018	Website	<p>Below is an excerpt from http://www.thsrc.com/single-post/2018/01/23/Florida-senator-says-Brightline-high-speed-rail-is-not-taxpayers-responsibility "Mayfield told News 6 she wants to make sure maintenance and safety costs for Brightline and any other high-speed rail is not dumped on the taxpayers, who "receive no financial benefit from the rail system." SB 572, The Florida High-Speed Passenger Rail Act, introduced by Mayfield and co-sponsored by state Sen. George Gainer (R) Panama City, is expected to be heard in Tallahassee this session. The bill would require any company operating a high-speed passenger rail system in the state "to be solely responsible for certain maintenance, improvement and upgrade costs." Those areas include being accountable and repairing "railroad roadbed, track, and railroad culverts within the confines of the public street or highway," and "streets or pedestrian grade crossings lying between the rails and for a distance outside the rails of one-foot beyond the end of the railroad tie." Mayfield's office calculated that there are 349 at-grade public crossings between Miami and Cocoa affecting approximately one million taxpayers living in those areas. "You know, when this train leaves Palm Beach it will not stop until it gets to Orlando," Mayfield said. "So the train will just be coming through (those communities) without any stops." SB 572 also provides for a measure of regulation, mandating that any high-speed rail system in the state would fall under the regulatory jurisdiction of the Florida Department of Transportation (where the authority is not pre-empted by the federal government). We need to ensure that Texas Central is required to be solely responsible for certain maintenance, improvement and upgrade costs. Their responsibilities should include being accountable and repairing "railroad roadbed, track, and railroad culverts within the confines of the public street or highway. We need to ensure that the state, county, city or municipality does not have to pay for anything related to the high speed rail system. If the counties, cities or municipalities will have increased costs then that needs to be calculated prior to the EIS as this will have a potential negative impact on the counties and the taxpayers to budget and account for these costs. If this is not done and agreed to prior to then the only choice is a no build!</p>	<p>Refer to GN-5 and TR-7. Florida Senate Bill 572, The Florida High-Speed Passenger Rail Act was withdrawn from consideration on March 10, 2018. Furthermore, any state bills or regulations outside of the State of Texas would not be applicable to this project.</p>
Kelly Maretick	2/26/2018	Website	<p>The DEIS does not address the negative impacts on our bird populations especially the Bald Eagle which is protected under the Bald and Golden Eagle Protection Act which I am including below. Studies have shown that birds are negatively impacted along thousands of kilometers of railways with trains operating at speeds of more than 155 mph and can generate unwanted effects, such as the mortality of birds, a fact that until now had not been analyzed or quantified. I am including this study here. The High Speed Rail will most certainly impact this species based on the population of bald eagles along this route. In 2018 alone, a total of 24 Bald Eagles have been reported in the first two months of the year in Harris, Dallas, Waller, Navarro, Freestone, Limestone, Ellis and Leon Counties all of which are along the path of the high speed rail. These findings can be reviewed on the aviary website: https://ebird.org/tx/region/US-TX/regions?yr=cur&changeDate=Set The Bald and Golden Eagle Protection Act (16 U.S.C. 668-668c), enacted in 1940, and amended several times since then, prohibits anyone, without a permit issued by the Secretary of the Interior, from "taking" bald eagles, including their parts, nests, or eggs. The Act provides criminal penalties for persons who "take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle ... [or any golden eagle], alive or dead, or any part, nest, or egg thereof." The Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." "Disturb" means: "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior." In addition to immediate impacts, this definition also covers impacts that result from</p>	<p>Refer to NR-2 and NR-3.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle's return, such alterations agitate or bother an eagle to a degree that interferes with or interrupts normal breeding, feeding, or sheltering habits, and causes injury, death or nest abandonment. A violation of the Act can result in a fine of \$100,000 (\$200,000 for organizations), imprisonment for one year, or both, for a first offense. Penalties increase substantially for additional offenses, and a second violation of this Act is a felony. No Build#	
Kelly Maretick	1/23/2018	Email	Dallas to Houston High Speed Rail DEIS MAIN TEXT I.pdf 2.2.2.2 IN regards to the NY study on super commuters which included commutes of 90 min or 180 miles. 90 min should not be counted as a super commuter as that might be just Huntsville to south side of Houston this is different from the 218% increase from 2002-2009 that a NY study did that AADT counts in the middle actually dropped from 26k to 24 k in that same time period. This data is flawed and should be open to public scrutiny as it can easily be skewed	Refer to PN-3 The term "super-commuter" is a reference from the cited literature (Mitchell L. Moss and Carson Qing, "The Emergence of the Super-Commuter," New York University Rudin Center for Transportation, Wagner School of Public Service, February 2012) and is not defined or modified by FRA.
Donovan Maretick	1/24/2018	Email	Regarding 3 Dallas to Houston High Speed Rail DEIS MAIN TEXT III.pdf Section 3.11.4.8 Data is skewed as the date of collection was during the Texas Renaissance Fair. TXDOT traffic counts for the same year 2015 was almost 20% less than TCR info. DEIS 30 5600, 90 5100. TXDOT 2015 4599/4527. TXDOT 2016 5212/4083 Use data that represents the norm rather than inflated facts and figures. No build	As reported in Table 3.11-27: Brazos Valley Intermediate Station Intersection LOS (Delay in Seconds per Vehicle) , level of service at SH 30 and SH 90 was deemed an acceptable level of B. The intersection of the two rural highways, SH 30 and SH 90, is a four-way stop. The intersection is in a rural location and does not experience substantial congestion.
Suzanne Maretick	1/25/2018	Website	The high-speed train CANNOT COME FAST ENOUGH!!! Just look at the CONSTANT TRAFFIC travelling to/from Dallas EVERY DAY!!	Comment noted.
Gladys Maria	3/1/2018	Email	Have y'all thought the negative impact you will be bringing to communities? The noise, the health hazard, the dirt, the traffic, the ugliness of it all? By the way, do any of you live within the 2 miles mentioned? I do! Are you going to take my house too? This train will be good to only a few - but will destroy the lives of many! Makes no sense! Why not put down the rails on 1-45 .. isn't that the way we go to Dallas? And to think that y'all think this is a good idea .. one way ticket \$199? Have y'all checked Southwest fares? Someone has to be cashing in on this ... this is truly ridiculous!	Refer to NE-1, NE-9 and SC-3.
Julie Marinucci	3/5/2018	Oral	Hi. My comments are directed to the FRA. I'm Julie Marinucci. I'm the president of the Inwood Forest Community Improvement Association. I'm a member of Super Neighborhood 5 and the Houston High-Speed Rail Watch. I want to thank you for having this meeting in the City of Houston. In talking to people that live and work in the area, it's clear that many Houstonians do not understand what this project is or what it will look like. For example, they do not know that the rail will be on an elevated structure as it comes into Houston. More community outreach is really needed. I have comments on three items. The first one has to do with funding and connectivity. In the Draft Environmental Impact Study, the FRA states that their evaluation of the purpose and need for this project will include an examination of how the project will integrate in the city's existing forms of transportation. Texas Central has said in various public meetings that high-speed rail passengers can get a rental car or take Uber once they arrive in Houston. This cannot be the primary way to move riders around. TCRR was relieved when the FRA ruled out taking the high-speed to downtown in the November 2015 Alignment Alternatives Analysis Report. The cost per mile to take the high-speed rail inside the 610 Loop would have been much more expensive for them than any other part of the line. We believe that the cost savings to Texas Central of not taking the line into downtown Houston is an opportunity to address some of those funds to address connectivity issues in a public private partnership with Metro and the City of Houston. Identification of preferred routes is another item. I think Texas Central needs to reach out to the communities around the Northwest Mall area and develop preferred routes to be used by those who will drive to and from the proposed Northwest Mall terminus. The 290/610/I-10 interchanges are very congested and the closest access to the freeways is often on the border of neighborhoods or sometimes through them. Preferred routes need to be developed. Hempstead Highway is my third issue. The railroad crossings all along Hempstead Highway have issues. What's the plan to keep the freight trains from blocking traffic either arriving or leaving the proposed terminus area? A couple of Fridays ago at 2:00 o'clock in the afternoon I sat on West 34th Street for 20 minutes while railcars were unhooked, moved, hooked, hooked up, moved. This is not an unusual occurrence. I'd like to know how that issue is going to be dealt with. And lastly, the Hempstead Highway is currently a four-lane undivided road with limited turning lanes. How will Hempstead Highway be improved to handle additional traffic in the area? Neighborhoods and businesses in that area need to be consulted. As some of my other Houston High-Speed Rail Watch members have said, this is the first-of-a-kind project in the U.S. and it should have first-of-its-kind planning to make sure that this project benefits the area it will impact. The only way to do this is to ensure that community representation is at the table when decisions are being made. Thank you.	Refer to GN-6, GN-9, PN-3, TC-7, TR-4, TR-5 and TR-12. The Project is fully-enclosed and vehicles would not have to wait for the train to pass. It would be unlike the freight train delays referenced in the comment. TCRR would not be responsible for fixing freight train delays or traffic congestion in the area. TCRR has been in ongoing coordination with major stakeholders in the area, including TXDOT and the freight rail operator UPRR. For more information about transportation impacts and the proposed Houston stations, see Section 3.11.5, Transportation, Environmental Consequences .
Julie Marinucci	3/9/2018	Email	I am Julie Marinucci. I am the president Of the Inwood Forest Community Improvement Association and a member Of both Super Neighborhood 5 and the Houston HSR Watch. Therese Markham	2/16/2018	Website	I am in support of the speed train. It would greatly enhance business and personal commutes to south Texas from Dallas. This would be a great assist to our state and city of Dallas.	Comment noted.
David Markle	3/8/2018	Website	I am not opposed to the train and think that we should network the entire country with them. However please finish 90 East from I-10 to the Beltway first... It is extremely unsafe in its current condition. DKM	Comment noted.
Carolyn Marks	2/5/2018	Website	The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, I-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. Â§ 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to BA-3, BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Carolyn Marks	2/5/2018	Website	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere...	Refer to GN-3.
Carolyn Marks	2/5/2018	Website	The Waller Harris Emergency Services District No. 200 ("ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has	Refer to SS-12, SS-18, SS-23 and SS-26.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Carolyn Marks	2/5/2018	Website	The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "..., we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC-4 slices through this entire planned WTC project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, ED-2, EJ-1, LU-4, NE-1, NE-8, NE-9 and PI-1.
Carolyn Marks	2/5/2018	Website	One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Carolyn Marks	2/5/2018	Website	The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5.
Carolyn Marks	2/5/2018	Website	The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in	Refer to EJ-1, LU-4, SC-19 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Carolyn Marks	2/5/2018	Website	Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to AS-1, NV-1, NV-5, TR-6 and TR-8.
Carolyn Marks	2/5/2018	Website	Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to NR-2, NR-3, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Carolyn Marks	2/5/2018	Website	Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-12.
Carolyn Marks	2/5/2018	Website	Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children	Refer to LU-3, LU-4, RF-1 and VA-1.
Carolyn Marks	2/5/2018	Website	The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-8.
Carolyn Marks	2/5/2018	Website	Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Carolyn Marks	2/5/2018	Website	Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl	Refer to NR-1, NR-2, RF-2 and WW-2.

			and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Carolyn Marks	2/5/2018	Website	At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old Inn and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-2 and CR-9.
Carolyn Marks	2/5/2018	Website	At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 - 20,000 lbs released, and June 11, 2007 - unknown quantity. On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-6, SS-18 and SS-19.
Carolyn Marks	2/6/2018	Handwritten	<ol style="list-style-type: none"> 1. Creates problem for developer of housing & commercial in or near Waller (hurts tax base). 2. Gil Marmol	3/6/2018	Website	The high speed rail connection needs to be built. The development of the Texas economy depends on timely, fast, and cost effective connections between Dallas and Houston. High speed rail can and will provide this service if it is built	Comment noted.
Kathy Marrack	2/5/2018	Oral	I don't have much else to say. Everyone has said it. But I do want to speak to you, the Federal Railroad Association. What really bothers me is the lack of transparency and getting the data right, because a 2005 landmark Supreme Court case, Kelo versus New London, Connecticut, what happened there, a private corporation was allowed to take all these people's homes, and all of those homes were destroyed. And guess what. The private corporation never did get -- the developers never did get the financial funds to -- and so these people lost. And that's what I'm so afraid of. We were sued. We were offered money at the same time. We have a beautiful historic place, and it's just gorgeous, and this just makes me sick. Thank you.	Refer to ED-1.
Kathy Marrack	2/9/2018	Website	I am against this project because it is illegal for a private corporation with no proof of economic viability or financial transparency to say they are a railroad and say they are doing something for public use. This company is not a railroad, and their project is not for public use. They may have paid a few hundred dollars to say they are and they may say they have money, but do they? And what is public need? I believe their project is a desire, not need.	Refer to ED-1, NE-1 and PN-3.
Kathy Marrack	2/9/2018	Website	Ridership for bullet train based upon common sense: 1. College student in Texas, say living in Cypress, TX? Are they really going to fight traffic on HW 290 into downtown Houston, about an 1 1/2 hour, then go through security, catch a train to 30 miles outside Texas A&M University, then find a way into the university perhaps with waiting times. That is about a 3 hour plus trip versus 90 minutes via car with no waiting or inconvenience. Which would you choose? 2. I was once a heavy business traveler. My typical week might be from Houston to Dallas on Monday, Chicago on Tuesday, New Jersey on Wednesday, Toronto on Thursday, and back to Houston on Friday. I would choose air travel without any hesitation. Moreover, when I would arrive at a terminal, I generally would drive up to 3 hours to a destination instead of flying. The reason was I was able to see some of the countryside, sometimes stopping at a significant place like the Liberty Bell on our way, and it was convenient. 3. What if I went to Dallas everyday on business? I would move to Dallas. Businesses let travel go first when there are tight economic times. 4. What if I sometimes went to Dallas on business? I would have a conference call via computer/telecommunications, and around the world too. For that matter, most of the time. 5. What about a family trip? No way, I would take my car so I could save money and spend time with my family or friends. A side note, I have always wanted to take a pleasure trip on Amtrak, and have looked at it numerous times, but do you know what stops me every time? - the cost. This bullet train would be a novelty at first like all things, but the price would have to drop in order to get people to choose it. When the price drops, it will fail, and will need to be subsidized.	Refer to BA-12, GN-2, GN-4, NE-1, PN-3 and SC-3.
Kathy Marrack	2/9/2018	Website	We have a home that you have mentioned in the draft EIS as historic. It is and will be destroyed if Texas Central has its way. What can we do to save it?	Refer to CR-4.
Kathy Marrack	2/9/2018	Website	Site HA.004a is listed as eligible for listing in the NRHP under Criterion C in "3 Dallas to Houston High Speed Rail DEIS_MAIN TEXT III.pdf". In "30 Dallas to Houston High Speed Rail DEIS Appendix E_Combined Tech Memos_Set 2 of 2.pdf" listed incorrectly as HA.004b.	Comment noted.
Kathy Marrack	2/9/2018	Website	I do not believe the pipeline very close to us that runs parallel to the proposed track was mentioned in the draft. https://primis.phmsa.dot.gov/comm/publications/PIPA/Land Development Near Transmission Pipelines Checklist 05102012.pdf https://primis.phmsa.dot.gov/comm/publications/pipa/PIPA-Report-Final-20101117.pdf "Local government actions may include: * Constraints on activities on or near transmission pipeline rights-of-way; * Restrictions on the types of land use and development that is allowed along transmission pipeline rights-of-way; * Specific design or construction features of the development; * Measures to facilitate emergency response and evacuation in the event of a transmission pipeline incident. When weighing the potential risks of hazardous materials releases in areas proposed for development, local governments should obtain all	Refer to EU-1, EU-2, HZ-5, PI-1 and SS-18.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			available information and base decisions on a balanced consideration of all risks. This includes consideration of all modes of hazardous materials transportation in the area, including roads, railway transportation, and transmission pipelines." But FRA did not speak with local governments from what I understood at a meeting at Prairie View A&M University in Prairie View, TX.	
Paul Marrack	2/5/2018	Oral	Good evening. My name is Paul Marrack, and I live in far northwest Harris County at Binford and Castle Road. If built, this project will cause my family financial harm, devastate our future plans, and as mentioned in DEIS, destroy our 1920s craftsman style home. In Texas we do things in a big way. As have been said, the high-speed rail is the next big thing. The Astrodome was a big thing; one of -- the first of its kind. NASA is a big thing, the only one of its kind. I'm sorry. I think you probably can hear me anyway. The medical center is a big thing, the best of its kind. The high-speed rail is not a big thing. It's a has-been thing. It's a 60-year-old technology that will be obsolete in 10 years. The need. The premise for construction of the HRS is to relieve traffic congestion on I-45. The EIS identified eight places on I-45 that are traffic problems; six of them in Harris County. If you look further, the majority of traffic congestion is not between Houston and Dallas; it's in Houston and Dallas. Thus, the high-speed rail will not relieve any traffic congestion. Texas does not have the population to support the high-speed rail. In Japan, where the high-speed rail is marginally profitable, it has eight times the population density of Texas. We hear Texas Central tout a thousand permanent jobs that will be created, but what we don't hear is the jobs that will be lost. More will be lost than added. The places that make Texas special, the farms, the ranches, the countryside wedding venues, and the bed and breakfasts will lose their livelihoods. The rhetoric from Texas Central is hype and lack of transparency. What they promise in their open house meetings is not what's in the EIS. They said they would not close roads. They are closing and rerouting numerous roads. They said they would only take 3,000 acres, yet they are taking 8,000 acres. They said they will not take public funding, yet seeking taxpayer-backed federal loans. They say they will work with landowners, and I don't know how you can sit here and say that you will work with landowners. The only thing I've heard is a suit. In reality, this land development project is a land development project with a side of rail. To our elected officials here tonight, let's learn from California, let's look at the Reason Foundation. Texas, Houston, and Harris County deserve and expect better. Thank you.	Refer to ED-2, GN-3, GN-4, NE-1, LU-14, PN-3, SC-21, TC-2 and TR-8.
Paul Marrack	3/9/2018	Email	<p>Please see the attached comments on the FRA's DEIS on the Dallas to Houston high speed rail project. I live at [...] in Harris County on the property indicated in the DEIS as HA.004. If carried out, this project will result in financial harm, devastate future plans, and as mentioned in the DEIS destroy our historic 1920's craftsmen style home (HA.04).</p> <p>My concerns are the following (refer to pages 2-4):</p> <ol style="list-style-type: none"> 1. How the HC-4 route was selected for Harris and Waller counties 2. Financial viability and longevity of the technology 3. Hazards and exclusion of pipeline and utility crossings 4. Coordination with the Waller County Sub-Regional Planning Commission <p>In addition to these concerns, I protest the length of the public comment period for the DEIS, even though it was extended to only March 9th. Texas Central Rail and the FRA have been working together on this DEIS since 2014. Landowners such as neighbors and myself were blindsided by the sudden choice of the HC-4 route without any proper NEPA review or public notice before chosen. We had no open comment period until the December 22, 2017, release of the DEIS, 3 years later.</p> <p>For the following reasons the only action for the FRA for the proposed Texas High Speed Rail proposal is the NO BUILD option.</p> <ol style="list-style-type: none"> 1. The Selection of the HC-4 and NEPA. <p>The HC-4 route selected for Harris and Waller counties was never presented to the public for comment. Only the Hegar Road path was presented during the scoping process as the corridor was portrayed as the only route that would go through Harris and Waller counties. The HC-4 route was suddenly announced well after the scoping process and the public comment period had ended. The alternative "alignments" were never released to the public and no opportunity was given to review and comment on them before the preferred alternative alignments chosen as the Build Alternatives. Citizens effected by this new HC-4 route were denied their right to participate in the DEIS process. The whole manner in which this EIS process has proceeded violates National Environmental Policy Act (NEPA) and its intent.</p> <p>The ROW for any additional transportation to Houston / Dallas is I-45. Cost is not an adequate or acceptable reason for not using this route. If I-45 is not straight enough, deviate from I-45 as needed. The lack of public input is a violation of the NEPA process and the only reparation for this action is the NO BUILD option.</p> <ol style="list-style-type: none"> 2. Financial Viability and Longevity of the Technology. <p>First, the DEIS provides no analysis for the financial viability of this project. Currently TCR refuses to divulge their ridership studies citing confidentiality from competitors. The published ridership of 5 to 7 million is grossly overestimated, and the costs to construct this project, \$10 – 12 BN, are underestimated. Recently, costs are estimated to be in excess of \$20 BN. The Reason report (link below) shows clearly that the viability of this project is very suspect and will fail spectacularly. There are only two HSRs in the world that come close to being profitable and</p>	Refer to BA-4, EU-1, EU-2, EU-6, EU-8, GN-2, GN-3, GN-4, NE-1, NV-5, PI-1 and TC-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>these do not include construction cost. If built, the HSR will become a tax burden to state and federal taxpayers. https://reason.org/wp-content/uploads/files/texas_high_speed_rail.pdf Second, the use of antiquated and sole sourcing of the rolling Texas Central HSR stock is disturbing. Much more flexible and less evasive technologies will come to fruition over the next 10 years making the 60-year-old HSR obsolete. The proposed Japanese HSR trains are the only rolling stock able to be used on the constructed tracks thus creating a dependency on Japan. For these reasons, the only option is the NO BUILD option.</p> <p>3. Hazards of Pipeline and Utility Crossings Route HC-4 was selected by TCR. Because of this, there was no opportunity for local input from the public or local governmental entities to address those factors impacting their selected route. In addition to many pipelines that are not considered in the DEIS, there are two large high pressure natural gas pipelines that run through this area, owned by Spectra Energy and Atmos Energy. The Atmos pipeline runs largely north and south and parallels the HC-4 route over a long distance through Harris and Waller Counties. Where the two pipelines intersect is a pipeline compressor station, a short distance to Texas Central’s selected route. This pipeline is a 30 inch diameter pipeline that operates at a nominal pressure of close to 1,000 psig. Pipeline and Hazardous Material Safety Administration (PHMSA) regulates natural gas pipelines and compressor stations. PHMSA regulations require all compressor stations have ESD systems in place that will, in the event of an emergency, totally shut down the compressor station and blowdown all of the high-pressure natural gas within the station, venting it to the atmosphere. In addition, it is required that each compressor station, at least once each year, perform an ESD procedure to verify the functionality of the system. The 60-year-old technology of the proposed Texas Central high-speed rail poses a serious and hazardous ignition source for any intentional or unintentional natural gas releases. The train operates on electricity using overhead catenary power lines and train mounted pantographs that slide along the overhead wires to provide power to the electric motors. The operating voltage of the catenary system is 25,000 volts. The only mention of electrical sparking in the DEIS has to do with a simple statement of electrically connecting the two pantographs on each trainset to help reduce sparking for the purposes of limiting nuisance noise. There is no mention of it being a possible ignition source for volatile gases and no mention of, nor any consideration given to, avoiding placing the route of the train away from possible sources of releases of large volumes of natural gas. While there are listings of oil and gas pipelines larger than 12 inches in diameter that the train would cross or closely parallel, there is no mention of gas pipeline compressor stations, underground natural gas pipelines, natural gas liquid storage facilities, natural gas processing facilities or any other possible source of releases of large volumes of explosive gases. This is a grievous safety omission and the FRA can only select the NO BUILD option.</p> <p>4. Coordination with the Waller County Sub-Regional Planning Commission The Waller County Sub-Regional Planning Commission (WCSRPC) was created under the authority of Texas Local Government Code Chapter 391 in 2008. Its members include Waller County, the Cities of Waller, Hempstead, Prairie View, Pine Island, Patt ison, Katy, and the Waller Independent School District, the Brookshire Katy Drainage District, and includes parts of Harris county. As a legally formed governmental entity, it has the right to request coordination with other governmental agencies on projects that affect the Commission’s long term planning for the region. Section 391.001(c) of the Texas Local Government Code expressly provides that agencies “shall, to the greatest extent feasible, coordinate planning with sub-regional planning commissions to ensure effective and orderly implementation of state programs at the regional level.” WCSRPC has repeatedly requested coordination from the FRA and TxDOT (as co-lead agency) on the TCR high speed rail project. The FRA has steadfastly refused any such coordination with WCSRPC, despite the requirements of NEPA. Reluctantly, TxDOT agreed to appear at a WCSRPC coordination meeting on February 9, 2016. At the February 9, 2016 coordination meeting, WCSRPC presented numerous concerns to TxDOT officials on detrimental impacts that the HSR proposal would have on the Waller regional area and WCSRPC’s long term planning. The legislative intent of the whole NEPA EIS process is to lay out different alternatives, identify impacts presented by the various alternatives, and to use those in decision making on choosing the best and least impactful alternative. However, the FRA has violated the intent of the process in developing the DEIS. The FRA has no other justifiable choice than to select the NO BUILD option for the final EIS because they directed a state agency to violate state law by requiring that state agency to not coordinate with the WCSRPC.</p>	
Leslie Marroni	2/7/2018	Email	<p>H. C Chandler and Son, Inc. Last night at meeting I was given information to find the full property map of our facility on the below website. I was instructed to website, than to Go to Appendix G, Volume 2-1, CVL-HN-0117S, Station Number HN2 3600+00. I am unable to locate Appendix G on site. Can you please advise or send me the full map for our Station Number? Thank you for your time and assistance.</p>	<p>There are multiple links on the FRA website for Appendix G. For your particular Volume it is located here: https://www.fra.dot.gov/eLib/Details/L19235</p>

Jacqueline Marroquin	2/6/2018	Website	Adding a High Speed Rail at 290 will cause more congestion for surrounding neighborhoods. I personally drive on 290 every morning and traffic is always backed up from 6am-10am. It currently takes me roughly about 40 minutes to get to work when it should take me 15 minutes. I believe if a high speed rail is added, they should focus on adding the rail on I-45 and avoid 290.	The Project would cross US 290 in Harris County. No lanes would be removed. See Table 3.11-31: Roadways in Harris County Study Area for a list of the roads that would be impacted by the Project in this area.
Joanthan Marsh	3/4/2018	Website	Why not follow the existing electrical transmission lines easement that already exists? I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to BA-5, BA-8 and LU-5.
Jonathan Marsh	2/23/2018	Website	To the FRA and Texas Central Rail, I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Seriously, there is an existing utility easement for power lines. It makes no sense that all the work and effort that went into acquiring land for that can't be piggy backed upon. I have serious concerns about the proposed route in portions of Navarro County. I understand that overall the southern most route proposed may be the most appropriate as compared to the other two proposed routes however I believe the portion which travels south of 3194, not along the utility easement as suggested in the middle route, would create significant adverse environmental, economic and cultural history problems. The proposed route parallels a county route which would require a large berm blocking access to property south of 3194. This would also create maintenance, water shed and inclement weather problems in my opinion. The proposed route could also block expansion of 3194 and future development along 3194. The proposed route intersects a three-way intersection requiring significant engineering and rerouting of county roads and the access roads to surrounding properties. Given the topography of the area surrounding CR 709 and 3194 the train would both be significantly below grade and then rapidly elevated creating watershed issues, access issues, and cosmetically detractive issues. If the proposed route was blended in this small area with the already vetted middle route, both the train and tall high-tension power lines would run parallel thus creating less environmental and esthetic impact. It seems much more appropriate to run the train next to a high voltage power grid already existing rather than run more high towers. If this small move is made the train would cross 709 at an already existing utility easement and would not adversely affect the three way intersection and would not limit CR 3194. Ongoing road maintenance would be simplified as would water shed. My final and major concern is that the proposed route would destroy a highly developed economic, charitable and cultural Navarro County Ranch. Listed on tax roles as Morgan Legacy Farms. If the proposed route is utilized the rail project would cause the destruction of two of the homes on the ranch, the destruction of one of the first (if not the first) rodeo arenas ever built in Navarro County. Access to the horse barns, parking and Lodge would be lost rendering the ranch unusable for it's primary purpose. Just in the last 5 years the ranch has been visited by over 900 guests as a charitable property. Churches, Girl Scouts, Boy Scouts, Military Personnel, Police, Fire and various city leaders as well as disadvantaged children from natural disasters. There is no other property like this facility located in Navarro County and perhaps within 100 miles. To destroy this icon rather than move the train route slightly north on an existing utility easement would create irreparable losses and damage to the county and those who benefit from the property.	Refer to LU-5.
Jonathan Marsh	3/2/2018	Website	I understand there is another proposed map that makes SO MUCH MORE sense. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5 and NR-2.

Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	
Jonathan Marsh	3/5/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5.
Jonathan Marsh	3/7/2018	Website	Consider following the high transmission electrical lines. There is already an easement. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5.
Jonathan Marsh	3/7/2018	Website	Consider following the high transmission electrical lines. There is already an easement. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. 			reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	
Jonathan Marsh	3/8/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. 			been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Jonathan Marsh	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. Paige Marsh	2/19/2018	Website	Dear FRA, I have recently reviewed the proposed route as shown on the high speed rail website. The route shows it crossing the property directly behind ours. I wanted to express my disapproval of this project with reasons I feel are valid. My husband and I purchased our land shortly after having our children. Our dream was to own land and raise our children in the secluded, quiet country. Most people our age are either still living at home with their parents or coming out of college and renting apartments. We decided to work hard towards our goal and purchase the most acreage we could within our budget. We sacrificed and saved to make that dream happen. Shortly after we were settled and living the life we imagined; we heard about the route of the high speed rail. I strongly feel that this project would take away from the quality of life we worked so hard for. This project is only serving a small percentage of people and our local communities are not benefiting from it. With all of the different transportation options available I feel this project is unnecessary. This project would be a huge noise burden and take our peace and quiet away. This would also take away from our beautiful scenic views. This project might be convenient, benefit and make profit for a few in the metropolitan areas; but it would also take away from our quality of life in the Rual community. Sincerely, Paige Marsh	Refer to AS-1, BA-4, NV-1 and SC-19.
Samuel Marsh	2/16/2018	Website	This rail project would be far more convenient than either driving or flying, and would increase competition for airlines, creating better service by both the rail and the airlines, and discourage airlines from beating passengers as United is wont to do.	Comment noted.
Thomas Marsh	3/8/2018	Website	I support construction of the Dallas to Houston HSR project. The HSR project will: 1. Lessen the strain on surface infrastructure by lowering the number of road trips between the end points; 2. Lessen congestion at end-point airports; 3. Provide a transportation alternative for individuals who cannot or will not drive or fly; 4. Provide environmental benefits compared to automobile and air traffic; 5. Provide construction jobs; 6. Provide permanent operations jobs. Let's get a move on!	Comment noted.
Carlton Marshall	2/28/2018	Email	I am writing with concerns about the Dallas to Houston High Speed Rail and how it will affect my family and myself and the impact to my property values. I live on a ten acre rural Dallas County property and possess various types of livestock. My residence and property run directly parallel to the proposed route for the high speed rail and will only be about fifty to seventy-five yards from its location. The location of this high speed rail will have significant negative impacts to our property values, quality of life and potential impacts to our various livestock. I have lived near a railroad many years ago and am aware of how much noise they can make. My understanding is the high speed rail will be running its route every thirty minutes. That noise, while bothersome during the day will most certainly cause interruption of sleep for my family and cause unknown effects on my livestock. At the very least, if my property will not be purchased, sound barriers need to be constructed along the full length of the rail system starting and ending approximately 100 yards on either side of the residential areas where it comes within the proximity of those residential areas by one quarter mile or less. This would assist with sound issues and privacy. If my property is purchased by Flur Enterprise it can be held and utilized in various ways until the Route 9 is constructed and then possibly sold for commercial or residential developments. Flur Enterprise will then recover their money on the back end.	Refer to NR-1, NV-1 and VA-1. All parcel acquisition and structure displacements resulting from Build Alternatives would be negotiated between the landowner and TCRR. This analysis assumes that negotiated prices would reflect the fair market value of displaced residences and/or businesses, allowing for investment in new or similar areas outside the LOD. As detailed within Section 3.14.5.2, Socioeconomics and Community Facilities, Build Alternatives , potential impacts to individual property valuations were beyond the scope of this analysis; it is not likely that these would produce a significant impact for the regional economy. Generally, the factors most cited in the literature that correlate to

				adverse property value impacts are near train tracks with the presence of potentially hazardous materials carried by freight rail, and nuisance factors like noise and vibration. This Project will be a passenger railroad only, with its own dedicated track, therefore no freight or hazardous materials will be transported. Section 3.4.6, Noise and Vibration, Avoidance, Minimization and Mitigation identifies a number of avoidance, minimization and mitigation measures to minimize impacts to properties in areas where higher noise or vibration levels may be present. As a result of minimal noise and vibration impacts and the absence of freight traffic on the proposed right-of-way, adverse effects on the values of adjacent properties would likely be minimal and could be offset by the additional tax revenue generated by TCRR's property on the proposed right-of-way. The Project is unlikely to result in a loss of property tax income to the jurisdictions it operates in. The potential for negative property value impacts would be limited and would be offset by an equally likely potential for a positive station area impacts that would exceed expectations. As a result, no macro-level economic effects are anticipated.
Jerry Marshall	1/24/2018	Email	This proect is not cost effective or cost efficient unless it is 99% USA.	Comment noted.
Todd Marshall	1/25/2018	Email	1000 characters? If it wasn't stupid government bureaucrats I'm sending this to I would say "you must be joking!" I've sent by alternate channels. Go pound sand! Why did W\8226 TC7 fall down? Do you really think we're that stupid as to believe the NIST report?	Comment noted.
Todd B. Marshall	1/25/2018	Letter	Why are you helping a private enterprise?	Refer to NE-1.
Carlton Marshall	2/28/2018	Email	I was a police officer in Dallas for twenty-one years when shot in the line of duty. As a result of that shooting I am now a quadriplegic. The home I reside in was specifically built to accommodate my condition. As most homes are not built for the wheelchair handicap, I cannot just go out and buy another home and certainly not on acreage property where my livestock can be kept. As a result, I must have a new home built to accommodate my needs on an acreage property we subsequently purchase. My property value will be significantly affected negatively because of the high speed rail and as such I could not get the fair market value for my home. I stringently request the private entity, Flur Enterprises and Lane Construction, who is purchasing the property for the installation of the high speed rail or the FRA buy my property at the high end of the fair market value or should be fairly compensated for the loss of property value. Further, if my property is purchased, I request to be allowed to reside at said residence for approximately six months or until a new home can be built to accommodate my needs. This project is several billion dollars in construction. It would only be a drop in the bucket to buy my property at fair market value and it is only fair and appropriate that this should be done.	Refer to ED-2, VA-1 and VA-2.
Carlton Marshall	2/28/2018	Email	I am writing with concerns about the Dallas to Houston High Speed Rail and how it will affect my family and myself and the impact to my property values. I live on a ten acre rural Dallas County property and possess various types of livestock. My residence and property run directly parallel to the proposed route for the high speed rail and will only be about fifty to seventy-five yards from its location. The location of this high speed rail will have significant negative impacts to our property values, quality of life and potential impacts to our various livestock. I have lived near a railroad many years ago and am aware of how much noise they can make. My understanding is the high speed rail will be running its route every thirty minutes. That noise, while bothersome during the day will most certainly cause interruption of sleep for my family and cause unknown effects on my livestock. Kenneth Martin	2/7/2018	Website	I fully support hi speed rail throughout the United States as an alternative to building more highways and putting more people in the air. Environmentally economically and socially it is the way to move people. Rail investment has proven to improve accessibility to our core cities and increase the value of real estate and improve the quality of life. Private capital investment in railinfrastructure is is the ultimate plus. I ride and support rail passenger service and would urge the the federal government to promote and develop hi speed rail investment.	Refer to GN-4.
Michael Martin	3/9/2018	Website	Automobile pollution is a major contributor to poor air quality in the Houston Metropolitan Region. It's easy to understand that in the Houston Metropolitan Region the pollution created by both private and commercial aircraft added to that created by automobiles presents a serious and almost intractable problem. Lacking viable alternatives in many areas of the region citizens are forced to turn to their trusted automobiles to travel across the vast expanse of this region. When commuting between the various population centers of Texas the same alternatives of the automobile and aviation confront the traveler. Even when seeking to travel outside the Houston Metropolitan region citizens typically rely on the automobile just to access our airports.((I'm going to lay this issue out in reverse order. The proposed terminal for the Houston High-Speed rail is to be located in one of the most traffic congested areas of the entire Houston Metro region. Access to the Northwest Mall is, to put it mildly, a nightmare for commuters. This alone was a major contributing factor to the demise of the Mall and the surrounding neighborhoods. I speak from personal experience as the headquarters of the counseling center where I once worked was at T.C.Jester and 610. The only remotely convenient times for accessing this office was during windows of opportunity between peak commuting times. That was over 10 years ago. Traffic through this area has increased many times over since that time.((This is due in no small part to the growth of West and Northwest Houston and Harris Counties and adjacent counties. Both I-10 and 290 are virtually impassible during significant parts of every weekday. Projections are that this problem will only increase even with the new construction of the adjoining 610 area tying the two thoroughfares together. This area will continue to grow as one of the major traffic choke points in the Houston Metro region. ((This is not some new revelation. It is well understood by our citizens to avoid this area at all costs. Unfortunately for a major population of commuters, avoiding this area is not an option and they have resigned themselves to watching significant parts of their lives tick away as they negotiate this area in their daily commute. Fortunately, others are not forced to endure this daily horror story.((Now we come to the location of the proposed terminal for the proposed and long awaited high-speed rail between Texas' two major metropolitan regions, Houston and Dallas. Our citizens have dreamed of our region joining the rest of the developed world in offering high-speed rail to provide fast and efficient transportation for our citizens. I won't even bother to discuss the advantages of high-speed rail over other modes of transportation. All one has to do is travel to Europe and have the experience of using this marvelous mode of transportation and no further explanation will be necessary.((But our dreams were soon dashed as we realized first the insidious route chosen for the rail system and then the location of the terminal site necessitated by this route. Instead of the commute for high-speed rail taking the assumed 1 hour of travel time, we were told (with a straight face, mind you) that this trip between Houston and Dallas would be one hour and thirty minutes. This is a	Refer to GN-9, NE-9, TC-4 and TR-5. Refer to Section 3.2, Air Quality and Section 3.21, Greenhouse Gas Emissions for more information about air quality issues.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>full fifty percent longer to make the trip than should be reasonably required.((reasonably required. ((Then we learned that this is all to the good because in our need to travel to Dallas we would be afforded an opportunity to travel to and through the Bryan-College Station area. Many if not most prospective riders of the still proposed high-speed rail were less than excited by this prospect. The majority of those commuting to Dallas from Houston are business travelers. We have zero interest in being routed through College Station. ((While travel to Houston Hobby is not without its challenges, on the whole it is a vastly better experience than being anywhere near I-10 or the 610 West Loop at ANY time of day. I for one would greatly prefer the comfort and convenience of high-speed rail over anything to do with flying. I am certainly not alone in this preference as evidenced by the excitement at the prospect of having the option of high-speed rail. ((Moreover, revisit my use of Europe as an example. I have ridden both trains and high-speed rail in Europe. And while there are air alternatives to any type of rail, European travelers who have an option overwhelmingly choose rail. This speaks volumes and is not lost on the American traveling public. I could digress into a discussion of how the proposed Houston-Dallas route was hijacked, presumably by special interest groups. However, the issues of the impact upon the environment will themselves prevail in the minds of reasonable people.</p> <p>1. As noted, the proposed terminal at the now defunct Northwest Mall will itself present a compelling argument regarding the undesirability of this location. This area is already choked with cars operating with internal combustion engines operating within their lowest ranges of efficiency: low RPMs and they creep along the various freeways at typical commuting speeds. Now add to that the increased congestion from whatever the projected ridership of the high-speed rail will bring. I will leave it to others to crunch the numbers. The principle is the issue here. The rest is only math and statistics.</p> <p>2. Add to this the full 50% increase in travel time required by the insidious route proposed by the high-speed rail developers. As a retired therapist I can assure you this carries with it an increase in the stress of traveling which equates favorably with the burning of fossil fuels. Nor is this increased route an "energy-free" proposition. Travel requires energy and energy requires fuel, whether that fuel is directly consumed by the internal combustion chambers of an automobile or by a coal or otherwise fueled power plant to generate electricity. The electricity to power these trains must come from somewhere. Thus, there must be an increased environmental impact by the increased, and I might add, unnecessary, 50% lengthening of the train's trip.</p> <p>3. Should this project not come to fruition due to asinine and predictable political power struggles of special interest groups, make no mistake that there will continue to be a steady increase in travelers falling back on the tried and true mode of commuting between Houston and Dallas: Southwest Airlines. And along with that I assume that the negative impact upon our environment from the burning of fuel by these commercial airplanes will also increase. The alternative to the proposed route and the terminal which it demands is quite simple. Now, long ago I stopped equating simple with "easy". They can be mutually exclusive. Nevertheless, the obvious solution to this problem is to run these trains up and down the I-45 corridor. The commuting time would be competitive with that of Southwest Airlines, ONE hour, a savings of time and energy of fifty percent. That is not negligible. The access to any proposed terminal AT WORST will be at least comparable to the currently proposed terminal. At best it can be vastly superior, especially given the budding light rail infrastructure in both Downtown Houston and the area north of Downtown. And finally, a common sense perspective. As noted the majority of travelers who commute between Dallas and Houston are not tourists. They are business travelers and to them time is money. And time involves both the commute to the transportation terminal as well as the time of the trip itself. And never overlook issues of convenience for these business people. So, assuming the development of the high-speed rail proceeds as currently proposed. The train is open and running. A business person has a need to travel to Dallas for a meeting with hopes of returning the same day. The thinking goes like this: OK, gotta run up to Dallas for a meeting tomorrow. God willing I hope to be able to return same day. Let's see, both Southwest and that train are options. Hmmm. Southwest takes one hour. Prices about the same. And OMG, I don't want to drive anywhere near 610 and I-10. Plus, that train takes 1.5 hours longer. That's strange. OK, I'll just use my app and book a seat on Southwest. Done. Pretty simple. Play that over a few million times. Then let's talk about "environmental impact".</p>	
Will Martin	3/8/2018	Website	This should have been done several decades ago. It will make a great contribution if it is started now, without delay, so the many benefits to the area and the nation will be realized. It is a brilliant solution to several problems and will increase business activity in the Dallas-Houston areas. Just do it!	Comment noted.
Kristin Martin-Evans	2/5/2018	Website	This train is a must. Not only will it create jobs but it also will decrease the commuting on our roads, help with companies and individuals who work throughout the state of Texas we can manage our travel load and work load, meaning work life balance. There are thousands of individuals who have to travel the state for work and the train will help. This also can help with schools and the ability of travel for students. The train can also help commerce and tourism in our state. The list is endless and as a transplant for over 10 years and growing up in the northeast where public transportation is readily available I see this as a very important resourceful piece to our agriculture, our industrial needs and will overall be of great use in our state. We have had so many people move to the Lonestar state in the past 10 years and they are not stopping. The traffic is becoming very troublesome.	Comment noted.

David Martinez	3/5/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Megan Martinez	2/27/2018	Website	I have lived in Corsicana, Texas - in the Corbet, Texas community for 47 years and in Corbet, Texas for 33 years. This proposed train would greatly disrupt the entire community and most especially the beautiful Morgan Legacy Farm. The Morgan family have opened their Farm to many charitable organizations for numerous uses for those charitable organizations to raise money. For example, Catholic Charities of Dallas hosted 2 very successful dinners for individuals who purchased same at a yearly fund raiser. Several small inter city schools have also been blessed with help from the Morgan Legacy Farm. To tear up and destroy a beautiful working farm, for any high speed transportation that certainly can be rerouted is a travesty. We see absolutely no good that will come from this high speed train, but do see tremendous destruction if implemented.	Refer to LU-5.
Megan Martinez	2/28/2018	Website	I would like to make a couple of comments regarding the proposed route for the High Speed Rail proposed by the FRA. The route chosen crosses several local roads and divides several properties - which will cause disruption to numerous county roads, causing at times, tremendous hardship to the 1000's of families in this rural area. This proposed route will also divide family properties that go back 4 and 5 generations. This is not progress. One of the valued properties in the FRA's path is the Morgan Legacy Farm which has hosted and continues to host hundreds of groups of children and adults in opportunities to experience and be exposed to true Texas farm and ranch life - at no cost to anyone who attends. Many nonprofits have benefited greatly from the hospitality and numerous activities that the Morgan Legacy Farm provides for free to the nonprofits donors, such as Catholic Charities of Dallas and many intercity schools. Running the train right through the middle of this beautiful well maintained property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid which already exists and where no one lives and fewer roads, if any, would be disrupted.	Refer to LU-5.
Megan Martinez	3/3/2018	Website	I believe that running a high speed rail through the rural area in Corsicana/Corbet, including the Morgan Legacy Farm is a big mistake for numerous reasons. The entire area is filled with numerous working ranches and farms, as is the Morgan's. The Morgan's farm has always been a place for numerous children from YMCA programs, Boy Scouts, and many intercity schools have visited the Morgan Farm and been exposed to many educational opportunities at literally no cost to any of the organizations. The children have learned about wildlife, plants specific to Texas and the Navarro county area, fishing, and many other environmental education areas. The proposed rail would disrupt and alter many of the rural roads that many many families depend on for deliveries and transportation to and from work. Progress is not progress if you destroy thousands of acres of land many people depend on for a rail that is not a necessity in our State. I truly believe that saving the Morgan Legacy Farm is much more important than any kind of high speed rail system.	Refer to LU-5, TR-6, TR-7 and TR-8.
Megan Martinez	3/5/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. A move to the north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. This ranch serves as a retreat, free of charge, to many medical service providers, first responders, nurses, physicians, students and others.	Refer to LU-5.
Megan Martinez	3/8/2018	Website	I would like to send a complaint on the new FRA proposed railway that would run through the Morgan Legacy Ranch in Corbet, Texas. This is a family owned and operated farm that has served as a retreat for many children and organizations which work with inter city children and many children with hardship backgrounds, through the YMCA and several other organizations that work with emotionally challenged children. It also has been a great "project" place for many Boy Scout projects and a great retreat for our first responders in the field. The Morgan Ranch is full of wild life, some from protected classes like the bald eagle, and all the wild life would be greatly disrupted. Equally important is that the Morgan family came to the Navarro County community, took land that had been vacant for years, reworked it at great expense and made it a haven for 1000's of other people. The Corbet community is filled with family owned and operated farms that have been family owned for 100's of years. Absolutely no good would come from running a high speed train through such a beautiful family owned home.	Refer to LU-5.

Roger J Marzulla	1/19/2018	Letter	The purpose of this letter is to request a ninety-day extension of the comment period for the pending Notice of Availability Dallas to Houston High Speed Rail draft EIS, announced in the Federal Register on December 22, 2017 at 82 FR 60723. This request to extend the comment period is made on behalf of our client, Texans Against High Speed Rail, Inc. (TAHSR), a non-profit 501c(4) (application pending) organization formed in early 2015 as a coordinated statewide-grass-roots effort to protect property, property rights and values, and to prevent the expense of taxpayer dollars or public subsidies for high-speed rail transportation in Texas. TAHSR was formed after plans for the Dallas to Houston route by Texas Central quietly began to surface in late 2014. Supporters include residents, private property owners, business owners and elected officials from all across Texas who share the core belief of combating eminent domain for private use and opposition to any tax-subsidized passenger railway. We make this request to allow adequate time for the public, including TAHSR, local governments and other organizations, to adequately review and provide useful comments on the Federal Railroad Administration's proposed Dallas to Houston High Speed Rail draft EIS. The current Notice of Availability, published December 22,2017, allows a minimal60-day comment period, with a drop-dead date of February 20, 2018. Meanwhile, the U.S. Army Corps of Engineers has published Public Notice for two wetlands permit	Refer to PI-3, PI-8 and PI-12. For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com) or sending a letter to FRA.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>applications under Section 404 of the Clean Water Act for this same project, with exactly the same truncated deadline for public comments of February 20, 2018. These simultaneous, short comment periods, which commenced during the holidays, allow insufficient time for meaningful public participation in the NEPA process. NEPA requires that an agency prepare an EIS for any "major Federal actions significantly affecting the quality of the human environment."1 And "[t]he EIS is a procedural obligation designed to assure that agencies give proper consideration to the environmental consequences of their actions. The EIS also insures that the public is informed about the environmental impact of proposed agency actions."2 To accomplish this purpose, NEPA regulations require that the agency (here, the Federal Railroad Administration) prepare and submit for public comment a draft EIS, and that Federal Railroad Administration take into account those public comments in preparing the final EIS. In addition to the inadequate time Federal Railroad Administration has allowed for public comment on this EIS, the process has been so confusing and changed so many times that full public participation has been nearly impossible. On December 22, 2017, AECOM, the environmental contractor, distributed a notice of availability of the draft EIS. The notice listed the location and time for public hearings in each of the 10 impacted counties. The same list was, and still is currently, published on Federal Railroad Administration's website. The January issue of On Track, the Dallas to Houston High-Speed Rail newsletter, lists changes in venue for public hearings in Madison and Grimes County. It also corrected the address of the hearing in Limestone County. On January 17, 2018, a notice was published in the Madisonville Meteor listing only the change to the Madison County venue. None of these changes are reflected on the list of public hearings on the Federal Railroad Administration's website. Additionally, several members of the public have received a notice of delivery failure when attempting to submit their comments via email to the address listed on Federal Railroad Administration's website for public comments, DallasHoustonHSR@urs.com. The issues relating to the submission of public comments are not limited to the comments submitted via email- the online form for submitting comments has also rejected comments. Some landowners have property in multiple impacted counties, the current public hearing schedule for several counties overlap and occur at the same time. This does not allow those landowners the opportunity to participate at the hearings for all of the counties that they own land in. In addition, at close of business on January 19, 2018, the Congress has not yet passed a continuing resolution, and a federal government shutdown looms at midnight. Should this shutdown occur, it will further disrupt the schedule for public hearings and the ability of the public to provide meaningful information to Federal Railroad Administration regarding the environmental impacts of this major federal project. Accordingly, on behalf of the interested public, and particularly T AHSR and its members, we request a ninety-day extension of the comment period to May 21, 2018 on this critically important EIS.</p>	
Roger J Marzulla	1/30/2018	Letter	<p>On January 19, 2018, I sent a letter (a copy of which is attached) to Kevin Wright, the Federal Railroad Administration's contact for the Dallas to Houston High-Speed Rail Draft Environmental Impact Statement. The purpose of that letter was to request a 90-day extension of the comment period for the pending Notice of Availability Dallas to Houston High Speed Rail draft EIS, announced in the Federal Register on December 22, 2017. 1 This request to extend the comment period was made on behalf of our client, Texans Against High Speed Rail, Inc. (TAHSR), a non-profit 501c(4) (application pending) organization formed in early 2015 as a coordinated statewide-grass-roots effort to protect property, property rights and values, and to prevent the expense of taxpayer dollars or public subsidies for high-speed rail transportation in Texas. I understand that the extension request has been forwarded to you. TAHSR was formed after plans for the Dallas to Houston route by Texas Central quietly began to surface in late 2014. Supporters include residents, private property owners, business owners, and elected officials from all across Texas who share the core belief of combating eminent domain for private use and opposing any tax-subsidized passenger railway. We made the request to allow adequate time for the public, including T AHSR, local governments, and other organizations, to adequately review and provide useful comments on the Federal Railroad Administration's proposed Dallas to Houston High Speed Rail Draft EIS . At the first public hearing held yesterday, the Federal Railroad Administration announced that the public comment period would be extended until March 9, 2018, a 17-day extension. Because that brief extension of the public comment period falls far short of providing the public adequate time to study and provide meaningful comment on the draft EIS, TAHSR renews its initial request for a 90-day extension until May 21, 2018 to allow sufficient time for meaningful public participation in the NEPA process. The Notice of Availability was published December 22, 2017, the same date the U.S. Army Corps of Engineers published Public Notice for two wetlands permit applications under Section 404 of the Clean Water Act for this same project, with exactly the same truncated deadline for public comments of February 20, 2018. Each of these wetlands permit applications, in addition to the approximately 5,600-page Draft EIS, deserve proper and thorough review by the public. It is for this purpose that TAHSR requests a 90-day extension of the comment period be granted. NEPA requires that an agency prepare an EIS for any "major Federal actions significantly affecting the quality of the human environment."2 And "[t]he EIS is a procedural obligation designed to assure that agencies give proper consideration to the environmental consequences of their actions. The EIS also insures that the public is informed about the environmental impact of proposed agency actions."3 To accomplish this purpose, NEPA regulations require that the agency (here, the Federal Railroad Administration) prepare and submit for public comment a draft EIS, and that the Federal Railroad Administration take into account those public comments in preparing the final EIS. In addition to the inadequate time the Federal</p>	<p>Refer to ED-1, NE-6, PI-3 and PI-8. For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com) or sending a letter to FRA.</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			Railroad Administration has allowed for public comment on this Draft EIS, the process has been so confusing and changed so many times that full public participation has been nearly impossible. The January 19, 2018 letter to Mr. Wright describes in detail the numerous changes and outdated postings and publications of public hearing dates, even including the Federal Railroad Administration's own website. Some landowners have property in multiple impacted counties. The current public hearing schedule for several counties overlap and occur at the same time. This does not allow those landowners the opportunity to participate at the hearings for all of the counties that they own land in. Additionally, for weeks several members of the public received a notice of delivery failure when attempting to submit their comments via email to the address listed for public comments on the Federal Railroad Administration's website, DallasHoustonHSR@urs.com. The issue relating to the submission of public comments was not limited to the comments submitted via email-the online form for submitting comments on the Federal Railroad Administration's website also rejected comments. In addition to the many environmental effects, the final decision on this project will greatly impact the future of thousands of Texas residents. We believe that a 90-day extension will allow for those impacted the adequate time to research, review, and provide their comments on this critically important Draft EIS. On behalf of the interested public, and particularly TAHSR and its members, we request that the Federal Railroad Administration take into consideration the issues raised in this letter and grant a 90-day extension of the original comment period to May 21, 2018.	
Roger J Marzulla	3/5/2018	Letter	On January 19, 2018, and again on January 30, 2018, I wrote you requesting an extension of time to provide meaningful and thoughtful comments on the draft environmental impact statement for the Texas Central railroad project, published in the Federal Railroad Administration's Notice of Availability Dallas to Houston High Speed Rail draft EIS, announced in the Federal Register on December 22, 2017. In those letters, copies attached, I explained that the Federal Railroad Administration's Notice, which provided the minimum allowable period of 60 days for comment on the draft EIS-including Christmas and New Year-simply allowed insufficient time for my client, Texans Against High Speed Rail, Inc. (TAHSR), to review and comment on this lengthy document, regarding a multi-billion-dollar project extending over 240 miles and affecting many thousands of Texas residents. I further explained that our client, TAHSR, is a non-profit 501c(4) (application pending) organization formed in early 2015 as a coordinated statewide-grass-roots effort to protect property, property rights and values, and to prevent the expense of taxpayer dollars or public subsidies for high-speed rail transportation in Texas. I did not receive a response to these requests, but understand that the Federal Railroad Administration announced a 17 -day extension, through March 9, 2018. Because that brief extension of the public comment period falls far short of providing the public adequate time to study and provide meaningful comments on the draft EIS, TAHSR again renews its initial request for a 90-day extension until May 21 , 2018 to allow sufficient time for meaningful public participation in the NEPA process. Our initial review of the draft EIS reveals numerous shortcomings in its evaluation of the impacts this massive construction project would have on the quality of the human environment-impacts that NEPA requires the Federal Railroad Administration to analyze before the agency grants authorization to the project. If the Federal Railroad Administration proceeds on the basis of this inadequate study of the environmental impacts of the Texas Central railroad project, that action will not comply with NEPA or the Administrative Procedure Act. Meanwhile, you should be aware that Texas Central is subverting the comment process by offering prizes to people who will send you letters of support:	Refer to NE-9, PI-3 and PI-4.
David Mason	1/31/2018	Oral	It's going to be hard to follow that one. And, by the way. My name is David Mason, and like any of you, my family at one time had four generations living on our place. My wife spoke a minute ago, and my 19-year old -- or, 20-year old son spoke last night in Leon. The land is our livelihood. That's what we live for. It's the prettiest place you've ever seen anywhere around. There is no money, you know, to purchase it. There's just -- there's just not that much in the world. But what I want to say briefly, we've been coming to these meetings for quite awhile, and it's just amazing to just take them in and listen to what's said to many of us when you ask a question. On one side of the room, you're going to get one answer. If you walk directly across the other side of the room and ask the same question, you get a different answer. "Come to this side, and we'll lie to you". Well, one thing that was said, a lady asked one of the representatives, "So, what are you going to tell your investors, you know, if the train --if it doesn't make it, that we all agree it's not, you know, economically viable?" And he said, "Well, you know one thing about investors, if it fails for the next group, it's just a third cheaper". So, even their representatives feel like it's not going to make it, and we're all going to pay the price.	Refer to GN-4 and NE-1.
David Mason	2/5/2018	Oral	I'm David Mason and I am from Limestone County and I guess I will attend as many of these as it takes for the sake of them. I will say this, you ought to be proud of your county for the turnout you had tonight. We had to wait 30 minutes to get in here, so obviously a lot of people didn't get a chance to get in here to say their peace. But much like many of you, my family's land is directly affected. And it means as much to me as it does to you. I have five children. All five of my children were born the old way, at our home, in our home. It's a safer place. You know, for me and my family, the land is not only the place we feel the closest to our family Father and it's a place where I teach them when they wake up every day and I teach them when they rise and to walk by the way. and it's just like the pastor that spoke earlier, it's where I feel a peace. And I think if in the U.S. you are at a place o worship, I think you should be protected. And that's the way I feel about it. My name is David Mason and I am with Texans against the high speed rail.	Refer to PI-6, PI-8 and PI-11.

Lauren Mason	1/31/2018	Oral	I have a written statement. My name is Lauren Mason, and I'm a landowner living in eastern Limestone County in the historic community of Fair Oaks. We live on what is commonly referred to as Beechnut Road. I'm a homesteader, a farmer, raising children, as well as organic produce and meat on our roughly 150-acre farm. My children are the fourth generation of family to live on this land that my grandparents, Joe and Nan Ainsworth, spent and sacrificed to acquire. Our property encompasses an old wagon road that used to connect the communities of New Hope and Fair Oaks, where my grandfather walked, or rode daily to school in the 1920's. It was his childhood dream to own the property where I now live, and I think he would be shocked to see how much of his precious land has been eroded over time; not by natural processes, but through the nefarious acquisition of portions of it by eminent domain from various entities. In the early 70's, we lost 50-foot of right-of-way off in front of our property for a county road. In the late 70's, the Brazos River Authority took 16 acres of our bottomland to flood for Lake Limestone. In the 2000's, when gas production was at its peak in this county, XTO destroyed 15 acres of woodland for a gas well path and pipeline production. Our land has been devastated over and over through the years, and now we have a private company who masquerades itself as a railroad trying to steal our land and destroy our way of life. My husband and I made the choice to move to our family farm after college graduation because we wanted a quiet, and simple way of life away from the hustle and bustle of big businesses and big cities, a safe haven to raise our children, as part of a real community, and we found that on Beechnut Road. While my property is not currently slated to be under the rail alignment, it does lie adjacent to the track, and it certainly falls within the one to two-mile land grab that Texas Central is asking for rights to on either side of the ramp. I-45 is not congested up and down its corridor as Texas Central would have you believe. It's only congested when one nears one of the major cities they are trying to connect with this high-speed rail boondoggle. It is my opinion that no car or truck-owning Texan is going to drive their vehicle into the congestion in Houston or Dallas, pay to park, pay \$199 for a one-way ticket to the opposite city, pay to rent a car when they get there, and then repeat that process in reverse just so they can say they rode a 205 mile an hour train that saved them two hours on the freeway. Surely as a people, as a community, and as a state, we have more sense than this. Thank you.	Refer to ED-1, ED-2, PN-3 and LU-14.
Heidi Massey	3/9/2018	Website	I don't think the projected rider numbers are accurate. I feel that the tax payers will get stuck w bill after the first round of private funding is exhausted. Not having a station in downtown Houston or cities south of houston along 45 seems pointless. Great idea just barely half baked right now. Don't support at this time.	Refer to GN-2, GN-4, GN-7 and NE-1.
Chris Masters	1/29/2018	Handwritten	The TCP Team has been a good North Texas partner as they continue to make ongoing design accommodations for future high speed rail expansion. Working closely with NCTOG, TCP's Dallas HSR station concept provides track and platform capacity and alignment to allow for future high-speed rail continuation to Fort Worth via the core express service corridor. TCP is committed to provide accommodation throughout the life of the project and to coordinate with NCTOG, City of Dallas, TXDOT and DART as design and construction advances.	Comment noted.
Conrad Masterson	3/3/2018	Website	I fully support the Texas Highspeed Rail project. This will be as important as construction of the DFW Airport and Mayberry as transformative as the founding of Southwest Airlines. Being privately funded is a strong positive in my view.	Comment noted.
Koshy Mathew	1/30/2018	Email	Another milestone to the history of US Railway. Move Forward.....	Comment noted.
Jim Mathews	2/7/2018	Website	The Rail Passengers Association (RPA) is writing you on behalf of our thousands of Texas members, and all 28,000 members nationwide, to voice support for Texas Central Railway's (TCR) Houston - Dallas high-speed rail corridor project As the Federal Railroad Administration (FRA) prepares the Environmental Impact Statement (EIS) for this transformative project, we hope that you'll consider the full breadth and width of benefits to the people of Texas, Americans at large, the regional passenger rail network, and the U.S. economy. Nearly 50,000 Texans currently travel between Dallas and Houston at least once a week. The 240-mile trek along Interstate-45 currently takes four hours. With Texas' population rapidly growing, that drive-time will grow to 6.5 hours by 2035 Texas' population is expected to double by the year 2050, further exacerbating problems. TCRs service will connect Dallas and Houston with frequent, 200mph service, cutting the trip-time to 90 minutes. TCR's Houston Dallas rail service will also close a significant gap in the regional rail network, directly connecting Oklahoma City to Houston via Amtrak's Heartland Flyer, and Dallas to New Orleans via Amtrak's Sunset Limited, providing greater connectivity throughout the south-central U S. while linking cities that play a vital role in domestic energy production. Beyond its direct transportation impacts, the TCR project-backed entirely by private sector capital-is exactly the kind of innovative infrastructure venture the Trump Administration has called for. The project will inject an estimated \$36 billion into the Texas economy during the next 25 years into, creating 40,000 construction jobs over the life of the project, and 1,000 permanent jobs in operations and maintenance The railroad will also pay \$25 billion in state, county, and school taxes over that same period. In consideration of the specific alignments discussed within the EIS RPA would emphasize the following points: RPA supports TCR's proposed Houston station at the Northwest Mall site, but with the recognition that it needs to be connected to the rest of the city through convenient, frequent, reliable transit, preferably light rail, to major business centers. These business centers include Downtown, Uptown/Galleria, and the Energy Corridor. These transit connections will facilitate the movement of passengers out of the station area while minimizing the impact of additional traffic volume on the surrounding neighborhoods, which already suffer an overloaded highway network. The transit connections	Refer to GN-8, TR-3 and TR-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			between TCR and downtown must include a stop at the Amtrak station on Washington Avenue This direct transit link will facilitate connections between Amtrak's National Network and TCRs Dallas - Houston, expanding the project's benefits to include passengers in Oklahoma, Arkansas, Louisiana, and beyond.	
Mark Mathis	2/16/2018	Website	Please note that I support this project to provide transportation options to the citizen of the State of Texas.	Comment noted.
John Maybury	2/7/2018	Website	THANK YOU FOR LEADING THE WAY ON HIGH-SPEED RAIL IN AMERICA. YOU ARE SETTING A GOOD EXAMPLE TO THE REST OF THE NATION.	Comment noted.
Michael Maywald	2/9/2018	Email	My family owns a 47 acre farm on Waller Spring Creek just East of Binford Rd, about 118th of mile from the site of the proposed high speed rail track. This farm has been in my family since the 1930s. Due to the noise and vibration this train will decrease the value of our property. It will be difficult to sell. No family will want to live here. And I am not sure even a business will be interested in building this close to the train. Our son and his family also live on this farm. His kids go to school in Waller. This train will mean that they will have to travel miles Out Of the way just to get to a school that is four miles from our property. This train will mar the landscape of Texas and put an end to the peace and tranquility of our countryside. If there is a derailment, and sooner or later there will be, it will be catastrophic. Emergency vehicles will have to go miles out of the way to get to victims. The ridership will not be enough to pay for this train And when it fails, we, the people of Texas will have to foot the bill. WE DO NOT NEED, NOR DO WE WANT HIGH SPEED RAIL IN TEXAS!	Refer to GN-2, NE-1, NV-1, SC-5, SC-7, SS-1, SS-12, SS-13 and VA-1.
Kathy A. Mazzaferro	2/12/2018	Email	It is virtually impossible for the average lay to comprehend and digest, especially in the time frame given, the massive DEIS put for consideration. Therefore, our limited observations are as follows: The "NO Build" alternative appears not an option it does not "...meet the specified Purpose and Need this Project..." We assert that the "Need" is overstated and the "Purpose" is not embraced by the majority Of Texans. In addition, from an environmental aspect. the scope of this project is massive and will adversely impact every plant, insect, animal and human in its path, not mention water and air. The entire social, natural, physical and cultural environment of the route for this high speed rail will be forever altered from its existing state to accommodate the perceived "Need". Please note... Texas is not Japan. Texans do not embrace mass transit. Texans drive. Rural Texans love their land. This DEIS is garbage. Computer programs can be fed whatever input is needed to spit out the desired result. Garbage garbage out. Any alteration Of the land along the route the project inherently and negatively alters the environment surrounding the Project. The Project will destroy the environment as it presently exists. We believe that Texas should be preserving rural land, not carving it up with financially unviable transportation projects. No Build is the only alternative.	Refer to BA-6, NE-1, NE-9 and PN-3.
John Mcadams	2/1/2018	Email	I dont want the Dallas to Houston high speed rail.	Comment noted.
Dan McAuliffe	1/18/2018	Email	please keep me updated on Dallas County ROW acquisition process	Refer to ED-2.
T McC	2/13/2018	Website	I do NOT want this high speed rail in my area. It is a complete waste of money.	Comment noted.
Morgan Legacy Farm	2/26/2018	Website	I would request the FRA consider moving a small portion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying their ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.

Joy McCaffety	3/9/2018	Website	I am against the High-Speed Rail and object to the Environmental effect. As a tax payer and land owner this private project is attempting to diminish my rights. How is the Federal Railroad a part of this private project? I hold liable the private entity and the Federal Railroad for their parts in the manipulation of public opinion in withholding and suppressing the tax burden that will be attached to it.	Refer to NE-1.
Louis McCarter	2/16/2018	Website	Superb idea! Probably should have been constructed much earlier. Looking forward to riding on it to the OU/UT football game and on numerous other occasions.	Comment noted.
Louis McCarter	3/9/2018	Website	Great idea, can't believe it hasn't been done years ago. I look forward to riding it, should be much less hassle than flying or driving. I can't understand why some folks oppose it. Would they have opposed the invention of the wheel? computers? airplanes? electricity? Cherry pie? Condemnation of property for a reasonable price was how our highways were constructed and continue to be.	Comment noted.
Gregory Paul McCarthy	3/9/2018	Website	Yes, please go ahead with this project. There needs to be a land-based easy and quick way for Texans to go from Dallas to Houston and vice versa. Travel needs to be reasonable and safe and efficient. Competition with others ways to travel is important to develop economic development and employment while allowing Texans choice in travel options. Thank you, GMcCarthy 03/0/2018	Comment noted.
Lucius McCelvey III	1/29/2018	Website	I am a resident of NW Houston that would use this service, and I know others would as well. I-45 between Houston, and Dallas, without relief like this very soon will have all weekends as crowded as a Holiday Weekend. That means travel time of 6-7 hours between cities. I travel often for work too, and I'd much rather ride high speed rail between cities than deal with the headaches of an airport.	Comment noted.

Camille McClanahan	1/29/2018	Handwritten	This purposed high-speed rail serves NO purpose to anyone who lives in Ellis, Navarro, Freestone, Limestone, Leon or Madison counties. It will divide peoples personal property, cut off roads for access for the public as well as emergency personnel/vehicles, I would ask that the US Dept of Transportation refuse to have anything to do with this, refuse funding or helping build this monstrosity. No matter how much the "private investors" say this won't be a burden to tax payers- I don't believe that for one minute! It Will Be a Burden. When you have to find other routes-more gas for your vehicles, for emergency transportation - the list is endless - school busses etc. We are NOT Japan - nor should the United States of America try to imitate them or that country's rail system. Need we remind the US dept of Transportation what happened with the rail system in Washington State recently? I think that should be lesson enough.	Refer to GN-4, NE-1, SC-6 and SS-23.
Anita McClosky	3/9/2018	Website	I am sending you my opinion of the high speed rail. I do not believe it is a project that will benefit Texas. I think they want to come in and take private land for their own personal gain without any consideration for the landowners. Every time I hear about how they are going to build it their plans have changed. The train will disrupt local travel, wildlife corridors, water flow and add to response time for first responders. They say they are going to be self sufficient, but as far as I know there is not any that are in the world. Texas does not need to be subsidizing it. Also we have plenty of existing easements and roadways that the state owns that they could use instead of trying to take our private land. What's wrong with Gov. Abbott's idea of an automated freight rail system that would take the 18 wheelers off the freeways and use existing right of ways? I vote no build to the high speed rail.	Refer to BA-4, GN-4, NR-2, NR-5, SC-19, SS-23, and TR-6.
James McClosky	2/6/2018	Handwritten	Have No Faith in Your Numbers working, Do Not think that your train will be able to exist without outside subsidy I Think That Texas is Too Spread out and People are Not Going to use the Train Enough & you will end up Bankrupt All you are doing is making a Big land Grab @ Destroying Peoples Homes	Refer to GN-2, GN-4 and NE-1.
James McClosky	3/9/2018	Email	I am sending you my opinion of the high speed rail. I do not believe it is a project that will benefit Texas. I think they want to come in and take private land for their own personal gain without any consideration for the landowners. Every time hear about how they are going to build it their plans have changed. The train will disrupt local travel, wildlife corridors and water flow and add to response time for first responders. They say they are going to be self sufficient and as far as I know there is not any that are in the world. Texas does not need to be subsidizing it. Also we have plenty of existing easements and roadways that the state owns that they could use instead of trying to take our private land. What's wrong with Gov. Abbott's idea of an automated freight rail system that would take the 18 wheelers off the freeways and use existing right of ways. I vote no build to the high speed rail.	Refer to BA-3, BA-4, BA-5, BA-8, ED-2, GN-4, PN-3, SC-19, SS-23, TR-8 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Wes McClure	1/26/2018	Website	I support the concept and routing of the proposed High Speed Rail. This travel alternative is an important one as IH 45 becomes more congested and airport travel more burdensome due to weather and security. The Japanese system has a perfect safety record and will be readily adapted to Texas. The proposed design with no at-grade crossings will readily allow for crossings by highways, other railroads, and within farm properties. The proposed station site near Lamar St in Dallas will enhance that area and create connecting opportunities for people in Dallas County.	Comment noted.
Russell McCollom	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Dana McCombs	3/5/2018	Website	I am totally against the Texas Central Railway being built. It will destroy land that has been in families for hundreds of years. It will cut off access to properties for some landowners. Their incomes will be affected, due to decreased cattle and hay production. It will change current routes for our roads, making it hard to access their land. I myself own land in Freestone County. This rail will come within 1/3 mile of my property. This is another complaint. Being that close, I believe my land was trespassed upon to do the EIS. The railway has no financial benefit to the landowners whose property it will destroy. No jobs will be created locally. Jobs will be lost due to decreased traffic on Interstate 45. Our county will lose property taxes due to decreased value of our land. The Freestone County Sheriff says he has still not been contacted by TCR about security. Our safety is at risk. I have not seen any evidence that this railway can support the expenses incurred with operation! I	Refer to ED-2, GN-1, GN-2, GN-4, GN-5, LU-11, NE-1, NE-8, PI-1, SC-15, SS-18, SC-19, SS-21, SC-22, SS-23, TR-8, TR-10 and VA-1.

			believe the projected ridership is exaggerated. The State of Texas will wind up bailing out the company. TCR has no benefit to me, my fellow landowners, Teague, TX and Freestone County. Do not let it be built!!	
Elisa McCool	2/8/2018	Website	As a former Texan who still visits family in Texas frequently, I highly support this high-speed rail project. I hope that across the US we can continue to develop and support rail as an efficient and climate-friendly transportation option.	Comment noted.
Ann McCoslin	3/9/2018	Website	The proposed Hish Speed Rail is not something we want, and certainly not something we need. The monetary gain that is envisioned is a far cry from the disaster that it will turn out to be. I'm not opposed to progress. However, I am opposed to pushing an idea on citizens, and then having it fail and fall to the taxpayers. Your predictions are under budget and we don't want to pay for it. I'm a teacher at Leon, and I know the negative impact your proposed train will have on me and my students. We won't safe at school. First we have to worry about active shooters, and now we might have to worry about a 200 mile an hour train hitting us...every 30 minutes. I don't think so. Please leave!	Refer to GN-2, GN-4, NE-1, PN-3, SC-6, SC-8, SC-22, SS-12 and SS-13.
Louise McCoy	1/31/2018	Oral	I welcome the train. I think it's a fabulous idea. There is too much misinformation from people. It's not noisy. I just think it's sorely needed for the state of Texas and I have support it wholeheartedly. I think if people understood and got informed about the environmental impact they will change their mind. I also, at some point would like to see future stops on the rail, I understand as per ridership increases. Thank you.	Comment noted.
Matt McCoy	3/5/2018	Website	I am opposed to the path running through the Morgan Creek Ranch near Coriscana	Refer to LU-5.
Catherine McCreight	2/16/2018	Website	I love the idea of a HS rail. Hurry up and build it.	Comment noted.
Kristin McCumber	2/6/2018	Oral	I'm Kristin McCumber: and I'm a native of Dallas. I'm a resident of Field Store, and the property that lies within a thousand feet of the train. And rm a real estate broker selling property across the State of Texas. There are so many issues with this project that it's hard to pick a place to start. So let me stan with one that's familiar: one that involves my profession, real estate. Texas has been long known for and prides itself on having some of the most protected property rights in the United States. We place a very high value on that alone. Chapter 21 of the Texas Property Code tells us that we are entitled to adequate compensation when it invoke eminent domain. How do you compensate for land in a family for seven generations that have to be handed down to the next generation? You don't. I'm affected by this train in so many ways, but it breaks my heart for all of my all of my neighbors that were born and grew up on the land that they call home. I risk losing my neighbors and my land: and they risk losing their heritage: which is far worse than the value that I'm going to lose on my land. How do you place a value on the social relationships that are developed within a neighborhood? You don't. There's not a damn dime you could give any of us that's going to replace that in our communities. Nothing. You know: I could sit here and tell you to get your checkbook out here and write me a check right now: but it's not going to change the wrong that you're doing to every family in this county and all the other counties across the State of Texas. In addition to this: you can't just look at the 200 feet wide of the 240 miles. You have to look at the whole picture. And when you look at that: ifs devastating. Property values will see a minimal loss of 30 to 40 percent across the State of Texas. New: young homeowners who just purchased their homes will be upside down in the value of their homes. People who plan to retire with the value of their investments in their places will no longer be able to do so. Many people within a minimum of 2 miles of this eyesore will be part of that dead zone I'm in that dead zone. I'll be done in just a minute. Moving on to the larger scale of an estimated mile on each side of this rail: we're not talking about 8,000 acres; we're talking about 3072000 acres across the State of Texas. We not talking about 8,000 acres. We're talking about the lives that you ruin in every county across this state. You know, if — we've heard it's estimated to be twice that. I mean: 300,000 acres is bad enough. For those of you that favor this project: how dare you? How dare you tell us that our property rights that we have put everything we've worked for are worth the price of a novelty ticket so you can sit on your ass in that seat, enjoy the beautiful properties that we worked for that are being taken against our will. I'm not going to get staffed about flood issues that will added for the infrastructure of this train. It will increase loss-of-life possibilities beyond what we saw during Hurricane Harvey, which was really h01Tible_ The decibel sound on a regular basis for many of us will be unbearable. The effect it will have on our wildlife and our livestock will be devastating. The hundred miles of berm will interrupt the migration patterns further: placing these animals under duress and will no doubt cause a reduction of offspring: furthering losses for those who depend on livestock for income. Concerns have been raised by environmentalists who suggest high noise levels adjacent to a rail corridor can cause impacts such as interference with communication, mass (inaudible), startling and fright in all animal life. I'm begging you: Do not build this rail in Texas.	Refer to AS-1, ED-, ED-2, NR-1, NR-6, LU-14, SS-16, SS-17 and VA-1.
Conrad McCutcheon	12/27/2018	Email	As a 56 year old lifetime resident of Houston with 4 children also in Texas, I can count the number of times my I have been to Dallas on one hand. My 80 year old mother confirms she has been there less than 5 times in her lifetime as well. Only one of my children has ever been to Dallas. I know of no one who goes to Dallas with any frequency and no one in Texas rides trains. I can see this project folding and many Texas landowners with marred property. A very bad idea for Texas.	Refer to ED-2, GN-2, LU-11, NE-1, PN-3 and TR-8.
Clara McDade	1/29/2018	Email	17 Residence to be affected by this project near the Highland Hills Community \u8226 Bullet train is Electric \u8226 Train will be East of I-45 \u8226 308 ft of train \u8226 60% of track on Viaduct \u8226 No at-grade crossings \u8226 240 miles of track \u8226 90 Minute of travel \u8226 Train will be traveling @205 miles per hr. \u8226 Any other questions please see info below:	Comment noted.

Bob McDaniel	2/6/2018	Oral	I'd like for someone to explain to me why it is that the FRA has not made any attempt to coordinate with any of the 391 commissions in the route that's proposed for this train -- on any of the routes that may be proposed on this train. It seems like there is a federal law and there is also a state law that it needs to be done. So if someone could please answer that question, that would be very helpful. In addition, I'd like to know why it is that they're trying to build something that looks like it's not going to be feasibly -- be feasible economically. The price is way too high for what they plan on doing. The land that they're going to need to acquire is going to cost them a great deal of money and I do not want the taxpayers of the state of Texas that have no access whatsoever to this rail to have to foot the bill at some point in the future. And based on what I see with respect to high-speed rails all over the world, not just in the United States, that will be the case. So I believe that the FRA should come up with the absolute no-build option. No route between these two cities is feasible at the prices they would have to pay and have to charge.	Refer to GN-2, GN-4, NE-1, PI-1 and SC-3.
Bob McDaniel	2/6/2018	Oral	Well, I'm Bob McDaniel. I live in Grimes County. Been here for about five years. And I want to quote something I think you've all probably heard. UNIDENTIFIED MALE: Use the microphone. Sorry. I usually don't even need a microphone. Anyway, I want to quote something that I think everyone of you have heard before. It goes like this. "We hold these truths to be self-evident that all men are created equal, and that they are endowed by their creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." Anyone in this room has the right to all three of those, especially the happiness part. This train is a joke. I have looked at this several times over the past several years, and I can assure you, first of all, coming from a transportation background--I worked for 20 years for Continental Airlines--you can go to Dallas for considerably less than \$200 per person any time you want. The only reason why the airlines are not fighting this is because Southwest Airlines made a deal with the City of Houston that they could get the land at the airport in Hobby and the City of Houston would build the terminal for them to have international routes. Otherwise, they would be fighting this along with us. And that's Southwest Airlines and that's a fact. So what it boils down to is this. This thing is not going to make any money, and you're going to wind up having to pay for it. There's no way I could compete with some of the information that's been given here tonight, but I can assure you it makes absolutely no sense.	Refer to GN-4, NE-1 and SC-3.
Bob McDaniel	3/5/2018	Oral	I think the no-build option for the high-speed rail is the only option that makes any sense. The reason why that I take that position today is because it took me almost two hours to get here today simply because of two wrecks on two freeways and it's a distance of about 40 miles. And the location that they believe, at least the mayor of Houston believes where they are going to put the terminal here in Houston at the intersection of 290 and the West Loop North or North Loop West, whichever you want to pick, is a bad location, not because of the construction that's going on today. That construction today is to simply let the freeway traffic move better than it has in the past. Prior to this construction about three years ago before any of it started any of this, this area was very hard to get to. It's probably as busy on this part of the North Loop -- excuse me -- this part of the West Loop as it is at the notorious Westheimer and the West Loop intersection. There are so many cars, especially on 290. This is a bad location. It's a bad idea. And for anybody in Houston that might live within three or four miles of where Terminal B is. This is going to take forever. To get out, if you add an hour to and it would take an hour easily on a slow day, plus the three hours to get to Dallas, 90 minutes to get to Dallas and, I can assure you, other things are going to cause problems. It's much faster to fly and it's almost as fast to drive all the way and you can change your mind and go to your real destination, which is not in the middle of Dallas, Texas.	Refer to BA-6, GN-7, NE-1, PN-3 and TR-5.
Bob McDaniel	3/5/2018	Oral	I think the no-build option for the high-speed rail is the only option that makes any sense. Lynne McDermott	2/19/2018	Website	I would love to see a high speed rail from Houston to Dallas. However, feel the price is a little high	Refer to SC-3 and SC-22.
Bob McDaniel	3/9/2018	Email	From: Howard Robinson Date: March 3, 2018 at 10:32:06 AM CST To: Howard Robinson Subject: High speed rail Reply-To: Howard Robinson THE DEADLINE FOR LODGING OBJECTIONS TO THE DRAFT ENVIRONMENTAL IMPACT STUDY INTO THE PROPOSED HIGH SPEED RAIL IS FRIDAY 9TH MARCH Make your voice heard and submit your objections to the proposed scheme by email to dallashoustonhsr@urs.com or DallasHoustonHSR@urs.com Submit ONE objection per email. A small amount of time spent now may well prevent a disastrous project effecting Texas for generations to come.	Comment noted.
Bruce McDonald	1/24/2018	Email	I cant understand why the texas high speed rail continues to alter there routes ro go through grimes county. The people of grimes county the representative and judge all oppose the rural of the county. Its not right for a private company to use eminent domain to take generations of family farms away from them. ultimately the taxpayers will be on the hook for the construction and maintenance for this project in the end look at California high speed as a example. We texans take great pride in pur family farms for high speed rail to take that away from thousands of texans is unacceptable way to use taxpayer funds. We will go to great lengths to make sure this project, never has a chance to even break ground on our soil.	Refer to ED-1, GN-2, GN-4, GN-5 and NE-1.
Caleigh McDonald	1/31/2018	Website	This railway is not going to make money. We have planes and most people would rather drive and pay gas then for these expensive tickets. What makes you think people will use this? I was at the public hearing on the 29th. Whoever did this environmental check should be fired. Our wild hogs will eat and block your railway. These are 400 pound animals and they travel in herds. Your 200 MPH train ain't nothing compared. No endangered species will be effected??? What about our bald eagles? I won't even get into the moral issues because clearly y'all are ignorant. I'm from New York and I didn't know anything about Texas life until I lived here for about 2 years. Educate yourself because right now your just making a bad business deal.	Refer to NR-3 and NR-6. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Norann McDonald	1/30/2018	Oral	Hi, I am Noran McDonald and I am from Madison County and I live close to the Walker's directly across the street from me. In Madison County we have three cemeteries that this train will impact. And the last time I checked the only thing the State of Texas can do anything -- when somebody in a cemetery. I am beyond appalled that the railroad commission would not try to place something like this in New York where they already have train ridership. There are only two high-speed rails in the whole world and we all know that this is not going to be a profitable one and everyone knows we will end up paying for this. The last thing that we want is something like what's going on in California where they are seven years behind schedule and billions of dollars over budget and they are going to end up picking up the tab for it or that thing will never be finished. That's nothing we want in this state. The people here are hard working. Raise your hand if have more that two jobs? A ranch and you work on top of it. And the people here in the county almost have three. They work, they ranch, and they side hustle. So their land is their livelihood. I just really want you guys to hear how against we are of this.	Refer to CR-6, GN-2, GN-4 and NE-1.
Norann McDonnell	2/5/2018	Oral	Hi, many name is Norann McDonnell. I have attended several meetings with the high speed raid and several of these public comments meetings. I am highly against the rail. And for those of you who may not be directly impacted, you have heard before, there are two miles on each 4 side of the rail. Get your neighbors involved, get people involved so we can stand up against this. My issues for the county, some of them, is only the cost to the county. We have destruction of EMS services and we will also suffer from a loss of income. Properties beside the rail will all decrease in value which will affect our taxes. Additionally we will lose jobs. Madison County has people who are ranchers who are paid who have dear leases, who also have businesses on their properties. And all this will be impacted when the high-speed rail takes those properties away from us. Additionally, the number that's been thrown out over these 8000 acres is that it will affect three percent of the cattle production in Texas. And I think that's a huge number. Secondly there's more. The upkeep for overpasses and for the new roads constructed by the train it says this in several places, is the responsibility of the county. We all know that our dollars are tight, strained and for us to be responsible for things we don't want, I think is terrible. Take your comment cards and you can send them in and you can send in more than one, just overload them. Overload this as we do not want this high-speed rail.	Refer to LU-2, LU-11, LU-14, SS-23, SC-21, TR-7 and VA-1.
Norann McDonnell	2/5/2018	Handwritten	I think this expensive study is using out of date (2014), you have major oil and gas pipelines with rights of way you are trying to build over and you have a coal mine that is unstable that you are trying to build over. We do not want this train in Madison county.	Refer to EU-2, GN-1 and SG-2.

Lee Mcelyea	2/23/2018	Website	As an East Texan I fully support the building of high speed trains across Texas. I also support the use of eminent domain to procure the land necessary for the project.	Comment noted.
Marcus McFarland	2/16/2018	Website	Please let's do this soon!!! Like yesterday....It is greatly needed..!!	Comment noted.
Laura McGee	1/29/2018	Handwritten	Property Taxes.- it would go without saying the HSR would impact property values within a mile or better of the rail. Your information shows up to 30 trains between the hours of 5:20a & 11:30pm with little to no sound mitigation. Although the real value of real estate would be hammered. The property would continued to be taxed at current or higher rates. The folks at the Navarro county Tax Assessors office figures taxes or a National Average so it conclusion the value will remain the same or higher. NO!! NO!! NO!!	Refer to TC-4 and VA-1.
Adam mcgill	3/9/2018	Website	I am a supporter of the Dallas to Houston High-Speed Rail and believe it will be a benefit to both regions, the state, and even the country.	Comment noted.
Stacey McGinney	1/29/2018	Email	I am for the rail, but please remember that a LARGE percentage of the "DFW Metroplex" is in Fort Worth and the surrounding cities. I would love for the plan to include a Fort Worth link that would go into and join up with the T system and the TRE train in Fort Worth, perhaps via a "Y" intersection stop/link in Ellis County. We west-siders have to get to Houston too.	Refer to BA-1 and GN-7.
Ken McGinty	12/30/2017	Email	News of this project has already lowered the value of my property.The path will not touch my place,but it is so close buyers do not want to live or invest.	Refer to VA-1.
Chris Mcglothlin	1/25/2018	Website	I am sending my support in for the railway. I believe that this would be an economic boom for everyone involved. The railway will provide untold economic opportunities. I live in the Huntsville area and believe that it would even provide a economic boost to this area as well. It could open up job opportunities in Dallas for someone such as myself. Federal Railroad Administration	Comment noted.
Terence McGuinness	NA	Website	I've been on the train from London to Brussels and it was exhilarating. Too from the Narita airport to Tokyo. America is so far behind regarding high speed rail that it is embarrassing. We must move into the 21st century even if some farmers are complaining about bogus fears attributed to trains.	Comment noted.
Constance McGuire	2/2/2018	Email	What if any restrictions apply to the landowners adjacent to the Railroad right of way? To what distance from the right of way do these restrictions apply?	The ROW will be fenced and access restricted. There would be no restrictions on use of parcels adjacent to the ROW.
Constance McGuire	12/18/2018	Email	The maps are nice, but there should be an overall key map that graphically shows how to find specific locations by milepost. Maps then should have mileposts in the file names. There are too many maps to look through each one to find how a 300' section of RR might affect a specific parcel. (Or maybe I haven't found the key map?)	Refer to GN-1. Mapbooks (Appendix D) included an inset map to aide in locating general areas along the route.
Stephen McGuire	2/8/2018	Website	Will there be any restrictions on hunting or shooting firearms near the train route? If so, what will the restrictions be and how far from the train route will they extend?	Refer to RF-2.
Andrew McHargue	2/20/2018	Website	Why were the multiple endangered or threatened species not listed in this report?	For information regarding the Endangered Species Act and federally listed species with potential to occur within the Project see Section 3.6.4, Natural Ecological Systems and Protected Species, Affected Environment. Section 3.6.4.4.2, Natural Ecological Systems and Protected Species, Protected Wildlife Species discusses federally and state-listed species reported by USFWS and TPWD. All species listed as threatened or endangered either by USFWS or TPWD are included in Table 3.6-8: Protected Wildlife Species with Potential to Occur within the Study Area.
Andrew McHargue	2/20/2018	Website	Why were the threatened or endangered animals we have in navarro county not listed on this report?	For information regarding the Endangered Species Act and federally listed species with potential to occur within the Project see Section 3.6.4, Natural Ecological Systems and Protected Species, Affected Environment. Section 3.6.4.4.2, Natural Ecological Systems and Protected Species, Protected Wildlife Species discusses federally and state-listed species reported by USFWS and TPWD. All species listed as threatened or endangered either by USFWS or TPWD are included in Table 3.6-8: Protected Wildlife Species with Potential to Occur within the Study Area.
Andrew McHargue	2/20/2018	Website	What steps are you taking in protecting our endangered species we have in Navarro county, such as the bald eagle?	Refer to NR-3 and NR-5.
Andrew McHargue	2/20/2018	Website	How do you plan on protecting the hsr from the gigantic hogs we have in navarro county?	Refer to SS-2 and SS-12.

Andrew McHargue	2/20/2018	Website	How do you plan to protect the rail system from the yearly flood waters we get right on the preferred path here in Navarro county?	Refer to SS-16.
Andrew McHargue	2/20/2018	Website	Whats steps are being taken to protect our livestock from the noise and threat of being hit by the train in navarro county?	Refer to NR-1 and NR-6.
Beverly McHargue	1/30/2018	Email	I just wanted to say that my husband David and I moved to Richland, Texas in May of 1993. We moved to the Country from the Dallas area, we wanted to get away from the City life and we wanted to raise our children in the Country. We have a 1000 acre Cattle Ranch. We raise Black Angus Cattle and I also have chickens as well. I am have also been a breeder of AKC Siberian Huskies for over 20 years. We also help control the wild Hog populations and we also hunt on our land we eat what we hunt. I have raised 2 daughters and 1 son and we have planned to pass on our Cattle Ranch to our children and their spouses. My whole family is against this High Speed Rail and we all are going to fight y'all with every thing we got. You are in for the fight and a fight you Will get! DON'T MESS WITH TEXAS, Oh also REMEMBER THE ALAMO!	Refer to LU-11.
Beverly McHargue	2/3/2018	Website	I am not for this High-Speed Rail, my husband David and I own a 1000 acer Cattle Ranch in Navarro County and we do not want it near or on our land. You can just stop shoving this High Speed Rail right down our throats, you need to shut it down now! Texans here around were you have pick to put it will fight you with everything we got. My maiden name is Seguin and I am a direct descendent to Juan Seguin who fought along side Sam Houston in the battle of Texas independents! "Remember The Alamo!" Oh and by the way do y'all remember the Bundy's from Nevada or even Rubi Ridge?	Comment noted.
David McHargue	1/31/2018	Oral	Hello, folks. My name is David McHargue. I live in Navarro County. And these people here aren't telling you everything on this -- building this railroad. There is \$13 billion up for grabs for it. If you don't believe me, go to a website, www.KenCope, C-o-p-e. He's been working on this project for four years, and he'll show -- tell you everything about it that you want to know. And furthermore, if you don't want these people on your property, y'all need to put some purple paint on each post of your -- border of your property to keep them out. I've had them come out wanting to come on mine, wanting me to sign a piece of paper to let them in. I either let them in verbally, or not at all. They haven't come out at all, but they wanted to send me a nasty letter out trying to sue me to let me let them come in. So, I got that settled already. But don't trust what they're trying to do to you out here, because they are taking you to the cleaners on all of this. And that's all I've got to say. God Bless Texas.	Refer to NE-8.
Crystal McHargue Tucker	2/3/2018	Website	We DON'T want it here. My parents own property in the area where they want to put it. We do all our hunting and fishing and recreational business here. We also have a cattle business. This will NOT benefit us in any way. The HSR is NOT needed here in Texas. The California HSR Project is a disaster WE DON'T WANT IT!!!!!!!!!!!!!!!!!!!!!!	Refer to LU-11, PN-3, RF-2 and SC-19.

Comment noted.
Paul McIntyre	3/4/2018	Website	I am a strong supporter of this high speed rail project in Texas. My wife and I are American citizens who have lived in England as Expatriates. During our time living there, we experienced many times the benefits of high speed rail across the United Kingdom and Europe. High speed rail should be a top infrastructure priority in the United States. The world's leading innovation country should have high speed rail connecting our major cities. This Texas project can lead the way. Paul McIntyre	Comment noted.
Sherry McIntyre	2/7/2018	Website	I have questions that where not address in the documents that I saw and they should have bearing on the outcome of this decision. 1. How many separately owned pieces of property will be impacted from this project? 2. Who allowed access to their property to do surveys? 3. How many refused access to their property? 4. What is the plan for putting the land back to its original state? 5. Where is the report on how this is going to affect our property values and our taxes? 6. What are the consequences if this project fails midstream? Who will be responsible?	Refer to LU-10, NE-1, NE-8, SS-5 and VA-1. Parcels impacted are detailed in in Appendix E, Land Use Technical Memorandum . To protect the privacy of private landowners, specifics regarding who allowed or denied survey permission is not included in the Final EIS.
Corinne McKay	2/11/2018	Website	Since 2011 I have been driving back and forth from Humble to Frisco and now from Frisco to Fairfield using I45 highway. I would like to know if there will be stops along the route, in particular in Fairfield or IAH airport. It currently takes two hours or more with traffic to get from Frisco to Fairfield and four-plus hours to get to Humble Texas. I am looking forward to cutting my driving time and gas costs. What is the estimated price for a round-trip ticket to Houston from Dallas? And do you plan to have the train follow further north into Frisco? Thank you, Corinne McKay.	Refer to GN-7, NE-1, PN-3 and SC-3.
George McKee	3/9/2018	Website	I've reviewed much of the Draft EIS; it's quite comprehensive and should address many concerns about the impact of the TCRR on the landscape. But appears to omit a few issues that I have special concerns about. My concerns may already be addressed in the DEIS, however because my review was not exhaustive, I may have missed the response. 1. The visual impact depictions of the catenary stanchions, e.g. fig.3.10-57, are significantly more pleasant to view than many of the depictions of Shinkansen trackways. I did not find any commitment from	Refer to AS-1, NR-1 and NR-6. As detailed in the Final EIS, the typical figures (Figure 2-2: Level II, Stage I Environmental Criteria and Figure 2-3: Dallas TMF Results) in Chapter 2.0, Alternatives Considered and the simulated figures in

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			TCRR to adhere to this design rather than others. The exemplar of stanchion design, in my view, is the lighting structures in the Post Oak District of Houston. TCRR designers should use these as design goals for portions of the route that traverse populated areas. 2. I was pleased to see that wildlife crossings discussed in sec. 3.6.6, NR-MM#9. While the discussion in Appendix E is encouraging, I was unable to find evaluation of whether there would be a sufficient number of crossings to significantly mitigate the effects of habitat fragmentation relative to construction alternatives with no specialized crossings. Simply elevating the track structures and leaving the ground underneath as raw dirt or gravel presents a significant barrier to many wildlife species. 3. Previous efforts to develop high-speed rail in central Texas were adversely affected by concerns that the trains would 'scare the cows.' I found no discussion of effects on livestock productivity of right of way barriers and the noise of train passage. Naively one would expect these effects to be less than the effects on deer and other large wildlife, but it would be valuable to see this concern addressed directly. Would large animal wildlife crossings be designed to accommodate the much larger number of livestock that might use them? Thanks for your consideration, - George McKee	Section 3.10, Aesthetics and Scenic Resources are all based on design specifications proposed by TCRR, as detailed within the TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F.
Michael McKee	2/27/2018	Website	I support this important infrastructure project which will benefit not only Texans like me who travel between Dallas and Houston, but also the jobs created to build and support this line, as well as the pollution avoided. Please do the right and visionary thing and move this project forward! Thanks!	Comment noted.
Jane McKetta	2/9/2018	Website	I don't think the train is a good idea and I am opposed to its construction. Texans are not going to use this in place of their car! There are little, if any, advantages...the time, money, and inconvenience will deter most commuters from using the train. In Houston/Dallas traffic, it could take hours just to get to the terminal, then you have to purchase a ticket, wait for the train, ride the train for 90 minutes, then travel to your final destination. It would be much easier to drive or fly! The thought of ruining all the land sickens me!	Refer to GN-2, GN-4, GN-6, PN-3 and TR-4.
Jane McKetta	2/9/2018	Email	I don't think the train is a good idea. In Houston traffic, it could take hours just to get to the terminal, then you have to buy a ticket, wait for train, ride the train for 90 minutes, then on arrival you would have to get some type of transportation to get to your final destination. It is easier to drive or fly! The thought of ruining all the land for the train sickens me!	Refer to BA-4, BA-12, GN-2, GN-6, NE-1, PN-3 and TR-4.
Jeff McKinney	3/8/2018	Website	I've followed up with interns and chief residents, and I couldn't be more pleased with what this years pediatric intern retreat seems to have allowed. Your site directly helped us offer something unique to our newest cohort of residents who we have recruited to Texas to work as pediatricians caring for patients at Children's Medical Center in Dallas. Your ranch gave us a unique natural and built environment that brought Out remarkable personal reflections and conversations about the stresses and complex ethical dimensions involved in front line medical care being offered at one of the busiest hospitals in the United States. I've done this for several years with successive cohorts of physicians. and nothing has come close to the impact that you and your ranch helped us achieve with our annual intern retreat and training sessions. The intentional design you have put into the site's development offered us a special environment with access to natural resources that I think proved central to the retreat and its positive impact. The donation of your ranch infrastructure and your time allowed us to use your ranch as a wekXYning home. I've never seen anything quie like this: an intentionally designed civic and natural resource that is open to others, combined With a personalized home-like welcoming environment Your ranch and its natural resources were extremely supportive of the mental health, wellbeing, and of our latest class of new pediatricians. It is a wonderful resource for others, and I am grateful for your generosity in opening it to our long-term viability. as a highly valuable civic for a wide array of users for years to come.	Refer to LU-5.
Johnnie McMahan	2/5/2018	Oral	Everybody knows me by Bud McMahan. I'm just here tonight because this is my home and they're taking our home. I want to thank that man that went to the Army and thank your family for your service. Madison County is proud to have you. But I want to tell you something. This is a pyramid 2scheme. And we're not on the corner. All I can say is, I'm upset there's no state representative. Nobody is here to take care of us. Nobody is interested in us. These people are just hires, and you know what, they'll get their check when they go home. But somebody, and it's going to be foreigners, that are going to own Madison County property and we're going to pay for We're going to pay for it. That's just the way it is. And that's about all I got to say. I'm glad to see some of the people I've prayed with and some of the people tried I've tried to show them the right direction. But this is my county, this is my state. This is my country, I love it. Thank ya'll.	Comment noted.
Eileen McMahan Funk	3/1/2018	Website	Really sad to hear there are plans to cut through the ranch, I've plans to go in September. I've heard so much about it and know the Morgans help the community a great deal with it. Hope the powers that be are able to be thoughtful about this and change their route, and with it, keep nature and goodness in balance.	Refer to LU-5.
Eileen McMahan Funk	3/1/2018	Website	I am VERY opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be better for the environment and save a great place. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory	Refer to LU-5.

Paul McManus	1/27/2018	Website	I wanted to comment on the EIS process for the bullet train from Dallas to Houston by saying that with the rapid population growth and increase in traffic throughout Texas, this train is very much needed as quickly as possible in order to reduce car traffic, reduce road congestion, reduce the stress of having to drive, provide alternative transportation options for people who need and want them, further advance in providing transportation options and mobility as has already been done in many other parts of the U.S. as well as around the world, improve air quality, and improve the overall quality of life for everyone. I appreciate your consideration of my suggestions, and please let me know if you have any questions or need any additional information. Thank you very much.	Comment noted.
Paul McManus	2/17/2018	Website	Hello, I wanted to write to express my excitement for this project and ask that it be completed as soon as possible! With the rapid population growth and traffic increase in both the Dallas-Fort Worth and Houston metro areas and also throughout Texas, this train will be absolutely wonderful in helping to reduce car traffic, road congestion and the stress of having to drive. This train will also provide an alternative transportation option for people who need and want it, and it will also help to encourage the use of mass transit options, improve air quality, stimulate business and other economic development, and improve the quality of life for many people. My family and I frequently ride trains and buses here in the Dallas-Fort Worth area operated by Dallas Area Rapid Transit (DART), the Fort Worth Transportation Authority (FWTA) and the Denton County Transportation Authority (DCTA). I can honestly say that we've had nothing but wonderful experiences, as these services are relaxing, fun and allow us to take cars off the road to help reduce vehicle traffic. Our wonderful mass transit experiences convince me that this new train will be wonderful as well! Thank you for considering my comments regarding this train. Please let me know if you have any questions or need any additional information, and I look forward to riding this train very soon! Paul McManus	Comment noted.
Janet McMillian	2/23/2018	Letter	Dear Mr. Wright: I understand the draft from the Environmental Impact Study describes the bullet train from Houston to Dallas as enclosed in a "fully sealed corridor." In my mind that translates as a 240-mile barrier across the east side of Texas ... and it is not practical. I regularly travel north on 1-45 from Walker County and turn off at Exit 189 to take care of family property west of Lake Mexia. With this proposed train streaking across the landscape at 200 miles an hour multiple times a day, there are sure to be traffic issues not only for the public but also for fire/EMS rescue services getting from one side of the "corridor" to the other. As for the environment, surely there will be high speed noise and likely vibrations for nearby residences. And ... what about the electric grid and additional strain on supplying power to homes and businesses along the route? During the dog days of summer, Texans are currently asked to limit usage during peak hours. The electric train is bound to pull too much power due to its speed and frequency. Need I say more!? As a fourth generation Texan, I am vehemently opposed to the usurping of public land (via granting eminent domain to a private business) for a risky project proposed by deep pockets businessmen of Texas Central Railroad and their partner Central Japan Railway. Landowners are at the heart of a risky, big business deal that will likely destroy rural Texas as we know it. The good Lord making any more land, and the Texas farmers who put food on America's tables are in the minority ... who will stand up for this rural minority? These are men and women who love the land and are the true keepers of our environment. As an environmental specialist for the FRC, I implore you to stand up bravely against this travesty touted "for the public good."	Refer to ED-1, EU-3, EU-4, NE-1, NE-9, NV-1, SS-23 and TC-7.
Marian McMillian	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Audrey McMurray	1/25/2018	Website	<p>Yes! It's about time! In Europe, I hopped on a train to go anywhere I wanted. It's crazy that we don't have the same easy mode of transportation. We need trains that connect Dallas, Houston, and San Antonio - a triangle - with connecting lines to Galveston and other cities. LONG OVERDUE. And may we have flat rail cars for our automobiles as well? We drive on, have a nice cup of coffee for the ride, and drive off when we get to the city? That would be wonderful!</p>	Comment noted.
Michael McMurtrey	3/8/2018	Website	<p>I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!</p>	Comment noted.
Thomas McNutt	1/29/2018	Oral	<p>Howdy. My name is Thomas McNutt. And I just want to be clear--I am 101 percent opposed to any form of this project. And I guess I do appreciate the opportunity for citizens to be able to speak. Okay? But to be quite honest, I'm just mad to even have to be here. It just makes me angry just sitting here, and I'm also shaking with anger. My family has owned land and lived here for over a hundred years. And I'll tell you, I've heard a lot of small reasons why to oppose this--you know, it will hurt our property rights -- excuse me. It will hurt our property values, the effects on the wildlife, the effects of emergency response, a lot of small reasons, and I agree with those. But if even all of those were not problems, I would be completely opposed to this because of the principle of it, and it's the principle called property rights. This country was founded on life, liberty, and property, and it's the principle of simply theft. One person shouldn't be allowed to take another person's land to go make money for themselves. They shouldn't be allowed to do it. This proposal gives the power of the sword of eminent domain to a private industry to cut through our county to go and make a profit, and that's wrong. Eminent domain sucks enough as it is for a public use, for a school or a bridge, but for a private company it shouldn't. So you might say, Well, the oil and gas industry gets it or the electrical companies get it. Well, you know what? Without oil, without electricity, this county doesn't run. Without the high speed rail, you leave our county alone. Anyway, I'll shut up. I don't need a full three minutes, but let me just close with this. I appreciate this meeting, I guess, and the opportunity to say something. But if there's any notion that a certain amount of meetings will quiet us, if there's any notion that if we are given enough bribery or we get a stop or we get more taxes or whatever else, that any of that can keep us quiet and will stop us fighting this issue, I promise you you're wrong. It's an exercise in futility. We are going to fight you to the very end, and if you want to know why, it's not</p>	Refer to ED-1, NE-1, NE-9, NR-5, PI-1, PI-7, SS-23 and VA-1.

M. J. McReynolds	3/8/2018	Website	I am totally against the proposed Dallas to Houston high speed rail project. This project is not in the best interest of Texas landowners and Texas heritage, nor the economy of any county that sits along the proposed route (except for Dallas and Houston). The DEIS does not include an acceptable accounting of the archeological and historical resources that would be impacted by the proposed route. Zero resources were listed to be impacted for Navarro County. I spoke with one of the consulting archeologists at a public hearing and they could not answer my questions about known or possible cultural resources that would be impacted. They are the ones who did the cultural resource management work for the DEIS and they could not answer my questions! I personally know landowners in Navarro and Freestone counties who did not allow for any survey work to be done on their land. A CRM survey could not possibly be done in that case, and the contracted archeologists did not contact the County Historical Commission to ask if they had any information. In short, the DEIS is not accurate or complete, which raises many questions and causes concern for the overall validity of this document.	Refer to CR-11. While cultural resources surveys have been conducted for portions of the Project area, many areas have yet to be surveyed. The Draft EIS included only the information that has been collected to-date. Within Navarro and Freestone counties, this only included background research inventories. This process is discussed in Section 3.19.6.2, Natural Ecological Systems and Protected Species, Programmatic Agreement of the Final EIS.
Patrick Mcshan	1/29/2018	Oral	My name is Patrick McShan. I am special litigation counsel for Texans Against High-Speed Rail. We are an opposition group that opposes My name is Patrick McShan. I'm an attorney with The Beckham Group in Dallas. I was born and raised in Dallas and we are special litigation counsel for Texans Against High-Speed Rail. Group of citizens, landowners, ranchers, farmers, and other folks who oppose this project and are trying to combat the abuse of eminent domain. I spent the last two years of my life studying this project and mitigating lawsuits up and down the affected corridor for landowners like the Risingers here, Mr. Caldwell back here who was sued by Texas Central because they didn't want to allow them on his private property and the reason they don't allow you on private properties is this company has not proved it has eminent domain. It claims it is a railroad, it is not a railroad. They filed 42 lawsuits up and down the line and when they lost the hearing on those lawsuits they dropped the rest of the lawsuits. Based on my study of the project I believe it is financially unfeasible to give you just one set of numbers. They claim in the Draft EIS that 5 million passengers a year, that comes out to 13,700 passengers a day. By comparison, the last 8 quarters of the FAA records you will see that only 1,800 people fly a day. So this company is telling the public that they're gonna pull everybody off the planes and then they're gonna find 12,000 other people to get out of their cars and take a train that's gonna cost as much as it costs to fly on the plane. Everyone in Texas knows that that is not going to happen. I spent two years and one lawsuit in Travis County trying to get the study -- the feasibility study that claims where these ridership comparisons and cost estimates are coming from. Texas Central wouldn't let me have it. They sent eight attorneys to the hearing and the question remains if this project is so good for Texas, why can't we have a simple debate about it and put all our cards on the table, have a transparent process and discuss the ins and outs of it. We told Texas Central on many occasions we're welcome to a public debate, they've declined those requests. We remain open with that offer, and I would ask you. I'll be here afterwards outside. If you'd like to come and speak to me I will explain to you in detail, on as many facts whatever you want to know, I can answer your questions and give you more information.	Refer to ED-1 and GN-2.
Jim McSpadden	2/5/2018	Oral	Good evening, ladies and gentlemen. I'm Jim McSpadden, senior leader in the Republican party of Harris County, also a Super Neighborhood Council member, and also a friend of Texans Against High-Speed Rail. Privately funded high-speed rail is not a feasible mode of transportation outside the northeast corridor of the United States. Amtrak is subsidized by our government, which is our money. Two lines make money, and that is outside the United States--Tokyo to Osaka, Japan, and Paris to Lyon, France. There is another one that is within ten years it will make	Refer to BA-12, GN-2, GN-3, GN-4, NE-1, PN-3 and SC-22.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			money. It's Hakata to Osaka, Japan. For that amount of money and investment, that's a long time to wait to get your money back. And then also Texas Central has not released a business plan nor any verifiable data regarding ridership projection, except by telling us that they roughly have 14 that people make 14 million trips between Houston and north Texas per year. Well, and then also I've heard projections made by cell phone calls between Houston and Dallas. Successful high-speed rail does very well in high residential and high commercial densities. Whereas we have 2800 people per mile in Dallas and Houston, there's 11,400 people in Tokyo, or 9600 in Paris, France. So basically that works there. And then also we have 90 percent of automobile ownership here in Harris County and in Dallas, so basically where Tokyo and Paris have only less than 50 percent. Transit usage percentage of total travel is less than three percent in Houston and Dallas; much higher in Tokyo and Paris. Also, again, it's been mentioned that only about one percent of private funding has been collected so far out of the \$12 billion they propose, Texas Central proposes to build this railroad. Well, or so-called rail. Basically it could cost as high as \$20 billion to most likely -- to build this thing. This is bad. And I'm citing things from the Reason Foundation policy report back in February 2011. Also, ridership estimated by TxDOT is about less than 2 million people annually starting in the 2025 or 2035 period. Still there is low-cost air service from Houston to Dallas with both airports in Houston within 45 minutes or less from any part of Houston.	
Patrick McTigue	2/16/2018	Website	I'm totally in favor of the bullet train.	Comment noted.
Suzanne McWilliams	1/9/2018	Website	The Texas Bullet Train Will Help My Business Grow! As a Superintendent of Schools, I am excited about the work being done on the Texas Bullet Train and urge the Federal Railroad Administration to move forward with its review and approval. Texas is the perfect place to plant the seed to grow this new high-tech industry in the United States. The new high-speed economy created by this project will be a game changer for workers, vendors, contractors and other companies and small businesses all along the route. The fact that it is fully investor-owned means it will provide a great benefit for not only passengers, but all taxpayers. The Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. For instance, it states that the Train will create more than 10,000 direct jobs per year during construction and about 1,500 jobs permanently when operational at least 25% of which will be in rural counties along the route It will contribute more than \$2.5 billion in taxes over its first 25 years to counties along the route and increase property assessment values within a half-mile of the proposed stations by between \$71.4 million and \$161.1 million. We want more travel options between Texas' two economic hubs and this project fills delivers and gives all travelers the freedom to choose a safer, more reliable and cleaner way to move across Texas. I welcome this new innovative industry and I urge the FRA to expedite its review and approval -- because it's good for business, good for the economy and good for Texas.	Comment noted.
Sharon McZeal	2/16/2018	Website	The high speed railroad would add to the transportaion options for North Texas. I have been to Europe where mass transit includes high speed rail. This is a project to inprove North Texas transportaion, convenience and environment.	Comment noted.
Justin Meador	1/25/2018	Email	Have they (the planners/engineers/builders) considered elevating portions or possibly utilizing tunnels for portions of the rail in order to prevent forcing eminent domain for the rail that cannot be built along the easement running parallel to 45? Also, the suggested 290/610 exchange is a horrible place to put the Houston station. 290 has infamously horrible traffic and that location would only make it worse. Why not run the rail through or around Houston and have it stop on the East side. It would spur economic groth in an area in great need for it and the additional traffic would not choke the Houstonians commuting from the ever expanding West & NW side. There, the bullet train passengers could hop on the light rail to downtown, medical center, museum district, etc.	Refer to BA-9, GN-6, GN-7, LU-11, TR-4 and TR-5.
Debra Meekins	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Elizabeth Meeks	2/17/2018	Email	We do NOT want the High-Speed rail built in Grimes County! Reasons: 1. Grimes County terrain is NOT flat or level. It is a rolling landscape with soil that is not uniformly stable. There is a lot more flooding than is noted on existing maps. We are a rural population by choice - we want to keep it quiet and rural. Your "train" is a noise poulltor! Grimes	Refer to EU-2, FP-1, GN-1, LU-11, NE-1, NV-1, SG-1, SG-2 and SS-23. Kelly Merte	2/6/2018	Oral	<p>Hello, everyone. As my husband stated, I'm Kelly Merte, and I'm here to talk about the price of the tickets stated in the DEIS. So Texas Central has cast a doubt on the numbers in the DEIS. The DEIS states that the average airfare between Houston and Dallas is \$199. The DEIS also uses this average as the average ticket price for the proposed high-speed rail. However, Texas Central claims on their website that the average 199 high-speed rail ticket published in the DEIS is a rumor and that the reality is, what? From the website, from the Texas Central website, the rumor states, in quotes, "ticket prices are prohibitively expensive." I read in the DEIS that Texas Central is going to charge \$199 for a one-way ticket. And this is going to be a train for rich people. In reality, Texas Central states that the fares used for the proposed DEIS were not developed by Texas Central. Texas Central also goes on to say that the average airfare is \$147. Texas Central never really gives an average price for the ticket -- for the ticket of the high-speed rail. Why does the DEIS state that the average one way airfare between Houston and Dallas is 199 and Texas Central claims that it's 147? That's a difference of \$52, or \$100 on a round trip. It's also worth noting that the DEIS does provide a link that shows the average one-way airfare between Houston and Dallas to be \$199, while Texas Central does not back up their number. The average 199 ticket price is not inconsequential, as it is used to calculate the expected sales tax impact in the DEIS. The table says that the sales tax collection is \$20 million: \$10 million supposed to go to Houston, 10 million going to Dallas. The 10 million is calculated -- for Dallas is calculated based on the 199, and they're saying that the 199 is a rumor. So in closing, I have no confidence that the -- in either the DEIS or the Texas Central, and the only option is no-build.</p>	Refer to SC-3.
Andrew Meshnick	2/11/2018	Website	<p>The bullet train would be a tremendous national asset. It could show that high speed rail can efficiently connect distant cities and fascinate greater exchange of ideas, goods, and people. A successful project in Texas will spur other projects around the country.</p>	Comment noted.
Neal Meyer	3/3/2018	Website	<p>March 3rd, 2018 Attention Federal Railroad Administration Regarding: The Draft Environmental Impact Study (DEIS) for the Texas High Speed Rail (HSR) line between Dallas and Houston Texas. My name is Neal Meyer, and I am submitting this statement into the public record as comment on the Dallas to Houston high speed rail line. I have been an activist for over 15 years, and have previously read no fewer than five environmental impact studies that have been performed for light rail line projects that were proposed and built by Houston's Metropolitan Transit Authority (METRO). In every single instance, those who prepared the studies for rail line projects all of whom had all the right academic credentials - have vastly overestimated ridership and have substantially underestimated project costs. In every instance, project costs ended up being approximately twice as much (or more) as initial estimates claimed they would be, and in actual ridership ended up being only between 20 60 percent of initial estimates. In a truly outrageous act, the City of Houston, METRO, and a local development authority have claimed the "need" to spend some \$200 - 300 million build a dedicated bus way in Houston's Galleria area for a bus route that draws at most a few hundred transit riders per day because it is claimed that a dedicated bus way will draw between 14,000 19,000 riders per day an increase of 50 fold or more. Now, some will say that the HSR project is a completely different project with completely different contexts. It will be said that those projects were inner city projects, whereas those issues don't apply because the Dallas Houston HSR project is an intra-city project with completely different issues at stake. My counter statement to those who say otherwise is that all of the same issues and lessons to be learned having to do with those light rail lines apply, if anything, with much greater force with the Dallas Houston HSR line. Indeed this project, being dozens of times larger in length and scope, has the potential to be a disaster the scale of which would also be many times larger than those with Houston's light rail lines. The promoters of this project have every incentive to understate costs and overestimate ridership, revenues, and alleged benefits. After all, once the digging starts, if any aspects of the project fall short of initial estimates, the taxpayers of Texas will always be there to bail out the project because supporters of this boondoggle will claim that HSR to be too big and too important to end or fail. That is nonsense. There is no need for this project. Projections verses reality - Traffic congestion disaster claims that don't exist and won't happen have been following the HSR project for several years now. One of the claims that has been made about the alleged need for this project involve claims of massive increases in traffic congestion that are supposed to be so great that average travel speeds between Houston Dallas / Fort Worth will slow from 59 miles per hour to 39 miles per hour by the year 2035. This claim has been made in Chapter 1.2.2.3 of the DEIS study under "Reliability of the State Highway System." The claims of Interstate 45 traffic between Houston Dallas / Fort Worth overwhelming I-45's capacity to handle vehicle traffic were also made by Texas Central Partners (TCP), the main entity sponsoring the project. In a post on Texas Central Partner's website which was</p>	Refer to GN-2, NE-1, NE-9, PN-3 and TR-1.

			<p>taken down, but which can be read here on an Internet archive site (here on an Internet archive site (https://web.archive.org/web/20150420225915/http://texascentral.com/the-benefits/), Texas Central Partners also makes the claim of average travel time between Dallas / Fort Worth to Houston slowing down to 6.5 hours within two decades.</p> <p>But what is the reality of travel times between Houston Dallas / Fort Worth? I have personally made the trip between Houston and DFW five times over the past ten years. On four of those five trips, I successfully completed the trip within 3 3 hours 45 minutes, and those trips were taken at varying times of the day. On two of those trips, I stopped off to refuel my vehicle along the way. On the remaining trip, my trip from Houston to Dallas actually took 5 hours. However, that trip was taken on the Sunday following Thanksgiving, which is one of the busiest travel days of the entire year as many thousands of Texans are going home after having spent the holiday with relatives. Moreover, the weather on that trip was bad, with rain falling along the route during my entire trip. I encountered no fewer than ten vehicle accidents along the road, which substantially slowed down traffic around each traffic accident. Yet, even with all those factors working to greatly slow down my trip, I still made it to Dallas one hour faster than Texas Central Partners and the government are claiming will be the average travel time between Houston Dallas / Fort Worth within 20 years! The claim of travel times slowing down more than 2 hours between Houston Dallas / Fort Worth, being made with the full official force of "all the right people with all the right credentials" and government authority behind it, is downright laughable. Apparently, none of the people who have all the right academic and bureaucratic credentials who made these studies ever bothered to think that if traffic between Houston Dallas / Fort Worth were to slow down to the point to where it would take 6 hours to make the trip, that one thing people would start doing is making the trip during off hours (or at night time) to avoid traffic congestion.</p> <p>Why do you think people don't trust government anymore? It is because claims like this are being used to justify massive projects and are being presented to Americans as undeniable facts. And, I don't want to belabor the point, but I also read "the sky is going to fall if we don't build rail" claims exactly like this that were made to try to justify light rail being built in Houston. Furthermore, the DEIS study does not take into consideration that one thing TX-DOT could do to improve travel speeds between Houston Dallas / Fort Worth and mitigate congestion would be to widen I-45 between the two metropolitan areas from two lanes in each direction to three lanes. Such a move would merely require widening I-45 in both directions by 12 or so feet, and that the right of way already for doing so already exists not that anyone who has made the trip between the two cities would say that traffic is so bad already that widening I-45 is really needed. Projections verses reality ridership projections that won't materialize</p> <p>In section 3.2.3.2.2 of the HSR DEIS, the statement is made that by the year 2040, the HSR line will attract 7.2 million riders per year. This equates to roughly 20,000 riders per day, but will this actually happen?</p> <p>One clue as to what future ridership for the HSR line might be is to look at existing inter-city rail service elsewhere in the United States. The most prominent example of rail service is the Acela rail line, which Amtrak runs, between Boston and Washington D.C. The Boston to Washington D.C. corridor is home to the metropolitan areas of Boston, Providence Rhode Island, New London and New Haven Connecticut, New York City, Philadelphia, Trenton and Wilmington New Jersey, Baltimore, and Washington D.C. There are roughly 35 million Americans who live in the metropolitan areas along the Acela corridor route, yet the total annual ridership in 2016 for the metropolitan areas along the Acela corridor route, yet the total annual ridership in 2016 for the Acela line according to Wikipedia was 3.489 million, or roughly 9,500 riders per day (https://en.wikipedia.org/wiki/Acela_Express). And, the Acela rail line has been in operation now for 15 years, giving the Acela the advantage of familiarity.</p> <p>In contrast, one of the much touted reasons for building the Dallas / Fort Worth Houston HSR line is the populations of both metro areas, and their projected future population growth. Yet, the total populations of both Texas regions as of 2017 is roughly 12 million, or only one third of the population which resides along the Acela rail line today. Even taking in projected population growth of Dallas / Fort Worth and Houston, the total regional populations of both areas by 2040 might reach 18-20 million, which would be little more than half the existing population which lives along the Acela rail corridor today. If ridership for the Dallas / Fort Worth Houston HSR line holds on a per capita basis to that being achieved by the Acela rail line, that would mean that starting ridership upon opening of the HSR route would likely be approximately 3,000 riders per day, presumably increasing to 4,000 5,000 per day through the 2040 time period. However, 4,000 5,000 riders per day is far below the 20,000 per day being projected in the HSR DEIS.</p> <p>Another way of determining possible ridership would be to study current air traffic between Houston and Dallas. Southwest Airlines currently operates 20 flights to and from Hobby Airport in Houston and Love Field in Dallas (https://www.southwest.com/flight/select-flight.html?displayOnly=&int=HOMEQBOMAIR), starting at 6:00 am, and the last flight taking off circa 9:30 pm at night. Typically, Southwest operates Boeing 737 700 aircraft, which the airline says has a seating capacity of 143 passengers. This amounts to a total of 2,860 passengers flying one way per day, assuming every seat is filled on every single flight. Additionally, United Airlines flies roughly 8 flights per day out of George Bush Intercontinental airport per day (https://www.united.com/ual/en/us/flight-search/book-a-flight/results/rev?f=Houston,TX,US(HOU-AllAirports)&t=DFW&d=2018-03-16&r=2018-03-18&sc=7,7&px=1&taxng=1&idx=1), typically flying Embraer ERJ 175 aircraft for the</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>route. The Embraer craft can carry 76 88 passengers, depending upon the aircraft configuration, for a total of 608 704 total passengers per day assuming all seats are filled on all daily flights.</p> <p>Adding the passenger totals of these two airlines, assuming all seats are filled, amounts to some 3,500 passengers per day currently flying between Houston and Dallas / Fort Worth. Yet even if the airlines were to completely shutdown all air traffic between Houston and Dallas / Fort Worth, and that every single one of those air travelers were to decide to take the HSR rail line, the ridership totals for the HSR line would be less than 20 percent of the total projected 2040 ridership. Even if the populations of both metro areas grow from 12 million to 18-20 million by 2035 2040 as projected, that would still imply only a 50 percent increase in ridership, bringing air travel to only some 6,000 passengers per day, which again is far below ridership projections being made for the HSR line.</p> <p>Another flaw of the DEIS study is that the authors of the study continually assert and assume over and over that there are no other ways for traffic increases between Houston and Dallas / Fort Worth to be handled or accommodated in any other way. Hence, the "need" for the HSR route. Yet, the authors ignore simple observations that the airlines, were they to see increased market traffic between the two metro areas, might simply decide to operate larger aircraft the accommodate increased travel demand.</p> <p>And, it makes sense to try to understand how large the air traffic market is between Houston and Dallas / Fort Worth because the promoters of the HSR line have continually told the public over and over again that their business plan calls for offering tickets for the HSR train that are roughly the same price as airplane tickets between the two metro areas. That would imply that the primary market for using the train would be business travelers or more affluent people who are willing to pay \$150 - \$300 per passenger for round trip tickets between Houston and Dallas / Fort Worth. It is not reasonable to assert that most of those who would otherwise being riding a bus or driving a motor vehicle between the two metro areas would otherwise decide to ride the train. Traveling by car between Dallas / Fort Worth and Houston not only is much cheaper for individuals and families, but traveling by car also eliminates the need to have yet another means of getting around the destination metro area at the end of your trip once you have arrived, which incurs yet another expense to both current air travelers (and to would be future HSR riders) in both time and money.</p> <p>In short, there is considerable reason to doubt that the ridership projections being touted in both the project DEIS and by Texas Central Partners will be anywhere near to what is being projected. That in turn turns the entire operating plan for the HSR line upside down, and will make it an almost certainty that the Texas Legislature (or Congress) will have to step in to allocate a permanent stream of taxpayer dollars to assure the continued operation of the HSR line. As far as I am aware, the only HSR line in the entire world that operates without taxpayer subsidies is the original Tokyo Yokohama Shinkansen rail line that was built in 1964, and it should be noted that the Tokyo Yokohama corridor has a population of some 70 million Japanese which is some six times the population of the two Texas metro areas combined. All other HSR lines around the world require taxpayer handouts to function.</p> <p>What should be the outcome of this DEIS study? The No Bulid Alternative of course! I have outlined and argued that the Houston Dallas / Fort Worth HSR line will likely end up being far more costly than projected. I believe project costs will likely be \$20 25 billion for the rail line, and that those costs will never be recovered. I have outlined why I think that the alleged need for the HSR line due to asserted catastrophic slowdowns in traffic travel speeds are wildly overblown. I have also shown reasons for believing that travel projections for the HSR line are also overblown. Furthermore, I have also stated that I have seen these exact same issues before in other federal EIS studies for light rail projects in Houston, which is why I brought these matters up. Based upon past experience with previous EIS studies, I sorely doubt that my arguments outlined in this public comment will be taken seriously or will even answered. However, that doesn't mean the alleged "experts" who authored this study are by any means close to being right, anymore than those who wrote the EIS studies for Houston's light rail lines were. And it's important that we start getting things right and that means choosing a no build for this project.</p> <p>Neal Meyer Houston Texas</p>	
Evan Michaelides	3/5/2018	Oral	<p>Hello. My name is Evan Michaelides, and I'm representing Houston High-Speed Rail Watch. We're a coalition of civic leaders that came together over three years ago when the routes originally presented for the train to reach downtown Houston threatened many of our neighborhoods. Our membership includes representatives from First Ward, Garden Oaks, Independence Heights, Inwood Forest, Oak Forest, Old Sixth Ward, West End, and Super Neighborhoods 5, 12, 22, and 51. It's critical for Houston that this project be integrated with local mass transit; because if the local mobility solution for high-speed rail riders is going to be a five-story parking garage with rental car facilities, that's just going to increase Houston's current traffic problems. After reviewing the Draft EIS, our unanswered questions and concerns include:</p> <p>Number one, will inbound riders reach downtown or other destinations like the Medical Center? Number two: How will Houstonians reach the high-speed rail station? Number three: The high-speed rail project is touted as a solution to anticipated growth of traffic and congestion between Houston and Dallas. But if 400 riders all get off a train at once and all of them will be getting into cars, all we've done is move the problem from I-45 to the streets of Houston. What is TCR doing to ensure high-speed railroaders do not bring more congestion to our local</p>	Refer to GN-6, TR-2, TR-3, TR-4, TR-5 and TR-12.

			streets and freeways? Number four: Among the objectives for this project are, in the words of the FRA, to, quote, "provide safe connectivity to existing transportation modes, i.e., heavy rail, light rail, and bus," end quote. How will TCR achieve this objective? We have put together a proposal for connecting the high-speed rail station to downtown with Metro rail or bus rapid transit running elevated over the main lanes of I-10. With a modest number of station stops along the way, this line could serve the neighborhoods it passes through, while providing a speedy end-to-end link. The new line could tie into the green and purple Metro rail lines downtown and into the bus rapid transit line currently under construction in Uptown. It could also become part of a commuting solution for residents of West Houston. This solution would provide connectivity to other parts of Houston, transcend Houston's transportation network, and benefit neighborhoods. We urge Texas Central and the FRA to work with Metro, TXDOT, and us to make this connectivity proposal a reality for Houston.	
Evan Michaelides	3/8/2018	Email	<p>I am a member of Houston High-Speed Rail Watch. William Middleton	1/29/2018	Website	I would like to tender my most strong support for this project. Texas - as is the case with the entire United States - must move forward with infrastructure improvements and technology upgrades to remain competitive with the rest of the world. These high speed rail systems give both businesses and personal customers of these lines much more flexibility in their travel choices when distances traveled are not really convenient nor price competitive with airlines, and auto travel is just plain too long. This rail service will greatly improve travel options in this transit corridor, and is badly needed.	Comment noted.
Morgan Milburn	2/16/2018	Website	I hope to see this come to completion. It would be a huge benefit to the economy in both Dallas and Houston!	Comment noted.
Barbara Miles	1/30/2018	Oral	And I have a teacher voice too. I can hold this away. Simply our county was created over 170years ago. It's faced its share of obstacles. We have had our share of wildfires and floods and drought. Even projects similar to this one in the 1980's and yet we have managed to join together as a community once again to enjoy the life that we have here. The latest obstacle is no different. It to threatens to destroy our way of life. It's identity theft. To the perpetrators of this theft, we the people of the Leon County considered nameless and faceless we are nothing more than a means to their end. So I would like to give them just a sense of who Leon County is. It is a community of farmers, ranchers, educators and steel workers, students, young professionals, veterans and retirees. It's families like the Aimsworth's, the Hughes' and the Dubose's who can claim generations of history here and the blood and sweat on the land to prove it. The Durbin's who retired here 30 years ago seeking a quiet life after Houston. Our properties, our homes, our cattle and property but those entitled seek to destroy with their own profit. We are here we are but it is impossible to say where one ends and the other begins. This is what these thieves do not understand and we don't want to live anywhere else than Leon County. We do so by choice. Just as those who live in Houston or Dallas chose to live there. We will defend our home and the way of life here until this latest obstacle can be overcome and we can again return to the life we know because that is what we know and that is who we are.	Comment noted.

Jim Miles	1/30/2018	Oral	Jim Miles. Almost everyone in here knows me. I live right over here across from the railroad tracks. I'm a former county commissioner and own a big ranch. They are going to cut my place in half in two just to have a place for the train to go through to Dallas. Well, first of all the tax entity of Leon County is going to lose billions of dollars because there is not anybody is going to want to live around that train. There is not anybody that's got any sense at all is going to want to live by a train going 200 miles an hours and if that thing happened to derail I wouldn't want you to be anywhere close to it. The environmental studies that they say they got is 2014 and behind further than that. It's 2006, I think. But anyway they have no idea what's on my place. They haven't ever been on it. There is Mr. Bill Hughes, Mr. Durbin, me, Earl's place all the way to Concord. Nobody is ever been on our places. How can they tell you they get an environmental study on a property they have never been on? Exactly. Somebody is smart here, I guarantee you. But that's what -- They use this theory and don't think about the people that have got to pay taxes and support this county because we -- as a county commissioner I can tell you how hard it is to gather tax money for this county. I was in it. So as far as I'm concerned if they don't get imminent domain they ain't coming on my property.	Refer to ED-1, ED-2, GN-1, NE-8, SS-1, SS-12, SC-22 and VA-1.
Jim Miles	1/31/2018	Oral	I'm glad all you people could come. Jim Miles is my name -- Jim Miles is my name, and I'm an ex-County Commissioner of Leon County, Precinct 3. I retired 20 years ago, and I never dreamed that this thing was going to -- something like this would ever happen, not only our county roads, but across our whole county. I mean, it's going to cut the county half in two. The whole thing that I cannot understand about the Texas Central Railroad is that they're doing a Japanese railroad in the United States. We don't need anything from the Japanese over here. We need something from Texas. We're Texans. We're not damned slant eyes from over there -- overseas, so -- I'm sorry. But --And the other thing is, they are going to come within less than a quarter of a mile from the Leon school. We have a thousand kids in that schoolhouse over there in Leon. And they are going to be passing that thing every 30 minutes with a train? You know what's going to happen, the kids are going to be looking outside, and scared, and all of that with that train coming through, and it's not feasible. It's just not -- not the way you do things in Texas. Now, if they want to build this thing up north, let them have it. We don't want it down here. The other -- the other point is the water system in the State of Texas. We got we've got a real good Wilcox and Carrizo Spring water system. It's been around, and it's the best water system in the State of Texas. You can ask anybody. We've got more water in Leon County than anybody ever had. They're going to ruin it when they put this train through. All that vibration, all that noise, it -- it just can't work. So, I appreciate y'all letting me talk to you, and if I can do anything for you, call me. My name is Jim Miles, in Jewett, Texas. Thank you.	Refer to NV-1, NV-5, SC-2, SC-6, SC-7, SC-8 and WW-6.
Jim Miles	2/5/2018	Oral	Jim Miles My name is Jim Miles, thank you for that I could talk about this for hours but I just have to take a couple of minutes to point out a few things. One thing I want to make sure of: we to stay united. It doesn't not matter where this train goes we will pay for it out of our tax dollars one way or the other. While I appreciate your thoughts about utilizing other transportation: the right-of-way, the fact of the matter is we're going to end up paying with or without We know that's there's no possible way this thing can make money. There's absolutely no way. We have Solendra (ph) Gia (ph) of what the federal government does when they believe something. That's exactly what is going to happen here once it gets built It doesn't matter where it goes. So what we're looking at: we're facing the use of our tax dollars through federal loans and bail outs to take our property from us. So we can't ever fracture it and say, well, it's than it is over here It does not matter. Don't even lose sight of that. This is another deal. We talked a little bit about the money. They don't have anywhere near the amount of money that they really need. They have not coordinated with your local government here. And understand that At this point the county governments do not understand exactly the impact that is going to take place with this project. Flip side of that is doesn't understand the impact that it's going to have on the county, who happens to be one of the larger landowner that's going to be affected. Right? We got roads and all kinds of other things that we're going to have to deal with and the county should be in the middle of that process. And at this point they have been excluded from that process. And that's obviously a huge deal. There's not an existing rail corridor which is typically a prerequisite for a project of this type. If you haven't this type of project: usually it replaces some existing passenger rail corridor that already has a demand that' s overcrowded. We talked a little bit about the no-build alternative. It should be considered. We all should demand that that be considered very high. The problem that we have: and I want to point this out. You may or may not know, but Texas Central changed the purpose that needed this project between the scoping report and today. They eliminated a very substantial portion of it specifically as it relates to the economic liability of the project When they took the criteria of economic viable from what the FRA has evaluated the project against Why is that? They did that because they know they cannot make it economically viable and if they had to let that in there they would have had to show their work. They don't want to show their work So at the end of the day, we need to make sure that we are looking at how these impacts are without consideration for the financial impact of this project. Because at the end of the day, since we don't get the numbers: they don't get to use and say how this project should be evaluated. I'm going to be outside if anybody needs to talk with me further_ I appreciate all of your attendance. Were here to stand together. Let's work this out and get this done.	Refer to GN-2, GN-4, LU-11, NE-1 and PN-4.
Jim Miles	2/6/2018	Oral	My name's Jim Miles. I'm from Jewett, Texas. I own a ranch right across from the Leon School, and this train is going to come less than a quarter of mile from the Leon School. We got a thousand kids. A thousand kids going to hear this roar and romp and aggravation everyday, everyday that they're in school. Mr. Wynn got up and talked the other night in the Leon School about it and told everybody, said what's going	Refer to BA-7, BA-8, GN-9, GN-4, GN-9, LU-14, NV-1, PI-4, SC-1, SC-19, SC-22 and TR-8.

Submitted By	Date Submitted	Submission Type	Comment	Response
			to happen it's going to interfere with the kids' education. And so the other thing I want to speak to is about Mr. McLane. He's the president of this thing now, or so I understand. And he said the other day, he said, It will be privately funded. Then why is Texas Central looking for federal funds to finance it? It won't be destructive, even though he needs to run it through his living room to say it's not going to be destructive. The high-speed rail would pass through Navarro, Freestone, limestone County, and actually this project will invade eight counties, eight Central Texas counties, not just two or three. And Grimes County is one of them. They don't even count Grimes County as one of the alternatives. System will not require any crossings that will be 25 to 35 feet in the air. It's not elevated 100 percent, it's only 30 percent. So we're not talking about a train going up in the air. We're talking about trains on the ground. It's going to run 200 miles an hour on the ground. Then he said it was going to cost \$15 million [sic] for this project. Well, we already know that's stupid. The other thing is that the fun and excitement of this thing going around by your home and everything's going to be a lot of fun and a lot of excitement. Just think everyday that you see this thing, (air whooshing sound) just like that everyday. So the project was not designed to benefit the people in these eight counties. It was designed for Houston and Dallas people, which they don't care about it anyway. They're not pushing it. There's not but two or three people in Houston that's really pushing it. They had a big meeting the other day in Harris County, and they picked the Northwest Mall for their new location. Now, they don't say that, but that's what they picked, because it was on TV and everybody watched it; everybody's seen it. So why don't you-all admit that that's what they picked, because that's what they said they was going to do. And I appreciate your time, and I if I could help anybody, let me know. Thank you.	
Jim Miles	3/5/2018	Oral	Citizens of the State of Texas, y'all are all here looking at a human being that's fixing to be devastated by this problem. This train goes through, it's going to cut my ranch half in two in Leon County. Now, I'm not from Harris County, but I used to live here years ago, and I knew there was traffic back then, so I got the heck out of Harris County. And -- and I live in Leon County, okay? And -- but the -- my major fault for this thing is the high school. Leon High School is on Highway 79 right outside Jewett, Texas. It's going to be a quarter of a mile from that schoolhouse where this train runs. And it's elevated about 30 feet. If that thing crashes at 200 miles an hour, it won't be nothing left of that schoolhouse. And they don't -- they don't -- they finally -- last week, they came to the schoolhouse and talked to the superintendent. But they have never even thought about the schools. There's not only that one, there's two more that's involved that's close enough to be damaged by a big rail. And whenever you start running 200 miles an hour in anything -- and I'm a pilot, and I fly airplanes 200 miles an hour, but not on the ground. And the -- the whole thing that I can see about the high-speed rail is they're trying to push this on people that really don't want it. I don't know of anybody -- well, yes, Harris County, there's a lot of people in Harris County want this thing. But are they going to be able to afford to ride it back and forth to Dallas? The cost of the ridership is way beyond what people can afford. We don't make -- I mean, I don't make a lot of money, and I know a lot of people live from day-to-day because they're poor people, and they're surviving for life. And so you don't push things like this on people just because you want a high-speed rail that's outdated 20 years. They haven't built one of these trains in 20 years. It -- yes, in Japan, they got them; but they don't do anything. I mean, they run the same route every day, and they move thousands and thousands of people. But we don't do that in the state of Texas. We drive our pickup trucks and our cars. The only other thing I can tell you people is in the State of Texas, for the last -- I been here 79 years, about 74 of it I can really remember. We have had two of these things. We had the bullet train in 1989 and '90. They tried to shove it down our throat, and we fought it. I went to Austin with tractors and went around the Capitol building and plugged it up and they finally begged us to get out of Austin. We may have to do that with this thing, too.	Refer to GN-2, PI-1, SC-2, SC-3, SC-6, SC-7, SC-8 and SS-12.
Kara Miles	3/9/2018	Website	I am in favor of high speed rail between Dallas and Houston	Comment noted.
Austin Miller	2/23/2018	Website	I feel that the community of Dallas, TX has always seen the future of rail which is clear with our DART transportation system. I do however feel that other cities are having numerous disagreements including the city of Houston who has been far behind on rail and public transportation. Furthermore, I am unable to drive due to intractable seizures.	Comment noted.
Brock Miller	2/6/2018	Website	I support this project as valuable alternative mode to travel from Houston to Dallas. The price should be comparable or cheaper than flying. Also, only private funds should be used for the development, construction, and long term operation.	Comment noted.
Cindie Miller	2/18/2018	Website	I fully support the Bullet Train from Dallas to Houston! I believe we cannot pass up an opportunity like this. I've attended town hall meetings regarding this project and was very impressed with the professionalism and environmental attention the group has given to this project. We need to provide options for travel along this corridor and not allow Southwest Airlines to block it due to their own greed and misguided values. It's time to stand up to large corporations who aren't concerned with the well being of our culture. This project will boost the economy in the very neighborhood in which I own a home. I've invested in this neighborhood. Let the project be completed. Thank you!	Comment noted.
Denise C Miller	2/5/2018	Letter	FRA FAILED TO PERFORM A PROGRAMMATIC ANALYSIS FOR THE EIS The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an	Refer to BA-5, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.

			alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Denise C Miller	2/5/2018	Letter	Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 Of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-3, LU-4, RF-1 and VA-1.
Denise C Miller	2/5/2018	Letter	The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1 .8 million will be lost to the Municipal Management District discussed in NO. 2 above, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1 .6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some Of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EJ-1, LU-4, SC-19 and VA-1.
Denise C Miller	2/5/2018	Letter	Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-4 and VA-1.
Denise C Miller	2/5/2018	Letter	RE: Houston to Dallas High Speed Rail DEIS comment I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON QUALITY OF LIFE Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1, NV-1, NV-5, TR-6 and TR-8.
Denise C Miller	2/5/2018	Letter	The proposed alignrment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the HSR project.	Refer to SC-5.
Denise C Miller	2/5/2018	Letter	IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1 ,500 servers that will be within 1,000 feet oftheHC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Denise C Miller	2/5/2018	Letter	The Waller Harris Emergency Services District No. 200 ("ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency that now service the District and provide an 8-minute response time. The HSR will	Refer to SS-12, SS-18, SS-23 and SS-26.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			disrupt this service and increase the resrxM1se time to dangerous and unacceptable levels. The District is funded with ad valoran taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brouW1t to the attention of the FRA by Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Denise C Miller	2/5/2018	Letter	Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas.	Refer to PI-1.
Denise C Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement. I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it.	Refer to EU-2 and WW-6.
Denise C Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON ECONOMIC DEVELOPMENT The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement. IMPACT ON ECONOMIC DEVELOPMENT The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-8.
Denise C Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track Of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impedirnents to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Denise C Miller	2/5/2018	Letter	I am lodging an objection to the high speed rail between Houston and Dallas for the following reason. IMPACT ON WATERFOWL AND HUNTING Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one Of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, ifnot destroyed by a high speed train. Ihis issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2, RF-2 and WW-9.
Denise C Miller	2/5/2018	Letter	IMPACTS ON HISTORICAL SITES At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to	Refer to CR-2 and CR-9.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also buried on the family cemetery located in the Kickapoo Preserve. HCA runs right over this land and very close, if not directly over this old Inn and Stage Coach site and canetery. When Kickapoo Preserve was established, they were required to perform an archaeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archaeological sites and two pre-historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	
Denise C Miller	2/5/2018	Letter	<p>FEASIBILITY OF PROPOSED HIGH SPEED RAIL A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U .S. high-speed rail lines may never be given a second chance" Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other laws. In effect, this project will either become a burden On taxpayers in terms of subsidies, or a bridge to nowhere...</p>	Refer to GN-3.
Denise C Miller	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed rail between Houston and Dallas for the following reason: IMPACT ON KATY PRAIRIE CONSERVANCY Katy Prairie Conservancy owns the Warren Ranch, a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. Warren Ranch is a critical part of the Katy Prairie Preserve, a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). KPC is diligently working to protect this land for generations to come. The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of animals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	<p>Refer to RF-4, NR-2, NR-3 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</p>
Denise C Miller	2/6/2018	Handwritten	<p>I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON PUBLIC SAFETY At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. "The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 - 20,000 lbs released, and June 11, 2007 - unknown quantity On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? nis will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to EU-6, SS-18 and SS-19.
Douglas Miller	3/9/2018	Email	<p>I advocate the NO BUILD option for the proposed hi-speed rail project between Dallas and Houston, and urge the FRA to stop further consideration of the project. The project has several fatal flaws, including:</p>	<p>Refer to ED-1, GN-4, NE-1 and PI-3. For information regarding impacts to wildlife and vegetation please</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			It will be an environmental disaster, directly destroying & damaging irreplaceable wildlife habitat. Concomitant and follow-on development will have the same effect. It will be an economic failure and require a public bail-out, with no benefit to the taxpayer. It will require unlawful taking of private property. No private entity should be allowed to take private property. It is not needed. There are already multiple proven alternatives for travel between Dallas and Houston. The public comment period should be extended beyond March 9. It is unreasonable to expect the public to digest such a large document in a few weeks that required much longer to produce. This project must be rejected. NO BUILD!	see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Elisha Miller	2/25/2018	Website	We don't need this in this area of Texas, you are ruining our area and our land,lives,travel in the area, and wildlife. People will not pay the price to travel on this train for what is just a short drive or flight from Houston to Dallas.	Refer to GN-2, NE-9, PN-3 and SC-3.
Harold Miller	2/16/2018	Website	This HSR is absolutely needed in our state. The I-45 corridor continues to be congested even with the recent lane expansions. Build the HSR!	Comment noted.
Joyce Miller	3/5/2018	Website	This train/rail is not necessary to our area, the cost of the ride, the noise, the train itself is used. Why do we need a company from another country buying up and property running a company in the US. Say NO TO THE RAIL.	Refer to NV-1, PN-3 and SC-3.
Texas Daughters of the American Revolution	2/23/2018	Website	I oppose the location of the High Speed Rail as the currently planned route cuts directly through Morgan Legacy Farms (located on FM 709 and 3194). Morgan Legacy Farms' bald eagle habitat and migratory waters will be disrupted. Also, this ranch serves as a retreat facility free of charge to numerous non-profit organizations. If the route was moved north of the existing power lines, it would be save Morgan Legacy Farms so it can continue to serve the community and environment.	Refer to LU-5, NR-2 and NR-3.
L Miller	2/24/2018	Website	I oppose the location of the High Speed Rail as the currently planned route cuts directly through Morgan Legacy Farms (located on FM 709 and 3194). 			Quality of Life issues include people living within noise and vibration distance, as well as, sight particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances.	
Mark T Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings; and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-5.
Mark T Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON HEWLETT PACKARD DATA CENTER One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-11.
Mark T Miller	2/5/2018	Letter	RE: Houston to Dallas High Speed Rail DEIS comment I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 The Waller Harris Emergency Services District NO. 200 ("ESD") provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-12, SS-18, SS-23 and SS-26.
Mark T Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. FRA FAILED TO COORDINATE WITH LOCAL GOVERNMENT Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. FRA has also in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to PI-1.
Mark T Miller	2/5/2018	Letter	RE: Houston to Dallas High Speed Rail DEIS comment I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON HISTORICAL SITES At the coordination meeting with TXDOT on or about February 9, 2016, Mr. Rick Welch and Tom Gleason discussed historical significant locations and objects and cultural resources within Waller County and the location where the rail is selected to traverse. Mr. Welch told of Benaiah "Yankee" Jones, III, born in Massachusetts in 1795 and moved to Texas in the 1830's to early 1840's. He ended up in the area that is now northeast Waller County where he bought 1,100 acres. On this land, he built a Stage coach Inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve. Jones and his family are also	Refer to CR-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			buried on the family cemetery located in the Kickapoo Preserve. HC-4 runs right over this land and very close, if not directly over this old and Stage Coach site and cemetery. When Kickapoo Preserve was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. Mr. Welch has historical maps indicating historical boundaries, roads, Stage coach routes, written historic interviews of "old timers," and all the historical sites on the Kickapoo Preserve. These documents show where the sites were for historical Stage Coach Road that was created between the 1830's and 1840's that came from in the original town of Harrisburg (now Houston) and went northwest through Mr. Jones' land. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention Of the FRA by the Texas Department Of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	
Mark T Miller	2/5/2018	Letter	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. IMPACT ON WATERFOWL AND HUNTING Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a hW1 speed train. issue was brought to the attention Of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2, RF-2 and WW-9.
Mark T Miller	2/5/2018	Letter	I am lodging an objection to the proposed speed rail between Houston and Dallas for the following reason. IMPACT ON FLOODING AND DRAINAGE Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was bro*t to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Mark T Miller	2/6/2018	Handwritten	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason: IMPACT ON G&W WATER G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. ney recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2.

Monty Miller	2/15/2018	Website	The Texas Bullet Train is good for Texas! I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the review and approval of the project. It is a landmark mass transportation project that will connect the two economic hubs of Texas, Houston and Nonh Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving between the two regions. The recent release Of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transponation technology, the Shinkanscn system, which has had zero crashes or fatalities in 53 years of operation in Japan. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational - at least 25% of them in rural counties along the route. It will be an economic boon for all counties along the route. As an electric train, this system will also be the best environmental alternative for traveling between the two regions as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies, and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion between North Texas and Houston -- because it's good for Texas!	Comment noted.

Nancy Miller	2/6/2018	Website	I would like to be informed of the proposed route as soon as possible. I hope we don't have another Trans-Texas Corridor-type situation developing.	Refer to BA-7 and PI-1.
Ron Miller	2/24/2018	Website	I oppose the location of the High Speed Rail as the currently planned route cuts directly through Morgan Legacy Farms (located on FM 709 and 3194). Morgan Legacy Farms' bald eagle habitat and migratory waters will be disrupted. Also, this ranch serves as a retreat facility free of charge to numerous non-profit organizations. If the route was moved north of the existing power lines, it would be save Morgan Legacy Farms so it can continue to serve the community and environment.	Refer to LU-5.
Shelby Miller	2/8/2018	Website	This is a worthy, fully justified and forward-thinking project that will improve the quality of life for Texas residents and visitors. I, as a former Texan, can take pride in a transportation project of this magnitude that will reap many benefits for future generations.	Comment noted.
Sid Miller	3/9/2018	Letter	I want to thank you for the opportunity to provide my comments to the Draft Environmental Impact Statement (DEIS) for the Dallas to Houston High Speed Rail project. As you are aware, a large percentage of the overall trackage is proposed to dissect a pristine part of rural east Texas. Additionally, it is clear that a notable percentage of Texas agricultural production will be negatively affected. Some of my main concerns are as follows: * Approximately 56% of the land for the project is currently used for production agriculture, which equates to the removal of approximately 4,500 acres from this vital land use. Additionally, production capability on remaining properties will be permanently altered. From cattle production to row crop farming, this land is invaluable to Texas' economy, as well as our food and textile supply. * Drainage pattern modifications could destroy ponds, tanks, and lakes that are crucial to the producer who relies on this natural resource to water herds and crops. Any modification to these patterns can upset large areas, both in the immediate vicinity and for miles downstream. * Some of Texas' heritage and longest standing ranches, that the state designates a Century Ranches, will be permanently altered. These ranches are vital to our economy, or food supply, and our way of life. * With the division of both large and small tracts, the lack of free movement of equipment, livestock, and wildlife will devastate the individual producer and the community as a whole. I am aware of private ranches that the DEIS indicates no pass-through, or connection, from one side to another. This is unacceptable; all our producers must have access to all of their resources. Further, basing any connection on the physical size of current livestock production, limits the producer's ability to expand operations and/or adjust for seasonal or market trends. * The reduction in remaining land values will devastate producers and landowners. In many cases, land values support the underwriting of agriculture loans and mortgages, which are crucial to economic upward mobility opportunities and growth. Finally, I take issue with the violation of private property rights through eminent domain for this project. The farmers, ranchers, and landowners of Texas are critical to Texas' vibrancy, economy, and way of life. Consequently, I opposed the proposed Dallas to Houston high speed rail project.	Refer to ED-1, FP-1, LU-2, LU-7, LU-11, NR-6, TR-10 and WW-2.
Joan Milligan	3/2/2018	Website	Texas and the nation are ready for high speed rail. Safe and comfortable, this rail system has less noxious emissions than a jet, and is much more environmentally sound. It is time.	Comment noted.
Joan Milligan	3/8/2018	Website	Build this train! The USA should not lag behind the rest of the world.	Comment noted.
Joanie Milligan	2/28/2018	Website	This train will benefit not just Texas, but the nation as well. High speed travel is the way of the future and DFW/Houston is just the beginning. Straight, elevated systems are not just faster, but also safer for passengers, those in motor vehicles, farm animals and wildlife. Further, as a retired military member/traveler, I can say it is high time we get going with high speed rail. The world is leaving us behind. I would like to add that my family ranch that was several generations in the making, was split by the taking of land for Hwy 75/Int 45 between Corsicana and Streetman. Taking land for public use is unfortunate, but we were paid fairly and we are glad that so many others benefit by use of the roadway. Land will not get cheaper or less populated in the future.	Comment noted.
Veronica Milligan	2/17/2018	Website	I have to travel to MD Anderson every three months for medical appointments. Traveling 45 is an absolute nightmare. Always under construction and dangerous. I would personally use the train and encourage others. Please let us move to the future for us and our children. I'm sure the same objections of right of way, costs, and we'll don't need this was used when highway 45 was proposed. We really need to move on to the 21st century! I fully support all efforts to build the train! Thank you	Comment noted.
David Millison	2/6/2018	Email	I am not interested in the environmental impact, I have been trying countless times to access your DallasHoustonHSR@urs.com site to give you my input concerning my property. Evidently this is a scam and you have no interest in anyone's opinion, as that site doesn't exist or doesn't work. I was on the high speed rail side, but after sitting in on a meeting and now not able to access the site that you gave me, I am believing that this is not legit.	Refer to PI-7.

David Millison	2/6/2018	Email	We have 43+ acres of land in southern Dallas county, We have a Lancaster address though not in the city limits. We have lived here for 16 years. We raise and show Miniature Zebu cattle and currently have 64 head I have been in the cattle business for 24 years. I purchased this property to have more pasture/grazing, a larger barn, seasonal pond and no restrictions on land use as well as privacy and seclusion but maintaining a close proximity to Dallas proper. I have a home, pool, barns, garages, shop buildings, RV hook up, three septic systems, a guest house, fencing etc. We had Rocket water service installed as well as a fresh water well. We own all the mineral rights to our property, our property line goes into the middle of Ten Mile creek and have unlimited water rights. We have a 30 year old autistic man we care for who lives in a trailer on our property and has for 9 years. We are 23 minutes from downtown Dallas directly in-between 1-35E and 1-45. We have spent 2 years and thousands of dollars having plans and blueprints drawn up to build a new home on our property that conforms to the topography of the property while maintaining the unobstructed and private view of our land. We have 1,500 linear feet of paved road frontage. We manage a commercial/retail property company from our home. The southern Dallas 1-45 and 1-35 corridor is one of the fastest growing areas in North Texas. Property values are rising at a steady and continuous pace. Since I found out about the High Speed rail, I have spent countless hours trying to find a place that replicates even closely what we have, with the same convenience to downtown Dallas, property taxes, highways, work etc. but, to no avail. We attended the meeting in Hutchins, TX and realized that of the 5 proposed routes, we are in all of them, so it seems that we will have no choice, especially after being told that you will have eminent domain to take our property. We are not opposed to the High Speed rail, but we have no interest in moving, relocating, etc. I am 61 years old and quite honestly planned to die living here. That said, we can move, but we won't be pushed out or around. I certainly hope and expect you to take these things into consideration when you offer to purchase our property. Moving a cattle operation, business and home is not something I am looking forward to, nor will it be cheap to do.	Refer to ED-2.
Mark Minier	3/5/2018	Website	I am a property owner in Leon County, Texas, and I am opposed to the Dallas Houston High Speed Rail project. I believe that this project will cause permanent negative changes to my property. I am concerned that the draft environmental impact statement has not thoroughly addressed the issues of relocating, closing, or establishing new roads. My property values will be permanently affected in a negative manner. I purchased rural property to be away from developments, noise, and commercial interests, all of which will happen if the DHHSR project continues. I would prefer to see the high speed rail project located along the I-45 corridor which is already developed.	Refer to BA-9, TR-8 and VA-1.
Jayson Minsky	2/20/2018	Website	Let's get this built and in service ASAP	Comment noted.
Brinn Miracle	3/5/2018	Website	As a community member and small business owner living and working close to the terminus of the proposed line, I can say with enthusiasm that this project is a welcome addition to the city of Houston and to my neighborhood. It provides not only jobs within our city to construct and maintain the infrastructure, but fringe and supporting industries such as hospitality, retail and restaurant will grow because of this project. Additionally, the opportunity to do business with connecting cities amplifies the economic growth by allowing efficient access to new markets. I support the high speed rail project and encourage the thoughtful and respectful creation of supporting infrastructure and systems that will benefit all communities impacted by this great project.	Comment noted.
David Miseldine	3/9/2018	Website	County Road Maintenance. Who is going to have to pay to take care of the additional use of the county roads? Our CR is already very poorly maintained and floods at the slightest rainfall. Is TCR prepared to shoulder the additional cost as these roads will not withstand that type of use without a lot of work being done to them. FINANCIAL COST TO THE COUNTY/RESIDENCE(TAXES) NO BUILD	Refer to TR-7.
David Miseldine	3/9/2018	Website	Ridership Numbers This is a huge project that could conceivably cost tax payers in the end should it fail. I am not against progress and improvement however any feasibility study of this size should be required to show its numbers and proof of source. Many variables play into the numbers including number of trains per hour. In doing some research HSR networks require extensive daily maintenance, which limits their opening hours. Has this been taken into consideration with the numbers? Those ridership numbers taken from the highways, are the vehicles continuing or being used for commercial use? Has this been considered? One vehicle does not mean one person. A family of four could not afford to use the train for continued use, has this been taken into account? WITHOUT SEEING RIDERSHIP INFORMATION IN IT FULLEST AN EDUCATED DECISION CANNOT BE MADE BY THE FRA. LACK OF DATA. NO BUILD - FINANCIAL LOSS TO TEXAS	Refer to GN-2.

David Miseldine	3/9/2018	Website	TRACK SAFETY In the rural areas it is all very well having fences but in order to stop wildlife from getting on the lines the fence will need to be buried. I can tell you from experience that if something wants to be on the other side of a fence not much will stop it short of an electrified fence. And that is neither safe or practical along the route. I am fighting the wildlife on a daily basis. What happens when an animals ends up on the track? SAFETY OF COMMUTERS, RESIDENTS AND WILDLIFE - NO BUILD	Refer to NR-6.
David Miseldine	3/9/2018	Website	We are a timber exempt gated community of 12 home sites each home has a minimum of 11 acres to 25 acres along a 1 mile road. We lie along the highline and according to the DEIS our neighborhood will be destroyed by the train line, maintenance roads, access roads for a bridge and hydro drainage ponds. This is a huge financial loss not only to our family but to all families in this subdivision. FINANCIAL LOSS – NO BUILD	Refer to LU-7 and VA-1.
David Miseldine	3/9/2018	Website	Should TCP take just the 4 ½ acres of land required of my 11 acres then I will have a train within 400 ft of the back of my home. This home was purchased as our retirement home (currently 64 years of age) we carefully chose our single story, low maintenance, timber exempt (for financial cost reduction during retirement years) home in a quiet, closed and safe community. TCP assured us that they would be using existing ROW and that now proves to be a mistruth. At best we will have the train at our back door with all the noise and activity associated with it or at worst loose our home to the train. PERSONAL FINANCIAL LOSS – ENVIRONMENTAL LOSS – NOISE POLLUTION NO BUILD	Refer to LU-7 and VA-1.
David Miseldine	3/9/2018	Website	We live on relatively untouched timberland originally divided up in such a way as to preserve the timber and subsequently the wildlife and it has done that. We have red and black woodpeckers in the pine woods, Navasota ladies tresses , birds of pray of every type due to the small wildlife and ponds. We have a low lying area behind our pond with is continually wet and supports frogs/toad herons and other swamp loving creatures. We have deer, huge hog and bobcat to name a few. All of this will be devastated and destroyed in most cases as the train plans on clearing much of this land. ENVIRONMENTAL LOSS – NO BUILD	Refer to NR-2, NR-3 and RF-4. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
David Miseldine	3/9/2018	Website	Fire Safety and access is a major concern in this area (Waller/Grimes County) Wild fires are very common we have had them every year here that I have witnessed just in our area Magnolia/Plantersville. Of course, the largest was 2011 consuming over 5000 acres. We have also had them on the highline neighboring our properties, on 1488 just to site a few. These areas are manned by volunteer fire fighters and emergency response teams. If the train runs through these area with a high fence surrounding it then access to areas that are currently easily accessed with be greatly hampered and in turn will lengthen the time it takes to get a fire under control to limit destruction and loss of life. COMMUNITY SAFETY NO BUILD	Refer to SS-27.
David Miseldine	3/9/2018	Website	Safety and security TCP have indicated that there will not be long lines such that you see at the airport (TSA) making the commute quicker. WHY ON EARTH would you not have TSA for a heavily packed high speed train? Its is as you can see below a sitting target. This is a High Speed Train. At approximately 17:45 CEST on 21 August 2015, Thalys train 9364, traveling from Amsterdam to Paris, had just crossed the border from Belgium into France when a 25-year-old Moroccan man, Ayoub El Khazzani, exited the toilets on car No. 12. He was shirtless and armed with an AKM assault rifle, for which he had nine magazines and a total of 270 rounds of ammunition. He was also carrying a pistol, a utility knife and a bottle of petrol PUT TSA IN PLACE FOR THE REQUIRED AND RESPONSIBLE SAFETY AND YOU MIGHT AS WELL FLY - NO BUILD DONT ENFORCE TSA SAFETY AND YOU PUT THE COMMUTERS AND SURROUNDING PUBLIC AT RISK - NO BUILD	Refer to SS-6, SS-7 and SS-9.

We have a low lying area behind our pond with is continually wet and supports frogs/toad herons and other swamp loving creatures. We have deer, huge hog and bobcat to name a few. All of this will be devastated and destroyed in most cases as the train plans on clearing much of this land. ENVIRONMENTAL LOSS – NO BUILD	Refer to NR-2, NR-4, NR-6 and WW-2.
Heather Miseldine	3/9/2018	Website	Fire Safety and access is a major concern in this area (Waller/Grimes County) Wild fires are very common we have had them every year here that I have witnessed just in our area Magnolia/Plantersville. Of course, the largest was 2011 consuming over 5000 acres. We have also had them on the highline neighboring our properties, on 1488 just to site a few. These areas are manned by volunteer fire fighters and emergency response teams. If the train runs through here with a high fence surrounding it then access to areas that are currently easily accessed with be greatly hampered and in turn will lengthen the time it takes to get a fire under control to limit destruction and loss of life. COMMUNITY SAFETY NO BUILD	Refer to SS-27.
Heather Miseldine	3/9/2018	Website	Route And Station Locations The locations of the stations make no logical sense. The Houston location is outside of the city requiring those commuters to still commute no different from going to the airport. The midpoint is in a small rural town that cannot withstand and does not want a project like this. With the guise that students from college station and Huntsville will use it. These are two state schools, students go to state schools for a reason. Funds! They are not private elite schools where parents are wealthy enough to support their child's every need or want. I'm speaking from experience as I have had and do have a college student. This train is not for students. So now you have a midpoint that also make no logical sense. If the FRA wants to see the numbers justified look at the I-45 corridor, there are in excess of 115,000 people in the woodlands alone and with the "New Woodlands" location just south of Willis will obviously increase. A perfect midpoint....so why when you start to look at logic is the I-45 corridor not being considered? Infrastructure is in place, employees for both construction and ongoing operation are in place, no tearing through small towns on county roads for no logical reason at major expense to the outlying counties. It strikes me that it's all about money and for some reason rather than thoroughly looking at this its easier to turn a blind eye and just accept TCP word for it. FINANCIAL COST TO TAXPAYERS WHEN IT FAILS DUE TO LOCATION AND RIDERSHIP CONSIDER THE I-45 CORRIDOR	Refer to GN-7, TR-2 and TR-4.
Heather Miseldine	3/9/2018	Website	Safety and security TCP have indicated that there will not be long lines such that you see at the airport (TSA) making the commute quicker. WHY ON EARTH would you not have TSA for a heavily packed high speed train? Its is as you can see below a sitting target. This is a High Speed Train. At approximately 17:45 CEST on 21 August 2015, Thalys train 9364, traveling from Amsterdam to Paris, had just crossed the border from Belgium into France when a 25-year-old Moroccan man, Ayoub El Khazzani, exited the toilets on car No. 12. He was shirtless and armed with an AKM assault rifle, for which he had nine magazines and a total of 270 rounds of ammunition. He was also carrying a pistol, a utility knife and a bottle of petrol PUT TSA IN PLACE FOR THE REQUIRED AND RESPONSIBLE SAFETY AND YOU MIGHT AS WELL FLY - NO BUILD DONT ENFORCE TSA SAFETY AND YOU PUT THE COMMUTERS AND SURROUNDING PUBLIC AT RISK - NO BUILD	Refer to SS-6, SS-7 and SS-9.
David Miseldine	3/9/2018	Website	The locations of the stations make no logical sense. 			money and for some reason rather than thoroughly looking at this its easier to turn a blind eye and just accept TCP word for it. FINANCIAL COST TO TAXPAYERS WHEN IT FAILS DUE TO LOCATION AND RIDERSHIP CONSIDER THE I-45 CORRIDOR	
Betty Misko	3/9/2018	Website	This high speed rail is a much needed answer to our horrible state of transportation in this state. It is pitiful that we do not have good rail and subway service in a state of this size. I 45 is the only way to get from North Texas to Houston. Ridiculous to say the least.	Comment noted.
Ben Mitchell	2/21/2018	Website	I oppose the building of the bullet train between Dallas and Houston. It is my understanding that they plan to use eminent domain to steal private land in order to build this train which is being built by a private company. This is not an appropriate use of eminent domain. If this company wants to approach these land owners and buy the property using fair market value, then I have no problem with it. But, as I understand it as of today, I oppose the train.	Refer to ED-1.
Bob Mitchell	3/8/2018	Website	On behalf of the Bay Area Houston Economic Partnership, I ask that the Railroad Administration swiftly move forward with the approval of your environment review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be an economic driver for the region, the state, and our country. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion impact over its first 25 years. The release of the Draft Environment Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because, in part, it will: * Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational - at least 25% of them in rural counties along the route; * Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 2040; * Bring the safest mass transportation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation; * Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where four of the counties served are already in an quality non-attainment status; * Preserve land access for property owners - a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; * Give travelers with disabilities a safe, comfortable alternative to driving or flying - the system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035, and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the United States. It is a transportation infrastructure project of national importance that will provide a safe, reliable, and convenient travel alternative between Houston and North Texas, and we ask that you expeditiously process the remaining steps in the review.	Comment noted.
Ron Mitchell	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The property has been enjoyed by hundreds of people including my family from he United Kingdom. I would like this bad decision to be reconsidered. Ron Mitchell, MD	Refer to LU-5.
Ron Mitchell	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. I would like you to reconsider this decision	Refer to LU-5.
Ron Mitchell	3/5/2018	Website	The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. Below is my child enjoying time on the property- please reconsider	Refer to LU-5.
Rickey Mixon	3/9/2018	Website	No on this project I agree that trains are in our future but not if it cost 300 dollars one way no one would pay that. It will lose money. Sounds like a brother in law deal and the tax payers will end up with the bill. We are watching and we vote!	Refer to GN-4, NE-1 and SC-3.
Louis Mize	1/25/2018	Email	I strongly object to the building of the high speed rail in Leon County Texas. Specifically, I object to my property being used for this purpose. Our property is farm and ranch land, and any tracks, especially one that has to be fenced in and electrically charged to keep humans, livestock, and other animals out will impede both our access to, and the purpose for which we use our property. I also challenge the lack of, and incompleteness of information contained in the DEIS. Many detrimental issues to local farms, ranches and businesses are not adequately addressed. I urge that the NO BUILD OPTION be approved and implemented.	Refer to GN-1, LU-7, LU-11 and NE-9.

Louis Mize	1/30/2018	Email	The time for us to read, review, and comment on more than 5,000 pages is inappropriate. Much of the information I have read so far is outright wrong. Please allow and extension period so that we may adequately respond to the DEIS document.	Refer to PI-3.
Louis Mize	2/5/2018	Oral	I'm Louis Mize from Normangee, Texas. I was born here in Madisonville. I wished I still lived right here. But my great-great grandfather and my great grandfather was buried here. And some of his grandsons are here tonight. We're proud of this community. I'm here tonight because the other evening in Jewett Texas, people from Madisonville came and spoke on behalf of us at the Leon county meeting. Not only people from Madisonville, but people from Harris County. People from Montgomery County, whom if I understand right, was not even passing through their county, but through their staunch opposition to the project. People from Grimes County. People from Waller County were there. People from Dallas were there. We talked to them. And every single person that spoke at that meeting was opposed to the high speed rail. We stand united and firm in our opposition against this high speed rail because we understand that it's going to destroy our lives, it's going to destroy our homes, our crops and our ranches. It's going to destroy the sacred church of God. It's going to destroy cemeteries. And I watched with great anticipation - - and you know, you've heard that "we're here from the government and we're here to help". And the other night in Jewett and I watched the faces and I watched the body language of the FRA members. And sometimes when people talk, I'm a grown man, and I had to choke back tears listening to what this thing would do to people's lives. But FRA watched with little to no emotion. And I wonder. And they say, we're not going to answer your questions. We're not going to answer your questions, but we want to hear from you. So I'm asking, FRA, I'm asking you; please listen to us. Because Texans do not want high speed rail.	Refer to CR-6, LU-11, NE-1, PI-1 and SC-9.
Louis Mize	2/9/2018	Website	I would like to to submit an objection to the building of a high speed rail as proposed by Texas Central Railway for the following reason: I have personally spoke with our Sheriff, our Fire Chief, the head of Leon County Emergency Management, and our EMS and First Responders in Leon County. They all agree that if this project were to be constructed in our county, it would greatly hamper their ability to respond to emergencies within our county, and would ultimately result in loss of life and injury to our citizens. Please note my objection and my recommendation that this project not be allowed to be constructed in our community for the detrimental effect it would have on life safety. Thank you. Louis Mize	Refer to SS-23.
Louis Mize	3/9/2018	Website	Dear Officials, I am writing to express my complete and sincere opposition to the proposed high speed rail project connecting Houston and Dallas. The reasons are many, but I would like to express just a few in this comment. The ridership numbers projected by the people proposing to build this rail are not obtainable based on the population density of the areas it would serve. Because of this, the feasibility of the project supporting itself thru fares collected is an impossibility. Due to this, there is no way the project would be able to succeed without imposing a tremendous tax burden on the citizens. The project would pass thru my farm and ranch land, imposing a serious hindrance on our ability to conduct the business we have built our livelihood upon. Cutting our farm in half would require us to travel many miles out of our way to get to the other side of our property, and would impose a financial burden on us that would prohibit us to continue the production of commercial calves and hay. Currently, there are zero safety regulations in place concerning the operation of a high speed rail in Texas, and we are very concerned about the operation of trains carrying a very limited number of people, traveling thru our farm at over 200 miles per hour. The project would not only impede the movement of domestic livestock in our operation, but would also negatively effect the natural movement of wildlife resources currently living on our land. The noise level from these trains has been grossly under estimated, and more study and time needs to be devoted to obtaining real and accurate numbers concerning the noise. The DEIS also did not take into consideration the elevated noise level which will be produced when two trains meet in passing, and wind shear produced from it. Counties will be forced to contend with destruction and termination of existing roads, and tax payers will endure the burden of rerouting these roads. There will also be an additional burden placed on our electric grid for something that will offer no benefit to us locally. The movement of certain areas of pipelines and utilities, including water and electricity, has not be adequately addressed in the DEIS statement. Much more attention and detail should have been devoted to address these concerns. Emergency operations will suffer serious consequences if this project were to become a reality. All law enforcement, fire fighters, and first responders I have spoken with are strongly against this project. Please note my strong objection to the building of another, what we firmly to believe to be a BOONDOGGLE, in our community, and in our state. The overwhelming majority of people do not want or desire this project, and we urge you not to force us to accept something we neither need nor desire. We recommend this project not be constructed thru our state, and strongly object to the burdens it would impose on the people of our community. Respectfully submitted: Louis Mize	Refer to EU-2, EU-4, GN-2, GN-4 LU-7, LU-11, NE-1, NR-6, NV-1, NV-10, PI-1, SC-19, SS-4, SS-23, TR-7 and TR-8.
Louis and Jimmie Mize	2/5/2018	Handwritten	The information which is contained in the DEIS is driven in many instances from unreliable and inaccurate sources. We have been allowed an unfair period of time to respond to the inaccuracies contained within the DEIS statement. Texas Central Railing has used grossly inflated ridership numbers. The population density of Houston and Dallas combined cannot and will not support these ridership estimates. The traffic numbers on Interstate 45 will not approach the levels projected based on numbers obtained from Tex Dot. TCR also assumes every vehicle headed north out of Houston has Dallas as it's destination. They also assume that every vehicle	Refer to GN-1, GN-2, GN-4, PI-3, SS-4 and SS-12.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			headed south out of Dallas has Houston as it's destination. Common sense and logic refuses this. We are completely opposed to the construction and operation of this boondoggle through our land and community. Any machine traveling at or near ground level at speeds in excess of 200 MPH is a threat to our safety and well-being. High speed rail is not the solution to our transportation problems in Texas. It hasn't worked any place else and it won't work for Texas or Texans. For this and many more reasons, we support the no build option.	
Destiny Moe	2/4/2018	Website	I am very concerned with the impact on our Waller County Emergency Services would this project continue. There will be delayed response time due to the potential impact on county and private roads. There will be a need for new ESD facilities and equipment. This will greatly impact all of Waller County Tax payers. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to SS-12, SS-13, SS-18 and SS-23.
Destiny Moe	2/4/2018	Website	I am very concerned with the impact of Historical Sites, waterfowl and Hunting. An Army Corp of Engineers Section 4 permit reports there a 4 archeological sites and 2 prehistoric/historic sites considered for inclusion in the National Register of Historical Places. Also the route cuts through the north end of one of the major wetlands in the the region where duck hunting is vital tot the economy. The waterfowl and hunting will be diminished, if not destroyed by a high speed train. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to CR-3, CR-9, CR-11, NE-1, NR-1, NR-2, RF-2, SS-10 and WW-2. Based on this comment, there is not a way to identify the specific wetland that is being referenced.
Destiny Moe	2/4/2018	Website	I am very concerned with the impact on Public Safety. There are no emergency services in the counties between Houston and Dallas that would be able to handle a disaster with a train going 200 miles per hour. The high speed train would pass within approximately 580 feet of a natural gas pipeline compressor station. This hazard has not even been addressed. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to SS-12, SS-13, SS-18 and SS-23.
Destiny Moe	2/4/2018	Website	I am very concerned with the impact on the Waller Independent School District. The proposed alignment will run through a large portion of Waller ISD's district. It will negatively impact the bus routes, which will cause Waller ISD to purchase additional school busses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to SC-6 and SC-7.

Destiny Moe	2/4/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement. I am very concerned with the impact on property values and the tax base of Waller County, which is a historical minority population county. This project will create an obsolescence that will negatively impact: property values in Waller County. The proposed route will cause people to lose value of their property, an the decreased valuation of property will cause lower tax revenue collected. School districts, cities, ernergency services and all public entities will lose income. This will reduce the services that are being provided to the citizens that pay the taxes. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable optio in the final Environment Impact Statement.	Refer to VA-1.

			People who do not support the proposed new Texas Central project as proposed, do not see the opportunities this will provide. They can only see with limited vision their own little world. In the words of Spock, the Star Trek character, "The needs of the many outweigh the needs of the one". The path for the new bullet train is least impactful on land owners, yet provides convenient service. With all the benefits this project will bring, like economic benefits, a safe alternative to driving, planning for the future growth and development, dedicated rail line which would not have the issues Amtrak has with wrecks, and better energy utilization per person transported, what is not to like? Get 'er Done!	
Margaret Monohan	1/25/2018	Email	My partner lives in Denton & I'm in Houston. We make the tedious 10+ hour journey every other weekend. Traffic and construction are exhausting, not to mention dangerous with everyone trying to get where they're going. We used to fly between cities, but airline prices have gone up so much that doesn't make sense anymore. I have to take time off work on Fridays when I drive to Denton because if leave right after work, my drive could be & has been more than 6 hours long. I hope that this rail line will become a reality, and that ticket prices will be reasonable. Most of all, I am hopeful that the engineers and project developers involved in this effort will ensure that the rail line is operated under the highest safety standards. There have been far too many stories in recent news of derailments on commuter trains. There is no point in creating the rail line if customers cannot be confident in their safe passage. Federal Railroad Administration	Refer to SS-12 and SS-13.
David Montague	2/5/2018	Website	This project is not needed and our limited government and private transportation infrastructure funds would be better spent elsewhere. I could go on but I respect your time so will stop here. Thank you for listening, David Montague, Bellaire TX City Council Member	Refer to GN-4 and PN-3.
Gustavo Montenegro	2/21/2018	Website	This project needs to be done to add a much needed mass transit system between the two largest cities in Texas to give we the people more options in how we travel. Hopefully this will lead to connecting San Antonio and Austin too having all 4 cities connected with high speed rail. This is long overdue and much needed. Texas needs to move into the 21st Century when it comes to mass transit.	Comment noted.
Gustavo Montenegro	3/9/2018	Website	I think Texas definitely needs High Speed Rail. As big as this state is driving and planes are not good enough for mass transit for this state. Another option like High Speed Rail would alleviate a lot of congestion on our highways. Many of us like myself would prefer not to drive to Dallas from Houston or even to San Antonio. This is a great way for a lot of people to travel our great state in comfort and in a timely manner. It will also allow for greater economic growth by allowing people a faster way to travel between our two largest cities and spend money in both cities accordingly. People will be able to work and attend school in each city and the commute will be that much faster. It is also a very environmentally safe project and will take help to keep a lot of greenhouse gases out of the air with these trains being electric run. This is long overdue for Texas and I strongly support this project being given the green light to start as soon as possible.	Comment noted.
Branden Montgomery	2/7/2018	Website	Mayor Sylvester Turner has called for a paradigm shift and transportation in the Houston region. Both Houston and Dallas are expected to have populations at or above 10,000,000 By 2035. There are thousands of super commuters Who travel between Houston and Dallas more than twice a week. To be prepared for the growth to come in to encourage further growth we have to develop transportation options besides individual vehicles. Building Moore and Baker Rose simply does not work. We have to think about moving people not vehicles. The bullet train will offer Texans view of what's possible and lead the way for further transportation Options.	Comment noted.
Dana Montgomery	2/5/2018	Handwritten	<ol style="list-style-type: none"> 1. Environment concerns: There is many pipeline that this will effect, one located just west of my home. 2. The effect on the wetlands. There are 3 wetlands in the area of my home. 3. My taxes. We all know we will have to maintain this area in Harris county. Where will this funding come from? TAXES! 4. There are 121 hazardous waste sites in Harris county they will disturb. They are down 290. 5. Pollution: the track will be it 24 hours a day. 6. How is this safe at 200 MPH? 7. There is only one train that is profitable, it is in Japan. How is this not going to fail? 	Refer to EU-2, GN-5, HZ-1, NE-1, NE-8, SC-19, SS-4, SS-12, SS-13 and WW-2.
Dana Montgomery	2/6/2018	Handwritten	<ol style="list-style-type: none"> 1. (sic) about the EMINET DOMAIN (sic) If this falls in the hands of the Japan Will they own all the property of the train. If they can take 2 miles on both sides of the TRACK That is a lot of Texas property in the Japan's hands. 2. I do not want my texas going toward this. I will never use this. 3. Why can we not vote on this. 4. Kickapoo Reserve now this will effect the wildlife. 5. Katy Reserve will be effed & will Destroy the wildlife sanctuary. 6. Safety 205 mile pr hour & the one in Waston was only going 81 miles when this one crashed people Died. 7. How is this going to effect the fire, EM, Timing to my home they will have to go around this TRAIN to get to my property. 	Refer to GN-4, LU-14, RF-4, SS-4, SS-12, SS-13 and SS-23. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Dana Montgomery	2/13/2018	Website	TCR has not adequately justified financials to support the project. In fact, there is great concern this project will not be economic and will ultimately have to be supported by tax payers. The Reason Foundation Policy Brief 139 from February 2017 has investigated the financials of this project and has determined the projected cost estimates are above \$26 billion resulting in a \$537 million revenue shortfall. Recently it was revealed a bullet train project in California was costing \$10.6 billion for only 110 miles of track. The FRA has a responsibility to its	Refer to GN-2, NE-1 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			taxpayers to review the gross estimates of both cost and schedule by TCR and provide to the public in the DEIS benchmarks against other like size projects. The FRA should review the gross economic viability as a result of TCR ridership and cost estimates and include it in the final draft of the EIS. Also the DEIS does not cover the situation of project failure and abandoned infrastructure responsibility. "The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS."	
Dana Montgomery	2/13/2018	Website	The DEIS woefully covers the harm that noise, vibration and electrical current would have on people's health and integrity of buildings. I would like to see this section expanded, especially since my property is 1500' from the proposed location. On chart 3.4-8 LT-20 is the closest to my property and has a current noise level of 49-51, yet the DEIS states construction noise limits and train will be 90-100 which is twice the level of noise. Table 3.4-12 indicates that in Waller County the train noise would be over the mid and severe limits for FRA at locations up to 1000 feet away from the tracks. The DEIS only reports noise levels for one train passing although it is expected there will be two trains passing each other at frequent intervals. The DEIS should have more stringent and clear specifications. It should address under what parameters noise mitigation must be installed and include that in the detail design. For vibration, Table 3.4-14 indicates train vibration levels for Waller County at 54, but does not state what the level is now, which I assume is zero, so this is a huge increase over the norm. The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS."	Refer to NR-1. The noise and vibration assessment was carried out in accordance with FRA guidance. The assessment methodology, criteria for impact, and locations of impacts are contained in Section 3.4, Noise and Vibration . The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24-hour period. The assessment is based on the reference noise level of a train passby at a known speed, the total number of trains per day and night, the length of each train, and the actual speed of the trains at a given location. Noise mitigation commitments have been made in Section 3.4.6.2, Noise and Vibration, Mitigation Measures . TCRR has committed to mitigation measures at locations where mitigation is feasible based on the detailed engineering design. FRA must approve all mitigation for the project. It is typical have mitigation commitments at the Draft EIS phase of the project, without specific measures such as noise barriers recommended, but to have detailed studies conducted during design to ensure that mitigation will be practical, feasible, and provide adequate mitigation at required locations. The cost for any mitigation measures will be a part of the project. The vibration assessment is not based on existing vibration levels, only on the project vibration levels. Typical background vibration levels are in the range of 50-55 VdB, which is below the threshold of perception.
Dana Montgomery	2/13/2018	Website	The proposed route through my area will be located dangerously close to an active gas pipeline, yet curiously both FERC (Federal Regulatory Commission) and PHMSA (Pipeline and Hazardous Materials Safety Administration) were omitted in the DEIS. In the drawings, several active pipelines have been omitted. What is the effect of the vibration issues on these pipelines? The hazard was not addressed in the DEIS that the train will pass 580' of a natural gas compressor station. The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS."	Refer to EU-1, EU-2, EU-6 and NV-5.
Lance Montoue	3/5/2018	Oral	Hi, my name's Lance Montoue, and I'm with the University of Houston. I'm currently majoring in mechanical engineering, so if anybody is looking for interns, I'm available. All right. I think it's obvious that the population of Houston is growing. I think that transportation should grow with it. If you look at the DEIS, it shows that there will be more than 200 percent increase in traffic on I-45 between Dallas and Houston in the coming years. I think the Texas bullet train will be the best solution for the problem. Once it's built, I will probably go to Dallas more often. I have some family down there that I don't get to see that often, so with this, it will be a lot easier. And at the end of the day, I think we should remember that Texas is doing things bigger and better. I think the Texas Bullet Train is exactly that. And before I close, I just want to stress to the FRA that this is the most-needed feature for Texas. My name is Lance Montoue, and I'm in support of the Texas Bullet Train.	Comment noted.
Karl Mooney	2/19/2018	Website	As Mayor of a growing community that will require improved transportation opportunities for its citizens in the very near future, I support the creation and proposed operation of the Texas Bullet Train. Changes of types of transportation are essential to meet what all demographers believe will be a substantial population growth for Houston, Dallas and the area in between. With the increased freight rail traffic on existing tracks, the two primary carriers, Union Pacific and Burlington Northern, have abandoned passenger service. Within the past decade rail traffic within those urban areas has proved to be a catalyst for economic growth and a popular resolution to single-person vehicular traffic. The creation of the Brazos Rail Yard eliminates the possible use of those rails for passenger service. Even if those rails could be used, they would not be adequate for an efficient train to ferry people. The contradiction of freight and passenger service is what doomed AMTRAK passenger service on that route in the late 1980's. As the suburban areas of these cities continues to grow, the volume of automobiles and trucks, including the evolution of autonomous vehicles, will overwhelm the capacity of existing interstates and toll roads. Creation of a new,	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			alternate, speedy, time-efficient, safe and affordable transportation system is essential to reduce grid-lock which will spread southward from Dallas and northward from Houston. A prime example is how regularly snarled traffic now exists on I-45 from Houston to north of The Woodlands. Engaging with and supporting the privately-funded Texas Central Railway makes good long-term sense for Texas. I realize there will be some impact, particularly in the rural areas that have remained largely untouched by substantial growth, but unless take steps today to manage the ultimate growth that will come, we will be mauled by it. Consider, if you will, the changes that have occurred between Austin and San Antonio. Similar growth and congestion is likely to occur in the Houston to Dallas corridor (I-45)if national and Texas' leaders do not support new and creative ways to move people on a daily basis. My own community, College Station and its neighboring city of Bryan will also be pressed to handle the growth brought on in part by Texas A&M's enrollment climbing to 80,000 by 2030, by the new RELLIS campus, the added growth of Blinn College and the proprietary technical school, Vista College. Linking to the Roans Prairie rail stop will be an objective that the BCS area will share with Huntsville. In advance, I thank you for supporting the Texas Bullet Train. By doing so, you are acknowledging the growth and changes that growth will bring to the Lone Star State. Sincerely, Dr. Karl P. Mooney, Mayor City of College Station	
Andrew Moore	1/29/2018	Email	I have some concerns about the parking structure to the north of the Cedars site. This parking is currently being utilized by the Alamo Drafthouse as well as numerous other businesses in the area. Will this parking garage be made available to customers of those business without cost? Will other parking be made available? WHat is the plan during the construction process. There is ample open and underutilized property south of the proposed site which might be a better option. I welcome this project as long as it doesn't stifle the existing redevelopment which has created the upswing in the Cedars.	The parking owned by Alamo Drafthouse will not be affected, however, parking south of Austin Street is on property not owned by Alamo Drafthouse and would be acquired. Property acquisitions will be made between the landowners and TCRR. The Dallas Terminal Station Option would convert about 63 acres of commercial and civic land to a transportation use. The remaining approximately 32 acres of the terminal station site are already used for transportation (e.g., UPRR, IH-30 and surrounding roadways). Construction and operation of the Dallas Terminal Station Option would not substantially change the pattern and intensity of land use in the area and would be compatible with adjacent land uses. The Dallas Terminal Station Option could indirectly lead to increased land use densities in proximity to the terminal and facilitate the development of transit-oriented development (TOD) in downtown Dallas, which would be consistent with local plans and policies and existing redevelopment efforts in the area. Due to the existing pattern, intensity and character of land use within the terminal station area, the conversion of land use to transportation would not adversely impact the area. Zoning designations at and around the Dallas Terminal Station area are Planned Development and Central Area. The Planned Development zoning designation offers design flexibility for land use and carries specific development conditions, while the Central Area zoning designation accommodates existing development in the central area of Dallas and seeks to prevent the increase of street congestion. Prior to construction, TCRR would be required to obtain a development permit from the City of Dallas for the Dallas Terminal Station. During the permitting process, TCRR would coordinate with the City of Dallas to ensure compliance with all relevant zoning and special purpose district regulations. As previously described, one of the allowable land uses for the planned development is a railroad passenger station. Therefore, no impacts with the zoning designations or special purpose districts would occur as there would be no conflict with any applicable land use plan, policy or regulation of an agency with jurisdiction over the Dallas Terminal Station Option.
Eddie Moore	1/29/2018	Oral	Good evening. I'm Eddie Moore, and I'm commissioner of Precinct 3, navarro County. I represent one fourth of this county, and they expect me to deliver. And I'll tell you guys, I had a whole lot of stuff to say but, you know, I've listened to these other gentlemen talk, and ladies, and it's hard to follow a lot of these folks. I can just tell you that this is going to be Texas' Waterloo if it goes through. Okay? It's going to hurt us all	Refer to ED-1, ED-2, NR-3, SC-6, SC-7 and SS-23. The California High Speed Rail Project, as originally envisioned, was 800 miles in length with 24 stations. It is in no way comparable to

Eddie Moore	2/6/2018	Website	<p>I have been a Navarro County commissioner for over a year now, and this is the most outrageous idea I have seen come across my desk. Coming from my business background, this is a money pit. Also, trying to achieve eminent domain status for a private company to attempt to profit from is unconstitutional. This project will affect the water table, aquifer and the water shed that will affect all 26 endangered species that live in Navarro county. We have to look to the future and make good decisions that will affect our children and their children. This is our responsibility as being good citizens. Watching careless planning of a project of this magnitude, without getting a true environmental impact study done, not the one that the Army Corp of Engineers sent us but a true one, is frivolous spending of investors monies. There are better routes, less expensive to build, or save your money for later on when the HSR will actually work. The way that they have it planned, it will cause more damage than good, even if there were enough people to fill the rail both ways. It will change the way water drains from the basins and disrupt the underground water aquifers and permanently damage our ecology forever. I urge you, as courtesy to the federal government, to not allow eminent domain status given to the Texas Central Railroad, which at this time, doesn't even own a train or 1 mile of track, and plans to disrupt the economy, ecology and lives of thousands of concerned citizens who live here.</p>	<p>Refer to BA-8, ED-1 and NE-9.</p>

James Moore	1/14/2018	Letter	This project has already had a negative impact on me as I cannot move forward with any plans I have for my business and property. This has been for over 3 years.	Comment noted.
James Moore	1/14/2018	Letter	This project has already had a negative impact as CLS (Survey Company) threatened me with legal action if I did allow them access to my property. Strong arm tactics.	Refer to NE-8.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal as it will be impossible to pursue my professional and personal goals in reference to the noise and vibration that will be the result of this proposed project. The "NO Build Option" should be chosen as the option in final EIS.	Refer to NV-1 and NV-5.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal wellbeing as the "Need and Purpose" of the proposed project has NOT been shown viable. The "NO Build Option" should be chosen as the only viable option in the final EIS.	Refer to PN-3.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal wellbeing as the Reason Foundation has found the project could lose over \$500 million a year. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to GN-3.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal wellbeing as the Emergency Services will be negatively impacted by the proposed project. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to SS-23.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal wellbeing as the proposed project will adversely affect the school district and therefore taxes. The "NO Build the Viable option in the final EIS.	Refer to SC-6.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal wellbeing as the project has already affected the tax base and real estate market. The "NO Build Option" should be chosen as the only viable option in the final EIS.	Refer to VA-1.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my personal wellbeing as the proposed project will impact the Bird population I have been trying to encourage. The "NO Build Option" should be chosen as the Only viable option in the final EIS-	Refer to NR-1, NR-2 and NR-5.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my wellbeing as the proposed project will impact the wildlife I have been attracting through management. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to NR-1 and NR-5.
James Moore	1/14/2018	Letter	This project will have a negative impact on my personal wellbeing as I think we should develop our own transportation systems here in the US. with a long term nationally integrated plan. The "No Build Option" should be chosen as the viable option in final EIS.	Refer to BA-6.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on my as project will negatively impact known and sites. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to BA-6.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on all the hundreds of rescued and rehabilitating animals at the Todd Mission Rescue on County Road 302. The "No Build Option" should be as the only viable option in the final EIS.	The Todd Mission Rescue would be located over a quarter mile from the proposed operational corridor and well outside the area for noise effects on animals. The property would also be outside of the Project's construction limits of disturbance. As a result, no impacts to the animals or animal rescue operations would be expected.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on our roadways in county and region and cost of repair for the taxpayers of the county and state. The "NO Build Option" should be as the option in final EIS- Sincerely,	Comment noted.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on the environment due to potential uses and mishandling of hazardous and toxic materials and waste products of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Hazardous materials management and waste management during construction are discussed in Section 3.5.6.2, Hazardous Materials and Solid Waste, Mitigation Measures, HM-MM#2: Hazardous Materials Management and HM-MM#4: Waste Management.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on the attraction and development of business in the county and region as the result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to BA-6 and SC-19.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on the attraction and development of agricultural and farm business in county and region as the result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to LU-2 and LU-11. For more information about the Limits of Disturbance (LOD) effects on agricultural production and the overall farming economy, refer to Section 3.13.4 Land Use, Affected Environment.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on the attraction and development of horticultural business in the county and region as the result of construction. The "No Build Option"; should be chosen as the only viable option in the final EIS.	Refer to LU-2 and LU-11.
James Moore	1/14/2018	Letter	This project will have a negative impact directly on flooding and drainage in the County and region as the result of construction. The "NO Build Option should be chosen as the only viable option in the final EIS	Refer to FP-1, WW-1 and WW-2.
James Moore	1/14/2018	Letter	This will have a negative impact directly on my personal property and the privacy of my neighbors as the proposed project will negate the use of the community trail system we are developing. This trail system has been utilized by our residents and visitors alike. We will be much to overcome in regards to our "Durango Ranch Trails". Our trail system now has 4 distinct trails. Trangi Loop Winding Approximately 2 (Entire to back) Approximately 1 mile (1660 approx. Please refer to attachment for Durango Ranch Trails. This trail system is as currently our future plans	The Build Alternatives would not directly impact the property identified in the attached document. The attached document identifies trails that follow Durango Ranch Road, the HSR System would not intersect nor impact Durango Ranch Road. The Build

			include additional trails to be added that loop around natural habitat and watering lwes. The EIS process should be halted immediately as the need for this pr*ct has NOT been clearly shown. The "NO Build Option" should be chosen as the only Viable option in the final EIS.	Alternatives would cross County Road 302 on elevated viaduct, therefore no impacts to roadways would occur. Additionally, Durango Ranch appears to be a gated access neighborhood and no trails have been identified in aerial imagery or through publicly available information. No impacts to trails in the Durango Ranch neighborhood would be anticipated.
James Moore	1/14/2018	Letter	<p>I am a property owner and resident of a small subdivision of 12 lots in Grimes County, Texas developed and made available around 2008-09. I purchased Lot 7 in September of 2010 and began the process of site planning, clearing and building the infrastructure needed to make a home of it. We banded together to form a homeowners association in order to have a basic and uncomplicated set of building and farm and ranch rules. We meet on set occasions and have agreed verbally to do other neighborly things such as sharing of the duties taking care of the landscaping needs of our common frontage, property owners agreeing to share some of their property for common infrastructure (ie: refuse enclosure, electric service, vehicle entryway/security gate) as well as a sharing of the construction and maintainance of said infrastructure. We are here to live together and as individuals in the rural setting we all chose. We chose to live here for many reasons As an individual, I have my own specific set of reasons for being here. Too many to list here and so will spare you 99% of the details. I will expound briefly on a few of them. I am an American. This is where I want to live. I am a Texan. This is where I want to live. I enjoy the rural country lifestyle as opposed to being in an urban environment. This is where I chose to live. I have family in Texas. This is where I want to live. My uncle, Lynn Hilton, AS,USNR, born in Bryan Texas, gave his life in the service of his country on May 8, 1942 sometime around Noon on the U.S.S. SIMS. He now rests in an unmarked watery grave on the bottom of the Coral Sea. I never got to know him. He never got to know his great nephew "Lt. Cmdr. Mark McCauley" F-18 Hornet pilot or his Japanese wife Harumi and their 4 children. He volunteered for this at 17 years old. I know he did it for me. The nephew he didn't know. So I would be able to live free and happy and not have an oppressive government or any other entity encroaching on the rights clearly expressed to me in the Constitution of the United States. I know the following statement can be taken as over the top but when all of the private and public lands are gone having been procured by the U.S. Government and corporations via the government, what will be left ? I don't know where you live or where you choose to spend your time. I can only assume that at some time in your life you seek solitude and peace and quiet. What happens when there's no place to go. What if we were the best of friends and you wanted to visit my quiet retreat in the woods. I unfortunately may have to tell you that it's not so quiet and wonderful anymore. I may have to tell you, my dear friend, that coming here won't meet your needs of quiet and solitude. We will have to make other plans. Walking the community trail and enjoying the privacy and solitude will be out of the question. Sitting outdoors for a meal or a campfire will not be enjoyable. My plans for Yoga and Meditation and Native American ceremonies will be out of the question. Recording inside or outside professionally or for personal uses will be out of the question; unless of course it happens to be between midnight and six in the morning. No more plans for house concerts and get togethers of any kind. No more plans for a wildlife habitat. No more plans for enjoying the ground underneath my feet. After working hard my whole life I am now left with stress and anxiety of my future as it will surely be impossible for me to stay here after the installation of a high-speed train behind my property. Will I even be able to sell it? Would someone other than a manufacturer be interested in having this property. It's not that convenient for customers. There's no major highway within 30 minutes of here and the train certainly won't be stopping to pick up freight or people. No new service businesses to take advantage of all the people stopping by. It would be devastating and I will be lucky to get out of here with my shirt on. And what about my poor neighbors. Our nice entrance gate, our incoming infrastructure, postal boxes and roadway will be taken. Which one of our other neighbors property will have to be taken just to allow for a new roadway to get in? These questions have not been answered. There are many highly educated civil and construction engineers who have looked at this proposal and have indicated after much study that there are many flaws in the preparation of the DEIS. The determination of this group of individuals and the Reason Foundation report is that not only is this project not viable financially but that much of the data is skewed, incorrect or not directly applicable to the specific conditions locally. Would you send your child to a school knowing a bullet train would be passing nearby throughout the school day? Will you be putting up sound baffles at the school sites? Will you be putting sound baffles behind my home? Unanswered questions indeed. The comment period, in my opinion, is woefully inadequate considering how long it takes the NEPA process to run its course. You get to have years to take up our time and we only get a few weeks to respond. That's what I call "FAIR". The "No Build Option" should be chosen as the only viable option in the final EIS. It is the opinion of many that this EIS process be halted immediately to save the nations taxes and allow you and your staff to move on to the real matters that face the future of our country. If you so desire, my telephone number is listed below so you can contact me at your convenience if you would like more information concerning the above.</p> <p>Would you send your child to a school knowing a bullet train would be passing nearby throughout the school day? Will you be putting up sound baffles at the school sites? Will you be putting sound baffles behind my home? Unanswered questions indeed.</p>	<p>Refer to GN-3, NE-1, NE-9, NV-1, PI-1 and PI-3.</p> <p>As described in Section 3.4.3.2.3, Noise and Vibration, Operational Noise Impact Criteria, schools are considered in land use Category 3 and based on the results summarized in Section 3.4.5.2.4, Noise and Vibration, HSR Operational Noise Impacts, no impacts have been identified at schools.</p>

James Moore	1/14/2018	Handwritten	This project will have a negative impact directly on the scenic and aesthetic resource along Grimes County Road 302 as as other roads in the county and region. The "No Build Option" should be chosen as the only viable option in final EIS.	The area around Grimes CR 302 is heavily forested. Only those properties adjacent to the Project would see the train infrastructure. Please see Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences and KVP #24 for a simulation of the Project. Figure 3.10-19: Visual Quality Assessment – Landscape Unit #8 also provides an aerial view, which shows the amount of dense trees in the area.
James Moore	1/14/2018	Handwritten	This project will have a negative impact directly on the scenic and aesthetic resource Grimes County Road 302 as as Other in and regbn. The "No Build Option" should be chosen as the only viable option in final EIS.	The area around Grimes CR 302 is heavily forested. Only those properties adjacent to the Project would see the train infrastructure. Please see Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences and KVP #24 for a simulation of the Project. Figure 3.10-19: Visual Quality Assessment – Landscape Unit #8 also provides an aerial view, which shows the amount of dense trees in the area.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the water quality in the region due to construction pollution and runoff and changes to the natural topography. The "NO Build Option" should chosen as the only viable option in the final EIS.	Refer to WW-1 and WW-2.
James Moore	2/6/2018	Handwritten	This project will have a negative impact on the natural ecological systems and protected animal species as the result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS	For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
James Moore	2/6/2018	Handwritten	This project has already had a negative impact on me as I cannot move forward with any plans I have for my business and property. This has been for over 3 years. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to BA-6.
James Moore	2/6/2018	Handwritten	This project has already had a negative impact as CLS (Survey Company) threatened me with legal action if "I" did not allow them access to my property. Strong arm tactics. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to NE-8 and ED-2.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as it will be impossible to pursue my professional and personal goals in reference to the noise and vibration that will be the result of this proposed project. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to NV-1.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the "Need and Purpose" of the proposed project has NOT been shown viable. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to PN-3.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the Reason Foundation has found the project could lose over \$500 million a year. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to GN-3 and NE-1.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the Emergency Services will be negatively impacted by the proposed project. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to SS-23.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the proposed project will adversely affect the school district and therefore taxes. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to SC-6.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the proposed project has already affected the tax base and real estate market. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to VA-1.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the proposed project will impact the Bird population I have been trying to encourage. The "No Build Option" should be chosen as the viable option in the final EIS.	Refer to NR-2.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the proposed project will impact the wildlife I have been attracting through management. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to NR-2.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as I believe that we should develop our transportation systems here in the U.S. with a long term nationally integrated plan. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to BA-6.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on my personal wellbeing as the project will negatively impact known and unknown historical sites. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to CR-4.

James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on all the hundreds of rescued and rehabilitating animals at the Todd Mission Rescue on County Road 302. The "No Build Option" should be chosen as the only viable option in the final EIS.	The Todd Mission Rescue would be located over a quarter mile from the proposed operational corridor and well outside the area for noise effects on animals. The property would also be outside of the Project's construction limits of disturbance. As a result, no impacts to the animals or animal rescue operations would be expected.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on all our roadways in the county and region and the cost of repair will fall on the taxpayers of the county and state. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to TR-7 and TR-8.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the elderly and handicapped as travel times for caregivers, family and Emergency Services will be affected due to proposed project. The "No Build Option" Should be chosen as the only viable option in the final EIS.	The design of the Project will accommodate children, service dogs and handicapped civilians. There will be space to fit children in baby carriers and storage areas to stow strollers or other equipment passengers may require for mobility. The design of the Project will comply with the requirements to accommodate handicapped civilians and service animals as per the following Americans with Disabilities Act (ADA) regulations: 49 Code of Federal Regulations (C.F.R.) 37 - ADA Transportation Services for Individuals with Disabilities; 49 C.F.R. 38 - ADA Accessibility Specifications for Transportation Vehicles; and, 2010 ADA Standards for Accessible Design, dated September 15, 2010. Local jurisdictions would have review and permitting authority over detailed construction plans that include roadway modifications. Through this process, local jurisdictions would be expected to ensure no adverse impacts to emergency response times during the construction phase. Special care would be taken to coordinate the staging of multiple transportation projects to ensure emergency responders have adequate access to all parts of their service area throughout the construction phase. With implementation of mitigation measures described in Section 3.16.6.2, Safety and Security, Mitigation Measures and approval by the local jurisdictions and service providers, impacts to emergency response times would not be anticipated to be significant. Mitigation measures regarding safety and emergency services are discussed in Section 3.11.6.2, Transportation, Mitigation Measures of the Final EIS.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the environment due to potential uses and mishandling of hazardous and toxic materials and waste products of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Hazardous materials management and waste management during construction are discussed in Section 3.5.6.2, Hazardous Materials and Solid Waste, Mitigation Measures, HM-MM#2: Hazardous Materials Management and HM-MM#4: Waste Management.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the water quality in the region due to construction pollution and runoff and changes to the natural topography. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to WW-1 and WW-2.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the attraction and development of business in the county and region of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to ED-2 and LU-3.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the attraction and development of agricultural and farm business in the county and region as the result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to LU-2, LU-11 and WW-9. The Project's LOD represents a small fraction of the region's total agricultural productivity and is not expected to adversely impact agricultural sectors of the economy.
James Moore	2/6/2018	Handwritten	This project will have a negative impact directly on the attraction and development of horticultural business in the county and region as the result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to LU-2 and LU-11.
James Moore	2/6/2018	Handwritten	This project will have a negative impact on flooding and drainage in the county and region as the result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	Refer to FP-1, WW-1 and WW-2.

James Moore	2/6/2018	Oral	Good evening, folks. I didn't come with any prepared remarks. Good evening: or as they say in Japan: konbanwa_ I'm a relatively new resident to Oh: I'm sorry. My name is James Moore: and I am a resident of Grimes County: property owner. I haven't been here very long, I have no children, I don't have the legacy and all that: but I deeply feel for all of those - all of you who do. And it is very emotional and it is heart-wrenching that you can't imagine — that people not connected they just can't imagine it. So anyway: I feel for everyone. I'll probably be moving away if they put this train in: if I can: you know: eat my way out of what's left when ifs all done. But at any rate, it was very Important. I appreciate everybody thafs brought all the wonderful technical information. And I would all I would encourage everybody to do, exactly what some of the speakers have said: and tha€s please contact everybody that you can that lives far away. You know somebody in El Paso: give them a call and let them know about it. But I'm definitely for the no build option because it just doesn't seem very viable. And I appreciate the FRA's involvement and everyone else: and hopefully we can get more intake: get the TxDOT to be more responsive and other agencies that can come in and get their input as well that hadn't been allowed to or told that their input wasn't wanted. So anyway _ Appreciate it. Good night	Refer to BA-6, GN-4, NE-1, PI-1 and PI-7.
James Moore	2/6/2018	Website	This project will have a negative impact directly on the elderly and handicapped as travel times for caregivers, family and Emergency Services will be affected due to proposed project. The "No Build Option" should be chosen as the only viable Option in the final EIS.	Refer to TR-7 and TR-8.
James Moore	2/6/2018	Website	This project will have a negative impact directly on the natural ecological systems and protected animal species as result of construction. The "No Build Option" should be chosen as the only viable option in the final EIS.	For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Jim Moore	2/18/2018	Website	I think this High Speed Train is going to help with the growth in THE Houston and Dallas area. The stop near Bryan/College Station will make it easy for students, families, and others visit there more often. It will reduce the number of cars on the roads and will also be safer too. Texas will be a model for public/private projects for rest of the country.	Comment noted.
Mary Ann Moore	2/16/2018	Website	Dallas to Houston and then to Austin and then to Dallas!!!!!!!!!!!!!! The magic triangle!!	Refer to BA-2.
Fran Moore-Kershner	3/9/2018	Website	I do not foresee this project providing a benefit for the State of Texas. The cost of providing this service will not be offset by riders. I do not see the utilization of rail vs. plane/auto cost as being realistically feasible. There is no advantage of the cost of a ticket being lower than by air. There would not be a significant time saving. I see quality of life diminished significantly with the proposed route over much private land. This corridor will also impact surrounding areas with ongoing noise and required maintenance. A review of the failings of the SunRail system in Florida and cost issues with the proposed California High Speed Rail costs and delays should be studied. The federal money for this project would be better spent on our nation's basic infrastructure. Regards, Fran Moore-Kershner	Refer to BA-12, GN-2, GN-4, NE-1, NE-9, PN-3, SC-3 and SC-19.
Abel Morales	1/29/2018	Handwritten	<ol style="list-style-type: none"> 1. We have a farm that has livestock that we raise and cut hay for a living. The noise will stress our farm animals so they will not reproduce. 2. We are concerned about the water shed and about erosion. 3. We are concerned about the endangered species such as the bald eagle and monarch butterfly. 4. Re-routing roads so that it takes twice as long for emergency help to get to our farm in the case of an emergency. 	Refer to NR-1, NR-3, SG-1, SS-23 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures . The Monarch Butterfly is currently "Under Review" for listing by FWS.
Howard Moreland	2/22/2018	Email	I support the Texas Bullet Train and the mall station location! As a resident of Texas, I now have a project that I'm proud to support. Finally, a project that isn't lane widening. Texas has to get in front of this project. Let' s join the 21st century. I travel the world; Japan, China, Europe and marvel at their transponation systems. Then I arrive back in the USA and crawl along 290 northwest bound out of Houston. The USA is embarassingly behind. We have a chance- right now- to do something about road congestion, infrastructure, jobs. We must seize the moment. Build this train. This will put Texas on the map. Forward thinking, visionary projects are needed, Let's not be mired in the status quo. It's good for Texas!	Comment noted.

Sheryl Moreno	2/12/2018	Email	<p>Our home of 35 years will be taken as part of the rail right of way. We are long retired and planned our lives to age in place. This whole ordeal has already disrupted our lives and is causing undue stress. The prospect of finding a piece of property and building another home is overwhelming. Having to relocate will create a huge financial, emotional and physical burden. We are on fixed incomes and the property truces alone on a new property will be a major burden.</p> <p>This is where we raised our daughter and our grandchildren come to escape the subdivision. The kids love the open space to run and explore. My grandson and I planted numerous pine trees when he was 4 years old. He's 13 now and proud of his trees and how big they are. We enjoy the peace of our open space and the surrounding nature. There are bird feeders off our patio so we can enjoy the different birds all year round. We have bald eagles, red-cockaded woodpeckers, falcons and owls, only to name a few that nest and frequent our property. During the winter months, there are numerous other species that are not native to our area. The livestock all around lends a sense of tranquility. We have a large lily pond off our patio filled with gold fish (pets). It may seem ridiculous to some, but what's going to happen to our fish? The sound of the frequent passing trains will destroy the tranquility for miles. Sound carries for miles in the open countryside. It is not only absurd, but insulting to suggest people re-insulate their homes in order to live with the constant noise. Are they supposed to become prisoners, not able to enjoy the outdoors? It is proven that noise has an adverse affect on people's health and well being. This doesn't even address the hideous eyesore this thing will be.</p> <p>Our home has never flooded during all the extreme rain events. When the Hwy 290 bypass was being built in the early '90s, our house did become an island. Residents who lived in the area for generations and never flooded went under water. This was directly caused by the highway construction changing the lay of the land. The rail construction will have the same devastating results. My neighbors just to the north on Binford flooded during the last three years. In fact, the high water sign is in front of our property. The construction for the rail will exacerbate the current flooding issues and create new ones. Large sections of Binford Rd go under water with just heavy rain, not even an extreme rain event. This area is upstream for Cypress Creek and all areas East and South. The same areas that experienced devastating flooding from Harvey and the floods of 2016 and 2015.</p> <p>This rail project is destruction on a colossal scale that will upend lives, families, the environment, wildlife, farm and ranch land and more, just to line the pockets of a few. How does a for profit company have the right to come in and destroy lives? We were already intimidated and threatened with legal action if we didn't allow access to our property. We are very concerned that we will be forced to accept whatever is offered for a buyout and basically put out on the street. They are depending on the fact that we do not have the finances for an attorney to fight them. All of this is a very frightening prospect that is keeping our lives in limbo. One just needs to look at the California high speed rail fiasco to see what will happen in Texas.</p> <p>The FRA is paid by our true dollars. They should listen to the voices of the people and cities between Houston and Dallas who will be destroyed. The FRA needs to extend the period of public meetings and input. The very short time frame allowed the public to express our objection has the appearance of collusion between TCRR and the FRA. There are a great many in the Houston area who either have not heard or do not fully understand how they will be impacted. There definitely need to be more meetings in the Houston/Cypress area. The TCRR has been exceptionally secretive and deceiving. All the facts need to be exposed. Please re-consider these issues.</p>	<p>Refer to FP-1, NE-1, NR-2, NR-3, NR-5, NV-1, PI-1, PI-3, PI-10, SS-17, WW-1 and WW-2.</p> <p>Sound is substantially diminished when transmitted from air to water, and therefore noise from the trains will not affect fish underwater. With regard to the effects on people, the FRA noise criteria are based on outdoor noise exposure and have been designed to account for annoyance which can indirectly affect human health and wellbeing. Home insulation is just one of multiple potential mitigation options that could be utilized and that would be paid for by TCR where mitigation is required or deemed appropriate. The route near Binford Road would be constructed on a mix of embankment and viaduct. All of these areas will be constructed to avoid resulting in negative impacts to flooding.</p>

We have bald eagles, red-cockaded woodpeckers, falcons and owls, only to name a few that nest and frequent our property. During the winter months, there are numerous other species that are not native to our area. The livestock all around lends a sense of tranquility. We have a large lily pond off our patio filled with gold fish (pets). It may seem ridiculous to some, but what's going to happen to our fish? The sound of the frequent passing trains will destroy the tranquility for miles. Sound carries for miles in the open countryside. It is not only absurd, but insulting to suggest people re-insulate their homes in order to live with the constant noise. Are they supposed to become prisoners, not able to enjoy the outdoors? It is proven that noise has an adverse affect on people's health and well being. This doesn't even address the hideous eyesore this thing will be.</p> <p>Our home has never flooded during all the extreme rain events. When the Hwy 290 bypass was being built in the early '90s, our house did become an island. Residents who lived in the area for generations and never flooded went under water. This was directly caused by the highway construction changing the lay of the land. The rail construction will have the same devastating results. My neighbors just to the north</p>	<p>Refer to FP-1, NE-1, NR-2, NR-3, NR-5, NV-1, PI-1, PI-3, PI-10, SS-17, WW-1 and WW-2.</p> <p>Sound is substantially diminished when transmitted from air to water, and therefore noise from the trains will not affect fish underwater. With regard to the effects on people, the FRA noise criteria are based on outdoor noise exposure and have been designed to account for annoyance which can indirectly affect human health and well being. Home insulation is just one of multiple potential mitigation options that could be utilized and that would be paid for by TCR where mitigation is required or deemed appropriate. The route near Binford Road would be constructed on a mix of embankment and viaduct. All of these areas will be constructed to avoid resulting in negative impacts to flooding.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>on Binford flooded during the last three years. In fact, the high water sign is in front of our property. The construction for the rail will exacerbate the current flooding issues and create new ones. Large sections of Binford Rd go under water with just heavy rain, not even an extreme rain event. This area is upstream for Cypress Creek and all areas East and South. The same areas that experienced devastating flooding from Harvey and the floods of 2016 and 2015.</p> <p>This rail project is destruction on a colossal scale that will upend lives, families, the environment, wildlife, farm and ranch land and more, just to line the pockets of a few. How does a for profit company have the right to come in and destroy lives? We were already intimidated and threatened with legal action if we didn't allow access to our property. We are very concerned that we will be forced to accept whatever is offered for a buyout and basically put out on the street. They are depending on the fact that we do not have the finances for an attorney to fight them. All of this is a very frightening prospect that is keeping our lives in limbo. One just needs to look at the California high speed rail fiasco to see what will happen in Texas.</p> <p>The FRA is paid by our true dollars. They should listen to the voices of the people and cities between Houston and Dallas who will be destroyed. The FRA needs to extend the period of public meetings and input. The very short time frame allowed the public to express our objection has the appearance of collusion between TCRR and the FRA. There are a great many in the Houston area who either have not heard or do not fully understand how they will be impacted. There definitely need to be more meetings in the Houston/Cypress area. The TCRR has been exceptionally secretive and deceiving. All the facts need to be exposed. Please re-consider these issues.</p>	
Ashley Morgan	2/23/2018	Website	I disagree with the proposed route of the High Speed Train that would divide the exceptional property referred to as the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals. Moving the HST route north of the already existing power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Morgan	2/23/2018	Website	I am 100% oposed to the High Speed Train route that will divide the Morgan Legacy Farm. This property that has served a significant number of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for tons of individuals, such as physicians. Instead of using the proposed route that will destroy a property that provides incredible support to their community, I am of the opinion that moving the the HST would have less of an impact by moving the route north of the already existing power lines.	Refer to LU-5.

Ashley Morgan	2/24/2018	Website	I am adamantly opposed to the route proposed for the High Speed Train. This route runs right through a working ranch, Morgan Legacy Farm. Not only are there significant changes in elevation that, in my opinion will cause incredible watershed issues, I am also concerned with the economical impact it will have on Navarro County. A move north of the already exisiting power lines would have less of an impact on Morgan Legacy Farm, and preserve the business that it provides to other suppliers in the community.	Refer to LU-5.
Ashley Morgan	2/24/2018	Website	I am 100% oposed to the High Speed Train route that will divide the Morgan Legacy Farm. The proposed route will occupy high elevation, which in my opinion will create significant watershed issues. The proposed route also cuts off one of the significant attributes to the Ranch, causing a negative historical impact not only for Morgan Legacy Farm, but for Navarro County. Making a change in the route by moving it North of existing power lines would have less of an impact on Morgan Legacy Farm, as well as the history of Morgan Legacy Farm and Navarro County.	Refer to LU-5.
Ashley Morgan	2/25/2018	Website	I adamantly oppose the proposed route of the HST. The route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. These watershed issues, in my opinion, would adversely affect the wildlife on Morgan Legacy Farm and surrounding areas. Moving the route north of the existing will prove less damaging to the county and Morgan Legacy Farm.	Refer to LU-5.
Ashley Morgan	2/25/2018	Website	I firmly oppose the route of the High Speed Train. The proposed route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. These watershed issues, in my opinion, would negatively affect the US migratory waters. Moving the route north of the existing will prove less damaging to the environment.	Refer to LU-5.
Ashley Morgan	2/26/2018	Website	I oppose the proposed route of the High Speed Train that cuts through Morgan Legacy Farm. It is a unacceptable that this property would no longer be able to serve as a retreat for hundreds of individuals that serve our community, but that it could also, in my opinion, do great damage to the wildlife due to the watershed changes that would be caused by extreme changes in elevation. Please move the route north to the already existing power lines, allowing this farm to continue to serve our community, wildlife that migrates included.	Refer to LU-5.
Ashley Morgan	2/26/2018	Website	I am adamantly opposed to the proposed route of the High Speed Train that will divide Morgan Legacy Farm. It is so sad that this property would no longer be able to serve as a learning environment to individuals such as students and Scouts. Moving the route north of the already existing power lines, will allow this farm to continue to act as a teaching environment.	Refer to LU-5.
Ashley Morgan	2/26/2018	Website	The proposed route of the High Speed Train that cuts through Morgan Legacy Farm is a disgrace. This property has provided sanctuary to wildlife, as well as to hundreds of individuals. Medical Residents and First Responders are just a few that serve our community that retreat to this beautiful ranch to spend time with their families. Please let this property continue to serve the wildlife and our community by moving the HST route north of the already existing power lines.	Refer to LU-5.

Ashley Morgan	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about charitable benefits.	Refer to LU-5.
Ashley Morgan	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. Ashley Morgan	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement	Refer to LU-5 and TR-10.
Ashley Morgan	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already	Refer to LU-5.
Ashley Morgan	2/28/2018	Email	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.

B K Morgan	2/27/2018	Email	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	
BK Morgan	2/26/2018	Website	I would request the FRA consider moving a small potion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn,colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying there ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.

BK Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property their are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.
BK Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.

There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.
BK Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.
Bob Morgan	1/29/2018	Oral	Good evening. My name's Bob Morgan I'm speaking about -- not in favor or opposed in general to the route, I'm asking that the FRA re-examine some of the route to deal with potential human impact. Specific portion is 709 and 3194 where there's a piece of property that's located that consists of a lodge, four homes, cottages. The -- one of the first original rodeo buildings ever built in Navarro County that serves as a charitable purpose for first responders, police officers, firemen. A typical example is when Yu Darvish wants to sponsor the children who survived the Japanese tsunami who came over and spent several days at the ranch. Police officers, firemen, physicians in training, people dealing with stress and emotion that all live within walking distance while they're there to central gathering areas to deal with stress and emotional stress. It contributes to the society benefit. And I think when we talk about Houston and Dallas, we're thinking volumes, but you don't think about the volumes of people served by our rural communities, whether it be agricultural or service. This particular facility has had over 900 visitors in 5 years, all at no charge. Many of them suffering from emotional stress from whether they're deploying or not deploying. And the route leaves the utility easement for approximately seven miles and bisects this property separating the lodge from the homes, the rodeo -- (Inaudible) -- which will render the property useless for charitable purposes. I would ask that the FRA re-examine the route and consider moving back onto the utility easement, which is topographically more appropriate, already condemned for public utility, and will be most appropriate from a cosmetic view to have a high-speed railroad run parallel to the lines as opposed to 2,000 foot south bisecting the ranch. Thank you for your time.	Refer to LU-5.
Bob Morgan	2/24/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5 and TR-10.
Bob Morgan	2/24/2018	Website	This is a comment from individuals who have visited the ranch Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic	Refer to LU-5 and NR-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutilple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	
Bob Morgan	2/26/2018	Website	I would request the FRA consider moving a small potion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn,colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying there ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.
Bob Morgan	3/2/2018	Email	This is a comment from a visitor to Morgan Legacy Farm. This facility is made available to first responders nurs s and other healthcare providers and is invaluable to the county, the state and even internationally. I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5.

Bobby Morgan	2/22/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Bobby Morgan	2/26/2018	Website	I would request the FRA consider moving a small portion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying their ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.
Bobby Morgan	2/26/2018	Website	At a time when we should be protecting waterfowl and native species the HSR will condemn thousands of sensitive acres that are privately owned, but heavily utilized by the native and migratory species. The Morgan Legacy Farm located near FM 709 and 3194 serves as nesting grounds for Mexican Black-belly Whistling ducks as well as several other migratory species who winter here in Texas. The construction of the HSR will permanently destroy this habitat as the tunnel and rail will permanently occlude the watershed. I am opposed to this project!!!	Refer to LU-5.
Bobby Morgan	2/26/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Bobby Morgan	2/27/2018	Website	This project on current path will destroy the land of Morgan Legacy Farm. The Morgan Legacy Farm located near FM 709 and 3194 is an irreplaceable site that has hosted weddings (including my own) and hundreds of meetings, gathering, and reunions. Churches, hospitals,	Refer to LU-5.

Refer to LU-5.
Bobby Morgan	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Bobby Morgan	2/28/2018	Email	I have strong opposition about the high-speed rail in Navarro County traveling through the intersection of 709 and 1394 destroying Morgan Legacy Farm along with the water habitats of several rare waterfowl species. With so many other potential sites with less impact on water and landowners I can't support the current path through this important land	Refer to LU-5.
Bobby Morgan	2/28/2018	Email	At a time when we should be protecting waterfowl and native species the HSR will condemn thousands of sensitive acres that are privately owned, but heavily utilized by the native and migratory species. The Morgan Legacy Farm located near FM 709 and 3194 serves as nesting grounds for Mexican Black-belly Whistling ducks as well as several other migratory species who winter here in Texas. The construction of the HSR will permanently destroy this habitat as the tunnel and rail will permanently occlude the watershed. I am opposed to this project!!!	Refer to LU-5.
brenda MORGAN	2/21/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about significant identified loss of wetland that will be lost by running the train through the high point of water shed underground blocking the flow necessary to fill multiple waters on Morgan Legacy farms including the track of water used for hunting by Bald eagles and as a roost for multiple species of ducks.	Refer to LU-5, NR-2, NR-3, WW-1 and WW-2.
Brenda Morgan	2/22/2018	Website	I am writing this comment to oppose the location of the High Speed Rail. Currently the route cuts through Morgan Legacy Farm located on FM 709 and 3194. This ranch serves as a retreat (free of charge) to many medical service providers. The location of the route goes directly in front of the main lodge separating the rodeo arena, cabins and pastures (that are used for cattle). There will be no way to access these areas with the needed equipment to provide care for the cattle. Also this takes away from the ones using the ranch for retreat purposes. If the route was moved north of the existing power lines it would be saving Morgan Legacy Farm so it can continue to serve the community.	Refer to LU-5.
Brenda Morgan	2/22/2018	Website	I am opposed to the High Speed train destroying a beautiful ranch that has been used for many charitable events. Morgan Legacy Farm provides a wonderful setting for many nurses and doctors, boy scouts, church groups and etc. This ranch has been a sanctuary for wildlife and the families that can enjoy seeing animals they don't normally get to see in the city. In addition to this there are places to meditate, walk in the woods and watch beautiful sunsets. All of this will be ruined if the current route chosen cuts through the Morgan Legacy Farm located at FM 709 and 3194. I strongly ask you to move the route north of the power lines to an existing easement which will allow Morgan Legacy Farm to continue to be a huge benefit to our community.	Refer to LU-5.
Brenda Morgan	2/22/2018	Website	I would like to express concerns regarding the High Speed Rail going through Morgan Legacy Farm located at FM709 and 3194. This ranch has benefitted over thousands of people. Serving as venues for weddings (one was for a young man going into the air force), used for charitable organizations, family retreat (recently for a family to spend time together before their father was deployed). The route chosen will literally destroy the ranch and the opportunity to serve the community.	Refer to LU-5.
Brenda Morgan	2/23/2018	Website	I am opposed to the train destroying the Morgan Legacy Farm located at FM709 and 3194! The impact of the High Speed rail is going to negatively impact the environment and migratory waters of this area. Not only those issues, but the economical and historical factors that are an important role that Morgan Legacy Farm plays in the community of Navarro County. I strongly suggest that the northern route be revisited.	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			There is an existing route of power lines that has already been cleared and seems to make sense to utilize that area which already been destroyed.	
Brenda Morgan	2/23/2018	Website	I am opposed to the train destroying the Morgan Legacy Farm located at FM709 and 3194. This ranch is located at one of the highest elevations in Navarro county which will bring significant watershed issues. That being said it will be a trickle down negative effect on the migratory waters, wildlife and then economical. The route north of the power lines seems to be a better location for this train.	Refer to LU-5.
Brenda Morgan	2/23/2018	Website	I strongly oppose the High Speed trains current route which divides the Morgan Legacy Farm located near FM709 and 3194. The negative impact of this location will effect the wildlife that is on the ranch. Most recently there has been a bald eagle sighted on many occasions swooping down to get a fish from the 8 acre lake that is on the property. I would ask that the route be moved north of the power lines.	Refer to LU-5, NR-3.
Brenda Morgan	2/23/2018	Website	I am strongly opposed to the High Speed train destroying the Morgan Legacy Farm located at FM709 and 3194. This ranch is unique in that the environment has been well cared for thus allowing wildlife to exist. The fact that one of the highest elevations in Navarro County is on the ranch. The train disrupting this area is going to impact the watershed which will disrupt the environment. A move to the north of the existing power lines would have less impact on the environment.	Refer to LU-5.
Brenda Morgan	2/24/2018	Website	I am strongly opposed to the rail going through Morgan Legacy Farm located at FM709 and 3194. I am concerned about the watershed issues this will create. I ask that you move the rail to north of the power lines. There is already an existing easement available that will be less of an impact on the environment.	Refer to LU-5.
Brenda Morgan	2/24/2018	Website	I am opposed to the rail going through Morgan Legacy Farm located at FM709 and 3194. The train will cut off the rodeo arena and two guest homes on the ranch. This ranch has been used for many charitable events. By cutting these off the ranch cannot continue the charitable work for the community. The trickle down effect is the community losses the access to the ranch and the economical (as Morgan Legacy Farm utilizes the vendors of Corsicana). Also the property no longer has the special feel by a train going by ever so often. I ask you to reconsider going north of the power lines.	Refer to LU-5.
Brenda Morgan	2/24/2018	Website	I would like to suggest that you reconsider going north of the power lines. There is already an easement which I would think would have less impact on the environment. By starting all over with the proposed route you will be effecting the watershed, wildlife, environment, and possibly historical artifacts. The damage that will be created by this route will take years to recover, if it recovers at all.	Refer to LU-5.
Brenda Morgan	2/24/2018	Website	I strongly oppose the High Speed Rail going through Morgan Legacy Farm located at FM709 and 3192. The impact of this train is going to create watershed and environmental issues. I think the northern routes should be revisited. There is already an easement for the power lines, it makes sense to utilize what is already available and not destroy more valuable farm land.	Refer to LU-5.
Brenda Morgan	2/24/2018	Website	I am opposed to the High Speed Train cutting through Morgan Legacy Farm located at FM709 and 3192. This ranch has been used for many of our nurses, doctors policemen, firemen and many other first responders as a place to be able to catch their breath and restore themselves. By placing the train there they will no longer be able to use it because of the damage that will be done to the ranch. So not only is the damage one issue but so are the effects on the environment, economic losses and charitable benefits that will no longer be available to the first responders	Refer to LU-5.
Brenda Morgan	2/25/2018	Website	I am strongly opposed to the High Speed rail going through Morgan Legacy Farm located at FM709 and 3194. The enviroment, wildlife and watershed is going to be greatly impacted by this train. The is already in easement locted north where there are exisiting power lines. this area has already been cleared and should be revisited for the High Speed rail.	Refer to LU-5.
Brenda Morgan	2/25/2018	Website	I am opposed to the High Speed Rail destroying Morgan Legacy Farms located at FM 709 and 3194. Other than the environmental and water shed issues it will bring, it will destroy a place that has been created for charitable events. There has never been a charge for anyone who has ever stayed at the ranch. Most of those who have stayed at the ranch have been nurses, doctors, and those who serve for our country. I request that you look to the north where there is an existing easement of power lines.	Refer to LU-5.
Brenda Morgan	2/25/2018	Website	I strongly request that the route the High Speed Rail be revisited. The route proposed now will impact the water shed in Navarro County. It seems most logical to run the route along the existing power line easement. Especially because of the inability for the farms and ranches on 3194 to be able to have access to their properties. It is hard to understand why there is a need to destroy another line of land when there is already land cleared with the power lines.	Refer to LU-5.
Brenda Morgan	2/25/2018	Website	I am opposed to the High Speed Rail going through Morgan Creek Farm located at FM709 and 3194. I would ask that this route be moved north of the existing power lines. The impact it will have to the area will be extremely harmful to the wildlife. I also believe that there are Native American artifacts on Morgan Legacy Farm actually that have been found right where the train is actually proposed to run through. I strongly ask that this route be moved from the FM709 and 3194 location.	Refer to LU-5.
Brenda Morgan	2/25/2018	Website	I am concerned about the High Speed Train project's proposed location in Navarro County near FM709 and 3194. In this area the has been multiple observations of an bald eagle flying down into the lake located at Morgan Legacy Farm. The impact of an area been completely	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			destroyed will have a huge impact on the wildlife that the Morgan's have so carefully tried to protect. The is already a power line easement north of the proposed route. I would strongly suggest that the easement be considered instead of the proposed route.	
Brenda Morgan	2/26/2018	Website	I am highly opposed to the train destroying Morgan Legacy Farm. Moving the route north of the existing power lines would not only save the ranch but create less of an impact on the environment. It would be so incredibly harmful to the wildlife if the existing route moves forward.	Refer to LU-5.
Brenda Morgan	2/26/2018	Website	Perhaps one of the greatest purposes of Morgan Legacy Farm has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.I am strongly opposed to the train destroying such a culturally, economically, historically, and charitable ranch that is unlike any other property in the county.	Refer to LU-5.
Brenda Morgan	2/26/2018	Website	I strongly oppose this route. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save Morgan Legacy Farm which is a unique and irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose.	Refer to LU-5.
Brenda Morgan	2/26/2018	Website	Morgan Legacy Farm serves as a retreat (free of charge) to many medical service providers. The location of the route goes directly in front of the main lodge separating the rodeo arena, cabins and pastures (that are used for cattle). There will be no way to access these areas with the needed equipment to provide care for the cattle. Also this takes away from the ones using the ranch for retreat purposes. If the route was moved north of the existing power lines it would be saving Morgan Legacy Farm so it can continue to serve the community.	Refer to LU-5.
Brenda Morgan	2/26/2018	Website	Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur.	Refer to LU-5.
Brenda Morgan	2/26/2018	Website	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term.	Refer to LU-5 and NR-2.
Brenda Morgan	2/26/2018	Website	It is important to recognize that Morgan Legacy Farm has served as an emotional release for health care providers, first responders and military. Aside from the environmental impact- destroying this ranch/property will have a much deeper impact than if the preferred route is moved near the existing power lines.	Refer to LU-5.
Brenda Morgan	2/26/2018	Website	I would request the FRA consider moving a small potion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn,colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying there ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	The preferred route of this rail travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory water fowl of the US.	Refer to WW-1.
Brenda Morgan	2/27/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provide. Especially to first responders, doctors and nurses that need a respite more than most. And no one is ever charged for the use of this special ranch that has opened itself up to the community and the world- even having tsunami victims seek comfort there! Do not rip that from the community and those who need it the most- not when another more suitable and less destructive route is possible!	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	This route through Morgan Legacy farm causes multiple issues that are truly detrimental to migratory waters, the bald eagle habitat and have a huge impact on the environment that is totally unnecessary. There is an alternate route along the power lines with an existing easement that would make much more sense and not destroy all that Morgan Legacy Farm protects. Destruction of this safe haven is deplorable.	Refer to LU-5.

Brenda Morgan	2/27/2018	Email	This route through Morgan Legacy farm causes multiple issues that are truly detrimental to migratory waters, the bald eagle habitat and have a huge impact on the environment that is totally unnecessary. There is an alternate route along the power lines with an existing easement that would make much more sense and not destroy all that Morgan Legacy Farm protects. Destruction of this safe haven is deplorable.	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. The charitable benefits are something that can truly not be found anywhere else in the area. The benefit the first responders are given at Morgan Legacy Farm is simply not available at any other venue and the value that providing all of it at no cost is immeasurable. There is a suitable alternate route that would not destroy all that the ranch has to offer the community. I highly oppose the current route and am so disappointed the destruction of such a community asset would even be considered.	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US.	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	By separating access on the Morgan Legacy Farm property from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term.	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	There couldn't possibly be a reason to destroy Morgan Legacy Farm in lieu simply moving the rail to north of the existing power line easement.It seems much more appropriate to run the train next to a high voltage power grid already existing. Making the environmental issues far less detrimental to the county. The property and environment that would be destroyed on Morgan Legacy Farm could not be replaced. I strongly oppose the current proposed route.	Refer to LU-5.
Brenda Morgan	2/27/2018	Email	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	Refer to LU-5.
Brenda Morgan	2/28/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Submitted By	Date Submitted	Submission Type	Comment	Response
Brenda Morgan	2/28/2018	Email	I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. And by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables -the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel.	Refer to LU-5.
Brenda Morgan	2/28/2018	Email	Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line.	Refer to BA-5, BA-7, BA-8 and TR-8.
Brenda Morgan	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.
Brenda Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property there are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.

Brenda Morgan	3/1/2018	Email	I recently became aware of the possible loss of a property due to the proposed route of the HSR. This property listed as Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur.	Refer to LU-5.
Brenda Morgan	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Brenda Morgan	3/1/2018	Email	I strongly oppose the loss of watershed and loss of water for migratory waterfowl at Morgan Legacy Farms, given the topography construction go this rail would be better suited north of the ranch along the existing power lines.	Refer to LU-5.
Brenda Morgan	3/1/2018	Email	Morgan Legacy Farm holds cultural, historical, economic and unique emotional benefits to the county, the state and also has international significance. It cannot be destroyed by the proposed route- I urge the rail to move the route north near the existing power lines and allow Morgan Legacy Farm to continue to serve the community.	Refer to LU-5.
Brenda Morgan	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has	Refer to LU-5, WW-1 and WW-2.

A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about The impact on limited areas for special charitable giving events.	Refer to BA-3 and WW-2.
Brenda Morgan	3/1/2018	Email	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.

Brenda Morgan	3/1/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared.	Refer to LU-5.

Brenda Morgan	3/2/2018	Email	This is a comment from a visitor to morgan Legacy Farm. I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5.

Brenda Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.

Brenda Morgan	3/3/2018	Email	I would request the FRA consider moving a small portion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying their ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.

			literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	
Brenda Morgan	3/3/2018	Email	I would request the FRA consider moving a small portion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying their ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.

Brenda Morgan	3/3/2018	Email	I am concerned about the environmental impact near FM 709 and 3194 should the preferred route be utilized in this high topography area in Navarro County. Morgan Legacy Farms is a highly managed facility that is dedicated to promoting migratory bird wetlands. In addition the ranch provides hunting waters for several bald eagles that feed in a lake that may be lost if the preferred route is not slightly moved to a less impactful route. The ranch has a program currently to release quail under a bird release permit. If the proposed route crossing near FM 709 and 3294 is not moved to a more appropriate path paralleling already existing high tower power lines there will be significant impact to migratory birds and a loss of a natural habitat supporting the local fauna.	Refer to LU-5.

Brenda Morgan	3/6/2018	Website	I would like to request that the FRA and Texas Central rail revisit the preferred route that has be chosen. This route will have an enormous impact to the water shed, the environment and wildlife near, on and around Morgan Legacy Farm which is located at FM 709 and 3194. I would hope you would consider the existing power line route that has already been cleared. When the existing route of power lines was put in place it took seven years for the wildlife to start coming back into the area, which we are still not at the full amount there was before building the switching station. Now with the watershed issue I fear we may never recover from the impact this train will make in this area. Please reconsider the existing powerline route before destroying this new area.	Refer to LU-5.
Brenda Morgan	3/7/2018	Website	I have concerns regarding the high speed rail cutting through Morgan legacy Farm located at FM 709 and 3194. This is one of the highest elevations in Navarro County and i believe that this will effect the watershed and the environment to this are. I would ask that you reconsider the rail to be moved north of the existing power lines.	Refer to LU-5.

			unusable because of the location. The train will cut through the very middle of the lodge and cabins, rodeo arena, stables and pavilion. This will destroy the ranch and its ability to continue to provide for the community. To the north there is an already existing power line easement that should be considered for the rail. I ask you to please look at the route to keep from destroying Morgan Legacy Farm.	
Brenda Morgan	3/7/2018	Website	I have concerns regarding the high speed rail cutting through the Morgan Legacy Farm located at FM 709 and 3194. The rail will cut the ranch in half at the core of the family oriented area used by many people for retreats, reflection and just good old family time. It will become unusable because of the location. The train will cut through the very middle of the lodge and cabins, rodeo arena, stables and pavilion. Brenda Morgan	3/7/2018	Website	I would like to strongly suggest that the projected route for the high speed rail be moved to the northern route. Under the current preferred route it cut the Morgan Legacy Farm (located at FM 709 and 3194) in half. With that in mind the ranch will be destroyed. This will effect the watershed which will have a large effect on the environment and wildlife in that area, also will effect the ability to grow hay and raise cattle. I would ask that you reconsider moving the rail to the existing power line easement just north of the area.	Refer to LU-5.

Brenda Morgan	3/7/2018	Website	I would ask that the FRA reconsider the proposed route for the high speed rail. The current route cuts through Morgan Legacy Farm located at FM 709 and 3194. The ranch has been a haven for the wildlife and has also been an area where there has been found native american Indian artifacts. The Kickapoos were one of the tribes that was in the area and they generally would locate their campsites high on a hill but close to water such as the Richland creek. It is unclear if this area has been looked at to see if there is a burial ground where the rail will be running through. I would ask that the northern route where the power lines already exist be reconsidered to protect the history and culture of Morgan Legacy Farm.	Refer to LU-5.
Brenda Morgan	3/7/2018	Website	I would ask that the FRA reconsider the proposed route for the high speed rail. The current route cuts through Morgan Legacy Farm located at FM 709 and 3194. The ranch has been a haven for the wildlife and has also been an area where there has been found native american Indian artifacts. The Kickapoos were one of the tribes that was in the area and they generally would locate their campsites high on a hill but close to water such as the Richland creek. It is unclear if this area has been looked at to see if there is a burial ground where the rail will be running through. I would ask that the northern route where the power lines already exist be reconsidered to protect the history and culture of Morgan Legacy Farm.	Refer to LU-5.
Brenda Morgan	3/7/2018	Website	I would ask that the FRA reconsider the proposed route for the high speed rail. The current route cuts through Morgan Legacy Farm located at FM 709 and 3194. The ranch has been a haven for the wildlife and has also been an area where there has been found native american Indian artifacts. The Kickapoos were one of the tribes that was in the area and they generally would locate their campsites high on a hill but close to water such as the Richland creek. It is unclear if this area has been looked at to see if there is a burial ground where the rail will be running through. I would ask that the northern route where the power lines already exist be reconsidered to protect the history and culture of Morgan Legacy Farm.	Refer to LU-5.
Brenda Morgan	3/7/2018	Website	I have significant concerns regarding the High Speed Rail cutting through Morgan Legacy Farm located at FN709 and 3194. Knowing this is one of the highest elevations in Navarro County I believe there will be significant damage to the water shed and the environment.	Refer to LU-5, WW-1 and WW-2.
Brenda Morgan	3/7/2018	Website	I have concerns about the high speed rail cutting through Morgan Legacy Farm located at FM 709 and 3194. I believe this will greatly impact the environment and wildlife in this area. I would ask that you consider running the rail along the existing power lines just north of this area.	Refer to LU-5. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Brenda Morgan	3/7/2018	Website	I have concerns about the high speed rail running through Morgan Legacy Farm located at FM 709 and 3194. I'm not only concerned about the environment but worried about how this will effect the intersection of FM 709 and 3194. Having the rail so close to the road will impact the farmers and ranchers all long 3194. I would ask that you reconsider running the rail along the existing power lines north of this intersection.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.
Brenda Morgan	3/7/2018	Website	I have concerns regarding the high speed rail cutting through Morgan Legacy Farms located at FM 709 and 3194. This ranch will be destroyed by the current location of this train. The ranch has been used for many charitable events, a retreat for many first responders and also for several international communities to see how we live here in Texas. I would like for you to reconsider using the power line easement for tis portion of the rail located just north of the ranch.	Refer to LU-5.
Brenda Morgan	3/7/2018	Website	I have concerns about the high speed rail cutting through Morgan Legacy Farm located at FM 709 and 3194. I believe this will impact the wildlife and the watershed of this area. I would ask that the route be reconsidered for the existing power line easement just north of the ranch.	Refer to LU-5, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Brenda Morgan	3/8/2018	Website	I would like to say I'm strongly against the High Speed Rail cutting through Morgan Legacy Farm located at FM 709 and 3194. The damage to the ranch will be devastating! The use of the collective housing structures will no longer be usable for families, first responders, and charity	Refer to BA-7, BA-8 and LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			events. Also the impact to the watershed and the environment will be just as devastating. All these factors will deem Morgan Legacy Farm to no longer be a viable ranch, which will be a horrific waste. The ranch currently grows hay, raises cattle and lets families come and visit free of charge. I ask The FRA to reconsider another route that already exist with power lines. By utilizing that route the impact would less damaging to the entire area.	
Brenda Morgan	3/8/2018	Website	and agricultural structure displacements when TxDOT criteria are met. I am also concerned the FM 3194 tie in to FM 709 is not located far enough from the new FM 709 Bridge over the high speed rail to meet vertical sight distance criteria for the turning maneuvers at the FM 709 and FM 3194 intersection. I do not have enough information to verify whether this criteria are met and suggest that you investigate this issue further. 3. Based on Google Street view and a site visit on February 2, 2018, I have identified numerous power line impacts for Segment 3A, some of which are not shown in the DEIS report. See Exhibits 3, 4, & 5. Exhibit 5 shows all the power line impacts I identified for both Segment 3A and Segment 3Z. These figures are tabulated in Part 2 of these comments. 4. The DEIS report has diagrams showing visual impacts across the project, but the main concern seems to be in around the stations. Exhibit 8 & 9 show the existing and proposed visuals of Segments 3A and 3Z around the FM 709 area. This segment of the rail may be in a lower density, rural area, but the Navarro County citizens are just as concerned with the visual impacts as the citizens around the stations in Dallas, Houston, and the Brazos Valley. Can higher quality visualizations be provided showing how the rail may look in these areas? What can be done to ensure the visual impacts are minimized? 5. Based on communication from the previous owners of Morgan Legacy Farms, Native American artifacts were regularly found following heavy rains in the area shown in Exhibit 4. Pursuant to discussion with Beth Reed of AECOM, a survey of the property should be conducted for both standing structures and archaeological resources as part of the Section 106 process.6. The land utilized by the Morgan Legacy Farms is subject to a charitable trust, and guests	Refer to LU-5 and NR-3.
Charles Morgan	1/31/2018	Oral	I'm Charles Morgan, I'm the Executive Director of Citizens For Environmental Clean Up. Works environmental issues in Freestone and surrounding counties. Main issues -- we have two issues with this high-speed train. Main reason we don't want it here. We don't need it here. They generate a low frequency noise and they have not defined that. They also use many megawatts 'cause electricity generates electromagnetic radiation that they have not defined and how it affects us. I want to tell you how it affects us. Low frequency noise creates a whole body pathology. I, myself, have been severely affected because of low frequency noise generated by gas and pressure stations. They're 130 of them in this county, but this train, we don't have a clue. They said, oh it'll only be there four seconds. Four seconds every 30 minutes. How long does it take for the noise to impact the brain or to impact the different organs in your body? The folks that live in Portugal name the affect of the low frequency noise vibroacoustic disease. It's a whole body pathology. Each low frequency impacts a different part of system on your body. It impacts your brain at 125 cycles per second. It will affect your eyes in 31.5 cycles per second. Each system is affected. We don't know how this is going to affect us, but we do know that it would travel 5 to 8 miles through the county -- 5 to 8 miles. 70 percent of the studies of the people who lived in Portugal -- 70 percent of the people who were studied are affected by this noise. Low frequency noise, any noise below 500 cycles per second. We have, today in this county, low frequency noise averaging 70 decibels across the county. EPA says 55 is the limit, but they only address the hearing range noise. We're talking about a noise that only seven percent of people can hear, but you're still affected and that's happening already. We don't need a low frequency noise adding to this out of this high-speed rail. The electromagnetic radiation, what's the limit on that? In Europe they said at .1 micro watts per square centimeter. Then in the United States they set the limit at 1,000, 10,000 -- times per day. And you're gonna have many megawatts of electricity being used with this train going down the track. It's gonna travel about two miles in any direction that's going to impact everybody also. That's their brain -These are major issues. Some of the issues are already being addressed by the railroad commission, but we need to have this -- you know, look at this stuff. You know, right now they're not even listening. So we don't need a high-speed rail here that is going to degrade our lives. Thank you.	Measurements of noise from TGV high-speed train operations in France indicate that LFN levels typically peak at a frequency of around 63 Hz, dropping off at frequencies below that. However, because the human ear is much less sensitive to noise in the low-frequency range, the LFN does not contribute significantly to the overall, A-weighted sound level, which is the noise metric prescribed by the FRA for noise impact assessment from high-speed train operations. Thus, during the brief periods of exposure during train passages, any annoyance effects will be predominantly due to higher frequency noise. Furthermore, the ear is the most sensitive organ in the human body for the perception of sound at low frequencies and, although vibration sensations can also occur in different parts of the body due to LFN, vibrotactile thresholds are well above the levels that people would be exposed to from high-speed train operations.
Dr Bob Morgan	3/2/2018	Email	This is a comment from a visitor to morgan Legacy Farm. I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of	Refer to LU-5.

Dr Robert Morgan	2/24/2018	Website	I wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy multiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks multiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high piers lines will little affect on access or growth along the route.	Refer to LU-5.

Dr Robert Morgan	2/24/2018	Website	I have concerns about the loss of an irreplaceable property that has provided literally hundreds of nurses physicians and other healthcare providers a much needed respite from the emotional stress of a high acuity pediatric health care environment. Morgan Legacy Farm has allowed free of charge for the providers at CHILDRENS to stay in the multiple homes, enjoy the lakes and use the stables, horses, meditation point, lodge and pavilion to obtain a much needed emotion break from the rigors of a tremendously stressful job. The is no other property within 100's of mile that provides this much needed service. I was extremely saddened to see the proposed high speed rail would destroy the use of this property blocking access to the various amenities and would destroy one of the primary purposes of the ranch. I would ask that the FRA consider moving the proposed route slightly north east of the ranch onto existing powerline easements in order to save this incredible property serving not just the county but the state and even the nation with its international visitors.	Refer to LU-5.
Robert Morgan (Five in Five, LLC)	2/24/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5 and TR-10.

Dr Robert Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.
Dr Robert Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Dr. Robert E Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property there are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.
Jean Morgan	2/8/2018	Website	I am not sure if this even counts. I vote for the NO Build of this rail. I can not believe that people will lose their homes, land, possibly everything that their families have work hard for. This just does not seem right. Why this train tracks doesn't go down the middle of IH 45 where no one would lose anything. Then what happens the train goes bankrupt. Who then is going to pay to keep this going? Why doesn't the people of the Great State of Texas vote if they want it or not. just don't understand why it is needed.	Refer to BA-9, NE-1, PN-3 and SS-5.
Krista Morgan	2/12/2018	Website	Been in this neighborhood for 55 yrs. This is a terrible terrible terrible idea. We cannot handle all of the traffic and bullshit we have now because of all these damn snowflakes and newbies moving here. We are a very tight knit community. We grew up together, went to school together. Sick and tired of all this so called progress. You know what we call the big houses that took place of the ones that have been in neighborhoods for years and years. McMansions. The snowflakes don't belong here and neither does this train station. Hope I am dead and gone before it gets started, if it's like anything else the city does, I will be. (No bad against our mayor. I like Mr. Turner)	Comment noted.
Krista Morgan	2/21/2018	Website	Regarding Morgan Legacy Farm off FM709. The high speed rail would impact the ranch, in a negative way, to an extreme amount. I believe there could be an alternative route that it could be built on so it wouldn't divide the ranch. I am strongly against the high speed rail.	Refer to LU-5.
Krista Morgan	2/22/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. My father in law has a staff with over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Krista Morgan	2/22/2018	Website	The high speed rail would greatly impact the Morgan Legacy Ranch in a negative way. We have spent many years visiting the ranch and we love everything about it. If the rail were to go through the property it would divide a lot of the guest cottages and arena from the rest of the ranch. The horses wouldn't be able to even get to the arena. The ranch is such a big part of so many peoples lives and I would hate to see that taken away. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Krista Morgan	2/23/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm Texas is becoming over ruled with progress. The rail would take away from the natural wildlife that the Morgan Legacy Farm is trying to protect. Moving it along the power lines would at least keep the farm all together and not disrupt the natural habitat of many animals.	Refer to LU-5.

Krista Morgan	2/23/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. Destroying guest houses on the farm will greatly impact what the farm is used for. Many service men and women are invited to the ranch, free of cost, to get away from their stressful jobs. By building the rail on the Morgan Legacy Farm it will take away how many people can visit. This is such a peaceful place, and splitting the farm will take that away. There are other routes the rail can be built. I would hate to see the rail ruin the peacefulness that so many service people need right now.	Refer to LU-5.
Krista Morgan	2/23/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. I am fully against the rail, but if it has to be built I would hope that you would consider not splitting up a ranch that protects wildlife, and so many other animals. There have been sightings of an eagle on the property and I would hate to see the rail disrupt its habit.	Refer to LU-5 and NR-3.
Krista Morgan	2/24/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. I am worried about what it will do to the natural wildlife. Texas has enough road ways and adding another form of transportation and taking more natural habitats away from animals will decrease the amount of wildlife that can survive.	Refer to LU-5. For information regarding impacts to wildlife please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife would be minimized by locating the HSR infrastructure adjacent to existing transportation infrastructure, utility corridors and other development. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Natural Ecological Systems and Protected Species, Mitigation Measures .
Krista Morgan	2/24/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed high speed rail route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5, WW-1 and WW-2.
Krista Morgan	2/26/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The rail will pollute the watershed on the property.	Refer to LU-5 and WW-1.
Krista Morgan	2/26/2018	Website	I would request the FRA consider moving a small portion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying their ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.
Krista Morgan	2/26/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm Texas is becoming over ruled with progress. The rail would take away from the natural wildlife that the Morgan Legacy Farm is trying to protect. Moving it along the power lines would at least keep the farm all together and not disrupt the natural habitat of many animals.	Refer to LU-5.
Krista Morgan	2/26/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The farm is a deer sanctuary, and I would hate to see that destroyed by a high speed rail.	Refer to LU-5.
Krista Morgan	2/27/2018	Email	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy multiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	
Krista Morgan	2/27/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm Texas is becoming over ruled with progress. The rail would take away from the natural wildlife that the Morgan Legacy Farm is trying to protect. Moving it along the power lines would at least keep the farm all together and not disrupt the natural habitat of many animals.	Refer to LU-5.

Krista Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property their are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.
Krista Morgan Hairstylist	3/2/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm Texas is becoming over ruled with progress. Krista Morgan	3/2/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. My father in law has a staff with over 100 employees and family members who visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

Krista Morgan	3/8/2018	Website	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. I have serious concerns about the proposed route in portions of Navarro County. I understand that overall the southern most route proposed may be the most appropriate as compared to the other two proposed routes however I believe the portion which travels south of 3194, not along the utility easement as suggested in the middle route, would create significant adverse environmental, economic and cultural history problems The proposed route parallels a county route which would require a large berm blocking access to property south of 3194. This would also create maintenance, water shed and inclement weather problems in my opinion. The proposed route could also block expansion of 3194 and future development	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>along 3194. The proposed route intersects a three-way intersection requiring significant engineering and rerouting of county roads and the access roads to surrounding properties. Given the topography of the area surrounding CR 709 and 3194 the train would both be significantly below grade and then rapidly elevated creating watershed issues, access issues, and cosmetically detractive issues. If the proposed route was blended in this small area with the already vetted middle route, both the train and tall high-tension power lines would run parallel thus creating less environmental and esthetic impact. It seems much more appropriate to run the train next to a high voltage power grid already existing rather than run more high towers. If this small move is made the train would cross 709 at an already existing utility easement and would not adversely affect the three way intersection and would not limit CR 3194. Ongoing road maintenance would be simplified as would water shed.</p> <p>My final and major concern is that the proposed route would destroy a highly developed economic, charitable and cultural Navarro County Ranch. Listed on tax roles as Morgan Legacy Farms. If the proposed route is utilized the rail project would cause the destruction of two of the homes on the ranch, the destruction of one of the first (if not the first) rodeo arenas ever built in Navarro County. Access to the horse bams, parking and Lodge would be lost rendering the ranch unusable for it's primary purpose. Just in the last 5 years the ranch has been visited by over 900 guests as a charitable property. Churches, Girl Scouts, Boy Scouts, Military Police, Fire and various city leaders as well as disadvantaged children from natural disasters. There is no other property like this facility located in Navarro County and perhaps within 100 miles. To destroy this icon rather than move the train route slightly nonh on an existing utility easement would create irreparable losses and damage to the county and those who benefit from the property.</p>

Mackenzie Morgan	2/21/2018	Website	<p>I have concerns about the routes in Navarro County and I am opposed to the chosen route. This rail will cut directly through a major property, Morgan Creek Ranch, and will destroy the wildlife on the property as well as take away the ability for the property to be able to host charity events, work retreats and weddings. This property has the capacity to impact the lives of many people in Texas and already has provided opportunities to many people that would never have access to see beautiful Texas country side, deer, goats, chicken, bulls, cows, donkeys, and a spectacular (unblemished by city) sunset. No other properties, that I know of have opened their doors to groups in Texas to host, no charge. I was married on the property and regularly visit the site to relive the wonderful day. It would be a travesty to desecrate a property that protects the wildlife as well as provides the people of Texas an opportunity view wildlife and a break from the city. Please reconsider the route that passes through Navarro County so that we may save a historical property.</p>	Refer to LU-5.
Morgan Legacy Farm	2/26/2018	Website	<p>I would request the FRA consider moving a small potion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying there ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving</p>	Refer to LU-5.

The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.
Mackenzie Morgan	2/26/2018	Website	I am opposed to the current proposed route of the train that would travel along 3194 in Navarro County. This route would affect the access to many properties/homes along 3194. Please move the path north parallel to the existing powerlines, which would affect fewer properties. It would be cheaper to build the railway here rather than paying settlements to all the families whose properties are affected by the 3194 route.	Refer to LU-5.
Mackenzie Morgan	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5, NR-3, WW-1 and WW-2.
Mackenzie Morgan	2/27/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5, TR-10 and WW-2.
Matthew Morgan	3/9/2018	Website	The construction of the high-speed rail could have a detrimental impact on the already heavily congested traffic areas of Cypress. Construction and the movement of materials and heavy equipment and workers along main thoroughfares crossing the path of the rail (Fry Road, Barker Cypress Road, Highway 6, North Eldridge Parkway, West Road, Jones Road, Gessner Road and Fairbanks N Houston Road) will impact the school districts transportation services and other traffic. Construction and the movement of materials should be scheduled in a way that minimizes the impact on traffic in the affected areas. In addition, it will be imperative to maintain good communication between Texas Central, Harris County officials and school district officials regarding the construction schedule and potential traffic disruptions.	Along the S.H. 290 corridor, the Project would be constructed on viaduct, and no roads would be rerouted or closed. Potential traffic impacts as a result of the construction and operation of the Project can be found in Section 3.11.5, Transportation, Environmental Consequences . Additionally, local jurisdictions would have review and permitting authority over construction plans and, through this process, would be expected to mitigate any significant adverse impacts to emergency response and school bus travel times during the construction phase.
Michelle Morgan	2/24/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared..all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

Michelle Morgan	3/6/2018	Website	I oppose any route of the Houston to Dallas High Speed Rail that would destroy the Morgan Legacy Farm, which is located near FM 709 and 3194. Alternative routes are available that would be less costly to build and more environmentally friendly, and therefore I oppose the current proposed route.	Refer to LU-5.
Michelle Morgan	3/8/2018	Website	I am opposed to the proposed route which parallels a county route, which would necessitate a large berm blocking access to property south of 3194. I am also opposed to this route due to maintenance, water shed, and inclement weather problems it may cause. The proposed route also intersects a 3-way intersection, which will require significant engineering and rerouting of county roads and the access roads to surrounding properties.	Refer to LU-5 and TR-10.

Refer to LU-5 and TR-10.
Michelle Alice Morgan	3/9/2018	Website	As a former board member of Altrusa International of Downtown Dallas and Housing Crisis Center of Dallas, I am deeply discouraged and concerned by the proposed location of the high speed rail, as it would destroy the Morgan Legacy Farm - a valuable property to non-profits and others who have benefited from using it. The year that I was Chair of Altrusa's annual fundraising event, Dessert First, the event raised significant sums, which allowed the foundation to give \$70,000 to a local charity, Kids-U, whose mission is to assist low income students. The generous donation of the use of Morgan Legacy Farms contributed to our ability to support this local charity (the primary beneficiary) as well as many other local charities through smaller grants and other support.	Refer to LU-5.
Pam Morgan	2/5/2018	Website	This high speed rail project is going to disrupt alot of farm and ranch lands, the impact to wildlife should also be considered. Its unfortunate that instead of choosing to route this on the I45 corridor, you choose to disrupt family farms and ranches. I believe that the taxpayers will wind up being on the hook for this boondoogle. Please reconsider this project. It is not needed in Texas.	Refer to BA-5, BA-9, NE-1, GN-2, GN-4, LU-11, NE-9, NR-5 and PN-3. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
R Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property their are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.

Remi Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.
Robert Morgan	2/22/2018	Website	At a time when we should be protecting waterfowl and native species the HSR will condemn thousands of sensitive acres that are privately owned, but heavily utilized by the native and migratory species. The Morgan Legacy Farm located near FM 709 and 3194 serves as nesting grounds for Mexican Blackbelly Whistling ducks as well as several other migratory species who winter here in Texas. The construction of the HSR will permanently destroy this habitat as the tunnel and rail will permanently acclude the watershed. I am opposed to this project	Refer to LU-5 and NR-2.
Robert Morgan	2/22/2018	Website	I have hesitation about the high speed rail in Navarro County traveling through the intersection of 709 and 1394 destroying Morgan Legacy Farm along with the water habitats of several rare waterfowl species. With so many other potential sites with less impact on water and landowners I can't support the current path.	Refer to LU-5.
Robert Morgan	2/23/2018	Website	I am concerned about the loss of a historical and cultural facility unique to Navarro County. This facility located on FM 709 and 3194 routinely entertains hundreds of residents in the state. I have over 50 employees who have utilize the ranch to take their families for emotional relief from the constant stress of treating a difficult complex number of patients. If the preferred route crosses this ranch not only will the rodeo arena where they ride horses be destroyed but the loss of watershed will affect negatively the number of places for migratory birds. Visitors who have seen Bald Eagles fishing in the lake (that will be lost) will lose a major benefit as well as the loss of habitat.	Refer to LU-5.
Robert Morgan	2/24/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5.
Robert Morgan	2/25/2018	Website	I wish to oppose a small portion of the proposed route located near FM 709 and 3194 passing through and bisecting one of the most pristine beautiful facilities located in Navarro County referred to as Morgan Legacy Farm. If the preferred route were to be moved to northeast of the existing power line easement the adverse impact to the aesthetics would be eliminated. The enclosed view is looking from the exact point where the train would cross the pristine non improved land destroying the view of this irreplaceable property. according to the impact statement if an alternative has less impact according to water issues, construction issues, migratory birds, local cultural impact the alternative	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			should be considered. I believe all of the criteria according to the DEIS has been met to consider a move to the power line easement to the north east	
Robert Morgan	2/25/2018	Website	I would ask that the FRA reexamine the preferred route that is slated to travel under a 3 way intersection located in Navarro at FM 709 and 3194. I am concerned about this portion of the preferred route that creates serious construction challenges given the adverse topography exiting along the 3194 and FM 709. In addition the DEIS appears not to have calculated the loss of water by running the train in a deep cut blocking the millions gallons of runoff that fill multiple surface acres southwest of the cut through Morgan Legacy Farm. This would adversely affect the existing water bodies causing a loss of available water for migratory water fowl. If the route is moved north east onto an existing high power line route in a more appropriate topographic area the construction challenges of running a train in a cut under a three way county road intersection can be mitigated. In addition the anticipated flooding and loss of watershed cause by the proposed route through FM 709 and 3194 could be mitigated if the route is moved north of the existing power line easement.	Refer to LU-5.
Robert Morgan	2/25/2018	Website	I am challenging the statement in the DEIS which states in 3.4.4.3 "The noise and vibration sensitive land use along Segment.....is typically rural farm land with scattered single-family residences." Morgan Legacy Farm located near FM 709 and 3194 filed an impact statement before the DEIS was completed advising the ranch was a multiple purpose facility with multiple homes capable of sleeping over 35 individuals in multiple locations on the property all within walking distance to a million dollar plus lodge and entertainment pavilion including a full size fully operational rodeo arena and multiple guest homes. In addition there are multiple other amenities including under ground utilities, and significant infrastructure with an estimated replacement cost in excess of 20 million dollars. Given the fact that is NOT "typical rural farm land" as referred to in the DEIS I would request the preferred alignment be moved off Morgan Legacy farm a small distance north of an existing utility easement with tall power lines where it will then actually be on "typical rural land" as stated in the DEIS.	Refer to LU-5. The facility is outside the range of where there would be noise impacts from HSR operations.

Refer to LU-5.
Robert Morgan	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Robert Morgan	2/27/2018	Email	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy multiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on FM 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be caused if the rail crosses FM 709 south of 3194. Paralleling just south of 3194 as proposed also blocks multiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	Refer to LU-5.
Robert Morgan	2/28/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5, WW-1 and WW-2.
Robert Morgan	2/28/2018	Website	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property there are multiple amenities such as a full size rodeo arena, horse and colt barns all	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property their are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.

Robert Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. Robert Morgan	3/2/2018	Email	This is a comment from a visitor to morgan Legacy Farm. I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5.
Robert Morgan	3/2/2018	Email	This is a comment from a visitor to Morgan Legacy Farm. This facility is made available to first responders nurses and other healthcare providers and is invaluable to the county, the state and even internationally. 			previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	
Robert Morgan	3/3/2018	Email	I would request the FRA consider moving a small portion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn, colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying their ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.

Robert Morgan	3/3/2018	Email	I am concerned about the environmental impact near FM 709 and 3194 should the preferred route be utilized in this high topography area in Navarro County. Morgan Legacy Farms is a highly managed facility that is dedicated to promoting migratory bird wetlands. In addition the ranch provides hunting waters for several bald eagles that feed in a lake that may be lost if the preferred route is not slightly moved to a less impactful route. The ranch has a program currently to release quail under a bird release permit. If the proposed route crossing near FM 709 and 3294 is not moved to a more appropriate path paralleling already existing high tower power lines there will be significant impact to migratory birds and a loss of a natural habitat supporting the local fauna.	Refer to LU-5.

Robert Morgan	3/8/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Robert Morgan	3/8/2018	Website	This project on current path will destroy the land of Morgan Legacy Farm. The Morgan Legacy Farm located near FM 709 and 3194 is an irreplaceable site that has hosted weddings (including my own) and hundreds of meetings, gathering, and reunions. Churches, hospitals,	Refer to LU-5.

REM3 Enterprise	3/8/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
REM3 Enterprise	3/8/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Robert Morgan	3/8/2018	Website	At a time when we should be protecting waterfowl and native species the HSR will condemn thousands of sensitive acres that are privately owned, but heavily utilized by the native and migratory species. The Morgan Legacy Farm located near FM 709 and 3194 serves as nesting grounds for Mexican Black-belly Whistling ducks as well as several other migratory species who winter here in Texas. The construction of the HSR will permanently destroy this habitat as the tunnel and rail will permanently occlude the watershed. I am opposed to this project!!!	Refer to LU-5.

Submitted By	Date Submitted	Submission Type	Comment	Response
Robert Morgan	3/8/2018	Website	<p>Per previous communication find enclosed documents concerning the proposed Navarro high speed rail route. To Mr. Kevin Wright and whom it may concern: As you know from my prior comments and our conversations, I am a trustee of a charitable trust owning property in Navarro County commonly known as Morgan Legacy Farm. I very much appreciate the difficulty you face as you seek input on the DEIS during this comment period, and I would like to thank you for spending so much time visiting with me at the Dallas and Ellis comment sessions. We have discussed the concerns expressed by myself and others about the proposed route in Navarro County described in the DEIS as Segment 3A. As I informed you on the phone, I am submitting this letter and the enclosed documents in an effort to compile information relevant to the evaluation of the impact of Segment 3A near Morgan Legacy Farms. The enclosures include: (1) reports prepared by engineers regarding the impact of Segment 3A and a proposed alternative route called 3Z, (2) comments from others relating to this portion of Segment 3A, and (3) pictures and other data relevant to your evaluation. I note that there is a discrepancy between the information provided to me by you and the information provided by Texas Central. In particular, Texas Central claims to be unable to alter the proposed route absent direction from the Federal Railroad Administration while the FRA informs me that Texas Central has the authority to determine the route. In an effort to ensure that there is no misunderstanding, I am also providing a copy of this letter to Texas Central with the enclosures. The enclosures demonstrate that an alternate route combining portions of Segments 3A, 3B, and 3C will reduce the negative environmental, construction, transportation, charitable, historical, and structural impacts of the preferred route. In particular, by crossing over FM 709 so close to its intersection with FM 3194 and in an area with substantial elevation changes, the current Segment 3A imposes significant burdens on nearby property owners who will lose road access, causes substantial negative changes to watershed, and disrupts an important part of the local transportation infrastructure. The proposed alternative route would alleviate these negative effects. It is my hope that the FRA and Texas Central will work cooperatively to adopt the less harmful alternative proposed in these comments. Using the FRA’s existing criteria in the DEIS, the proposed alternative is clearly superior and poses less of an environmental impact. Thank you again for your thoughtful consideration. Sincerely, Robert E. Morgan</p> <p>March 8, 2018 To Mr. Kevin Wright and whom it may concern: In addition to my prior comments, this letter and comment is a summary of expressed concerns regarding a small portion of the proposed route of the Texas Dallas to Houston High Speed Rail located in Navarro County. The enclosed data and thousands of comments regarding the location of this small portion of the rail support the conclusion that the Federal Railroad Administration and Texas Central should consider an alternative route that blends portions of the already vetted Segments 3A, 3B, and 3C. We believe this alternative, named 3Z, or a near variant would better address the criteria and mitigate the harms evaluated in the DEIS. It is not our intent to call into question the entirety of the DEIS published in December 2017. However, after a significant review of the proposed route as published, we contend that there are significant issues not identified during the initial study which makes the 6-7 mile portion of Segment 3A that travels parallel to FM 3194 and crosses below grade at FM 709 onto a property referred to as Morgan Legacy Farm unacceptable for use while. Utilizing this proposed route would produce significant negative impacts regarding many of the criteria used to evaluate build alternatives. The following reports, data, photos and comments are submitted documenting the objections to the proposed route transecting Morgan Legacy Farm. We are providing this data and observations as gathered and analyzed by experienced environmental, road, rail, and construction engineers. In addition, statements from multiple individuals, civic leaders, and local, state and even international travelers are included. These statements reflect a concern that this small portion of the rail will destroy this highly-developed, irreplaceable community asset and the properties paralleling FM 3194 in the path of the proposed route. Below are comments related specifically to each of the criteria utilized in the DEIS. With respect to air quality, we contend that the construction and operation of a railroad close to the already existing, tall, high-voltage structures is more appropriate than introducing another obstacle traversing additional properties. With respect to water quality, the enclosed reports and supporting data identify additional harms to water and watershed that were not identified in the DEIS and identify how moving the route further north would mitigate those harms. With respect to noise and vibration, we disagree with the findings of the DEIS stating that, in Navarro County, the route travels through “typical rural farm land with scattered single family structures”. The enclosed photos of Morgan Legacy Farm, a highly developed facility composed of multiple multifamily residences with extensive infrastructures and amenities, show the inaccuracy of the DEIS statement when applied to this portion of the route. Indeed, the existing facility would be difficult, if not impossible, to duplicate should the route not be moved. The division of the facility into two by the rail, and the noise and vibrations caused by the proximity of the train to the structures would preclude the present uses of the property. With respect to hazardous waste materials and solid waste, we have not identified any particular causes for concern. However, construction of the railway would likely create waste, and utilizing the already existing easement further north that contains high voltage lines would be less disruptive than traversing the highly developed properties as now proposed. With respect to natural ecological systems and protected species, we contend the data submitted reveals significant risks if the proposed route is not moved. In particular, there are multiple ecologic impacts, including damage or loss of the lake and waters that bald eagles feed out of (see attached photos). Given the topography of the ranch, the lakes and waters are at risk of loss and damage because the deep cuts utilized in</p>	Refer to LU-5.

			<p>Segment 3A will significantly alter the flow of water. With respect to utilities and energy, a route adjacent to an already existing power grid and power pads would appear to be vastly preferable to building an entirely separate, cosmetically detractive grid and new high voltage lines. However, by running south of the existing lines, this portion of Segment 3A would require this unnecessary duplication of utilities and accompanying disruption of properties. The enclosed reports with maps identify the already present power pad locations and the document the additional modifications of exiting powerlines that would need to be moved, modified or added should the route utilize this portion of Segment 3A. With respect to the waters of the US, the analysis of data shows an improved conservation of waters if the proposed route is moved to the proposed Segment 3Z. The enclosed tables reveal significant preservation of these waters. With respect to aesthetic and scenic resources, it is abundantly clear that, as visualized from FM 709, having the train run directly adjacent to the existing tall power lines, poles and power grid is more visually appropriate than creating another eye sore. Routing the train adjacent to FM 3194 but underground through a three way intersection at FM 709 produces an additional negative impact in an unneeded second location. Additionally, the proposed route crosses the lower portion of Morgan Legacy Farm and, therefore, would destroy a unique picturesque landscape view of hundreds of acres of clear land. Indeed, the proposed route runs between the existing high point structure referred to as “meditation point” and the land viewable from that high point. Paralleling the existing power lines would be more appropriate to reduce the impact to the cosmetics of this beautiful pristine land. Please see attached simulated views. With respect to transportation, as discussed in the reports and comments, the proposed route creates significant negative issues surrounding construction, bridges, roadways, and roadway maintenance if the proposed route is utilized. Indeed, as discussed in the reports, the proposed adjustments to FM 709 and FM 3194 do not comply with the requirements of the Texas Department of Transportation. In order to comply with state requirements, the proposed Segment 3A would need to be even more disruptive than described in the DEIS. With respect to effects on the elderly and handicapped, the loss of the highly improved facility easily accessible to both groups would cause irreparable loss to the community. In the past young children with emotional and physical disabilities have been provided the opportunity to interact with animals, ranch and surrounding amenities as well as to ride horses in the rodeo arena. The arena and homes are scheduled to be lost if the proposed route is not moved. With respect to socioeconomic and community facilities, it is apparent from the thousands of comments we have received from individuals that a majority are concerned about the loss of this highly developed, economically impactful facility. This facility has contributed literally millions of dollars into the local economy and, given the number of visitors to the locale, the additional socioeconomic benefit is ongoing. The facility has been instrumental in serving numerous civic and charitable purposes. The facility has hosted first responders, health care providers, and visitors from multiple international points, including the survivors of the Japanese Tsunami who visited the ranch as part of the Japanese American Summit in 2012. Perhaps one of the most important issues from a community perspective is the loss of 10 family residences and 14 agricultural structures caused by the proposed route. The alternative route called 3Z will not cause the harmful effects on the 24 structures. Literally thousands of comments on the FRA site are available for review outlining the socioeconomic benefits provided by this facility not available at any other venue. With respect to electromagnetic fields, it is our contention (which we believe to be fairly obvious) that running the train adjacent to already existing powerlines would create fewer risks than creating another electrical station. Therefore, we suggest a modification of the proposed route to more closely parallel the power lines. With respect to cultural resources, in addition to the preceding comments and the thousands of comments made on the FRA DEIS comment link, there are multiple adverse issues created should the proposed route not be modified. The original lodge was once a structure for the rail when it travelled through down town Corsicana and was disassembled and rebuilt as the first structure on the ranch and is over 50 years old. Previous owners routinely located Indian artifacts located directly in the path of the proposed routes and have documented the location (see map enclosed) The rodeo area and the land surrounding the arena is the location of one of the first such facilities in Navarro County and is still in use today as part of the facility’s cultural, charitable, and service to first responders and others. The ranch as developed is of cultural significance as it was one of the properties cleared by German Prisoner of War soldiers that were housed in Corsicana during WWII. This property has a long unique history and cultural impact, and it is therefore inappropriate to destroy for this rail project. The DEIS does not adequately address the cultural and historical importance of the property, and more study would be required before the route could traverse Morgan Legacy Ranch. With respect to soils and geology, there are multiple reasons not to traverse this area using the proposed route. Given the topography of this area, significant adverse drainage, damage to water shed, top soil, degradation of valuable farm land, waters and negatives impact produced by retention ponds would be created given the depth of the required cuts. By running the train through the proposed route adjacent to FM 3194, the required cut and significant areas utilizing a berm would significantly adversely affect the soils and geology through adverse runoff and watershed problems. The less intrusive alternate route in a more appropriate topography closer to the utility easement and away from a highly traveled road should be considered. With respect to greenhouse gas emissions or climate, we have no comment. Please see following specific reports and observation about the DEIS as well as the attached exhibits. We have also documentation of over 3000 negative comments concerning the proposed location along 3194 traversing</p>

With respect to aesthetic and scenic resources, it is abundantly clear that, as visualized from FM 709, having the train run directly adjacent to the existing tall power lines, poles and power grid is more visually appropriate than creating another eye sore. Routing the train adjacent to FM 3194 but underground through a three way intersection at FM</p>	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>709 produces an additional negative impact in an unneeded second location. Additionally, the proposed route crosses the lower portion of Morgan Legacy Farm and, therefore, would destroy a unique picturesque landscape view of hundreds of acres of clear land. Indeed, the proposed route runs between the existing high point structure referred to as “meditation point” and the land viewable from that high point. Paralleling the existing power lines would be more appropriate to reduce the impact to the cosmetics of this beautiful pristine land. Please see attached simulated views. With respect to transportation, as discussed in the reports and comments, the proposed route creates significant negative issues surrounding construction, bridges, roadways, and roadway maintenance if the proposed route is utilized. Indeed, as discussed in the reports, the proposed adjustments to FM 709 and FM 3194 do not comply with the requirements of the Texas Department of Transportation. In order to comply with state requirements, the proposed Segment 3A would need to be even more disruptive than described in the DEIS. With respect to effects on the elderly and handicapped, the loss of the highly improved facility easily accessible to both groups would cause irreparable loss to the community. In the past young children with emotional and physical disabilities have been provided the opportunity to interact with animals, ranch and surrounding amenities as well as to ride horses in the rodeo arena. The arena and homes are scheduled to be lost if the proposed route is not moved. With respect to socioeconomic and community facilities, it is apparent from the thousands of comments we have received from individuals that a majority are concerned about the loss of this highly developed, economically impactful facility. This facility has contributed literally millions of dollars into the local economy and, given the number of visitors to the locale, the additional socioeconomic benefit is ongoing. The facility has been instrumental in serving numerous civic and charitable purposes. The facility has hosted first responders, health care providers, and visitors from multiple international points, including the survivors of the Japanese Tsunami who visited the ranch as part of the Japanese American Summit in 2012. Perhaps one of the most important issues from a community perspective is the loss of 10 family residences and 14 agricultural structures caused by the proposed route. The alternative route called 3Z will not cause the harmful effects on the 24 structures. Literally thousands of comments on the FRA site are available for review outlining the socioeconomic benefits provided by this facility not available at any other venue. With respect to electromagnetic fields, it is our contention (which we believe to be fairly obvious) that running the train adjacent to already existing powerlines would create fewer risks than creating another electrical station. Therefore, we suggest a modification of the proposed route to more closely parallel the power lines. With respect to cultural resources, in addition to the preceding comments and the thousands of comments made on the FRA DEIS comment link, there are multiple adverse issues created should the proposed route not be modified. The original lodge was once a structure for the rail when it travelled through down town Corsicana and was disassembled and rebuilt as the first structure on the ranch and is over 50 years old. Previous owners routinely located Indian artifacts located directly in the path of the proposed routes and have documented the location (see map enclosed) The rodeo area and the land surrounding the arena is the location of one of the first such facilities in Navarro County and is still in use today as part of the facility’s cultural, charitable, and service to first responders and others. The ranch as developed is of cultural significance as it was one of the properties cleared by German Prisoner of War soldiers that were housed in Corsicana during WWII. This property has a long unique history and cultural impact, and it is therefore inappropriate to destroy for this rail project. The DEIS does not adequately address the cultural and historical importance of the property, and more study would be required before the route could traverse Morgan Legacy Ranch. With respect to soils and geology, there are multiple reasons not to traverse this area using the proposed route. Given the topography of this area, significant adverse drainage, damage to water shed, top soil, degradation of valuable farm land, waters and negatives impact produced by retention ponds would be created given the depth of the required cuts. By running the train through the proposed route adjacent to FM 3194, the required cut and significant areas utilizing a berm would significantly adversely affect the soils and geology through adverse runoff and watershed problems. The less intrusive alternate route in a more appropriate topography closer to the utility easement and away from a highly traveled road should be considered. With respect to greenhouse gas emissions or climate, we have no comment. Please see following specific reports and observation about the DEIS as well as the attached exhibits. We have also documentation of over 3000 negative comments concerning the proposed location along 3194 traversing Morgan Legacy Farm and their desire to move the route to the existing utility easement. Thank you for your consideration. Sincerely, Robert E. Morgan RE: DEIS Comment Dallas to Houston High-Speed Rail Project.</p>	
Robert Morgan	3/9/2018	Website	<p>I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has</p>	Refer to LU-5.

Robert E Morgan	3/8/2018	Letter	To Mr. Kevin Wright and whom it may concern: As you know from my prior comments and our conversations, I am a trustee of a charitable trust owning property in Navarro County commonly known as Morgan Legacy Farm. I very much appreciate the difficulty you face as you seek input on the DEIS during this comment period, and I would like to thank you for spending so much time visiting with me at the Dallas and Ellis comment sessions. We have discussed the concerns expressed by myself and others about the proposed route in Navarro County described in the DEIS as Segment 3A. As I informed you on the phone, I am submitting this letter and the enclosed documents in an effort to compile information relevant to the evaluation of the impact of Segment 3 A near Morgan Legacy Farms. The enclosures include: (1) reports prepared by engineers regarding the impact of Segment 3A and a proposed alternative route called 3Z, (2) comments from others relating to this portion of Segment 3A, and (3) pictures and other data relevant to your evaluation. I note that there is a discrepancy between the information provided to me by you and the information provided by Texas Central. In particular, Texas Central claims to be unable to alter the proposed route absent direction from the Federal Railroad Administration while the FRA informs me that Texas Central has the authority to determine the route. In an effort to ensure that there is no misunderstanding, I am also providing a copy of this letter to Texas Central with the enclosures. The enclosures demonstrate that an alternate route combining portions of Segments 3 A, 3B, and 3C will reduce the negative environmental, construction, transportation, charitable, historical, and structural impacts of the preferred route. In particular, by crossing over FM 709 so close to its intersection with FM 3194 and in an area with substantial elevation changes, the Current Segment 3A imposes significant burdens on nearby property owners who will lose road access, causes substantial negative changes to watershed, and disrupts an important part of the local transportation infrastructure. The proposed alternative route would alleviate these negative impacts. It is my hope that the FRA and Texas Central will work cooperatively to adopt the less harmful alternative proposed in these comments. Using the FRA's existing criteria in the DEIS, the proposed alternative is clearly superior and poses less of an environmental impact. Thank you again for your thoughtful consideration. Sincerely, Robert E. Morgan [...] March 8, 2018 To Mr. Kevin Wright and whom it may concern: In addition to my prior comments, this letter and comment is a summary of expressed concerns regarding a small portion of the proposed route of the Texas Dallas to Houston High Speed Rail located in Navarro County. The enclosed data and thousands of comments regarding the location of this small portion of the rail support the conclusion that the Federal Railroad Administration and Texas Central should consider an alternative route that blends portions of the already vetted Segments 3A, 3B, and 3C. We believe this alternative, named 3Z, or a near variant would better address the criteria and mitigate the harms evaluated in the DEIS. It is not our intent to call into question the entirety of the DEIS published in December 2017. However, after a significant review of the proposed route as published, we contend that there are significant issues not identified during the initial study which makes the 6-7 mile portion of Segment 3A that travels parallel to FM 3194 and crosses below grade at FM 709 onto a property referred to as Morgan Legacy Farm unacceptable for use while. Utilizing this proposed route would produce significant negative impacts regarding many of the criteria used to evaluate build alternatives. The following reports, data, photos and comments are submitted documenting the objections to the proposed route transecting Morgan Legacy Farm. We are providing this data and observations as gathered and analyzed by experienced environmental, road, rail, and construction engineers. In addition, statements from multiple individuals, civic leaders, and local, state and even international travelers are included. These statements reflect a concern that	Refer to LU-5.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>this small portion of the rail will destroy this highly-developed, irreplaceable community asset and the properties paralleling FM 3 194 in the path of the proposed route. Below are comments related specifically to each Of the criteria utilized in the DEIS. With respect to air quality, we contend that the construction and operation Of a railroad close to the already existing, tall, high-voltage Structures is more appropriate than introducing another obstacle traversing additional properties. With respect to water quality, the enclosed reports and supporting data identify additional harms to water and watershed that were not identified in the DEIS and identify how moving the route further north would mitigate those harms. With respect to noise and vibration, we disagree with the findings of the DEIS stating that, in Navarro County, the route travels through "typical rural farm land with scattered single family structures". The enclosed photos of Morgan Legacy Farm, a highly developed facility composed of multiple multifamily residences with extensive infrastructures and amenities, show the inaccuracy of the DEIS statement when applied to this portion of the route. Indeed, the Department of Transportation. In order to comply with state requirements, the proposed Segment 3A would need to be even more disruptive than described in the DEIS. With respect to effects on the elderly and handicapped, the loss of the highly improved facility easily accessible to both groups would cause irreparable loss to the community. In the past young children with emotional and physical disabilities have been provided the opportunity to interact with animals, ranch and surrounding amenities as well as to ride horses in the rodeo arena. The arena and homes are scheduled to be lost if the proposed route is not moved. With respect to socioeconomic and community facilities, it is apparent from the thousands Of comments we have received from individuals that a majority are concerned about the loss of this highly developed, economically impactful facility. This facility has contributed literally millions of dollars into the local economy and, given the number of visitors to the locale, the additional socioeconomic benefit is ongoing. The facility has been instrumental in serving numerous civic and charitable The facility has hosted first responders, health care providers, and visitors from multiple intemational points, including the survivors of the Japanese Tsunami who visited the ranch as part of the Japanese American Summit in 2012. Perhaps one of the most important issues from a community perspective is the loss Of 10 family residences and 14 agricultural Structures caused by the proposed route. The alternative route called 3Z will not cause the harmful effects on the 24 structures. Literally thousands of comments on the FRA site are available for review outlining the socioeconomic benefits provided by this facility not available at any other venue. With respect to electromagnetic fields, it is our contention (which we believe to be fairly obvious) that running the train adjacent to already existing powerlines would create fewer risks than creating another electrical station. Therefore, we suggest a modification Of the proposed route to more closely parallel the power lines. With respect to cultural resources, in additional to the preceding comments and the thousands of comments made on the FRA DEIS comment link, there are multiple adverse issues created should the proposed route not be modified. The original lodge was once a structure for the rail when it travelled through down town Corsicana and was disassembled and rebuilt as the first structure on the ranch and is over 50 years Old. Previous owners routinely located Indian artifacts located directly in the path Of the proposed routes and have documented the location (see map enclosed) The rodeo area and the land surrounding the arena is the location of one of the first such facilities in Navarro County and is still in use today as part of the facility's cultural, charitable, and service to first responders and others. Ihe ranch as developed is of cultural significance as it was one of the properties cleared by German Prisoner Of War soldiers that were housed in Corsicana during WWII. This property has a long unique history and cultural impact, and it is therefore inappropriate to destroy for this rail project. The DEIS does not adequately address the cultural and historical importance of the property, and more study would be required before the route could traverse Morgan Legacy Ranch.</p>	
S Morgan	2/27/2018	Email	<p>Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along</p>	Refer to LU-5.

			3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	
Scott Morgan	2/21/2018	Website	I am against the rails current routing. I think it is wrong to destroy Morgan Legacy Farm located near FM 709 and 3194 with a rail. I believe a move north paralleling the existing powerlines or running down along I45 would be a better route.	Refer to LU-5.
Scott Morgan	2/22/2018	Website	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.
Scott Morgan	2/23/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property that generations will be able to enjoy for decades to come.	Refer to LU-5.
Scott Morgan	2/24/2018	Website	I do not like the current high-speed rail route running through Morgan Legacy Farm located near FM 709 and 3194. I think the environmental impact of running a rail on that route will be detrimental to livestock and wildlife. The current routing will impact the water run off that feeds the multiple stock tanks on this property. Migratory gamebird use these stock tanks. I think that route further north or route that goes along interstate 45 would be a better route.	Refer to LU-5.
SM Aviation	2/26/2018	Website	I do not like the current high-speed rail route running through Morgan Legacy Farm located near FM 709 and 3194. I think the environmental impact of running a rail on that route will be detrimental to livestock and wildlife. The current routing will impact the water run off that feeds the multiple stock tanks on this property. Migratory gamebird use these stock tanks. I think that route further north or route that goes along interstate 45 would be a better route.	Refer to LU-5.

Scott Morgan	2/26/2018	Website	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the watershed.	Refer to LU-5, WW-1 and WW-2.
Scott Morgan	2/26/2018	Website	I do not like the current high-speed rail route running through Morgan Legacy Farm located near FM 709 and 3194. I think the environmental impact of running a rail on that route will be detrimental to livestock and wildlife. The current routing will impact the water run off that feeds the multiple stock tanks on this property. Migratory gamebirds, deer, cattle and other types of wiledlife use these stock tanks. I think that route further north or route that goes along interstate 45 would be a better route.	Refer to LU-5, NR-2, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Scott Morgan	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. Furthermore, I am concerned about Migratory flyway waters.	Refer to LU-5, NR-2 and WW-1.
Scott Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared	Refer to LU-5.

Scott Morgan	3/3/2018	Email	These are comments made from a visitor to the facility I am writing to voice my concerns over the proposed route of the Dallas-Houston HSR project. I am an environmental scientist/engineer with over 30 years of experience in environmental investigations involving soil, groundwater, noise, and air issues. It appears that the proposed route will bisect the Morgan Creek Legacy Farm located near the intersection of Highways 709 and 3194 in Navarro County. I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5.
Scott Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed	Refer to LU-5.

Scott Morgan	3/4/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Scott Morgan	3/4/2018	Email	The current routing of the high-speed rail will be disasters for the Navarro county community. The rail will be dividing private properties that supply hay, water and grazing for horse and cattle. The current routing is traversing Morgan Legacy Farm (7755 FM 709) at its highest point and continuing to one of its lowest points next to Richland creek. The water run off will not only contaminate stock tanks on Morgan Legacy Farm but will also pollute Richland creek and every thing down stream. The affects of the water contamination on livestock can be disastrous. I have seen waterfowl and other migratory bird use the tanks on Morgan Legacy Farm and travel up and down the Richland Creek. The duck and goose migration has been moving more westerly in the last 5-10 years polluting more water could result in pushing the migration further west. Moving the route north to parallel the power lines or strait down I45 would be less detrimental to Navarro county and would have less water pollution.	Refer to LU-5.

Scott Morgan	3/8/2018	Website	To the FRA and Texas Central Rail, I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. I have serious concerns about the proposed route in portions of Navarro County. I understand that overall the southern most route proposed may be the most appropriate as compared to the other two proposed routes however I believe the portion which travels south Of 3194, not along the utility easement as suggested in the middle route, would create significant adverse environmental, economic and cultural history problems. The proposed route parallels a county route which would require a large berm blocking access to property south of 3194. This would also create maintenance, watershed and inclement weather problems in my opinion. The proposed route could also block expansion of 3194 and future development along 3194. The proposed route intersects a three-way intersection requiring significant engineering and rerouting of county roads and the access roads to surrounding properties. Given the topography of the area surrounding CR 709 and 3194 the train would both be significantly below grade and then rapidly elevated creating watershed issues, access issues, and cosmetically detractive issues. If the proposed route was blended in this small area with the already vetted middle route, both the train and tall high-tension power lines would run parallel thus creating less environmental and esthetic impact. It seems much more appropriate to run the train next to a high voltage power grid already existing rather than run more high towers. If this small move is made the train would cross 709 at an already existing utility easement and would not	Refer to LU-5.

Submitted By	Date Submitted	Submission Type	Comment	Response
			adversely affect the three way intersection and would not limit CR 3194. Ongoing road maintenance would be simplified as would water shed. My final and major concern is that the proposed route would destroy a highly developed economic, charitable and cultural Navarro County Ranch. Listed on tax roles as Morgan Legacy Farms. If the proposed route is utilized the rail project would cause the destruction of two of the homes on the ranch, the destruction of one of the first (if not the first) rodeo arenas ever built in Navarro County. Access to the horse barns, parking and Lodge would be lost rendering the ranch unusable for its primary purpose. Just in the last 5 years over 900 guests have visited the ranch as a charitable property. Churches, Girl Scouts, Boy Scouts, Military Personnel, Police, Fire and various city leaders as well as disadvantaged children from natural disasters. There is no other property like this facility located in Navarro County and perhaps within 100 miles. To destroy this icon rather than move the train route slightly north on an existing utility easement would create irreparable losses and damage to the county and those who benefit from the property.	
SM Aviation	3/9/2018	Website	The current routing of the high-speed rail will be disasters for the Navarro county community. The rail will be dividing private properties that supply hay, water and grazing for horse and cattle. The current routing is traversing Morgan Legacy Farm (7755 FM 709) at its highest point and continuing to one of its lowest points next to Richland creek. The water run off will not only contaminate stock tanks on Morgan Legacy Farm but will also pollute Richland creek and every thing down stream. The affects of the water contamination on livestock can be disastrous. I have seen waterfowl and other migratory bird use the tanks on Morgan Legacy Farm and travel up and down the Richland Creek. The duck and goose migration has been moving more westerly in the last 5-10 years polluting more water could result in pushing the migration further west. Moving the route north to parallel the power lines or strait down I45 would be less detrimental to Navarro county and would have less water pollution.	Refer to LU-5.

SM Aviation	3/9/2018	Website	I have concerns about the high-speed rails current route; the projected route divides Morgan Legacy Farm. Morgan Legacy Farm provides a much need get away for many of our first responders, and charitable organizations. Multiple people have seen a bald eagle on this property leading me to believe that it might be nesting on the property. I have also taken first responders on quail, dove and duck hunts on Morgan legacy farm. One of the small cabins on the property used to be a concession stand for the rodeo arena. Historically rodeos are a great source of income for counties. People walking the high point on the property have found Native American auro heads. Both the rodeo arena and the high point are in the current route. Moving the route north paralleling the power lines would be a better route. Or following I45 south in the most direct route to Houston. Either of these routes would help in preserving Morgan legacy farm.	Refer to LU-5.

Churches, Girl Scouts, Boy Scouts, Military Personnel, Police, Fire and various city leaders as well as disadvantaged children from natural disasters. There is no other property like this facility located in Navarro County and perhaps within 100 miles. To destroy this icon rather than move the train route slightly north on an existing utility easement would create irreparable losses and damage to the county and those who benefit from the property.	Refer to LU-5.
Scott Michael Morgan	2/27/2018	Email	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along	Refer to LU-5.

			3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	
Spencer Morgan	2/26/2018	Website	I would request the FRA consider moving a small potion of the preferred route crossing FM 709 at 3194 slightly north of an existing high power line easement. Morgan Legacy Farm is a highly developed facility supporting the local economy and charities. It hosts multiple individuals often giving them the only time to rest and relax in a peaceful environment. Police, fire and healthcare workers routinely stay at the ranch. Always at no cost. The guest homes, rodeo arena, horse barn,colt barn, pavilion and lodge all are within walking distance. However the preferred route cleaves directly in between these amenities destroying there ability to continue the mission of the ranch. Further the bottom portion of the ranch provided a beautiful panoramic vision of undeveloped land as far as the eye can see. The train is proposed to also travel directly in front of the pristine and quiet meditation point. I would ask that given the loss of purpose for this charitable facility serving literally thousands of guests and given the pristine undeveloped area on the bottom half of the ranch that it would be more appropriate to have the train run parallel to the existing easement northeast of the ranch.	Refer to LU-5.

Refer to LU-5.
Spencer Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property their are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.
Spencer Morgan	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.

Spencer Morgan	3/8/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Spencer Morgan	3/8/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. Taylor Morgan	2/28/2018	Email	I have concerns about the proposed route as it cleaves Morgan Legacy Farms by Richland Creek and how it destroys one of the most unadulterated and beautiful panoramic views in the county on the bottom of this facility. From the meditation point on the property a person can sit and look for miles onto undeveloped land. To traverse a train through this view would be criminal. Also the top of the ranch is one of the most highly developed properties in a Navarro supporting 30 or more guests in homes and lodges who come for free to this ranch shared by the Morgan Family Trust. On the top of the property their are multiple amenities such as a full size rodeo arena, horse and colt barns all scheduled to be destroyed if the preferred route is not relocated. Literally hundreds of first responders, nurses, physicians and other healthcare providers and service men and women have benefited from this beautiful facility. The high towers and high tension power line easement north of the proposed route would be less detrimental to the pristine unadulterated view proposed to be destroyed by the preferred route west of 3194 and FM 709 crossing Morgan Legacy Farm.	Refer to LU-5.
Morgan Creek Ranch	3/7/2018	Website	As I informed you on the phone, I am submitting this letter and the enclosed documents in an effort to compile information relevant to the evaluation of the impact of Segment 3A near Morgan Legacy Farms. The enclosures include: (1) reports prepared by engineers regarding the impact of Segment 3A and a proposed alternative route called 3Z, (2) comments from others relating to this portion of Segment 3A, and (3) pictures and other data relevant to your evaluation. I note that there is a discrepancy between the information provided to me by you and the information provided by Texas Central. In particular, Texas Central claims to be unable to alter the proposed route absent direction from the Federal Railroad Administration while the FRA informs me that Texas Central has the authority to determine the route. In an effort to ensure that there is no misunderstanding, I am providing a copy of this letter to Texas Central with the enclosures.	Refer to LU-5.
Robert Morgan III	2/27/2018	Email	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch (held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	Refer to LU-5.
Robert Morgan III	3/3/2018	Email	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where	Refer to LU-5.

			grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.

I have been a guest at the Morgan Creek Legacy Farm on several occasions along with guests from across the USA and Canada, Australia, and Japan. The Morgan Farm lies in a pastoral setting, with beautiful vistas and abundant wildlife. The Morgan family makes the facilities on the farm available to a wide variety of visitors from all over the world. It is a wonderful place to relax and recreate. It appears that grading the planned right-of-way through the Morgan Farm to below the existing current elevation will be necessary to lay the tracks. This will change the direction of precipitation run-off and impact the existing bodies of water and wetlands on the farm. As such, the impact of running a high-speed railway through the farm would be a threat to the wildlife on the farm, an eyesore and would destroy the aesthetic beauty of the place. There is an electric power substation on the adjoining property northeast of the farm and a northwest to southeast power line right-of-way which runs from the Huntsville area up to the southern part of the Dallas-Ft. Worth metroplex. It would make much more sense to take advantage of this existing thoroughfare than to forcibly create new one by the taking of property by eminent domain and destroying the Morgan farm in the process. The use of this existing right-of-way should be given priority consideration in your deliberations.	Refer to LU-5.

Race Morgenroth	3/9/2018	Website	I cant wait to see this passed and built...Its about time TX moves in to the future.....Being a businessman who travels to Dallas 2-3 times a month, I would love this type of transportation...Thanks for the space...Race Morgenroth	Comment noted.
Allen Morris	2/6/2018	Handwritten	1. Why are the sound studios done on ONLY one train & not 2 train passing like there will be? 2. People cannot afford, on a regular basis, \$199 per ticket-one way. It is our opinion that the NO BUILD option is the ONLY option.	Refer to NV-1 and SC-3.
Allen Morris	2/6/2018	Handwritten	My wife and I don't have much. We've never had much. But what we have, is enough. What we have has been earned with much hard work, sweat and sacrifice. This small piece of property, a mere 45.275 acres, has been our home for 30 years and we love it. We cherish every single square inch of it and have made it a home for us to raise our children in, grow old in and, now, for our grandchildren to enjoy. We raise cattle on this property, we grow hay to feed the cattle and to sell when we have a surplus, we hunt and fish On this property, I am in the process of building a welding shop to work Out of after retirement on this property, we have our home on this property and this is the only place we want to live. The proposed high speed rail threatens to take away everything that we have worked so hard for. We are in our mid 50's and can't even fathom having to move away and start over. We can't even fathom having to see and hear a high speed train zoom by our back door every 30 minutes. The peacefulness and beauty of Bedias is why we chose to live here. Sitting on our back patio and watching a beautiful sunset is now in danger. Our land for raising cattle and growing hay is now in jeopardy. Every. Single. Thing. that we have worked for is now at risk. And for what? So a few people can be transported from Dallas to Houston? And I say only a few because realistically, how many people will take this train versus an airplane when the cost of a ticket is the same? How many people will take this train for an exuberant cost instead of driving their own vehicles? Not many, if any. A few may ride in the beginning, but then quickly realize it isn't affordable or practical. Then what? The system fails, the jobs are gone, Japan owns our American soil, the taxpayers, not TCR, will be paying for this travesty and by that time, our home and everything we love so dearly will be gone. Just look at how this is working out in California.ut's not. There are many arguments against this high speed rail, so we beg you to heed them and stop it in its tracks. We cannot make a home somewhere else. This property IS our home. It is everything we have ever wanted and worked for. TCR could not pay us enough to start over somewhere else and they would never pay us enough to cover everything we have into our property and home.	Refer to GN-2,GN-4, NE-1, PN-3 and SC-3.
Becky Morris	1/30/2018	Oral	Hello, my Name is Becky Morris. In 1983 a 19 year old marine married a second year college student in the small town of Texas called Bedise. In 1985 this young couple bought 60 acres of land using a loan from the veterans land board of Texas. This land was wooded and unmarked but the young couple saw some promise and hope on there one piece of property. The young man started clearing this property with only hand tools as they could not afford anything else. Slowly but surely over the course of three years, the young couple had the land cleared and a fence built and a pond constructed, electricity run, a water well and a stock septic system put in. The young people didn't hire up all of the work because they could not afford it. The majority of the work was done by them. Mainly of course by the husband. They were finally able to move their home. An old 1975 single wide onto the property. The young couple was experiencing their American dream and they were thrilled to see their dreams come true. A home on land that belonged to them. By this time the young couple had two children and began to purchase more land in order to run a few heads of cattle through. With much sweat and hard work, the couple purchased more land connected to their original 10 1/2 acres giving them about 45 acres plus. The couple didn't have very much income as the husband worked in the coal mine and the wife was a teacher in a small rural school. Their sacrifice and hard work was worth it because they wanted nothing more than to live on this one piece of property, to raise their children and grow old on. Fast forward 30 years later, 2015. And this couple, my husband and I with grown children hear of the project that threatens everything we have worked so very hard for. Our American dream could be snatched right out from under us. A high-speed rail company has threatened to come and take our land, our home and everything we have been working for our entire married life. This rail with affect every aspect our life. Our land, cattle and home. This will not benefit us or the other land-owners in its path. There are many arguments against this high-speed rail and we beg you to heed them and stop it in its tracks. We can not make a home somewhere else. This property is our home. Everything we ever wanted and worked for. TCR can not pay us enough to start over somewhere else. They would never pay us enough. Everything we are we have put into property and our home.	Comment noted.
Becky Morris	2/5/2018	Oral	My name is Becky Morris and I live in Bettis, Texas. I don't live in Madisonville but I graduated from Madisonville High School just a few years ago and I'm standing with all my friends. I've worked here, I shop here and so I am definitely against this high speed rail. In 1983 a 19-year old Marie married a 20-year old college student in a small town in Texas called Diaz. In 1985, this young couple 2.6 acres of land using a loan from the Veterans Land of Texas. This land was wooded and unworked, but the young couple saw promise and hope in owning they own piece of property. The young man started cleaning this property with only hand tools as they could not afford anything else. Slowly but surely over the course of three years, the young couple had the land clear, fit to build, a pond constructed, an electricity run, a water well dug and a septic system put in. The young couple didn't hire out all the work because they couldn't afford it. The majority of them work was done by them mainly, of course, by the husband. They were finally able to 18 move their home, a 1975 single-wide mobile home unto the property. And this young couple was experiencing the American dream. And they were thrilled to see their dreams coming true, a home on land that belonged	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
			to them. By this time, the young couple had two children and began to purchase more land in order to run a few head of cattle. Through much sacrifice, sweat and hard work, the couple purchased an additional 34 acres of land connecting to the original ten acres giving them about 45 acres. This was not an easy task, as the couple didn't earn very much money. The husband worked and the wife was a teacher in a small rural school. The sacrifice and hard work was absolutely worth it as there was nothing more that this couple wanted as their own piece of property to live on to raise their children on and to grow old on. There was not a time when this couple was not improving their property home and their lives and they loved every minute of it. Fast forward 30 years, 2015. This now seasoned couple, my husband and I, with grown children and now grandchildren, hear of a project that threatens everything we worked so very hard for. Our American dream could be snatched right out from under us. A high speed rail company with ties to Japan is threatening to take our land, our home and everything we treasure for our entire married life. This rail will affect every aspect of our land, cattle and home and it will definitely not benefit us or any other landowner in its path. There are many arguments against this high-speed rail, so we beg you to heed them and stop it in its tracks. We cannot make a home somewhere else. This property is our home. It is everything that I've ever wanted and worked for. TCR could not pay us enough to start over somewhere else and they would never pay us to cover everything we've put into our property and our home.	
Becky Morris	2/6/2018	Handwritten	In 1983 a 19 year old Marine married a 20 year old college student in a small town in Texas called Bedias. In 1985, this young couple bought 10.6 acres of land using a loan from the Veterans Land Board of Texas. This land was wooded and unworked, but the young couple saw promise and hope in owning their own piece of property. The young man started clearing this property with only hand tools, as they could not afford anything else. Slowly, but surely, over the course of 3 years, the young couple had the land cleared, fences built, a pond constructed, electricity run, a water well dug and a septic System put in. 			could not pay us enough to start over somewhere else, and they would never pay us enough to cover everything we have into our property and home. Thank you.	
Becky Morris	2/6/2018	Oral	Don't leave, honey. Have you heard about the Aggie code of honor? Aggies do not lie, cheat, or steal, and that's what this company is trying to do is steal our land. Okay. Sorry. I just wanted to tell her that because I have two Aggies, Aggie children. All right. Right now I'm speaking on behalf of the Patterson family from Madison County who cannot be here tonight. Their family opposes the train as it will totally destroy their property. Should this train be approved on the current proposed route, their property would be greatly impacted. Their property they own is rectangle in shape. Currently for the train itself, they will need approximately 110 acres. This does not include the two-mile access for dirt and water. The train will be in their front yard about 100 yards from their front door. Their mother-in-law will be even closer on the other side of the railway. Her back door will be about 50 yards from the railroad. Texas Central has proposed moving their county road so that access continues. They graciously moved it to their backyard; yes, between their house and the pond that they walk their show animals to daily. With the move of the county road, they actually will divide their property into fourths. Now, they haven't actually moved the road yet, but that's what they're proposing they will do. The Pattersons do make their money raising cattle, and have yet to figure the loss of income in that regard at this time. Two of the new sections of property will no longer be able to run cattle because of the lack of water. The damage to wildlife and hunting will be significant as well. They have numerous deer and other animals that reside on their land because of the access to Caney Creek, their natural water source. In regard to imminent domain, the Pattersons believe that imminent domain should be used when it is going to help the majority. This train is being built for two cities. Economically they believe it could negatively affect many of the small towns along I-45. The Patterson family stands firmly against this train and asks for a no build.	Refer to ED-1, ED-2, LU-11, LU-14, NR-5, NR-6 and SC-15.
Gene Morris	1/29/2018	Oral	The train will run right across the street from my house and I concerned about the property value and how that is going to affect my property value and I don't think anybody will want to buy my place with a train running across the road. I am just really concerned about it. i guess that's about it.	Refer to VA-1.
Jim Morris	2/17/2018	Website	The bullet train form Houston to Dallas would be a great way to get to Dallas to do business and be back home the same day. It will be nice to have a second alternative to driving 4 hours each way. I hope in the near future we will have the same rail system to Austin area.	Comment noted.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Plantation Lakes straddles Grimes and Waller Counties. Texas Central Partners' (TCP) preferred route for the proposed HS Rail line will destroy property and property values in our community. There are Common Areas well within the 2 miles on either side of the rail line that are at risk. The HS Rail will destroy property, our neighborhood's atmosphere as a rural community, and the appraised values. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to ED-2 and VA-1. Section 3.14.5.2, Socioeconomics and Community Facilities, Build Alternatives and Section 3.14.6.2, Socioeconomics and Community Facilities, Mitigation Measures of the Final EIS detail the potential impacts and mitigation for residences located on Plantation Drive. The Project would directly impact and displace 12 of the homes on the west side of Plantation Drive. TCRR shall mitigate the permanent impacts to this neighborhood through compensation and relocation. Terms of relocation would be subject to one-on-one negotiation with the owner and TCRR. This analysis assumes that negotiated prices would reflect the fair market value of displaced businesses, allowing for investment in new or similar businesses outside the LOD. The remaining 14 homes on the east side of Plantation Drive would not be directly impacted. These homes would be facing the Build Alternatives which would be crossing at-grade on embankment. Mitigation strategies would include screening the HSR System through native vegetation, walls, berms, natural looking constructed land forms or visual barriers where possible.
Karen Morris	1/19/2018	Email	Dear Mr. Wright or Whomever it Concerns: I read the legal notice of the Notice of Availability of a Draft Environmental Impact for the Highspeed Rail in the Corsicana Daily Sun. Would it be possible to receive an electronic map file of the route so that we may overlay on our appraisal district maps for accuracy. Should you want to visit with me by phone, my contact information is listed and I would welcome your call.	Refer to PI-1.
Linda Morris	3/8/2018	Website	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Grimes County transportation and traffic problems will be worsened, whether the track is at grade or is elevated. There are already dangerous traffic accidents and tax payer inconvenience from existing traffic issues and road conditions. The HS Rail will only make these situations worse, would further increase response times for emergency services, and would adversely impact school bus routes and travel times for students: closure of FM 1774 between Plantersville and Anderson (Grimes County); FM 1488 (Waller); Riley Road (Waller and Grimes) and many more.	Refer to SC-6, SC-7 and TR-8. No public roads in Waller County would be closed as a result of the Project. Three public roads would be rerouted, as shown in Table 3.11-50: Waller County Roadway Modifications .

			The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option. Submitted on behalf of the Plantation Lakes Community Association Board of Directors	
Michael Morris	1/29/2018	Oral	Hi. For the record, Michael Morris, Director of Transportation and the North Central Texas Council of Governments. I'd like to read from our freedom of transportation council statement of support for high-speed rail from Dallas to Houston and we will submit this piece of paper for the record. This is submitted by the Regional Transportation Council of North Central Texas Council of Governments together serving as the metropolitan planning organization for the Dallas Fort Worth area on January 29, 2018. The North Central Texas region has been identified as a potential hub for passenger railroad serving Texas. Federal and state plans indicate a need for high-speed rail service to and through and within our region. The strong economic growth projected population increases to North Central Texas combined with widespread local political support for investment in public infrastructure, provided optimal environment for the high-speed rail and contemporary systems in Texas. High-speed rail between Dallas and Houston is a vital transportation need that'll help sustain the national, regional, and state local economies. Both the Regional Transportation Council and the North Central Texas Council of Governments support and are committed to creating and leveraging public and private resources to enhance the mobility of travellers in Texas. Developing a safe, dependable, and the interconnected passenger rail systems is in the best interest of the traveling public because of rail's safety, reliability, air quality benefits and efficient use of land which fosters and economic development. In the North Central Texas region the proposed high-speed rail system will provide connectivity to existing public transportation systems, and the proposed Dallas Fort Worth high-speed rail corridor express roads. The design supports the development of high-speed rail connectivity between Fort Worth, Arlington, Dallas, Houston to the Texas Central Partners proposed Dallas high-speed rail station in downtown Dallas. The proposed Dallas to Houston high rail is consistent with mobility 2040, the metropolitan transportation plan for North Central Texas. Due to the projects critical natural the North Central Texas Council of Governments is willing to provide any assistance in the planning, design, and implementation for this.	Comment noted.
Ian M. Morrison	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Melissa Morrison	2/11/2018	Website	I do not want my tax dollars to fund this.	Comment noted.
Jacqueline Morton	3/9/2018	Email	This project is ridiculous & is selling minimal disruption. That is crap. All the small town families you are forcing to sell or move away after generations of sweat & blood put into a family's heritage. We choose to move into a small town in the country, to the middle of nowhere. We choose this because it is our right & our preference. However, big cities are choosing to take this away from us. Try to explain minimal disruption to a quite small country town. We aren't used to noise except maybe cows and a tractor. Now we have a train zooming by at 200	Refer to ED-1, GN-7, NE-1, NR-5, NV-1, PN-3, SC-19.

			miles an hour. Not only that, this would not even benefit us, who would have to drive hours to the nearest station. Minimal disruption, our wildlife is now disrupted. Our one lane country roads that take us to where we need to go. All for the convenience of a few big city people trying to pass over us like we are nobody to get to the next big city? When did America get so selfish? You see it on the news, but now we are living it. Maybe if these big city people trying to pass over us country folk would take the time to stop off at one of these towns & see the people. It's a whole another world out there & it's not so bad. Hell they might enjoy it and see that they are passing up life. Maybe these big city people can learn something from these county folks they are passing up. But I'm guessing they should do what they do best & hurry because IF this train comes through there will not be any stops to small town America & all we will be is a blur at 200 mph. So much history & heritage will be passed up and then the disconnect will be even greater between these people. How selfish are we as Americans to pass up & forget the history that made this country. Shame on you America. I could write a book for all the reasons why this train is a disruption and a negative impact. But I'm guessing you've heard all these reasons plus a hundred more. I'm also guessing that you do not care and will do what you want to do because that is what the American people now think is right. Again, shame on you. A truly concerned citizen and soon to be forgotten of small town America, Farrar, Texas.	
Chris Moss	1/30/2018	Oral	I didn't write a speech. I wasn't planning on speaking. My grandmother is here. Billy Moss Bolin. This train is going to cut through two tracks of land that my grandparents own. It is going to cut through my mother's track of land and it is going to cut through my uncle's track of land. My grandmother has done real estate for over 50 years. Her investment was land. She didn't have like a retirement or pension and she has oil and gas on her land and this proposed route, it says on item number 14 -- would close that down. So it is going to take her livelihood. It is going to take what she's worked for her whole life for. So you know that's one thing. The second thing is I have a lot of doubts about the numbers they we have been given. I've been reading different studies and throwing a lot of numbers around and talking about the project. Some figures say 3 billion. Some say 19. Some said, you know, the figures are all over the place. It doesn't make sense. I don't think it is going to be profitable. There is two high-speed rails in the world that are profitable. One of them is in Osaka, Japan to Toyko. They have a very high concentration of people. Not a lot of people that have cars there. The second one that is profitable is from Paris to Lions in France. How many of you people know people from Houston or Dallas that have automobiles? Raise your hands. Thank you. The subways in New York. I know it is not a high-speed rail but the reason they work is there are so many people and densely populated area right there that they do not own cars. Texans have trucks. Texans have cars. We have Southwest Airlines to take up back and forth. The people in between are going to see no benefit. I really don't know how the people of Houston and Dallas are going to benefit either. They already have avenues to travel. So that is all I have to say.	Refer to BA-4, BA-12, GN-1, LU-7, NE-1, SC-19 and SC-22.
Chris Moss	1/30/2018	Oral	I just forgot to say something the last time I was up. And if you heard the statement that says, "if you don't learn from history you are bound to repeat it." I think if you look at the figures this doesn't look like they are going to make money based on there are 20 high-speed rails in the world and only two are profitable. Look at California how theirs is such a mess and it is going way over budget and I feel like this thing is going to fail and they're saying that the legislation that was just passed prevents the taxpayer from picking up the bill. When a large insurance failed and General Motors failed who paid for that? The taxpayers. So they can say anything they want but I mean do you trust them. I don't. That is all I want to say.	Refer to GN-2, GN-4 and NE-1.
Karen Moss	2/16/2018	Website	This railway is so exciting for so many reasons. A safe, quick and eco-friendly way to travel. Jobs created and ongoing, taxes for the communities, are just a few. To be at the forefront of mass transit capabilities is a positive statement for Texas and will no doubt bring corporations and more jobs.	Comment noted.
Marvin Moss	2/6/2018	Website	High speed rail service is a vital part of any first world nation's transportation network - it's time that America steps up to the plate and add the links and service that will replace wasteful short haul flights and four-hour drives that are inefficiently serving medium-distance city pairs. Doing so will thereby free up capacity at airports for more lucrative long-haul flights and mitigate the need for long distance freeway expansion projects.	Comment noted.
Mollie Moss	3/8/2018	Email	I, Mollie Moss, do oppose this proposal of the THSR. My great grandparents a century ago bought our land that is now in danger of being ruined. Please add my name to the list. Mollie Moss [...] Thank you.	Comment noted.
Will Moss	12/19/2017	Email	I'm worried about the noise pollution caused by this type of train. The proposed routes will cut through residential areas within a couple miles, how can we be sure the train won't disturb the peace of the neighborhoods? Also, how will the tracks be maintained and guarded from debris and people? Will there be a parking garage to house the travelers?	Refer to NV-1, SS-2, SS-13 and TC-5.
Destiny Mow	2/4/2018	Website	I am very concerned with the impact of economic development. There are dozens of roads planned which cannot be completed if the train cuts through. Stifling all future economic developments in all counties along the proposed route. The feasibility of this project is not there. In closing a NO build should be chosen as the only viable option in the final Environment Impact Statement.	Refer to TR-1 and TR-8.
Ronald Mraz	1/30/2018	Oral	I am a retired policeman from Houston, 22 years. And I also worked for the DART transit police for 11 years. I was on the start-up team and there are going to be many comments on the objection I realize about this train situation. We have acreage on the east side of 45 about 200	Refer to SS-6 and SS-7.

			acres and what will be will be. But in the interest of safety or personal health I am wondering if there has been any thought on how they would handle the security between Dallas and Houston and when I worked for the DART police we work in three counties with jurisdiction between these two cities and what has gone wrong will actually happen. And for the safety of the people if this has already been thought of and figured out then I would say that this organization is well on its way to planning the full needs of the people. I would like -- I would like to see if there has been any planning on this situation as I just mentioned. Because with the world situation things have gotten a lot worse compared to when this ideas was first generated. And so that's about it.	
Linda Mudgett	NA	Website	Also, the business case for this project is very weak.	Refer to GN-4 and NE-1.
Paul Mudgett	NA	Website	Also, the business case for this project is very weak.	Refer to GN-4 and NE-1.
Addison Mueller	2/27/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.

Jennifer Muir	1/29/2018	Handwritten	What makes this project any different than the H.S. project in California? NO Railroads H.S. or otherwise Run Without Federal or Government Support. I DO NOT Want my tax Dollars to be used to pay for ANY Part of this project now or later. the Financial Numbers DO NOT ADD UP to Support the claim that Ridership will Pay for the Opperation of the H.S.R. the General Public is not Aware of what a ticketwill Cost to Ride the HSR.	Refer to GN-2, GN-4, NE-1 and SC-3.
Jennifer Muir	1/29/2018	Handwritten	How will Riders Get From the Train Station to th Business Disticts of either Dallas or Houston? Texas will not Give us their Cars and the Flexability personal transpotation Allows. the construction of the Project kwill ultimately go over budget and not get built in a timely fashion. Refer to the California H.S.R project. I conclude the project will end us like the " Super Conducting Super Collider" in Waxahachie unfinished and unused.	Refer to GN-6.
Jennifer Muir	1/31/2018	Email	My name is Jennifer Muir. I live on a ranch in Navarro County, specifically 1 mile (+ or —) from the overhead crossing on FM 7098. I can only imagine the noise, interruption and hassle this project is going to cause. The thought that the last years of my life will be spent watching a project that is despised by so many be built so close to our home is sickening! I truly hope the FRA will step in and STOP the insanity!!!	Refer to EU-2, GN-2, GN-4, GN-7, NE-1, PN-3, SC-3, TR-3 and TR-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>I have attended several "meetings" concerning this project. The Texas Central people have NOT been very forthcoming with any specific information. The general public is NOT aware of what the cost of a ticket will be, exactly where the stations will be located in Dallas or Houston or how anyone is going to get from the stations to their destinations once they arrive in either Dallas or Houston. I feel that if more people were aware of the prohibitive cost and the less than ideal locations of the stations, they would also be against this project. That is not to mention the likelihood of eventual Government funding and tax payers dollars going to subsidize this ridiculous project. The studies/projections of ridership are very flawed. Dallas or Houston does not have the dense population that Japan or even Europe has. Texans will never give up the freedom that driving their own vehicle provides. Texas Centrals claim that the HSR Will lessen congestion on the freeway is false. The only places that there is significant congestion is in the immediate proximity to Dallas or Houston. I travel 1-45 regularly and drive at the posted speed limit of either 70 or 75 mph the whole trip. Their claim that business travelers will take advantage of the train is suspect to me. My understanding is most businesses are using Skype or a similar cyber meeting system to cut down on travel and the added expense that goes with it. No where in the literature does it explain how utilities will be handled. This type of construction will increase the need for more right of ways and therefore more land grab!</p> <p>This brings me to another concern: the likelihood of the project being started and then abandoned. Just like the Superconducting Supercollider was in Waxahachie. Land grab, tax dollars spent and then NOTHING!!! What would happen to all the land if/when this project goes bankrupt? What if some Of the rail is built and then left unfinished? Not only would this be an eye sore, it would devalue any property in its path. Once again....Bad idea, Bad for Texas! I will not go on and on discussing all of the valid points that are being brought up at the public hearings, but I agree with all of them. Hog concerns, flooding, erosion, safety issues with road closures, land locking ranchers, rebuilding fences, cyber attacks, devaluation of land, illegal use of eminent domain (specifically private venture for private profit), displacing homeowners, restrictions on hunting due to gun fire.</p>	
Robert Muir	1/29/2018	Handwritten	I Strongly oppose the rail project. It will make money and sustain as an ongoing project. Therefore the burden will fall on Tax Payers. It will devalue our property values thus reducing local tax receipts. The will inevitably Terminate Numerous county roads denying access for local residents. They will divide peoples ranches and farms creating hardship with little or no remuneration. They will create a carbon footprint with construction that the rail will never I believe it will be a land grab for right away fo all sorts of utilities (power, hydrocarbon, communications,...) that will be seperated from the rail project by the original Investors thus removing The True Profit center from The Project.	Refer to GN-4, LU-11, NE-1, TR-8, TR-10 and VA-1. Construction emissions are quantified in Section 3.2.5.2.1, Air Quality, Build Alternatives.

			Another thing, WHERE ARE THE ECONOMIC STUDIES? HOW COME YOU DO NOT SHOW EVERYONE THE 5 STUDIES THAT SHOW THIS CANNOT MAKE MONEY. EVER! And, the taxpayers will be obligated to fund even when it goes OVER BUDGET or BELLY UP, WHICH IT WILL. They all do and the taxpayers have to pick up the cost. The government is already out of control and this has to stop now. We cannot afford anymore bad ideas to pay for.	
Richard Munson	2/6/2018	Website	THE IMPACT OF A HIGH SPEED RAIL LINE ON THE VALUE OF MY PROPERTY IS UNKNOWN, PENDING ITS FINAL ALIGNMENT, BUT CANNOT BE TO THE POSITIVE. IT CAN ONLY BE TO THE NEGATIVE BECAUSE OF THE NOISE CREATED BY THE TRAINS WHICH ENCROACH ON THE SIRENITY OF LIVING OUT IN THE COUNTRY. THEREFORE, THE NO BUILD OPTION SHOULD BE CHOSED AS THE ONLY VIABLE OPTION IN THE FINAL ENVIRONMENTAL IMPACT STATEMENT	Refer to NV-1, SS-23, TR-6, TR-8 and VA-1.
Richard Munson	2/6/2018	Website	THE IMPACT OF A HIGH SPEED RAIL LINE ON THE VALUE OF MY PROPERTY IS UNKNOWN BUT CANNOT BE TO THE POSITIVE. IT CAN ONLY BE TO THE NEGATIVE BECAUSE OF THE BLOCKING OF ROADS THAT CURRENTLY CROSS WHERE THE LINE IS PROPOSED TO BE CONSTRUCTED AND OPERATED. THE POTENTIAL BLOCKAGE COULD LIMIT CIRCULATION WITHIN THIS PART OF THE COUNTRY NEGATIVELY AFFECTING LIFE SAFETY ADN EMERGENCY MANAGEMENT SERVICES INCLUDING FIRE FIGHTING. THEREFORE, THE NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION IN THE FINAL ENVIRONMENTAL IMPACT STATEMENT.	Refer to SS-23, TR-6, TR-8 and VA-1.
Richard Munson	2/6/2018	Website	THE IMPACT OF A HIGH SPEED RAIL LINE ON THE VALUE OF MY PROPERTY IS UNKNOWN BUT CANNOT BE TO THE POSITIVE. IT CAN ONLY BE TO THE NEGATIVE BECAUSE THE BLOCKING OF ROADS THAT CURRENTLY CROSS WHERE THE LINE IS PROPOSED TO BE CONSTRUCTED AND OPERATED. THE POTENTIAL BLOCKAGE COULD LIMIT ACCESS TO MY PROPERTY AND GENERAL CIRCULATION WITHIN THIS PART OF THE COUNTY. THEREFORE, THE NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION IN THE FINAL ENVIRONMENTAL IMPACT STATEMENT.	Refer to SS-23, TR-6, TR-8, TR-10 and VA-1.
Richard Munson	2/6/2018	Website	ONE OF THE BASES OF THE ENVIRONMENTAL IMPACT STUDY AS DEFINED IN ITS INTRODUCTION IS THAT THE FRA HAS THE AUTHORITY TO REGULATE THE SAFETY OF RAILROADS, INCLUDING THIS PROJECT. IT IS MY UNDERSTANDING THAT THE PROPOSED HIGH SPEED RAIL OR ITS OWNERSHIP DOES NOT MEET THE DEFINITION OF RAILROADS THAT THE FRA HAS THE AUTHORITY TO REGULATE. THEREFORE, THE NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION IN THE FINAL ENVIRONMENTAL IMPACT STATEMENT.	Refer to NE-1, NE-2 and SS-4.
Richard Munson	2/6/2018	Website	THE ECONOMIC FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL IS IN QUESTION. SOME HAVE CONCLUDED THAT THE PROPOSED HIGH SPEED RAIL WILL NOT HAVE THE RIDERSHIP THAT THE OWNERS ARE PROJECTING. IN ADDITION, SOME HAVE CONCLUDED THAT THE COST TO CONSTRUCT AND OPERATE THE PROPOSED HIGH SPEED RAIL WILL EXCEED THE OWNERS PROJECTIONS. IF THE PROPOSED HIGH SPEED RAIL FAILS TO OPERATE WITH A PROFIT AND / OR IS MORE COSTLY TO BUILD AND / OR OPERATE, IT WILL MOST LIKELY END UP BECOMING THE RESPONSIBILITY OF THE TEXAS TAX PAYERS TO BAIL IT OUT. THEREFORE, THE NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION IN THE FINAL ENVIRONMENTAL IMPACT STATEMENT.	Refer to GN-2, GN-4 and NE-1.
Paul Muri	2/21/2018	Website	Please build this! Make sure the train station can be easily accessed from Clear Lake, TX.	Comment noted.
Maureen Murphy	2/20/2018	Website	Re: High-speed rail between Houston and Dallas I am a Houston resident and have NO property that will be affected by this rail project. I am also a huge proponent of mass transit. However: My concern is whether this rail will be used enough to make it worthwhile. I have lived in Houston for 30 years and have traveled to Dallas only about six times. The only possible reason I can think of for my ever using this train would be to fly out of Dallas-Fort Worth Airport but, with two international airports in Houston, that possibility seems unlikely to happen. Will people really use this train? Will the cost of a ticket be affordable - and will this system be totally self-sufficient? Or will the federal government have to step in and subsidize it for the rest of its life? I personally don't think this rail is necessary or viable. NO federal funding should be provided for for construction or operations. Local residents don't need this train, and the federal government doesn't need this financial albatross.UA Thank you for allowing local residents to comment.	Refer to GN-2, GN-4, NE-1 and PN-3.
Patrick Murphy	2/8/2018	Website	I write to urge support of the Dallas to Houston High-speed Rail A few of the reasons to support the Dallas to Houston HSR are as follow: * 100% privately funded infrastructure unlocks more local investment * Creates 10,000 construction jobs each year and 1,000 permanent jobs * Texas Central will be a tax-payer, not a tax-taker, paying \$2.5 Billion in taxes in 25 years * Estimates injecting \$36 Billion over next 25 years into the Texas economy * Re-enforces importance of investment in a balanced transportation system * Creates vital piece of a 21st century transportation system * N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas * The current 4-hour, 240 mile mile trek up I-45 is expected to increase to 6.5 hours by 2035 * I-45 is the nation's 2nd deadliest interstate in the U.S.; rail keeps more cars off roads and saves lives * With a 90-minute travel time, be at your destination before you could board a flight after arriving at an airport	Comment noted.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			With the Texas population set to nearly double by 2050, now is the time to be proactive and put in place infrastructure that can support the ballooning population along the Houston to Dallas corridor. Building more or wider highways is not the answer; sustainable, frequent, on-time mass transportation is, and will be, embraced as the preferred mode of transportation in the future. Thank you Patrick Murphy	
Patrick Murray	1/28/2018	Website	I am in favor of a high speed train to and from Dallas / Houston. I hate driving I-45 due to it's amount of traffic. It's so highly traveled, it proves that a rail corridor is needed. High Speed trains would allow more flexibility to do business in both Cities more frequently. I am also a big "live music" person. A high speed train would allow me to come to Houston from Dallas, and see more musical performances. Thanks for your consideration.	Comment noted.
Evelyn Mushinski	2/5/2018	Handwritten	REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would *beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to BA-8, ED-2, EJ-1, NV-5, PI-1, PN-3, PN-5, SC-19, SS-1, SS-4, SS-12, SS-13, SS-23 and VA-1.
Evelyn Mushinski	2/5/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle Of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to GN-3, NE-1, NR-1 and PI-1.
Evelyn Mushinski	2/5/2018	Handwritten	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. 			Waller residents in any way. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely from a Concerned Citizen of Waller/Harris County	
Normon Mushinski	2/5/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This Is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile Stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to NR-2, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . For information regarding vegetation please see Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Normon Mushinski	2/5/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Normon Mushinski	2/5/2018	Handwritten	REFERENCE: IMPACT OF PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as wemove from location to location within OUT community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! NO one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to EU-2, EU-6, EU-7 and PI-1.
Normon Mushinski	2/6/2018	Website	This project will create an obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation Of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rall, failed to coordinate with the local Waller County Government, and It Is obvious It would be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side Of the rail), which would definitely cause future foundation Issues to surrounding homes in the close proximity of the route. This proposed route Of HSR's goal is to service from only city central to the next city central with a possible one stop in-between. This HSR will not benefit one resident in any way. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community.	Refer to NV-5, SC-19, SS-1, SS-12, SS-13, SS-23 and VA-1.
Normon Mushinski	2/6/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.

Jack Myers	2/17/2018	Website	Please do not approve the Dallas -Houston High-Speed Rail Line, After attending the hearing held in Cypress recently it was very clear this is not a viable project. It lacks funding, as well as ridership to support the endeavor . If it fails the taxpayers will be stuck with the cost and taxed appropriately. The sad part is the property taken will be gone and not returned to the original owners. What a chance to take.	Refer to GN-2, GN-4 and NE-1.
Lois Myers	3/4/2018	Website	<p>I do not support this High Speed Rail. I attended the Cypress Public Meeting & after listening to many public comments, which had substantive evidence & facts to back them up, I believe this private-business High Speed Rail enterprise will be an economic failure, and Taxpayers will end up having to pay for it. American citizens cannot afford any additional taxation, especially to bail out a business backed primarily by foreign banks initially funding this Project, with Construction Contracts awarded to foreign businesses. Therefore, I am NOT in favor of Texas Central Rail, because of the strong likelihood that I, & other Americans, would end up being taxed in the long-run to fund this Project.</p> <p>I also am opposed to the sheer ugliness of the monstrously tall buildings, required to support the rails, & also opposed to the high wires suspended above the rails that I believe would be detrimental from a health-standpoint (too loud, above legal noise decibel-levels for tolerance/hi-voltage electricity too close to homes).</p> <p>Furthermore, I do not see any plans for any detention ponds (above or below ground) that Central Rail intends to build, to contain its Rain Run-Off, displaced by cement and other structures necessary for the construction of this Railway; instead, its Rain Run-Off, displaced by all its cement & buildings on the ground, will run into surrounding streets, homes, bayous, & creeks, causing man-made flooding.</p> <p>Additionally, this Railway also poses a great potential threat to possible gas explosions, because in Texas there are many underground oil/gas lines, and some of the structures for this Rail Project will be built too close to them, and therefore dangerous.</p> <p>Texas is NOT the place for this high-speed rail...it might be fine for foreign countries, which have most of their populace living mostly in multi-family dwelling units or housing, without a predominance of single-family homes...BUT here in America, where single-family homeownership & neighborhoods exist, where such quality of living needs to be preserved, Texas Central would ruin such neighborhoods, and be a huge detriment & mistake.</p> <p>Please present all my arguments & concerns at the Public Meeting for HSR in Houston, TX on March 5th. Thank you.</p>	Refer to AS-1, EU-2, EU-5, GN-4, NE-1, NV-1 and WW-1. Utilities and Energy mitigation measures are discussed in Section 3.9.6.2, Utilities and Energy, Mitigation Measures , and include performing below ground utility exploration during final design (EU-MM#1: Development Impact Report) and protecting/encasing (EU-MM#3: Coordination with Anderson Water Company and Wickson Creek SUD for the Brazos Valley Intermediate Station Water Demand), or relocating the utilities during final design and construction (EU-MM#2: Coordination with Prairielands Groundwater Conservation District for the Bardwell MOW Water Demand).

Lee Nader	2/23/2018	Website	Make it happen.	Comment noted.
Gregg Nady	2/5/2018	Handwritten	1) Please include a bike trail connection south from the Houston NW mall terminal to the planned 12th St to Westview bike trail, under the 610 loop. 2) Provide a bike trail underpass along the drainage between Bingle and Kempwood. This will provide a safe pathway between Addricks Rosemont and White Oak bayou along the so called powerline hike and bike trail corridor. 3) I fully support this project and look forward to an alternative transit option between Houston and Dallas.	TCRR has not proposed any bike trails as part of the project.
Gregg Nady	2/6/2018	Website	I have several comments, but I am in complete support of the HSR project and look forward to an alternative mode of transportation and reduced congestion on I-45. First, I would like to have included a hike and bike trail connection at the Houston NW Mall terminal from the planned Westview Dr. to 12th St bikeway. Preferably this would cross between the TxDOT detention ponds under Loop 610 and connect to the terminal at the West Loop Southbound feeder road and Hempstead Road. This should include a bike path to the terminal building and bike parking at the terminal. Note that the Westview/12th St bikeway has direct bikeway connections to downtown Houston and West Houston/Katy. This would provide an alternative form of commuting to and from Dallas. I am including a file which shows the Westview to 12th St bikeway. On the Dallas terminal end, please plan to include a safe bikeway connection to the Trinity Skyline trail which plans to be extended to downtown Dallas with a connection to the Katy Trail which runs to the SMU campus and White Rock Lake. It appears that a bike path southeast from the terminal might be the best option. Also, please consider accommodations on the trains to allow bike storage for the trip. This would allow riders to bike to the terminal, ride to Dallas, then bike around Dallas before returning to Houston. In Houston, please consider allowing for a bikeway underpass at the east-west drainage along Hempstead Hwy, just south of Bingle Rd. This is the likely route of a future bikeway connecting White Oak Bayou to West Houston, via a powerline corridor. Thank you for your consideration of these comments and please contact me if you need additional information.	TCRR nor FRA are recommending new or additional hike and bike trails, however, data concerning bicycle and pedestrian facilities were collected from NCTCOG, H-GAC and the cities in the Study Area. On-road, non-motorized transportation facilities, including bike lanes, bike routes and multi-use paths or trails, were obtained from the inventory of roadway crossings discussed above. Facilities designed for use by bicycles, whether on-road or off-road, are defined as bikeways. All facilities in an existing roadway ROW are considered on-road. Off-road facilities, or facilities not within an existing roadway ROW, are discussed separately in Section 3.17, Recreational Facilities .
Monica Nagel	3/9/2018	Website	The train is a much needed project! Texas needs more like this as it continues to grow in population.. We need to embrace the 21st century.	Comment noted.
Steven Nagel	3/9/2018	Website	I fully support this project. Houston and Texas need to build more rail systems.	Comment noted.
National Motorists Association	2/5/2018	Website	With the advances in autonomous vehicles, 18th century solutions to 21st century problems is a silly waste of money. HSR to cover a distance of 200 miles is a waste of money. Please stop lying to people that "no tax dollars will be used". Please shut down this effort immediately.	Refer to BA-4, NE-1, GN-4, PN-3.
Liz Nava	2/1/2018	Email	I am absolutely against the HSR. Being from a small community this rail will run through, I cannot imagine the negative impact it will have on our community. Keep this out of here. Definitely a NO.	Comment noted.
Penelope Navar	3/9/2018	Website	This is an extraordinary idea. It is both efficient and accessible. There is a lot of travel between Houston and Dallas, and this would just make both business travelers and pleasure travelers commute much faster.	Comment noted.
Ken Navarro	2/13/2018	Website	Houston High-Speed Rail Watch, a coalition of neighborhood leaders, has put forward a proposal for connecting the HSR station to downtown with METRORail or BRT (Bus Rapid Transit) running elevated over the main lanes of I-10. With a modest number of station stops along the way, this line could serve the neighborhoods it passes by while providing a speedy end-to-end link. The new line could tie in to the Green and Purple METRORail lines downtown, and into the Bus Rapid Transit (BRT) line currently under construction in Uptown. It could also become part of a commuting solution for residents of West Houston. This solution would provide connectivity to other parts of Houston, strengthen Houston's transportation network, and benefit neighborhoods. I support this proposal, and urge METRO, Texas Central Partners, the FRA, and TxDOT to work with Houston High-Speed Rail Watch to make their connectivity proposal a reality for Houston.	Refer to TR-4.
Kelly Neal	2/6/2018	Oral	Good evening. My name's Kelly Neal. I live in Austin. I'm a real estate agent, and I'm here tonight because my parents own 21 acres off of Binford Road. They have a blackberry farm. They have a -- they're in the process of building a farmers market right now, and this entire -- their entire livelihood is built off of this property. But I'm here tonight to talk to y'all about something that no one in this room has mentioned yet, and that's Google fiber. I'm not sure how many of y'all are familiar with Google fiber or have even heard of the word. It's short for fiberoptics. It's Google's new fiber optic cables that are about a hundred times faster than the average U.S. Internet service. Back in 2011, Google started a test market, and they tried it out in Kansas City first. They wired up the entire area of Kansas City with the underground fiber optic cables. And it was so successful that they made Austin their second market for testing since Google's headquarters are in Austin, as well. So in 2014, they started wiring up the city. They got all of our sidewalks, our roads, subdivisions. They have wired up about 90 percent of the city limits right now. And it costs about \$130 plus tax for you to get Internet and digital TV through Google fiber. So since it's so expensive, not that many people are really using it. It also has a \$300 install fee. But what I'm concerned with about all of this is that Austin was the first city wired up in Texas. Now, San Antonio is being wired up. They started getting wired up in late 2017. And now Dallas is in the running for the third group that Google is going to wire up. So there's been no mentioning of Google fiber in Houston that I've heard of; and from what I've talked to my	Refer to LU-14 and NE-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			parents and grandparents' friends, most of y'all are not even familiar with the word at all. And I think it's something that most of you need to be researching if you're landowners, because if they put the train -- which sounds like it's a useless train -- but they can't put it -- they can't -- Google can't take your land for utility easement. So if they put a worthless train through there, then they can take your land for the train easement. Then when the train fails, they'll already have an existing easement that's already wired up with Wi-Fi, and Google is going to be making a couple of hundred bucks off of every single user that uses this. I want to know if my parents and grandparents and all of you other property owners are going to get paid anything from Google or any of the other tech companies off of that train if the train fails and the utility lines still stay in place and Google's still running their fiber. So that's all I needed to say.	
Les Neal	1/31/2018	Oral	How are y'all doing? My name is Les Neal. I live out in Shiloh, right around the corner from Bobby Forrest. And he's right, we have some good people out there in Shiloh, and I know that Shiloh isn't solid for this particular land grab, but let me just tell you people something. Y'all are in the wrong damn state to be trying to steal people's land. Y'all should have went to fucking California with that shit. Okay. Time saving. There ain't going to be no time saving. I'm a truck driver. Let me tell you something. You're going to go to Dallas, you're going to get on -- I agree with that lady. You're going to go to Dallas, you're going to try to drive up and park your personal vehicle on one end or the other, and then take a train to Houston, -- By the way, the only people going to Houston from Dallas is lawyers, doctors, people with more money than they have sense, and are impatient, and do not appreciate the Texas landscape that they can drive down and enjoy on I-45, stop by, Bucc-ee's, Woody's, or wherever, and buy some beef jerky, and just take your time. You're in the wrong damn state. If you're in a hurry, go to Jersey, where everything is right there local. Also, eminent domain. I mean this. Have y'all ever heard of Ruby Ridge? There was just one family up there getting in trouble over a shotgun. Y'all are talking about people with five generations. That shit runs deep. Excuse my French. That runs deep. And Texans don't back down. Richard Petty -- I mean, Petty -- Tom Petty should have been from here. Okay. They don't abide lies, they don't like little trickery bullcrap. They won't put up with it. So, whenever you go down to one of this Mr. Little's house, or somebody else's house, and you've got a shotgun in your face, and you're wondering "Why are we on TV -- We were suppose to be having a commercial about the high-speed rail, but now we're on TV", and Donald Trump is going "Well, we have a problem in Texas. The high-speed rail came in, and we had a bunch of killings", that's probably going to be what happens. So, go to California, try it from L.A. to San Francisco. It's bigger. You know, let the fags go to nuts, and the nuts go to fags, whatever. So, bye.	Comment noted.
Anna Beth Neason	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Anna Beth Neason	2/6/2018	Oral	It was my understanding this was an opportunity to also comment on the Environmental Impact Statement. I've spent the last several days digging through that thing. A number of issues were not addressed at all and how it will impact us in our environment. For one thing, the traffic on our current roads. Highway 30 is already overloaded with traffic. If you put a station in Roans Prairie, it's going to increase that. And Shiro, which is where I live, we already have problems where they ignore the speed limit. It's not uncommon to see them doing 75 and 80 in front of my house. They ignore the passing zones. They even ignore the emergency vehicles. The Shiro Fire Department is catty-corner from my house. They have to sit at the end of their driveway with their lights and their sirens going waiting for the traffic to decide to stop. Well, to clear because they don't stop. If you increase the traffic on that current highway it will get worse. Secondly, emergency services. One of things that they did not address is they talked about the current emergency services. Do you realize that most of the route through Grimes County is served by volunteer fire departments, which means during the workday they have very few or very low manpower to address any emergency situations. You would have to wait until Bryan/College Station could get out there because they would not have the manpower to handle a train wreck. You will also increase the accident rate on Highway 30 which is already high by increasing the traffic. Pollution. I looked at the air pollution. The only thing they address was the non-attainment areas in Houston and Dallas and their effects on it. So what's it going to do to Grimes County? I could not find anything in there that would address that issue. Light pollution in the five-mile area. We already have light pollution from Tenaska, the transformer station, and now we're going to get this big train depot. Noise pollution. Believe me, the traffic noise	Refer to AS-1, CR-12, HZ-5, NE-1, NE-9, NV-1, PI-7, SS-23, TR-2, WW-1 and WW-2. Section 3.2 Air Quality and Section 3.21 Greenhouse Gas Emissions contain detailed analysis of potential air quality impacts associated with construction and operation of the Build Alternatives. Both sections determined there would not be significant, long term adverse impacts to air quality and a net reduction in both major pollutants and greenhouse gases. Temporary adverse air quality impacts associated with construction were discussed, and mitigation measures outline at the end of Section 3.2, Air Quality. Section 3.20.4.8.3, Soils and Geology, Seismicity have been updated to reflect all major and minor faults within the Grimes County. Section 3.20.5.2.3, Soils and Geology, Seismicity details that annual probability for seismic hazards being felt is low and would cause

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>is already a problem. I've tried to soundproof one of my bedrooms in my home. You can't do it. And if you increase the traffic, it will be worse. Ground water and surface water. We depend upon ground water for our water source. What are you going to be doing to it? I could not determine from the comments in the environmental statement what they would do if they contaminated our ground water. Fault lines. There are three fault lines across Grimes County. How is it going to impact them? Again, nothing was in there. Historical sites. You know, not every historical site's on the National Register of Historical Sites. I know of Hadley Fort. It will be impacted. I know of an Indian campground north of Roans Prairie. It will be impacted, and you can't just pick it up and move it. I am against the high-speed rail.</p>	<p>minimal to no structural damage to the HSR system and would not pose risk of injury or death to passengers. Furthermore, as described in Section 2.2.1, Alternatives Considered, Technology, the HSR system is equipped with proven earthquake sensors containing anti-derailment and braking technology.</p>
Annabeth Neason	2/23/2018	Website	<p>I wish to express my opposition to the proposed High Speed Train that would link Houston and Dallas, TX and be built by the Texas Central Railroad. First I will explain why I believe this to be a very bad idea. Then I will point out deficiencies in the Draft Environmental Impact statement that was released in December of 2017. Why I oppose the High Speed Train (HSR):</p> <ol style="list-style-type: none"> 1. Texans are NOT mass transit minded people. We are not accustom to being herded into a container like cattle and then dumped out a point that may or may not be near our destination. Most people may take the train once or twice. But, as soon as transport to our final destination, such as Lewisville, Keller, or Grapevine, is excessively expensive in money or time, we WON'T take the train again. 2. Our cities are sprawling and have not been developed to allow easy mass transportation within the metroplexes. Look at the history of mass transit in Houston. They still haven't been successful with it. 3. The cost is too high. Estimates for a one-way ticket from Houston to Dallas are \$199.00. You can fly from Houston to Dallas on Business Select level for \$126 one way on Southwest Airlines. Flight time is 1 hour. People will choose the airline over the train. 4. The HSR is planned to travel through the rural areas of Texas while the benefit is for the larger cities. The cities such as Bryan-College Station see the HSR as an enormous benefit. They only gain benefits. They do not lose anything. Only the rural counties lose. The supposed increase in taxes the railroad would pay will not make up for the increased costs of road maintenance, trash and waste handling, or the other impacts of the railroad. 5. The building of the HSR is highly detrimental to the rural areas of Texas. We lose our land. Much of this land is highly productive agricultural land. I know that compared to production to the entire state of Texas, this reduction is small, but the day will come when any reduction is unacceptable. It will remove land from the property tax roles of counties that are not affluent. It will destroy family legacies that have stood for five or more generations. It will destroy or severely damage family livelihoods. 6. Safety – Based on the Amtrak accidents that have occurred in the last couple of months, I have a concern for the safety of the high speed rail. Amtrak only travels about 70 miles per hour, the high speed rail will travel at 205 mph. How will the Federal Railroad Administration ensure the safety of the passengers on the train. <p>In addition to opposing the general concept of the high speed rail, I have numerous concerns about the Draft Environmental Impact Statement (DEIS).</p> <ol style="list-style-type: none"> 1. Validity of data used. The statement clearly indicates that it is a desktop statement. This means most of the data used in the report was obtained from other studies by other entities for other reasons and possibly in other areas. Very little data was actually obtained on the land that will be directly impacted by the railroad. I question the validity of such data. Such a drastic enterprise should be evaluated on the actual land it will impact, not similar areas. There are many variables within "similar" areas that will affect the environmental impact. The data needs to be specific to the area that is being included in the rail line 2. Impact on nearby small communities. The houses in the community of Shiro sit very close to Hwy 30. Some are less than 100 ft from the road. They are old houses. <ol style="list-style-type: none"> A. Noise –The station in Roans Prairie will create an increase in traffic, especially on Hwy 30, which increases noise levels that are nearly impossible to block. The current levels of traffic increase about 5:30 a.m.. I seldom have to wait for my alarm to wake me. The increased traffic at that hour usually wakes me up before the alarm goes off. And this problem is with the current level of traffic. The station in Roans Prairie will possibly increase the traffic level. B. Maintenance – increased traffic will require increased maintenance. Maintenance that will have to be paid by the tax payers C. Safety – Current traffic flies through the community at high speeds ignoring the speed limit. The train station in Roans Prairie will increase this problem. D. Difficulty in accessing Hwy 30 from side roads and driveways. Traffic on Hwy 30 already makes it difficult and dangerous in pulling out on the highway. Increased traffic will exacerbate the problems. <ol style="list-style-type: none"> 1) many homes along the highway have to back out into the traffic because there is no room for a turn around in the drive 2) due to drivers ignoring speed limits, accelerating to obtain speed after accessing the highway often ends up with impatient drivers sitting on your bumper. 3) Drivers ignore the no-passing zone in Shiro. This makes pulling out into the traffic even more hazardous. You have consider not only the 	<p>Refer to AQ-8, CR-12, GN-2, HZ-5, LU-2, NV-1, PN-3, SC-3, SS-4, SS-12, SS-13, SS-18, SS23, TR-6, TR-7, WW-1 and WW-6.</p> <p>Section 3.20.4.8.3, Soils and Geology, Seismicity has been updated to include all major and minor faults within Grimes County. Section 3.20.5.2.3, Soils and Geology, Seismicity details that annual probability for seismic hazards being felt is low and would cause minimal to no structural damage to the HSR system and would not pose risk of injury or death to passengers. Furthermore, as described in Section 2.2.1, Alternatives Considered, Technology, the HSR system is equipped with proven earthquake sensors containing anti-derailment and braking technology. The station area impacts discussion in Section 3.10.5.2.2, Aesthetics and Scenic Resources, Build Alternatives have been revised to include impacts from station area lighting. For the Brazos Valley Station, FRA introduced additional mitigation measures to minimize the cumulative lighting impacts. The station would be located approximately 1/2-mile from the businesses located at the Hwy 90 and Hwy 30 intersection. While the height of existing mature trees may not block the view of the entire station, the existing vegetation and trees will help limit the distance light travels from the station area.</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>traffic you see, but also the traffic that may be behind them and in a hurry.</p> <p>E. Heavy traffic on Hwy 30 makes it difficult for emergency vehicles from the Volunteer Fire Department to respond to emergency calls.</p> <p>1) Traffic on Hwy 30 ignores the fire engine sitting in the drive with its lights and sirens going. They do not stop. The fire fighters have to wait for traffic to clear.</p> <p>2) This delays the response time of the Volunteer Fire Department.</p> <p>3). Impact on the County</p> <p>A. The DEIS notes that construction materials will be brought in by rail. These materials willstill have to be trucked to the construction sites. To access the remote construction sites, thetrucks will have to use county roads.</p> <p>B. Trucking these materials to construction sites will often involve small County maintained, dirt roads. The county will have increased costs for road maintenance.</p> <p>C. Emergency Services</p> <p>1) The DEIS admits that during construction there may be problems with response time for emergency vehicles in some areas. When emergency services arrive at the scene of an emergency, victims must be transported to the nearest medical facility in Huntsville, Navasota or Bryan. Increasing the response time could possibly have negative effects on victim survival.</p> <p>2) Most of the areas the proposed high speed rail will travel in Grimes County and other rural counties are served by Volunteer Fire Departments. During the day, these departments have very few responders since many of the younger firefighters work elsewhere. The limited number of available responders would be a major concern if there is a rail accident. Responders from larger towns that may be much further away would have to be called. This would definitely delay the response time if an accident occurred on the railroad.</p> <p>4. Impact on Environment</p> <p>A. Air Pollution</p> <p>1) Most of the areas addressed by the DEIS on air pollution dealt with the non-attainment areas found in Houston and Dallas. The DEIS does not address air pollution which will be created by the increased traffic on Hwy 30 and Hwy 90 due to the location of the Roans Prairie station. This air pollution will affect homes located very close to these two highways. Currently we meet air quality standards. How will the train and its station location affect the air quality in Grimes County?</p> <p>B. Light pollution –While the DEIS addressed the light pollution from construction and the operation of the train. I did not find that they addressed light pollution from the stations. Grimes County is a rural area and yet within 5 miles of the proposed station, we already have excessive light pollution emitted by the Valero station in Roans Prairie, the Tenaska power station between Roans Prairie and Shiro, and the electrical transformer station down CR 229. The Roans Prairie station would add a fourth light pollution source that disrupts wildlife behavior. This issue was not addressed.</p> <p>C. Noise pollution –</p> <p>1) The only statement I could find related to noise pollution and the stations was in Section 3.4.5.2.2 and I quote -"sources of potential operational noise impacts in the vicinity of stations includes auto and bus traffic on access roads and parking facilities. For these sources, FTA guidance suggests impact screening distances in the range of 100 to 225 feet. For the station sites under consideration, however, there are no noise-sensitive land uses within these distances. Thus, noise impacts would not occur due to station activities. The DEIS does not address noise pollution from increased traffic in the areas of the Roans Prairie station. 2) I believe this is a false statement. Hwy 30 runs close to a number of homes. It is about 100' from my front porch. The home was built in this location prior to 1944. The traffic noise is already extensive and creates difficulties in sleeping. Most methods of noise abatement available to home owners are ineffective. I know, I have tried several of them on one bedroom so overnight guests could sleep in peace. These methods have not worked.</p> <p>D. Groundwater and Surface water</p> <p>1) The following statements were made in the DEIS</p> <p>a) "No watershed protection plans are currently in effect for any sub watersheds in the study area; therefore the Project would not be subject to local watershed protection plan requirements."</p> <p>b) "Operation of the railway would have permanent impacts on surface water quality including impaired stream segments."</p> <p>c) "Long-term increase in water demand would occur during operations at the stations and TMFs from food and beverage service, restrooms, meal preparation and train washing."</p> <p>2) The impact of the stations was addressed concerning how you would meet these needs in Houston and Dallas. You did not address how you would meet these increased needs at the Grimes Co. Station.</p> <p>a) Roans Prairie does not have "city water" so you would have to drill wells to supply the station. This could draw down our groundwater of the area with the increased demand.</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>b) Roans Prairie does not have "city sewer". Homes in the area use a septic system for disposal of sewage. The sewage outflow from the station could affect our surface water as well as our groundwater.</p> <p>c) You admit that construction may have impacts on the quality of surface and groundwater in the build areas. However you only promised to use best management practices. You did not address what will be done in the case of contamination. I noticed a definite lack of addressing these possibilities in Grimes County. Shiro is solely dependent on groundwater for our water supply.</p> <p>E. Fault lines I could not find anything in DEIS addressing effects of the TCRR rail line and the three fault lines that cross Grimes County.</p> <p>5. Historical sites Not all historical sites are listed in the National Register of Historic Places or the Texas Historical Commission. How will the construction of the HSR affect the ruins of the Radley Fort, south of Roans Prairie or the Indian campground (possibly the Bidias Indians) north of Roans Prairie?</p> <p>Overall, I find the DEIS to be insufficient in addressing the actual impact on our environment. It tends to use a broad brush in explaining the impact of the high speed rail as it applies to Houston, Dallas and the rural counties it will severely impact. These three areas are unique and different. Noise and light in Houston and Dallas is considered normal. However, in Grimes County it will a drastic, detrimental change. I suspect much of the data used in the report came from the environmental impact statement of the Center Point power transmission line currently being constructed in Grimes County. There is a huge difference in the impact of a power line upon the air and a rail system on the ground with its associated increase of people and traffic. Also, the transmission line does not incur the problems of a rail station and its impact on a rural county. The Environmental Impact Statement is inadequate. It needs to be completely redone. It needs to use real data concerning the impact of this rail, not data from other studies for other reasons. PLEASE stop the high speed rail. It is a financial disaster. I do not believe it will succeed over the long term. Then the rural areas of Texas will be left "holding the bag" with this monstrosity sitting on our land, and destroying our environment. This is discrimination against rural counties and the people who live there, including black, brown and white. We do not have the "voice" or money to fight high dollar investors such as the backers of the high speed rail. We ask the federal government to stop the high speed rail.</p>	
AnnaBeth Neason	2/23/2018	Website	<p>To the Federal Railroad Administration Re: High Speed Train in Texas Dear sirs or madams: I wish to express my opposition to the proposed High Speed Train that would link Houston and Dallas, TX and be built by the Texas Central Railroad. First I will explain why I believe this to be a very bad idea. Then I will point out deficiencies in the Draft Environmental Impact statement that was released in December of 2017 Why I oppose the High Speed Train (HSR) 1. Texans are NOT mass transit minded people. We are not accustom to being herded into a container like cattle and then dumped out a point that may or may not be near our destination. 			campground (possibly the Bidias Indians) north of Roans Prairie? Overall, I find the DEIS to be insufficient in addressing the actual impact on our environment. It tends to use a broad brush in explaining the impact of the high speed rail as it applies to Houston, Dallas and the rural counties it will severely impact. These three areas are unique and different. Noise and light in Houston and Dallas is considered normal. However, in Grimes County it will a drastic, detrimental change. I suspect much of the data used In the report came from the environmental impact statement of the Center Point power transmission line currently being constructed in Grimes County. There is a huge difference in the impact of a power line up in the air and a rail system on the ground with its associated increase of people and traffic. Also, the transmission line does not incur the problems of a rail station and its impact on a rural county. The Environmental Impact Statement is inadequate. It needs to be completely redone. It needs to use real data concerning the impact of this rail, not data from other studies for other reasons. PLEASE stop the high speed rail. It is a financial disaster. I do not believe it will succeed over the long term. Then the rural areas of Texas will be left holding the bag with this monstrosity sitting on our land, and destroying our environment. This is discrimination against rural counties and the people who live there, Including black, brown and white. We do not have the voice or money to fight high dollar investors such as the backers of the high speed rail We ask the federal government to stop the high speed rail.	
Sheila Necessary	3/5/2018	Website	As to the proposed HSR, the negative effect it will have on my property is it will run right behind my property. I raise horses and cattle and have been around them all my life. Now let me tell you that horses are extremely sensitive, they are prey animals and introducing something as obtrusive as this train would send my horses into turmoil. They simply cannot take the stress of this monster on a day in and day out basis. Now, lets talk about the environmental side of this. First, we have the large Red Headed Wood Peckers that live out here, this would certainly mean a catastrophic end to them. The next thing would be the flooding issue. Let me tell you that we already have a problem with the water out here and if this train comes through it will only have devastating effects on our community and property. Last but not least, I have a hearing problem already, and the last thing I need is to have this train cancel out my hearing all together, let alone having to look at this horrible site all day and all night. So I support "THE NO BUILD" on this Terror Train!	Refer to FP-1, NR-1, NR-2, NV-1, WW-1 and WW-2. Red-Headed Woodpeckers are relatively common and occur throughout the eastern part of the United States. While some individuals may temporarily be displaced to similar adjacent habitat, The Project will not likely impact the species. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Sheila Necessary	3/5/2018	Website	The need and the purpose for the HSR is just not there. The studies have shown that only 5% of people in the area would only take part in this. As you know, if someone takes this train once they get to their destination they will need additional transportation from point A to point B and that is only going to cost addition funds out of their pockets. Also, there will be security checks to enter the train, that will only delay the time to the commuter. I think the studies are very correct on this issue. It is just not economically wise to build this train, that is why "I SUPPORT THE NO BUILD"!	Refer to GN-2, GN-4, NE-1 and PN-3.
Sheila Necessary	3/5/2018	Website	The impact of the HSR on our schools, would have a significant negative impact on the routes and times our children get to school and home. WISD would have to purchase more buses to get the children picked up and the pickup time would be even earlier than 7:30 a.m. as it is now, and the drop off time will be even later than 5:00 p.m. as it is now. Now that means our taxes would be going up because of that negative factor and all of the other negatives this train would bring. No child deserves to be on a bus that length of time, but that would be the direct result of our roads being negatively impacted or closed by the HSR project. "I SUPPORT THE NO BUILD"!	Refer to SC-5, SC-6, SC-7 and SC-8.
Sheila Necessary	3/5/2018	Website	The economic impact on property values in my county will create an obsolescence that would negatively impact the property values in Waller County. The proposed route will cause our property values to decrease and cause a lower tax revenue collected for our schools and emergency services. We bought this property 30 years ago and put our blood, sweat and tears in it to increase its value, only to have a high speed train come through, "I Don't Think So"! "I SUPPORT THE NO BUILD"!	Refer to VA-1.
Sheila Necessary	3/5/2018	Website	How is this HSR going to impact my quality of life? I moved out here from Houston to get away from the hustle and bustle of the city. We found this peace of paradise 30 years ago and decided to lay down roots and send our son to the WISD for education. He grew up out here riding horses, working cattle and just learning about every day life of mother nature. No one can take those memories away, those are great memories. I moved my parents out here to live with us only to have my father pass away here in the country. Like any small towns you're going to have people move in and move out and then before you know it, your small piece of paradise starts to grow. However, when I still look out my back door, all I see are trees, birds, blue skies, deer, dogs, horses, cattle and all that mother nature has to offer. But now, you want to come in and take all of that away from me and my family. I never want to open up my back door and see a monstrosity like the HSR and feel like I live in hell. This is my tranquility, my peace and quiet and I do not want to ever look at the ugly site of a high speed train and all the maintenance that will have to be performed when the loud and horrible train is not running. So that is why "I SUPPORT THE NO BUILD"!	Refer to AS-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
Sheila Necessary	3/6/2018	Website	I understand that the HSR is going to run within feet of our water supply tower G&W. On my property I have both well and G&W water supply. What do you think will happen to our water supply with the train running so close to the tower? First, it will definitely disrupt our supply with all the construction and vibration from the train and second it will pollute our water supply. We have some of the best drinking water here and if this train comes through, that will cease to exist. That is why "I SUPPORT THE NO BUILD"!	Refer to WW-6. Further, the Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Sheila Necessary	3/6/2018	Website	Here in Waller County, we have a real problem with flooding. When hurricane Harvey came through the amount of rain that fell and all of the properties that flooded around here were astronomical. In fact, when it just rains mere inches we still have the problem with flooding. This train is going to run across 5 creeks here that we already have a problem with. Now, I have to ask you, what do you think is going to happen with berms built all around here to support this train. Residents will definitely be washed out all together. This is just not right or humane. That is why "I SUPPORT THE NO BUILD"!	Refer to FP-1, SS-17, WW-1 and WW-2. Approximately 40 percent of the Preferred Alternative in Waller County will be constructed on viaduct (bridge type structure) which allows for free movement of water and would avoid and/or minimize floodplain and waters impacts.
Sheila Necessary	3/6/2018	Website	This is important that the HSR tracks would run within approximately 580 feet of a Natural Gas Pipeline Compressor Station. Now, if you did not know, gas and electricity is just not a perfect combination. What do you think is going to happen when these two components catch up with each other? It doesn't take a rocket scientist to figure this one out. It is my understanding that this "Very Dangerous Hazard" has not be addressed at all. I think it is time to start addressing this problem. I know I don't ever want to hear a huge blast. What do you think the future riders of this train will think when they are brought into the light about this hazard? You would be putting so many lives at risk with this train. "I SUPPORT THE NO BUILD"!	Refer to EU-2, EU-7 and SS-18.
Terry Necessary	3/7/2018	Website	The proposed HSR, will have negative effect on my property as it will run behind my property. I have horses and cattle and these animals are extremely sensitive, they are prey animals and having something as obtrusive as this bullet train will send my animals into turmoil. They cannot take the stress of a bullet train day in and day out. We have Red Headed Woodpeckers out here and the environmental impact it would have on them would be a catastrophic end to these amazing birds. As to the flooding issue, we already have a problem with the water out here and the proposed HSR would have devastating effects on our community and our property. I also have hearing problems, and hearing this train all day and night would only hinder the hearing I have left, this is unacceptable and then the sight of this monstrosity I just cannot accept. "I SUPPORT THE NO BUILD" of this train!	Refer to FP-1, NR-1, NR-2, NV-1, WW-1 and WW-2. Red-Headed Woodpeckers are relatively common and occur throughout the eastern part of the United States. While some individuals may temporarily be displaced to similar adjacent habitat, The Project will not likely impact the species. For information regarding impacts to wildlife and vegetation please see Section 3.6, Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures .
Terry Necessary	3/7/2018	Website	The studies have shown that only 5% of people in the area would ride this train. If someone takes the train, once they get to Dallas/Houston, they'll need to take additional transportation to get to their final destination, which will cost additional funds. They will have to go through security checks to enter the train, which will cost time at that point. I think the studies speak for themselves that the need and purpose for this train is not economical at all. "I SUPPORT THE NO BUILD"!	Refer to GN-2 and PN-3.
Terry Necessary	3/7/2018	Website	The impact of our Emergency Services District No. 200, the response time would be significantly impacted. I am a volunteer fireman at Tri-County and our response time is an 8 minute response and if our roads are closed off or torn up due to this train construction, that would add time to our response and I can tell you that even 1 minute longer would mean the time between life and death. "I SUPPORT THE NO BUILD"!	Refer to SS-23.
Terry Necessary	3/7/2018	Website	The economic impact on property values in Waller County will create an obsolescence that would highly negatively impact the property values in this county. The proposed route will cause our property values to plummet and cause a lower tax revenue to be collected for our schools and emergency services. We purchased our property approximately 30 years ago to one day retire off of and put 30 years worth of hard labor and money into this land to increase its value and now you want to come along and put this eye sore through here and devalue our properties. I will not stand for that! That is why "I SUPPORT THE NO BUILD"!	Refer to VA-1.
Terry Necessary	3/8/2018	Website	The HSR is going to run within feet of our water supply tower G&W. On my property I have both well and G&W water supply. What do you think will happen to our water supply with when the train will be running so close to the tower? It will definitely disrupt the water supply with all the construction and vibration of the train. Second, it will most certainly pollute the water system. We have great drinking water here and this train would certainly disrupt that. "I SUPPORT THE NO BUILD"!	Refer to WW-6. Further, the Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Terry Necessary	3/8/2018	Website	How will the HSR impact my quality of life? I moved my family out here 30 years ago to get away from the city. I wanted my son to be exposed to the good things in life that the country had to offer. He attended school here from kindergarten through graduation, he grew up with horses and cattle and just enjoyed things that the city could never offer him. We live a peaceful life and a quiet one, but now you want to send this bullet train right behind our property to disrupt everything we have enjoyed for 30 years. There is no way I want to start my day off and end it with a monstrosity of this magnitude in my back yard every day. I do not want this at all and that is why "I SUPPORT THE NO BUILD"!	Comment noted.

Terry Necessary	3/8/2018	Website	We have a big problem with flooding in Waller County. When hurricane harvey hit us, I was on duty with Tri-County Fire Dept. assisting with rescuing residents that were flooded out. I can tell you from first hand experience, that what I saw was just unimaginable to wrap your head around. Let me be the first one to tell you that if this train comes through and you start building berms around here, we will be experiencing flooding of this proportion permanently. I do not ever want to have to go through this type of flooding or any flooding ever again. This is why "I SUPPORT THE NO BUILD!"	Refer to FP-1, SS-17, WW-1 and WW-2. Approximately 40 percent of the Build Alternatives in Waller County would be constructed on viaduct (bridge type structure).
Linda Neel	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Angela Nelson	1/25/2018	Website	Please approve the Dallas to Houston High Speed Rail project. Here are a few good reasons why: Time savings vs. driving 4-5 hours on a good day, which means less congestion and pollution on the roads; planes have cut back service between Dallas and Houston and this gives travelers a good option; no highway grade crossings to worry about train-vehicle collisions; it uses technology that is safe and efficient; the train is more environmentally friendly than cars, buses or planes; it takes too long in total time to fly when you consider check-in, security, waiting and delays; it will help revive an economically depressed area of Dallas and Houston; it will create thousands of construction jobs for the Texas economy and permanent, well-paying jobs in the railroad industry; it will create accessible transportation for mobility challenged Texans, and it's a private company investing in Texas and is not asking for state or federal funding to build or operate the railroad.	Comment noted.
Betsy Nelson	1/2/2018	Email	As a transportation professional, I am extremely supportive of the Texas HSR project; not only because I support passenger rail, but because of the implications of not supporting this project are too large to ignore. I grew up in Houston and have spent way too many days traversing I-45 between Houston and Dallas. Our dependence on POVs, is not only an environmental issue, but is most importantly a safety issue. I-45 is the nation's second most deadly highway. When we can save one life, we have succeeded. When we take cars off the road, traffic is lighter, accidents fewer, more lives saved. Lives should never take a backseat to the environment. We will likely build new roads, widen existing ones, and spend tens of billions of dollars only to create more traffic. This is a privately funded, environmentally friendly, lifesaving project that should be supported by the Federal Government/FRA, local and state governments, and the public	Comment noted.
Dean Nelson	2/17/2018	Website	The Dallas to Houston high-speed train system will significantly benefit our state and riders economically, from an environmental and safety standpoint and demonstrates to the country as a whole the leadership in Texas. Let's move forward on new technology investments. The time for action is now. Thank You Dean Nelson	Comment noted.
Debbie Nelson	2/11/2018	Website	This would be a mistake. There are not enough people that would be willing to pay \$200 each way for this service. Flights are easier and maybe even cheaper. Who is this supposed to benefit? Families won't use it, it is too expensive. Businessmen fly and don't need it. The drive is just not that far and this will save very little time in the total commute. Then you must find a car when you get there to get around anyway. What is needed are commuter trains from the suburbs into the city, not from Houston to Dallas. I love my home in Cypress, but it is located less than a mile from the proposed route. Home sales are already down in this area due to the possibility of this disaster happening. I could not live with the sound of a jet taking off right next to my home every 45 minutes (who could?). But I will not even be able to sell my home (which I don't want to do) if this becomes reality. Please STOP this project NOW, before hundreds of people lose their homes and businesses.	Refer to GN-2, GN-6, PN-3, SC-3, SC-19 and VA-1.
Jason Nemeck	2/20/2018	Website	This is the dumbest idea to come along since Rick Perry's Trans-Texas Corridor. Thankfully that boondoggle got show down. Not only is this a train that will not GO anywhere useful, but it's going the wrong way to Dallas! Put the station at the AIRPORT! Put it downtown or in the Galleria, where people WANT TO GO! NW Houston on 290 at 610???? DUMB and DUMBER could have come up with a better plan than this! And there's been a LOT of silliness and subterfuge on WHO is paying for this "Train to Nowhere that No One Wants!" NO TAX MONEY EVER for this thing!!!	Refer to GN-4, GN-7, GN-9, and NE-1.
Beth Nemeth	1/31/2018	Website	I am against this 100% and even more against the use of eminent domain for this project. It isn't right to split land up with in the manner that it is to be done. This is just not a good option for Texas	Refer to ED-1.

George NeSmith	2/11/2018	Website	I live in Nevada, but I feel the issue of High Speed Rail is of national importance. As our nation grows and our infrastructure falls behind, staying connected becomes more important. This project is very important in so many ways, and can be a kickstart for other projects of it's type. This city pair is a good example of the benefits that can be achieved by fast, efficient, and safe high speed rail. Thank you, George NeSmith	Comment noted.
Chris Nettles	1/25/2018	Email	A MUCH more useful route would be from Houston to Austin to Dallas, connecting the three largest cities in the state. There are no great reasons for going through College Station other than it's "on the way". That stop just delays what would be an even faster trip. With the unnecessary stop in College Station (if you've ever been there you would realize this immediately) and travel time to the station from home and parking, boarding, deboarding, etc., the time savings of the bullet train diminish significantly. Don't throw an extra stop in College Station just because a bunch of Texas A&M alums want it.	Refer to BA-2, BA-8, GN-7, PN-3 and TC-4.
Judith Nettles	2/6/2018	Handwritten	Vote No	Comment noted.

Raymond Nettles	2/6/2018	Handwritten	I vote No	Comment noted.
Raymond Nettles	2/6/2018	Handwritten	I vote No	Comment noted.
Mike Nevill	2/6/2018	Oral	Hello. My name is Mike Nevill: and I'm a landowner in Grimes County I heard someone here to submit written comments to the FRA by registered mail to the FRA documents. I couldn't trust electronic submissions in this day and age. Rs important to include all the issues in your comments: because if we challenge this this is going to be decided in an administrative court by an administrative law judge of the EPA who is an EPA employee: so you have to get all your comments in and make sure it's part of the record. The DEIS is deficient in several — in many areas: actually. Some areas are covered thoroughly: but it's deficient in many areas. This does not address any of the required permits except for a general flood plain development permit: a general construction storm water permit: and a classified UIC permit to inject the 30,000 gallons a day sewage-contaminated water at the Roans Prairie substation. No determination has been made or addressed of the hazardous waste generated by the operation of the high-speed rail and its associated facilities. It's been dismissed or a detailed evaluation was dismissed by saying the best management practices would eliminate hazardous waste. For something this size and this big an operation: saying that less than 220 pounds per month of ignitable: corrosive: toxic: or listed waste will be generated is not realistic. There should be adequate data from the Japanese operation to determine this. No assessment was made and: therefore: no discussion for the required TPDS wastewater discharge permits for the TMF facility for the attendant maintenance: assembly and paint and washing facilities. Again, they should be available from Japan. And this permit is required before construction can begin. No assessment was made and: therefore: no discussion was made for the required TCEQ storm water permit for the operation of the railroad and all the other facilities. This is another permit that is required and has to be issued before construction can begin. Again, the data should be available from Japan. The EIS is supposed to detect or address the detrimental effects of forcibly taking land from landowners, which is required by the NEPA Act: and it doesn't do that: so I'm not going to go into the details. Several other people have talked about that The noise impacts have been mentioned: and what they did is actually use the average noise surveys and areas: and then I would take an average noise generated by the rail. And you need to use peak-to-peak You can't have noise you can't use decibels if you can't add the noise: and that's something that should be done. They talk about permanent impacts to the flood plains: but this only - the flood plains are 100- and 500-year flood plains. You need to look at the entire 240-mile route of what that's going to do to storm water drainage. We already drainage problems in Grimes County, and that has to be modeled for a Hurricane Harvey type event They talk about safety, and I'll just — you've already talked about what' s happened with Amtrak, but the other highway, rail: and air travel fatalities increased by at least — decreased by at least 25 percent from 2004 to 2013: while transit fatalities have increased by 50 percent in the same time period. Fra admits that TxDOT's expansion of 1-45, which is going to occur, it's already been planned: will satisfy the transportation needs of this project. Also increased bus traffic would satisfy that But FRA says that that's not allowed because it doesn't meet the high-speed rail requirement of 90-minute travel. So the transportation needs can be satisfied: but if your only tool is a hammer, everything looks like a nail. Also FRA eliminated the two railroad corridors because the railroads declined to share access with the high-speed rail. If the railroads can decline to share high-speed rail access: why can't landowners decline this.	Refer to BA-4, BA-6, BA-10, ED-1, FP-1, FP-4, GN-1, HZ-4, NE-1, NE-6, NE-9, NV-1, NV-6, PI-1, PI-7, SG-1, SS-12, SS-17, SS-23 and WW-1.
Harry Newell	2/7/2018	Website	I hope to one day ride this high speed rail line, even though I live across the country in Massachusetts. I think it is a crucial need in infrastructure for the whole nation that projects like this go forward to reduce our highway crowding and keep our people the world's most productive.	Comment noted.
Marcy Newman	2/6/2018	Website	I am hopeful this project comes to fruition. Texas has a long history of being "car captives", but the cost and amount of infrastructure to move people and goods across this state can no longer be borne by the highway system. Reductions in gas taxes have reduced the amount for infrastructure improvements. Texas needs alternative transportation options. Air is no longer affordable or practical for many families. High	Comment noted.

			speed rail is an attractive alternative and requires much less infrastructure and ROW to construct. Please, please, please move forward with this project! Thanks for taking my comments into consideration.	
Duke Newton	2/22/2018	Website	Not getting this bullet train would be a travesty. I need to get to Dallas weekly and this would open up a whole new economy for Texas. Don't be pre-historic. Get modern Texas, please.	Comment noted.
Duke Newton	2/22/2018	Website	Come on really. PUT THE TRAIN IN!	Comment noted.
Kimberly Nguyen	2/17/2018	Website	I support 100%	Comment noted.
Anthony Nicasio	3/9/2018	Website	We should start with this train. And add the ones for Houston to San Antonio and Houston to Austin	Comment noted.
Burgess Nicholas	1/29/2018	Handwritten	As you are elected official we are watching how the republican party is handling this. Due to the lack of support to stop this from the republican party we may need to replace all of you. The value of our property has already dropped and there are so many houses and land in the front of this. And as Americans we are to just lay down and take it from a privately owned company. I don't think so.	Comment noted.
Kim Nicholas	1/29/2018	Website	We moved from the Dallas area about 20 years ago, in hopes of raising our children without fear of bullets coming through their windows. Well, that is now once again my worst fear, only it is a bullet train! My husband has spent the last year waking up in the middle of the night due to nightmares of what this train, company, government can just come in and steal our land to use it for whatever it wants. We have gotten to raise 2 of our children in peace, but you know what, I have 2 more. What about my future grandchildren that I want to play the same places their parents got to play. I am mad, to say the least.	Comment noted.
Harry Nicholls	2/14/2018	Website	I am definitely in favor of the project. It will encourage more locals at each end to travel to the other city for more functions, business, and entertainment. I do have a problem with the location of the end stations, not the route nor real estate needs. The Houston site announced is too far from the center of town and will require a "second seat" of some type to attain access to city center. Renting a car, riding a bus, and definitely any taxi type service is not conducive to attract customers. While the Dallas end is better located than first spoken of, I still think for access to the local DART and Trinity Express would be better served if the Union Station was the end terminal. "Close" is not close enough. I realize there are problems of track availability with DART, Trinity Express and local freight with AMTRAK access, but space must be found, or created, for the HSP project. Otherwise, the project may not find its fulfillment in transporting people between the cities as planned.	Refer to GN-6, GN-7, GN-8, TR-3 and TR-4.
Cathann Nichols	3/5/2018	Website	I live near Interstate 45 and hear traffic from my porch. There is no way the High Speed Rail will succeed. Some times there is hardly any traffic on 45. No way will the average person be able to pay the ticket price. By the time the rider gets to the station, goes through security, rides to the destination, rents a car, taxi or Uber, they have not saved any time and it has cost much more than travel by car. You can get from Houston to Dallas in 4 - 4 1/2 hours and less than a tank of gas (about \$40 for me). Taking people's property for this is totally ridiculous. People have chosen the rural lifestyle to get out of the noise and to grow crops, raise cattle, and enjoy the wildlife. Working hard for their property. This will fail and then foreigners will own a strip of Texas! And we will have a monstrosity through our beautiful countryside. No tax money? It has been admitted they will or have applied for Federal loans. Where do they think the money comes from for federal loans? No HSR has been successful with the exception of the one in Japan Osaka-Tokyo and the one in France. These areas are densely populated, unlike Texas. I am totally and completely against this project. It will destroy people's life and livelihood.	Refer to AS-1, GN-2, GN-4, LU-11, NE-1, NE-5, NE-9, NV-1, PN-3 and SC-3.
Cathy Nichols	1/30/2018	Handwritten	I am totally against this project. I do not have property affected, however, I am concerned about the property [sic] and I do not believe this project will ever pay for itself. Ridership has been exaggerated (greatly); the economies of all the small towns on I-45 will definitely suffer. One can drive from Houston to Dallas in 4 hours or less for a tank of gas. The noise will disrupt neighborhoods, wildlife. Only two HSR trains operate in the black and that is in Japan and France, both areas are densely populated which is not the case in Texas. I don't understand how an environment study was conducted when many residents have not allowed TCR on their property. TCR had years to prepare statement, how long have citizens had to respond? just a few months. Nothing fair about that! This will affect our electrical grid as well. Our roads, public and private will be disturbed. I see nothing good from this. The impact on [sic] and the rural way of life is too much!	Refer to EU-4, GN-2, NE-1, NE-8, NR-1, NV-1, PI-3, SC-15 and TR-8.
Susan Nichols	3/9/2018	Website	I am against the establishment of this Dallas to Houston High Speed Rail Project. It will create disruption of rural land, property owners and wildlife in Texas as well as create noise and other kinds of pollution in communities along the route, including Houston. It will not alleviate I-45 traffic, nor be any more convenient than current air traffic. It will be an economic disaster with reduced property values and the high likelihood of taxpayer liability.	Refer to BA-12, ED-2, LU-11, NE-1, NE-9, NR-5, NV-1, PN-3, TR-8 and VA-1.
Peter Nicholson	2/7/2018	Website	If Congress allowed the FAA to implement NEXTGEN on every airport in the USA without an EIS, why is the High speed rail project required to submit an EIS?	Refer to NE-1.
Bill Nink	2/21/2018	Website	This would be a financial disaster's burden on Texas taxpayers when the rail company can no longer stay afloat and the Federal and State government will have to bail them out. It will damage property owners' land and become an eye sore like billboards. Why did Texas pass bond	Refer to AS-1, GN-4, NE-1 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			money to improve our highway structure and raise the speed limit. This will be another Texas Big Pothole in years to come. I say NO to the train. Amtrak is failing so now they want to recreate the past to the future.	
Tom Nobis	2/5/2018	Handwritten	If train is elevated to 45 feet the noise will travel further than if at ground elevation. Property values on subdivisions by route have been affected adversely. Ridership estimates don't align with Texas travelers and makes the forecast burden [sic] for on taxpayers. Look at California project. I've heard two costs, \$200 one way and \$400 one way, what is it? At a cost of \$200 one way, there's no way I would use it. I need a car on the other end so it does not make sense. If I can fly for an hour at \$70 why take a train? I oppose the high speed rail project and select the No Build.	Refer to GN-2, NE-1, NV-7, PN-3 and SC-3.
John Noble	3/5/2018	Website	The High Speed Rail project would add another layer of noise and danger to disturb the domestic tranquility of our neighborhoods. It would have a negative impact on our farmlands and cattle ranches by forcing them to divide their lands, damaging the careful land management system that took years to develop. All of this to accommodate an intrusive, unwelcome 200 mph rocket going through their fields. Besides the negative impact on the environment and added stress on our communities, it would coerce landowners into selling their properties and put taxpayers on the hook as the guarantors to pay for a hairbrain project that has already been anticipated to operate at a \$537 million dollar annual operating deficit for 40 years. Think of the already-overtaxed property owners across the state who would wind up paying for it. The only beneficiaries are the robber barons who initiate the project. They get their profits and run with it, leaving the distresses and negative fallout to the people of Texas. The following is just one article that exposes the same flawed logic that produced the Houston Metro Rail Line. It is hard to imagine a more wasteful and more corrupt enterprise, but the Dallas to Houston High-Speed Rail Line would make it and the Clinton Foundation look like a Sunday School picnic. https://www.bizjournals.com/dallas/news/2017/02/14/texas-bullet-train-could-cost-taxpayers-21-5.html	Refer to GN-3, GN-4, LU-11, NV-1 and PN-3.
Chad Nobles	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
Justin Noey	1/30/2018	Handwritten	I think you should not bring the rail road threw are (sic) church grounds.	Refer to CR-4.
Timothy Nold	1/24/2018	Website	I definitely support the Texas Central Railway's plan to put a high speed railroad between Dallas and Houston. I am a resident of Fort Worth and I have family and business interests in Houston. I believe the line will positively affect the traffic congestion between the two towns, reducing consumption of fossil fuels and improving air quality. The footprint of the railroad will make a smaller footprint on the environment over continued widening of 1-45. Texas' prosperity and development was lead by the construction of railroads which opened the vast wilderness to settlement and provided for the transportation of commerce and passengers. An electric high speed railroad will be another chapter in our continued prosperity with a minimal impact compared to adding more congested, dirty highways.	Comment noted.
Anthony Nolen	2/16/2018	Website	This will be a great benefit and offer new opportunities for business and recreational activities between the 2 largest cities in the state.	Comment noted.
Stephen Norair	2/19/2018	Website	This would be a phenomenal asset to Texas. Combining two of the most economically important cities in the United States via high speed rail would ensure our state remains the powerhouse it is.	Comment noted.
Eugene Nordt	3/9/2018	Website	Against!	Comment noted.
Delores Norris	3/8/2018	Website	I am all for the bullet train between Houston and Dallas.	Comment noted.
Dominic Norris	12/26/2017	Email	The Dallas Station should be located near or on DFW Airport Property. The Airport is already a Multimodal transportation hub. With an existing connection to the Dallas Area Rapid Transit (DART) Rail line, the Trinity Railway Express, local bussing and of course air travel, it opens up a plethora of opportunities for business and leisure travel. Not to mention the fact that UBER will soon begin testing fully automated personal flight vehicles to and from DFW Airport, the site offers prime connection options for the passengers Texas Highspeed Railway and could help to farther propel Texas into the future.	Refer to GN-7, NE-1 and PN-3.
Nathan Novy	3/9/2018	Website	Hi, my name is Nathan Novy and I have lived in Ennis for almost twenty years. Unlike the bulk of other rural residents living along the proposed route, I am an avid supporter of this project - on one condition. I believe there is a key component that is missing from this project. There is a lack of local regional rail service between Dallas and Houston, which is a concern of mine since I believe the TCR high speed rail service would not be as economically successful or sustainable without this supplementary local rail service. Local rail service exists alongside all other high speed rail lines in the world in order to provide service for communities bypassed by high speed rail service. Whether its along separate routes, parallel to the high speed rail line, or shared with the high speed corridor, these local amd commuter services are crucial in providing a necessary service to any bypassed cities along the high speed rail line that could potentially need service. This helps to serve these alienated cities, as well as supplement high speed service with transfers. Its proven success around the world is attributed to the fact that it further increases overall rail ridership by providing transportation alternatives for more and more people, taking them off of congested roads and polliting airplanes. But it's not just an international phenomenon: in the US, local trains operate daily - if not, hourly - between Boston and Washington DC along the Northeast Corridor, or between cities along the proposed California HSR line. The NEC alone is an incredibly successful rail corridor that provides transport for hundreds of millions of people every year - and this ridership number isn't entirely due to the Acela Express. Its local and commuter rail service that provides the bulk of service for commuters and travellers in the region. In Texas, similar rail service has been proposed in recent years but has failed to come to fruition - not because of a lack of potential demand, but because of a lack of cooperation between negotiating powers. An EIS for a Dallas-Houston local rail service was conducted in 2010 by Amtrak, but due to a lack of cooperation with the track owner Union Pacific, plans for the potential service seemed to have fallen through. However, a potential coalition of agencies and companies such as the TCR, TxDOT, a local rail service provider such as Amtrak, and any other supportive entities would provide the leverage needed to allow for this service to be created without significant interruption or hindrance in the planning stage. Jointly operated services provided by a similar array of agencies have been tested and proven to be beneficial for the areas it services. Amtrak's Piedmont and Heartland Flyer, the New Mexico RailRunner, the Michigan Services, and many other services throught the country are all provided by joint service between a rail provider and state agencies. A similar model in this Dallas-Houston line bolstered by the TCR could be a potential option in effectively providing and operating this local intercity service in conjunction with the high speed rail line. In conclusion, I believe local service should be provided along with the high speed rail service. If the Texas Central Railroad is proven to be viable, then an intercity rail service is likely to be just as viable. Providing a daily or twice-daily services similar to the Heartland Flyer could directly	Comment noted.

Submitted By	Date Submitted	Submission Type	Comment	Response
			connect to any bypassed cities lacking direct service from the TCR, as well as provide supplementary service to the high speed rail line. There would undoubtedly be a mutual relationship between both services that would only further the economic success for the TCR, the cities of Dallas and Houston, and the state of Texas.

NRG Energy, Inc.	3/9/2018	Website	<p>Dear Mr. Wright: NRG Texas Power LLC ("NRG") respectfully offers the following comments on the Federal Railroad Administration's Dallas to Houston High Speed Rail ("HSR") Draft Environmental Impact Statement ("DEIS"). NRG is a subsidiary of NRG Energy, Inc., a Fortune 500 Company and a leading integrated power company in the U.S. with the largest generation portfolio and leading retail electricity platform. The company owns and operates approximately 30,000 MW Of generation and serves approximately 2.9 million mass market customers through its retail business. In Texas, NRG has approximately 10,000 MW Of generation and 2.2 million mass market customers through its retail business. Of its operations in Texas, NRG owns a 1689 MW coal-fired plant in Limestone County ("Limestone Plant") with an associated lignite mine known as the Jewett Mine. The Jewett Mine is over 30,000 acres located in Limestone, Freestone, and Leon Counties. This mine is authorized under Permits 32G and 47 A from the Texas Railroad Commission ("TRC") with parts of the mine in current reclamation. Mine reclamation consists of restoring the land to its approximate original contour and environmental and ecological state as before mining began. As part of the reclamation process under TRC rules, NRG must post bonds to ensure satisfactory completion of mine reclamation and environmental restoration of the Jewett Mine. The preferred Utility Corridor of the HSR in Leon County crosses approximately 15,000 linear feet of the Jewett Mine located slightly south of the Limestone/Leon County line south to FM 1512. This route is directly through a reclamation portion of the Jewett Mine. I The reclamation was never identified in the DEIS. The only reference of the Jewett Mine in the DEIS is found on page 3.6-68, where it states ' 'Due to the proximity of Jewett Mine to Build Alternatives A,B, D, and E, which would be approximately one-half mile from Segment 4, where interior least terns have been documented to nest... TCRR will coordinate with the lignite mine operators to obtain the latest data on known nesting locations to avoid impacts to this species.' ' This is surprising given that the Jewett Mine is mentioned in reference to the interior least tern but not to the HSR route Or impacts of the route to the mine. There are several environmental concerns to NRG's land, mine area and TRC permit compliance due to the HSR project as more fully described below.</p> <p>1. The HSR project crosses the Mine Creek post-mine drainage channel which affects designs for channel drop structures and compliance with TRC rules and mine permits. The drop sãuctures are required to control the flow of water over land elevation drops and without these in place, unacceptable amounts of erosion, and subsequently sediment runoff from storm events, can occur. These channel flows are directed into Pond RP-A6 which would also then be impacted by the sedimentation. Additionally, any erosion and Sedimentation caused by construction of the HSR in this area would also impact the Mine Creek channel, Pond RP-A6, Pond RP-BI and Pond 027 thereby affecting compliance with the TRC rules, mine permits and future costs. Pond RP-BI 's permitted boundary is directly impacted by the proposed Utility Corridor which conflicts with the existing TRC Mine Permit 32G. Even if HSR maintains its own construction storm water pennit, additional erosion and sedimentation to NRG's drainage area will be an additional cost to NRG and permit compliance risk. This would especially be prevalent if HSR assumes that it may use the Jewett Mine ponds for storm water control. NRG would incur significant additional costs to dredge the Pond to maintain permit compliance due to the impacts of HSR.</p> <p>2. The preferred Utility Corridor of the HSR is an area that has not been released from reclamation bond. Disturbances caused by HSR to the areas under reclamation bond increases the time that area could be under bond requirements. Moreover, any impact to this area could increase the timeframe for the mine to complete reclamation permit requirements to discharge the bonds. In addition, the potential reclamation delay that would be caused by the HSR would add carrying costs to NRG</p> <p>3. NRG expects that there will be impacts to Permit 32G as the reclamation plan is finalized due to and incorporation of off-channel storage ponds and overland flows, stream locations and diversions, and on-channel ponds or water rights inter Should HSR assume that it may use the Jewett Mine ponds or channels for storm water control it could also have an effect on the water rights Of the mine or others downstream by affecting the current flow patterns. Any changes to overland flows due to HSR, or to channel flows, will impact how NRG complies with its required reclamation and increase those compliance costs of how NRG uses the mine ponds or optionality in how NRG uses the mine ponds to</p>	Refer to EU-2, FP-1, HZ-4, NE-6, NE-8, SG-3, WW1 and WW-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>reach reclamation completion.</p> <p>4. Access to the west and south portions of the mine property due to the Utility Corridor, and subsequently, access rights from FM 1512 from the west to the east across the HSR Utility Corridor for oil and gas well owners will be impacted by HSR. By access being cutoff to existing wells and propeny, new roads and easements for the landowners and well owners will have to be granted resulting in additional land impacts and environmental impacts of new road construction for these entities. This not only impacts these entities, but also the full utilization of the land by the owners due to rerouting Of access and further encumbrances. Additionally, NRG will not be able move its mining reclamation equipment as needed across the mine. The HSR will block the access of equipment across existing heavy haul roads that are already in place. This not only inhibits NRG from freely accessing all property within the mine boundary with existing and necessary equipment, but will also add cost to NRG to comply with reclamation for land to the west of HSR by finding alternate access or equipment that can be moved to the needed area.</p> <p>NRG appreciates your consideration of this information. Each of these items will have an environmental, ecological, and/or reclamation impact. In addition, higher costs will be incurred to the party to correct the delay and detrimental effects of the HSR going through the Jewett Mine. Therefore, NRG believes the DEIS is deficient and looks forward to your response as to how these impacts are addressed.</p> <p>Sincerely, Jan Fluharty Director, Asset Management ERCOT NRG Energy, Inc.</p>	
Alexandria Nugent	2/22/2018	Website	I have been waiting for this train for 40 years. I travel to Houston on business regularly - I would take the train as often as possible.	Comment noted.
Alicia Nuzzie	2/5/2018	Oral	<p>Good evening. My name is Alicia Nuzzie, and I'm with a Houston organization called Houston High-Speed Rail Watch. And on behalf of our neighborhood coalition, I'm actually asking the FRA to have an additional public meeting about this project closer to Houston. I believe that the public engagement period, or what you're doing to engage the public and make sure that they have their comments heard is vital and extremely important. We appreciate the ten meetings that you've already conducted or are in the process of conducting. However, we do believe that we need a Houston meeting, especially because of today's announcement that TCR has a preferred end terminus at the Northwest Mall. We would like to see a meeting closer to this area so that residents in these communities also have the opportunity to speak up and voice their concerns. People are concerned about this project and they're concerned about how it will affect their communities. Everyone along this rail line should have the same opportunities to share their concerns about how they feel this project will impact them. TCR representatives who I spoke with tonight, especially David Hagy in the back, urged me to submit public comment about this. They said that they agreed, but that you-all have the power to grant another meeting. And so, again, we are asking that you do that. In 2014 our communities unfortunately heard about this project very, very late, and we couldn't get a public meeting in Houston, and so we actually had to invite TCR representatives to meetings that we organized ourselves so that our communities had information. We had for both of those meetings over 400 people in attendance. So there are people that are very interested in learning more about this project and voicing their concerns. We hope you will grant us our request. Thank you.</p>	Refer to PI-10.
Alicia Nuzzie	3/5/2018	Oral	<p>Good evening. My name is Alicia Nuzzie, and I'm a lead organizer for Houston High-Speed Rail Watch. I'm also the vice president for the Central Northwest Super Neighborhood Council and a resident of Oak Forest. In the draft EIS for the Dallas to Houston high-speed rail project, it states: One of the biggest issues raised during the scoping process of this project was public involvement. I'm grateful to the FRA for granting us a Houston public meeting about this project, thank you very much, but I have to say that I'm still concerned that communities in this area do not truly understand what this project is and how this project will affect them, especially with the recent announcement of the Northwest Mall as the preferred location for a destination or the terminus. I would like to see more outreach to individual civic clubs and homeowners associations, not just such super neighborhood in this area, such as the Oak Forest Homeowners Association, Timbergrove, Lazy Brook, Mangum Manor, Old Spring Branch, Shepherd Forest, Ridgecrest, and Langwood. These communities will be affected the most by the building of this terminus in their area. I know Texas Central has been doing some outreach, but when I've gone out to these residents, they seem to not still, like I said, fully understand the extent of this project or know what they should be thinking about. For good urban design to happen and benefit communities, it needs to have input from those communities. Communities need to think about what they need and how they'll be affected by this type of build. But you can't ask a group to have the ability to analyze something or ask them to dream about something that they want if they don't know how to do it. And I think there's a lot of assumption that people do, that they understand this language and sometimes they don't. And while there is an MOU that has been created between the City of Houston and Texas Central Rail to discuss education and outreach strategies, I worry about how this will be done. It does state that Texas Central is committed to educating the</p>	<p>Refer to NE-1, GN-9, PI-10, TR-4 and TR-5.</p> <p>FRA is not involved in the development of municipal or district boundaries. Those discussions and negotiations could be conducted by TCRR the appropriate authority.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>city and its communities. It also talks about a plan for community outreach that includes no less than three community outreach meetings to the affected areas. However, as we all know, an MOU is nonbinding and it just is up for -- an MOU just sets forth only respective intentions. Please let it go on record that our communities want to be at the table. Houston communities want more outreach to make sure this project does not disrupt neighborhoods and quality of life. This area has a potential to be an attractive space with green spaces, reclaimed streets, striving businesses and affordable living, but all of this takes time and planning and understanding. And I am encouraging an independent firm, who specializes in urban planning and urban revitalization, be considered to make sure this happens for our area, rather than just relying on the City of Houston or Texas Central to do this. Moving forward, there should also be some type of management for the growth of this area. This property sits just outside the Spring Branch Management District's boundaries. Can we incorporate the Northwest Mall into those boundaries to ensure proper planning, revitalization, and outreach continues to happen? If this project is the first of its kind in the United States, then it should have the first of its kind in planning to make sure it benefits our city. That's the only way to ensure communities have adequate representation at the table. Thank you.</p>

O				
Craig Oakes	1/30/2018	Oral	I typically don't speak well in front of folks so -- I am Limestone County Commissioner and it is a crying shame that all these people have got to come out as many times as we already have to try to stop this thing. And I just -- Freestone County every resolution we could sign and pass through our county court we have been doing against this high-speed rail. Continue on with us and we are going to keep fighting as long as we can and would like everybody to come to Prairieville again tomorrow night.	Comment noted.
Kevin Oates	3/4/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I strongly believe a simple move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the pProperty block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5 and NR-2.
Atieno Obala	2/5/2018	Website	I am interested in understanding how construction will impact traffic flow on already congested highways. Specifically where places like the Energy Corridor are being referenced.	Refer to TR-6. The LOD would not interact with Interstate 10 (the Energy Corridor).
Terry O'Connor	2/6/2018	Oral	Good evening, everybody. Can you hear me? No? What did I do? Better? I don't have any prepared notes. I have a bunch of random thoughts, and I just thought I'd talk to you-all about it. I am not for or against this. As a recovering transportation engineer of three decades ago, I find this project fascinating. I find this process fascinating. I find you people fascinating, because the democratic process is really working here. I'm going to say something that nobody's said tonight. I want to thank the FRA, the TRCC, and the consulting engineers for putting all this documentation together so you-all have something to chew on. It's not an easy task what they've got. Nothing they do is perfect. Okay? But they've done an incredible amount of work, and it allows you to determine an opinion, and I think that is really good. Okay? Now, I am near a couple of train lines, and I have some valid concerns about this particular project. And one on just a purely technical note, I am concerned that there's going to be horns on this train. When the wind is right, those horns on these freight trains blast me out of bed, and I'm not very keen on that. So please make sure there are no horns on these trains. Okay? There is a lot of information that some of you have been saying and quoting. I haven't read the EIS, but a couple of things that some folks have said have kind of made me think. I don't know about you, but that vehicle I drive, if it had 1960s technology in it today it would not be that great. So these trains you may think it's old technology. It's not going to be old technology. Technology is really incredible these days. Okay? Trains have been around forever. All right? You may not like the thought of it, but they have been around and they can be really, really great. The design of the structures and everything, they are a long way away from figuring out what they're going to do there. They need people's feedback. If it ever gets built, they're still going to need your feedback. And there are a number of operational aspects you need to consider which probably aren't in the EIS very well. They're not going to be barreling down here at 200 miles an hour. Never going to happen. Okay? Because if they do, they're going to end up in my house on the other side of 610, and I'm not going to like that. I'll just close by saying I am, you know, looking forward to seeing where this goes, but I'm also looking forward to someday taking high-speed rail from Houston to Dallas. It may not be this route, may be another route, but I am really looking forward to doing it.	Refer to SS-12, TC-2 and TC-3. HSR trains do not sound horns. The entire alignment is grade separated with no grade crossings.
Michael Oder	1/19/2018	Email	This is a test email.	Comment noted.
Richard O'Donnell	2/23/2018	Website	This is a must!! It's much faster and less stressful than driving. Also, when you take into account all of the time and hassle to get to the airport, park, check in, TSA, etc., the bullet train is much faster. Every industrialized country in the world, except for the US, has bullet trains. Let's finally wake up and join the 21st century.	Comment noted.
Trevor O'Gorman	1/17/2018	Website	This is a great initiative for the state of Texas; I propose extending the route to San Antonio and other major cities for a fully realized high speed rail network.	Comment noted.
C Ohlenforst	2/24/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US.	Refer to LU-5.
Cindy Ohlenforst	2/22/2018	Website	The proposed route for the area near FM 709 and 3194 creates environmental and other damages that can and should be avoided. Moving the proposed route north of the power lines paralleling the existing lines in an established easement would not only be environmentally preferable, but would also avoid irreparably damaging the Morgan Legacy Farm (the Morgan Creek Ranch), which provides migratory waters, a bald eagle habitat, charitable, economic and community benefits that would be eliminated by the currently proposed route.	Refer to LU-5.

Cindy Ohlenforst	2/24/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US.	Refer to LU-5.
Cindy Ohlenforst	2/25/2018	Website	The proposed path would adversely affect property owners in Navarro County located on 3194 and would potentially cause serious watershed issues. It seems unreasonable to follow that path when a northeast path, parallel to the exiting power lines is already located in an easement and would cause less environmental damage.	Refer to LU-5.
Cindy Ohlenforst	3/3/2018	Email	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.
Cindy Ohlenforst	3/3/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Cindy Ohlenforst	3/4/2018	Website	I'm bewildered by the path chosen through Navarro County; the proposed path unnecessarily harms the environment and the Morgan Creek Ranch. Please rethink this flawed path.	Refer to LU-5.
Cindy Ohlenforst	3/4/2018	Website	I'm so bewildered by the path chosen through Navarro County; the proposed path unnecessarily harms the environment and the Morgan Creek Ranch. Please rethink this flawed path.	Refer to LU-5.
Cindy Ohlenforst	3/4/2018	Website	The path chosen through Navarro County unnecessarily harms the environment and the Morgan Creek Ranch. Please rethink this flawed path.	Refer to LU-5.
Cindy Ohlenforst	3/5/2018	Website	The planned route would destroy a culturally, economically, and historically important ranch that's often used for charitable purposes. This ranch, the Morgan Legacy Farm, is located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and would save this important community and state resource.	Refer to LU-5. A review of the current alignment indicates that it would closely parallel the existing powerlines for the area in question.
Cindy Ohlenforst	3/8/2018	Website	The route's proposed path through Navarro County includes a path that would unnecessarily and unwisely adversely impact the environmental and economic benefits currently available. The Morgan Legacy Farm would be so severely impacted by the proposed route that the negative effect would harm not only the ranch owners but also the community at large. Moving the proposed path north of the utility lines would be better for the environment and the community and would avoid destroying this significant property.	Refer to LU-5.

The Morgan Legacy Farm would be so severely impacted by the proposed route that the negative effect would harm not only the ranch owners but also the community at large. Moving the proposed path north of the utility lines would be better for the environment and the community and would avoid destroying this significant property.	Refer to LU-5.
Cynthia Ohlenforst	2/24/2018	Website	Homeowners in Navarro County located on 3194 will be adversely impacted by the proposed route because it closely parallels 3194, blocking access to their property, and potentially causing serious watershed issues. It would be better to have the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5.
Cynthia Ohlenforst	3/3/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Dr. Patrick Ohlenforst	2/24/2018	Website	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.
Kristen Ohlenforst	2/23/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Kristen Ohlenforst	2/23/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about charitable benefits.	Refer to LU-5, WW-1 and WW-2.
Kristen Ohlenforst	2/25/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. Thank you for your consideration.	Refer to LU-5.
Kristen Ohlenforst	2/25/2018	Website	I am concerned about the negative impact of this train's proposed route on migratory waters in the designated area. Specifically, I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable,	Refer to LU-5.

Kristen Ohlenforst	3/4/2018	Website	Building this train along the proposed route will undermine a multitude of opportunities for continued charitable giving, both to first responders and other helping professionals. Specifically, I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable, historical, and emotional support to thousands of individuals including first responders, nurses, physicians, students, and other helping professionals. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Thank you for giving thoughtful consideration to these comments.	Refer to LU-5.

P Ohlenforst	2/24/2018	Website	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.

Pat Ohlenforst	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and militaryamjv	Refer to LU-5, NR-2, WW-1 and WW-2.

Chy Oka	1/29/2018	Email	I support the initiative.. It will help reduce unemployment between both cities.	Comment noted.
Andrew Okrah	2/28/2018	Website	My property is affected by this project but I strongly support the construction of the High- Speed Train project. I will benefit from travelling from Houston to Dallas and back within that 90 min time period. I have family living in Dallas and do a lot of driving there. This will help during my visits. I hope this project becomes reality.	Comment noted.
Tracy Olds	2/5/2018	Oral	Howdy. My name is Tracy Olds, and I am for the no build. Back in the 1950s, America as a whole rejected train travel and bought into the new interstate highway system that our government constructed. From the day President Dwight D. Eisenhower signed the Federal Aid Highway Act of 1956, the interstate system has been part of our culture of construction projects, transportation, and our daily lives, and is an integral part of the American way of life. We bought new cars. We visited new motels along the system. We visited our national parks, and took our families on vacations across this great nation. We are very unique in this concept. The bullet train does not fit in this American culture. We are not your Europe, and we don't want to be Europe. And I'm going to debate there Boys' Life here, which left his magazine up here so I'm not sure if he was a plant from TCR or the FRA, but all his papers are right here. So Europe is now flying. For all of you who have visited lately, it is now cheaper to get on a plane and hop from Paris to Zurich, Switzerland than it is to ride the train. So they are abandoning their train system as well. Again, its old technology. Texans really enjoy their trucks driving across the state, and I don't know anybody that is -- because I've polled a lot of people, and they're going to drive their trucks to Dallas. So the station in Houston at the Northwest Transit Center--and this was on a website off of the TCR system--they admit that it doesn't link into any of the transportation system in Houston, so when you get there you're going to have to Uber. Dallas, now that was a little bit different. It is linking into their system. But what I'm really concerned about is Highway 30. They're building that substation, and we don't know anything about it other than it's around Roans Prairie. But there hasn't been any studies on how the traffic is going to impact Highway 30 or Highway 6 heading north or south, or I-45 heading north or south, because I guarantee you people in Spring, Texas are not going to drive to Northwest Mall to get on a train to go back north to Dallas. That's just not going to happen, folks. So the other -- a couple of ladies before me talked about the produce and everything. You ask a millennial where their beef comes from, they say the grocery store. They have no idea that that organic grass-fed beef that they're buying is from a cattle rancher in Grimes County. They have no idea that their tofu comes from soy beans grown in Grimes County. They have no idea that the organic squash and tomatoes bought at their farmers market comes from Grimes County. So they're clueless. Most of the city people are clueless about what's going on and how it's going to affect them. I'm not getting into the taxes, but they have not done any studies on how taxes are going to -- the devaluation of property against the increased payment of -- you know, that they're going to tax the high-speed rail. Thank you. I've got a lot more points. I did a lot of research. I've got about four pages here. Decibels, they're lying in their study.	Refer to GN-7, GN-9, LU-2, NV-1, TC-2, TR-2, TR-4 and VA-1.
Tracy Olds	2/5/2018	Website	1. Put cities on the alternative maps.2. Provide tax analysis - taxes from TXHSR vs. lost revenue due to de-valued land.3. Provide study of increase in traffic on I-45 North to Highway 30 and Highway 6 to I-30 as well as all across Highway 30 to Roans Prairie Station.4. Your doorbell study is flawed compared to international studies for this train. 65th [sic] should be 95th [sic]. Customer sound study also reports 95th.5. How will oil/ gas well owners be compensated if their well is plugged due to TXHSR? 6. Provide index to DEIS documents in real language.7. What provisions are being made if during construction you find Indian artifacts? Are construction crew going to be trained to preserve these if found?	Refer to CR-7, SC-19 and VA-1. Jurisdictional labels will be provided on maps dependent on the extent shown on a particular map and the informational needs of the particular resource being mapped. For an analysis of the traffic impact analysis, see Section 3.11.3.3, Transportation, Roadways, Intersections and Traffic Circulation . Insufficient information is available in the comment to address international studies or the source of the reference to 65th/95th. As detailed in Section 3.9.6.1, Utilities and Energy , , TCRR shall close and abandon all oil and gas wells within the limits of disturbance (LOD) of the Preferred Alternative. The abandonment of wells would be conducted in accordance with the Railroad Commission of Texas Statewide Rule 14, Plugging, Revised. All parcel acquisition and structure displacements resulting from the Preferred Alternative, including

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				existing wells, would be negotiated between the landowner and TCRR. This analysis assumes that negotiated prices would reflect the fair market value, allowing for investment in new or similar activates outside the LOD.
Tracy Olds	3/5/2018	Website	There have been no surveys of Texans or a VOTE in Texas about the need for this train. From the day President Dwight D. Eisenhower signed the Federal-Aid Highway Act of 1956, the Interstate System has been a part of our culture as construction projects, as transportation in our daily lives, and as an integral part of the American way of life. https://www.fhwa.dot.gov/interstate/history.cfm The bullet train does not fit into our American Culture. We are not Europe nor do we ever want to be. Texans especially enjoy their vehicles (trucks) and driving across this great State. Americans rejected trains and drive our nations highways. The train system for personal travel operates in the red	Comment noted.
Tracy Olds	3/5/2018	Website	THERE ARE NO CITIES ON THE MAPS IN THE STUDY. THERE ARE NO ROADS NOTED ON THE MAPS. HARD TO READ TO BE ABLE TO FIGURE OUT THE IMPACT.	Refer to GN-1.
Tracy Olds	3/5/2018	Website	PROVIDE A TAX ANALYSIS - TAXES FROM THE THE HIGH SPEED RAIL COMPANY AND ALSO THE LOST REVENUE FROM THE DE-VALUED LAND.	Refer to VA-1.
Tracy Olds	3/5/2018	Website	PLEASE ADD TO THE STUDY THE INCREASED TRAFFIC STUDY ON I-45 NORTH TO HIGHWAY 30 AND ALSO ON HIGHWAY 6 TO I30. TRAFFIC STUDY IS NEEDED FOR I-30 TRAFFIC INCREASE FOR THE ROAN'S PRAIRIE STATION USAGE.	Refer to PN-3 and TR-2.
Tracy Olds	3/5/2018	Website	YOUR DECIBEL STUDY IS VERY VERY FLAWED. I HAVE RESEARCHED INTERNATIONAL STUDIES FROM ENGLAND, JAPAN, GERMANY AND THEIR NUMBERS AVERAGE 95DB. THE CALIFORNIA BULLET TRAIN DECIBEL STUDY REFLECTS THIS 95 DB RANGE. PLEASE REVISED THE DEIS DECIBEL STUDY TO REPORT BETTER NUMBERS - AND INCLUDE THE TWO TRAINS PASSING SCENARIO AS WELL. I AM SPECIFICALLY LOOKING FOR THE LMAX CURVE.	Refer to NV-1 and NV-6.
Tracy Olds	3/5/2018	Website	I COULD NOT FIND HOW THE OIL AND GAS WELL OWNERS ARE GOING TO BE COMPENSATED IF THEIR WELL IS PLUGGED DUE TO TO THE BULLET TRAIN. PLEASE PROVIDE A PLAN OF THE WELLS THAT WILL BE PLUGGED AND THE PLAN. AGAIN IF THIS IS ON A MAP, PUT CITIES AND ROAD NAMES ON THE MAP AS WELL.	Refer to ED-1, ED-2 and ED-4. Oil and gas structures are outlined in Section 3.11, Land Use . Oil and gas structures are defined as any relating to the extraction of oil and natural gas (includes wells, sheds, etc.). As noted in Appendix E, Land Use Technical Memorandum , between 14 and 28 primary oil and gas structures would be located directly in the Project footprint, depending on the Build Alternative. Build Alternatives C and F would interact with 14. Build Alternatives A and D would interact with 27. Build Alternatives B and E would interact with the most at 28. Acquisitions of oil and gas structures (located on parcels that may be acquired) are outlined in Table 3.13-16: Summary of Structure Acquisition (No. of Primary and Secondary Structures) by Build Alternative . The Land Use Technical Memorandum provides tables that list all oil and gas structure displacements and acquisitions.
Tracy Olds	3/5/2018	Website	PROVIDE AN INDEX TO THIS HUGE DOCUMENT AND APPENDICES THAT IS IN REAL LANGUAGE. WHERE ARE THE OIL / GAS WELLS ADDRESSED? WHERE ARE THE ROADS THAT ARE GOING TO BE REMOVED ADDRESSED? SOUND STUDY?	Refer to EU-2, NV-1 and TR-8.
Tracy Olds	3/5/2018	Website	WHAT PROVISIONS ARE BEING MADE IF DURING CONSTRUCTION THROUGH GRIMES COUNTY YOU FIND INDIAN ARTIFACTS? ARE THE CONSTRUCTION CREWS GOING TO BE TRAINED TO PRESERVE THESE IF FOUND? ARE THE NATIVE TRIBES GOING TO BE NOTIFIED? BEDAIS TRIBE, ALABAMA-COUSHATTA?	As stated in Section 3.19.3, Cultural Resources, Methodology of the Final EIS, the Federal Railroad Administration initiated government-to-government consultation with the federally recognized Native American tribal governments with a known interest in Texas, pursuant to 36 C.F.R. Part 800.2(c)(2)(ii). FRA will continue to consult with Native American tribes as the project advances and if Native American sites or human remains are discovered during construction in accordance with the terms of the Programmatic Agreement, a draft of which is appended to the Final EIS in Appendix E, Cultural Resources Technical Memorandum .
Tracy Olds	3/5/2018	Website	I am proposing that the bullet train be scrapped because it will be an economic failure. We have no further to look than the failure of the California bullet train. In my research I have found European countries fighting this same concept for the same reason. Rather than investing in their current existing train system, investors want to build this new concept on new rightofways. Texans will not flock to ride this train. One only has to look at the light rail in Houston. It has failed miserably as well.	Refer to GN-2 and NE-1.

Tracy Olds	3/5/2018	Website	I SUPPORT NO BUILD AS THIS IS NOT NEEDED. IF THIS FOREIGN COUNTRY INSISTS ON BUILDING IT. THEN TAKE IT UP I45 OR HIGHWAY 6 RATHER THAN THROUGH OUR PRISTINE COUNTRY SIDE. ON I45 - YOU WILL ONLY BE WIPING OUT EYESORES OF ABANDONED CAR LOTS AND STRIP CLUBS.	Refer to BA-6 and BA-9.
Tracy Olds	3/5/2018	Website	The California bullet train is failing. Over budget, has not met completion deadlines. Check the Los Angeles Times.. It is billions over budget and they going back to the state government for more money. WHERE IN THE DEIS STUDY IS IT ADDRESSED AS TO WHY THIS TRAIN WILL BE A SUCCESS AND NEVER FALL BACK ON THE TEXAN TAXPAYER? WE WANT GUARANTEES!	Refer to NE-1.
Tracy Olds	3/5/2018	Website	What provisions are put in so that if this fails, that the land acquired will be returned to the 5 generation families that settled Texas?	Refer to NE-1.
Tracy Olds	3/5/2018	Website	I HAVE NOT FOUND IN THE DEIS STUDY THE FLOOD RELIEF STUDY WITH THE NEW POST-HURRICANE HARVEY REQUIREMENTS. THIS TRAIN WILL BE RAISED ON VIADUCTS WHICH WILL INTURN DIVERT WATER - WHERE IS THAT IMPACT STUDY? WILL THIS CAUSE INCREASED FLOODING? THIS NEEDS TO BE INDEPTH WITH THE NEW REQUIREMENTS.	Refer to FP-1, SS-17, WW-1 and WW-2.
Tracy Olds	3/5/2018	Website	How long will construction take on my land? Are there additional stipends for owner of land if construction does not meet deadlines. Will TXHSR have access to my land adjacent to the HSR? Will I be paid for access of my land by TXHSR after construction is completed? If not, HSR employees and contractors will be considered trespassers. If an easement is needed how will I be compensated? How do I report problems to TXHSR with their construction and operation of HSR? Land owner will not be held liable for any problems with HSR crossing property? If TXHSR fails, can I get my land back? If TXHSR fails and I cannot have my land back, then what will become of this?	Refer to ED-1, ED-2, ED-3, GN-4 and LU-7.
Gerardo Olivares	3/9/2018	Website	Besides having a few of the carts with the lone star flag, I would say we need to hurry up and start planning we're the stop from Houston to CALIFORNIA would be.... thanks y'all	Comment noted.
Bill Oliver	12/16/2017	Email	Please send e-mail updates on the proposed Dallas to Houston High-Speed Rail project any and all public hearing notices to [...].	Refer to PI-1.
Cindy Olivieri	2/16/2018	Website	I believe this project is a waste of Federal money. If this is such a great plan then use your own money and not expect the government to pick up the tap. Why can it not run along the interstate or state highways? Running though farm land and destroying personal property is wrong. You will cut my way into town. I oppose this project as it stands now and will use my voting power to see it never gets off the ground. Sincerley, Cindy Olivieri	Refer to BA-9, GN-2, GN-4, NE-1 and TR-8.
Darrell Olsen	3/8/2018	Website	My name is Darrell Olsen and I own a feed store in Navarro County. I would like to first advise that in principal I oppose the High Speed Rail being located anywhere in our county. However, I need to make comments about the proposed preferred route as suggested by the FRA as it directly impacts my livelihood. The proposed route that travels parallel to 3194 would adversely affect the access for landowners south of 3194. The proposed route travels within a close proximity to the Lodge for Cotton Mesa, through a number of properties owned by the Steel family and destroys much of the homes, rodeo arena and horse facilities on Morgan Legacy Farm. The loss of these properties to the rail would cause my feed business catastrophic economic harm. The properties represent several of the largest, nicest, most improved properties in Navarro County. They account for a significant portion of my business's income. For the purposes of comments to the FRA I would implore the FRA to move the 6-7-mile-long route along 3194 off the proposed preferred route and north onto an existing utility easement. This easement is more appropriate from an esthetic perspective and would have far less economic, cultural and environmental impact than that proposed.	Refer to LU-5.
James Olsen	1/29/2018	Oral	I'm James Olsen, and I'm Navarro County Commissioner, Precinct 4. Vicky, I agree with you. These are nice people, and I mean this very respectfully when I say this tonight. This is a public hearing. A public hearing is where the public comes together and you hear both sides of the issue. We have a commissioners court and we have public hearings. We usually hear both sides of an issue. But we've come here tonight, and you've heard the outcry against the high speed rail, and I just thought to ask people in here, who's against the high speed rail? And so I ask you, this being a public hearing, who is for the high speed rail? And I'd like to ask that question here. Besides the people that work for Texas Central and those connected, anybody who has anything to gain? The riders in Dallas or Houston, would anybody like to say they're going to be a rider from Dallas to Houston and is for this project? I mean this very respectfully to you-all. I know you've come to listen to us. And I can assume, and I think that I do, assume that you came here, as you do to all public hearings, and want to listen to draw a conclusion from the public. Well, if you came here with an open mind tonight--and I do believe you have; we visited; you're great people, both of you--after hearing what you've heard tonight, the only conclusion you can take back to Washington, or wherever you're from, is to fold your notes up and declare this a dead project. Thank you.	Refer to PI-1 and PI-7.
Joseph Olson	3/5/2018	Oral	Main Street before: A noisy stinky, dirty abandoned bus corridor. Main Street after: A marble-lined, air-conditioned shopping mall connecting Intercontinental, downtown, several universities, a Medical Center and Hobby Airport. For you, only \$1 billion. I made this presentation to the	Refer to EH-1, SS-3, SS-12, SS-13, SS-18 and SS-19.

			<p>City of Houston in September of 1989. I was competing against Walt Disney and a very corrupt system that Kathy Whitmire was going to produce a 14-mile monorail. In a debate with Bob Lanier, she was asked why they had the corridor going from downtown to The Galleria. She said, well, this rail system will reduce the parking requirements for Kenneth Schnitzer at Greenway Plaza and Gerald Hines at The Galleria. That's what we need to spend a billion dollars on. I started researching it. Turns out, Disney has built three monorail systems: One in Disneyland, one in Orlando and one in 1962 for the Seattle World Fair. When you enter the Magic Kingdom, you sign a nondisclosure agreement. You never know how many people are killed by their rail system there, but we know that there are several in Seattle. Further research, there -- the Disney monorail had never been crash tested, never plane tested, never evacuation tested and never approved for ADA. It was DOT registered as an amusement park ride. When it was submitted to the City of Honolulu after our submittal, they said it was laughable and not worthy of consideration. Bob Lanier was fired by Kathy Whitmire and I went to meet with him in his office afterwards and I said, Bob, Kathy is trying to do a no-bid contract on this monorail. It's a violation of the state competitive bidding law Vernon's Code 664-4. It was in my engineering newsletter last month. Lanier, who was an attorney said, yeah, I know. He said, one of the contractors said, if we don't have to bid against anybody, we can hide \$200 million of excess profit in this billion-dollar rail project and we'll all get rich on it. Published in the Houston Press, aired many times on a dozen different talk radio programs in Texas -- I mean, in Houston. One of the talk shows I was on was on KCOH with Michael Harris. My rail system went through the Third Ward, went through the Fifth Ward, took minorities to where they needed to go, at jobs, to the airports, to the universities. I was up explaining my system to him and he kept -- he agreed to give me an hour of time and he kept looking away. I said, Mike, what's the problem? And he said, well, yesterday, after Whitmire fired Lanier, she appointed Anthony Hall. Anthony Hall held a press conference for the black news media at Phyllis' Restaurant and he said, I need to make this rail thing happen and you're going to do what I tell you or you won't get any advertising or pretty money out of the City of Houston or out of Metro. I jumped out of my chair and I said, Mike, that's what we've got to fight against. Skipper Lee, who was the station manager, was standing outside the door, stepped in and said, who is we, Olson? He said, I promised you an hour of time on my radio station and I'm going to give it to you, but you make these people mad at me and they can seriously hurt me and they will. I know the extent corruption that's involved in this world and I know it in this city and I can tell you, this is a defective rail system. It's never -- just like the monorail -- never crash tested, never plane tested, never evacuation tested and how are you going to get out of that thing in a wheelchair when you're 30 feet in the air and you can see how much you've got for a side rail. I mentioned it to one of the HR guys and he says, oh, it's going to have handicap railing all the way down it. It's, like, yeah, sure.</p>	
Mark Olson	2/21/2018	Website	<p>Building this rail line will be a great thing for Texas. Fast economical transportation between DAL and HOU will help get cars off the crowded highway, and be a real alternative to the hassles of flying. We need investments in our infrastructure, and this will be an excellent way to proceed. The technology is reliable and time tested in Japan. It is time to do this. Thank you for inviting comments.</p>	Comment noted.
Tom O'Meara	1/30/2018	Oral	<p>I use to live up in Chicago and then I moved here to Texas and one of the things I know is Texans like to talk about their rifles. I got hogs and you know they can tear up the ground. Were about a mile to the right-of-way. Now my rifle shoots about a three mile bullet. So what's going to happen to that train when the electronics on the railroad if I miss the hog and hit the track or hit the train. In other parts of the country around the airports, it's a no hunting zone. No long rifles. So what's going to happen in Texas are we going to have 8 mile corridor from Dallas to Houston where they can be no long rifles. Doesn't that sort of impact a lot of people around here? Maybe it could be a 10-mile corridor because they want a little safety margin in there because you know high-powered rifle, four miles, the bullet. Now, no reason to aim for the train but guess what we do miss our target. That's all I want to say. If you want that train, that is what's going to happen. It's going to end up where a lot of things change. The game to wildlife. I don't think anybody wants that. Thank you.</p>	Refer to SS-2.
Jerry Orr	2/9/2018	Website	<p>Why is the centerline distance between the two parallel tracks only 14.5 feet in the Houston to Dallas HSR; when the California HSR is 16.5 feet and AREMA specifies 15.0 feet?</p>	As noted in the TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F , the centerline distance between mainlines is 14ft 9in. and it's based on the technology being proposed for the corridor Tokaido Shinkansen system and N700-series trainset. That's the technology TCRR has proposed for this corridor.
Rebecca Ortiz	2/20/2018	Website	<p>The plan of High speed rail from Dallas to Houston should be stopped. If you ask me it is the stupidest thing . These plans should not go forth . People have never had issues driving back and forth to Dallas now y'all want to spend money and years on something that is highly unnecessary focus on other important things in our communities . We will do what we have to do to stop this .</p>	Refer to PN-3.
Daniel Osborn	2/19/2018	Website	<p>I am very much in support of the project.</p>	Comment noted.

			<p>"desktop" survey, a lot of the data in this study appears to be standard boilerplate report fodder, clearly not the result of evidence gathered by "boots on the ground". A few of the issues are :</p> <ol style="list-style-type: none"> 1) The noise pollution studies seem to be based on a false maximum of 87 dB, for a single train. What are the effects along the line when the airflows of two opposing trains meet? That should be used as the worse case scenario, not 87dB. 2) Most of the environmental impact seems to be centered around the grossly overstated total Vehicle Miles Traveled which would, in turn, causes the amount of gas saved to be overstated as well. The total VMT removed from the DFW NAA is 200% overstated. The total VMT removed from the Harris County VMT is overstated by 300%. If the correct values were used, the net emissions would be closer to zero. 3) What about the carbon footprint of the construction equipment, during the construction phase of this project?What about the emissions of the power generating plants that will provide electricity to this project? The train is always praised as being environmentally friendly, since it's electric...but the generating plants are coal-fired and the bulldozers drink their fair share of diesel. 4) What load will the train place on the existing electric grid? 5) Where is the Ridership and Revenue analysis? There is a whole section related to that in the All Aboard Florida DEIS. Does the FRA not think that such issues should be examined with this project as well? 6) Many sources believe that Texas Central is grossly overstating its ridership values. They refuse to release them. I believe that they should have to provide proof of their expected ridership before this project continues. Did the FRA consider ridership and revenue? Where did the values used come from? 7) Texas Central always claims that this is a privately-funded project but they also say that they will try to secure taxpayer-backed federal loans as well. In light of that statement, doesn't the FRA have an obligation to the taxpayer to fully vet the construction costs as well as the ridership numbers in order to insure that there will be sufficient revenue available to repay the federal loans? Or is the FRA content with approving a project that is sure to fail, thereby requiring ongoing government subsidies? 8) Several real estate organizations have stated that property values will plummet along the train route. The Mayor of Houston even stated that when he was in the State Legislature. Now that he is the Mayor of Houston, he seems more interested in changing his story and securing lucrative contracts with Texas Central, for his family members though. What analysis did the FRA perform to justify their claims that property values wouldn't be affected? 9) The DEIS indicates that 147 miles of county roads will be re-routed even though Texas Central claims otherwise. This will have a negative impact on Emergency response times in the rural areas near the train. Why did the FRA not take this into account? EMS and law enforcement officials WERE NOT contacted during the DEIS process so it's hard to make a claim that the FRA put much thought into this issue. What was your analysi based on? 10) Texas Central boasts about the jobs that will be created. What about the impact of the jobs lost due to business displacements? Where are those considerations addressed in the DEIS? 11) This project has been very stressful on the citizens along this route for several years. If built, the noise and vibration will no doubt cause additional stress for many of these families for years to come. Where was this issue addressed in the DEIS? What about the quality of living that is being stripped away for these tax-paying citizens? How does the noise and vibration levels affect the learning ability of young children, especially those with special needs? 12) Many farms and ranches will be split in half. What analysis has been done as to the economic impact of that?Livestock movement will be affected as will the movement of wildlife. Even on the viaduct sections, much of it will fenced because of the need to use the access roads as part of the solution to the 147 miles of re-routed county roads. What used to be a simple matter of moving livestock from one pasture to another will now become a very complicated affair, involving trucks, trailers and additional expenses. Where was that addressed in the DEIS? 13) Texas Central is also claiming that the State of Texas will receive \$15-39 Billion in sales tax revenue. That is simply not true. Transportation tickets are NOT subject to Sales and Use Tax in the State of Texas. It sounds good but it's a 100% false claim on the part of Texas Central. Since there isn't a Revenue and Ridership section in this DEIS, it's hard to guess what values went into the FRA's calculations and where those values might've come from. Obviously anything provided by Texas Central can't be trusted since they obviously didn't take the time to research something as easy as sales tax law. What fiscal analysis did the FRA perform and where did they obtain their data? <p>This project could split my property in half. This land has been in my family for 6 generations. I cannot believe that a private, for-profit, foreign-backed company would even be considered as a candidate to use the power of eminent domain, in order to build such a financially disastrous project, as this appears to be.</p> <p>A recent study of the 111 high speed rail projects in the World concluded that there were only 3 systems that didn't operate at a loss. The study claimed that two of these railways, Paris to Lyon and Tokyo to Osaka, operated at a profit but that study didn't include the fact that the</p>	<p>The emissions of the power generating plants were accounted for in the analysis of operational emissions as documented in Section 3.2.3, Air Quality, Methodology. Construction emissions were calculated considering their engine technology (typically diesel). Though overcoming a carbon footprint is not a national or state policy requirement, the overall operational CO2eq emissions show a net reduction that in several years of operation, would offset those produced during construction.</p>

			<p>infrastructure was government-funded. If the cost of those rail systems was figured in, even those system would operate at a net loss. When you consider that the population densities of those areas are 30,000-50,000 people per square mile, whereas Houston and Dallas are closer to 3000-3500 persons per square mile, I don't see how anyone could conceivably think that this project will be anything other than a complete failure.</p> <p>It seems that the economic aspect of this project has been completely overlooked by the FRA. Texas Central has manipulated VHT values, in order to make their net emissions numbers look better. They have fabricated unrealistic ridership values, in order to make the project seem to be profitable at \$199 per one way ticket. All the while, they were also claiming that they would be competitively priced and would match the market. If they match the market, their cost per ticket will have to come down which will drastically reduce revenue ... the this project is back to being a losing proposition. All of this wasted money to address a problem that doesn't exist. The congestion issue is NOT in the rural portions of Interstate 45 ... it's in Houston and Dallas. This project will not alleviate that but instead, it will make it worse. Where is that analysis in the DEIS?</p> <p>I formally request a response to each issue above. Those responses need to hard facts and their source ... and not just the advertising propaganda that is spread by Texas Central.</p> <p>As a final note, I wholeheartedly recommend the NO BUILD option.</p>	
Clark Osborne	3/9/2018	Email	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any reference to a statute that would remotely allow a private company, like Texas Central Partners, to qualify for eminent domain authority. Texas Law is very specific in this area. Texas Central does not meet the definition of a railroad as defined in Chapter 81 of the Texas Transportation Code, since 1) they weren't incorporated before Sept. 1, 2007 and 2) they are not "operating" a railroad. They weren't incorporated until 2012. They are clearly not "operation a railroad" because they don't own a single railcar nor do they possess a single inch of track! Since they don't qualify as a railroad, they surely can't be granted condemnation rights because of eminent domain. Please respond with a detailed explanation as to your analysis of this matter.</p> <p>As a final note, I wholeheartedly recommend the NO BUILD option.</p>	Refer to ED-1.
Clark Osborne	3/9/2018	Email	<p>To Whom It May Concern,</p> <p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. Texas Central knows this and they know that a large majority of the comments regarding this project will be negative.</p> <p>In order to try to solicit positive comments for the DEIS, Texas Central has posted an online form for people to use. The user simply had to fill in their name, address and email address and a positive comment would be sent to the FRA. In return for this positive comment, the user would be sent a toy train! This offer immediately caught the attention of several groups opposed to the train and Texas Central changed to offer. Now, every positive comment entered awards the commenter with another "chance" to win a toy train, in a drawing to be held soon. They openly state that the more comments a person makes, the more chances they will have to win a toy! Is it legal to offer compensation or goods, in return for comments to the DEIS? It might not be illegal but it is surely unethical....but we are used to that with Texas Central. Please respond with a detailed explanation as to the FRA's position on this "pay to comment" scheme..</p> <p>As a final note, I wholeheartedly recommend the NO BUILD option.</p>	Refer to PI-4.
Johnny Osborne	3/9/2018	Email	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail.</p> <p>One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on local Law Enforcement, FIRE and EMS services in local communities during the construction phase.</p> <p>The DEIS contains claims that no County roads will be closed, which is simply not true. Dozens of roads are going to be closed during the construction phase and many will have to be re-routed, at each County's expense.</p> <p>The response time for Law Enforcement, FIRE and EMS services, due to these road conditions is going to greatly increase , both during and after construction. This is simply something that the County governments and taxpaying private landowners should not have to deal with. During this entire process, Texas Central and the FRA has not met with ANY of the local law enforcement, FIRE or EMS service officials. Their first contact was on or around February 22, 2018.</p> <p>Page E2-23 of the Executive Summary, in the DEIS, mentions that "closures and reroutes will be closely coordinated with local jurisdictions". When is that going to start? Why weren't the local jurisdictions contacted, as part of the DEIS process?</p> <p>How did the FRA get through this entire DEIS process, including the hearings, without ever putting ANY consideration into the safety of the residents that this project will affect?</p> <p>That demonstrates a pure negligence, on the part of the FRA, in my opinion, by not addressing this issue in the DIES.</p> <p>I formally request a full analysis of the effects that the construction phase will have on each County, specifically related to the response times for Law Enforcement, FIRE and EMS service. Such analysis needs to include input from local government and department officials and not just</p>	Refer to PI-1, SS-18, SS-23, TR-6, TR-7 and TR-8.

Johnny Osborne	3/9/2018	Email	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major error in the DEIS is a gross overstatement of the Vehicle Miles Traveled (VMT). The Total VMT is overstated in the DEIS by 200%, which also makes the "total for gallons of gas saved" per year a 200% overstatement. The total VMT removed from the DFW NAA is overstated by 200% and the total VMT removed from the Harris County NAA is overstated by 300%. If the correct amounts are taken into account, net vehicle emissions are closer to zero than the values stated. I formally request a full analysis of the errors in your calculations and a recalculation of the resulting vehicle omissions using the correct total VMT values, rather than the grossly overstated ones. please respond with a detailed explanation as to your analysis of this matter.</p>	Refer to AQ-12. Gallons of fuel saved has also been updated in the Final EIS Section 3.9.5.2.3, Utilities and Energy, Build Alternatives and a reduction in fuel was still demonstrated with these revisions.
Johnny Osborne	3/9/2018	Email	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is approximately 2 years of correspondences forthe 6) Agency Correspondences File. There are a lot of correspondences between several different agencies leading up to and including September, 25, 2015. Then, mysteriously, there is a two year gap, followed by a letter to AECOM's Erin Lee, from USDA/NCRS Soil Scientist Carlos Villareal. Were those other correspondences on Hillary's server too? In addition to the missing correspondence, a couple of other things are "odd", 1) Mr. Villareal's comments seem to be in response to an earlier communication that he mentions, dated August 31, 2016. Where is that letter? 2) Mr. Villareal's comments also seem to outline that his analysis of the land along the route was completed in a week! He's fast! Maybe his speed is related to the fact that this was simply a "desktop" analysis, like much of the DIES...it didn't involve "boots on the ground" One particular line in his report is troubling. He stated "Although the urban areas (as defined by USGS topographic maps) may contain Prime Farmland, we now consider the location to be "land committed to urban development". Who is he quoting? What gives a soil scientist the right to make a recommendation about rural farmland being "land committed to urban developmen&#8364;? How about calling it "land committed to agricultural production" ! I formally request a full disclosure of the additional correspondences related to this project. I would also like to see an actual analysis of the farmland in question,</p>	Refer to GN-1, NE-1, NE-7 and NE-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			along the route. Finally„ I would like to see where it is written the land between Houston and Dallas is "committed to urban development! Please respond with a detailed explanation of each of these issues.	
Johnny Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on the local jobs. Texas Central has claimed that this project will result on an additional 1500+ jobs. The DEIS states that 1051 jobs will be lost due to business displacements. Some business will not be able to reopen due to being grandfathered with the county/city or TCEQ. Where is the analysis of that loss, in the DEIS? I formally request a full analysis of the effect that the loss of local jobs will have on the local economies.. Such analysis needs to include input from local government officials and business leaders...and not just the advertising propoganda that is spread by Texas Central. please respond with a detailed explanation as to your analysis of this matter.	Refer to PI-1 and SC-21.
Johnny Osborne	3/9/2018	Email	Question regarding DEIS - Extension Of Comment Period Response requested In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. I also feel that the time allotted for public comment to this 5600+ page report is grossly inadequate. I formally request a 90 day extension to the public comment period, as has been requested by numerous elected officials, including Texas Rep. Kevin Brady. Please respond with a detailed explanation as to your decision on this matter.	Refer to PI-3.
Johnny Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. I also feel that there should be another scheduled public hearing for the residents on Madison County, TX. The FRA FAILED to secure a venue of adequate capacity, knowing full well the size of the anticipated crowd. Instead of booking a venue of suitable capacity, the FRA secured a facility that had a seating capacity of only 300. This was barely enough for half of the citizens that tried to attend. Approx. 200 people were turned away due to overcrowding. When do they get their hearing? I formally request another hearing be held for the residents of Madison County and that it be held in a venue of sufficient capacity to allow entry for anyone that wanted to attend. Because so many citizens were turned away at the door, I also formally request a 90 day extension to the public comment period, as has been requested by numerous elected officials, including Texas Rep. Kevin Brady. Please respond with a detailed explanation as to your decision on this matter.	Refer to GN-1, PI-3 and PI-11.
Johnny Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of ridership and revenue. Since Texas Central has announced that they intend on seeking taxpayer-backed Federal loans, in order to finance this project, I think it is the FRA's responsibility to insure that such tax dollars aren't wasted because of a lack of a need for this project. Why is there a section of the "All aboard Florida" DEIS dedicated to Ridership and Revenue, when there is NO SUCH SECTION for the Dallas to Houston project? That demonstrates extreme negligence on the part of the FRA, in my opinion. I formally request a full analysis of ridership and revenue for this project. Such analysis needs to include estimates from industry professionals and not just the advertising propoganda that is spread by Texas Central. Please respond with a detailed explanation as to your analysis of this matter.	Refer to GN-1 and GN-2.
Johnny Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of ridership and revenue. What was the source for the little bit of ridership information that is present in the DEIS ? Independent consultants or Texas Central's own publicity department? I formally request a full explanation of the sources and methods used to derive the ridership estimates in the DEIS. Please respond with a detailed explanation as to your analysis of this matter.	Refer to GN-2, GN-4 and NE-1.
Johnny Osborne	3/9/2018	Email	Re: Question regarding DEIS -- Texas Central DOESN'T qualify as a Railroad. - Response requested In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any reference to a statute that would remotely allow a private company, like Texas Central Partners, to qualify for eminent domain authority. Texas Law is very specific in this area. Texas Central does not meet the definition of a railroad as defined in Chapter 81 of the Texas Transportation Code, since 1) they weren't incorporated before Sept. 1, 2007 and 2) they are not "operating" a railroad. They weren't incorporated until 2012. They are clearly not "operation a railroad" because they don't own a single railcar nor do they possess a single inch of track! Since they don't qualify as a railroad, they surely can't be granted condemnation rights because of eminent domain. Please respond with a detailed explanation as to your analysis of this matter.	Refer to ED-1.
Johnny Osborne	3/9/2018	Email	To Whom It May Concern, In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on property values and the local economies of the counties that it crosses. The DEIS contains claims that property values will be enhanced along the rail route. In what World? If there isn't a local train station, this project will not add any value to property that is bisects. Instead, those landowners will have to endure the noise and vibrations from dozens of trains, 18 hours a day, every day, for the rest of their lives. Nobody wants to live near that and land values will plummet accordingly.	Refer to NV-1 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>Dozens of roads are going to be closed during the construction phase and many will have to be re-routed, at each County's expense. The response time for Law Enforcement, FIRE and EMS services, due to these road conditions is going to greatly increase , both during and after construction. This is simply something that the County governments and taxpaying private landowners should not have to deal with. During this entire process, Texas Central and the FRA has not met with ANY of the local law enforcement, FIRE or EMS service officials. Their first contact was on or around February 22, 2018. Page E2-23 of the Executive Summary, in the DEIS, mentions that "closures and reroutes will be closely coordinated with local jurisdictions". When is that going to start? Why weren't the local jurisdictions contacted, as part Of the DEIS process? How did the FRA get through this entire DEIS process, including the hearings, without ever putting ANY consideration into the safety of the residents that this project will affect? That demonstrates a pure negligence, on the part of the FRA, in my opinion, by not addressing this issue in the DIES. I formally request a full analysis of the effects that the construction phase will have on each County, specifically related to the response times for Law Enforcement, FIRE and EMS service. Such analysis needs to include input from local government and department officials and not just the advertising propoganda that is spread by Texas Central. Please respond with a detailed explanation as to your analysis of this matter.</p>	
<p>Lisa Laird Osborne</p>	<p>3/9/2018</p>	<p>Email</p>	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. Perhaps what is more disturbing are the issues that weren't addressed in the DEIS. Since this is a self-admitted "desktop" survey, a lot of the data in this study appears to be standard boilerplate report fodder, clearly not the result of evidence gathered by "boots on the ground".</p> <p>A few of the issues are :</p> <ol style="list-style-type: none"> 1) The noise pollution studies seem to be based on a false maximum of 87 dB, for a single train. What are the effects along the line when the airflows of two opposing trains meet? That should be used as the worse case scenario, not 87dB. 2) Most of the environmental impact seems to be centered around the grossly overstated total Vehicle Miles Traveled which would, in turn, causes the amount of gas saved to be overstated as well. The total VMT removed from the DFW NAA is 200% overstated. The total VMT removed from the Harris County VMT is overstated by 300%. If the correct values were used, the net emissions would be closer to zero. 3) What about the carbon footprint of the construction equipment, during the construction phase of this project?What about the emissions of the power generating plants that will provide electricity to this project? The train is always praised as being environmentally friendly, since it's electric...but the generating plants are coal-fired and the bulldozers drink their fair share of diesel. 4) What load will the train place on the existing electric grid? 5) Where is the Ridership and Revenue analysis? There is a whole section related to that in the All Aboard Florida DEIS. Does the FRA not think that such issues should be examined with this project as well? 6) Many sources believe that Texas Central is grossly overstating its ridership values. They refuse to release them. I believe that they should have to provide proof of their expected ridership before this project continues. Did the FRA consider ridership and revenue? Where did the values used come from? 7) Texas Central always claims that this is a privately-funded project but they also say that they will try to secure taxpayer-backed federal loans as well. In light of that statement, doesn't the FRA have an obligation to the taxpayer to fully vet the construction costs as well as the ridership numbers in order to insure that there will be sufficient revenue available to repay the federal loans? Or is the FRA content with approving a project that is sure to fail, thereby requiring ongoing government subsidies? 8) Several real estate organizations have stated that property values will plummet along the train route. The Mayor of Houston even stated that when he was in the State Legislature. Now that he is the Mayor of Houston, he seems more interested in changing his story and securing lucrative contracts with Texas Central, for his family members though. What analysis did the FRA perform to justify their claims that property values wouldn't be affected? 9) The DEIS indicates that 147 miles of county roads will be re-routed even though Texas Central claims otherwise. This will have a negative impact on Emergency response times in the rural areas near the train. Why did the FRA not take this into account? EMS and law enforcement officials WERE NOT contacted during the DEIS process so it's hard to make a claim that the FRA put much thought into this issue. What was your analysi based on? 10) Texas Central boasts about the jobs that will be created. What about the impact of the jobs lost due to business displacements? Where are those considerations addressed in the DEIS? 11) This project has been very stressful on the citizens along this route for several years. If built, the noise and vibration will no doubt cause additional stress for many of these families for years to come. Where was this issue addressed in the DEIS? What about the quality of living that is being stripped away for these tax-paying citizens? How does the noise and vibration levels affect the learning ability of young children, especially those with special needs? 	<p>Refer to AQ-3, ED-1, EU-4, GN-1, GN-2, GN-4, LU-11, NE-1, NE-8, NV-1, NV-10, PN-3, SC-3, SC-22, SS-21, SS-23 and VA-1.</p> <p>The emissions of the power generating plants were accounted for in the analysis of operational emissions as documented in Section 3.2.3, Air Quality, Methodology. Construction emissions were calculated considering their engine technology (typically diesel). Though overcoming a carbon footprint is not a national or state policy requirement, the overall operational CO2eq emissions show a net reduction that in several years of operation, would offset those produced during construction.</p>

			<p>12) Many farms and ranches will be split in half. What analysis has been done as to the economic impact of that? Livestock movement will be affected as will the movement of wildlife. Even on the viaduct sections, much of it will be fenced because of the need to use the access roads as part of the solution to the 147 miles of re-routed county roads. What used to be a simple matter of moving livestock from one pasture to another will now become a very complicated affair, involving trucks, trailers and additional expenses. Where was that addressed in the DEIS?</p> <p>13) Texas Central is also claiming that the State of Texas will receive \$15-39 Billion in sales tax revenue. That is simply not true. Transportation tickets are NOT subject to Sales and Use Tax in the State of Texas. It sounds good but it's a 100% false claim on the part of Texas Central. Since there isn't a Revenue and Ridership section in this DEIS, it's hard to guess what values went into the FRA's calculations and where those values might've come from. Obviously anything provided by Texas Central can't be trusted since they obviously didn't take the time to research something as easy as sales tax law. What fiscal analysis did the FRA perform and where did they obtain their data?</p> <p>This project could split my property in half. This land has been in my family for 6 generations. I cannot believe that a private, for-profit, foreign-backed company would even be considered as a candidate to use the power of eminent domain, in order to build such a financially disastrous project, as this appears to be.</p> <p>A recent study of the 111 high speed rail projects in the World concluded that there were only 3 systems that didn't operate at a loss. The study claimed that two of these railways, Paris to Lyon and Tokyo to Osaka, operated at a profit but that study didn't include the fact that the infrastructure was government-funded. If the cost of those rail systems was figured in, even those systems would operate at a net loss. When you consider that the population densities of those areas are 30,000-50,000 people per square mile, whereas Houston and Dallas are closer to 3000-3500 persons per square mile, I don't see how anyone could conceivably think that this project will be anything other than a complete failure.</p> <p>It seems that the economic aspect of this project has been completely overlooked by the FRA. Texas Central has manipulated VHT values, in order to make their net emissions numbers look better. They have fabricated unrealistic ridership values, in order to make the project seem to be profitable at \$199 per one way ticket. All the while, they were also claiming that they would be competitively priced and would match the market. If they match the market, their cost per ticket will have to come down which will drastically reduce revenue ... the this project is back to being a losing proposition. All of this wasted money to address a problem that doesn't exist. The congestion issue is NOT in the rural portions of Interstate 45 ... it's in Houston and Dallas. This project will not alleviate that but instead, it will make it worse. Where is that analysis in the DEIS?</p> <p>I formally request a response to each issue above. Those responses need to have hard facts and their source ... and not just the advertising propaganda that is spread by Texas Central.</p> <p>As a final note, I wholeheartedly recommend the NO BUILD option.</p>	
Michael Osborne	3/9/2018	Email	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on the local jobs. Texas Central has claimed that this project will result in an additional 1500+ jobs. The DEIS states that 1051 jobs will be lost due to business displacements. Some business will not be able to reopen due to being grandfathered with the county/city or TCEQ. Where is the analysis of that loss, in the DEIS? I formally request a full analysis of the effect that the loss of local jobs will have on the local economies.. Such analysis needs to include input from local government officials and business leaders...and not just the advertising propaganda that is spread by Texas Central. please respond with a detailed explanation as to your analysis of this matter.</p>	Refer to PI-1 and SC-21.
Richard Clark Osborne	3/9/2018	Email	<p>In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on local Law Enforcement, FIRE and EMS services in local communities during the construction phase. The DEIS contains claims that no County roads will be closed, which is simply not true. Dozens of roads are going to be closed during the construction phase and many will have to be re-routed, at each County's expense. The response time for Law Enforcement, FIRE and EMS services, due to these road conditions is going to greatly increase , both during and after construction. This is simply something that the County governments and taxpaying private landowners should not have to deal with. During this entire process, Texas Central and the FRA has not met with ANY of the local law enforcement, FIRE or EMS service officials. Their first contact was on or around February 22, 2018. Page E2-23 of the Executive Summary, in the DEIS, mentions that "closures and reroutes will be closely coordinated with local jurisdictions". When is that going to start? Why weren't the local jurisdictions contacted, as part of the DEIS process? How did the FRA get through this entire DEIS process, including the hearings, without ever putting ANY consideration into the safety of the residents that this project will affect? That demonstrates a pure negligence, on the part of the FRA, in my opinion, by not addressing this issue in the DEIS. I formally request a full analysis of the effects that the construction phase will have on each County, specifically related to the response times for Law Enforcement, FIRE and EMS service. Such analysis needs to include input from local government and</p>	Refer to PI-1, SS-18 and SS-23.

			department officials and not just the advertising propoganda that is spread by Texas Central. Please respond with a detailed explanation as to your analysis of this matter. As a final note, I wholeheartedly recommend the NO BUILD option.	
Richard Clark Osborne	3/9/2018	Email	Re: Question regarding DEIS - Property values will be reduced- Response requested To Whom It May Concern, In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on property values and the local economies of the counties that crosses. The DEIS contains claims that property values will be enhanced along the rail route. In what World? If there isn't a local train station, this project will not add any value to property that is bisects. Instead, those landowners will have to endure the noise and vibrations from dozens of trains, 18 hours a day, every day, for the rest of their lives. Nobody wants to live near that and land values will plummet accordingly. When the land values go down, the local property tax rates are going to have to increase, to offset the loss in revenue for the County. There is no reason to believe that Texas Central will be registering any of their rolling stock to each County, so the claims in the DEIS about the amount of property taxes that Texas Central will be paying, is preposterous. That demonstrates a lack of due diligence, on the part of the FRA, in my opinion. I formally request a full analysis of the resulting decrease in property value and the effect that such a decrease will have on each local taxing jurisdiction. Such analysis needs to include estimates from local appraisal officials and not just the advertising propoganda that is spread by Texas Central. Please respond with a detailed explanation as to your analysis of this matter. As a final note, I wholeheartedly recommend the NO BUILD option.	Refer to GN-1 and VA-1.
Richard Clark Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major error in the DEIS is a gross overstatement of the Vehicle Miles Traveled (VMT). The Total VMT is overstated in the DEIS by 200%, which also makes the "total for gallons of gas saved" per year a 200% overstatement. The total VMT removed from the DFW NAA is overstated by 200% and the total VMT removed from the Harris County NAA is overstated by 300%. If the correct amounts are taken into account, net vehicle emissions are closer to zero than the values stated. I formally request a full analysis of the errors in your calculations and a recalculation of the resulting vehicle omissions using the correct total VMT values, rather than the grossly overstated ones. Please respond with a detailed explanation as to your analysis of this matter. As a final note, I wholeheartedly recommend the NO BUILD option.	Refer to AQ-3.
Richard Clark Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is approximately 2 years of correspondences for the 6) Agency Correspondences File. There are a lot of correspondences between several different agencies leading up to and including September, 25, 2015. Then, mysteriously, there is a two year gap, followed by a letter to AECOM's Erin Lee, from USDA/NCRS Soil Scientist Carlos Villareal. Were those other correspondences on Hillarvs server too? In addition to the missing correspondence, a couple of other things are "odd", 1) Mr. Villareal's comments seem to be in response to an earlier communication that he mentions, dated August 31, 2016. Where is that letter? 2) Mr. Villareal's comments also seem to outline that his analysis of the land along the route was completed in a week! He's fast! Maybe his speed is related to the fact that this was simply a "desktop" analysis, like much of the DIES...it didn't involve "boots on the ground". One particular line in his report is troubling. He stated "Although the urban areas (as defined by USGS topographic maps) may contain Prime Farmland, we now consider the location to be "land committed to urban development". Who is he quoting? What gives a soil scientist the right to make a recommendation about rural farmland being "land committed to urban development"? How about calling it "land committed to agricultural production" ! I formally request a full disclosure of the additional correspondences related to this project. I would also like to see an actual analysis of the farmland in question, along the route. Finally., I would like to see where it is written the land between Houston and Dallas is "committed to urban development! Please respond with a detailed explanation of each of these issues.	Refer to CR-12, GN-1, NE-7, NE-8 and WW-9.
Richard Clark Osborne	3/9/2018	Email	One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on the local jobs. Texas Central has claimed that this project will result on an additional 1500+ jobs. The DEIS states that 1051 jobs will be lost due to business displacements. Richard Clark Osborne	3/9/2018	Email	I also feel that there should be another scheduled public hearing forthe residents on Madison County, TX. The FRA FAILED to secure a venue of adequate capacity, knowing full well the size of the anticipated crowd. Instead of booking a venue of suitable capacity, the FRA secured a facility that had a seating capacity of only 300. This was barely enough for half of the citizens that tried to attend. Approx. 200 people were turned away due to overcrowding. When do they get their hearing? I formally request another hearing be held for the residents of Madison County and that it be held in a venue of sufficient capacity to allow entry for anyone that wanted to attend. Because so many citizens were turned away at the door, I also formally request a 90 day extension to the public comment period, as has been requested by numerous elected officials, including Texas Rep. Kevin Brady. Please respond with a detailed explanation as to your decision on this matter.	Refer to PI-3 and PI-11.

Richard Clark Osborne	3/9/2018	Email	One major omission to the DEIS is any reference to a statute that would remotely allow a private company, like Texas Central Partners, to qualify for eminent domain authority. Texas Law is very specific in this area. Texas Central does not meet the definition of a railroad as defined in Chapter 81 of the Texas Transportation Code, since 1) they weren't incorporated before Sept. 1, 2007 and 2) they are not "operating" a railroad. They weren't incorporated until 2012. They are clearly not "operation a railroad" because they don't own a single railcar nor do they possess a single inch of track! Since they don't qualify as a railroad, they surely can't be granted condemnation rights because of eminent domain. Please respond with a detailed explanation as to your analysis of this matter.	Refer to ED-1.
Richard Clark Osborne	3/9/2018	Email	One major omission to the DEIS is any meaningful analysis of ridership and revenue. What was the source for the little bit of ridership information that is present in the DEIS? Independent consultants or Texas Central's own publicity department? I formally request a full explanation of the sources and methods used to derive the ridership estimates in the DEIS. Please respond with a detailed explanation as to your analysis of this matter.	Refer to GN-2.
Richard Clark Osborne	3/9/2018	Email	One major omission to the DEIS is any meaningful analysis of ridership and revenue. Since Texas Central has announced that they intend on seeking taxpayer-backed Federal loans, in order to finance this project, I think it is the FRA's responsibility to insure that such tax dollars aren't wasted because of a lack of a need for this project. Why is there a section of the "All aboard Florida" DEIS dedicated to Ridership and Revenue, when there is NO SUCH SECTION for the Dallas to Houston project? That demonstrates extreme negligence on the part of the FRA, in my opinion. I formally request a full analysis of ridership and revenue for this project. Such analysis needs to include estimates from industry professionals and not just the advertising propaganda that is spread by Texas Central. Please respond with a detailed explanation as to your analysis of this matter. As a final note, I wholeheartedly recommend the NO BUILD option.	Refer to BA-6, GN-2, GN-4 and NE-1.
Richard Clark Osborne	3/9/2018	Email	Re: Question regarding DEIS - Burden on local infrastructure during construction due to road closures- Response requested To Whom It May Concern, In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on the infrastructures of local communities during the construction phase. The DEIS contains claims that no County roads will be closed, which is simply not true. Dozens of roads are going to be closed during the construction phase and many will have to be re-routed, at each County's expense. Timothy Michael Osborne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. Perhaps what is more disturbing are the issues that weren't addressed in the DEIS. Since this is a self-admitted "desktop" survey, a lot of the data in this study appears to be standard boilerplate report fodder, clearly not the result of evidence gathered by "boots on the ground". A few of the issues are : 1) The noise pollution studies seem to be based on a false maximum of 87 dB, for a single train. What are the effects along the line when the	Refer to AQ-3, ED-1, EU-4, GN-1, GN-2, GN-4, LU-11, NE-1, NE-8, NV-1, NV-10, PN-3, SC-3, SC-22, SS-21, SS-23 and VA-1. The emissions of the power generating plants were accounted for in the analysis of operational emissions as documented in Section 3.2.3, Air Quality, Methodology . Construction emissions were calculated considering their engine technology (typically diesel).

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>airflows of two opposing trains meet? That should be used as the worse case scenario, not 87dB.</p> <p>2) Most of the environmental impact seems to be centered around the grossly overstated total Vehicle Miles Traveled which would, in turn, causes the amount of gas saved to be overstated as well. The total VMT removed from the DFW NAA is 200% overstated. The total VMT removed from the Harris County VMT is overstated by 300%. If the correct values were used, the net emissions would be closer to zero.</p> <p>3) What about the carbon footprint of the construction equipment, during the construction phase of this project? What about the emissions of the power generating plants that will provide electricity to this project? The train is always praised as being environmentally friendly, since it's electric...but the generating plants are coal-fired and the bulldozers drink their fair share of diesel.</p> <p>4) What load will the train place on the existing electric grid?</p> <p>5) Where is the Ridership and Revenue analysis? There is a whole section related to that in the All Aboard Florida DEIS. Does the FRA not think that such issues should be examined with this project as well?</p> <p>6) Many sources believe that Texas Central is grossly overstating its ridership values. They refuse to release them. I believe that they should have to provide proof of their expected ridership before this project continues. Did the FRA consider ridership and revenue? Where did the values used come from?</p> <p>7) Texas Central always claims that this is a privately-funded project but they also say that they will try to secure taxpayer-backed federal loans as well. In light of that statement, doesn't the FRA have an obligation to the taxpayer to fully vet the construction costs as well as the ridership numbers in order to insure that there will be sufficient revenue available to repay the federal loans? Or is the FRA content with approving a project that is sure to fail, thereby requiring ongoing government subsidies?</p> <p>8) Several real estate organizations have stated that property values will plummet along the train route. The Mayor of Houston even stated that when he was in the State Legislature. Now that he is the Mayor of Houston, he seems more interested in changing his story and securing lucrative contracts with Texas Central, for his family members though. What analysis did the FRA perform to justify their claims that property values wouldn't be affected?</p> <p>9) The DEIS indicates that 147 miles of county roads will be re-routed even though Texas Central claims otherwise. This will have a negative impact on Emergency response times in the rural areas near the train. Why did the FRA not take this into account? EMS and law enforcement officials WERE NOT contacted during the DEIS process so it's hard to make a claim that the FRA put much thought into this issue. What was your analysis based on?</p> <p>10) Texas Central boasts about the jobs that will be created. What about the impact of the jobs lost due to business displacements? Where are those considerations addressed in the DEIS?</p> <p>11) This project has been very stressful on the citizens along this route for several years. If built, the noise and vibration will no doubt cause additional stress for many of these families for years to come. Where was this issue addressed in the DEIS? What about the quality of living that is being stripped away for these tax-paying citizens? How does the noise and vibration levels affect the learning ability of young children, especially those with special needs?</p> <p>12) Many farms and ranches will be split in half. What analysis has been done as to the economic impact of that? Livestock movement will be affected as will the movement of wildlife. Even on the viaduct sections, much of it will be fenced because of the need to use the access roads as part of the solution to the 147 miles of re-routed county roads. What used to be a simple matter of moving livestock from one pasture to another will now become a very complicated affair, involving trucks, trailers and additional expenses. Where was that addressed in the DEIS?</p> <p>13) Texas Central is also claiming that the State of Texas will receive \$15-39 Billion in sales tax revenue. That is simply not true. Transportation tickets are NOT subject to Sales and Use Tax in the State of Texas. It sounds good but it's a 100% false claim on the part of Texas Central. Since there isn't a Revenue and Ridership section in this DEIS, it's hard to guess what values went into the FRA's calculations and where those values might've come from. Obviously anything provided by Texas Central can't be trusted since they obviously didn't take the time to research something as easy as sales tax law. What fiscal analysis did the FRA perform and where did they obtain their data?</p> <p>This project could split my property in half. This land has been in my family for 6 generations. I cannot believe that a private, for-profit, foreign-backed company would even be considered as a candidate to use the power of eminent domain, in order to build such a financially disastrous project, as this appears to be.</p> <p>A recent study of the 111 high speed rail projects in the World concluded that there were only 3 systems that didn't operate at a loss. The study claimed that two of these railways, Paris to Lyon and Tokyo to Osaka, operated at a profit but that study didn't include the fact that the infrastructure was government-funded. If the cost of those rail systems was figured in, even those system would operate at a net loss. When you consider that the population densities of those areas are 30,000-50,000 people per square mile, whereas Houston and Dallas are closer to 3000-3500 persons per square mile, I don't see how anyone could conceivably think that this project will be anything other than a complete failure.</p>	<p>Though overcoming a carbon footprint is not a national or state policy requirement, the overall operational CO2eq emissions show a net reduction that in several years of operation, would offset those produced during construction.</p>

			<p>It seems that the economic aspect of this project has been completely overlooked by the FRA. Texas Central has manipulated VHT values, in order to make their net emissions numbers look better. They have fabricated unrealistic ridership values, in order to make the project seem to be profitable at \$199 per one way ticket. All the while, they were also claiming that they would be competitively priced and would match the market. If they match the market, their cost per ticket will have to come down which will drastically reduce revenue ... the this project is back to being a losing proposition. All of this wasted money to address a problem that doesn't exist. The congestion issue is NOT in the rural portions of Interstate 45 ... it's in Houston and Dallas. This project will not alleviate that but instead, it will make it worse. Where is that analysis in the DEIS?</p> <p>I formally request a response to each issue above. Those responses need to hard facts and their source ... and not just the advertising propaganda that is spread by Texas Central.</p> <p>As a final note, I wholeheartedly recommend the NO BUILD option.</p>	
Timothy Michael Osbourne	3/9/2018	Email	In my opinion, there are dozens of inaccuracies and omissions in the DEIS for the proposed Dallas to Houston High Speed Rail. One major omission to the DEIS is any meaningful analysis of the effect that this railroad will have on the local jobs. Texas Central has claimed that this project will result on an additional 1500+ jobs. The DEIS states that 1051 jobs will be lost due to business displacements. Some business will not be able to reopen due to being grandfathered with the county/city or TCEQ. Where is the analysis of that loss, in the DEIS? I formally request a full analysis of the effect that the loss of local jobs will have on the local economies.. Such analysis needs to include input from local government officials and business leaders...and not just the advertising propaganda that is spread by Texas Central. please respond with a detailed explanation as to your analysis of this matter.	Refer to PI-1 and SC-21.
Sharon Oster	1/10/2018	Email	Both my brother (who is in his eighties) and my home and property are in the direct path of the bullet train. Please help us. There is property with no homes close to us that the proposed route is bypassing. Please send us updates. Thank you.	Refer to BA-8 and ED-2.
William Ott	3/5/2018	Website	It is so SAD that Texas, and the rest of the Nation for that matter, has remained in the "Dark Ages" for so long regarding public transportation!! Just look at the rest of the industrialized world!	Comment noted.
Troy Ottmer	2/16/2018	Website	I feel that building this project will have far more benefit economically and culturally, than the minimal of any environmental impact. I offer my full support.	Comment noted.
Paul Owen	2/12/2018	Website	I have high hopes for this project. Not only to bring grimes co and Texas into 21 century but to do it with an environmental attitude	Comment noted.
Edwin Owens	2/6/2018	Website	I love this project. You MUST consider including the furthest northern point to conclude at the WinStar resort in Oklahoma. This inclusion would benefit Dallas and Houston when bidding for national and international events ie, Olympics, Super Bowl, World Cup etc.	Refer to GN-7, NE-1 and PN-3.
Evelyn Owens	1/14/2018	Email	I am opposed to the proposed high speed rail in Texas, as it will negatively impact my homestead property values.	Refer to VA-1.
Gregory Owens	3/5/2018	Website	Texas is in the middle of the country, three and a half hours from the east and west coast by air somewhat. Dallas has DFW and Love Field airports, mass transit and cheap housing for now and mucho TRAFFIC throughout the State. Austin is not helping fast enough on traffic issues, local or statewide. They have Passenger Rail service on the East Coast, so why not here? It is way past time to have the Major Cities in TEXAS connected by a Bullet Train. Austin do the right thing, support this project and don't listen to the airline lobbyist or the anti-rail Folks. Learn from other Bullet Train entities nationwide and around the world and let's get going before it's too late.	Comment noted.
M.E. Owens	1/14/2018	Email	I am opposed to the construction of a high speed rail between Houston and Dallas. The project has been evaluated by four or five sources and found to be economically unfeasible. Construction cost over-runs will be the tip of the iceberg tor a venture which will not draw enough commuters to pay for itself, much less become profitable. Thank you for your time in considering my view point.	Refer to GN-2, GN-3, GN-4 and NE-1.
Richard Owens	2/13/2018	Website	Great project. I can't wait to ride the train.	Comment noted.
Robin Owens	2/6/2018	Website	I am submitting my comment in support of the Bullet Train project. I am from Houston and my family has roots throughout central and southeast Texas. My father was born and raised in Fort Worth, my mother in Texarkana, and most of my family on both sides live between North Texas and the greater Houston area. I believe that the Bullet Train is good for Texas as an economic engine for meaningful employment as well as a stimulator for small businesses from Houston to Dallas and the counties in between. I am also looking forward to the economic benefits attributed to this project, including 10,000 jobs per year of construction, and \$2.5 billion in tax revenue benefiting communities, hospitals, school districts, and more. I can see the benefit for business exchange between Dallas and Houston, and can also see how the Bullet Train will make the idea of a weekend trip between these two cities a safer and more feasible option. Speaking of safety, I understand that technology the Bullet Train will utilize is best in class, and has been in operation for over 53 years with steady improvement over time. To put it in perspective, for the duration of its operational life the Shinkansen N700i has had 0 crashes or fatalities from operations during its entire existence. What other transportation means can boast these claims? Certainly not tired and distracted drivers on the ride between Houston	Comment noted.

			and Dallas. Change is unsettling at times, but as Texans, we have never shied away from a challenge. I am proud of the fact that our state will lead the nation in a major infrastructure project that will revolutionize the way Texans and Americans travel. I was in the audience at one of the public hearing meetings, and I wanted to share my viewpoint, but decided to share my comments here instead. I think Texas needs this train, and I hope that you will note my comments and agree that Build Option A is good for Texas! Thank you for your time.	
Robin Owens	2/20/2018	Website	I am looking forward to how the train will, once again, distinguish Texas as a leader in innovation, technology and transportation. I also think the economic impact of JOBS, especially in the rural counties, will be beyond even what the current estimates indicate. I believe in progress, especially progress that expands opportunity for Texans across the board, and I know this train will represent both.	Comment noted.
John Ownby	2/5/2018	Handwritten	After carefully examining the planned route within Harris county, I am concerned that the land area available for building the high speed rail is limited and that there may be a conflict with other planned or potential infrastructure projects. Specifically, the land where the high speed rail is intended on building appears to be the same land where the Hempstead tollway is planned. Moreover, the publicly available drawings for the US 290 highway project indicate an approximately 50 foot wide corridor intended for future high capacity rail or commuter rail. Would the construction of the high speed rail prevent or preclude the construction of either the Hempstead tollway and/or the future option to build a commuter rail? If it will prevent or preclude or adversely impact these other infrastructure options I believe that this should be disclosed to the public.	Please see Section 3.11, Transportation for the planned transportation projects in Harris County. The Hempstead Toll Road and the US 290 Transit Rail (commuter rail) are noted as planned transportation projects. Also see Section 4.4.7.5 Transportation, Indirect and Cumulative Impacts , for more information about anticipated effects to planned transportation projects.
Beyhan Ozer	2/22/2018	Website	I live in Dallas, TX and I visit Houston often via car. My son commutes between the two cities driving and his drive is long and dangerous and I am worried about accidents. Flying is expensive, and not really faster than driving, plus the hassle and the delays. There are tens of thousands of commuters between the two cities, and also millions of people visit between Dallas and Houston every year, so a HSR is much needed. The HSR will decrease the traffic on I-45, so less number of accidents, less number of lives lost due to accidents, and more productive time on the train. So I support building of the HSR between Dallas and Houston. Thank you.	Comment noted.
Alice Ozoria	3/9/2018	Website	That would be great to travel from Houston to Dallas, some people can even work and commute every Day!!!! Love the idea!!! I would definitely ride this !!!!	Comment noted.
Ozgur Ozturk	1/25/2018	Website	Please build Dallas-Houston high speed rail project. Create jobs. Save oil. Save on emissions.	Comment noted.
