Vaughn T. Roden, III	2/27/2018	Website	Your scheduled rail route south of Corsicana near the intersection of FM 709 and 3194, will cut through important areas within the Morgan Legacy Farm destroying its purpose. Its purpose is a gathering place for a very large group of people to be in nature. Providing a place for R&R while team building and learning better ways to be more effective in high stress jobs that protect and save lives helps not only the participants but also the communities they serve. There are few friendly sites affordable (free) for the people who stand for us all in our communities, such as police officers, firefighters, EMTs, nurses, and doctors, to name a few. Please find a way to move the rail a little north so it will it go along the existing electrical poles along 3194 instead, saving access on the ranch to continue its purpose. Thank you.	Refer to LU-5.
Vaughn Thomas Roden, III	3/5/2018	Website	Morgan Legacy Farm is located near the intersection of FM 709 and 3194 in Navarro County. Morgan Legacy Farm's has a special area, consisting of a meeting/dining lodge, guest cabins, stables and arena. Morgan Legacy Farm charitably gives to all of us Texas. How? The use of these special buildings which can house a large group to participate in a seminar updating the latest techniques to do a better job at work. This venue in Nature is loaned for FREE to first responder groups like hospital and police. Besides learning, the first responders are refreshed. Access between the lodge and the stables, arena, and guest houses will be severed by the train's rail trench. Please move the rail route north just a little, so the rail route instead traverses along the existing power lines along 3194 to keep the ranch intact for access between the retreat facilities. Thank you for your help to protect this unique feature of Morgan Legacy Farm.	Refer to LU-5. A review of the current alignment indicates that it would closely parallel the existing powerlines for the area in question.
Vaughn Thomas Roden, III	3/8/2018	Website	High-speed scheduled rail route in Navarro County near the intersection of FM 709 and 3194 will cut through important areas within the Morgan Legacy Farm destroying an important resource available for free to hospital and police in the DFW and (903) areas including the Red River Valley. Morgan Legacy Farm has always provided a FREE gathering place for large groups of first responders to participate in hospital functions or seminars within its beautiful natural environment. This time of year flocks of migrating birds are beginning to fly up from across the Gulf of Mexico to return to Canada. They also stop at Morgan Legacy Farm for a respite before continuing on in their journey. The rail trench will destroy the watershed for their habitat just like the rail trench is cutting through the retreat area of Morgan Legacy Farm separating the meeting lodge from the guest cabins, stables and arena. Providing first responders a place for R&R while team building and	Refer to LU-5.

			learning better ways to be more effective in high stress jobs that protect and save lives helps the participants so they are better able to save all of our lives in the communities they serve. Morgan Legacy Farm is a FREE friendly site for the people who stand for us all in our communities. Please find a way to change the fast-speed rail route by moving it north to go along the existing electrical power lines along 3194, saving access within the ranch to continue its charitable mission. Thank you.	
Carol Rodgers	2/16/2018	Website	I am a landowner in Navarro County. The ridership numbers and revenue numbers are, I believe, very inflated. The vast number of people who will be served by this project have both auto and airline alternatives. Unlike Europe or Japan's urban centers that have limited auto access and ownership. If this rail project is using older high speed rail technology and there is not substantial ridership, then I believe that the taxpayers at the state and federal level may be at risk for having to take over. As a landowner and taxpayer, I have a large stake in this. I do not support this dated technology or project.	Refer to GN-2, GN-4 and TC-2.
John Rodgers	2/16/2018	Website	I am AGAINST the high speed rail in the state of Texas. It will NOT be good for this state either financially or economically. It will NOT be as good as published. The ridership is NOT there for this train. The economics are NOT there for this train. The financial economics are NOT there for this train. The large and small landowners in each county will be hurt. Lands that have been in families for generations will be split up. County roads will be shut down. Higher than normal flooding will be apparent during heavy rains and even not so heavy rains along the train route. All of this is BAD for the state of Texas and for the people of Texas. This project needs to be ABANDONED.	Refer to FP-1 GN-2, NE-1, SC-19, TR-8, WW-1 and WW-2.
John Rodgers	2/27/2018	Website	I am 100% AAINST the dallas/houston so-called high speed rail. Everything given to the Texas people regarding this train has been false. The projected ridership is overinflated. The environmental impact is inaccurate. The cost is under-estimated. The benefit for the State of Texas has been over-inflated. This only possibly helps a few people in houston and dallas, and that's all. The people of Texas will end up funding this entire project through increased taxes. This is bad for the State of Texas and not needed.	Refer to GN-1, GN-2, GN-4, NE-9, PN-3, SC-19 and SC-22.
Lola Rodgers	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Theresa Rodriguez	3/8/2018	Website	On behalf of the Bay Area Houston Transportation Partnership (BayTran), I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be an economic driver for the region, the state and our country. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because in part it will: Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational -- at least 25% of them in rural counties along the route; Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 2040; Bring the safest mass transportation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation; Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status; Preserve land access for property owners - a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; Give travelers with disabilities a safe, comfortable alternative to driving or flying - system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035 - and current state and local transportation plans cannot adequately address these growing	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			population concerns. We are excited to support the first true high-speed passenger train system in the United States - a transportation infrastructure project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review.	
Rebecca Roeth	2/28/2018	Website	<p>I am against the HSR.</p> <p>The hub for this project will be located within 2 miles of my home and property. We already have enough noise pollution from airplanes, highway, and the normal railway. It will increase the light pollution we get at night also. It looks like our dirt road will get an upgrade from the addition of the HSR, which means an increase in traffic. I worry about the increase in crime in the area as criminals start targeting those who have the money to ride the HSR.</p> <p>On a less personal note, I do not see how HSR will benefit the majority of Texans. It is going to ruin the properties of farms and ranches that provide food and products for the State of Texas. The money offered to those near the HSR is not enough for them to find an equivalent property with the amenities and structures they already have.</p> <p>I am against this project.</p>	<p>Refer to AS-1, ED-2, LU-2, LU-11, NV-1, SC-19, SS-6, SS-7, TR-7 and TR-8.</p> <p>System lighting will be directed towards the rail and will be designed to limit its projections outward to the community. Please see <b>Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences</b> for lighting impacts. Location-specific mitigation has not yet been identified but may include planting trees or vegetation to screen views. Examples of potential mitigation measures can be found in <b>Section 3.10.6, Aesthetics and Scenic Resources Avoidance, Minimization and Mitigation</b>. TCRR shall coordinate with individual landowners regarding modifications to a private dirt road. Driveways and private roads were not usually provided grade separations. If driveway access is eliminated, TCRR will need to provide a new option. If driveway access is limited, TCRR will need to work with the landowners to develop options for access.</p>
Daniel Rogers	2/5/2018	Oral	<p>My name is Daniel Rogers and I'm here to support everybody in Madison County and hope you will do the same for us in our Grimes County meeting tomorrow now. You heard from Becky and you heard her story. I lived next door on the place, 1858. My grandfather ran cattle on all of that out there at one time. In 2006 a piece of property came up for sale. My wife says, that's a nice piece of property, and I said, yeah, it is. And I looked at it and I talked to the owner. I didn't know it was Becky's dad. We have the same last name. My wife said we ought to buy this place, we've been looking for a place. Okay. I was tired of Houston. Thirty years of the noise, grime, the traffic and the people. I said I'm ready to move out. I got four generations buried in Willohough. I said, why don't I come home. I said I could live out the rest of my years, hopefully in a little peace, work in a small town, make enough money to live, and be happy. I bought that place. Now that train is going to be a hundred, two hundred off my back fence. It's cutting off five or seven acres back there. But now they tell they got jurisdiction two miles in either direction. If they need dirt, and you got a big coastal field sitting behind dry, you going to have a pond. If you've never seen what happens when they build a tract across pastures, go over to lola and see what TOPA did, when they built a coal mine. What used to be good pasture turned into a year-round swamp. Here's another thing you gotta think about. They're telling you big ranchers they're going to give you access under the train to get under there. Watch 'em. They're not going to give you a permanent access. They're just going to tell you that you got access. If any time they want to, they can shut you off just like the MTA did. They'll put it in. They will put gates on both sides. They are the worst fences built too. But don't believe a word these people are telling you. Like the people have said here, we've heard all the negatives? What have we heard that's positive? This is the thing you got to think about. From this day forward we got to pushed for our rights to this safe and what I don't understand is, the state of Texas, a former republic, has special rights over any other state in the United States. But where are our representatives in this. They're sitting on the fence. you don't see them standing up and talking against it. They're some of them up there that are all for this. And when it comes time for an election, we need to make sure they know we don't appreciate it. Thank you.</p>	Refer to LU-11, LU-14 and NR-6.
Ellis Rogers	1/29/2018	Oral	<p>My name is Ellis Rogers. And my statement, my comment is, please hurry and make this train come through. We want the high speed rail because it's going to take traffic, the impact of traffic off of Interstate 45. It's going to get people from destination to destination so much faster. It's going to create opportunities for jobs in other major cities, opportunity that you wouldn't have if you didn't have that type speed travel. So yes.</p>	Comment noted.
James Rogers	2/8/2018	Website	<p>I would like to see this system built and it has my full support. It is an environmentally sound plan, and it will not involve taxpayer funds. Please let this project succeed. We always talk about private industry building infrastructure. Let's walk the walk, and not just talk!</p>	Comment noted.
Jeremy Rogers	2/9/2018	Email	<p>To whom it may concern, The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman</p>	Refer to BA-6, BA-8, LU-4, NE-1 and PI-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>facility currently under construction, a heating and air conditioning, \$410 million facility that will be 4.2 million square feet in size, the industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. The City is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. The barrier will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation Of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." Waller Town Center (WTC) is a joint venture being marketed by Cullinan Properties, a national developer operating in Illinois, Missouri, Georgia, and Texas. The WTC is an integral part of the City/ s development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The 462-acre project is a \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" Of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. HC4 slices through this entire planned WTC project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development opportunities. All of the above impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I vote the NO BUILD option. Regards, Jeremy Rogers Ocean Edge Services, Inc. 161 832-604-7245 (main) 832-604-7247 (fax) 281-685-2727 (cell) OCEAN EDGE 6720 Theall Road Houston, Texas 77066 ISO 9001 &amp; 14001 certified</p>	
Jeremy Rogers	2/9/2018	Email	<p>The proposed alignment will impact all future road and thoroughfares through the northern portion of the County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to TR-8.
Jeremy Rogers	2/9/2018	Email	<p>Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. Also, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to LU-3, RF-1 and VA-1.
Jeremy Rogers	2/9/2018	Email	<p>Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.</p>	Refer to LU-4.
Jeremy Rogers	2/9/2018	Email	<p>The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District discussed in No. 2 above, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens Who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were</p>	Refer to EJ-1, LU-3, LU-4, SC-3 and VA-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Jeremy Rogers	2/9/2018	Email	The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-5 and SC-8.
Jeremy Rogers	2/9/2018	Email	The Waller Harris Emergency Services District No. 200 ("ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. The District is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. Each fire department costs \$4.5 million for the building, equipment and staffing. An ambulance costs \$300,000 and staff is needed 24/7 for 365 days. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. The District is also very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result Of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SS-12, SS-18, SS-23 and SS-26.
Jeremy Rogers	2/9/2018	Email	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected ridership. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere. California has attempted a similar project and it is grossly over budget, behind schedule and now a burden on the taxpayers, therefore I vote for the NO BUILD option.	Refer to GN-3, NE-1.
Jeremy Rogers	2/9/2018	Website	At the coordination meeting between WCSRPC and TXDOT on February 9, 2016, Mr. Tom Gleason discussed the Atmos Energy Turbine Powered Natural Gas Compression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: May 24, 2007 - 18,000 lbs released, May 30, 2007 - 20,000 lbs released, and June 11, 2007 - unknown quantity On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that Mr. Gleason and other neighbors experienced over a mile away. It turns out that Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 200 mph ignite the natural gas and cause a catastrophic accident? This will cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction to Waller County or any Other county should this occur. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety and welfare of our community and local residents, as well as, the passengers on the train should an explosion occur. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to EU-6.
Jeremy Rogers	2/9/2018	Website	Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I vote the NO BUILD option.	Refer to NR-1, NR-2, RF-2 and WW-2.
Jeremy Rogers	2/9/2018	Website	Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This was brought to the attention of the FRA by	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.

			the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I vote the NO BUILD option.	
Jeremy Rogers	2/9/2018	Website	G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I vote the NO BUILD option	Refer to EU-2.
Sherri Rogers	3/9/2018	Website	I welcome this, not only as a much-needed service to the community, but also as the beginning of true mass transportation in Texas. Those who have traveled in other cities here and around the world realize the doors which are opened via such commerce.	Comment noted.
Paula Rogers Dossett	2/5/2018	Handwritten	<p>My ancestors were the early settlers along the Old San Antonio Road (OSR) that now separates Leon and Madison Counties. A grave marker located in the Randolph Cemetery, and shown here-in at Attachment i, illustrates the lineage of my ancestors, with the bottom name, J.M. Rogers being my Father. Robert and Stephen came to the area between 1820 and 1835, receiving Land Grants from Mexico, Robert to the north of OSR in Leon County and Stephen to the south of OSR in Madison County. These grants are reflected as the Robert Rogers Survey and the Stephen Rogers Survey in the respective counties. Ownership of the property has passed down to the family, and I still retain an ownership interest. I spend considerable time enjoying the "tranquility/" the property provides.</p> <p>Impact to Home The Japanese train poses the greatest threat to a 217 acre tract identified on the map found at Attachment 2. I have not been told how much, if any, of this property the Japanese will attempt to confiscate. They have sent representatives unannounced to my Conroe residence and have sent certified mail containing forms with letters threatening expensive legal action if I fail to do as they request. Judging from their aggressive behavior, I reason that the Japanese train company has an interest in at least part of my property. I do not want to surrender it to them, and my blood pressure soars when I think of my ancestors serving in World War II preventing the Japanese from taking our land with guns and bombs, but 75 years later they are back with lawyers and lobbyist trying to take 8,000 acres out Of the heart Of Texas! My husband's 90 year old father lives on Bryan, Texas, and as a result, he is on the road regularly between Conroe and Bryan or between Madisonville and Bryan. During the construction phase of this fiasco it will be impossible to travel to Bryan from either location without experiencing construction related traffic delays. It is my understanding that we have a shortage of skilled labor, and that those that find themselves unemployed are lacking in the skills in demand. This situation is predicted to worsen. If this fiasco produces even half the labor boom the Japanese train folks advocate, the agriculture industry will face inflated labor costs and delays in building fence, pens, barns, and in agriculture hauling. It may be a boom for welders, equipment operators and haulers for a while but "boom and bust" economies are disruptive to everyone in the long run.</p> <p>Community Culture Impacts Cattle are raised on the 217 acres shown at Attachment 2, and unlike many similar operations, this one consistently turns a profit. Being 71 years of age, and on a relatively fixed income, this revenue is welcomed, but the real value of the property lies in what it represents to the continuity of the Texas spirit. My Daughter and I are members of The Daughters of the Republic of Texas, and in the spirit of the Republic, we maintain a small one-room cabin, complete with an "out house". The cabin has no electricity and heat is provided by a wood stove or a campfire. I have memories of visiting a similar Structure very near this one as a child. It was my Grandfather's home. My Father and Uncles would help my Grandfather work cattle on horseback while I looked on. The primitive experience helps me relate the past to the future. My children have enjoyed the experience for the past 45 years and my grandchildren (all members of The Children of the Republic of Texas) continue to show the same enthusiasm. I do not see this experience continuing with Japanese trains whizzing by every few minutes at 200 miles per hour. My husband takes pleasure and comfort from places where he can escape the sounds made by man's machines. He says (speaking of the property identified at Attachment 2) one can go for upwards of 30 minutes without hearing any sound made by a machine. In the evening one can sit by the campfire, listen to coyotes howl, the frogs croak, and maybe the rustle of an Armadillo in the bushes. These experiences bring us in contact with how it was and how we got to where we are today. When we read history they help us relate. We do not want, nor do we need, fifteen Japanese trains whizzing by every few minutes.</p> <p>Things of Historical Significance A picture found at Attachment 1 shows the grave marker for Stephen Rogers. This area was once known as Rogers Prairie and Stephen was one of its first settlers. This grave marker is all that is left to remind us of his existence. He selected this place Randolph Cemetery Madison County, Texas for his final rest because of its beauty and because of its tranquility. The map found at Attachment 3 shows that the Japanese bullet intends to take no mercy on Stephen or the other settlers trying to rest in peace in Randolph Cemetery. Ironically, my Brother, Harvey J. Rogers elected to join the family in Randolph Cemetery on Christmas Day of 2013, just months before the Japanese announced their fiasco. 2 The dead, especially those that have been resting for over a 150 years, should be allowed to rest in peace.</p>	Refer to CR-6, ED-1, ED-2 and TR-6. The Randolph Cemetery, determined eligible for listing in the National Register of Historic Places, is adjacent to the Limits of Disturbance and has the potential to be impacted by the Project.
Tom Rohm	2/19/2018	Website	This project is good for Texas and the US.	Comment noted.

August Roquevert	2/2/2018	Website	I believe that the High Speed project in Texas would be a start of a great thing. This country is so behind in passenger rail transportation. I believe that if this project is a reality, this country will see this type of rail systems throughout the country. I ride Amtrak as much as I can, it is slow and the trains hardly arrive on time because of the shared tracks with the freight railroads. You can see in many cities in the United States that streetcars and light rail lines are being built, and the younger generations are using public transportation. I been to Europe many times and have rode many of the High Speed trains, they ride thought some of the most beautiful parts of their country and the train does not disturb any of normal movement of people near the train. This country does need more options on transportation, the highways are crowded and flying can be very time consuming. I believe that the High speed project is an answer, clean, safe and fast. I hope that they are able to work with the land owners and they come to the realization that this is good for Texas and that this is history in the making.	Comment noted.
Auburn Rose	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

			4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	
Matina Rose	1/10/2018	Email	Please explain why this train is needed? An airline flight from Houston to Dallas is only 45 minutes, the train will take 90. An airline flight costs less AND won't disrupt people's lives and properties, so why do we need this rail again?	Refer to BA-12, SC-3 and PN-3.
Matina Rose	1/10/2018	Email	Why is the notice of intent cut off at the beginning? It starts in the middle of a sentence?	Refer to PI-1.
Matina Rose	1/10/2018	Email	Why do we need this rail? It will be a huge expense for very little return for the local area. What effect will this have on the rural communities that rely economically on use of the highways?	Refer to PN-3, SC-15 and SC-19.
Matina Rose	1/10/2018	Website	Will this electric train use our current electric grids? What happens when there are brownouts, which do happen currently in the summer? Will electricity be diverted for use of the rail in this type of situation? How will that effect the local communities?	Refer to EU-3 and EU-4.
Matina Rose	1/31/2018	Email	What allowances are being made for the shifting of the earth in this area? Ellis county has black dirt that turns to sticky mud in the rainy season and in the dry season it cracks and shifts causing constant problems in building foundations and roads.	Refer to SG-1.
Matina Rose	2/1/2018	Email	Why is this rail not going to be placed along Hwy 45 which already has a pre-existing path between Dallas & Houston?	Refer to BA-9.
Matina Rose	2/1/2018	Email	What is your projected impact on local businesses with the reduction of traffic on the Highway? You project a 36% reduction in traffic, what is the corresponding projection of reduced income to the communities?	Refer to SC-15.
Matina Rose	2/2/2018	Email	Was there a study done on the costs overruns in California and how the delays there have affected the environment? Also were any delays due to weather, soil conditions etc considered and how those delays would affect the water supply road interruptions and farm production?	Refer to NE-1, NE-9 and WW-6. The California High Speed Rail project is out of the scope of the study for the Dallas to Houston HSR project.
Matina Rose	2/2/2018	Email	There are studies that loud noise (over 80db) can effect the male sex hormone in cattle and produces changes in the reproductive organs and glands. Noise stress provokes an increase in serum corticosteroid, which causes up to 80% decline in testosterone concentration. How is this going to be combated by the train company? If they build sound barriers how much additional cost will be added to the project?	Refer to NR-1.
Matina Rose	2/7/2018	Website	how long is the construction projected to last? How will the local watersources be protected during the construction phase of this project	Refer to TC-6, TR-6, WW-1 and WW-6.
Matina Rose	2/7/2018	Website	During the summers in this area there are often electrical brownouts, will the train have it's own electric grid or will it be pulling from the existing grid? If it's using the existing grid, how will this affect the community at large and how will it be decided who gets first use of the grid?	Refer to EU-3 and EU-4.
Matina Rose	1/10/2018	Email	How much taxpayer money will have to be spent on this project? Not only for initial construction but for maintenance. This is a private company that is majority owned by a Japanese company, who is using outdated (over 50 years) technology.	At this time, TCRR has not spent any tax payer money to design the Project. Additionally, TCRR has not requested nor obtained any tax payer funding for construction or operations.
Taylor Rosenberger	1/25/2018	Website	This would be an amazing idea for Texas. But please add a line that connects Houston to Abilene or Abilene to Dallas. This would connect a huge amount of Texas and cut a 6 hour drive from Abilene to Houston down in half! Please don't leave out the little people in this huge step forward!	Comment noted.
Norman Rosenblatt	2/5/2018	Email	Questions on proposed Dallas to Houston bullet train Good evening, I am sorry I could not attend the public hearing tonight. I would greatly appreciate it if you would answer a few questions of mine: 1) How many trips per day in each direction are expected? 2) What stops along the way are expected? 3) Will all of those stops be on each trip in each direction, or will some be bypassed on some trips? 4) If you could provide a detailed schedule Of proposed trips, including time Of departure and time Of arrival, that would be fantastic. Thank you very much for this opportunity to gain new knowledge.	Refer to TC-4.
Arthur Rosene	3/9/2018	Website	The bullet train will create a flood risk to my subdivision (White Oak Falls). What do they intend to do to mitigate the flooding problem?	Refer to FP-1, WW-1 and WW-2. The route near the White Oak Falls subdivision is parallel to Highway 290 and on viaduct.
Gerry Rosier	2/5/2018	Handwritten	Identify all natural gas gathering in the path of rail line and construction area and proposed routes. The erosion effects including grass and trees. Power for the HSR is proposed to be electric. Compare all fossil fueled power plants to alternative power sources such as wind and solar. Include cost analysis and emissions. Protected species: Determine the length of time seeds from the large fruited sand verbena may lay dormant and methods used to determine if any seeds are in the projected path. And part of the New Deal: During depression era, the soil erosion service provided instruction and funding for terrace and [sic] plowing. Determine all properties with these archaeological sites. The effect on soil erosion by removing the terraces. Determine method to prevent soil erosion. Determine the agency to grant permission to remove the terraces. Determine long and short term effects of water flow across the area with the terraces removed.	Refer to CR-4, EU-2, EU-4, NR-4 and SG-1. LFSV flowers for the first time at 2-3 years of age.
Gerry Rosier	2/5/2018	Handwritten	US 79 and FR 39 are major routes for oversize loads including height, weight, length and width. With the limiting of the height a vessel [sic], determine alternative routes for the vehicles. Determine [sic] noise effecting schools, hospitals, nursing homes and other sites. 			disruption to normal traffic patterns including access to businesses and parks. The increased traffic to load zoned roads will damage the road. Determine the impact and expenses to the citizens for vehicle damage. The alternative routes may increase the distance by many miles increasing the cost of moving the vehicle. Determine the cost increase of moving the vehicles on the alternate route.	
Christopher Rosinski	2/20/2018	Website	Looking forward to this high speed rail being built. Hopefully they find a way to connect it to Austin. Regardless, it's about time we got high speed rail infrastructure in the US.	Comment noted.
Lou Rossitto	2/6/2018	Oral	My name is Lou Rossitto, and I've got a 300-acre ranch, and the train is going to go one mile through the middle of my ranch. I just had CenterPoint run power lines through one mile of my ranch. Now I've got Valero and Magellan pipeline wanting to run one mile through my ranch. All -- CenterPoint had the right of eminent domain. Their project was ridiculous also because they don't have any power to put in their lines, but they made \$125 million profit building that project. Valero, it's a business scheme, but they're threatening, and they low-ball it and they will put people into court to fight that pipeline. I missed the road, the 249 Freeway, by a quarter of a mile. This train would also take one mile through the ranch. And I bought the ranch in 1985. I could talk about pollution. I'm an engineer. I could talk all about pollution. But the problem is we do not have any landowner rights. I paid taxes on this thing for 34 years, and at the end of the day it's just divvied up by companies for profit. My land is going to be worth absolutely nothing. And the property of my neighbors, like Steve, he won't get any money out of this but his property value will be zero. And for me, they will have taken probably 75 acres. And to me there is no option for taking people's land. And I talked to Kevin Brady last Saturday night, and he is 100 percent against this. And hopefully he can get Donald Trump's ear, and some more of the swamp in Washington. And, for God sakes, it better not be any federal money that gets into this.	Refer to ED-1, ED-2 and NE-9.
Melissa Rowell	3/9/2018	Email	I am against this high speed rail project. There won't be the ridership expected. It will cost more than expected. Costs should not be coming out of tax payers pockets Eminent domain should not be used to destroy personal property and farm land and businesses Hardly anyone is going to pay the planned costs to ride from Houston to Dallas Property values will be lowered significantly Our family is fully against this Japanese and private Investors' high speed rail project. We want the "NO BUILD" option.	Refer to GN-2, ED-1, NE-1 and SC-1
Stephanie Rubeck	2/5/2018	Oral	Thank you. My name is Stephanie Rubeck, and I live in the neighborhood. I'm a neophyte at this and most people have taken my bullet points. However, there are a few things that I am most interested in. I live in Stonegate, and I live on the outside perimeter. Outside of our fence is a retention area. Beyond the retention area is an active pipeline. Beyond that is the railroad, the Union Pacific freight line. Then we have the feeder road and 290. There is no space that I have been able to find that would allow the railroad to put their pilings down in to support the railroad, which obviously has to be quite high. It has to go over Barker Cypress. The only thing I have heard that has been proposed is that the railroad would put its pilings between pipelines. The pipelines themselves, as they run from Barker Cypress down to Huffmeister, are 50 feet apart. I think that's a little dangerous on the environment there. What are the chances of a pipeline rupturing? What is the vibration of the train going to do to the pipeline? What is the guarantee that we have that the railroad would choose the most effective abatement procedures for this train, which would be to cover all of the pollution that would be more than -- cost more than the cheaper version? The view, as most people have said, is also a concern. We have a lot of birds, we have a lot of little small animals, rabbits, deer, whatever. What's it going to do to them? And what is it going to do to our way of life and the thousands of other people that live in this general area? We like to protect the life we've chosen as well as the folks do that have a lot of land. Thank you.	Refer to EU-1, EU-2, NR-2 and NV-5. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Stephanie Rubeck	3/7/2018	Website	environmental hazards using the pipe line easement tunnel under the 290 corridor and alleviate most environmental problems with the several thousand homes and families and proximity to high school	Refer to EU-2.
Stephanie Rubeck	3/5/2018	Oral	MS. RUBECK: My name is Stephanie Rubeck. This is my second meeting. I did speak at the one that was on Barker Cypress because I live in that territory. Tonight, I was out before the meeting, talking with the engineers on the building of this line. No. 1, there has only been and only is one track that they're talking about to get from Waller to the terminus. We don't have any choices, apparently. He pulled up Appendix G, which is my backyard. The rail will run at the top end 60.5 feet above ground. The actual train base would be, I believe, about 15 feet less than that, maybe a couple more. They said to me that they were pretty sure that they were going to be able to put their footings in a pipeline right-of-way. That's the only land there that is available, quote, "available." There is 290. There's a feeder road. There's the rail -- freight rail. There's the pipeline. There's a ditch that is supposed to take the water off of Stone Gate. It doesn't have any room to take any water off of a rail line. And then there's my backyard. What they said to me tonight was that they are planning on putting their footings in the pipeline easement. Safe? I don't think so. Some of those pipes are pretty old. I hear there are two companies that have pipelines in there. It's not safe. Thank you.	Refer to BA-4, BA-7, and EU-1.

Brenda Rubenstein	2/16/2018	Website	This would be a great opportunity to ease traffic, save travelers time, create jobs for the people of Texas. Let's do it!	Comment noted.
Adam Rubinson	2/16/2018	Website	Please get this done! This would make intrastate travel much easier and help me grow business in our state! Dallas to Houston would be a tremendous win for Texas business.	Comment noted.
Adam Rubinson	2/19/2018	Website	Please make this happen! This would help me with my business and even family travel to and from Houston. This would save so much time and money for us. Please help us revolutionize Texas travel and the future of US infrastructure!	Comment noted.
Ellen Rud	2/21/2018	Website	Texas desperately needs better public transit infrastructure. I'm thrilled to see this train project. It will prevent lots of auto traffic and associated pollution between Dallas and Houston. It should also encourage local tourism between the two cities. I can't wait to take the rail!	Comment noted.
Dick Ruddell	2/19/2018	Website	I support the Texas Bullit Train	Comment noted.
Delinda Ruffino	2/14/2018	Website	After hearing multiple peoples comments from a meeting held in Ennis, I am VERY concerned for our community and our surrounding community neighbors!	Comment noted.
Delinda Ruffino	2/14/2018	Website	I have read articles about a similar train in California and the negative impact on the communities there.	Comment noted.
Jeremy Rugenstein	2/8/2018	Website	I have seriously considered moving to Texas (specifically Houston) to work, but the lack of alternative means of transportation has always scared me away. This project will make Texas more attractive as a place to live and work, and therefore I strongly support approving the high-speed rail between Dallas and Houston.	Comment noted.
Mario Runco	2/17/2018	Website	This project is long overdue!	Comment noted.
Etta Rush	2/21/2018	Website	I am very much against the Hight Speed Rail. My name is Etta Rush. Our land is approximately 2,000 feet from the proposed right-of-way of the HSR. We bought our homeplace in 1962 and have lived and worked our land each year, raised our two children here and we love our home, our cows, hay meadows, our deer hunting and fishing. We are aware that deer hunting or any type of hunting requiring firearms will not be allowed. This type of hunting has provided food to many in this area. We know it is not beneficial for our state, the amount of land it will take, the people who will lose their homes and land, and we know the train will never pay for it's self. The information the promoters of the HSR are providing is not always correct. The EIS proposal statement is allowing 65 days to review a document that contain 5,647 pages. There has not been enough time for even the FRA employees to read, review, and understand the plans for this private rail system. They tell us the vibration of the ground will only last a moment or two. That statistic is for one train, what about 68 train a day? The only study conducted for high speed rail was for 160 miles per hour. This proposed railway will travel at 205 miles per hour. Is not the safety of individuals an important consideration and further studies needed before allowing such a transportation system without proper documentation for such a speed in a railway? These trains will be running every 14 to 15 minutes each day. Livestock will not cross under the train through tunnels for fear of the noise and vibration. The land owner will be cut-off from the cattle and unable to move the livestock. A world-wide contractor attending the FRA meeting, and witnessing such a situation, has stated that the cows will not enter the tunnels as the promoters of the HSR have published in their statistics. The project will not relieve the traffic on Interstate 45 since the cars are not the problem. The trucking industry is the cause of traffic congestion on the interstate. In comparison the project to the Highway 130 from Georgetown to Interstate 10. There is not enough traffic on that highway to pay for itself in 100 years. A better solution would be adding addition lanes from Huntsville, TX to Fairfield, TX, which would create 3 lanes all the way from Dallas to Houston, TX. Additional lanes are feasible with the adaqueate right-of-way the interstate secured before any construction was started. This project at Georgetown is only for a few people, 2,000 at the most and the same ones will probably be the percentage of people riding the train. What about the other 99.99 percent of Texas that will end up paying for the project and never using it, plus the poor families that have lost their homes and land who have worked, saved, and loved their land? The counties involved with the proposed railway will now be required for the upkeep placing the county under a tax increase to meet the new repairs, in turn passing more expense to the citizens of the county involved. The corridor selected, one of four corridors possible, is a utility corridor and these companies with various types of lines in this corridor will be required to relocate those lines at the company expense. This will more than likely be passed on the the customers of these utilities. I am adamantly against the Dallas to Houston High Speed Rail.	Refer to BA-4, ED-2, EU-2, GN-4, NE-1, NE-9, NR-1, PI-3, SS-4, TR-7 and VA-1.
Etta Rush	2/22/2018	Website	I am Etta Rush and I am adamantly against the High-Speed Rail. Our land is approximately 2,000 feet from the proposed right-of-way. We bought our homeplace in 1962 and have lived and worked our land each year, raised two children. We love our land, cows, hay meadows and also deer hunting and fishing. We know the HSR is not beneficial for our state or county. The amount of land it will take and the people who will lose their homes and land; the train will never pay for it's self. The information HSR has promoted is not adequate because they state the viberation of the land will only last a minute or two. That information is only for one train. What statistics have been provided for 68 trains commuting daily. These trains will run ever 14 to 15 minutes according to the hourly statistics from HSR. Livestock will not be able to pass under the rail for fear of noise. A retired contractor addressed the Federal Railroad Administration meeting in Madison County and stated he	Refer to ED-1, LU-11, NE-9 and NR-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>had witnessed cattle at these crossing and they will not enter the tunnels, as stated. Also, will hay equipment have adequate space to use the tunnel to access the other side of the hay meadow when cut in half by the proposed railway or will they have to be loaded on trailers and hauled, no telling how far, to re-enter the same property and complete the hay process? These tractors, balers and hay rake's are all large equipment. The hay meadows are fertilized and sprayed by commercial distributor trucks and will need even more width in the tunnel to accomodate their size than a mere cattle crossing. The HSR will not relieve the traffice on Interstate 45 as the congestion is created by the trucking industry not private vehicles. There is more congestion in the metropolition areas than on Interstate 45 in the rural regions. To relive the congestion of I-45, a third lane should be added from Huntsville to Fairfield. I-45 has more than adequate right-of-way to continue adding additional lanes as needed. This project being properly planned, allowed adequate right-of-way that was purchased before the project ever began. In comparing the HSR project to the Highway 130 from Georgetown to Interstate 10, there is not enough traffic on that highway to pay for it's self in 100 years from the usage observation of the traffic flow I have witnessed. The HSR project is for only a few people commuting from Dallas to Houston on this railway. How long will it take for this project to be turned over to the Federal Government and the taxes will be the responsibility of government and the people? Has a study been completed for financial obligation bonds to secure 100% o construction cost and operation/maintenance for the life of the project? HSR predicts an enormous amount of jobs the rail will create. Work will probably be sublet to various contractors and they have their own crews that travel with the company from job site to job site. These workers possibly will bring their families and this could crowd Texas public school system regulations of students per classroom. This will require schools to hire additonal teachers and the salaries are the responsibility of the school not the state. This is another fallacy of how the railway will benefit the involved counties. Our families are big deer hunters and we hunt them for food source, not pleasure. The viberation of the HSR, the additonal electrical grids and various pipelines that benefit Houston and Dallas are all contributing to reduction in deer population. Texas Central officials have repeatedly stated that this project will spur economic development, create jobs and generate tax revenue for the surrounding counties and communities. This railway will only stop in Roans Prairie, so it will not generate income for any other of the counties involved in this project. The Office Of The Attorney General of Texas, states that Texas Law prohibits condemnation authorities from taking your propery to enhance tax reveues or foster economic development. (Texas Government Code Section 402.031 and Chaper 21 of the Texas Property Code). How can the HSR claim to have Eminent Domain since this is not a railroad but a private form of transportation? I am definitely against Eminent Domain, the HSR , and parterening with foreign governments in any situation!!!!</p>

We bought our homeplace in 1962 and have lived and worked our land each year, raised two children. We love our land, cows, hay meadows and also deer hunting and fishing. We know the HSR is not beneficial for our state or county. The amount of land it will take and the people who will lose their homes and land; the train will never pay for it's self. The information HSR has promoted is not adequate because they state the viberation of the land will only last a minute or two. That information is only for one train. What statistics have been provided for 68 trains commuting daily. These trains will run ever 14 to 15 minutes according to the hourly statistics from HSR. Livestock will not be able to pass under the rail for fear of noise. A retired contractor addressed the Federal Railroad Administration meeting in Madison County and stated he had witnessed cattle at these cossing and they will not enter the tunnels, as stated. Also, will hay equipment have adequate space to use the tunnel to access the other side of the hay meadow when cut in half by the proposed railway or will they have to be loaded on trailers and hauled, no telling how far, to re-enter the same property and complete the hay process? These tractors, balers and hay rake's are all large equipment. The hay meadows are fertilized and sprayed by commercial distributor trucks and will need even more width in the tunnel to accomodate their size than a mere cattle crossing. The HSR will not relieve the traffice on Interstate 45 as the congestion is created by the trucking industry not private vehicles. There is more congestion in the metropolition areas than on Interstate 45 in the rural regions. To relive the congestion of I-45, a third lane should be added from Huntsville to Fairfield. I-45 has more than adequate right-of-way to continue adding additional lanes as needed. This project being properly planned, allowed adequate right-of-way that was purchased before the project ever began. In comparing the HSR project to the Highway 130 from Georgetown to Interstate 10, there is not enough traffic on that highway to pay for it's self in 100 years from the usage observation of the traffic flow I have witnessed. The HSR project is for only a few people commuting from Dallas to Houston on this railway. How long will it take for this project to be turned over to the Federal Government and the taxes will be the responsibility of government and the people? Has a study been completed for financial obligation bonds to secure 100% o construction cost and operation/maintenance for the life of the project? HSR predicts an enormous amount of jobs the rail will create. Work will probably be sublet to various contractors and they have their own crews that travel with the company from job site to job site. These workers possibly will bring their families and this could crowd Texas public school system regulations of students per classroom. This will require schools to hire additonal teachers and the salaries are the responsibility of the school not the state. This is another fallacy of how the railway will benefit the involved counties. Our families are big deer hunters and we hunt them for food source, not pleasure. The viberation of the HSR, the additonal electrical grids and various pipelines that benefit Houston and Dallas are all contributing to reduction in deer population. Texas Central</p>	Refer to ED-1, LU-11, NE-9 and NR-1.

			officials have repeatedly stated that this project will spur economic development, create jobs and generate tax revenue for the surrounding counties and communities. This railway will only stop in Roans Prairie, so it will not generate income for any other of the counties involved in this project. The Office Of The Attorney General of Texas, states that Texas Law prohibits condemnation authorities from taking your property to enhance tax reveues or foster economic development. (Texas Government Code Section 402.031 and Chaper 21 of the Texas Property Code). How can the HSR claim to have Eminent Domain since this is not a railroad but a private form of transportation? I am definitely against Eminent Domain, the HSR , and parterening with foreign governments in any situation!!!!	
Howard Rush	2/21/2018	Website	I Howard D. Rush am against the High Speed Rail Train from Houston to Dallas, becaus people in Madison County will not benefit any what so ever from it. The people here have worked their whole lives to purchase land to live the rest of their lives on and some foreign people want to take their land away from them and put a high speed rail through Madison County and it will not benefit anyone in Madison County. It does not cross my property, but it comes within 2,000 ft from my home and if it goes through they may decide to take my property in next. I am against the high speed rail.	Refer to LU-14 and SC-19.
James Russell	2/22/2018	Website	My name is Dr James Russell, and I am strongly opposed to a portion of the the train's proposed route, near FM 709 and 3194. This section would essentially destroy a unique, historic and charitable ranch referred to as Morgan Legacy Farm. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment, while preserving a tremendously important property. In addition to issues of environmental impact, Bald Eagle habitat, watershed disruption and others that have been expressed, I would like to add a personal reason. Morgan Legacy Farm has served as the location of many outdoors retreats for me, and others like me. It is where my family has been able to gather and enjoy the peace and quiet of nature for many years, all completely free of charge. There are hundreds of other families who have done the same. Please consider the small route change outlined above to allow this ranch to survive for future enjoyment. Thank you for your time.	Refer to FP-1, LU-5, NR-2, WW-1 and WW-2.
James Russell	2/22/2018	Website	I am strongly opposed to a portion of the the train's proposed route, near FM 709 and 3194. This section would essentially destroy a unique, historic and charitable ranch referred to as Morgan Legacy Farm. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment, while preserving a tremendously important property. The proposed route travels in one of the highest elevations of the area, which would create significant watershed issues, in addition to the obvious aesthetic impact. The proposed route also destroys a three-way intersection, which would require significant engineering and rerouting of county roads and the access roads to surrounding properties. In regard to Morgan Legacy Farms, the proposed route would gut the property and render it useless for further cultural and charitable functions. It has served as the location of retreats, meetings, and getaways for thousands of Texans, including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Thank you for your time.	Refer to AS-1, LU-5, TR6, TR-7, TR-8 and WW-2.
James Russell	2/23/2018	Website	I am strongly opposed to a portion of the the train's proposed route, near FM 709 and 3194. Joseph Russell	1/29/2018	Oral	That's a tough act to follow. My name is Joseph Russell and I want to speak to the location of the proposed location of the train station in the Dallas area. So right now the train station's being proposed to be right below downtown Dallas, which is a very congested area of town, highway, not easy to get on and off of, and right now under construction. But from what I'm hearing it might be a little bit in the future when this happens when some of that construction is gone. But I'm proposing that the train station be located, and this might be ironic because of the we're in, at the intersection of Illinois and Mayforge Road. No one know where that is? That used to be the Wilmer Hutchins Independent School District office building. That location is 4.7 miles from where they currently want it to be and offers easy on and off the highway. It offers a rail line running right along the side of it. It offers actual economic help for the southern sectors. Economic help for an area that's already bumping and grinding. So why not give the south side some of that 10,000 jobs, 36 billion in economic help and \$2.5 billion in taxes for roads, et cetera, etcetera. Now I really do want to say one thing too. I really sympathize with these people who don't want a wall, basically, built through their property, you know. And I wish there was another way that it could happen, but if there is and we can do it, maybe we can, but as Commissioner of Ellis said, this is for everybody to profit and I want the people of south Dallas to profit. South Dallas profit, not that	Refer to GN-7, NE-1 and TR-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			south Dallas that's right there under downtown, but the south Dallas that's on the other side of the Trinity River. And if there's any possibility that that could happen, I would like to see it happen. Thank you. Also, I'm for it.	
Joseph Russell	1/29/2018	Oral	I want to propose a new train station. A different train station. Located at Illinois and Mayford. 4.7 miles south of the current preferred location. For the following reasons: it will make a tremendous and socio-economic impact on the community. It offers ease of access, on the off. Open land ready to be built upon and easy access to the trains, the train lines that are proposing. That's my proposal.	Refer to GN-7, NE-1 and PN-3.
Kane Russell	3/8/2018	Letter	The 2016 Project alignment ran through Prime Pointe, and WHL appreciates the fact that Texas Central Railroad ("TCR") redesigned the Project to avoid bisecting Prime Pointe. Since 2016, significant warehouse and distribution centers have been built at Prime Pointe, which reinforce the importance of preventing TCR from interfering with the operation and growth of Prime Pointe. WHL objects to any Project plans or alignments that would limit access to Prime Pointe or disturb its grov.rth and .operations. In order to avoid any negative impact on Prime Pointe and to allow Prime Pointe to grow in the future, Prime Pointe requires all TCR road crossings in the vicinity of Prime Pointe and DIT to be grade-separated, specifically including but not limited to the major thoroughfares of West Belt Line Road, Greene Road, East Pleasant Run Road, West Wintergreen Road, Lancaster Hutchins Road and Interstate 20. All grade-separated structures along the West side of Prime Pointe should be built in conformance with Union Pacific's standard vertical clearance for overhead bridges, 231-611, to allow for future railroad extensions. Prime Pointe further objects to the location of a TCR service facility south of Pleasant Run Road and requires plans for this facility to be relocated.	Refer to LU-12 and TR-1.
Mary Russell	1/30/2018	Email	I am very much in favor of this proposed high speed line and think it would be a great boon to the people of Texas, both economically and socially.	Comment noted.
Megan Russell	2/21/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create significant watershed issues, causing a loss of migratory waters. This will significantly and negatively impact the native wild life in the area, including a number of species of migratory birds. Many, of not most, migratory birds nest in the same location year after year whenever possible, so the current proposed route would a substantial number of birds and could have a chain effect on the native flora, insect population, and prey populations of these species. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5 and NR-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Megan Russell	2/22/2018	Website	I am strongly opposed to the current preferred train route that would destroy the culturally, economically, historically significant, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preserving the natural beauty of the Texas landscape should be a high priority for the Texas governing powers, and thus should be a huge consideration in this route. A move to north of the already existing power lines would have less impact on the visual pollution of the Texas landscape, as it would easily consolidate the man-made structures of the powerlines and the train for a portion of the train route. Please consider the preservation of Texas's natural beauty and landscape and move the train route north to proposed route 3Z along the existing powerlines.	Refer to LU-5.
Megan Russell	2/22/2018	Website	I am opposed to the current planned route of the train that would destroy a culturally, economically, and historically significant ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. As a veterinarian, I am acutely aware of the continuing loss of ranch and farm lifestyles that are a huge part of our country's history as well as economic well being. There is a massive economic significance to the loss of this lifestyle, as our country fails to produce its own resources and has to seek fulfillment of them elsewhere. The Morgan Legacy Farm is economically significant itself, but also significant in that it is helping educate future generations of potential ranchers and farmers. The large number of guests that have visited this ranch are exposed to a lifestyle that is fading in our city culture, and by moving the train route north and keeping this ranch alive, more children and potentially future farmers will be inspired to choose the farm or ranch lifestyle for themselves.	Refer to LU-5.
Megan Russell	2/22/2018	Website	I am opposed to the current proposed route of the train that would destroy a culturally, economically, and historically significant ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. As a veterinarian, I am very concerned about the negative impact on native wildlife species as I understand the massive impacts that environmental destruction can have on a population of animals. The preferred route travels in one of the highest elevations, which will create significant watershed issues, causing a loss of migratory waters, which will significantly and negatively impact the native wild life in the area,	Refer to LU-5, NR-2 and WW-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			including a number of species of migratory birds. Furthermore, it is my understanding that according to both Texas state and federal law it is illegal to harm native birds or to disturb, relocate, or destroy nests or eggs. The preferred route will cause substantially more disruption to migratory water fowl as it will interfere with multiple bodies of water. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Thank you for your time in reading this.	<b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b>
Megan Russell	2/23/2018	Website	I am opposed to the preferred train route through a ranch located near FM 709 and 3194 referred to as Morgan Legacy Farm. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save this irreplaceable property. The preferred route travels in one of the highest elevations which will create significant watershed issues, causing a loss of migratory waters. This will significantly and negatively impact the native wild life in the area, including a number of species of migratory waterfowl. A large portion of migratory birds nest in the same location year after year, so the current proposed route would affect a substantial number these animals. Furthermore this could have a chain effect on the native flora, insect population, and predator populations in this ecosystem. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5.
Megan Russell	2/25/2018	Website	I am opposed to the current proposed route of the train that would travel along 3194 in Navarro County. This route would affect the access to many properties/homes along 3194. Please move the path north parallel to the existing powerlines, which would affect fewer properties. It would be cheaper to build the railway here rather than paying settlements to all the families whose properties are affected by the 3194 route. Thanks for your consideration.	Refer to LU-5.
Megan Russell	2/28/2018	Website	I am opposed to the train destroying a culturally, economically, historically significant, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create significant watershed issues, causing a loss of migratory waters. This will significantly and negatively impact the native wild life in the area, including a number of species of migratory birds. Many, of not most, migratory birds nest in the same location year after year whenever possible, so the current proposed route would affect a substantial number of birds and could have a chain effect on the native flora, insect population, and prey populations of these species. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5.
Megan Russell	2/28/2018	Website	I am strongly opposed to the current preferred train route cuts through and restricts the access to multiple properties located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines would be less detrimental to the environment and less disruptive to the longstanding tenants of these properties. Furthermore, preserving the natural beauty of the Texas landscape should be a high priority for the Texas governing powers, and thus should be a huge consideration in this route. A move to north of the already existing power lines would have less impact on the visual pollution of the Texas landscape, as it would easily consolidate the man-made structures of the powerlines and the train for a portion of the train route, and would not add additional visual (and noise) pollution in an additional area of the surrounding. Please consider the preservation of Texas's natural beauty and landscape, and consider the impact the proposed route would have to the current residents in the area, and please move the train route north along the existing powerlines. Thank you for your time.	Refer to LU-5.

Megan Russell	3/9/2018	Website	Please find attached my documents (letter and photo) in strong opposition of the current proposed route and its destruction of Morgan Legacy Farm. First, thank you for taking the time to read this letter. I would like to give feedback regarding the FRA proposed route for the Dallas-Houston High Speed Rail. In general, I am in favor of the high speed rail, as I feel it will help reduce vehicular traffic and thus pollution from travels between cities. However, I have serious concerns about portions of the southern-most proposed route, namely the portion traveling through Navarro County. As I'm sure you have realized after reading countless letters and comments on the FRA website, there is an amazing and meaningful property referred to as the Morgan Legacy Farm that would be essentially destroyed by this portion of the railway. Clearly this is major motivator for my letter, but I truly believe that the environmental and economic arguments set forth in this letter are legitimate reason themselves to reconsider the railway route. The portion of the proposed route traveling through Navarro County south of 3194 would affect more untouched land than alternative routes, thus creating more significant environmental and economic impact. This is	Refer to LU-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>the area that I am asking you to reconsider. A small diversion of the route north to the already existing utility easement and paralleling the existing powerlines would solve many of these problems. A major concern of mine is the preservation of the Texas landscape and visual pollution of manmade structures. Clearly any time a manmade structure is added to an untouched area of land, the environmental impact is substantial. If the proposed route was diverted north along the utility easement, as suggested by the middle route, both the train and already existing power lines would run parallel. This would have substantially less impact on the visual pollution of the Texas landscape, as it would easily consolidate the man-made structures of the powerlines and the train for a portion of the train route. It also would create less environmental impact as this area of the countryside has already been cleared and (partially) developed, leaving a larger portion of the landscape untouched. As a veterinarian, I care deeply about what the preservation of landscape means for our native Texas wildlife and their habitats. Given the topography of the area surrounding CR 709 and 3194, the proposed train route would initially be below grade and then quickly increase in elevation. Additionally, it would also cut through multiple small bodies of water. The negative impact on watershed and subsequent change in irrigation would dramatically change the surrounding land and could destroy countless animal habitats-beyond the ones destroyed by the construction itself. Furthermore, the potential loss of the streams and small lakes cut off by the rail could be devastating to the native animal populations, particularly migratory waterfowl. Many migratory waterfowl preferentially nest in the same location year after year, so the potential loss of waters would be devastating to these birds and would significantly-and negatively-affect their populations. A change in the waterfowl populations could have a chain effect on the native flora, insect population, and prey/predator populations of these species. Furthermore, it is my understanding that according to both Texas state and federal law it is illegal to harm native birds or to disturb, relocate, or destroy nests or eggs. Given that the preferred route would cause substantially more disruption to these habitats and loss of waters, it stands to reason that there is a greater likelihood of the train construction disturbing or destroying the nests and nesting areas of our native Texas birds. A move north to the already established utility easement would be less likely to disturb these habitats, and would have less impact on the untouched landscape, watershed, animal populations, and generally would be less damaging to the environment in the long term. There are also a number of economic reasons to move the train to the utility easement. It would likely be more cost effective to run the train next to the already existing high voltage power grid, rather than having to run more expensive (and unsightly) high towers. The proposed train route would parallel a county route and also intersect a three-way intersection, thus limiting access to surrounding properties and requiring expensive road work to reconfigure the roads. If the small move north is made, the train would cross 709 at the already existing utility easement and would not adversely affect the three-way intersection or limit access along CR 3194. As a veterinarian, I am acutely aware of the continuing loss of ranch and farm lifestyles that are a huge part of our country's history as well as economic well being. There is a massive economic significance to the loss of this lifestyle, as our country fails to produce its own resources and must seek fulfillment of them elsewhere. Morgan Legacy Farm is economically significant itself, but also significant in that it is helping educate future generations of potential ranchers and farmers. The large number of guests that have visited this ranch are exposed to a lifestyle that is fading in our city culture, and by moving the train route north and keeping this ranch alive, more children and potentially future farmers will be inspired to choose the farm or ranch lifestyle for themselves. Finally, as alluded to earlier in this letter, the proposed route would destroy a property referred to as Morgan Legacy Farm. This farm has more meaning than I can put into words, both culturally and personally. The owners of the property are without a doubt the most charitable people that I personally know. They are continuously giving of their time and resources to others, both to individual persons and to schools, the church, and non-profit organizations. Many of their charitable contributions come in the form of benefits to families, children, and civil servants. In the past few years, Morgan Legacy Farm has hosted (at no cost) over 900 guests, including church groups, Boy Scouts, Girl Scouts, military personnel and their families, police officers, fire fighters, doctors, nurses, city leaders, and victims of natural disasters. I feel certain that if this ranch is preserved, the Morgan family will continue to use this property charitably and they will open their doors even wider than before. To destroy this ranch rather than move the train route slightly north to the utility easement would create irreparable losses and damage to the county and for guests who benefit from the property from all over the state and country. Personally, this property holds so much sentimental and emotional value to myself and to my family, both extended and nuclear family: My husband and I read the prayers of the faithful at my cousin's wedding ceremony; they said their vows overlooking the beautiful lake at sunset. When we moved out of state and I missed being near family for holidays, my aunt Brenda meticulously collected and cracked dozens (if not hundreds) of pecans to send me a care package with jar of perfect whole pecans from the ranch--so that I could make her pecan pie recipe with Texas pecans and feel close to home and family. Most recently, I watched my 3-year-old son John experience ranch life first hand and for the first time. John put on his hand-me-down cowboy boots and helped feed deer, cows, goats, and chickens. He watched as we collected and cracked walnuts. He tried his hand at fishing in the pond. He was able to see the stars beautifully and clearly with no light pollution. He rode a horse for the first time, saying as he rode, "I'm a cowboy!". He followed my uncle Bob around like a little duck--watching, learning, and taking in every beautiful second of ranch life. John didn't want to take his cowboy boots off for the rest of the week. These memories are a drop in the bucket of what Morgan Legacy Farm has been witness to. This irreplaceable</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			property is host to weddings and family reunions. It educates our children about ranch life and responsibility. It is a reminder of the importance and beautiful simplicity of time with family. This property is unlike any other in Navarro County, and the cultural benefits of this property reach people across the state and country. The current proposed route for the Dallas-Houston High Speed Rail would destroy Morgan Legacy Farm. We are asking you to please reconsider the route for the Dallas-Houston High Speed Rail. If the portion of the route set to travel through Navarro County south of 3194 is diverted north to the utility easement, it will save vast areas of the Texas landscape, have dramatically less environmental impact, and be more economic to build and maintain. It would save Morgan Legacy Farm. Please reconsider the route and divert the rail north along the utility easement as suggested in the proposed middle route. Thank you for your time and consideration.	
Joseph Russell Jr.	1/6/2018	Email	Who would I speak to in order to make a suggestion for the placement of the Dallas Station?	Refer to GN-7.
Vicki Russell Leathers	2/19/2018	Website	1. We own property on Oxford Cemetery Road where the highline crosses, not 1/2 mile from us. It will disrupt our access to our property, our solitude and peaceful environment that we worked so hard to buy to enjoy our retirement! It will do the same to our neighbors. 2. We live there for a reason, to get away from all of the urban mess. I live full time in Pasadena since my husband still works. This will not benefit anyone south of Houston to relieve the terrible traffic congestion here between Galveston and the north side of Houston. Northwest mall is an hour away from our side of town so no one out here will use it. 3. Who will be employed to build this train? Will the locals who live in the counties it is cutting through have an opportunity for these jobs? If not, even more reason not to continue this project. 4. I want to know since the stop is in Roans Prairie how this train is going to benefit Madison and surrounding counties? Roans Prairie is still too far away from Houston and Brian-College Station to have any real impact on the ridership. College Students will not pay the \$199 each way ticket. They will continue to drive back and forth. 5. This is Texas, not New York. People in this state don't mind driving. They want their own transportation when they get from point A to point B. They will also balk at paying \$199 each way for a ticket when they can fly Southwest Airlines between Dallas and Houston for anywhere from \$49 to \$79 each way depending on when they travel. 6. We have cows on our 96 acres along with all kinds of wildlife and deer. No one can convince me that the sound every 15 minutes, 18 hours a day will not have a negative impact on our beef production and the wildlife that belong on our properties and co-exist peacefully as our neighbors. This train will severely disrupt everyone's peaceful way of life. 7. I want to know if eminent domain can be used to take our land. I would like a straight answer to this question. This is NOT a federal agency like our railroad, flood control, etc. so can we expect this to happen? 8. Where are our lawmakers in this fight? I want to know where they all stand in this land grab, especially since this is an election year. It is just that in my opinion, a land grab from hardworking people that left the city to live a slower paced peaceful country life. Shame on Texas Central High Speed Railway and the Federal Railroad Administration for the entire project. 9. There are alternatives that would help relieve traffic and get people faster from Houston to Dallas. I have heard nothing mentioned so Texas Central must be in someone's pocket. We already have airports in Galveston, Ellington Field, Hobby, Houston Intercontinental, a Northwest airfield and there is one in Katy, Conroe and LaPorte that can accommodate an air shuttle system between Dallas, San Antonio and Houston with point in-between. Bryan and Waco also have an airfield too and I'm sure there are more. These are already in place to expand and use without spending billions of dollars on a gamble this train will be ridden enough to justify its existence. It would be much safer, faster and quieter with no significant impact to use air travel. I don't know any fool my age that has said they are going to ride a 200 mph train either. 10. I have to believe that someone in these agencies are getting their pockets padded pretty well to push this project. Again, where is our government representation? Where do they stand on this project. If they are for it, they will not have my vote.	Refer to BA-12, ED-1, ED-2, LU-11, NE-1, NR-1, SC-3, SC-4, SC-19 and SC-22.
Joseph Russell, Jr.	1/29/2018	Oral	I want to propose a new train station. A different train station. Located at Illinois and Mayford. 4.7 miles south of the current preferred location. For the following reasons: It will make a tremendous and socio-economic impact on the community. It offers ease of access, on the off. Open land ready to be built upon and easy access to the trains, the train lines that they are proposing. That's my proposal.	Refer to GN-7, NE-1 and PN-3.
Monica Russo	2/6/2018	Website	When it comes to multi-modal transportation, the United States is far behind other countries. I welcome the Texas Bullet train as the first step towards a 21st-century transportation network. Our freeways and roads are too crowded already and will become even more congested as time goes on. Road expansion is not sustainable and is much more detrimental to the environment than electric above grade rail. I totally support the Texas Bullet train project. I just wish it went all the way to downtown Houston.	Comment noted.
JR Rust	1/25/2018	Website	Please, please move this project forward. The drive and flying are such a hassle. This would be ideal, and we will use it often.	Comment noted.
Ronald Rust	2/20/2018	Website	I strongly urge you to deny construction of the Dallas to Houston High Speed Rail project. It is not needed and is destined to fail financially. It will negatively impact many farms and ranches along its proposed route. These ranches have been in families for many years and will be almost impossible to replace.	Refer to ED-1, ED-2, GN-1, LU-2, LU-11, NE-1, NE-9 and PN-3.
Nancy Rutherford	3/5/2018	Oral	My name is Nancy Rutherford and I'm vice president of the Tax Exchange Institute in Houston. We are donor advocates and we are on the education side of any kind of right-of-way. It could be a highway, it could be a pipeline, it could be a transmission line, in this case, you know,	Refer to ED-2.

			it's talking about this train. What we do and what I do is speak to landowners as soon as they even hear a whisper of a right-of-way or condemnation or eminent domain. Those are sort of like buzz words and what they can do at no charge to them is reach out to me and I will walk them through the process of what could happen to them. And the sooner they talk to me, the better it is for them. Some landowners will need to seek counsel. I might be able to provide information on who they might will use, maybe who they don't want to use in the middle of negotiations and then lastly, if a landowner is paid, if they receive an award for their -- for the project, then they find they have a capital gains tax on that. So it's like this aha moment of you're kidding me. Now, I didn't want my land taken and now they have to pay capital gains tax. They do not necessarily have to pay the tax and we show them how to avoid paying a capital gain tax. So that kind of gives you a summarization for it. Most people don't know that they can avoid paying those taxes and we walk them through it. So they get stepped on. They get, as you can hear tonight, they get bullied. It's really sad. They're not treated well. They're not treated fairly. So that's it and they can, you know, if I would have known, I would have been able to speak tonight out loud; but I didn't know. Thank you.	
Nancy Rutherford	3/8/2018	Email	This is absurd. It's too expensive at \$200-. I can use Southwest Airlines for less. I do not support this bullet	Refer to SC-3.
Byron Ryder	1/30/2018	Oral	Hi, I am Judge Ryder and I am here to represent myself and the commissioners court. I just want everybody to know since we learned that this train was coming through Leon County, which was November or December of 2014, your commissioner's court and myself have been violently opposed to this train. We have passed three resolutions against the train and we passed a economic agreement opposing the train. We have had many, many agenda items in our court against the train. We even passed a policy about being able to go across our roads. They are going to have to get our permission. So there are lots of things the commissioner's court has done. The commissioner's court continuously goes to Austin and Washington. Whatever it take to get things done. And you notice in those six bills we introduced two of our bills passed and Kyle Workman and Bill and that bunch really worked hard for that and we all had a part of talking to our representatives and Senators about that tonight. The environmental study that we are talking about, they have not gone through and asked us anything about the impact of the roads or the impact of our ditches? How it would impact the drainage, nothing. I would think if they are going to go through ten rural counties, the two on each end. Those two are for it. They would have to go through the counties to figure out how is was going to impact us. That should of been in their study. They didn't do that. I just want you to understand that your commissioner's court -- every single meeting we have we have an agenda item where we talk about the train. When events like this come up keep inviting people to be there and oppose the train. I just want you all the understand and personally I just want people to know the Texans against High-speed Rail -- I have personally given twice money for that. So I urge you need to get on board for this. They come ask us for money, they come and ask us for their water too. So please please, please help that out. Thank you very much.	Refer to NE-1, NE-6, NE-9, PI-1 and TR-8.
Byron Ryder	1/30/2018	Oral	I want to say thank you very much for being here tonight. I know a lot of the crowd is gone. This is the crowd that kind of sticks around to see what is going on at the very end. There might be some excitement. You can't tell. I wanted to tell you I have been to every meeting, every meeting. I even went to onein Teague and when they first started this thing the problem that everybody has had with this train and the presentation is that every time, you know, they say something different. Ever single time they say somethingdifferent. And we're over here in Jewitt from the very first meeting over there and their point man and I am not going to say who it was. I know people know who it was. He came up to me and he said, "what would it take for you all to be for a train in Leon County". I said, "absolutely nothing." He said, "Well, I tell you what I'm willing to do. I am going to promise you a station in Leon, Texas. Will that do it?" I said, "no it won't do it." The very next meeting we have another meeting in Jewitt and the same gentlemen was there. Several minutes later he says, "What is it going to take to get ya'll to agree to this in Leon County?" I said, "nothing." He said, "I tell you what I am going to do. I am going to make sure that ya'll have a 2 million dollar sludge fund." He said, "I like your jail down there in the Elm Square that has the hanging booth in it and I want to see ya'll use some of that money to fix that jail." And there was six or seven people around there that heard him say that. I left after that. I left and went out to my car. Then what does he do? This grown man he comes running after me cause he knows what he said has just been downright bribery. That has been the problem you ask the guy at the first meeting how they are going to get the financing. He says he is not going tell me tonight. All I will say to that is we need to be very, very careful what they're presenting out here tonight. Everybody made some real good points. They have different bullet points on the paper. Be real careful because remember the next meeting you go to it will be totally different. I just talked to the commissioner and of another county and he said it was the same way there. They always deceive us every time they comment so please, please, please be very careful what you see and what you here. Thank you.	Comment noted.
Byron Ryder	2/12/2018	Website	It has been brought to our attention that the Draft Environmental Impact Statement (DEIS) prepared by the FRA includes relocation and realignment of public roads within Leon County. Further, we understand that it is assumed that existing roads may altered or closed and new roads are proposed to be constructed within our jurisdiction for our frture ownership, responsibility and maintenance. Please be advised, based on the information currently available, any construction, relocation or realignment of county roads within our county is not acceptable and will not be granted. Further, even if county roads were to be moved or altered, Leon County will not accept responsibility for new or	Refer to ED-3 and TR-8.

			<p>additional roads without a long-term maintenance reimbursement plan in place. In addition, the Commissioners Court will require that all county roads remain open for use by the travelling public both during and after construction. Please make the necessary adjustments to the DEIS document(s) to take this into account. At this point, we cannot even begin to evaluate the impacts to our County until the DEIS investigative findings are consistent with county regulations and the policies of the Commissioners Court. Once the DEIS has been updated and issued, only at that time will we be able to begin our detailed review and provide additional comments.</p>	
Dianne Ryder	3/2/2018	Email	<p>I am Dianne Ryder elected Buffalo, Texas City Council member and President of the Leon County Economic Development Association. The associations I am affiliated with see NO benefit for Leon County. In fact we see it as a total detriment to our rural way of life. I am totally against eminent domain and do not want to see land grabbed and divided. If your ridership estimates are anywhere close to correct, our businesses along I 45 will definitely be affected. The cities along the I 45 corridor depend heavily on the interstate traffic to stop at our local businesses. Cities along the I 45 stretch will receive no tax revenue from the rail. We will only lose sales tax dollars from our businesses. I am also very concerned about the loss of property value along the rail. Why would anyone want to be located anywhere near this rail? Our property values will go down and no estimates can even be given on the tax amount the rail will pay the county. Cities will receive nothing but a loss of sales tax dollars which may lead to reduction of city services and even businesses going out of business. Sure there may be a boom, if the rail is built, with construction but that is only good for a short time. There will be no ridership from the rural counties. Why would I drive an hour to the Grimes County stop and pay \$199.00 to ride a train to Houston or Dallas when I can be there in my car in less than 2 hours and have transportation once I get there. If you think College students from A &amp; M and Sam Houston State University will ride this train you evidently have never raised teenagers or young adults, they want their own transportation. Our school district, ems, fire departments, sheriff department have not been contacted. I understand from the last information received at several meetings I attended, that roads will have to be moved and maybe totally re-routed. This will seriously affect our response times and may cause deaths due to the extended time to reach a location. Please consider my comments. Thank you for your time.</p>	Refer to ED-1, GN-2, PI-1, PN-3, SC-3, SC-15, SS-23, TR-8 and VA-1.

Jim S	NA	Website	I fully support the further development of this project. This project will provide a much needed alternative for transportation in this corridor and will be a significant economic benefit to our region. I am a resident of the Cypress area and believe that any minor impacts will be offset by the greater benefit of this project.	Comment noted.
K S	NA	Website	Taxpayers will end up paying for a train. This is not needed!	Refer to GN-4 and PN-3.
John S.	1/30/2018	Oral	Well I started farming out there when I was 15 years old and i am 100 next month. I bought land and we irrigated it and worked together. and got to where I could farm all of it. It's pretty good farm. I invested in and paid the taxes on it for seventy years. If there is any way they can get profit for the rail to get the farm and keep it that way. It's not a question of money it's a question of people. There is more people in the area they are talking about than ever. They will put people of business. Out of the way they work and if they have to pay more taxes, it won't be good. The story of the taxes is that other places have tried it and it ended up bad and the same thing is going to come up here. They are just taking advantage of a lot of land and a lot of taxes. People pay taxes on it. They seem like money grabbers. It isn't for the people. We have the Southern Pacific railroad and they couldn't make it work. Oklahoma couldn't make it profitable. California broke all the banks and it's still going on. Those are the things that these people overlook. The things that we have to have and need to have get taken from us. I guess that is all I want to say.	Refer to GN-4 and VA-1.
Dawn Sachs	2/17/2018	Website	#buildthistrain	Comment noted.
Teresa Sackett	3/5/2018	Website	HIGH SPEED RAIL IS NOT WANTED IN THIS RURAL COMMUNITY WHERE WE ARE RAISING OUR KIDS AND GRANDKIDS!!! WE MOVED THEM OUT OF THE CITY TO GET AWAY FROM BUSY TRAFFIC AND NOW ARE HAVING TO FIGHT TO NOT HAVE THIS MONSTROSITY FLY THROUGH OUR LAND!! WE DO NOT WANT THE HIGH SPEED RAIL!!!	Comment noted.
Saddle Creek Forest Property Owners Association	3/9/2018	Email	Claims suggesting that this project will result in one or more solutions to current traffic situation are flawed and even contradicted by statements made by TCRP, particularly near the big cities. There will be a devastating impact on traffic in the rural areas. There have been no independent evaluations of future traffic along the I-45 corridor that support statements about the benefit of the high-speed rail project. Traffic volumes of I-45 are currently much lower than predictions made in previous government sponsored studies. Independent and objective analysis must be authorized and completed before the need for this project can be established.	Comment noted.
Mitchell Sadler	2/16/2018	Website	As a lifelong 4th generation resident of Texas, I deeply feel the time is right for Texas and the United States to take the national lead in environmentally responsible, efficient and safe travel in the Americas. While others talk about and flounder at leading us to the next generation of mass transit the great team at Texas Central Rai's team is making great strides toward blazing the trail forward without burdening the taxpayers. In a growing state with expanding population the people of Texas need and want alternatives that support clean air, safe and efficient travel. Texas Central's project is the perfect example of just such an alternative. Please clear the way by expeditiously approving this project and removing any obstacles at the Federal level. In doing so you will show the country that the U.S. Department of Transportation is serious about it's mission and wants to forward the progress of clean, safe, modern transportation for this country.	Comment noted.
Dalin Sakoglu	2/22/2018	Website	Hi. I live in Dallas, TX. I support building this train since my family and I travel between Houston and Dallas frequently, and flying is much hassle. Noone is mentioning this: the HSR between Dallas and Houston can also help when a disaster strikes, such as a hurricane, to rapidly transport people. It is good to have alternative modes of transport available. And HSR is simply the future. There are 15 million people in the two metropolitan areas combined and we are already late to build this project.	Comment noted.
Unal "Zak" Sakoglu	1/25/2018	Website	My family and I currently live in Dallas, TX. I drive between Dallas and Houston frequently. Within the last two years, I drove more than 100 times round-trip, so it would be a much safer and quicker option for me to travel. So I support the high speed rail project between Dallas and Houston. Having it as alternative way of transportation is very important for It is also important and necessary to have it as an additional mode of transportation in case a disaster strikes (such as Hurricane Harvey) for people to be able to evacuate quicker.	Comment noted.
Sam Sakowitz	2/16/2018	Website	What would we have done if railroads had never been built. Are built landing strips somewhere.	Comment noted.
Priscilla Salas	3/9/2018	Website	We should not take land from owners to build this train. I also don't feel the train, itself, it cost effective and will be worth the expense to consumers in terms of driving/flying versus taking the train.	Refer to BA-12, ED-1, ED-2, PN-3 and SC-3.
Judy & Ray Salazar	2/6/2018	Handwritten	REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in	Refer to LU-3, LU-4, RF-1 and VA-1.

Ray & Judy Salazar	2/5/2018	Handwritten	REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would not be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County. Phillip Salerno	3/5/2018	Oral	<p>MR. SALERNO: My name is Phillip Salerno, and I'm representing Super Neighborhood 5, Greater Inwood Council, and I'm a member of the Houston High-Speed Rail Watch organization and the Citizens Transportation Coalition.                      Three potential sites for a Houston terminus were identified in the DEIS. TCR has indicated that they prefer the Northwest Mall terminal option. The drawings contained within Appendix G, Volume 3.1 present issues and conflicting data that needs to be addressed and analyzed further in a revised DEIS or in the Final EIS in order for the FRA to make an effective choice for the Houston terminus.                      There are inadequate parking spaces for high-speed rail customers based upon an existing terminus design. The current plan calls for a five-level parking facility northwest of the terminus for as many as 6,500 vehicles, including privately-owned vehicles, rental cars, valet service, and employee parking. The terminal design does not support a multi-modal facility, and there's no direct connectivity to the Northwest Transit Center. The drawing for the station needs to be updated to include the availability from the access road, which curves around the east end of the current mall site to a newly constructed flyover ramp that ends at the Northwest Transit Center. Access to this flyover would permit more rapid transit time to the center and decrease the circulator traffic on North Post Oak Road.                      A timeline for the discussions between the City of Houston and Texas Central Railroad for the study and design of efficient multi-modal connections between the Houston station and the City's major activity centers needs to be identified in the DEIS. The DEIS also lacks a definition of peak hours.                      The failure to define peak hours of operations factors into the volume of traffic, level of anticipated congestion, and parking requirements. Section 3.2.3.2.2 states that TCR expects only a 62 percent utilization for train, while Appendix F Section 6.4.3.1 states that TCR expects a 95 percent utilization per train. So there's a conflict between these sections of the DEIS.                      In Appendix F, Section 6.41, TCR indicates that they've conducted a proprietary market demand study, but provides no data as to who conducted the survey or any other data about the demographics of the survey participants; therefore, the allocation of only 6,500 total parking spaces at the terminal, of which 5,500 is allocated for car parking, see Appendix F, Section 6.5, is insufficient to meet the needs of passengers.                      TCR estimates that for the Houston terminal, only 25 percent of the passengers would make a short journey of one night or fewer, while the remainder would be -- make a journey of three days on average. This estimates -- estimate appears to be incorrect based upon business traveler trip duration.                      Since this project is the first of its kind in the United States, it should have a first-of-its-kind planning to make sure the project benefits the areas it will serve. The only way to do this is to ensure community representation at the table when decisions are made. Thank you.</p>	<p>Refer to PN-3, TC-5, TR-4 and TR-5.                      The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See <b>TR-MM#1: Traffic Control Plan</b> in <b>Section 3.11.6.2, Transportation, Mitigation Measures</b> for more information.</p>
Ray and Judy Salezar	2/5/2018	Handwritten	<p>Reference: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY                      NO HIGH SPEED RAIL WALLER/HARRIS COUNTY                      This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes.                      As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would *beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community.                      NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS                      Sincerely From a Concerned Citizen of Waller/Harris County.</p>	<p>Refer to EJ-1, NV-5, PI-1, PN-3, PN-5, SC-19, SS-1 and VA-1.</p>

			NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/HARRIS County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to SC-5 and SC-8.
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community Of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY". NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to CR-9.
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON HEWLETT PACKARD DATA CENTER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property. FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area. As a resident of Waller/Harris County, I do not feel the "Need and Purpose" of this project has "not" been shown. It does not benefit our Waller County Community in any way. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to PI-1 and SC-11.
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, the "Need and purpose" of this project has not been shown to date. A High Speed Train would not be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public input from those affected.	Refer to BA-3, PI-1, PI-8, PN-3, SC-7, SC-19 and SS-23.

			EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. Many of which are used for emergency vehicles that now service the District and provide an 8 — minute response time. This HSR goal is to service from only one city central to the next city central with a possible ONE stop in-between. This HSR will not benefit Waller residents in any way. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely from a Concerned Citizen of Waller/Harris County	
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This Is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile Stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to NR-2, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Ray and Judy Salezar	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, the "Need and purpose" of this project has not been shown to date. A High Speed Train would not be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public input from those affected. EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. Many of which are used for emergency vehicles that now service the District and provide an 8 — minute response time. Submitted By	Date Submitted	Submission Type	Comment	Response
Anna Salinas	12/19/2017	Website	I think this would be a great opportunity to be able to commute from Houston to Dallas since there have not been many jobs in the Houston area. this will allow workers to use the train and still maintain steady income.	Comment noted.
Marta Salinas	2/25/2018	Website	Include San Antonio and rio Grande Valley please!!!!	Refer to BA-2.
Joseph L. Salmeron	2/5/2018	Website	If we want continue development for our State, we must have high speed transportation.	Comment noted.
Oscar Salter	3/3/2018	Website	This would be great to travel from Houston to Dallas	Comment noted.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The No Build analysis left out the huge increase in Impacted Acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres and has not been addressed by the FRA nor was it a part of the No Build Alternative Analysis.	Refer to LU-9 and LU-14.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). The HSR remote route with its crossings routed very close to O&G and Utility Facilities demands application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those scenarios followed by Mitigation Actions/Planning. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to SS-19 and TR-6.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There are no Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in a remote area. There is also no Risk Management System applied nor Emergency Response Planning indicated to handle a high elevation rescue of the public in case of a shut-down or incident in a remote area. These same issues would apply to the construction phase. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to EU-2, SS-18 and SS-19.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Since the FRA is responsible for RR Safety, including that of the public, and would be the federal agency to allow TCRR to operate a RR in the future with the FRA's oversight, why is there no mention in the DEIS of Risk Management Systems being applied to Public Safety or Security? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to EU-2, SS-18 and SS-19.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no indication that risk event scenarios have been developed by the FRA on any activity of the HSR construction and operation along with performing risk assessments by qualified Risk Engineers for those events/scenarios. There is also no evidence that the FRA has applied any Risk Management System to the highly congested traffic flows along with road and lane closures, modifications and rerouting of roads, or any risk management situations associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to EU-2, SS-18 and SS-19.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no mention of any Risk Management System to be applied to the crossing or close proximity of the HSR to other hazardous facilities such as O&G facilities, pipelines, and transmission lines. Does the FRA not consider pipelines being crossed by the HSR a Risk Management Issue considering pipeline explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or are the FRA's safety processes void of a Risk Management System? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to EU-2, SS-18 and SS-19.

Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). The public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. TCRR, based on its track record for 3+ years, will likely not fulfill many of the commitments included in the DEIS and when they do not, the FRA will be held accountable. There are also questions about TCRR's unethical actions during the collection of field data and it appears the FRA has potentially implicated themselves in potentially illegal activity against the very people they are being paid to protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to BA-6, NE-1, NE-2 and NE-8.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). TXDOT was unwilling to work with a local county government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an advocacy group, but a true county governing body. The county sued TXDOT and it was found during the court case that the FRA had told TXDOT not to work with this local governing body, and to not attend the meetings. Waller County won the court case. TXDOT then appealed, and lost the appeal. Did the FRA break federal law by telling a Texas State government body not to work with a county government body and not to attend the meetings? Why would the FRA not want input from a county government body? Since the public is fully aware of this case, does this not destroy the public trust in what the FRA has done regarding the HSR DEIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to PI-1.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). Has the FRA evaluated the answers provided to the public in open forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? If not, is the FRA interested in any false or misleading statements made to the public by TCRR vs. what the FRA has included in the DEIS? Is it important to FRA's analysis of TCRR's capability to operate a RR or not if TCRR has misled the public on a number of issues as compared to what the FRA has included in the DEIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to GN-1, GN-2 and NE-1.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water supply for use at all construction sites and during construction along the entire HSR route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). The FRA must quantify the water needs over 5 years of construction and reconcile that with the State or County Water Conservation agencies to determine the need for permits or approvals for the use of source water. No indication of this in the DEIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to WW-6.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Who in the public will be negatively impacted by the large use of water by the HSR project? Comment: Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to WW-6.
Casey Salzar	3/9/2018	Website	TCRR's current plan has caused the closure, rerouting, modification, and rebuilding over the HSR of many private and public roads and increased the ROW land required without any accountability for TCRR's earlier claims. The FRA simply glosses over those huge changes.	Refer to BA-3, LU-14 and TR-8.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water supply for use at all construction sites and during construction along the entire HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Will water be used almost constantly during dry times (almost all the time in Texas) to water all of the temporary dirt roads along the HSR construction route and at road modifications? What is the volume of water usage for this project, including during construction and how does it fit into Texas' focus on water conservation programs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to WW-6.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built	Refer to TR-6, TR-7 and TR-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			construction sites on major road arteries, Road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The FRA should provide to the Counties via the DEIS an estimate of damage to their existing road infrastructure following 5 years of construction related traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards all planned construction sites. These will be a magnet for workers, raw materials, equipment, vendors, lay down areas, etc. and will cause considerable wear and tear on county roads that counties will then be responsible for maintaining. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The public has no idea of the potential negative impacts to their local communities and roads as a result of this project. The DEIS is not complete without the FRA advising the public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project construction phase. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to TR-6, TR-7 and TR-8.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The DEIS has not quantified the impact of increased traffic in general, damage to existing roads, and traffic congestion over and above the current rural environment, as the result of project construction worker travel, equipment and raw material hauling, particularly around all of the construction sites and staging areas along the route, congestion associated with permit roads, traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to TR-6, TR-7 and TR-8.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS_MAIN TEXT I; DEIS Abstract). Does RR security fall under the responsibility of the FRA? Where in the DEIS does the FRA address the new state law expectations for security of HSRs? A number of years ago when an HSR was being considered, the State of Texas established a regulatory board for HSR oversight. However, the project never happened and the state board was eliminated. Currently, whenever there is a project that ultimately is used by the public, there exists state regulatory agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide oversight responsibility to protect the interest of the public /taxpayers. Who will protect the public's interest outside of any FRA RR safety responsibilities during execution of this project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to SS-4, SS-5 and SS-9.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS_MAIN TEXT I; DEIS Abstract). What Texas State Regulatory Agency/Body with the current authority to do so is responsible and can be held accountable by the public to provide oversight on ALL aspects of this project that are not covered under the FRA's scope of "RR Safety"? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to BA-6, NE-1, SS-4 and SS-5.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission) Past projects such as road, transmission line, and pipeline projects normally employ a very significant contingent of workers from outside Texas and certainly from outside the local areas. This will result in additional pressure on County services and infrastructure. The Counties must have time and funding to be able to adequately respond to these large challenges. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to SC-4 and TR-6.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs	Refer to BA-6, SC-4 and SC-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including education, particularly in very small ISDs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). What is the negative impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically traffic, congestion, housing, medical facilities, Absorption of a portion of the food supply and demand chains, and the negative impact on small rural school ISDs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to BA-6, SC-4 and SC-6.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Additional traffic and congestion due to permit loads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 3, Pg. 22 of 34; Sect. 4, Pg. 23 of 34; Sect. 5, Pg. 27 of 34). What is the quantity of permit loads the public should expect to be added to their traffic flow over and above the norm prior to the execution of this project? No figures on permit loads are included in the DEIS. There are construction sites all along the route that will be used for staging of materials and for the construction of pre-cast concrete structural components. Many of those loads going to the construction sites as well as constructed structural components are very large, likely qualifying as permit loads that must traverse existing roads to transport them to the HSR installation site. This will cause significant wear and tear on those roads and there is no money allocated to the counties to cover the cost. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to TR-6 and TR-8.
Casey Salzar	3/9/2018	Website	Also not addressed are the many public safety considerations that the FRA has glossed over: increased ER times, safety of traffic congestion around construction sites, lane closures, rerouting roads, road closures and more public road travel required just to get from point A to point B due to the HSR.	Refer to SS-23, TR-6 and TR-8.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Personal safety expectations during construction (Ref: DEIS Omission). The work by TCRR's Contractors will be in close proximity to the public. A lack of a comprehensive personal safety program as well as management commitment and leadership in safety could lead to more danger on the public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the public off guard. These must be executed in a safe manner with lots of warnings issued to the public for route changes. The FRA should provide to TCR a set of construction safety system expectations not only for personal safety, but for the safety of motorists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to SS-19 and TR-6.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). Since TCRR and the FRA are aware that the route they selected goes through or adjacent to many subdivisions, homes and businesses, why has the FRA DEIS not set out specific specifications for the use of noise abatement structures with minimum standards so TCRR is therefore required to put up noise abatement should those specifications not be met vs. leaving it up to TCRR once detailed design is completed? For this issue, preliminary design with a known route and known noise level is all that is needed to determine the location needs for noise abatement specifications. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to NV-1.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the additional noise impact of the additional scientifically proven "slapping sound" as a result of the aerodynamics of two lead air flows from each train colliding with each other? The FRA noise study MUST account for the scientifically proven aerodynamic "slapping sound". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to NV-1 and NV-10.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the maximum noise level in dBA of TWO trains, not ONE, passing each other at any point along the HSR route while traveling in opposite directions on adjacent tracks? The DEIS only covers the noise impact of one train in one	Refer to NV-1 and NV-10.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			direction (87 dBA at 50'). I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. The DEIS shows 66 private road closures, 43 private roads rerouted, 161 private road crossings, 1 public road closure, 139 public roads rerouted, 463 public road crossings, and many roads, FM and CR, going over the HSR vs. the viaduct going over the roads to minimize destruction of our road system. DEIS states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or new access if it is proposed as part of the ROW construction. What if it is not proposed, meaning TCR actually gets to decide? That decision should not be left to a private company and can be catastrophic to a landowner. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to TR-6 and TR-8. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). Contrary to previous TCRR documented statements, a number of FM and CR roads all across the counties are being closed and reconstructed with an overpass over the HSR. Will Texas eminent domain powers for road construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that matter and for the destruction of people's homes that originally would not have been taken specifically due to the HSR? If so, this is unlawful stealing of more land and homes than necessary as there is no proven public need or financial viability for this project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to ED-1, ED-3, LU-14, TR-8 and VA-2.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually be closed during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Will all road construction be completed before, at the same time, or after the HSR construction is completed? What priority will be placed on repairing and replacing roads vs. construction of the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to TR-6, TR-7 and TR-8. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See <b>TR-MM#1: Traffic Control Plan in Section 3.11.6.2, Transportation, Mitigation Measures</b> for more information.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Who is to pay for maintenance of these overpasses that did not exist before this project plan? Who will pay for the future maintenance of the access roads built alongside the HSR route that will be used to get around many of the road closures and modifications? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to LU-11, NR-6 and TR-8. Culverts, fencing, and fence-gates would be included as possible negotiation measures to allow livestock crossings. This would be conducted on a case-by-case basis between TCRR and the landowner.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. Contrary to TCRR's claims and as a result of TCRR's plan, landowner's property will be cut in half with no free movement, which will severely restrict their economic potential and harm the landowner's livelihood. As TCRR is only willing to purchase the ROW they need for the HSR, landowners will suffer immensely from the restriction on the use of their land with no compensation, for a project that has not been proven necessary or financially viable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to LU-14.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11). An access road will be built all up and down the HSR	Refer to LU-11, NR-6 and TR-8. Culverts, fencing, and fence-gates would be included as possible negotiation measures to allow livestock crossings. This would be

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. TCRR's advertisements for a viaduct providing this free movement were FALSE. Animals would have to be moved across a public road. Will TCRR provide culverts in any ditches alongside the access roads and fence gates as well as road shut-down/signaling methods at various locations so animals can be moved across the public roads? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	conducted on a case-by-case basis between TCRR and the landowner.
Casey Salzar	3/9/2018	Website	The FRA does not provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the No Build Alternative. The FRA DEIS understates the damage to the public and property but overstates the necessity for the HSR.	Refer to BA-6, NE-9 and PN-3.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Documentation exists showing TCRR told the public that they only needed around 100' ROW width for the HSR. In many places that has increased to 400' at a minimum. Is it not the case, after looking at all of the HSR route maps ROW, the significant increase of ROW might be also a significant part of that increase in impacted acreage? Does TCRR have valid reasons for the change, or are they attempting to obtain the land for a reason other than the HSR, like laying broadband cable from Houston to Dallas? The FRA should investigate this issue. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to BA-3, LU-14 and TR-8.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT III, Tables 3.11) Question: viii. There exists documentation of TCRR stating the impacted acreage for the HSR would be around 3,000 acres. The recently released DEIS shows around 8,000 impacted acreage. The FRA should halt any further work on the DEIS until there is a clear understanding where all of the increases took place. Is it not the case, after looking at all of the road modifications including those reconstructed over the HSR, that the significant increase of new road work ROW is a significant part of that increase in impacted acreage? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to BA-6 and LU-14.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Regarding emergency response times during construction of the Dallas to Houston HSR, the FRA DEIS Summary Statement in File TEXT III, 3.16- 24, is "Impacts to Emergency Response (ER) times are not anticipated to be significant". Since the FRA study does indicate an increase in ER times, is even ONE single public fatality due to increased ER times acceptable by this FRA DEIS? Since this FRA DEIS is not based on traffic modeling yet of the traffic increase, particularly during construction with many roads under construction, then how can the FRA with any credibility or accuracy make a claim that "impact on ER times is not anticipated to be significant? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to SS-23.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Devaluation of property value. Although there is no data to support that property located near a high speed rail loses value, one only need look at other modes of transportation, including airports, freeways, railroad tracks and bus stations, to confirm that property all along the route will lose value. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to VA-1.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: 1. Potential for flooding. My understanding is that the route will have a berm in our area which could block the water flow and cause flooding in an already flood prone area. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to FP-1 and WW-2.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Impact on hunting. We currently have deer on our property and duck and geese that fly over that will leave the area if a train is going by every 30 minutes. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to NR-1, NR-2, RF-2 and WW-9.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Aesthetic value. The elevated train will be visible for much of the 240 mile route which ruins the aesthetics and rural environment. I	Refer to AS-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: The most significant reason the HSR should not be allowed to be built by TCRR is because it is not a financially viable project. According to the Reason Foundation, TCRR has grossly underestimated the cost of the project and overestimated the potential ridership. Based on TXDoT data of projections for people that will travel between Dallas and Houston, the HSR will not get close to the ridership it needs to sustain itself. And because TCRR has publicly stated that they will pursue federal loans, taxpayers will end up supporting the HSR for generations. There is no factual data other than from TCR that shows the HSR is even needed. Any prudent person can see that based on the commute to the station, parking, security and transportation from the station to destination, it will not be practical to ride the train and very few people will take advantage of it, especially since the advertised ticket price will be so high. It just doesn't make sense for Texas, and appears too much like the California boondoggle. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to GN-2, GN-3, GN-4, NE-1, PN-3 and SC-3.
Casey Salzar	3/9/2018	Website	Per the Reason Foundation, TCRR underestimates the project cost and overestimates the ridership. The FRA did not consider the Reason Foundation's Analysis, which clearly proved this project will fail; nor has it been mentioned in the FRA DEIS at all, which proves the DEIS is not an objective and unbiased analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to AQ-7, BA-6, GN-2, GN-3 and NE-1.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The Claims by the FRA on I-45 transportation predictions, traffic congestion, safety, and transportation alternatives are not adequately supported with detailed facts.	Refer to BA-6, BA-9 and NE-1.
Casey Salzar	3/9/2018	Website	The "Public Need" has never been established in the DEIS by the FRA. "Public Need" must clearly be established due to the huge negative impact of landowners' property, homes, cemeteries and livelihood.	Refer to NE-1, NE-9, PN-3 and TR-7.
Casey Salzar	3/9/2018	Website	Existing public roads and county maintenance costs have not been adequately covered by the FRA DEIS, nor has it been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the facts to back it up. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to NE-1 and TR-7.
Casey Salzar	3/9/2018	Website	To Whom It May Concern: I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the No Build Alternative. First, any claim regarding this project being a traffic solution or congestion relief has been contradicted by TCRR publicly. TCRR has stated this project will not solve any perceived traffic issues, particularly near the big cities. In fact, due to the location of the stops, traffic within the cities will increase. Second, the FRA must show more data regarding future estimates of traffic volume. Researching past predictions, today the traffic volumes of I-45 have in no way even come close to reaching TCRR's traffic predictions. In fact, traffic volume has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that the No Build Alternative would provide no alternative transportation option, when it has not provided any data or proof that a need exists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you, Casey Salzar	Refer to BA-6, NE-1 and PN-3.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the No Build Alternative. The FRA DEIS understates the damage to the public and property but overstates the necessity for the HSR. Per the Reason Foundation, TCRR underestimates the project cost and overestimates the ridership. The FRA did not consider the Reason Foundation's Analysis, which clearly proved this project will fail; nor has it been mentioned in the FRA DEIS at all, which proves the DEIS is not an objective and unbiased analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, PN-3, TR-2 and TR-5.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The Claims by the FRA on I-45 transportation predictions, traffic congestion, safety, and transportation alternatives are not adequately supported with detailed facts. The "Public Need" has never been established in the DEIS by the FRA. "Public Need" must clearly be established due to the huge negative impact of landowners' property, homes, cemeteries and livelihood. Existing public roads and county maintenance costs have not been adequately covered by the FRA DEIS, nor has it been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the facts to back it up. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, NE-9, PN-1, PN-3 and TR-7.

Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref. DEIS Main Text 1, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the NO Build Alternative. First, any claim regarding this project being a traffic solution or congestion relief has been contradicted by TCRR publicly. TCRR has stated this project will not solve any perceived traffic issues, particularly near the big cities. In fact, due to the location of the stops, traffic within the cities will increase. Second, the FRA must show more data regarding future estimates of traffic volume. Researching past predictions, today the traffic volumes of I-45 have in no way even come close to reaching TCRR's traffic predictions. In fact, traffic volume has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that the No Build Alternative would provide no alternative transportation option, when it has not provided any data or proof that a need exists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, PN-3, TR-2 and TR-5.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a private company the responsibility to construct and operate a HSR without the application of a Comprehensive Risk Management System, particularly since the lives of the public hinge on its safe and secure construction and operation. That sort of lack of credible oversight by the FRA, a Federal Government Agency responsible for "RR Safety", could easily be considered "negligent", to say the least. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19 and TR-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). The HSR remote route with its crossings routed very close to O&G and Utility Facilities demands application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those scenarios followed by Mitigation Actions/Planning. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2 and SS-18.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There are no Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in a remote area. There is also no Risk Management System applied nor Emergency Response Planning indicated to handle a high elevation rescue of the public in case of a shut-down or incident in a remote area. These same issues would apply to the construction phase. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-18 and SS-19.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Since the FRA is responsible for RR Safety, including that of the public, and would be the federal agency to allow TCRR to operate a RR in the future with the FRA's oversight, why is there no mention in the DEIS of Risk Management Systems being applied to Public Safety or Security? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no indication that risk event scenarios have been developed by the FRA on any activity of the HSR construction and operation along with performing risk assessments by qualified Risk Engineers for those events/scenarios. There is also no evidence that the FRA has applied any Risk Management System to the highly congested traffic flows along with road and lane closures, modifications and rerouting of roads, or any risk management situations associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19, TR-6 and TR-8.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no mention Of any Risk Management System to be applied to the crossing or close proximity of the HSR to other hazardous facilities	Refer to EU-2 and SS-19.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			such as O&G facilities, pipelines, and transmission lines. Does the FRA not consider pipelines being crossed by the HSR a Risk Management Issue considering pipeline explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or are the FRA's safety processes void of a Risk Management System ? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). The public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. TCRR, based on its track record for 3+ years, will likely not fulfill many of the commitments included in the DEIS and when they do not, the FRA will be held accountable. There are also questions about TCRR's unethical actions during the collection of field data and it appears the FRA has potentially implicated themselves in potentially illegal activity against the very people they are being paid to protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Comment noted.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Who in the public will be negatively impacted by the large use of water by the HSR project? Comment: Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of trafficflows in small rural areas as a result of newly built construction sites on major road arteries, Road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The FRA should provide to the Counties via the DEIS an estimate of damage to their existing road infrastructure following 5 years of construction related traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards all planned construction sites. These will be a magnet for workers, raw materials, equipment, vendors, lay down areas, etc. and will cause considerable wear and tear on county roads that counties will then be responsible for maintaining. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The public has no idea of the potential negative impacts to their local communities and roads as a result of this project. The DEIS is not complete without the FRA advising the public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project construction phase. I propose that the Only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The DEIS has not quantified the impact of increased traffic in general, damage to existing roads, and traffic congestion over and above the current rural environment, as the result of project construction worker travel, equipment and raw material hauling, particularly around all of the construction sites and staging areas along the route, congestion associated with permit roads, traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.

Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS MAIN TEXT 1; DEIS Abstract). Does RR security fall under the responsibility of the FRA? Where in the DEIS does the FRA address the new state law expectations for security of HSRs? A number Of years ago when an HSR was being considered, the State of Texas established a regulatory board for HSR oversight. However, the project never happened and the state board was eliminated. Currently, whenever there is a project that ultimately is used by the public, there exists state regulatory agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide oversight responsibility to protect the interest of the public /taxpayers. Who will protect the public's interest outside of any FRA RR safety responsibilities during execution of this project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, SS-4, SS-5 and SS-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS MAIN TEXT 1; DEIS Abstract). What Texas State Regulatory Agency/Body with the current authority to do so is responsible and can be held accountable by the public to provide oversight on ALL aspects of this project that are not covered under the FRA's scope of "RR Safety"? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, SS-4, SS-5 and SS-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission) Past projects such as road, transmission line, and pipeline projects normally employ a very significant contingent of workers from outside Texas and certainly from outside the local areas. This will result in additional pressure on County services and infrastructure. The Counties must have time and funding to be able to adequately respond to these large challenges. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-4.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including education, particularly in very small ISDs? I propose that the only viable alternative would be that the NO BUILD Option be chosen in the final Environmental Impact Statement.	Refer to SC-4 and SC-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set I of 2; Pgs. 4-8). Since TCRR and the FRA are aware that the route they selected goes through or adjacent to many subdivisions, homes and businesses, why has the FRA DEIS not set out specific specifications for the use of noise abatement structures with minimum standards so TCRR is therefore required to put up noise abatement should those specifications not be met vs. leaving it up to TCRR once detailed design is completed? For this issue, preliminary design with a known route and known noise level is all that is needed to determine the location needs for noise abatement specifications. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). What is the negative impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically traffic, congestion, housing, medical facilities, Absorption of a portion of the food supply and demand chains, and the negative impact on small rural school ISDs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-2, SC-4, SC-6 and TR-6.
Kevin Salzar	1/29/2018	Handwritten	Texas Central is still spreading the manure from the DEIS that the HSR will generate \$15 - \$39 Billion in sales tax revenue from ticket sales on its website AND telling people to comment on the DEIS: <a href="https://www.texascentral.com/itstime/">https://www.texascentral.com/ itstime/</a> Even if every number in the DEIS's Table 3.14-22 were correct (big hint: they are not), it would take over 600 years to reach \$39 billion in sales tax revenue. This process is irretrievably broken. The DEIS must be scrapped and FRA must immediately issue a decision of NO BUILD.	Refer to SC-3 and TR-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Personal safety expectations during construction (Ref: DEIS Omission). The work by TCRR's Contractors will be in close proximity to the public. A lack of a comprehensive personal safety program as well as management commitment and leadership in safety could lead to more danger on the public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the public off guard. These must be executed in a safe manner with lots of warnings issued to the public for route changes. The FRA should provide to TCR a set of construction safety system expectations not only for personal safety, but for	Refer to SS-23 and TR-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			the safety of motorists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the additional noise impact of the additional scientifically proven "slapping sound" as a result of the aerodynamics of two lead air flows from each train colliding with each other? The FRA noise study MUST account for the scientifically proven aerodynamic "slapping sound". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-10.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 Of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the maximum noise level in dBA of TWO trains, not ONE, passing each other at any point along the HSR route while traveling in opposite directions on adjacent tracks? The DEIS only covers the noise impact of one train in one direction (87 dBA at 50'). I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. The DEIS shows 66 private road closures, 43 private roads rerouted, 161 private road crossings, 1 public road closure, 139 public roads rerouted, 463 public road crossings, and many roads, FM and CR, going over the HSR vs. the viaduct going over the roads to minimize destruction of our road system. DEIS states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or new access if it is proposed as part of the ROW construction. What if it is not proposed, meaning TCR actually gets to decide? That decision should not be left to a private company and can be catastrophic to a landowner. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-10.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). Contrary to previous TCRR documented statements, a number of FM and CR roads all across the counties are being closed and reconstructed with an overpass over the HSR. Will Texas eminent domain powers for road construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that matter and for the destruction of people's homes that originally would not have been taken specifically due to the HSR? If so, this is unlawful stealing of more land and homes than necessary as there is no proven public need or financial viability for this project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, ED-3, LU-12, LU-14, NE-1 and PN-3.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually be closed during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Will all road construction be completed before, at the same time, or after the I-ISR construction is completed? What priority will be placed on repairing and replacing roads vs. construction of the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6, TR-7 and TR-8.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, 1 of 14): File 3, TEXT 111, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Who is to pay for maintenance of these overpasses that did not exist before this project plan? Who will pay for the future maintenance of the access roads built	Refer to TR-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			alongside the HSR route that will be used to get around many of the road closures and modifications? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. Contrary to TCRR's claims and as a result of TCRR's plan, landowner's property will be cut in half with no free movement, which will severely restrict their economic potential and harm the landowner's livelihood. As TCRR is only willing to purchase the ROW they need for the HSR, landowners will suffer immensely from the restriction on the use of their land with no compensation, for a project that has not been proven necessary or financially viable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-11, NE-1, NR-6, PN-3 and TR-7.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. TCRR's advertisements for a viaduct providing this free movement were FALSE. Animals would have to be moved across a public road. Will TCRR provide culverts in any ditches alongside the access roads and fence gates as well as road shut-down/signaling methods at various locations so animals can be moved across the public roads? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-11 and NR-6. Culverts, fencing, and fence-gates would be included as possible negotiation measures to allow livestock crossings. This would be conducted on a case-by-case basis between TCRR and the landowner.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-11 and NR-6. Culverts, fencing, and fence-gates would be included as possible negotiation measures to allow livestock crossings. This would be conducted on a case-by-case basis between TCRR and the landowner.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) Documentation exists showing TCRR told the public that they only needed around 100' ROW width for the HSR. In many places that has increased to 400' at a minimum. Is it not the case, after looking at all of the HSR route maps ROW, the significant increase of ROW might be also a significant part of that increase in impacted acreage? Does TCRR have valid reasons for the change, or are they attempting to obtain the land for a reason other than the HSR, like laying broadband cable from Houston to Dallas? The FRA should investigate this issue. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-14.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) Question: viii. There exists documentation of TCRR stating the impacted acreage for the HSR would be around 3,000 acres. The recently released DEIS shows around 8,000 impacted acreage. The FRA should halt any further work on the DEIS until there is a clear understanding where all of the increases took place. Is it not the case, after looking at all of the road modifications including those reconstructed over the HSR, that the significant increase of new road work ROW is a significant part of that increase in impacted acreage? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3 and LU-14.

Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Regarding emergency response times during construction of the Dallas to Houston HSR, the FRA DEIS Summary Statement in File TEXT 111, 3.16- 24, is "Impacts to Emergency Response (ER) times are not anticipated to be significant". Since the FRA study does indicate an increase in ER times, is even ONE single public fatality due to increased ER times acceptable by this FRA DEIS? Since this FRA DEIS is not based on traffic modeling yet of the traffic increase, particularly during construction with many roads under construction, then how can the FRA with any credibility or accuracy make a claim that "impact on ER times is not anticipated to be significant"? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-23.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Devaluation of property value. Although there is no data to support that property located near a high speed rail loses value, one only need look at other modes of transportation, including airports, freeways, railroad tracks and bus stations, to confirm that property all along the route will lose value. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to VA-1.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: 1. Potential for flooding. My understanding is that the route will have a berm in our area which could block the water flow and cause flooding in an already flood prone area. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, WW-1 and WW-2.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Impact on hunting. We currently have deer on our property and duck and geese that fly over that will leave the area if a train is going by every 30 minutes. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-5 and NR-6.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Aesthetic value. The elevated train will be visible for much of the 240 mile route which ruins the aesthetics and rural environment. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: The most significant reason the HSR should not be allowed to be built by TCRR is because it is not a financially viable project. According to the Reason Foundation, TCRR has grossly underestimated the cost of the project and overestimated the potential ridership. Based on TXDoT data of projections for people that will travel between Dallas and Houston, the HSR will not get close to the ridership it needs to sustain itself. And because TCRR has publicly stated that they will pursue federal loans, taxpayers will end up supporting the HSR for generations. There is no factual data other than from TCR that shows the HSR is even needed. Any prudent person can see that based on the commute to the station, parking, security and transportation from the station to destination, it will not be practical to ride the train and very few people will take advantage of it, especially since the advertised ticket price will be so high. It just doesn't make sense for Texas, and appears too much like the California boondoggle. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AQ-7, GN-2, GN-3, GN-4, NE-1, PN-3 and SC-22.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The No Build analysis left out the huge increase in Impacted Acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres and has not been addressed by the FRA nor was it a part of the No Build Alternative Analysis. TCRR's current plan has caused the closure, rerouting, modification, and rebuilding over the HSR of many private and public roads and increased the ROW land required without any accountability for TCRR's earlier claims. The FRA simply glosses over those huge changes. Also not addressed are the many public safety considerations that the FRA has glossed over: increased ER times, safety of traffic congestion around construction sites, lane closures, rerouting roads, road closures and more public road travel required just to get from point A to point B due to the HSR. The FRA does not provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, LU-14, SS-23, TR-6 and TR-8.
Kevin Salzar	1/29/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the No Build Alternative. The FRA DEIS understates the damage to the public and property but overstates the necessity for the HSR. Per the Reason Foundation, TCRR underestimates the project cost and overestimates the ridership. The FRA did not consider the Reason Foundation's Analysis, which clearly proved this project will fail; nor has it been mentioned in the FRA DEIS at all, which proves the DEIS is not an objective and unbiased analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, PN-3, TR-2 and TR-5.

Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Aesthetic value. The elevated train will be visible for much of the 240 mile route which ruins the aesthetics and rural environment. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1.
Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: The most significant reason the HSR should not be allowed to be built by TCRR is because it is not a financially viable project. According to the Reason Foundation, TCRR has grossly underestimated the cost of the project and overestimated the potential ridership. Based on TXDOT data of projections for people that will travel between Dallas and Houston, the HSR will not get close to the ridership it needs to sustain itself. And because TCRR has publicly stated that they will pursue federal loans, taxpayers will end up supporting the HSR for generations. There is no factual data other than from TCR that shows the HSR is even needed. Any prudent person can see that based on the commute to the station, parking, security and transportation from the station to destination, it will not be practical to ride the train and very few people will take advantage of it, especially since the advertised ticket price will be so high. It just doesn't make sense for Texas, and appears too much like the California boondoggle. I propose that the Only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AQ-7, GN-2, GN-3, GN-4, NE-1, PN-3 and SC-3.
Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water supply for use at all construction sites and during construction along the entire HSR route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). The FRA must quantify the water needs over 5 years of construction and reconcile that with the State or County Water Conservation agencies to determine the need for permits or approvals for the use of source water. No indication of this in the DEIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Who in the public will be negatively impacted by the large use of water by the HSR project? Comment: Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water supply for use at all construction sites and during construction along the entire HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Will water be used almost constantly during dry times (almost all the time in Texas) to water all of the temporary dirt roads along the HSR construction route and at road modifications? What is the volume of water usage for this project, including during construction and how does it fit into Texas' focus on water conservation programs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23; Sect. 5, Pg. 27). Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The public has no idea of the potential negative impacts to their local communities and roads as a result of this project. The DEIS is not complete without the FRA advising the public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project construction phase. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Marilyn Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23; Sect. 5, Pg. 27). The DEIS has not quantified the impact of increased traffic in general, damage to existing roads, and traffic congestion over and above the current rural environment, as the result of project construction worker travel, equipment and raw material hauling, particularly around all of the construction sites and staging areas along the route, congestion associated with permit roads,	Refer to TR-6 and TR-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Marilyn Salzar	2/5/2018	Website	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually be closed during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Will all road construction be completed before, at the same time, or after the HSR construction is completed? What priority will be placed on repairing and replacing roads vs. construction of the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6, TR-7 and TR-8. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See <b>TR-MM#1: Traffic Control Plan in Section 3.11.6.2, Transportation, Mitigation Measures</b> for more information.
Marilyn Salzar	2/5/2018	Website	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Impact on hunting. We currently have deer on our property and duck and geese that fly over that will leave the area if a train is going by every 30 minutes. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2 and RF-2.
Marilyn Salzar	2/6/2018	Letter	Texas Central has grossly exaggerated the potential ridership and underestimated the costs of this project, as shown by 5 studies based on factual data.	Refer to GN-2, GN-3 and GN-4.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). The public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. TCRR, based on its track record for 3+ years, will likely not fulfill many of the commitments included in the DEIS and when they do not, the FRA will be held accountable. There are also questions about TCRR's unethical actions during the collection of field data and it appears the FRA has potentially implicated themselves in potentially illegal activity against the very people they are being paid to protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to GN-1 and NE-1.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, Road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The FRA should provide to the Counties via the DEIS an estimate of damage to their existing road infrastructure following 5 years of construction related traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards all planned construction sites. These will be a magnet for workers, raw materials, equipment, vendors, lay down areas, etc. and will cause considerable wear and tear on county roads that counties will then be responsible for maintaining. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Marilyn Salzar	2/6/2018	Handwritten	My concern with this high speed rail project is its financial viability, which I believe covers the scope of the DEIS to "assess the potential benefit and detrimental effects of implementing the project" as stated in the introduction to the DEIS. Texas Central has grossly exaggerated the potential ridership and underestimated the costs of this project, as shown by 5 studies based on factual data. The Texas Department of Transportation projected annual ridership of .7 to 2.7 million passengers by 2035, yet Texas Central expects 5 million. Where are these extra passengers coming from? The FRA should not just accept what Texas Central tells them and should start relying on facts and critical thinking to do their analysis. Most commuters from Houston to Dallas do not come from the area around the potential Houston station. Even most business travelers do not live downtown. They will have to commute from the suburbs to the train station, which only makes Houston's transportation issues worse. Then they will have to park, go through TSA Security (which Texas Central fought against in the last legislative session) then commute from the station in Dallas to their final destination. So the trip will save very little time, if any. In addition to the extra hassle of getting to and from the stations, the rider will have to pay an average of \$400 for the trip. Any prudent person can recognize that very few people are going to choose to commute into Houston just to save an extra 30 minutes on their trip to Dallas, plus pay more money to take that trip. Also according to several studies, Texas Central has grossly underestimated their capital costs to build the project. Their estimated costs have grown since they first touted the project, but it is still underestimated by half according to several studies. One study estimates the high speed rail will have a shortfall of \$537 million dollars per year. We know that it is not a privately funded project like Texas Central has said because they have raised less than 1% of the capital they need and they are trying to get your approval so they can pursue federal loans. The investors are intelligent people. They are not going to put their money in a project they know will not cash	Refer to AQ-7, GN-2, NE-1, NE-9 and SC-22.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			flow, until they are certain they receive those federal funds, which is why only 1% has been raised. If you allow this project to move forward, when Texas Central defaults on those federal loans, I and my descendants for generations will have to pay to operate a high speed train that few people ride. I should not have to support the pipe dreams of others. Your obligation is to the taxpayers of this country, not to the highly paid marketing experts at Texas Central, the misled politicians, and investors with grandiose ideas who might be seeking your favors. I and other voters will be watching to see who is doing their job for the taxpayers, not for the investors with deep pockets. Thank you for your time.	
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref. DEIS Main Text 1, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the No Build Alternative. The FRA DEIS understates the damage to the public and property but overstates the necessity for the HSR. Per the Reason Foundation, TCRR underestimates the project cost and overestimates the ridership. The FRA did not consider the Reason Foundation's Analysis, which clearly proved this project will fail; nor has it been mentioned in the FRA DEIS at all, which proves the DEIS is not an objective and unbiased I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Thank you,	Refer to BA-6, GN-2, GN-3, NE-9 and PN-3.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The Claims by the FRA on 1-45 transportation predictions, traffic congestion, safety, and transportation alternatives are not adequately supported with detailed facts. The "Public Need" has never been established in the DEIS by the FRA. "Public Need" must clearly be established due to the huge negative impact of landowners ' property, homes, cemeteries and livelihood. Existing public roads and county maintenance costs have not been adequately covered by the FRA DEIS, nor has it been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the facts to back it up. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, NE-9, PN-3 and TR-7.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref. "Public Need" must clearly be established due to the huge negative impact of landowners ' property, homes, cemeteries and livelihood. Existing public roads and county maintenance costs have not been adequately covered by the FRA DEIS, nor has it been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the facts to back it up. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-4, NE-1, NE-9, PN-3, TR-7 and TR-8.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref. DEIS Main Text 1, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the No Build Alternative. First, any claim regarding this project being a traffic solution or congestion relief has been contradicted by TCRR publicly. TCRR has stated this project will not solve any perceived traffic issues, particularly near the big cities. In fact, due to the location of the stops, traffic within the cities will increase. Second, the FRA must show more data regarding future estimates of traffic volume. Researching past predictions, today the traffic volumes of I-45 have in no way even come close to reaching TCRR's traffic predictions. In fact, traffic volume has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that the No Build Alternative would provide no alternative transportation option, when it has not provided any data or proof that a need exists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, PN-3, TR-2 and TR-5.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref:	Refer to SS-19 and TR-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			DEIS Appendix F TCRR FDCE v7 REPORr: sect. 3.12, Pg. 49 of 199; sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a private company the responsibility to construct and operate a HSR without the application of a Comprehensive Risk Management System, particularly since the lives ofthe public hinge on its safe and secure construction and operation. That sort of lack of credible oversight by the FRA, a Federal Government Agency responsible for "RR Safety", could easily be considered "negligent", to say the least. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v? REPORT: Sect. 3.12, Pg. 49 of 199; sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; sect. 4.4, Pg. 64 of 199). The HSR remote route with its crossings routed very close to O&G and Utility Facilities demands application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those scenarios followed by Mitigation Actions/Planning. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2, SS-18 and SS-19.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There are no Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in a remote area. Here is also no Risk Management System applied nor Emergency Response Planning indicated to handle a high elevation rescue of the public in case of a shut-down or incident in a remote area. These same issues would apply to the construction phase. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2, SS-3, SS-18, SS-19 and TR-6.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Since the FRA is responsible for RR Safety, including that of the public, and would be the federal agency to allow TCRR to operate a RR in the future with the FRA's oversight, why is there no mention in the DEIS of Risk Management Systems being applied to Public Safety or Security? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRRFDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no mention of any Risk Management System to be applied to the crossing or close proximity of the HSR to other hazardous facilities such as O&G facilities, pipelines, and transmission lines. Does the FRA not consider pipelines being crossed by the HSR a Risk Management Issue considering pipeline explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or are the FRA's safety processes void of a Risk Management System? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2, SS-18 and SS-19.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). The public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results ofTCRR's Plan. TCRR, based on its track record for 3+ years, will likely not fillfill many of the commitments included in the DEIS and when they do not, the FRA will be held accountable. There are also questions about TCRR's unethical actions during the collection of field data and it appears the FRA has potentially implicated themselves in potentially illegal activity against the very people they are being paid to protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and NE-8.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). TXDOT was unwilling to work with a local county government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an advocacy group, but a true county governing body. The county sued TXDOT and it was found during the court case that the FRA had told TXDOT not to work with this local goveming body, and to not attend the meetings. Waller County won the court case. TXDOTthen appealed, and lost the appeal. Did the FRA break federal law by telling a Texas State government body not to work with a county government body and not to attend the meetings? Why would the FRA not want input from a county government body? Since the public is fully aware of this case, does this not	Refer to PI-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			destroy the public trust in what the FRA has done regarding the HSR DEIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). Has the FRA evaluated the answers provided to the public in open forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? If not, is the FRA interested in any false or misleading statements made to the public by TCRR vs. what the FRA has included in the DEIS? Is it important to FRA's analysis of TCRR's capability to operate a RR Or not if TCRR has misled the public on a number of issues as compared to what the FRA has included in the DEIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and PI-4.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, Road closures, road modifications, and rerouting existing roads (Ref. DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The FRA should provide to the Counties via the DEIS an estimate of damage to their existing road infrastructure following 5 years of construction related traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards all planned construction sites. These will be a magnet for workers, raw materials, equipment, vendors, lay down areas, etc. and will cause considerable wear and tear on county roads that counties will then be responsible for maintaining. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Does RR security fall under the responsibility of the FRA? Where in the DEIS does the FRA address the new state law expectations for security of HSRs? A number of years ago when an HSR was being considered, the State of Texas established a regulatory board for HSR oversight. However, the project never happened and the state board was eliminated. Currently, whenever there is a project that ultimately is used by the public, there exists state regulatory agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide oversight responsibility to protect the interest of the public [taxpayers. Who will protect the public's interest outside of any FRA RR safety responsibilities during execution of this project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, SS-4, SS-5 and SS-6.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS_MAIN TEXT 1; DEIS Abstract). What Texas State Regulatory Agency/Body with the current authority to do so is responsible and can be held accountable by the public to provide oversight on ALL aspects of this project that are not covered under the FRA's scope of "RR Safety"? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, SS-4, SS-5 and SS-6.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Past projects such as road, transmission line, and pipeline projects normally employ a very significant contingent of workers from outside Texas and certainly from outside the local areas. This will result in additional pressure on County services and infrastructure. The Counties must have time and funding to be able to adequately respond to these large challenges. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-4.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including education, particularly in very small ISDs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-4 and SC-6.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). What is the negative impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically traffic, congestion, housing, medical facilities, Absorption of a portion of the food supply and demand chains, and the negative impact on small rural school ISDs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-4 and SC-6.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Additional traffic and congestion due to permit loads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 3, Pg. 22 of 34; Sect. 4, Pg. 23 of 34; Sect. 5, Pg. 27 of 34). What is the quantity of permit loads the public should expect to be added to their traffic flow over and above	Refer to TR-6 and TR-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>the norm prior to the execution of this project? No figures on permit loads are included in the DEIS. There are construction sites all along the route that will be used for staging of materials and for the construction of pre-cast concrete structural components. Many of those loads going to the construction sites as well as constructed structural components are very large, likely qualifying as permit loads that must traverse existing roads to transport them to the HSR installation site. This will cause significant wear and tear on those roads and there is no money allocated to the counties to cover the cost.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	
Marilyn Salzar	2/6/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Personal safety expectations during construction (Ref: DEIS Omission). The work by TCRR's Contractors will be in close proximity to the public. A lack of a comprehensive personal safety program as well as management commitment and leadership in safety could lead to more danger on the public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the public off guard. These must be executed in a safe manner with lots of warnings issued to the public for route changes. The FRA should provide to TCR a set of construction safety system expectations not only for personal safety, but for the safety of motorists.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to SS-19 and TR-6.
Marilyn Salzar	2/6/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Since TCRR and the FRA are aware that the route they selected goes through or adjacent to many subdivisions, homes and businesses, why has the FRA DEIS not set out specific specifications for the use of noise abatement structures with minimum standards so TCRR is therefore required to put up noise abatement should those specifications not be met vs. leaving it up to TCRR once detailed design is completed? For this issue, preliminary design with a known route and known noise level is all that is needed to determine the location needs for noise abatement specifications.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to NV-1.
Marilyn Salzar	2/6/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: EIS Appendix E Combined Tech Memos Set I of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the additional noise impact of the additional scientifically proven "slapping sound" as a result of the aerodynamics of two lead air flows from each train colliding with each other? The FRA noise study MUST account for the scientifically proven aerodynamic "slapping sound".</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to NV-1 and NV-10.
Marilyn Salzar	2/6/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: DEIS Appendix E Combined Tech Memos Set I of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the maximum noise level in dBA of TWO trains, not ONE, passing each other at any point along the HSR route while traveling in opposite directions on adjacent tracks? The DEIS only covers the noise impact of one train in one direction (87 dBA at 50').</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to NV-1.
Marilyn Salzar	2/6/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. The DEIS shows 66 private road closures, 43 private roads rerouted, 161 private road crossings, 1 public road closure, 139 public roads rerouted, 463 public road crossings, and many roads, FM and CR, going over the HSR vs. the viaduct going over the roads to minimize destruction of our road system. DEIS states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or new access if it is proposed as part of the ROW construction. What if it is not proposed, meaning TCR actually gets to decide? That decision should not be left to a private company and can be catastrophic to a landowner.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	<p>Refer to TR-6, TR-8 and TR-10.</p> <p>The Project would travel underneath State Highway 8 through retention-cut (below-grade) designs. Design details, ownership, and maintenance responsibilities would be closely coordinated with the appropriate Project stakeholders during more advanced design during the design and construction phase.</p>
Marilyn Salzar	2/6/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). Contrary to previous TCRR documented statements, a number of FM and CR roads all across the counties are being closed and reconstructed with an overpass over the HSR. Will Texas eminent domain powers for road construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that matter and for the destruction of people's homes that originally would not have been taken specifically due to the HSR? If so, this is unlawful stealing of more land and homes than necessary as there is no proven public need or financial viability for this project.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	<p>Refer to ED-1 and TR-8.</p> <p>Any road modifications are included within the Project's footprint as described in the Final EIS.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually be closed during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Will all road construction be completed before, at the same time, or after the HSR construction is completed? What priority will be placed on repairing and replacing roads vs. construction of the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6, TR-7 and TR-8. The traffic control plan would require safe and efficient travel during construction, which would require that roads be repaired so that travel can be completed safely. Coordination would occur between TCRR and local agencies as permits are released. See <b>TR-MM#1: Traffic Control Plan in Section 3.11.6.2, Transportation, Mitigation Measures</b> for more information.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Who is to pay for maintenance of these overpasses that did not exist before this project plan? Who will pay for the future maintenance of the access roads built alongside the HSR route that will be used to get around many of the road closures and modifications? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-7 and TR-8.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. Contrary to TCRR's claims and as a result of TCRR's plan, landowner's property will be cut in half with no free movement, which will severely restrict their economic potential and harm the landowner's livelihood. As TCRR is only willing to purchase the ROW they need for the HSR, landowners will suffer immensely from the restriction on the use of their land with no compensation, for a project that has not been proven necessary or financially viable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6, TR-7, TR-8 and TR-10.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) Documentation exists showing TCRR told the public that they only needed around 100" ROW width for the HSR. In many places that has increased to 400' at a minimum. Is it not the case, after looking at all of the HSR route maps ROW, the significant increase of ROW might be also a significant part of that increase in impacted acreage? Does TCRR have valid reasons for the change, or are they attempting to obtain the land for a reason other than the HSR, like laying broadband cable from Houston to Dallas? The FRA should investigate this issue. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-14.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRRFDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) Question: viii. There exists documentation of TCRR stating the impacted acreage for the HSR would be around 3,000 acres. The recently released DEIS shows around 8,000 impacted acreage. The FRA should halt any further work on the DEIS until there is a clear understanding where all of the increases took place. Is it not the case, after looking at all of the road modifications including those reconstructed over the HSR, that the significant increase of new road work ROW is a significant part of that increase in impacted acreage? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3 and LU-14.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Since the FRA study does indicate an increase in ER times, is even ONE single public fatality due to increased ER times acceptable by this FRA DEIS? Since this FRA DEIS is not based on traffic modeling yet of the traffic increase, particularly during construction with many roads under construction, then how can the FRA with any credibility or accuracy make a claim that "impact on ER times is not anticipated to be significant?" I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-23 and TR-6.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Devaluation of property value. Although there is no data to support that property located near a high speed rail loses value, one only need look at other modes of transportation, including airports, freeways, railroad tracks and bus stations, to confirm that property all along the route will lose value. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to VA-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: 1. Potential for flooding. My understanding is that the route will have a berm in Our area which could block the water flow and cause flooding in an already flood prone area. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, WW-1 and WW-2.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Impact on hunting. We currently have deer on our property and duck and geese that fly over that will leave the area if a train is going by every 30 minutes. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2 and RF-2.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Aesthetic value. The elevated train will be visible for much of the 240 mile route which ruins the aesthetics and rural environment. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: The most significant reason the HSR should not be allowed to be built by TCRR is because it is not a financially viable project. According to the Reason Foundation, TCRR has grossly underestimated the cost of the project and overestimated the potential ridership. Based on TXDOT data of projections for people that will travel between Dallas and Houston, the HSR will not get close to the ridership it needs to sustain itself. And because TCRR has publicly stated that they will pursue federal loans, taxpayers will end up supporting the HSR for generations. There is no factual data other than from TCR that shows the HSR is even needed. Any prudent person can see that based on the commute to the station, parking, security and transportation from the station to destination, it will not be practical to ride the train and very few people will take advantage of it, especially since the advertised ticket price will be so high. It just doesn't make sense for Texas, and appears too much like the California boondoggle. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AQ-7, GN-2, GN-3, GN-4, NE-1, PN-3, SC-3 and SC-22.
Marilyn Salzar	2/6/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, sect. ES.8, Pg. 8). No Build analysis left out the huge increase in Impacted Acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres and has not been addressed by the FRA nor was it a part of the No Build Alternative Analysis. TCRR's current plan has caused the closure, rerouting, modification, and rebuilding over the HSR of many private and public roads and increased the ROW land required without any accountability for TCRR's earlier claims. The FRA simply glosses over those huge changes. Also not addressed are the many public safety considerations that the FRA has glossed over: increased ER times, safety of traffic congestion around construction sites, lane closures, rerouting roads, road closures and more public road travel required just to get from point A to point B due to the HSR. The FRA does not provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, BA-8, LU-14, SS-23, TR-6 and TR-8.
Marilyn Salzar	2/6/2018	Email	We live in the White Oak Falls Subdivision on Kirkland Woods Drive. We attended the public hearing held at Woodard Elementary on 2/5 but to be honest, we left after 45 min because we didn't feel this was beneficial. I'd like to know how the high speed train will affect my home. How many feet are people allowed to live close to the viaduct? Segment 5 does not necessarily cut through my property when looking at the map but it does cut through the homes across the street. We are trying to understand what this means for our family and our home. Will we see a wall where our neighbors homes used to be? Will large trees/vegetation be planted? What kind of safety will be put around the area since we have 2 girls (ages 4 and 10) and 2 small dogs? I highlighted (7532) to show you where our home is. I also noticed on the map that homes are labeled with 7K numbers. Does this mean these homes are affected by the train? Based on your past experience with similar projects could you give us some insight as to what we can expect. We'd greatly appreciate any input and look forward to your response.	This specific location would likely suffer adverse visual impacts due to the close proximity to the Project. Mitigation measures for visual impacts can be found in <b>Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation</b> . However, site-specific mitigation has not yet been determined and will be identified through negotiations between TCRR and the landowner. Additionally, noise walls may be used to minimize impacts where it has been determined noise impacts will occur. The walls could be treated with vegetation to soften the look of the noise mitigation. If there are no noise impacts, trees or vegetation could be planted to limit the views of the Project. Please refer to <b>Section 3.4.4, Noise and Vibration, Affected Environment</b> for impacts related to noise. The 7K numbers were the parcel numbers for parcels in and around the LOD (within 200 feet).
Marilyn Salzar	2/6/2018	Oral	My name is Marilyn Salazar. I am a CPA, and I live in Waller. My concern with this high-speed rail project is its financial viability, which I believe covers the scope of the DEIS to "assess the potential 1 benefit and detrimental effects of implementing the project" as stated in the introduction to the DEIS. Texas Central has grossly exaggerated the potential ridership and underestimated the costs of this project, as shown by five studies based on factual data. The Texas Department of Transportation projected annual ridership of .7 to 2.7 million passengers by 2035, yet Texas Central expects 5 million. Where are these extra passengers coming from? The FRA should not just accept what Texas Central	Refer to AQ-7, BA-6, GN-2, GN-3, GN-4, NE-1, PN-3, SC-3 and SC-22.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			tells them and should start relying on facts and critical thinking to do their analysis. Most commuters from Houston to Dallas do not come from the area around the potential Houston station. Even most business travelers do not live downtown. They will have to commute from the suburbs to the train station, which only makes Houston's transportation issues worse. Then they will have to park, go through TSA security (which Texas Central fought against in the last legislative session) then commute from the station in Dallas to their final destination. So the trip will save very little time, if any. In addition to the extra hassle of getting to and from the stations, the rider will have to pay an average of \$400 for the trip. Any prudent person can recognize that very few people are going to choose to commute into Houston just to save an extra 30 minutes on their trip to Dallas, plus pay more money to take that trip. Also, according to several studies, Texas Central has grossly underestimated their capital costs to build the project. Their estimated costs have grown since they first touted the project, but it is still underestimated by half according to several studies. One study estimates the high-speed rail will have a shortfall of \$537 million per year. We know that it is not a privately funded project like Texas Central has said because they have raised less than 1 percent of the capital they need and they are trying to get your approval so they can pursue federal loans. The investors are intelligent people. They are not going to put their money in a project they know will not cash flow, until they are certain they receive those federal funds, which is why only 1 percent has been raised. If you allow this project to move forward, when Texas Central defaults on those federal loans, I and my descendants for generations will have to pay to operate a high-speed train that few people ride. I should not have to support the pipe dreams of others. Your obligation is to the taxpayers of this country, not to the highly paid marketing experts at Texas Central, the misled politicians, and investors with grandiose ideas who might be job seeking your favors. I and other voters will be watching to see who is doing their job for the taxpayers, not for the investors with deep pockets.	
Tommy Salzar	2/5/2018	Letter	The FRA does not provide adequate documentation for elimination of the No Build Alternative. Per the Reason Foundation, TCRR underestimates the project cost and overestimates the ridership.	Refer to BA-6, GN-2, GN-3, NE-9 and PN-3.
Tommy Salzar	2/5/2018	Letter	The No Build analysis left out the huge increase in Impacted Acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres and has not been addressed by the FRA nor was it a part of the No Build Alternative Analysis. Also not addressed are the many public safety considerations that the FRA has glossed over: increased ER times, safety of traffic congestion around construction sites, lane closures, rerouting roads, road closures and more public road travel required just to get from point A to point B due to the HSR.	Refer to BA-6, LU-14, SS-23, TR-6 and TR-8.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The Claims by the FRA on I-45 transportation predictions, traffic congestion, safety, and transportation alternatives are not adequately supported with detailed facts. The "Public Need" has never been established in the DEIS by the FRA. "Public Need" must clearly be established due to the huge negative impact of landowners' property, homes, cemeteries and livelihood. Existing public roads and county maintenance costs have not been adequately covered by the FRA DEIS, nor has it been quantified by the FRA like the other things that support the HSR have been quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the facts to back it up. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, NE-9, PN-1, PN-3 and TR-7.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref. DEIS Main Text 1, Sect. ES.8, Pg. 8). The FRA does not provide adequate documentation for elimination of the NO Build Alternative. First, any claim regarding this project being a traffic solution or congestion relief has been contradicted by TCRR publicly. TCRR has stated this project will not solve any perceived traffic issues, particularly near the big cities. In fact, due to the location of the stops, traffic within the cities will increase. Second, the FRA must show more data regarding future estimates of traffic volume. Researching past predictions, today the traffic volumes of I-45 have in no way even come close to reaching TCRR's traffic predictions. In fact, traffic volume has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that the No Build Alternative would provide no alternative transportation option, when it has not provided any data or proof that a need exists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, PN-3, TR-2 and TR-5.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is considering giving a private company the responsibility to construct and operate a HSR without the application of a Comprehensive Risk Management System, particularly since the lives of the public hinge on its safe and secure construction and operation. That sort of lack of credible oversight by the FRA, a Federal Government Agency responsible for "RR Safety", could easily be considered "negligent", to say the least. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19 and TR-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR and Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). The HSR remote route with its crossings routed very close to O&G and Utility Facilities demands application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those scenarios followed by Mitigation Actions/Planning. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2 and SS-18.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There are no Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in a remote area. There is also no Risk Management System applied nor Emergency Response Planning indicated to handle a high elevation rescue of the public in case of a shut-down or incident in a remote area. These same issues would apply to the construction phase. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-18 and SS-19.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Since the FRA is responsible for RR Safety, including that of the public, and would be the federal agency to allow TCRR to operate a RR in the future with the FRA's oversight, why is there no mention in the DEIS of Risk Management Systems being applied to Public Safety or Security? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no indication that risk event scenarios have been developed by the FRA on any activity of the HSR construction and operation along with performing risk assessments by qualified Risk Engineers for those events/scenarios. There is also no evidence that the FRA has applied any Risk Management System to the highly congested traffic flows along with road and lane closures, modifications and rerouting of roads, or any risk management situations associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19, TR-6 and TR-8.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no mention Of any Risk Management System to be applied to the crossing or close proximity of the HSR to other hazardous facilities such as O&G facilities, pipelines, and transmission lines. Does the FRA not consider pipelines being crossed by the HSR a Risk Management Issue considering pipeline explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or are the FRA's safety processes void of a Risk Management System ? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2 and SS-19.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). The public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. TCRR, based on its track record for 3+ years, will likely not fulfill many of the commitments included in the DEIS and when they do not, the FRA will be held accountable. There are also questions about TCRR's unethical actions during the collection of field data and it appears the FRA has potentially implicated themselves in potentially illegal activity against the very people they are being paid to protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Comment noted.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Who in the public will be negatively impacted by the large use of water	Refer to WW-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			by the HSR project? Comment: Due to water conservation efforts in Texas, the public has been under more regulatory limitations associated with drilling new water wells vs. the use of available surface water. Because of the huge amount of road work, and the extremely large size of many of the Construction Sites, there will be a need for an enormous amount of water for keeping dust levels to a minimum as required in the air quality restrictions. The DEIS simply states that Water will be made available at the construction sites. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of trafficflows in small rural areas as a result of newly built construction sites on major road arteries, Road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The FRA should provide to the Counties via the DEIS an estimate of damage to their existing road infrastructure following 5 years of construction related traffic wear and tear, particularly along all equipment/material travel corridors from major highways towards all planned construction sites. These will be a magnet for workers, raw materials, equipment, vendors, lay down areas, etc. and will cause considerable wear and tear on county roads that counties will then be responsible for maintaining. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). Rural communities and all roads in the vicinity of the HSR will see a significant increase and change in type of traffic flow and volumes. Existing roads will be damaged as a result of that increased traffic, particularly with lots of heavier loads than normal. The public has no idea of the potential negative impacts to their local communities and roads as a result of this project. The DEIS is not complete without the FRA advising the public what they should expect as well as the changes that might have to be considered in the local infrastructure to mitigate some of the many negative impacts of the HSR Project construction phase. I propose that the Only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Significant changes to the magnitude, congestion, and make-up of traffic flows in small rural areas as a result of newly built construction sites on major road arteries, road closures, road modifications, and rerouting existing roads (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 4.2, Pg. 23;Sect. 5, Pg. 27). The DEIS has not quantified the impact of increased traffic in general, damage to existing roads, and traffic congestion over and above the current rural environment, as the result of project construction worker travel, equipment and raw material hauling, particularly around all of the construction sites and staging areas along the route, congestion associated with permit roads, traffic associated with the road closures and road modifications or rebuilding, and that associated with construction of the HSR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6 and TR-7.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS MAIN TEXT 1; DEIS Abstract). Does RR security fall under the responsibility of the FRA? Where in the DEIS does the FRA address the new state law expectations for security of HSRs? A number Of years ago when an HSR was being considered, the State of Texas established a regulatory board for HSR oversight. However, the project never happened and the state board was eliminated. Currently, whenever there is a project that ultimately is used by the public, there exists state regulatory agencies such as the Public Utility Commission of Texas or the Railroad Commission that provide oversight responsibility to protect the interest of the public /taxpayers. Who will protect the public's interest outside of any FRA RR safety responsibilities during execution of this project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, SS-4, SS-5 and SS-6.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Texas State Regulatory Agency/Body (Ref: DEIS MAIN TEXT 1; DEIS Abstract). What Texas State Regulatory Agency/Body with the current authority to do so is responsible and can be held accountable by the public to provide oversight on ALL aspects of this project that are not covered under the FRA's scope of "RR Safety"? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, SS-4, SS-5 and SS-6.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission) Past projects such as road, transmission line, and pipeline projects normally employ a very significant contingent of workers from outside Texas and certainly from outside the local areas. This will result in additional pressure on County services and infrastructure. The Counties must have	Refer to SC-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			time and funding to be able to adequately respond to these large challenges. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). There exists nothing in the DEIS to address this issue. Has the FRA been working with Counties to provide them with the extraordinary needs that will be thrust upon them as a result of the huge influx of construction personnel and to understand the County's view of the increased resources and infrastructure that will be required of them including education, particularly in very small ISDs? I propose that the only viable alternative would be that the NO BUILD Option be chosen in the final Environmental Impact Statement.	Refer to SC-4 and SC-6.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set I of 2; Pgs. 4-8). Since TCRR and the FRA are aware that the route they selected goes through or adjacent to many subdivisions, homes and businesses, why has the FRA DEIS not set out specific specifications for the use of noise abatement structures with minimum standards so TCRR is therefore required to put up noise abatement should those specifications not be met vs. leaving it up to TCRR once detailed design is completed? For this issue, preliminary design with a known route and known noise level is all that is needed to determine the location needs for noise abatement specifications. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Adverse impact of the added construction personnel on the area traffic, schools, and housing infrastructure (Ref: DEIS Omission). What is the negative impact due to increased construction personnel over and above those normally in the areas and their traveling needs as it impacts specifically traffic, congestion, housing, medical facilities, Absorption of a portion of the food supply and demand chains, and the negative impact on small rural school ISDs? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-2, SC-4, SC-6 and TR-6.
Tommy Salzar	2/5/2018	Handwritten	Texas Central is still spreading the manure from the DEIS that the HSR will generate \$15 - \$39 Billion in sales tax revenue from ticket sales on its website AND telling people to comment on the DEIS: <a href="https://www.texascentral.com/itstime/">https://www.texascentral.com/itstime/</a> Even if every number in the DEIS's Table 3.14-22 were correct (big hint: they are not), it would take over 600 years to reach \$39 billion in sales tax revenue. This process is irretrievably broken. The DEIS must be scrapped and FRA must immediately issue a decision of NO BUILD.	Refer to SC-3 and TR-6.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Personal safety expectations during construction (Ref: DEIS Omission). The work by TCRR's Contractors will be in close proximity to the public. A lack of a comprehensive personal safety program as well as management commitment and leadership in safety could lead to more danger on the public than if this project had never been done. Also, many accidents including fatalities occur during road construction due to surprise lane changes and route changes catching the public off guard. These must be executed in a safe manner with lots of warnings issued to the public for route changes. The FRA should provide to TCR a set of construction safety system expectations not only for personal safety, but for the safety of motorists. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-23 and TR-6.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set 1 of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the additional noise impact of the additional scientifically proven "slapping sound" as a result of the aerodynamics of two lead air flows from each train colliding with each other? The FRA noise study MUST account for the scientifically proven aerodynamic "slapping sound". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-10.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Applicable noise measurements and science omitted by the DEIS (Ref: DEIS Appendix E Combined Tech Memos Set I Of 2; Pgs. 4-8). TCRR has been asked this question regarding the maximum level of noise a number of times at Open Houses, Public Informational Forums, and in writing without a single response. What is the maximum noise level in dBA of TWO trains, not ONE, passing each other at any point along the HSR route while traveling in opposite directions on adjacent tracks? The DEIS only covers the noise impact of one train in one direction (87 dBA at 50'). I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Tommy Salzar	2/5/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11).</p> <p>TCRR has stated in a Public Forum that the only road going over the HSR is Beltway 8. The DEIS shows 66 private road closures, 43 private roads rerouted, 161 private road crossings, 1 public road closure, 139 public roads rerouted, 463 public road crossings, and many roads, FM and CR, going over the HSR vs. the viaduct going over the roads to minimize destruction of our road system. DEIS states existing private property access will be provided as a part of purchase of property as a part of the ROW construction or new access if it is proposed as part of the ROW construction. What if it is not proposed, meaning TCR actually gets to decide? That decision should not be left to a private company and can be catastrophic to a landowner.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to TR-10.
Tommy Salzar	2/5/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11).</p> <p>Contrary to previous TCRR documented statements, a number of FM and CR roads all across the counties are being closed and reconstructed with an overpass over the HSR. Will Texas eminent domain powers for road construction be used to acquire the additional ROW necessary to reconstruct the roads over the HSR or for any road rerouting or modifications for that matter and for the destruction of people's homes that originally would not have been taken specifically due to the HSR? If so, this is unlawful stealing of more land and homes than necessary as there is no proven public need or financial viability for this project.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to ED-1, ED-3, LU-12, LU-14, NE-1 and PN-3.
Tommy Salzar	2/5/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11).</p> <p>A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Per the description of TCR's plan in the Tables of 3.11, will the FM or CR Roads actually be closed during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Will all road construction be completed before, at the same time, or after the I-ISR construction is completed? What priority will be placed on repairing and replacing roads vs. construction of the HSR?</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to TR-6, TR-7 and TR-8.
Tommy Salzar	2/5/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, 1 of 14): File 3, TEXT 111, Tables 3.11).</p> <p>A number of FM and CR roads all across the counties being closed and reconstructed with an overpass over the HSR. Who is to pay for maintenance of these overpasses that did not exist before this project plan? Who will pay for the future maintenance of the access roads built alongside the HSR route that will be used to get around many of the road closures and modifications?</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to TR-7.
Tommy Salzar	2/5/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11)</p> <p>An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. Contrary to TCRR's claims and as a result of TCRR's plan, landowner's property will be cut in half with no free movement, which will severely restrict their economic potential and harm the landowner's livelihood. As TCRR is only willing to purchase the ROW they need for the HSR, landowners will suffer immensely from the restriction on the use of their land with no compensation, for a project that has not been proven necessary or financially viable.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.</p>	Refer to LU-11, NE-1, NR-6, PN-3 and TR-7.
Tommy Salzar	2/5/2018	Handwritten	<p>I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11).</p> <p>An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. 			road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. TCRR's advertisements for a viaduct providing this free movement were FALSE. Animals would have to be moved across a public road. Will TCRR provide culverts in any ditches alongside the access roads and fence gates as well as road shut-down/signaling methods at various locations so animals can be moved across the public roads? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	conducted on a case-by-case basis between TCRR and the landowner.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11). An access road will be built all up and down the HSR to help move traffic from closed roads or roads being rerouted or reconstructed. As any road built along the HSR would become a public road that must be fenced off due to liabilities as well as keeping animals in the landowner's property, this will negatively impact the free movement of equipment and animals even with the use of a viaduct. TCRR's advertisements for a viaduct providing this free movement were FALSE. Animals would have to be moved across a public road. Will TCRR provide culverts in any ditches alongside the access roads and fence gates as well as road shut-down/signaling methods at various locations so animals can be moved across the public roads? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-11 and NR-6. Culverts, fencing, and fence-gates would be included as possible negotiation measures to allow livestock crossings. This would be conducted on a case-by-case basis between TCRR and the landowner.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) Documentation exists showing TCRR told the public that they only needed around 100' ROW width for the HSR. In many places that has increased to 400' at a minimum. Is it not the case, after looking at all of the HSR route maps ROW, the significant increase of ROW might be also a significant part of that increase in impacted acreage? Does TCRR have valid reasons for the change, or are they attempting to obtain the land for a reason other than the HSR, like laying broadband cable from Houston to Dallas? The FRA should investigate this issue. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-14.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Road closures and modifications (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 6.5, Pgs. 29-30 of 34; Also Appendix F TCRR FDCE v7 REPORT; Appendix C, Pg. 1 of 14): File 3, TEXT 111, Tables 3.11) Question: viii. There exists documentation of TCRR stating the impacted acreage for the HSR would be around 3,000 acres. The recently released DEIS shows around 8,000 impacted acreage. The FRA should halt any further work on the DEIS until there is a clear understanding where all of the increases took place. Is it not the case, after looking at all of the road modifications including those reconstructed over the HSR, that the significant increase of new road work ROW is a significant part of that increase in impacted acreage? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3 and LU-14.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Regarding emergency response times during construction of the Dallas to Houston HSR, the FRA DEIS Summary Statement in File TEXT 111, 3.16- 24, is "Impacts to Emergency Response (ER) times are not anticipated to be significant". Since the FRA study does indicate an increase in ER times, is even ONE single public fatality due to increased ER times acceptable by this FRA DEIS? Since this FRA DEIS is not based on traffic modeling yet of the traffic increase, particularly during construction with many roads under construction, then how can the FRA with any credibility or accuracy make a claim that "impact on ER times is not anticipated to be significant"? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-23.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Devaluation of property value. Although there is no data to support that property located near a high speed rail loses value, one only need look at other modes of transportation, including airports, freeways, railroad tracks and bus stations, to confirm that property all along the route will lose value. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to VA-1.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: 1. Potential for flooding. My understanding is that the route will have a berm in our area which could block the water flow and cause flooding in an already flood prone area. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, WW-1 and WW-2.

Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Impact on hunting. We currently have deer on our property and duck and geese that fly over that will leave the area if a train is going by every 30 minutes. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-5 and NR-6.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Aesthetic value. The elevated train will be visible for much of the 240 mile route which ruins the aesthetics and rural environment. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: The most significant reason the HSR should not be allowed to be built by TCRR is because it is not a financially viable project. According to the Reason Foundation, TCRR has grossly underestimated the cost of the project and overestimated the potential ridership. Based on TXDOT data of projections for people that will travel between Dallas and Houston, the HSR will not get close to the ridership it needs to sustain itself. And because TCRR has publicly stated that they will pursue federal loans, taxpayers will end up supporting the HSR for generations. There is no factual data other than from TCR that shows the HSR is even needed. Any prudent person can see that based on the commute to the station, parking, security and transportation from the station to destination, it will not be practical to ride the train and very few people will take advantage of it, especially since the advertised ticket price will be so high. It just doesn't make sense for Texas, and appears too much like the California boondoggle. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AQ-7, GN-2, GN-3, GN-4, NE-1, PN-3 and SC-22.
Tommy Salzar	2/5/2018	Handwritten	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: "No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The No Build analysis left out the huge increase in Impacted Acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres and has not been addressed by the FRA nor was it a part of the No Build Alternative Analysis. TCRR's current plan has caused the closure, rerouting, modification, and rebuilding over the HSR of many private and public roads and increased the ROW land required without any accountability for TCRR's earlier claims. The FRA simply glosses over those huge changes. Also not addressed are the many public safety considerations that the FRA has glossed over: increased ER times, safety of traffic congestion around construction sites, lane closures, rerouting roads, road closures and more public road travel required just to get from point A to point B due to the HSR. The FRA does not provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-6, LU-14, SS-23, TR-6 and TR-8.
Tommy Salzar	2/5/2018	Website	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). TXDOT was unwilling to work with a local county government body regarding planning for the HSR, the Waller County Regional Planning Committee. This was not an advocacy group, but a true county governing body. The county sued TXDOT and it was found during the court case that the FRA had told TXDOT not to work with this local governing body, and to not attend the meetings. Waller County won the court case. TXDOT then appealed, and lost the appeal. Did the FRA break federal law by telling a Texas State government body not to work with a county government body and not to attend the meetings? Why would the FRA not want input from a county government body? Since the public is fully aware of this case, does this not destroy the public trust in what the FRA has done regarding the HSR DEIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to PI-1.
Tommy Salzar	2/5/2018	Website	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Business ethics, public trust, and TCRR competence level (Ref: Nothing in the DEIS on this issue). Has the FRA evaluated the answers provided to the public in open forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? If not, is the FRA interested in any false or misleading statements made to the public by TCRR vs. what the FRA has included in the DEIS? Is it important to FRA's analysis of TCRR's capability to operate a RR or not if TCRR has misled the public on a number of issues as compared to what the FRA has included in the DEIS? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and SS-19. Pennco is identified as a high-risk site that would require further investigation prior to construction. Environmental consequences due to disturbing hazardous materials sites are discussed in <b>Section 3.5.5.2, Hazardous Materials and Solid Waste, Build Alternatives</b> . Mitigation measures are discussed in <b>Section 3.5.6.2, Hazardous Materials and Solid Waste, Mitigation Measures</b> .
Tommy Salzar	2/5/2018	Website	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Water supply for use at all construction sites and during construction along the entire HSR route (Ref: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). The FRA must quantify the water needs over 5 years of construction and reconcile that with the State or County Water Conservation agencies to determine the need for permits or approvals for the use of source water. No indication of this in the DEIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Tommy Salzar	2/5/2018	Website	I am submitting an objection to the proposed high speed rail between Dallas and Houston for the following reasons: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F	Refer to WW-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). There is no mention of any Risk Management System to be applied to the crossing or close proximity of the HSR to other hazardous facilities such as O&G facilities, pipelines, and transmission lines. Does the FRA not consider pipelines being crossed by the HSR a Risk Management Issue considering pipeline explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or are the FRA's safety processes void of a Risk Management System ? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Guadalupe Sanchez	2/17/2018	Website	I am writing to express my strong DISAPPROVAL of the proposed High Speed Rail project. I live in Palmer TX which is in Ellis county. I travel I-45 every morning between 4:00am and 5:00am. Again at around 4:00pm. Traffic is never congested and most of the traffic is Semi truck and construction vehicles. I personally do not see a demand for this type of travel at this time. I feel the failure of this project will create a burden on Texas Tax payers. With the autonomous car technology fixen to explode the chances of anyone using this train route will certainly be ruined. The proposed route falls 300 ft past my front door. This train will absolutely destroy the value of our 16 acre ranch my wife and I have been paying on. This train will destroy the country life dreams of many for the few that will actually use this train service. I voluntarily served this great country to keep the United States safe from foreign enemies. Lets not let them build their crap here in Texas. Sincerely Guadalupe Sanchez	Refer to BA-4, ED-2, GN-4, NE-1, PN-3 and VA-1.
Guadalupe Sanchez	2/24/2018	Email	Dallas to Houston High-Speed Rail Environmental Impact Statement I am writing to express my strong DISAPPROVAL of the proposed High Speed Rail project. I live in Palmer TX which is in Ellis county. I travel I-45 every morning between 4:00am and 5:00am. Again at around 4:00pm. Traffic is never congested and most of the traffic is Semi truck and construction vehicles. I personally do not see a demand for this type of travel at this time. Juan Carlos Sanchez	2/19/2018	Website	This is a much needed project that will make intraday travel between Houston and Dallas much more seamless and less cumbersome than having to travel by air. It will save the average person approximately 2-3 hours depending on their location. Additionally, it will allow travelers to be more productive in that they will be able to work during the train ride vs flying or driving.	Comment noted.
Mercedes Sanchez	3/5/2018	Oral	Hi, good afternoon. Thank for listening to our comments today. My name is Mercedes Sanchez, and I'm here on behalf of Dr. Laura Murillo and the Houston Hispanic Chamber of Commerce. The Houston Hispanic Chamber of Commerce is the leading regional advocate for the economic and the civic interest of the Hispanic business community. We represent approximately 90,000 businesses in the greater Houston region, ranging in size from start-ups to multinational corporations, making the Houston Hispanic Chamber of Commerce the largest in the country. I am pleased to be here today to express the Chamber's support of the proposed high-speed train project connecting north Texas to Houston. With Texas population continuing to grow, travel between the two economic hubs of the state is only going to get worse. Our existing infrastructure for highways is inadequate to address increased interactions between the two regions. In fact, current estimates show that travel time between the two economic powerhouses will increase to over 6-and-a-half hours in the next 20 years. The Texas Bullet Train can help complement the state's existing transportation network and help prepare Texas for generations of future growth. In addition to providing alternative transportation and taking cars off the road, this project will provide a boost to the Texas and the Houston economy. The high-speed train is expected to generate a direct impact of \$36 billion to the Texas economy over the next 25 years, as well as a projected increase of 10,000 jobs per year over the four-year peak construction period, plus 1,500 permanent, highly skilled jobs to support the railroad's operations when it is in full service. The Houston Hispanic Chamber of Commerce is proud to support this innovative project which will provide safe and reliable travel alternatives between Houston, the Brazos Valley, and north Texas. This project is good for Texas, and it's good for Houston. Thank you.	Comment noted.
Johnny Sandel	1/29/2018	Oral	Phone#[...] COMMENT: The property I am talking about is in Leon County. Please get back with me as soon as possible. So if the train comes through this area and then my property is within say 800 yards of it, am i going to affected as far as firearms going off because I lease it for deer hunting. So that make sense, right? So if you will just take that and ask them and how to go get the answer. I lease that property out to deer hunters so I don't what for them to say, "oh, you can't do that anymore". Because one time we heard that they weren't going to allow firearms within a mile of each side. You know a high power rifle. That makes sense, right? When will they get back with me? I have to leave early from here. Thank you for doing this.	Refer to RF-2.
Johnny Sandel	1/29/2018	Oral	Hello, I'm Johnny Sandel here and my issue -- first of all I'm, like, neither for nor against it. A few gentlemen -- and I see y'all I'm a landowner in Leon County and I can still watch the paint it's not going to cross my property, it's 1,239 feet from my property. And I know this is not a forum for asking questions, but nobody in the back -- I spoke to seven or eight folks, no one can answer this question, maybe you can put me	Refer to RF-2. As noted in <b>Table 3.11-45: Leon County Roadway Modifications</b> , FM 977 would be reconstructed over the rail for Segment 3C. Segment

			on someone here this evening that can. But my property being that far and the rumor mill down in that county, they -- first of all, I lease my land for deer hunting. I wish they would shoot more pigs because they're a bunch them and the other landowners have fences and I don't and it just runs them over to my property and they tear the stuff up. But the rumor mill there said that oh, they're not gonna let you have high-powered weapons for deer hunting. Is there anybody that can answer that question here tonight, number one. And number two, it's FM road 977 where I have another rental property and that rental property would be like at the dead end of 977 and this is out in the boonies, you don't just run down 45. Well, you don't run down 45 anyway that's another issue, that traffic sucks bad. But you don't just run there, exit, and go over there and take care of business. If that road's not through then that's multiple miles to get back around to it, it butts up behind kind of close to it. Is there anybody here that can answer those two questions tonight. That's two financial places where I may be affected. Number one, is it true that if your deer lease is next to it, are you gonna be able to hunt there because it -- you know, I hope deer hunters that I lease to are careful, but if you miss the deer then what? Is it just like, oh, a drive-by in Dallas or something and you're just up the creek without a paddle or are they gonna come after you or what what's the answer to these questions?	3C, however, is not a part of the Preferred Alternative, which is Alternative A. In the Preferred Alternative, the Project would go over FM 977, approximately 900 feet east of County Road 1270.
Johnny Sandel	1/29/2018	Oral	Hello, I'm Johnny Sandel. here and my issue -- first of all I'm, like, neither for nor against it. Shawn Sanders	2/24/2018	Website	This project would be beneficial to our state because we cannot keep up with demand for highways between Houston, Dallas and other cities. It is also my understanding that the air traffic patterns for these cities is overloaded and that airlines are at their maximum capacity for air space. While those in the rural areas are against this project, I believe it is based primarily on false or misleading information. It would be my hope that the private company building this line would compensate the property owners fairly.	Comment noted.
Terry Sanders	2/17/2018	Website	The high speed train will, without doubt, relieve traffic on IH-45 between Houston and Dallas, which has far passed what is an acceptable amount of traffic on that highway. Also, the ability that the high speed train will provide in assisting in the evacuation of the elderly and handicapped during natural disaster events in the Gulf Coast Region, is, by itself, reason enough for the train, (this alone is the single reason that changed me and my wife's mind set on the project, as we were originally against this as much or more than anybody). It means we will not have elderly people helplessly burning to death again in a stalled bus on IH-45 during evacuation events. Finally, the economic impact it will provide for our state, specifically the impacted counties, is hard to argue with. Through all of the projections on this matter, the economic impact will far surpass any projected thought, in my opinion. As vehemently opposed to this project as we were at the very beginning, we have changed our minds about the project, and fully support it.	Comment noted.
Tammy Sanford	2/6/2018	Oral	Hi. I'm Tammy Sanford. I'm a landowner here in Grimes County. That impact study that you-all are talking about, I know it's only environmental, and I'll get to some of that, but it doesn't talk about the impact it's going to have on my pocketbook. They've been talking about this, but they're going to take this land off of our tax roles. Guess what. The money's going to have to come from somewhere. That means my taxes, everybody's taxes here, everybody's taxes across the state. I pay property taxes. I'm fine with that. I don't want to pay their property taxes because it is going to impact me in that way. But they don't talk about that. The other thing that they don't talk about, Texans as a culture, we do not ride trains. We do not grow up on subways, elevated trains of any kind. We're not used to it. So they're going to put this train in for people who drive. We can get from place to place with no problem. We can park wherever we want. That's not a problem. So you're going to take my land and then try to convince us that we need to be on this train, when we know better. Now, they discussed the railroad crashes. That's going to be a problem that has not been addressed either. There have been two crashes this week within the United States. That's going to happen with this train at some point, but it has not been discussed how our emergency vehicles are even going to get to some of these places. Across some of these lands it's going to be very difficult. So it's not only going to need property for the train; you're going to need property to get emergency vehicles to any and all spots. That's more land. Four, you talk about the historical impact. Guess	Refer to CR-12, NV-1, SC-19, SS-3, SS-12, SS-13, SS-18 and SS-19. Through coordination with local emergency responders required by these plans, as well as <b>TR-MM#1: Traffic Control Plans</b> , locations with limited off-road or over-creek access would be determined as well as plans for continued access during Project construction and operations.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			what. Every Texas student who's gone through -- any Texas public school student knows that Grimes County is one of the historical spots irregardless. We were part of the Stephen F. Austin colony. That you're not going to find on any national register. But guess what. We are a historical property as a county. You're going to cut my county in half because you didn't think about all of that it impacts. I think that that needs to be thought of, because we chose to live in a rural county. We chose for the quietness. I know you talk about noise and all. Guess what. It's really quiet where I live. I like it that way. I don't want them to come in with any above Decibels. Okay? This thing's going to run until 11:30 at night? Guess what. We have kids that go to bed a lot sooner than that. You try to get them to sleep when a train comes past your house every 90 minutes. And then you're going to have it double because they're going both directions. Those are impacts that were not discussed on those boards out there and need to be looked at. And just to finish, this is going to hurt our way of life and our chosen way of life in this county and the other counties. And people say progress is good. This progress is not good and needs to be stopped.	
Octavio Santagadea	1/25/2018	Website	Having a fast train system linking Houston to Dallas should give the two metro areas a good competitive advantage vs other states like California where projects like this have gone nowhere. Once the train starts to go on service nobody will have any doubt that it was a great idea. I lived in Asia and I always enjoyed the train systems in Japan and China where fast speed trains travel is common. It's time that the US has a proper fast train unlike the one in the East coast that doesn't really qualify.	Comment noted.
John Sartell	2/20/2018	Website	There is no benefit that trumps the property rights of thousands of private landowners, including my neighbors. This project is unnecessary.	Refer to ED-2 and PN-3.
Fabiola Saucedo	3/9/2018	Website	Excited about this new method of transportation!	Comment noted.
Joseph Saverino	2/21/2018	Website	Let's do it! Time has come to bring Texas to the forefront of the rail revolution!	Comment noted.
Matthew Scandale	1/25/2018	Website	This is a GREAT idea! It's great to see Texas lead the world in 21st-century transportation. It's privately-funded and Texas will get it done. This will make Houston and Dallas into the premiere business cities in North America. Thank you!	Comment noted.
Leon Scardino	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Becky Scasta	12/27/2017	Email	It has been brought to my attention that letters went out on December 19 to all potentially impacted landowners. I have been contacted multiple times by TCR requesting land surveys and threatening legal action, yet I do not get a notification letter about the DEIS. Is there a good reason why?	Refer to PI-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Becky Scasta	1/9/2018	Email	It is my understanding that IF Texas Central can prove that they have eminent domain authority and IF the HSR between Dallas and Houston is approved, they will be able to condemn land two miles either side of the center of the rail. If that is true, has the study encompassed the 4-mile swath between Dallas and Houston? What businesses, homes, historical places, farms, ranches, roads and lives will be affected? Did the study consider that area of land? I have been going through the DEIS which is a daunting task. I don't pretend to understand how to navigate it or how to find information. However, it is not clear to me that this 4-mile swath is included in the study. How do I find that out?	Refer to LU-1, LU-7 and LU-14. The Project area does not extend 4 miles wide at any point along the Project's extent.
Becky Scasta	1/9/2018	Website	Did the DEIS compare the pros and cons of HSR to cars and aviation by projecting in the long-term?	Refer to BA-4 and BA-12.
Becky Scasta	1/11/2018	Email	Will there be laws that disallow the discharge of firearms near the HSR? That will be a major problem in the rural setting as many of us hunt, shoot for defense, and target practice. Will our right to use our firearms be affected?	Refer to RF-2.
Becky Scasta	1/11/2018	Email	According to my research and an article from the Journal of Transport Geography, "there has been no grounded empirical work on the economic development impacts of HSR in the US since such services do not exist." (Levinson, 2012) Taking that into consideration, how can Texas Central say, with certainty, that this will be good for the economy of my county and all of the other affected counties? Do their numbers take into account lost revenue streams from agricultural impact, loss of homeowner tax base, cost to the counties and ultimately the tax payers for upkeep of the new roads and bridges that they propose in the DEIS? They grossly underestimate the cost of the project and it has been shown that it will cost twice more than what they publicize. Their ridership numbers appear to be grossly overinflated. How can we be certain that this is good for the socioeconomic welfare of all affected counties?	Refer to GN-2, GN-4, LU-2, VA-1, SC-19, SC-22 and TR-7.
Becky Scasta	1/11/2018	Website	Page 3.11-42 shows that my road, Old Boyce Road, will be rerouted in Alternatives D, E, and F. However, I read in the DEIS that the preferred alternative is A. What will happen to Old Boyce Road in Alternative A?	Refer to TR-6. Changes between the release of the Draft EIS and the Final EIS result in Old Boyce Road no longer being rerouted. The Project would be built over the road. The Preferred Alternative would result in no modifications to Old Boyce Road.
Becky Scasta	1/11/2018	Website	What time period does the DEIS project fuel consumption savings estimates into? For instance, are they projecting out 10 years, 20 years, or 30 years? In doing so, are they do so by comparing the future of cars and aviation as well? According to Levinson, 2012 in an article in the Journal of Transport Geography, "cars are getting better from both an environmental perspective and from the perspective of automation technologies. The DARPA Urban Challenge vehicles, subsequent development by those engineers working at Google, need to be bested to justify HSR. Aviation is improving as well, both in terms of environmental impacts and its efficiency. Socially-constructed problems like aviation security or congestion can be solved for far less money than is required for any one hsr line given sufficient will." Have those types of things been taken into consideration when evaluating energy savings estimates in the DEIS?	Refer to AQ-5 and AQ-14. Fuel savings were done assuming the passenger vehicle average of the most current standard at the time (31.3 miles per gallon [MPG]), which sets the goal that manufacturers must meet in new, future cars manufactured. The then-most current model year of 2014 was assumed because it was the readily realizable fuel economy in place. Fuel savings estimates are specific to vehicle travel and do not factor in fuel consumption from aviation.
Becky Scasta	1/31/2018	Oral	My name's Becky Scasta, I'm an affected landowner from Ellis County and I'm 100 percent opposed to this high-speed rail and I'm here to fight with my neighbors to the south. Number one question I have is, should a business plan and a cost-benefit analysis be part of the consideration when making a decision of this nature? Is that built into the EIS? If not, how it is utilized in the decision-making process when it appears that the EIS is the end-all decision point? Number two, there have been studies conducted to demonstrate the potential damage of a train moving at 250 miles per hour crashing and skidding off the tracks. How far would it travel before coming to a stop? How close can a home be to be considered safe? Number three, can I shoot my guns on my property if a train is slated to be approximately 1200 feet from my door? And the next answer I would like to have the law cited, so we can look at it ourselves and identify it. The fourth question I have is, the proposed project has caused great and mental anguish for thousands of people. And that's only the beginning of the psychological pain. If displaced the enormous amount of stress will have significant psychological impact. I would like to know if the psychological impact has been studied, and if so, how? And will people will be compensated for their mental anguish? The fifth question is whether the statistics prove the need of the HSR in regards to I-45 congestion, I just drove down here from Waxahachie with construction, I had no problem. Number six, our son is a well-published ranch land management research specialist at the University of- and he issued this statement on behalf of our farm: While I have not systematically surveyed this property from plant inventory I've only identified plants to the species level of various times of years since the property was acquired by its current owners. This has been included no less that ten cycles. As such I believe this property is in the midst of- of ecological recovery since the disturbance of tillage was halted and I found a number of important native plant species such as the dotted blazing star, medium paint brush, Texas bluebells, Texas bluebonnets, - native grasses, Texas winter grass and - The presence of these species and availability to plant with functional grassland - are important for a number of reasons. First tall grass prairie is characterized as a -less than two percent remains intact. Second, grassland birds have been one of the most rapidly declining groups of birds and we believe the decline has primarily been function of the habitat loss. Third, native floral resources are critical for pollinators such as bees and butterflies, and the loss of these floral resources has been directly attributed to the loss of pollinated species. In summary I contend that any destruction or	Refer to NE-1, NE-9, NR-5, PN-3, RF-2, SS-1 and SS-12.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			fragmentation of the land will result in a loss of local -such native resources are difficult to recreate and negative consequences -is likely to be of a severe magnitude. I'd like to know how that plant will be remediated if it's destroyed by construction. Thank you.	
Becky Scasta	1/31/2018	Oral	I am still Becky Scasta and I have two points that I want to make. One is the comment on the visual impact section of the EIS. I know for a fact that one of those 13 is a wedding venue site. Beautiful, beautiful area. They have outdoor weddings. When they did the visual impact pictures from there, it was looking out from the venue. You have no idea you're sitting at a wedding venue with those pictures. People are not going to have their weddings there when there's a train going by. So that beautiful place, a heritage home, is going to lose their business. Secondly, I wanted to say one more time, several people have mentioned it, Texans Against High-Speed Rail is a valuable resource for fighting this project, so I encourage you to go to their facebook page and like it if you have not been yet, go to their website, donate to them. They have a legal team that's amazing that's working pro bono and lobbyists in Austin and D.C. fighting for us and they have experts that are going through the EIS tearing it apart, bit by bit, so I just want to encourage you to check them out. Thank you.	Refer to AS-1.
Becky Scasta	2/5/2018	Oral	Ifs a long drive down from Waxahachie but we are the neighbors to the north and stand side by side with you guys _ I have several questions regarding the DEIS_ First: I would like for the FRA to clarify your definition of what a displaced business is. According to page 4 -9 of the DEIS, a displaces business if a business that would be able to find replacement properties close by and who is in business: and if that business chooses to relocate outside the area: that would be a loss of tax base for the local economy. So have you looked at the businesses that cannot relocate within the counties: and have you counted for that in lost income to the counties. On Page ES 23: sorry: wrong one. The second question I have is where do the public roads that Texas Central plan to build (inaudible) parallel to the rail and it gets back to the counties for lifetimes maintenance: interrupted by means and ways. The public drive on those means and ways and are the public roads the county will have to maintain truly for public use. Page E-S 25 states that there will be zero parts and zero trails impacted in Alternative A. Well, Lake Margo is about 15, 20 minutes from my house and this is a corps of engineer federal land area. The rail as I understand the map: it is going directly over the equestrian and hiking trails on the north end of lake, which is also a designated hunting area. So how can you say that area won't be impacted. If I'm riding a horse, rm not raiding no horse under that train I'm also a hiker. I hike because I haven't to be out with hike. I don't want to hike where there's a train going through. And also: how will that impact hunting in that area? I just want to know how you got permission to cross federal land unless there is something in the DEIS about that with the corps of engineers. We are within 1500 feet of a field of a 100-year flood plain which it floods so bad there's actually gates on the road that they close that road which is floods. Mostly flows directly downstream to the proposed rail by duct. The maps detailing the proposed closed road show roads installed parallel to the rail, just north of where that same creek flows: and then immediately south right in front of our house. Well: I can't find a map that shows that road on the section in between which is where Mustang creek runs through. So I want to know why that map is not in there or is that just going to be road with no access? If there is a road do you have to ends up Mustang creek: that backs up into the flood plain. So I would like to have an answer to that and I want to hear their responses. So I encourage you guys and I support you against this high speed rail. Thank you.	Refer to NR-1, RF-2, SC-21, TR-7 and TR-8. The public road that would be built through the Mustang Creek floodplain (in Leon County) would be Interstate 45 frontage road. These modifications are part of Build Alternative C, which is not the Preferred Alternative.
Becky Scasta	2/22/2018	Website	The High-speed rail, if approved, is slated to be placed about 1/2 mile downstream from Mustang Creek which is in a 100-year flood plain. This is 1/2 mile or less from my home. Interestingly, there is no map in the Draft Environmental Impact Study (DEIS) that shows what kind public road will be built in that section of the flood plain. There are maps for the sections before and after the floodplain section and they have the new roads on them. Surely, they will be connected in between. To explain, Texas Central plans to build "public" roads that they will gift back to the respective counties for lifetime maintenance. These roads will run parallel to the track, interrupted intermittently by the rail's Maintenance of Way (MOW) sections. I highly doubt these "public" roads will be accessible to the public as they are clearly access roads to the MOWs. Here are the problems: 1. What kind of "public" road will be built through the floodplain section? Will it be elevated to allow Mustang Creek to flow beneath It? The fact that the map is missing is one example of how incomplete the DEIS is. 2. Will the "public" roads truly be public if they're interrupted by MOWs? 3. If they're not truly public roads, why "gift" them back to the counties for maintenance? Taxpayer dollars being used for a "private" project? Reference maps RDY-EW-04007 and RDY-EW-04008	Refer to FP-1 and TR-7. The public road that would be built through the Mustang Creek floodplain (in Leon County), would be Interstate 45 frontage road. Additionally, this portion of the Project is Segment 3C, which is not part of the preferred alignment. In Leon County, the preferred alternative is Segment 4, which is located approximately 5 miles to the west. Segment 3C is included in Alternatives C and F. Segment 4 is included in Alternatives A, B, D and E. Refer to Appendix D, Mapbooks for more detailed maps and footprints for the Project.
Becky Scasta	2/22/2018	Website	I would like to know why every household in every affected county was not notified of the public hearings. I am an affected landowner and I did not receive a letter from the FRA regarding the public hearings. I have certainly received enough letters from Texas Central requesting to survey and informing me of potential litigation. My address and name are known. Please tell me why every household was not notified. Thank you,	Refer to PI-1.
Becky Scasta	2/22/2018	Website	"Dallas, Ellis, Navarro, and Limestone counties have been selected as focal areas for Monarch butterfly habitat development because of their strategic location within the butterfly's flight zone during spring and fall migrations. These counties also offer great potential for Monarch habitat improvements on private lands." The benefits of butterflies are many per the links I am providing: <a href="https://butterfly-conservation.org/45/why-butterflies-matter.html">https://butterfly-conservation.org/45/why-butterflies-matter.html</a> <a href="https://www.nps.gov/articles/monarch-butterfly.htm">https://www.nps.gov/articles/monarch-butterfly.htm</a> I have read that a decision will be made in 2019 as to whether the monarch will be placed on the endangered species list. What studies have you conducted regarding the impact of destroyed lands, possibly four miles wide along a 240 mile path on monarch habitat? Have you studied the impact of endless	For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species,</b>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			streams of disturbed air from trains running every 15-30 minutes at 205 mph, noise and vibration on monarchs and other pollinators? If so, please reference those studies. If you allow this to go forward and if the habitats are destroyed, what is your plan for remediation? How long will it take to recover and how will it impact the migratory path of the monarch in the interim? Please provide references for all information that you cite. Thank you.	<b>Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b> The Monarch Butterfly is currently "Under Review" for listing by FWS.
Becky Scasta	2/22/2018	Website	Have you studied the impact to business lost along the I-45 corridor is you are truly able to remove the millions of drivers that you claim will choose to ride the train? What is the financial impact to each town and county along the corridor? Please show me those figures? Please show me how these businesses and communities will benefit and survive with the loss of highway traveler income. Please show me how the HSR will compensate them for their loss. Thank you.	Refer to SC-15. Economic impacts are calculated for the five economic analysis areas described in <b>Section 3.14.3, Socioeconomics and Community Facilities, Methodology.</b>
Becky Scasta	2/22/2018	Website	When I look at the maps that show the insertion of public roads parallel to the HSR, there does not seem to be maps for the entire route? I would like to know why? How many miles of new public roads to you plan to put in? What is the purpose of these new roads? Why will they be gifted back to the counties for lifetime maintenance if Texas Central has a need to install them? Thank you.	For the mileage of proposed public roads, see <b>Table 3.11-61: Summary of Transportation Impacts by Build Alternative.</b> Reroutes to existing roads would result in the addition of approximately 16.6 miles (Build Alternative D) to 46.9 miles (Build Alternative C) of public roads. After new public roads are constructed, the ownership and responsibility for maintenance of these new roads revert to the appropriate local, municipal, county, state, or federal authority. For information about roadway modifications per county, Segment, and Build Alternative, please see <b>Section 3.11.5, Transportation, Environmental Consequences.</b>
Becky Scasta	2/22/2018	Website	The HSR is slated to cross the north end of Lake Bardwell. This is a USACE area. The section that the rail is supposed to cross is an equine trail, a hiking trail, and hunting land. 1. How is it possible that a private project like this is allowed to cross federal land? 2. What studies have you conducted to demonstrate that there will not be significant startle of horses who are not accustomed to the sound of HSR? 3. What is the plan if there is a thrown rider and potential life-threatening injuries? 4. The DEIS stated that there would be no impact on recreation in Ellis county. How can this be true if it crosses this area? I am a hiker. I wouldn't want to hike there. When I hike I want to be out in the quiet of nature. 4. What is the law regarding the discharge of firearms near the HSR? Please cite the law? 5. What will the impact be on wildlife and what will be the subsequent impact to hunting and recreation? What studies substantiate your claims? Please reference the link and article I am providing as it has significant information. <a href="http://transweb.sjsu.edu/PDFs/research/1427-high-speed-rail-and-equine-issues.pdf">http://transweb.sjsu.edu/PDFs/research/1427-high-speed-rail-and-equine-issues.pdf</a>	Refer to GN-3, NR-1, NV-1 and RF-2. As described in <b>Section 3.17.5.2.2, Recreational Facilities, Build Alternatives and Section 3.17.5.2.3, Recreational Facilities, Build Alternatives, Recreational Facilities, Environmental Consequences,</b> the preferred Alternative would not intersect Lake Bardwell, but would intersect the lake's flowage easement. Private projects work in coordination with public agencies such as USACE, FRA, TPWD, etc. to ensure that linear infrastructure projects are developed in accordance with existing laws and regulations. Appropriate steps must be taken depending on the type of project being conducted within varying areas of USACE real estate. More information regarding necessary permits for Lake Bardwell can be found in <b>Section 3.7.5.2.2, Waters of the U.S., Ellis County.</b> The Final EIS states that an impact would be present for Build Alternatives D, E and F where Segment 2B occurs. <b>Section 3.17.6.2, Recreational Facilities, Avoidance, Minimization and Mitigation, MM#1</b> Temporary Recreation Impacts to Lake Bardwell provides information on how TCRR would work with USACE to mitigate potential impacts.
J.D. Scasta	1/14/2018	Letter	We live at [...] in Waxahachie, TX of Ellis County. It is our understanding from the persistent attempts to survey our land, which we declined, and from the DEIS that our property will be part of the impact area for the high-speed rail. We bought this property 6 years ago to establish our first-ever farm and our forever home that we plan to retire in. We have worked tirelessly to rehabilitate the land, build farm infrastructure. and establish a means to provide for ourselves through gardening and raising livestock. We have spent countless hours and thousands of dollars to do this. We hope to make this a farm that provides food to the community and have worked to build a customer base for eggs, figs, blackberries, beef, pork. and honey. The bees we raise are surrounded by hundreds of acres Of farm land and are an important part Of the overall ecological System in our county. Our house was built in the 1930s and is reputed to be the main homestead for all the farming in the Boyce area. It still has the original hardwood floors and many Other unique features found only in homes built in that era. We are continually improving on the farmhouse and have spent thousands Of dollars in the last six years to make it energy efficient and comfortable. Our grandchildren love coming to papa and BiBi's farm. They learn about life and death here as we raise animals for food. They have learned to fish and to garden and have spent countless hours playing on the old storm shelter out back and riding bikes around the property. Children spend much time on electronic screens these days and it is special that our grandchildren still know the old-fashioned way	Refer to NR-2 and NR-5. Impacts to wildlife and vegetation will be minimized with compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting, and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b> Two species of Blazing star or gayfeather occur within range of the Project. However, neither are federally or state listed as endangered or threatened. The Monarch Butterfly is currently "Under Review" for listing by FWS. according to a wildlife biologist who specializes in ornithology and has extensive experience with avian species in Texas, the photo of the "red-cockaded woodpecker" is actually a red-bellied woodpecker

			<p>Of playing in the dirt, using their imagination, interacting with animals, and learning where food comes from. Building the high-speed rail the way Texas Central wants to do it will ultimately eliminate the rural way of life that is essential to our culture.</p> <p>Our son is a professor Of rangeland management in Wyoming and was the Ag agent for Navarro County for three years prior to completing his doctorate. He is very familiar with Texas native grasses and wildflowers. He has walked our property multiple times and commented on the re-emergence Of Texas natives that are becoming rarer in our State. Once such plant is the Blazing Star and it is noted in the Nature Conservancy to be a plant that should be protected. There are many more plants that are re- emerging on our property that should be protected, as well. <a href="https://www.nature.org/ourinitiatives/regions/northamerica/unitedstates/indiana/journeyyyithnature/blating-star-wi'dflowers.xml">https://www.nature.org/ourinitiatives/regions/northamerica/unitedstates/indiana/journeyyyithnature/blating-star-wi'dflowers.xml</a> We have also seen the red-cockaded woodpecker on our property, as recently as this week. According to the Nature Conservancy. it has been forced to the brink Of extinction.</p> <p><a href="https://www.nature.org/ourinitiatives/regions/northamerica/unitedstates/florida/placesweprotect/reintroducing-the-red-cockaded-woodpecker">https://www.nature.org/ourinitiatives/regions/northamerica/unitedstates/florida/placesweprotect/reintroducing-the-red-cockaded-woodpecker</a> I am attaching pictures of both the Blazing Star and the Red-cockaded woodpecker. Our property is also covered with milkweed which is the host plant the monarch butterfly to lay their eggs in and is the only food source for the larvae to feed upon. Monarch butterflies are becoming endangered and the US. Fish &amp; Wildlife Service petitioned to have them protected in 2014. Disrupting fields such as those on our farm will significantly impact monarchs in Ellis County. <a href="https://www.fws.gov/savethemonarch/SSA.html">https://www.fws.gov/savethemonarch/SSA.html</a> Surely, there is a better way to move people from Dallas to Houston than to wipe out whole farms and ranches throughout our county. I don't believe there has been enough research into other options and consideration for the use of right of ways that are already dedicated to transportation. Encroaching Scasta Farm - Description of ecological function General Introduction and Soil and Ecological Descriptions This property is comprised Of approximately 20 acres with 3 soil units (HaB - Houston Black Clay (1-3% slopes) comprising 24.3% of the property, Heiden Clay (1-3% slopes) comprising 0.1 % of the property, and Heiden Clay (3-5% slopes eroded) comprising 75.6% of the property (Figure 1; Table I). Illis property is comprised of 2 ecological sites including R086AY 196TX-Blackland 28-40" PZ and R086AY009TXSouthern Eroded. Prior to European settlement, this region was classified as tallgrass prairie. Given the wide spread tillage for row crop agriculture in this region, we surmise that this property was tilled at one time. For example, properties to the NE and the SW are farmed (Figure 1). A review Of 1995 aerial imagery (see Figure 2) supports this history of tillage. Important Botanical Resources While we have not systematically surveyed this property for a plant inventory, we have informally identified plants to the species level at varying times of the year Since the property was acquired by its current owners (Scasta). "Illis has included no less than 10 site visits. As such, we believe this is in a mid-successional state Of ecological recovery since the disturbance of tillage was halted and have found a number of important native plants species.</p> <p>NATIVE FLOWERING PLANTS</p> <ul style="list-style-type: none"> <li>* Dotted blazingstar (<i>Liatris punctata</i>)</li> <li>* Indian paintbrush (<i>Castilleja indivisa</i>)</li> <li>* Texas blue bells (<i>Eustoma grandiflorum</i>)</li> <li>* Texas bluebonnet (<i>Lupinus texensis</i>)</li> </ul> <p>NATIVE PERENNIAL GRASSES</p> <ul style="list-style-type: none"> <li>* Sideoats grama (<i>Bouteloua curtipendula</i>)</li> <li>* Texas wintergrass (<i>Nassella leucotricha</i>)</li> <li>* Vine mesquite (<i>Panicum obtusum</i>)</li> </ul> <p>The presence of these species, and the availability of land with functional grassland characteristics, are important for a number of reasons. First, tallgrass prairie is characterized as a "threatened ecosystem" of which less than 2% remains intact (Noss et al, 1995). Second, grassland birds have been one of the most rapidly declining groups of birds and the declines have been primarily a function of habitat loss (Hill et 2014). Third, native floral resources are critical for pollinators such as bees and butterflies and the loss of these floral resources has been directly attributed to loss of pollinator species (Woodward and Jha, 2017). In summary, we contend that any destruction or fragmentation of the land will result in a loss of local biodiversity and functioning grassland ecosystem. Such native resources are difficult to recreate and the negative consequences for native flora and fauna is likely to be of a severe magnitude. J.D. Scasta, Ph.D. Assistant Professor and Extension Rangeland Specialist Department of Ecosystem Science and Management University of Wyoming Figure 1. Map Of Scasta Farm property with corresponding soil units using 2017 (Web Soil Survey). Figure 2. Monarch butterflies are becoming endangered and the U.S. Fish &amp; Wildlife Service petitioned to have them protected in 2014. Disrupting fields such as those on our farm will significantly impact monarchs in Ellis County. We are in the process of applying to be a monarch sanctuary. Dallas, Ellis, Navarro, and Limestone counties are focal counties for development of monarch sanctuaries as these counties are in the monarchs migratory flight path. <a href="https://www.fws.gov/savethemonarch/SSA.html">https://www.fws.gov/savethemonarch/SSA.html</a> <a href="https://monarchjointventure.org/our-work/">https://monarchjointventure.org/our-work/</a> Surely, there is a better way to move people from Dallas to Houston than to wipe out whole farms and ranches throughout our county. I don't believe there has been enough research into other options and consideration for the use of right of ways that are already dedicated to transportation. Encroaching upon private lands for a project that will never benefit the people in my county makes no sense. Our county has a heavy agriculture base with over millions of dollars of livestock and agricultural products produced. With HSR cutting through primarily agricultural land (the entire length of our county) there is no way that HSR will be financially beneficial to the economics of Ellis County. Texas Central touts numbers that say our county will benefit financially but the agricultural impact alone will cost the people of Ellis County. I personally know several large-scale farmers who will be wiped out. Additionally, I have reviewed the maps in the DEIS and have observed that many public roads and overpasses will be put in and maintained at the taxpayers' expense. Our emergency services, postal services, utility services, and school services will all be impacted as routes will change and access may disappear altogether. The county will be left holding the financial responsibility for these issues as well. We appreciate your time and consideration in saying No to high-speed rail in Ellis County, TX. Respectfully Submitted, Ronald and Becky Scasta Scasta Farm. Scasta Farm – Description of ecological function General Introduction and Soil and Ecological Descriptions This property is comprised of approximately 20 acres with 3 soil units (HaB - Houston Black Clay (1-3% slopes) comprising 24.3% of the property, Heiden Clay (1-3% slopes) comprising 0.1% of the property, and Heiden Clay (3-5% slopes eroded) comprising 75.6% of the property (Figure 1; Table 1).</p>	<p>Refer to BA-8, BA-9, BA-10, CR-11, EU-2, LU-2, LU-9, LU-11, NR-2, NR-5, SC-6, SC-7, SS-23, TR-1, TR-7 and TR-8.</p> <p>Impacts to wildlife and vegetation will be minimized with compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b>. Two species of Blazing star or gayfeather occur within range of the Project. However, neither are federally or state listed as endangered or threatened. The Monarch Butterfly is currently "Under Review" for listing by FWS. according to a wildlife biologist who specializes in ornithology and has extensive experience with avian species in Texas, the photo of the "red-cockaded woodpecker" is actually a red-bellied woodpecker which is not federally or state listed, but still protected under the Migratory Bird Treaty Act (MBTA). <b>Table 3.13-6: 2012 Agricultural Statistics in Section 3.13, Land Use</b> provides agricultural statistics in Texas and in the 10 counties in the Study Area.</p>

			<p>This property is comprised of 2 ecological sites including R086AY196TX-Blackland 28-40" PZ and R086AY009TX-Southern Eroded. Prior to European settlement, this region was classified as tallgrass prairie. Given the wide spread tillage for row crop agriculture in this region, we surmise that this property was tilled at one time. For example, properties to the NE and the SW are farmed (Figure 1). A review of 1995 aerial imagery (see Figure 2) supports this history of tillage. Important Botanical Resources While we have not systematically surveyed this property for a plant inventory, we have informally identified plants to the species level at varying times of the year since the property was acquired by its current owners (Scasta). This has included no less than 10 site visits. As such, we believe this property is in a mid-successional state of ecological recovery since the disturbance of tillage was halted and have found a number of important native plants species. NATIVE FLOWERING PLANTS Dotted blazingstar (Liatris punctata) Indian paintbrush (Castilleja indivisa) Texas blue bells (Eustoma grandiflorun) Texas bluebonnet (Lupinus texensis) NATIVE PERENNIALL GRASSES Sideoats grama (Bouteloua curtipendula) Texas wintergrass (Nassella leucotricha) Vine mesquite (Panicum obtusum) The presence of these species, and the availability of land with functional grassland characteristics, are important for a number of reasons. First, tallgrass prairie is characterized as a "threatened ecosystem" of which less than 2% remains intact (Noss et al., 1995). Second, grassland birds have been one of the most rapidly declining groups of birds and the declines have been primarily a function of habitat loss (Hillet al., 2014). Third, native floral resources are critical for pollinators such as bees and butterflies and the loss of these floral resources has been directly attributed to loss of pollinator species (Woodward and Jha, 2017). In summary, we contend that any destruction or fragmentation of the land will result in a loss of local biodiversity and functioning grassland ecosystem. Such native resources are difficult to recreate and the negative consequences for native flora and fauna is likely to be of a severe magnitude. J.D. Ronnie Scasta	1/31/2018	Oral	<p>Can y'all hear me? Okay. I am the other half, not the better half, my name's Ronnie Scasta. I am here to support you guys and I also had a few thoughts about this project and I am 100 percent against this high-speed rail. And I want to clarify a couple of things here. First of all, I generally appreciate the heritage and the local land and all the things rural that I've heard presented at a couple other of these. It's a matter of importance to your family. And all of that stuff is really great, so write it in a book and see if you can sell it, because Texas Central doesn't care. They don't care what your feelings are, they don't care about your land, you have something they want. They want your land. They don't care. They want your land, they don't care your heritage or anything else you have on that land. An opinion from the country looking over this project is that the FRA, Texas Central, TxDOT, U.S. DOT, they've all jumped in bed together. I really feel like the FRA will approve this project. Why do I feel this way? Because they don't care whether this is a viable project or not. They're about the railroad and railroad safety. They don't care about your land, the heritage or whatever else -- your ownership and they don't care about us, the taxpayer being on the hook for a project that in the end costs the taxpayer billions of dollars. This should make you mad and I hope it makes you mad enough to fight this with everything you have. 'Cause they plan on taking everything you have without any fault to the incline on your families and your way of life. As I said these agencies do not care about you or your feelings. We, the public, have got to get online and send your questions and concerns to the FRA. You've got to overburden them with questions. If you talk you're losing. If you don't do that, it's also just business as usual with another big government project pushing something down your throat that you don't want to have anything to do with, without any fault to the taxpayer working on its back. Are you mad? If you're not you should be already. This project is you not a viable project. As someone said, a sixth grader can run the numbers and see that the numbers do not add up to make this a viable project. So if this is a background question, or answer, we should be very scared when we ask the next question, why? Why would a private, foreign-backed company and the U.S. government agencies joining forces to push a multimillion dollar project that, working with the numbers presented, will never be a viable project in the next 30 years. What are the government agencies trying to set up for the future with all this land that they're taking and basically cutting Texas in half? To be safe why would you cut it in half. What deals are being made behind the public's back to -the taxpayer over? We don't know what's going on back there, it's scary. What is being hidden from us, the taxpayer? If you're not scared you as a tax-paying citizen of the U.S.A. should be. There's actions we need to take. Overload the FRA with questions about this project, get with Texans Against High-Speed Rail and talk to your congressmen. Thank you.</p>	Refer to ED-1, GN-2, GN-4, NE-1, NE-2 and SS-4.
Ronnie Scasta	2/5/2018	Oral	<p>I'm Ronnie Scasta and I'm with Ellis County, your neighbor north of here and we're going to help you fight this thing. We come here to oppose this thing because it's not fair, but have you guys met TC, Texas Central. They're friendly, they're nice but let me tell you something, they will take you to court to take what you got, they don't care. They want what you have as cheap and as free as they can get it. So be aware of that. When you get involved with them, watch your back because you can't trust them. If you want to fight it, Texans against high speed rail, join</p>	Refer to BA-6, GN-4, PI-1, LU-11, SC-15, SC-19, SC-21, TR-7 and TR-8.

			us, put your name there, and get out there and fight this thing and get it stopped. They hot a questions they put in the DEIS, they got all these roadways where they're putting new roads in, how come our county commissioners were not invited to be a party to that? I believe they know our roadways and what we need better and how to fit this to what some companies from Houston does who doesn't know what we have in our county. On page ES 23, says only positive impact in our county under each alternative. Does this take into consideration the impact on agribusiness and the farms and add operations that will not be able to relocate in the county or the loss of a business to those businesses along I-45. We drove down an hour and a half. I don't see a study that says all these businesses along I-45 are going to be hurt by this. They plan on taking all this business so they are going to kill every county. Where's the study that shows that? I haven't seen that. So why if the no-build alternative not included in the tables when comparing impact data side by side? We're here to fight it and get on board with the Texas High Speed Rail and let's get this stopped. Thank you.	
Beverly Scheck	2/24/2018	Website	I am oppose to the train destroying a cultural economical, historically and charitable ranch referred to as Morgan legacy ranch farm located near FM709 and 3194. I believe a move north parralling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property	Refer to LU-5.
Tim Scheck	2/23/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. Michael Schelski	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Matt Schiel	2/5/2018	Oral	I am Matt Schiel. I live in Tomball, property in Madison County. I think the two biggest things about this project is -- Okay. Here we go. I think the two biggest projects here we've got to look at is where's the money going and the pipelines. This whole train thing is about commercial development in Houston and Dallas. That's it. The train is just the viaduct to get it done. This will not relieve any congestion on 45, besides what's in Houston and maybe a little bit in Dallas. That's it. So why are we worried about a handful of people getting rich off of this while people in the wake of it got to fund private enterprise to make a lot of money off my back? The second thing that's the biggest thing is I've already did my portion for the great state of Texas. I have the two pipelines and the high -- the transmission lines. I think I'm doing enough for the great state of Texas. Now, on the books here, you want to put the train on top of the pipelines? Where have you-all done anything about that? How are we going to move those pipelines, or move anything? And I have not seen anything about that. So that's really a big problem for me is that the pipelines -- I love pipeline people. They're great. They work with us. They come in, do a job, and make it look like nothing ever happened before. So you're going to tell me that I got to move pipelines and then put a train there? That's BS. So I want hopefully that will be in your report showing what is going to happen on that one. Lastly, two weeks ago, three weeks ago now, we had to go to Fort Worth for an awards presentation for the boys and the Fort Worth Stock Shows. I said, Man, it would be great to get on that train from Houston to Dallas. But wait. Let's just say the ticket was \$100 one way. I got five people, so that's \$500 one way, \$500 back, so that's a thousand. So you want me to spend a thousand dollars to go to Dallas for a three-hour meeting I had to get -- for a boys to get a recognition? Really? A thousand bucks. And plus I have to feed them, because they're all got pretty big boys, so you know they're going to eat. So that's what? \$1200 to go up there. I think my truck and my time is probably a little less than \$1200. I don't know about you-all, but I think it is. And then we can enjoy each other. Yeah, we can enjoy each other on a train or in the car. How many times people have kids that show cattle? How many memories do you-all make driving to the show; not actually at the show. We get to talk a lot of different things, spend a lot of time together. That's where you're going to build families; not sitting on some train for 90 minutes playing on your cell phone, as my kids would. So hopefully it will be a big no, no, no for the train. Thank you.	Refer to ED-2, EU-1, EU-2, GN-4, NE-1, PN-3 and SC-3.
Rhonda Schiel	2/6/2018	Handwritten	The state cannot afford this train! The citizens will end up paying for it. Sooo many lives are effected. their livelihood is decreased or existing. The cattle market will be come non-existing. what are people to eat - Rice! the only people profiting from this are the Japanese & some	Refer to CR-6, ED-4, GN-4, LU-2, LU-11, NR-1, NR-2, PN-3 and RF-2.

Submitted By	Date Submitted	Submission Type	Comment	Response
			politicians. Not the people who actually support the state politicians come & go but we the people will stay forever. We have several methods to get to Dallas. Train not needed for mobility. Who is paying the taxes on our land when you take our livelihood away. How are you providing emergency care to our counties when roads are closed or rerouted. It takes 4 mins to save a life. How many people will die because of this project? Who is going to own the minerals on these properties? How do we hurt on the property. Deer will probably not know the window (30min) we have to shoot them. When I am fishing @ my ranch I don't need to drink, pills to distress. The sounds of cows mooing birds chirping & quietness is my therapy. What will my property be worth if train goes thru? Nothing!! I don't even have internet @ my ranch. I get 2 channels on my T.V. I don't want any technology on my place. I go there to distress I have 3 cemeteries on my road. It is so wrong to disturb the dead. Where are they going to be moved?	
Jonathan Schmidt	2/9/2018	Website	I would absolutely prefer to use high-speed rail over flying or driving between any cities as close as Dallas and Houston. This option is cheaper, faster, cleaner and safer than additional highway lanes or short flights. Rail transportation also demonstrably improves the livability and desirability of super-regions like Dallas-Houston. As personal vehicles increasingly become electrified and eventually are replaced with rented, driverless vehicles, rail travel will become the backbone of inter-city transportation system. The plan being considered is a strong one and we'd be wise to implement it now rather than after it becomes painfully obvious it was needed.	Comment noted.
Dieter Scholz	3/5/2018	Website	<p>Comments on the Dallas to Houston High Speed Rail Draft EIS Fundamental issues regarding statements in the “Purpose of and Need” summary.</p> <p>Growing travel demand</p> <ul style="list-style-type: none"> <li>* It has not been explicitly shown where the demand will be coming from.</li> <li>o I-45 traffic congestion is dominated by increased movement of goods by tractor trailers. The bullet train will not substantially improve that.</li> <li>o Most super-commuters do no travel daily. They travel at the beginning and end of the week and remain at their work location during the week.</li> <li>o Those travelling for personal reasons chose their personal automobile for convenience and cost savings. Car rental or other public transportation costs are never included in TCRR’s cost comparisons.</li> <li>o Increased demand is not supported by an increase in air travel. If demand was there, surely the airlines would add flight itineraries.</li> <li>o Many companies are reducing travel budgets by using virtual meetings, telecommuting, and advanced communication technologies instead of sending employees to remote locations.</li> <li>o Studies sited in the chapter 1.2 are ten and even thirty year old. Rail systems are a dying technology for moving people. Electric self-driving cars is the future. People will choose a means which provides the greatest flexibility to go where and when they choose.</li> </ul> <p>TCRR Dubious Projections</p> <ul style="list-style-type: none"> <li>* TCRR suggests that the public chooses personal cars over air due to pre-arrival time minimizing the advantage of air travel</li> <li>o Will passengers board a bullet train without any TSA type security screening? If so, how will safety be addressed?</li> <li>o If there is a more efficient screening method that TCRR will implement, why aren’t we using that at airports?</li> <li>o The reality is, when distances are relatively short (400 miles or less) people choose personal automobiles because they need transportation at their destination.</li> <li>* TCRR does not discuss ticket price but says there will be multiple tiers competing directly with cost of air travel and automobile travel</li> <li>o From personal experience, round trip travel to Dallas in a V8 pickup truck (not great on gas mileage) costs less than \$50 in gas. Will TCRR offer ticket price that is competitive when you also consider rental car, parking, etc? They would have to offer free ticket AND subsidize the cost of the car rental. Not a very good business model.</li> </ul> <p>Safety</p> <ul style="list-style-type: none"> <li>* Safety is sited as a need factor</li> <li>o In chapter 1.2.2.4, it is stated that highway deaths are 45 times greater than air or rail travel. That is like comparing the cost of a bicycle to that of an automobile. In order to compare those one has to use some common denominator to measure cost vs benefit. In comparing death rates for different modes of travel, a good common denominator might be number of miles traveled. If you look at it that way, highway travel is actually the safest mode of travel and rail is the least safe. See table below -</li> </ul> <p>No Build Alternative</p> <ul style="list-style-type: none"> <li>* The report summarily dismisses this alternative without presenting credible evidence that there is a need. The FRA is apparently accepting the private beneficiary’s declaration of need when there has been no public demand for this. The private investors are in “need” of leveraging this perception to violate and infringe on the rights of private landowner for personal gain. The public does not “need” a high speed rail system.</li> </ul> <p>Design considerations to minimize impact</p>	Refer to AS-1, BA-4, BA-6, GN-2, GN-4, LU-9, NE-1, NR-6, NV-1, NV-6, PI-1, PI-4, PN-3, SC-3, SS-2, SS-9, SS-14, TC-7 and WW-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>* There are many references to “public” involvement by both the FRA and TCRR. It is unclear what inputs, if any, were taken from the public as it pertains to the impact to the region. The overwhelming public comment has been against this project but it seems to have fallen on deaf ears.</p> <p>* According to the report, use of the viaduct system “potentially” reduces the fragmentation of existing habitat.</p> <p>o It is my understanding that security fences will be placed on either side of the track in order to prevent unauthorized access. I do not understand how this reduces fragmentation.</p> <p>* According to the report, permanent physical impacts would occur to groundwater wells during construction, including public water systems.</p> <p>o Water is life. How much bigger of an impact is even possible??</p> <p>* Noise</p> <p>o 100dBA is VERY LOUD. According to the California DOT, that’s somewhere between a lawnmower at 3 ft and a jet fly-over at 1000 ft. I wear ear plugs when I mow the grass.</p> <p>Mode</p> <p>Billion Miles Traveled</p> <p>(Note 1) Fatalities</p> <p>(Note 2) Fatality Rate (deaths per billion miles)</p> <p>Highway 2988.281 32719 10.94910418</p> <p>Air Carrier, Domestic 5.965 429 71.9195306</p> <p>Total Train miles 0.542 43 79.33579336</p> <p>Transit 4.413 266 60.27645593</p> <p>Note 1: USDOT Bureau of Transportation Statistics</p> <p>Note 2: From the EIS, Table 1-1</p> <p>With a train passing every 30 minutes, I guess earplugs will be part of my everyday wardrobe.</p> <p>* Aesthetics and scenic resources</p> <p>o This is very subjective and the only opinions that matter are those of the impacted residents. It is not up to Washington bureaucrats to determine what is aesthetically pleasing to the citizens who live there. A shiny railway station is no comparison to the loss of natural beauty that would result. The FRA needs to recuse itself with regards to this topic.</p> <p>I could go on and on but I’m running out of time, that which I have not much to spare. The high speed rail between Dallas and Houston is a bad idea. It was born not out of need but out of greed. It is not the public which demands this but a few wealthy investors, and those looking to become wealthy, who are advocating this project. The FRA EIS report does not spend much effort to justify the need but takes it on TCRR’s word. The “no build” alternative was summarily dismissed without providing analysis. The objective to minimize impact is not achieved but talked around as if the “need” is fact. This is a short sighted project that will have near term benefit for a few but will ultimately get dumped on the taxpayer. The environmental impact to those strategizing in the board room is nothing, but to those in the train’s path, it is devastating.</p> <p>I ask that the FRA deny permission to build the high speed rail system from Dallas to Houston and to deny credit assistance to TCRR and any of it’s affiliates.</p> <p>Respectfully, Dieter Scholz Houston, TX</p>	
Nicholas Scholz	3/3/2018	Website	<p>I cannot see this project being in any way profitable. There are other options available for travel and most people do not travel for work anymore with technology advancing the way it is. The data for travelers used in EIS was taken many years ago and is no longer valid. For those traveling for personal reasons, it makes no sense to travel on the rail. For example, I have a spouse and three children. It would cost is around 1000 dollars one way to travel from Houston to Dallas, and then we would have to rent a car upon arrival. Or, we could just drive for 60 dollars round trip.</p> <p>Second, the EIS states that rail is the safest way to travel. According to the US DOT statistical data (this literally came from their website, I'm not making this up), that is a horribly false statement. Per mile traveled in the US in 2015, you are five times more likely to die in a plane than a car, and 21 times more likely to die on a rail than a plane (126 times more likely to die on rails than in a car). I'll take my chances on the road.</p> <p>Third, the EIS states there will be no interference with roads, but hundreds of roads will be re-routed or closed?? Also, who is paying for the roads? Can FRA give the residents of the effected counties a written guarantee that our tax payer money will not be used to re-route or</p>	<p>Refer to GN-1, GN-2, GN-4, GN-7, NE-1, NE-9, PI-1, PN-3, SC-3, SS-12, SS-14, SS-18, SS-23, SS-26, TC-4, TR-2, TR-6, TR-7 and TR-8.</p> <p>Surveys completed by FRA were conducted on property where access was granted. In the event that a representative of FRA accessed property and then determined that entry had been denied or miscommunicated, the representative left the property. FRA cannot speak to the survey actions of TCRR or its representatives.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>upgrade roads due to the HSR? What about during construction? Will roads temporarily be closed for construction of the HSR? How is this not affecting the roads and residents that use them daily? And the proposed station at the intersection of TX-30 and TX-90. How will this affect traffic? These roads are only two lane highways (one lane in each direction). Who will pay for expansion of these highways?</p> <p>Fourth, our Sheriffs in each of the affected counties have not been included on any of the EIS. What about safety of the people? What about response times? Is additional man-power going to be needed? How can our Sheriffs not be included? What if a railway worker is injured during construction? What if there are violations of neighboring properties No Trespassing rights? In Grimes county alone, there have been hundreds of reports of trespassing related to Central Texas already and construction is not even close to starting. These reports are taking up time of our law enforcers.</p> <p>Fifth, the station in Roans Prairie is ridiculous. Who is going to travel to that station to ride a train for 200 dollars? The only answer that I have gotten is Texas A&amp;M college students, or Sam Houston college students. First off, not all of the students come from Houston or Dallas. Second, why would any of those students travel 35-40 minutes to get to the station, then pay 200 dollars, then the ride, then find another ride on the other end of the train ride, when from Huntsville or College Station a drive is only 1-3 hours to either Houston or Dallas and costs a whopping 30 dollars for gas, AND you have your car at your destination?</p> <p>There is so much more wrong with the EIS but I don't have that much room to reply to everything on a 5600 page report of complete and utter falseness. It would be a shame to take land from hard working AMERICANS to give it to a project that has already started off with nothing but lies and is destined to FAIL.</p>	
Linda Schoppe	2/5/2018	Website	I believe in jobs. Texans need to work. Saying that, my property is not in the area of the rail system. Please continue your good work and finish the HSR.	Comment noted.
Linda Schoppe	2/27/2018	Website	Just imagine the number of jobs before and after construction of the HSR. Great for Texas!	Comment noted.
Cecil Schroeder	2/6/2018	Handwritten	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> <li>1. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</li> <li>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</li> </ol>	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Corey Schuler	3/3/2018	Website	I am strongly opposed to the proposed route for the high speed train. This route runs through a working ranch, Morgan Legacy Farm. I am concerned that the significant changes to elevation would cause incredible watershed issues. I am also concerned about the economic impact it will have on Navarro County. A move north of the already existing power lines would have less of an impact on Morgan Legacy Farm, and ultimately it would preserve the business to it's suppliers in Navarro County.	Refer to LU-5, WW-1 and WW-2.
Larry Schulin	2/6/2018	Website	Northwest Mall..lol How appropriate. This train is nothing more than a huge payoff to politicians, and lobbyists. I'm not sure if it's been officially named, but once the novelty wears off, it will look just like NW.Mall in recent years. Therefore I suggest calling this HUGE waste of money "CASPER". It will become a ghost train by 2020. A financial DISASTER.	Refer to GN-7 and GN-9.
Bruce Schultz	2/6/2018	Oral	<p>Bruce Schultz Hi_ Good evening, and thank you for staying here to hear what everybody's got to say. I appreciate that. My name is Bruce Schultz. rm part of a family group that O'vns property on Binford Road: here we've owned it as a family farm for about 160 years. We're still there. We've been through the Civil War. We went through the Great Depression. We've gone through everything: and we still use it for agricultural purposes and we want to keep doing that. Were out for the quiet enjoyment of our property: and we're really upset and pretty resentful to see a big railroad train headed straight at us to try' to force us off of our property. There — all of our property access is on Binford Road, and the train cuts our property away — cuts it in half, basically, and leaves us With a large parcel that has no other access to a road So now in the back room: the people are saying: "Oh: well: we can get you access to the service road. We can negotiate that." Well: this is crazy to have proceeded through this far. They've already sued us, and now they're saying: "Oh: we thought about how to get you access. Let's talk about something. This is crazy. With this much activity going into this: this is no way to run a railroad. So I'm here to speak as somebody tha€s directly impacted with this and my family. But that's me. So let me just speak quickly in the time I've got left to just talk about some big things. This is as other speakers have said: this is going to divide into an east side and a west side. And in the future: in 20 and 30 years: we'll be</p>	<p>Refer to TR-7, TR-8 and TR-10.</p> <p>Section 106 of the National Historic Preservation Act requires federal agencies to consider the effects of their actions on historic properties. One component of FRA's overall environmental analysis is dedicated to understanding how cultural resources may be affected. In accordance with Section 106 and pursuant to 36 C.F.R. Part 800.4(b)(2) and 5(a)(3), FRA, TCRR, Texas Historical Commission, and other Signatories are developing and will execute a Programmatic Agreement (PA) that allows for the phased identification, evaluation and assessment of effects to historic and archeological resources as access to private land holdings becomes</p>

			<p>talking about do you east of the railroad or west of the railroad: because there are going to be limited access points where you can actually cross the right-of-way And in the future: if they build the overpass for 2920, and 2920 is two lanes wide well, what happens when it ultimately needs to be six lanes wide or even bigger? That — who is going to pay for that? Does the County have to pay for that? Does the State do it? We're all going to have to pay for it as taxpayers. So think about the future. We've been there for a long: long time. We hope to be there for a much longer time. But for all of us: think about what this will be like in 10 years, 20 years and 30 years: and lets do some long-term though and some long-term planning on this. So we oppose this project. We endorse the no-build option, so please join us on that Thank you</p>	<p>available and after publication of the Final EIS. Historic and archeological resources can include structures, buildings, sites, districts, and objects such as farmsteads and ranches. The PA outlines a comprehensive methodology to identify historic properties eligible for or listed in the National Register of Historic Places, and to consider avoidance and minimization measures to, as well as ways to resolve adverse effects for, those properties that may be affected. This process is discussed in <b>Section 3.19.6.2, Cultural Resources, Programmatic Agreement</b> of the Final EIS. Binford Road would not be closed, rerouted, or crossed by the Project.</p>
Bruce Schultz	3/9/2018	Website	<p>I am writing in opposition to the proposed Texas Central Railway Dallas-Houston High Speed Rail line because of the adverse impact to future land use in Harris and Waller Counties. The proposed alignment, with the noise and vibration created by 30 to 50 train passages per day, greatly reduces the potential for residential land use in proximity to the proposed rail line. With residential uses diminished, the future "highest and best use" will probably fall to industrial and warehouse development along the rail line, similar to that seen between Washington and New York City. I recommend the "No-Build" option.</p>	<p>Refer to NV-1 and NV-5.</p>
Bruce Schultz	3/9/2018	Website	<p>I am writing in opposition to the proposed Texas Central Railway Dallas-Houston High Speed Rail line because of the adverse impact to future traffic patterns in Harris and Waller Counties. The proposed alignment, has only three (3) east-west roadways between US-290 and Spring Creek, a distance of nearly four (4) miles. These east-west roads are FM 2920, Waller-Spring Creek Road, and Castle Road. The alignment calls for FM 2920 and Waller-Spring Creek to go underneath the tracks, while Castle Road is to be a bridge over the tracks. How many lanes Of traffic are these crossings planned to carry? As Northwest Harris County develops, how will these crossings be enlarged to carry more auto, truck and school bus traffic? Will our County and State governments have extra work and expense to maintain adequate and efficient east-west traffic flow? Failure to plan for east-west traffic movement may be a limitation to future growth and may create adverse traffic and lifestyle issues. I can hear it now: "I would have been home earlier, but I got tied up in traffic at the Texas Central overpass". This seems to be an unnecessary burden for our local population to bear, just to move rich people from Dallas to Houston. I recommend the 'No-Build' option.</p>	<p>Refer to TR-7, TR-8 and TR-10.</p>
Bruce Schultz	3/9/2018	Website	<p>I am writing in opposition to the proposed Texas Central Railway Dallas-Houston High Speed Rail line because it does not serve the communities between Dallas and Houston, misses most of the network benefits that could be created by linking the cities between Dallas and Houston. A railroad system is a network. And the value Of a network is proportional to the number of nodes (intersections) on the network. The proposed Dallas-Houston line links central Dallas and Houston, and the only other node is a pasture in Grimes County, 25 to 30 miles from Bryan or Huntsville. This seems to fail reaching any synergy that could be created by linking the cities along the 1-45 Corridor: The Woodlands, Conroe, Huntsville and Corsicana. If the railroad stopped in those cities, they could benefit from access to Dallas and Houston. Even in Japan, the Shinkansen makes multiple stops between Tokyo and Osaka, which is approximately the same distance as Dallas-Houston. I agree with Congressman Kevin Brady, if there is a high speed rail line between Dallas and Houston, it should serve the cities of the 1-45 corridor and aim to pull Texas together. It should not just be a high-speed link between Dallas and Houston. I recommend the 'No-Build' option.</p>	<p>Refer to BA-8 and PN-3.</p>
Bruce Schultz	3/9/2018	Website	<p>I am writing in opposition to the proposed Texas Central Railway Dallas-Houston High Speed Rail line because of the adverse impact to my family's farm. I recommend the 'No-Build' option. The proposed alignment runs through my family's farm and splits it into two parcels, the larger of the two parcels (about 50 acres) having no access to a public road. This creates a great hardship to us in continuing our agricultural uses of the farm. It also greatly limits the future uses of the property for residential or industrial uses. While we wish to continue the agricultural uses of our property, as responsible stewards of the land and of our family's economic interests, we strongly object to this proposed taking of our property. Weve heard a lot of promises from Texas Central about how this will have minimal impact, but from the proposed alignment on our property, this is not so. From my point of view, this project is a scheme to take property from current owners, build the project with government-guaranteed debt, let it fail, and then distribute to new owners, with the defaulted indebtedness to be absorbed by the government. I recommend the 'No-Build' option. Sincerely, [...]</p>	<p>Refer to ED-1.</p>

Cyndy Schultz	2/23/2018	Letter	<p>This letter is to express my views on the Dallas to Houston High-Speed Rail Project. I stand with many other citizens of Texas in being against the high-speed bullet train proposed by Texas Central Railway. The first area I would like to address from the Draft Environmental Impact Statement (DEIS) is whether there is a need for the project. Previous passenger rail studies completed by the Federal Railroad Administration (FRA) and the Texas Department of Transportation (TxDOT) support the need for reliable multimodal transportation alternatives to promote congestion relief strategies. One of these strategies identified in the State Rail Plan included the potential implementation of HSR within the Dallas to Houston corridor. Many high-speed rail lines in other countries or other areas of the United States were built to relieve crowding on conventional rail lines and to connect central cities with extremely high residential and commercial population densities. Most of the other areas where there are large subway systems with high rates of usage are those that have low rates of vehicle ownership or have airports nearby with low-cost air service. This is hardly the case with the Dallas to Houston corridor. Because there is no existing Passenger Rail Service, most of the riders must come from air and passenger vehicles. This corridor has the highest rates of car ownership and the population is too spread out for people to be able to conveniently drive to a central railway station. Both Dallas and Houston have airports located very close to their downtown area and other airports throughout the region. I do not believe the air quality impacts have been fully vetted. From the Executive Summary (ES.9.3 Air Quality): "The Build Alternatives would provide another option for intercity travel between Dallas and Houston that would emit air pollutants, including Mobile Source Air Toxics (MSATs), into the atmosphere. However, the Build Alternatives would decrease overall VMT from passenger vehicles compared to the NO Build Alternative, thereby decreasing regional MSAT emissions generated by passenger vehicles, and consequently would have a beneficial impact on regional MSAT emissions." I believe we will see an increase in MSATs in the Houston area because of the lack of travel alternatives from the proposed rail station locations to other areas for business travelers except passenger vehicles, probably rented at the station or taxis. This will actually increase the MSATs for the Houston area, something the air quality of Houston doesn't need. I am not very familiar with the rail station location in Dallas, but I expect there could be similar impacts. I also do not believe the impact to the floodplain have been fully vetted. From the Executive Summary (ES.9.9 Floodplain Hazards and Floodplain Management): "Final design of the Build Alternatives would minimize potential increases to the floodplain elevations by retaining existing water surface elevations where feasible to avoid impacting the available flood storage and minimizing fill in sensitive areas. Many regulatory floodplains and unregulated stream segments would be fully spanned and potential impacts avoided. Compliance and mitigation measures, including temporary detention, would be used to offset effects on floodplains from piers and construction within the floodplains." I am concerned that the project will affect watersheds North and West of Houston and Harris County. The impacts from Hurricane Harvey last summer were monumental to Houston, Harris and surrounding counties. The amount of rainfall surpassed 100 and 500-year floodplains. The environmental study indicates that approximately 4 acres are located within a 500-year floodplain and approximately 179 acres are located within a 100-year floodplain. Since recent climate change studies indicate precipitation events have become and will continue to become more intense, has this been factored in with all Of the additional concrete from this project on land that typically absorbed the rainfall? I also see a number of detention basins on the maps, but no indication Of where these will eventually drain to. There are a number Of bridges and Overpasses that need to be built on existing roadways for the train to pass under. I assume the project will pay for the initial construction, but what government entity will absorb the cost to maintain all these bridges and overpasses being built over the railroad? Taxpayers will likely be forced to pay maintenance through higher tax rates. It's not fair for taxpayers to absorb these costs for the benefit Of a private corporation. It should also be unlawful. I am also concerned about the electricity to power the train. A couple of quotes from the study seem to fly in the face of recent articles in the Houston Chronicle (2/21/2018) about electric rate hikes for consumers due to shutdown of 3 of the state's largest coal-fired generating plants. This will drive the state's power reserves to their lowest level in more than a decade. "Additionally, any number of regional power plants connected to the Electric Reliability Council of Texas (ERCOT) grid can satisfy operational demand for the HSR System and station areas. (page 17)." "Construction power usage would not require significant additional capacity, or result in a significant peak electric demand or base-period electric demand. (Page 25)" The DEIS seems to believe there is no impact to electric usage, but consumers will bear the brunt of higher costs for their electricity due to the forecast low supplies, especially during peak demand hours in the summer. I am also concerned from the environmental aspect that all threats to protected species, including bald eagle nesting grounds, been fully studied. Another concern of mine is the economic impact. This project is going to destroy homes and the way of life for many citizens in the communities affected. Should Texans suffer extreme economic damage through the unlawful</p>	<p>Refer to AQ-2, AQ-3, AQ-10, BA-12, ED-1, ED-2, EU-4, FP-1, FP-4, GN-2, LU-11, NE-2, NE-9, NR-3, NR-4, PN-3, SS-17, TC-6, TR-7 and TR-10. If passengers would not take the high-speed rail, they would be taking cars, buses, or planes from one city to the other (Dallas to Houston or vice versa). Once they get to that city, they have to keep driving a car, rent a car, or take a taxi to their local destination. That portion of local connection or travel emissions would exist whether they took a train, plane, or automobile between the cities. All applicable research information has been incorporated into the Final EIS. In addition, detailed detention pond design will be developed during further design. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b>. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b>.</p>

			<p>application of eminent domain to benefit a private company and ultimately a foreign corporation? The property rights of citizens are being violated as the farm and ranch land that has been the source of income for several generations is destroyed. My family has owned property the proposed rail route will cut through for over 160 years. We will lose access to 2/3 of our property because we have no access to the property on the other side of the berm that will go through our property. That property has been farmland for its entire history of ownership in our family. The people that farm the land will lose their livelihood since 2/3 of the property will be inaccessible to their equipment. I also believe the FRA has accepted the Texas Central Railway incomplete and misrepresented financial and operational projections without question: I believe the overly optimistic ridership projections call into question the long-term viability of the project. I am afraid Texas taxpayers will be footing the bill when actual ridership falls short of projections. I am 100 percent against the high-speed rail project by Texas Central railway. I am not against economic development for the state of Texas, but it should not come at the expense of the environment, the agriculture industry or small town communities and only benefit a few. I strongly feel this project harms all and will eventually be a burden to Texas taxpayers.</p> <p>I do not believe the air quality impacts have been fully vetted. From the Executive Summary (ES.9.3 Air Quality): Mr. Wright February 23, 1018 page 2 "The Build Alternatives would provide another option for intercity travel between Dallas and Houston that would emit air pollutants, including Mobile Source Air Toxics (MSATS), into the atmosphere. However, the Build Alternatives would decrease overall VMT from passenger vehicles compared to the NO Build Alternative, thereby decreasing regional MSAT emissions generated by passenger vehicles, and consequently would have a beneficial impact on regional MSAT emissions." Sheree Schultz	1/11/2018	Website	I think this railway is a wonderful thing. It will cut down time and hassle for commuters and open the doors for so many possibilities between the two cities.	Comment noted.
Gaynelle and Miles Schulze	2/13/2018	Website	The proposed high-speed rail route between Dallas and Houston is something that will benefit everyone. It will improve transportation options between the two cities and favorably impact the economies of all the areas through which it passes. Since it is proposed to be built with private money instead of government funding, it is difficult to understand why anyone would oppose it. The United States needs to catch up with other developed nations who are years ahead of us in the utilization of rail travel. Expanding and repairing highways is no longer the answer for "medium range" trips such as Dallas-Houston. There also needs to be another option to airlines for trips of this nature.	Comment noted.
Tracey Schut	1/25/2018	Email	Please ignore - testing.	Comment noted.

Kay Schwartz	2/5/2018	Website	This will never make enough money to pay for itself, let alone make money. Southwest Airlines does a fine job, and driving only takes 3-4 hours. Disrupting so many peoples' lives and properties for such a folly is a disgrace. Our current politicians will be long gone by the time everyone realizes what a colossal mistake has been made and the taxpayers will wind up dealing with this mess. Reminds me of the Ship Channel cruise port thinking.	Refer to BA-4, BA-12, GN-4, NE-1 and PN-3.
Maureen Schwarz	12/20/2017	Email	I am totally against this High-Speed Rail for several reasons. The main one being that it is supposed to be from Dallas to Houston. The routes I have seen are no where near Houston. One of them runs right down my driveway and I am in Waller County as well as Grimes County. If they want this take it closer to Houston at least in Harris County. I do not believe that this is a profitable venture at all. Also the fact that it will put people out of their homes and property that they have had for many, many years and are still making a living off of. I have more reasons but that is just a few. Also it says it will be privately financed, somehow I just don't buy this.	Refer to BA-7, BA-8, GN-4, GN-7 and NE-1.
Stephen Schwarzbach	2/28/2018	Website	As a concerned citizen who lives within a few miles of the proposed terminal in Houston, I feel compelled to say that this terrible idea should be stopped. This train is unnecessary - the ridership projections are grossly overstated, it will be a blight to the city and especially countryside, and it will ruin the quality of life and will damage private property along the way. It defies logic that a private company can exercise any semblance of eminent domain to acquire land from private property owners to build a for-profit enterprise. On that basis alone, this project is an insult to the people of Texas and an abomination to the rights of its citizens. If built, it is highly likely that this enterprise will go bankrupt (based on unrealistic ridership/cost/time savings assumptions and projects put forth by TCR), creating a further burden to citizens and taxpayers. To summarize: 1. Not needed, 2. Blight on the land, 3. Unfair acquisition of private property, 4. Property damages, 5. Long-term economics not feasible. There is simply no good reason to build this railway.	Refer to AS-1, ED-1, GN-2, GN-4, NE-1 and PN-3.
William Scofield	1/30/2018	Website	The draft Environmental Impact Study (EIS) released to the public by Texas Central Railway (TCR) for its high-speed rail project is fatally deficient with respect to studying, protecting, and complying with the federal law of the Endangered Species Act. I attended a comments meeting held by the Federal Railroad Administration (FRA) on March 5th, 2018 at the Sheraton Brook Hollow in Houston, Texas which provided me with the opportunity to speak with an AECOM biologist that worked on TCR's draft EIS. The AECOM biologist had a poster board explaining that during the research work for the draft EIS, no endangered species had been found in the 240 miles (crossing ten Texas counties) that would be impacted by TCR's rail project. I told the biologist had visited the Texas Parks and Wildlife website which gives a complete listing of documented endangered species in the ten Texas counties. Texas Parks and Wildlife lists a total of twelve endangered species that have habitat in the portions of these ten counties. These species include: the Houston Toad, Atwater's Prairie Chicken, the Whooping Crane (its migration route), and the Red Wolf. In addition, there are approximately 22 threatened species. I asked the biologist what fieldwork had been done to observe and document endangered and threatened species in the ten counties which would be impacted by the 240 miles of construction necessary to complete TCR's project. The biologist explained to me that very little fieldwork was completed before the draft EIS was published and released to the public and that AECOM was beginning to do actual field work and research on the impact the high-speed train would have on endangered and threaten species. Since the initial work done by AECOM found no endanger species, obviously a great deal of additional work will be required to complete an Environmental Impact Report which fully covers any impact on endangered species. The only logical explanation for why TCR did not find endangered or other protected species is their biologist didn't really look for any of these species. TCR's EIS-DEIS is also fatality deficient, since the document does not specifically provide steps TCR will undertake to insure the protection of endangered or threaten species under Texas law. The Texas horned lizard is now a protected species, and, in Texas, it is illegal to take, possess, transport or sell them without a special permit. Habitat destruction is an illegal "taking" of a species. TCR's EIS must present specific information about their biologist's study of the Texas Horned Lizard and must also detail how TCR will protect the Horned Lizard during construction and include how TCR will mitigate damage to their habitat. The Texas Horned Lizard is found in all ten counties and without a specific plan with respect to protecting the lizard, TCR's EIR does not comply with Texas law. The possible negative impacts and any mitigation requirements that are needed to protect and preserve all endangered species with habitats along TCR's 240-mile corridor is one of the most important parts of the EIS. This will allow both experts and the public to review and submit comments to the FRA with respect to this project. This opportunity will effectively be denied unless a second draft EIS is prepared for proper review. The current draft EIS should never have been approved for release unless all work necessary with respect to endangered or threatened species had been completed. This is one of numerous deficiencies of TCR's draft EIS which should require the preliminary draft to be rejected by the FRA. If the FRA properly completes the tasks it has been assigned by Congress and the President, the FPA should immediately notify TCR that the company must issue a draft EIS that can be properly reviewed by all interested parties. The FRA should refuse to accept any EIS-DEIS submitted by TCR until TCR takes its legal obligations to protect threatened or endangered species seriously, and until TCR produces a preliminary EIS which others can examine and submit comments to the FRA.	Refer to NR-4. For information regarding the Endangered Species Act and federally listed species with potential to occur within the Project see <b>Section 3.6.4, Natural Ecological Systems and Protected Species, Affected Environment. Section 3.6.4.4.2, Natural Ecological Systems and Protected Species, Protected Wildlife Species</b> discusses federally and state-listed species reported by USFWS and TPWD. All species listed as threatened or endangered by either the ESA or by state for Navarro County are included in <b>Table 3.6-8: Protected Wildlife Species with Potential to Occur within the Study Area</b> . For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> . NEPA does not require 100% of the Project to have field surveys conducted.

William Scofield	3/5/2018	Letter	<p>There are so many problems with the Environmental Impact Study (DEIS) that Texas Central Railway has released, it is difficult to know where to begin stating the problems. Since early 2016, I have personally attended several meetings concerning the Texas Central Railway (TCR) proposed high speed rail project. During each of these meetings TCR has continued to ignore requests from municipal and county governments for critical information about the project. A meeting I attended at Prairie View A&amp;M in 2016 is representative Of TCR's refusal to address the legitimate concerns of Waller County Texas. This meeting was organized by Waller County Judge Trey Duhon and lasted over two hours. Judge Duhon and many county officials made presentations to both TCR and TXDOT requesting TCR cooperate with the county concerning TCR's impact on the county during and after completion of the high-speed rail line. If constructed, the rail line will cut the county into two distinct halves and impose a tremendous burden on county government. The officials making requests for information included law enforcement, emergency services, the school district, the fire marshal, the county engineer, and construction and permitting. Waller County requested TCR enter discussions covering some of the following issues:</p> <ol style="list-style-type: none"> <li>1. The impact the railway would have on Emergency Response Times. Specifically, would the county EMS department be able to service the county in terms of both transportation and using existing emergency facilities. TCR acknowledges there would be temporary and permanent public and private road closures throughout the county.</li> <li>2. The impact on the county's ability to provide law enforcement services and how police and sheriff department response times would be impacted as well as the possible construction of new facilities to properly service the citizens of Waller county. If additional facilities or staff are needed, would the county be provided with financial assistance from TCR?</li> <li>3. The school district's need to plan for the transportation of students to and from school. Permanent road closures will obviously impact school bus routes. How was the school district to obtain the funds necessary to provide what could be potential significant increases in transportation costs?</li> <li>4. The Fire Marshal has many of the same concerns as both police and emergency services. A careful analysis needs to be made to arrive at a plan to make sure fire equipment can be transported where needed throughout the construction process and after completion Of the process. Once again, if the County must expend significant funds to put in new facilities where will these funds come from?</li> <li>5. The county engineer and the counts's construction and permitting people should have been consulted and given the opportunity to review the entire project, including detailed design plans and asked TCR to do so before the preparation of the DEIS. Since TCR first announced their proposed railway, the Company has consistently refused to work with the governmental representatives Of Waller and at least 7 Other Texas counties. On March 1, 2018 the sheriffs of 8 different counties had a news conference to inform the public that TCR had failed to contact any Of their departments to Obtain vital information necessary to properly complete a DEIS that conforms to FRA requirements. There can be no doubt that constructing an elevated rail line running between Dallas and Houston will have a major impact on the costs incurred by the counties and cities in its path. How will these governmental agencies begin to cover these costs?</li> </ol> <p>The high-speed rail line will negatively impact the tax base of each of the rural jurisdictions it will cover as the majority of the 8000 acres the project will require will come from these counites, In addition, land values Of the Surrounding acreage for probably two miles in each direction will be significantly impaired by the negative impact the line will have on the local environment. Reducing the evaluation of these thousands of uncounted acres will only further reduce the tax base of each of these counties. TCR has refused to even meet with the elected officials in each of the eight rural counties. Yet, the DEIS currently sent to the FRA reports that these impacts have been considered and none will have a significant impact! The FRA's first obligation should be to make sure the needs of the citizens that will be impacted by the project are carefully considered. To date, there has been no effort to consider these local citizens' needs but there has been a concentrated effort to ignore them! There is an abundance of conclusions reached in Section 3.13 of TCR's DEIS which should be based upon detailed discussions with both city and county officials rather than TCR simply compiling them from various statistical studies or Other third- party sources. FRA approval of the DEIS submitted by TCR should have been withheld until TCR solicited the input of all the governmental agencies who have the responsibility of protecting and serving the local citizens and residents. The process used by TCR to complete the DEIS is so fatally flawed that TCR should be forced to properly conduct and complete a DEIS which meets FRA standards.</p>	Refer to LU-14, NE-1, PI-1, SC-5, SC-6, SC-19, SS-18, SS-23, SS-26, TR-8 and VA-1.

William Scofield	3/5/2018	Oral	<p>My first comment is I think it's inexcusable that tonight we are called here for a citizen's commentary meeting and we, for the first 30 minutes, were talked to about politicians trying to justify the project. I didn't think that was the purpose of this meeting. I thought it was select citizen input. My second comment is, this Texas central railroad's treatment of everybody involved or impacted by this thing has been totally unacceptable. They've lied to people about having the right of eminent domain. They've threatened people with court cases and court actions, even though they didn't have the right to do so. They've continued to maintain they have the right of eminent domain even after a court in Harris County has ruled they have not. My next problem is that the EIR that they prepared so far is fatally flawed. They've been unable to gain enough access to the land to be able to properly survey it. They claim they haven't found a single endangered species in their surveys. Well, they haven't looked. There's at least 20 endangered species that are along this route. Two years ago I attended a meeting in Waller County conducted by Waller County judge. The people and the county officials and Waller County judge begged Texas Central to work with them, at least fill them in on what it would impact emergency response times, how it would impact law enforcement, how it would impact their schools, how it would impact fire services and to date, nobody with Texas Central Railway has been willing to meet with any of the officials of Waller County to discuss these issues.</p>	Refer to ED-1, ED-2, GN-1, NE-8, NR-4, PI-1, SS-23 and SC-5.

William Scofield	3/7/2018	Letter	<p>I attended a public meeting conducted by Federal (FRA) Officials On March 5 at the Sheraton Brook Hollow, located at 4000 NW Highway Houston, Texas. I do think this meeting was conducted in accordance with FRA guidelines (for meetings to solicit Citizens comments) for the following reasons: 1. The FRA officials officiating the meeting claimed it was an additional meeting called to give residents living close to Texas Central Railways' (TCR) proposed terminal site. Northwest Mall, to have a convenient meeting location to present Comments to the FRA. I arrived early, at 4:45 pm, to secure a low speaker number for the meeting. I received number 52 and this was at a time when less than 75 people had arrived and most of the early arrivals were representatives of TCR or contractors working for TCR. Instead Of allowing individual citizens the opportunity to share their concerns about or Support for the proposed high-speed rail a preference was given to politicians who attempted to the on all the benefits of TCRs high-speed proposal. These officials have had ample opportunity to share with the FRA their support Of TCRs project. These politicians and their staffs had a chance to help prepare TCRs Draft Economic Impact Statement and already had direct access to the FRA before the document was released in December 2017. This meetings primary function should have been to solicit input from individual citizens, who have had no voice or direct input with the FRA. TO make matters worse, these were given preference in the speaking order over the residents that the FRA representatives claimed they were trying to reach. I think the entire meeting demonstrated that the FRA instead of following its legal mandate to objectively evaluate TCRs DEIS, is actively engaged in promoting it! 2. I attended this with a good friend who also arrived at approximately 4:45pm. In addition to giving preference to politicians trying to sell the project, we both noticed that lower speaker numbers were given to individuals supporting the project that simply were not in attendance when we arrived. In a previous meeting held by the FRA, the overwhelming majority of citizens came to speak out against the project. The real purpose of the additional meeting appeared to me to be "staging" a meeting favorable for TCR and not to solicit additional information from the public. This meeting represented to me a new low, even for TCR.</p> <p>TCR's past tactics in trying to build their high-speed train have been shameful and have made anyone that has dealt with them distrustful. TCR has steadfastly refused to meet with local county and city officials of the areas their project would impact. Therefore, much of the data in their DEIS is unreliable. I have personally met dozens of landowners to whom TCR has falsely claimed the company has eminent domain in Texas. TCR's tactics have been to try and strong arm these landowners into buying options on their land or to nefariously gain access to these landowners' properties to complete potential surveys of their route detailed in their DEIS. It is troubling that any branch of the federal government would consider any of the information included in their preliminary EIR-DEIS to be accurate enough to gain approval Of a finalized Economic Impact Statement. The FRA should at the very least reject the current EIR-DEIS and force TCR to prepare an accurate one for the FRA's review. It should be the FRA's mission to look out for the taxpayers' interest in approving this project since TCR is seeking billions Of dollars in federally guaranteed loans to build it.</p>	Refer to ED-1, ED-2, NE-1, NE-8, NE-9 and PI-11.

William Scofield	3/8/2018	Letter	<p>Texas Central Railway has never released a detailed economic feasibility report on their proposed high- speed rail project. Before the FRA moves forward on TCR's preliminary EIR-DEIS, the FRA should insist on a detailed feasibility study which can be compared to the only one currently available, the Reason Foundation study. During the last session of the Texas legislature, when TCR was lobbying for legislation that would assist in building the high-speed rail system, members of the legislature made the prudent and reasonable request asking for such a feasibility study. TCR fail to produce one during the legislative session and their refusal played a significant role in not only defeating the company's legislative agenda but also the passage Of a bill prohibiting TCR from borrowing money or receiving any State of Texas loan guarantees for their project. Which leads to another question -- why, if the Texas legislature refused to support TCR's efforts, is the FRA seeking to assist them by approving TCR's EIR without a detailed economic feasibility study? TCR's preliminary EIR includes some inadequately supported financial and ridership forecasts in it which are clearly not supportable. In addition. the EIR falsely claims significant sales tax</p>	Refer to AQ-7, GN-2, GN-3, NE-1, PI-1, SC-3, SC-16, SC-19, SS-9 and SS-12.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>benefits for the cities of Dallas and Houston which simply are not achievable under the current Texas sales tax law. TCR claims that there will be passenger demand totaling 13,000 one-way trips each day. TO achieve this number, that would equate to one-way trips per year. Data available for 2015 shows that the total one-way trips by the three currently available modes of transportation: aviation, personal automobile and bus, were approximately per year or a little over 31,369 per day. This means TCR would have to capture over 41 per cent of the current trips to achieve their projections. How will they accomplish this feat? TCR's EIR claims the cost of \$199 per one-way ticket on the train. Currently a traveler can fly Southwest Airlines for as low as \$169 and arrive in Dallas at a much more convenient terminal location. TCR claimed, at the FRA meeting I attended, that the traveler would prefer the train to a plane because there would be no need to arrive for the train early and clear security. This statement was incorrect as Texas Senate Bill 975 passed in the 2017 legislative session requires the high-speed rail terminals to provide for increased security and safety standards closely resembling TSA airport standards. I have not found in the TCR EIR where the security costs necessary to comply with SB 975 have been taken into consideration. The majority of the daily trips between Houston and Dallas, about 9.8 million per year, are made by personal automobile. Let's assume that each trip has a modest 1.5 passengers in the personal automobile. Assuming a one-way trip consumes about 12 gallons of gasoline at a cost of \$3.00 per gallon, the direct out of pocket costs of this trip is \$36. Even allowing for a fully prorated cost of maintenance, depreciation, and insurance of 55 cents per mile results in a one-way cost of \$132 or about \$88 per passenger and once the personal automobile arrives in Dallas there will be no addition local transportation cost such as an uber, taxi, or rental car. Finally, for the economically hard-pressed customer, a one-way bus trip can be had for as little as \$23. A luxury bus ticket costs \$102. The bus terminals in both cities are more conveniently located than the proposed rail terminal site in both cities. The location of the termini for the luxury bus trip are the most convenient of any mode Of public transportation. So even if a lot of travelers like the convenience and comfort of the train at a cost of \$199, it is illogical to expect TCR ridership to exceed current air travel one-way trips of about 3,400 per day. In fact, it is unlikely the high-speed rail would take away all the air travelers but assuming they capture all of this market they would transport about 1.25 million or about 3,400 not 13,000 one-way trips per day! Finally, the terminal site TCR has chosen in Houston is in the worst traffic corridor in the city - believe me, I work only a few miles from the site. A traveler could easily lose most of the time saved by the high-speed train trip getting to their final destination in Houston. TCR has another major bust in table 3.14-22 of their DE'S. In this table, TCR claims the train could generate \$15 to \$39 billion in sales tax for the State of Texas. Didn't TCR check with the State Controller's office in completing this table? Texas doesn't have a sales tax on transportation! In fact, to the extent the train does shift travel from passenger cars, Texas will see a reduction in taxes collected by the state on gasoline. TCR and political officials including the Chairman of their Board and the mayor of Houston have made this claim about sales tax after being told Texas does not apply sales tax to transportation tickets! The FRA has been requested to cite the tax code section pertaining to Texas sales tax that would create this multibillion dollar tax windfall and the FRA has declined to do so. Finally, the TCR EIR-DEIS contains no estimate of the millions of dollars Of property tax that will be lost by the 8 rural counties the train will pass through, These are just two Of the most material misstatements of facts in the DEIS. TCR's ridiculous claims about generating billions in sales tax revenue on a nontaxable ticket alone is so significant, how can any of the information in the DEIS be trusted? There are so many intentional and unintentional misstatements Of facts in the DEIS it appears the FRA has no interest in correcting the misinformation. The FRAS refusal to extend the 75-day comment period it granted the citizens of Texas to examine a document that took at least 18 months to prepare and is over 6,000 pages long is a clear indication the FRA has no interest in TCR submitting an accurate DEIS. No wonder the public has lost faith in the federal government.</p>	
William Scofield	3/9/2018	Website	<p>The draft Environmental Impact Study (EIS) released to the public by Texas Central Railway (TCR) for its high-speed rail project is fatally deficient with respect to studying, protecting, and complying with the federal law of the Endangered Species Act. I attended a comments meeting held by the Federal Railroad Administration (FRA) on March 5th, 2018 at the Sheraton Brook Hollow in Houston, Texas which provided me with the opportunity to speak with an AECOM biologist that worked on TCR's draft EIS. The AECOM biologist had a poster board explaining that during the research work for the draft EIS, no endangered species had been found in the 240 miles (crossing ten Texas counties) that would be impacted by TCR' s rail project. I told the biologist I had visited the Texas Parks and Wildlife website which gives a complete listing of documented endangered species in the ten Texas counties. Texas parks and Wildlife lists a total Of twelve endangered species that have habitat in the portions of these ten counties. These species include: the Houston Toad, Atwater's Prairie Chicken, the Whooping Crane (its migration route), and the Red Wolf. In addition, there are approximately 22 threatened species. I asked the biologist what fieldwork had been done to observe and document endangered and threatened species in the ten counties which would be impacted by the 240 miles of construction necessary to complete TCRs project. The biologist explained to me that very little fieldwork was completed before the draft EIS was published and released to the public and that AECOM was beginning to do actual field work and research on the impact the high-speed train would have on endangered and threaten species. Since the initial work done by AECOM found no endanger species, obviously a great deal of additional work will be required to complete an Environmental Impact Report which fully covers any impact on endangered species. The only logical explanation for why TCR did not find endangered Or other protected species is their biologist didn't</p>	<p>Refer to NR-4. For information regarding the Endangered Species Act and federally listed species with potential to occur within the Project see <b>Section 3.6.4, Natural Ecological Systems and Protected Species, Affected Environment. Section 3.6.4.4.2, Natural Ecological Systems and Protected Species, Protected Wildlife Species</b> discusses federally and state-listed species reported by USFWS and TPWD. All species listed as threatened or endangered by either the ESA or by state for Navarro County are included in <b>Table 3.6-8, Protected Wildlife Species with Potential to Occur within the Study Area</b>. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6 Natural Ecological Systems and Protected Species and Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b>. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1,</b></p>

			<p>really look for any of these species. TCRs EIS-DEIS is also fatality deficient, since the document does not specifically provide steps TCR will undertake to insure the protection of endangered or threaten species under Texas law. The Texas horned lizard is now a protected species, and, in Texas, it is illegal to take, possess, transport or sell them without a special permit. Habitat destruction is an illegal "taking" of a species. TCR's EIS must present specific information about their biologist's study of the Texas Horned Lizard and must also detail how TCR will protect the Horned Lizard during construction and include how TCR will mitigate damage to their habitat. The Texas Horned Lizard is found in all ten counties and without a specific plan with respect to protecting the lizard, TCR's EIR does not comply with Texas law. The possible negative impacts and any mitigation requirements that are needed to protect and preserve all endangered species with habitats along TCR's 240-mile corridor is one Of the most important parts of the EIS. This will allow both experts and the public to review and submit comments to the FRA with respect to this project. This opportunity will effectively be denied unless a second draft EIS is prepared for proper review. The current draft EIS should never have been approved for release unless all work necessary with respect to endangered or threatened species had been completed. This is one of numerous deficiencies of TCR's draft EIS which should require the preliminary draft to be rejected by the FRA. If the FRA properly completes the tasks it has been assigned by Congress and the President, the FRA should immediately notify TCR that the company must issue a draft EIS that can be properly reviewed by all interested parties. The FRA should refuse to accept any EIS-DEIS submitted by TCR until TCR takes its legal obligations to protect threatened or endangered species seriously, and until TCR produces a preliminary EIS which others can examine and submit comments to the FRA.</p>	<p><b>Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b> NEPA does not require 100 percent of the Project to have field surveys conducted.</p>

			two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. In addition to this mobility factor, the project is an economic development bonanza with the creation of more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational - at least 25% of them in rural counties along the route. Needless to say, it will be an economic driver for the State as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as four of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. We welcome a faster, safer and cleaner transportation alternative to reduce congestion - because it's good for Texas!	
Michael Scudder	1/24/2018	Email	I am lodging an objection to the proposed high speed rail line between Houston and Dallas for the following reason: I am unaware of any steel wheeled rail system that has not experienced a derailment sometime in its operation. A derailment at 50mph is a tragedy. I can't fathom the destruction that would follow a derailment at 200mph. Recent train derailments have occurred on both the east and west coasts and involved modern equipment. The proposed route involves being close to some housing subdivisions. How far from the rails could a rail car travel going 200 mph? The destruction to a home or group of homes would be total.	Refer to SS-12 and SS-13.
Kay Scully	3/8/2018	Email	Our family has owned our property in Leon and Madison county 100+ years. Our forefathers slowly bought land as they could afford it, and we now have a prosperous ranch in Madison County. When my brothers and I inherited the land, it continued to be a highly productive property with both ranching and farming. We love our Roman IX ranch which still has some of the old barns, fences, and buildings that were built by our grandparents. My children have grown up loving the land. We oppose wholeheartedly that the proposal that we give up the land by "imminent domain". It is a project from which all rural people feel will NOT benefit. It would go right through the farm with the house, barns, sheds, horses, and cattle by the high wires that were forcefully installed, also, years ago. Our land has been almost 100% improved when my father was alive, and it is not right that these people allow this to happen. The noise alone would cause cattle to not be able to be raised there, and many of these rural people would lose their homesteads also and NOT be able to relocate due to age, money, etc. Thus, I am posting my objection to this project which also would prove to be unprofitable. Thank you.	Refer to ED-1, ED-2, NE-1, NR-1, NV-1 and SC-19.
Kay Scully	3/8/2018	Email	I have tried to send several emails to other people I was told to write about this awful proposal, but the emails keep coming back to me. Maybe you will get this one! I retired after 40 years of teaching history last year and had looked forward to moving back to our land. We vehemently oppose this project; one of my brothers has been fighting it a long time, and he has encouraged me to do the same. We grew up loving the Roman IX Ranch which has been in our family over 100 years. It is unthinkable to me for federal unelected officials to claim imminent domain for this train which would ultimately be unproductive. Our ranch and my adjoining property would be ruined. The noise alone would not allow productive cattle raising, and I do not feel very many people from Houston would even use this transportation to Dallas. I currently live in Houston, and most people (unless they have property in Madison and other counties) know very little about the detrimental results of this train. No amount of money offered would change our minds about this offensive project. Please help stop this atrocity from happening. Thank you for your unending help.	Refer to ED-1, GN-2 and NR-1.
Linda Scurlock	2/13/2018	Website	I support the draft proposal for the Dallas to Houston High-Speed Rail. The end of the line terminal at Northwest Mall is acceptable with connections to Metro Rail or Rapid Bus transportation.	Comment noted.
Dan Seals	1/31/2018	Oral	I, myself, am not a political speaker, so here's what I've got to say. Here in Texas: we had — a few years ago: we had the Trans-Texas Corridor: which was going to be terrible for And it's basically the same problem: you know. They realized that we turned that down through all of our public access speaking: and now they've said "well: we will tell you what we can't do. We can't do it through Texas, so why don't we go to the federal government and get this thing through us?" They have — we would not have comments from them about any of this. And what about the tax base? You know: you're going to be killing us in our property tax. And all our EMS: our firefighters: our sheriffs: police: they are going to be impacted: but they haven't even been asked. So: how can we even believe anything these people have to say? Remember, "I'm from the government. I'm here to help"	Refer to PI-1, SC-19, SS-23, VA-1 and VA-3.
Dan Seals	1/31/2018	Oral	Dan Seals, again. You know one thing that -- that disturbs me is in California, they started one of these, and they secured it after it was \$2 billion in arrears. So, what says it's going to be any better here?	Comment noted.
Tracey Sebasta	NA	Website	That's my mom. That's my mom. So I did my formal statement, but there's a few things that got said tonight, so I just wanted to address them. Eleven weeks is not enough time to allow half of the State of Texas to respond to a 5,500-page document that took you guys years to do without having all the information. So I think we all agree on that. It's going to affect half the State of Texas or more, and you want us to read 5,500 pages and respond in eleven weeks. You said something earlier when you were talking. You made the comment that there's no federal funds available yet. You said "yet." And I picked up on that. We worked really hard with our legislators in the last session to make sure that no	Refer to ED-1, GN-4, NE-1, PI-3 and SS-12.

			<p>taxpayer dollars were going to go to fund this. So now TCR is going to go to the federal government to try to get them to come in and step on top of Texas property owners' rights to take their private property for a private enterprise that the federal government's going to come in here and try to force us to do? I think -- I mean, I heard that -- In the event that something happens in the event, we're all going to fight this forever. In the event that this train was built, you have to look at it would be a catastrophic event if there was some kind of accident. You've got trains traveling at 200-plus miles an hour. It is not going to be a pretty thing. The Amtrak train thing that just happened, look how many casualties there were from that. And that was on the ground. This thing is going to be 40 feet up in the air and traveling at 200 miles an hour. So again, the federal funding, Texans don't take kindly to that. They don't take kindly to somebody coming in and treading on our private property rights. And we have to look at the cost. It's been proven. Cecil Bell -- everybody's done the numbers and done the numbers. It does not fund. It does not pay for itself. It will be a taxpayer casualty. We will have to clean it up in the event that it's built. I support the no-build option.</p>

Arthur J. Seely Jr	2/27/2018	Website	I greatly support the efforts of the Texas Bullet Train with initial service between Dallas and Houston. As a multi-generational Texan, I value the opportunity to ride a high speed train vs. having to drive on Interstate 45 (which has solid traffic between Houston and Dallas) or having to fly from Dallas to Houston. This is a tremendous opportunity to give the public a choice that makes perfect sense. I will greatly encourage, the powers that be, to get behind this project and make it a reality, as quickly as possible. Thank you, in advance, for your support.	Comment noted.
Ashwin Prabhu Seethapathi	3/8/2018	Website	I would strongly admit that, this is the most important era for our Texas state for adopting the next generation transportation system. To be more specific we should also look for alternative solutions for our DFW-HOUSTON economic corridor which I mean here is 'HYPERLOOP ONE'. As a civil engineer, I see the potential alternative for the futuristic transportation is HYPERLOOP ONE and in this fast-changing economy, it is our advantage to add the evolving technology to incorporate in our lives. I hope for the states best development in the near future.	Refer to BA-4.
Jeri Seldomridge	2/1/2018	Email	I am against this project happening to the citizens of my county. There is no reason for this to occur. Our land is sacred to us all and this will only hurt our counties future.	Refer to PN-3 and SC-19.
Larry Selman	2/7/2018	Website	I am respectfully asking you to support legislation that would prevent any federal, state, or local taxpayer money from being used for high-speed rail and not allow eminent domain to be used for high-speed rail in Texas. I oppose the Dallas to Houston high-speed rail project being promoted by Texas Central Railway (TCR) for the following reasons, among others: 1. The project will have significant negative impact on our State and way of life, including: a. Bisecting agricultural and disrupting city b. Decreasing values, thus reducing tax revenues c. Destroying the habitat of wildlife and cutting off local migration thereof 2. The project details have lacked transparency and many of the details shared have been later changed, leaving citizens to doubt every decision by this company. 3. Despite TCR's claims the project would be entirely privately funded, TXDOT has reported it is not feasible to construct and high-speed rail in Texas without utilizing taxpayer subsidies. TXDOT is continuing to pursue this project behalf of TCR by using federal grants, which are clearly taxpayer dollars. 4. The use of eminent domain for private corporation(s) 5. The project will not reduce traffic congestion on IH45 6. The project will not have any positive benefits for counties that do not have a station. 7. TCR has not how they propose to secure 250 miles of high-speed rail tracks from terrorist attacks, and the first responders in rural do have the resources to do so. As a proud Texan, I am understand this is not just an issue for my county, but the entire State. I am standing with our neighbors in Dallas, Ellis, Freestone, Grimes, Harris, Leon, Limestone, Madison, Montgomery, Navarro and Waller counties who oppose this rail projecL As a constituent, I respectfully request you take all action(s) available to you to stop this proposed project aryl support that would prevent any federal, state, or local money from being used for high-speed rail and mt allow eminent domain to be used for high-speed rail in Texas. The Final EIS has been updated to include Compliance Measure <b>LU-MM#3: Development Regulations</b> , detailing that TCRR shall adhere to all applicable local ordinances for both the construction and operation of the stations and the Project alignment with the aim to reduce disruption to urban and suburban areas. FRA has a regulatory responsibility to evaluate the Project as proposed by TCRR which is a Dallas to Houston alignment. As part of this evaluation, FRA analyzes the indirect or cumulative impacts of other planned, programmed or reasonably foreseeable projects in <b>Chapter 4.0, Indirect and Cumulative Impacts</b> , of the EIS. This analysis includes FRA's and TxDOT's Texas-Oklahoma Passenger Rail Study (TOPRS) of passenger rail options, including conventional rail, higher speed rail, and high speed rail. The 2017 Tier I Record of Decision (ROD) formally identified seven Selected Alternative to serve as the framework for future investment in new and improved conventional and high-speed passenger rail service in three regions between Oklahoma City and South Texas. The ROD did not grant approval for construction, but selected alternatives for specific geographic sections along the corridor, to be carried forward in a more detailed, Project-Level EIS in the future. A Dallas to Houston geographic region was not assessed by TOPRS. The Texas Department of Transportation (TxDOT) provided technical assistance to FRA in the preparation of the EIS.

Samantha Selman	3/5/2018	Website	This is a great idea! I have been behind this idea since its inception, please don't listen to the naysayers! -90 minute trip to Dallas AND you're not the one driving? Who doesn't want that? -It will alleviate traffic on I-45 which is sorely needed. With less people on the road, it should also reason that there would be fewer accidents. -IT CONNECTS TO ALL (most) OF THE UNIVERSITIES BETWEEN HOUSTON AND DALLAS. While not practical for moving your student to college, it sure does help for those weekends when they want to come home! And it's great for alumni visiting their campuses for those oh-so-sweet football games. -It makes sense for the elderly as well. If they don't want to fly and they can't/won't drive the four hours, they have another option. -Northwest Mall is just sitting there being a creepy building. It would be perfect for the train station! -Constructing the bullet train and everything related to it would create much needed jobs, which is always a good idea. - Eminent domain. Nobody likes this, and from what I've heard, this will affect a lot of people, BUT...if they don't lose it now to the bullet train, it'll just be later on down the road when the freeways are widened AGAIN. -Great for the economy. This goes back to less people driving and not using gas. It would be even better if the train (or a train) expanded to a commuter style train for all of the outlying areas of Houston. And I guess Dallas as well. -I think a lot of people will use the train. As much as I hate Dallas, I would be up there at least once a month if I didn't have to drive. Not to mention all the business people who travel back and forth on a regular basis. -Houston and Dallas are the 4th and 5th largest cities in the nation. Why don't we have better transportation between the two metropolises? Trains are more efficient than buses and more comfortable than planes. -I believe in this bullet train so much that I would be willing to pay a reasonable tax for it. In conclusion....DO IT!!!!	Comment noted.
Stephen Seltzer	2/7/2018	Website	As a person who uses passenger rail for travel, I strongly support the Dallas to Houston High-Speed Rail project. This project can only benefit the State of Texas as well as all people who want comfortable high speed service between these two cities.	Comment noted.
Lisa Selzer	3/8/2018	Website	I am pleased that Texas will finally be getting other forms of transportation form Dallas to Houston and hopefully other major cities. I lived overseas for a few years and enjoyed my travels on many trains throughout Europe. Many people in Texas have never been on a train or used the train system to get to and from work, yet oppose the high speed train. I travel from Houston to Dallas about 3 times a month and would appreciate a train service. When I currently travel to Dallas I have different venues that I use. I very rarely travel by plane because of the cost and flying is now a hassle with luggage and long security lines. I usually travel in my car which is a 4 hour and 15 minute trip when there isn't construction or a wreck that day on the freeway. I have taken the direct line bus which is cheaper yet it is still a 4 hour bus ride from downtown Houston. Taking a high speed train for 90 minutes where I can relax, carry on luggage that I will not be charged for would be great. Many people oppose the train saying it will take land from people. Yes, that is true, but so did every highway built in Texas and I am sure they have driven on many of those roads. They gripe that you will have to rent a car when you arrive at your destination, and so do you when you fly. I believe there are just people who do not like changes in their life and you can't please everyone.	Comment noted.
Marianna Sennour	2/16/2018	Website	PART 2: ALTERNATE ROUTE 3Z (FEASIBLY BLENDED FROM VETTED ALIGNMENTS 3B AND 3C) Mr. Zimmerer collaborated with others in the development of a feasible alternative route in Navarro County, which is named Segment 3Z and shown on the attached location map and schematic exhibit. The northern limit of Segment 3Z would diverge from 3A approximately at the State Highway 31 crossing. The southern limit of Segment 3Z would converge with 3A near County Road SW 2190. Segment 3Z runs nearly parallel to the previously studied route 3C from its northern divergence from 3A and blends with vetted route 3B to the south to converge back to 3A. See attached exhibits showing general location and route schematics. IMPACT COMPARISON BY BUILD ALTERNATIVE The following impact comparison was developed from review and analysis of the DEIS document and other publically available information about the project area. The tables are very similar to the ones found in the DEIS report that were used to compare all the previously proposed alignments. These tables however only compare the Preferred Route (3A) to the alternative route 3Z. The environmental impacts were analyzed in a separate comment from LCA Environmental, Inc. by Mark Boyd, but shown below as well for your convenience. The basis of design for 3Z was to avoid the large elevation changes that Segment 3A encounters (see Exhibit 7). By going around the highest elevations, the rail can maintain shallower grades which give the opportunity for operational cost savings and eliminates the need for the 1600 feet of retained cut section. As shown in the table, Segment 3Z becomes 0.24 mile longer than 3A, however the reduced impacts and costs associated with 3Z should offset this cost of rail. Another basis of design for Segment 3Z was to reduce the number of transitions from viaduct to embankment/cut. This could potentially accelerate construction, reduce costs, and minimize unexpected challenges during construction. Segment 3A touches ground 9 different times over a 13.17 mile stretch. At this point in the design, alternate route 3Z touches ground 3 times (similar to 3B as it converges into segment 3A). After that, 3Z is in a viaduct for 12 miles (similar to 3C until it ties back in with Segment 3A). Staying in a bridge section may cost more per mile for the rail itself, but it reduces the impacts to road crossings, parcels, residential and agricultural structure displacements, streams, wetlands, lakes, ponds, watersheds, fences, sound walls, etc. With further design, the rail may choose to lower sections of Segment 3Z to have more cut/embankment sections. Two possible locations where this may be possible have been identified below, however for the purposes of this comment, the Segment 3Z reflects the sections shown in the DEIS report for Segments 3B and 3C.	Comment noted.

Christine and Randy Senter	2/5/2018	Handwritten	We do not want TCRR in Madison county. TCRR cannot support the economic viability of this project. The impact of the quality of life in Madison county will be negatively effected. The environmental beauty of Madison county will be ruined for eternity.	Refer to AS-1, GN-4, NE-1 and NE-9.
Steven Senter	1/31/2018	Handwritten	In the area of Freestone County south of FCR 844 and Perry Creek has been indicated to contain Indian burial grounds and other historical sites. This information was told to me by my father who purchased land in the area in the 1940s. This information was indicated to have been confirmed when the power line was built.	All information provided by landowners and informants, including oral histories, regarding the presence of historical sites, artifacts, and cemeteries, will be used by project archeologists and cultural resource personnel to locate historic and archeological resources, both previously recorded and unrecorded within the Limits of Disturbance (LOD). If cemeteries or historic sites are found within the LOD, they will be investigated and assessed for National Register of Historic Places (NRHP) eligibility and subject to the methodology outlined in the Programmatic Agreement.
Austin Sersen	2/7/2018	Website	A less auto-dependant society has far-reaching long term economic benefits as well as benefits not immediately seen such as less hospital beds being occupied from car accidents, a healthier population from more walking, and stronger cities. Let us not also forget the need to improve the 'last mile' in both Dallas and Houston as the current systems fail to adequately serve the majority of the population in those regions. Moving forward, working with the cities on a ground up approach rather than a top-down approach will help to realize the importance of walkable environments; thereby naturally increasing density so that public transit systems won't have to cover so many miles of low density areas serving the currently rather sparse population.	Refer to GN-6.
Londa Sessions	2/6/2018	Handwritten	We do not need or want this high-speed rail in Waller County. This rural area desires to remain rural, which does not include a fast moving train. I fear also that taxpayer will end up liable to pay for some of this project. One of the proposed lines would go down the side of our property. We DON'T want this running along side our property!!! The preferred route is two miles away from our homestead. This is undesirable too. Please STOP this project.	Refer to GN-4 and NE-1.
Melissa Seuneau	3/5/2018	Oral	Melissa Seuneau. Hi_ I'm Melissa. rm curious. You guys were at the last meeting, and I don't really see you taking notes: like: who's for or who's against and I'm curious if this is just a huge waste of time just like the construction has been on 290 and just like the construction will be for me frying to cross the south side of Fry Road to the north side of Fry Road when this construction goes through. Do you have any comment? Are you writing this down? Are you checking a list? Who is for? Who's against? MS. GATES: That's not the process. MS. SELTNEAU- Okay. I'm just curious that this public hearing is another huge waste of time because rm tired of wasting my time. I've got to survive and make money for my family. I've got to survive and get in the traffic and head to The Galleria and this train doesn't really get me into Houston any faster. I think that they need to stop it in Cypress and get me on there to buzz me on into town. Otherwise: why am I sitting on the freeway? What good is this train? And it really bothers me that a billionaire is rushing this through and he's not here to look in the faces of all of these people who are losing their land. I'm from Texas, and private property rights are a big deal. You buy your land. That's one of the American dreams, is to buy your land: buy your house and know that you're safe. And for these people to come through and just take it: you know: here' s — here's a dollar for you on your \$2 million ranch: sir: and, you know: show me the money. Where — how much money are we going to get? How much money are we going to make? And then my other concern is the safety. I sent to the sheriffs meeting the other day and the plan between Waller and Dallas: there is no plan. The sheriffs they talked about emergency management. They talked about all these roads being closed. They said that, you know, in an emergency, a minute is very important and that they're going to have to figure out how to get around and in an emergency: in a car wreck: your safety is important I talked to Steve Radack today, and he told me that we've got to go through the state in order to get our voice heard. And then Jack Cagle gets up here and says that he represents 1.4 million people. Well: he didn't call any of us. We have no vote on this deal through the state of Texas. Not a single person was asked to be given a vote. And tomorrow is election day or the day we go vote. So why are they shoving this down our throat at the cost of Drayton McLane, the billionaire? He's running Texas: guys: and all of us are wasting our Monday night when we should be having dinner with our family I know my time is up: but I want to let everyone know that right now Precinct 4 and Precinct 5 are closed down. In northwest Houston: unincorporated Harris County: we have no voice: we have no courthouse and it' s time for our elected officials to stand up for us and stop pushing through their agenda that makes them look good and gives them a legacy. This is our state. This is our city. And I don't know. been calling a lot of people. Not a lot of people answer the phone. They must not be selling anything. And all these people in the back are getting paid. I'm sure these guys are getting paid. Paid. Paid. Paid. And here we are volunteering our time.	Refer to ED-2 and SS-23.
Melissa Seureau	2/5/2018	Oral	Hello, everyone. I'm Melissa Seureau. I'm a real estate broker in northwest Houston. I live in Black Forest Ranch, which is on this side of 290, and I am actually thinking about putting my house on the market and moving to this side of the freeway. The reason is I'm 35 years old and I have spent the last five years sitting on 290, and I'm tired of it. If this train goes through, we will have construction at Fry Road and 290, Barker Cypress and 290, Huffmeister and 290, Telge and 290, all the way to Highway 6, and on and on and on it goes, and I'm just tired of my	Refer to ED-1 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			life being interrupted. And I get 290, it's a great idea, it's already almost done, I'm almost to the end of this tunnel, and now they want to bring a train through that won't even get me to Houston where I need to go. So as far as a Harris County resident, this does nothing for me. It takes my land, it takes my resources, it takes my time, and I can't get on a train in Waller or Cypress and get to Houston. What exactly are we getting out of this deal? I want to call Mr. Trump and I want to say, You need to go back to the drawing board and renegotiate this deal. \$10 million? That's chunk change. Come on, people. We can make more money getting into Houston than we can getting to Dallas. Now, I get there's a couple of hundred guys that got to go to Dallas every other day, and maybe this train is for them, but I heard that the grand scheme of this train is to get us to Chicago. Now, how many of us are going to Chicago? Are you going to spend \$800 round trip to get there? \$1600? I can get to Hawaii cheaper than that. I want to shout out to Mike Schofield and Tom Oliverson. I saw them in the building. They are our only representation in northwest Houston. Us being unincorporated is the reason they're bringing this train through. They're not taking it through Montgomery County, they're not taking it through The Woodlands. Why? Because they're louder than we are. So it's time for everyone to step up. I also want to know how has this gotten this far? What politician where has -- I mean, where is the money? Why are we doing this? I want to know where Ed Emmett is, I want to know where Greg Abbott is, I want to know where my politicians are that are supposed to represent me and my best interests. Right. I'm also a member of the Texas Real Estate Political Action Committee. We donated a million dollars to politicians. They are hush, hush, hush; We're not saying nothing, Melissa; we just want to be in bed with these politicians because and what are we doing supporting private property rights when right here through eminent domain they're being taken away. One more thing. My family had 2200 acres at the Port of Houston. In 2008 Exxon got 100 acres through eminent domain. If they can take my family's land, they can take your family's land. This thing might go from east to west, it can go -- I mean, who knows where it's going to branch out and then snatch your property, too.	
Melissa Seureau	3/5/2018	Website	My biggest concern is safety, I'm on the South side of 290 and the construction from this train will prohibit those of us on the South side to get to the hospitals on the North Side. In addition, 290 is an evacuation route for Houston, I've sat in this traffic trying to get out during Hurricane Rita and the construction from this train could prohibit us from getting out of the area during a natural disaster. Another safety concern the 13 counties that are supposed to be managing this project do not communicate, calling into Dallas or Houston is a black hole. My concern is a domestic or foreign terrorist attack, how will our Emergency Management from Texas respond over such a large amount of land. Minutes are vital during an emergency, with 120 road closures I don't see how an ambulance can get to a car wreck quickly or how a firetruck will get to a fire. This train will impact my life, I already sit in an hour of traffic just to get into town, the construction from this project will steal time from homeowners in NW Houston. Time from our families, time for ourselves, time for the community that is under served. We currently have Precinct 4 & Precinct 5 closed due to Harvey, we can't even get our car registration done in a timely manner. The police are overwhelmed and this will add one more layer to the cake that's ready to fall to the floor. Lastly, I think it's wrong to advertise this project as Private to get it started and then switch it over and ask for grant money from the Federal Government. This is strategic to ensure the people do not get a vote. Our commissioner hasn't been able to get money for our county due to the flood, how are we going to pay for the rail that benefits very few. I also advocate for private property rights, this is the biggest land grab in my generations history and I'm disappointed in The Great State of Texas. I'm fortunate that I can put a sign in my yard and move to the North side of the freeway but to be pushed out of my home by an entity is very troubling. If this rail line goes through, our freedoms and what it means to be an American will have indefinably change for the worse. This train does nothing for Houstonians, if you want to change our city, get us a train that will get Houstonians into Houston faster.	Refer to ED-1, GN-4, PN-3, SS-23, SS-6, SS-7 and SS-9. The proposed Project is entirely grade separated, and the segment along SH 290 in Harris County would be elevated on viaduct, minimizing permanent impacts. Construction access to roads would require coordination with TxDOT or the appropriate local jurisdiction through the Road Access Permit process described in <b>Section 3.11.6, Transportation, Avoidance, Minimization and Mitigation, TR-CM#3.</b>
Karen Severn	3/7/2018	Email	I am totally against the High speed train UNLESS there is written confirmation that the government will NOT be bailing them out. Amtrak and California high speed rail are not working so well. The projected cost puts it in a perk for the upper-middle incomes and higher. I am skeptical that this can work because the train station in Houston is not downtown. I haven't even touched on personal property rights being taken by a PRIVATE COMPANY. Are we in Texas or California? This is intolerable. Please derail this plan.	Refer to GN-2, GN-4, NE-1, SC-3, GN-7 and ED-1.
Tyler Shade	12/19/2017	Email	I don't want this high speed rail across from my house, no body wants to listen to that thing go by how every many times a day. I moved to my the country for country life not to have a railroad across the street. Build it somewhere else not Waller.	Comment noted.
Omar Shahin	2/12/2018	Website	I support the train	Comment noted.
Ruja Shahrzad	2/17/2018	Website	As a houston resident I'm totally against this project. It will have negative effects on properties and businesses along it's way. Also with the proposed ticket price it won't have enough commuters to cover the operation expenses and our tax money will be spent to keep it running against our will. We should focus on addressing the greater houston traffic and public transportation issues before even thinking on pointless projects like this.	Refer to GN-4, NE-1, PN-3 and SC-3.
Claire Shahzad	2/19/2018	Website	I understand the red tape is necessary but understand this is necessary for the State of Texas. Studies are good but just to a point. We need to move forward. There are thousands of people waiting on this train and the longer we wait the more congestion we have and that is definitely not good for the environment or the people that live in this area. Please move forward at "high speed". We don't need a snail's pace here. Thank you for your consideration and any help you can provide to get us moving.	Comment noted.

	1/22/2018	Email	Council Member Edwards would like additional information about the upcoming meetings.	
Zack Sharp	3/9/2018	Website	As a business owner who travels between Dallas and Houston, I strongly support the building of the bullet train project.	Comment noted.
Taylor Sharpe	1/21/2018	Website	As a small business owner in Dallas, this will open up business opportunities in Houston that are not currently easily done in that we can travel and work at the same time and arrive in Houston ready for face-to-face meetings with our clients. This transportation project is important to my business and I heartily encourage this project's being built to fruition.	Comment noted.
Dannie B. Sharron	2/6/2018	Letter	I support the comments listed below and offer them as evidence supporting the No Build Alternative 1. I support the No Build Alternative on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration. US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use Of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative' because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance. such as cemeteries, farms and buildings that may qualify as historical Sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation Of HSR results in land take. noise and air pollution, visual disruption and a high consumption of electricity.	Refer to BA-6, ED-1, NE-1 and NE-9.
Janice and Mike Shaw	2/19/2018	Website	We are ONBOARD with the Dallas to Houston High Speed Rail Project and look forward to the time when we can board the train for a stay in Dallas. While there, we can take in an Astros crushes the Rangers game, and visit the various tourist destinations and shop the area near the Magnolia Hotel where we attended the High Speed Rail Conference. Great cookies there!! Mike is a mechanical engineer and has a life long interest in trains and grew up riding public transportation in the UK. More and more people, particularly the younger generation, are not interested in owning a car if they can find public means of getting around. In addition, older people, like me are not interested in driving. Put me on a train where I can read, surf the web via wifi and nap for 90 minutes. The train will come within 2-3 miles of my house. I put up with car noise from the 249 and Grand Parkway, I'm on the western entry flight pattern for IAH. Train noise, particularly at night, will just be another sign of big city life. Lets get moving!	Comment noted.
Jawed Sheikh	2/16/2018	Website	I will strongly recommend to complete this project as soon as possible. This will reduce the traffic load from roads. Less chances of accidents. Less consumption of natural resources. Less pollution. Public safety. Improved environmental conditions and many many more. Thanks	Comment noted.
Greg Shelton	1/29/2018	Website	I am very much for the approval of High Speed Rail between Dallas and Houston and future Texas Cities. I believe this would be a huge benefit to me and the people of Texas to have an alternative to Air Transport that is fast but also will have many more departure times. 2 years ago I was in Japan on Vacation and had the opportunity to take the same high speed rail system being proposed between several cities. It was a great experience, fast, clean, comfortable and easy.	Comment noted.
William Shelton	1/31/2018	Oral	Good evening, my name is William Shelton. I personally oppose this project for very personal reasons. My family first came to this county in 1857 and I'm passionate about Freestone County. Unfortunately, like many of you, my family's ancestral home is directly in the path of this train. Now what my cousin stands to lose is a big pasture. What I stand to lose is the ancestral homestead that I had -- the principal porch was built in 1847. I operated just outside of Dallas, I was educated there, I lived there for about 20 years. I know the mental processes of the people who live in large cities when faced with infrastructure projects. Oh well, they'll give you some money, they'll take my land, I'll buy a new house. I could buy a new house. How do you buy another home? How do you place monetary value on being able to stand in the parlor under the stain glass windows where every christening, wedding, and funeral for seven generations has been held and besides that what do I leave the next generation for this property that was entrusted to me pass on to them. From a practical standpoint, I've spent the last five years and about \$300,000 restoring this house and I'm not near done. So my response to Texas Central Partners is there is no monetary value that you could equitably compensate me with the emotional and financial investment that I have made in this property. And I guarantee you, I will be restoring this house until that first train comes over the hill on my property. Thank you.	Comment noted.
Ben Shepard	3/6/2018	Website	I am an avid birder. Birds don't like trains. If you build the train where will all my sparrows go? Please reconsider	Refer to NR-2.
Ben Shepard	3/6/2018	Website	Also trains ruin water. Birds drink water. What will the birds drink?	Refer to NR-2 and WW-2. Individual birds may be temporarily displaced to similar adjacent habitat by the construction of The Project. Birds will still drink water, but from adjacent sources if their water source is expected to be impacted by The Project.

Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Erika Shields-Carter	1/25/2018	Email	Are you going to hold meetings in the SE/Medical Center area? Are you going to build or use an existing bus station/depot for people to ride the bullet train (ex. Union Station)? Will the Federal Railroad Administration expand to the Ft. Worth and Arlington areas?	Refer to BA-1, GN-7 and TR-3.
Erika Shields-Carter	2/5/2018	Website	Will you stream-live the meetings for people that are unable to make it to the meeting locations?	The 11 Public Hearings for the Dallas to Houston High-Speed Rail project were not live streamed because this is not a requirement for Public Hearings under NEPA and therefore no provisions were made to include this capability. However, hearing materials (Public Hearing boards, PowerPoint presentation, and fact sheet) were made available on the project website ( <a href="https://railroads.fra.dot.gov/current-environmental-reviews/dallas-houston-high-speed-rail/dallas-houston-high-speed-rail">https://railroads.fra.dot.gov/current-environmental-reviews/dallas-houston-high-speed-rail/dallas-houston-high-speed-rail</a> ) and an online comment link was available on that same site for submission of comments until the end of the public comment period on March 9, 2018.
Terry Shistar	2/7/2018	Website	The environmental impacts of the Dallas to Houston High-Speed Rail must be considered in context. With the Texas population set to nearly double by 2050, now is the time to be proactive and put in place infrastructure that can support the ballooning population along the Houston to Dallas corridor. Building more or wider highways is not the answer; sustainable, frequent, on-time mass transportation is, and will be, embraced as the preferred mode of transportation in the future. N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas. The current 4-hour, 240 mile trek up I-45 is expected to increase to 6.5 hours by 2035. I-45 is the nation's 2nd deadliest interstate in the U.S.; rail keeps more cars off roads and saves lives. It will save time as well. With a 90-minute travel time, travelers will be at their destination before they could board a flight after arriving at an airport. Thank you for this opportunity to comment.	Comment noted.
Connie Shivvers	2/4/2018	Letter	After a review Of the information published in the DEIS, information for two properties along the proposed route for the High Speed Rail may have been omitted. A review of the current vesting deeds of properties that Wyman Gordon Forgings sold has brought to light some alarming facts about the condition of the properties along and abutting Highway 290, easement Off of Telge Road and NW Lake Drive in Harris County. A review Of aerials from Google Maps (attached Exhibit A) shows these properties never had a structure on them but were used as wastewater lakes for industrial purposes which was used by Cameron Cooper, Cooper Industries, Cameron Forge Company, Cameron Iron Works and Wyman Gordon Forgings starting somewhere around the late 1950's or 1960's. A review of the EPA records shows Wyman has a history of dumping contaminates into water sources and drains which ultimately seep into the ground. This continued negligence has set a precedent which makes these properties high risk. A review of the full title for these properties will reveal more than I am presenting today.	Refer to HZ-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>The vesting deeds attached to this letter clearly indicate contamination exists and still persist; otherwise Wyman Gordon and NW Lakes would not have put language referring to hazardous contamination and indemnification clause with no liability. Here in Harris County we have experienced recent and past flooding events that have carried contaminants onto adjoining properties. The wastewater pit (as Wyman and NW Lake have acknowledged in the vesting deed) has in the past (prior to it being emptied) overflowed onto the existing pipeline and railroad easements where the high speed rail is proposed to be located. Exhibits B &amp; C - Two Special Warranty Deeds where Wyman sold the O Telge Road property to NW Lake in 2012, in that deed it states "present and future use of wastewater and wastewater capacity" along with a restriction of use which prohibits daycares, schools or residential use as well as contamination by hazardous material clause. NW Lake then sells the property off to Angadare Land in 2016 which has additional language to include hazardous material contaminants and a Superfund site. Shortly after the sale the lake was drained and 10 to 15 feet Of dirt was put over the lake, the site was not cleaned just covered up. Now a shell Of a building and concrete covers the majority of the property near where the high speed rail is to be located. Since the previous deed stated wastewater and Page 1 of 3 contamination by hazardous materials, a further investigation is warranted to ensure this was not used as a tailings pond or a waste pit. Over the past 16 years living in this area, I have personally witnessed flooding from the lake property overflow and flood the pipeline easement and railroad easement, which has occurred numerous times. This property had a chain link fence with three strand barbwire at the top with no trespassing signs every 50 feet. Exhibit D - Tiwe was a wastewater pit similar to the NW Lake property located on Gyrodata Land abutting UPRR easement, a drainage ditch and Highway 290. The google map shows this property never had a structure located on it, only wastewater pit. The Correction Special Warranty Deed acknowledges contaminants may persist including hydrocarbons, asbestos, hazardous materials and toxic contaminations. The language as highlighted in the attachments are indication of knowledge of contamination where a party is seeking indemnification against any and all liabilities and cleanups. The high speed rail project is proposing to locate a drainage retention pond on this property, which would connect into an existing drainage ditch. This action would spread unknown and known contaminants affecting surrounding homes and communities exposing residents to harmful substances which are known to cause cancer and other health related problems. I strongly disagree with the findings in the Draft EIS in regards to these sites and area as being Of low concern calling for no further investigations. EPA records indicate that Wyman Gordon Forgings has continued to release in the environment; Chromium, Cobalt, Copper, Hydrochloric Acid, Hydrogen Fluoride, Lead, Manganese, Nickel and Nitric Acid. We are not aware of how Cameron Cooper, Cooper Industries, Cameron Forge and Cameron Iron Works may have contributed to possible contaminants on these properties prior to Wyman's use. What we do know, was these lakes were created for wastewater from industrial uses that would not of stayed stationary and would of seeped into the ground and surrounding land. The vesting deeds clearly indicate contaminants persist thus requiring a full investigation to identify and/or rule Out a health and safety issue to the public and school children. These properties have not been properly cleaned. They are being modified to hide the issues being presented. A Comprehensive Phase II Assessment should be conducted on the following the high speed rail is proposing to be located, which are listed below: [See table in PDF] These affected properties by no means can be passed over and not have a Comprehensive Phase II Assessment conducted. Since one deed clearly directs the reader to believe that there is the potential for a Superfund site to be discovered on the property and current pictures of active contamination, these properties should be fully investigated. Were these documents and this information presented to FRA for the environmental process? I did not find these properties mentioned in your findings. If a superfund site or hazardous substance contaminants are identified, then these properties should be avoided at all costs and the route along HWY 290 should be abandoned. Incidentally this is not the only highly contaminated area or site of known contaminations in Harris County along Highway 290, Hempstead Highway and along Post Oak Blvd. As you review this information please remember there are three residential communities west and south of Wyman and three active schools right across Highway 290 which are Cy-Fair Senior High School, Arnold Junior High School and Lamkin Elernentary School. The following supporting documents are attached for review,</p> <ul style="list-style-type: none"> <li>* Exhibit A - Google maps imagery of the properties dating from 1944 to 2017</li> <li>* Exhibis B, C &amp; D - Three current vesting deeds of the properties</li> <li>* Alignment sheets from TCPs proposed sites.</li> <li>* Picturs of existing contaminated water.</li> <li>* Wes reports from the EPA TRI websites.</li> </ul>	
Connie Shivvers	2/5/2018	Oral	<p>My name is Connie Shivvers. I'm a local resident here in Houston. I live in Stonegate. I'm actively supporting the no build alternative, and the reason why I'm supporting that is I have reviewed the draft EIS. It has numerous errors and omissions, and I review these types for projects quite often. First of all, I'd like to thank the ranchers and the farmers for providing these merchantable crops. Why this important? Over 8,000 acres of land is going to be taken away from these people that provide us food on our tables on a daily basis. If you don't live near the train, the train will run through your pocketbook, just like the judge has said, but it's going to run through your dinner table, too, because your food prices are going to go up because they produce less. Second of all, the sound and vibration study was based upon a train moving at 50 miles</p>	<p>Refer to GN-1, NV-6, LU-2, LU-10, LU-11, LU-14 and SC-21. The actual speeds of the train were used at all locations for modeling purposes.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>per hour. Well, guess what. It's going 200, so multiply that by four. That's the impact. The fact that Stonegate and the apartment complex at Fry Road was not included in the sound vibration impact in the first segment of the EIS is appalling, because I live 1,665 feet away, I hear movement 7,872 feet away from businesses around me, and you're going to tell me I won't hear that? You're lying to me. You're lying to the public and it needs to stop. TCR, all you third party vendors that work on this project should be ashamed. You are an embarrassment to this community. Second of all, there are 1600 jobs that will be impacted, if not totally lost, due to businesses being relocated, and that number's low. In the EIS it states that TCR will have 1,176 sustainable jobs. What happens to those 1600 people? Is TCR going to compensate them. The business gets compensated, but those people don't. Their lives are impacted. Folks, this isn't just the rural versus the urbanites. This project affects everybody. The study does not work. Other interesting notes. The limit of disturbance during construction was grossly understated in Harris County. After the final EIS is issued, TCR and third-party vendors will seek additional work space wareyards, storage yards, mud disposal sites, et cetera, that is not evaluated by the FRA and other third-party contributing agencies. And this is huge, folks. It happens often in large linear projects, and you need to voice your concern. I have many other points, but I will respect the three minutes. I support the no build.</p>	
<p>Connie Shivers</p>	<p>2/6/2018</p>	<p>Website</p>	<p>After reviewing the DEIS, I found it troubling that the FRA would suggest that the Pipelines, utilities and roads be consider as independent projects. The Pipelines, utilities and roads would not require modifications, relocations or removals if the high speed rail wasn't coming through.</p> <p>The CAL HSR Final EIS included FERC and public Utilities. Are there different requirements between states and corporations proposing high speed rail projects?</p> <p>I contacted FERC about this troubling fact, that they were excluded from the FRA process for the TCR HSR project. FERC stated and I quote "Request the FRA to include FERC and PHMSA in the Texas Central High Speed Rail project."</p> <p>Today I am requesting that FERC and PHMSA be included so they may become contributing agencies in this environmental impact statement since they are the responsible agencies to the management of pipeline safety.</p> <p>All affected pipelines, roads and utilities should be considered as the full impact of the project in one environmental impact statement. Yes this means, a little more time will be required to come to a final determination, but in the long run everything will work seamlessly.</p> <p>Secondly, TCR's construction and daily operations will have a critical impact to the safety of pipelines that crosses and/or runs parallel to this proposed project. The introduction of a new constant source of electricity and vibrations will cause fatigue upon the existing pipelines. This fatigue will lead to failure. Failure will result in an explosion where loss of life is highly probable, there will definitely be property damage, companies will have to make apologizes and lawyers will settle in court.</p> <p>There are impacts from this project that I have very little confident will make it to the pipeline companies if TCR is left with the responsibility of making that happen. TCR wants us to believe the impacts are less than reality.</p> <p>The FRA can not afford to have its reputation tarnished, you are here to protect the public and the environment. By allowing pipelines, utilities and roads to be treated as separate projects, the possibility of critical operational data may not make it to the relevant parties so that necessary precautionary steps can be taken.</p> <p>Including FERC and PHMSA in the overseeing the 142 affected pipelines is the only responsible action. Yes FERC and PHMSA have stringent requirements because they know one pipeline explosion is one to many.</p> <p>Respectfully, Connie Shivers</p>	<p>Refer to EU-1, EU-2, LU-14, NE-1, NE-9 and NV-5.</p> <p>As defined in Section 3.9.5.2.1, Build Alternative, the project limits of disturbance includes the potential relocation of pipelines, utilities, and roads as a direct impact of the proposed project and are not considered a separate project.</p>
<p>Connie Shivers</p>	<p>2/20/2018</p>	<p>Website</p>	<p>RE: Dallas to Houston High-Speed Rail, DEIS. Research based on need and viability. Mr. Kevin Wright, The Federal Highway Administration documented the "Peak Period Congestion on National Highway System 2012" (diagram A) which shows congestion currently exists between Houston and San Antonio along I-10 as well as San Antonio to Dallas along I-35. They also documented on the "Peak Period forecast for 2035" (diagram B) which shows the demand is highly congested on I-10 as well as I-35 but NOT Houston to Dallas on I-45. According to TXDOT Statewide planning map website, three traffic congestion monitoring sites between San Antonio to Dallas (I-35), Houston to San Antonio (I-10) and Dallas to Houston (I-45), the I-45 route has the least growth consistently over the past 10 years, which pales in comparison to the San Antonio to Dallas (I-35) corridor which has about three time more daily volume. Station No. 110703 along I-35 route between San Antonio to Dallas had a daily volume from 2006 to 2016 from 85,000 to 110,703 with only one year reporting decreased volume. (diagram C) Station No. 45180 along I-10 from San Antonio to Houston had a daily volume from 2006 to 2016 from 37,000 to 45,180 with one year of significant decrease. (diagram D) Whereas Station No. 236H88A along I-45 route from Houston to Dallas between Harris County and the City of Madisonville has a daily volume from 2007 to 2016 from 32,000 to 35,762. A fractional increase over 10 years, five of which had a decrease in daily volume. (diagram E). This information provided by TXDOT and Federal Highway Administration does not support claims made by Texas Central to justify constructing a high speed rail from Houston to Dallas. The FRA board did approve the Oklahoma City - South Texas Corridor project which addresses the need and the only need for mass transit to Dallas. Even by projections from the Federal Highway Administration,</p>	<p>Refer to AQ-7, BA-2, GN-2, GN-3, NE-1 and PN-3.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Houston to Dallas still would not provide enough ridership to sustain the proposed Texas Central HSR project. If the Federal Highway Administration shows no need, it is critical that Texas Central provide the evidence displaying their interpretation of Purpose, Need and Viability since section ES.4 Purpose of and Need for the Project lacked substantial proof and substance. Predictions being made on forecasted growth does not take in consideration, that Houston may continue to have 500 year floods from here on as predicted by the National Weather Services which does look at data objectively. This will cause a decrease in growth, simply because people will move out of the Houston area since rebuilding year after year has an emotional, financial or psychological toll on people's lives. By the evidence of data from the Federal Highway Administration and TXDOT statewide planning map, there is not enough evidence to support Texas Central proposed High Speed Rail from Houston to Dallas. I ask the Federal Rail Administration to consider the No Build Alternative at this time.	
Connie Shivers	2/22/2018	Website	Federal Rail Administration February 22, 2018 RE: Texas Central DEIS, Road congestion While the FRA was in town, you got to experience fake news as well as some gamesmanship moves by Texas Central and the City of Houston with the Mayor participating. If memory serves millions of Texans correctly, both the Mayor of Houston and Texas Central took the opportunity to hold a special news conference to publicly announce the Houston Train Station location. They lied, causing the public to believe the FRA had given TCR and the City of Houston insider information. This false announcement came just hours before the Houston public hearing. Then another fake news story was being circulated, claiming that construction on Highway 290 would be completed by the end of 2018. Thus again deceiving the public and attempting to influence a federal agency with a false narrative in favor of the high speed rail. These two heavily publicized reports are still being circulated. So here's some facts to chew on. TXDOT has taken 8 plus years to get less than 50% of Highway 290 constructed. So by mid 2019 they will possibly be done with the first 50%. Then TXDOT will have to work on the second 50% of the highway project. Since the past is generally a foreteller of the future, it will take TXDOT much more than one year to finish Highway 290. Another nightmare construction project to add to the mix, Loop 610 has begun to create a double decker which will cause delays for two or more years. Now according to the DEIS, TCR wants to add to the anguish of the daily commuters by altering, relocating and/or closing 97 to 105 roads that feed into Loop 610 and Highway 290. Now lets say that Texas Central's projections of ridership are not fabricated. The 5 million proposed passengers will cause 3 million more vehicles to be added to the already heavily congested freeways and side streets. NO, this certainly isn't a recipe for disaster. Really people enjoy utter grid lock, road rage and not being able to get to their destination within Houston. Then let's say we have a major hurricane during the next three years, Highway 290 is one of the major evacuation routes. Adding Texas Central's chaos to two major highway construction projects will ensure there will be fatalities during regular commutes and especially during a hurricane evacuation. The problem isn't getting from Dallas to Houston or vice versa. The problem is getting around within Dallas and within Houston. The City of Houston supports this project because the City is financially bankrupt and would grab pennies while stepping over dollars. Commuters are already burdened with a failed freeway system. This project will ensure continued grid lock and frustrations. While Texas Central openly admits they will not fix the congestion within the cities, it is an admission this project will greatly contribute to increased congestion within the cities. I'm sure that will be great for business. If people can't get to the proposed train station, then no one will take the train. Texas Central has put the cart a mile in front of its horses. Allow the City of Houston and the Gulf Coast Rail District to address the alternatives to fixing the congestion within the City of Houston before adding a High Speed Rail from Houston to Dallas. This will provide sensible travel arrangements that will clearly indicate where the need for the High Speed Rail is truly warranted. I ask the Federal Rail Administration to consider the No Build Alternative at this time.	Refer to GN-6, GN-9, PN-3, TR-4 and TR-5.
Connie Shivers	2/25/2018	Website	The Morgan Family Legacy Farm is a boon to Navarro county and Texas. It is extensively used for first responders , medical personal, charitable organizations and others for stress relief and enjoyment. The Morgans never charge she tbt use of the property and share with hundreds and hundreds of people every year. Move the route to the north of the power lines, to the existing easement and preserve this valuable asset.	Refer to NV-1 and NV-7. The distances quoted are for noise impact, and not audibility of a source of noise. The criteria are based on a comparison of the existing noise with the project noise. A construction noise assessment, consistent with FRA guidance, has been conducted for the project and will be further refined during engineering and design as construction details are determined.
Connie Shivers	3/4/2018	Website	Federal Rail Administration March 4, 2018 RE: TCR DEIS - Beltway 8 road closure There is some major miscommunications about which roads will be closed or impacted. Section 3.11: Transportation pg 705 Regardless of the Build Alternative, all roads within the Study Area would experience a temporary disruption of service during construction. Construction activities would result in increased construction traffic on nearby and adjacent roads. Construction activities would also result in traffic delays and temporary road closures on roads crossed by the Build Alternatives. Hidden in fine print on the drawings are the following statements about Beltway 8 undergoing structural modifications which would require this major thoroughfare to be closed. According to the Table 3.11-31 Roadway Crossing in Harris County does not list the Beltway 8 however the GENERAL CIVIL RAIL TYPICAL SECTIONS Sheet 12 of 20, existing Beltway 8 structure, spans, and column TO BE MODIFIED AS REQUIRED (Drawing number CVL-00-03012 Rev 01) and Houston Segment Civil Plan and Profile HN1 380 00 TO HN1 408 00 page	Refer to EU-2, HZ-5, SS-16, SS-17, TR-6, TR-7 and TR-8. State Highway 8 would not be closed; the Project would travel underneath the highway through retention-cut (below-grade) designs. Design details, ownership, and maintenance responsibilities would be closely coordinated with the appropriate Project stakeholders during more advanced design during the design and construction phase. The "year complete" for US 290 widening, as noted in <b>Table 3.11-35: Planned Transportation Projects in Harris</b>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>41 says printed on top of the Beltway 8 Roadway Structure Modification. Note #3. Column location, footings and spacing for existing Beltway 8 to be verified by structural as built drawings and field verification. Typical section illustrates conceptual placement of HSR elements. Clearance and Pier protection requirements to Beltway 8 structure to be confirmed during final design. Modification to existing structure may be required. Roadway structure modification would require Beltway 8 to be closed. Beltway 8 is a major artery around the city. Having this major thoroughfare closed basically puts the whole city in a massive grid lock. By not disclosing this in the Table 3.11-31 is deceiving the public. This major thoroughfare will be closed while modifications to the structure are completed. This could be three to five years and will be a major problem. Why is this hidden in fine print where the average reader would not find it? Closing Beltway 8 for structure modifications will impact 146,307 daily commuters. Hurricane Harvey flooded the Beltway 8 at Memorial for two weeks. Getting to and from work took four to six hours. It put the whole city in a massive grid lock. No joke folks! TCR purposely hid this in the fine print because the uproar from the community would be too much for them to overcome. Also the Table 3.11-35 incorrectly reports Hwy 290 completed 2017. Highway 290 road widen project will not be 100% complete for several years. As I have stated in my previous submittals. The route along the Utility Corridor (Hwy 290) is not a viable option. There are more impacts that negatively affect millions of people in Harris County alone. There is no room to relocate the pipelines and utilities, or add adequate drainage and detention, or minimize the impacts of hazardous sites on the environment, road closures, road relocations and the probability of closing Beltway 8 so that the HSR can go under neath it. I request the FRA to implement the No Build Alternative as the only solution. Respectfully, Connie Shivers</p>	<p><b>County</b> was collected from TxDOT in 2019. The estimated complete date according to TxDOT is currently TBD. The year complete for this project has been updated in <b>Table 3.11-35: Planned Transportation Projects in Harris County.</b></p>
Connie Shivers	3/4/2018	Website	<p>Connie Shivers Federal Rail Administration March 4: 2018 RE: TCR DEIS - Hazards</p> <p>Disturbance of all the hazardous waste sites could potentially put the public in harms' way. According to the EPA Toxic Release Inventory, it shows Harris County to be one of the most polluted counties in Texas. Once polluted and hazardous waste areas are disturbed it opens+the door to releasing all sorts of towns that could harm the public. This is a proven fact as it has already happened in other pans of Harris and Galveston Counties. +A good example of this is the dioxin waste pit sites on the San Jacinto River, that have been exposed due to flood water and storm damage weather events which released the dioxin into neighborhoods causing cancer cells or pockets within the communities. These toxins seeped into the ground and water. It took years for people to discover this since so many parties did their best to deny and hide relevant information that endangered human life and the environment To this day there is no permanent solution to this environmental disaster.</p> <p>The route along Highway 290 (Utility Corridor) is no different According to the DEIS, 307+hazmat sites were identified in Harris County. Forty six (46) are adjacent to the limits of disturbance (LOD) and twenty nine (29) are inside the LOD, however only forty (40) out of these seventy five (75) sites will be investigated.</p> <p>A site that was not appropriately rated was the Wyman Gordon properties (which have changed hands in the last two years). If research on all the previous owners is performed in the Harris County Judicial courts along with Wyman Gordon: you will find that people have sued Wyman and Cameron Forge because employees have died of different types of cancers from the products or by-products or hazardous waste that Cameron and Wyman Gordon used and disposed of on and off Additional concerns stated in the public forum: are, that TCR understated their construction workspace and if the record of decision and the final EIS are issued, nothing prevents TCR and its third party vendors to stay strictly within the footprint that was reviewed. Thus meaning those sites they listed as low and outside of the reviewed footprint would be disturbed and no oversight on these hazmat sites would occur: nor would a proper investigation be done. These sites would not be properly cleaned thus causing contaminates to be exposed that would put the public in harms' way The FRA can not be 100% certain that construction of the HSR will not release toxins in the environment The FRA also can not be 100% certain, all relevant information about hidden hazardous sites have been given to you or reviewed. These will be discovered after construction starts and then there will be no oversight of how those sites will be handled.</p> <p>If the federal government won't protect the people: then who will? The Utility Corridor (route along Highway 290) is not a viable solution as there are too many factors going against it Due to the numerous road closures, such as the Beltway S which is a main thoroughfare: road relocations: the pipelines and utility relocations: not enough adequate drainage or detention and the numerous hazmat sites that would be disturbed I am requesting the No Build Alternative be implemented.</p> <p>Respectfully: Connie Shivers</p>	<p>Refer to BA-5, HZ-1, HZ-2 and LU-14.</p>

Connie Shivers	3/4/2018	Website	<p>Federal Rail Administration March 4, 2018 RE: TCR DEIS - Drainage and detention In south Texas, drainage is a major topic of concern for all residents and the government. Every proposed project is required to supply new independent adequate drainage and detention to be identified and implemented and NOT push the "run off" into existing drainage systems. According to the Appendix F_TCR Constructability v4 Report Section 2.6, it states TCR would incorporate existing drainage systems into design approach. This can not be allowed. I live in the Stone Gate neighborhood. The drainage ditches built around this neighborhood were designed to prevent flooding to our homes. In 2015 and 2016, we received 20 +/- inches of rain in a 12 hour or less timeframe. The drainage ditches worked but were at capacity, no homes flooded but some streets were under water. In 2017 we were hit with Hurricane Harvey that dumped 50 +/- inches of rain. The drainage ditches failed to protect the homes due to the amount of rain, the runoff, the over flow of Cypress Creek and the over flow of Addicks reservoir. We could not get out of the neighborhood for days, and numerous homes were under water. TCR proposes to build a 65 foot super structure that is 48 feet wide and a 12 to 15 foot wide access road that will be abutting the drainage ditch. The rain "run off" of the super structure will erode the ditches. This will cause additional flooding problems when we get torrential rain storms, tropical storms or hurricanes. Homes that never flooded before will flood as a result of this structure and road since TCR is not providing their own independent detention and drainage that is adequate for the amount of impervious area they are creating. The drainage ditch along Stone Gate was not designed for TCR's capacity. After reviewing the alignment sheets and project footprint drawings, I found that from Loop 610 to Fry Road, TCR will be adding 175.43 acres of impervious cover (that does not include the station area) while only adding 20 acres of detention from Jones Road to Fry Road. There is no drainage detention provided from Loop 610 to Jones Road. That includes zero detention ponds or drainage at the station locations. 1.3 acres of detention will also be removed. Harris Counties existing infrastructure has proven it can not support this type of increase. The environmental consequences caused by flooding has some of the most devastating impacts. Flooding can decimate key ecosystems functions</p>	Refer to SS-16 and WW-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			and biodiversity, spread unknown contaminates, loss of human life, damage to property, loss of merchantable crops, loss of livestock and deterioration of health due to waterborne diseases. DEIS, Impervious Cover and Detention page 3.8-26 states "construction of stations and other infrastructure in highly urbanized areas would contribute additional volumes of stormwater runoff to existing stormwater drainage systems. Increasing stormwater runoff flow rates and volume would increase the risk of flooding in areas that are lacking stormwater infrastructure or in areas where existing infrastructure cannot support an increase." Since it is not feasible or possible for TCR to supply adequate detention and its own independent drainage, I request the Federal Rail Administration to implement the No Build Alternative. Respectfully, Connie Shivvers	
Connie Shivvers	3/4/2018	Website	Federal Rail Administration March 4, 2018 RE: AS-MM#1 Public Outreach - Lack of involvement of the Stone Gate Community As per the Section 3.10.6.1 Mitigation Measures - The following Mitigation Measures (MM) would minimize the aesthetic and scenic impacts of Build Alternatives A through F. AS-MM#1 Public Outreach-Public Meetings with Impacted Neighborhoods. As part of the LID approach, TCRR SHALL CONTINUE to incorporate stakeholder input into design throughout the project to inform their decision-making process. Prior to construction, TCRR or its contractors shall present visual impact mitigation strategies to the following neighborhoods: Saddle Creek Forest Development (Grimes and Waller counties), Plantation Drive (Grimes and Waller counties), Mallard Crossing (Harris County), Stone Creek Ranch (Harris County), Mallard Crossing (Harris County), Stonegate (Harris County) and White Oak Falls (Harris County). For all other residential areas, public comments from the Draft EIS will be incorporated into the Final EIS. The responses and comments would be used to guide mitigation measures implemented during construction and operation of the HSR system. I am a Stone Gate homeowner. I have lived here for 16 years with one address. I have been following the Texas Central High Speed Rail project from 2014 when CLS contacted me to see if my home was for sale on two occasions. I have requested verbally and in writing that the Stone Gate neighborhood be involved, be notified and included in open house meetings and requested a neighborhood meeting for the residents. At the initial open house meeting at the Tin Hall in 2014, very few residents were sent an email from the HOA 30 minutes before the meeting. Not every homeowner got the email as many are not on the list. This gave no one time to plan to attend that meeting from the start. I requested at the open house meeting written notifications be send to each homeowner in the community. This was totally ignored. I continued my requests during the Surface Transportation Board (STB) process and in other forums and YET NOT ONE letter was sent to the homeowners. I would know since I have been activity following this and interviewing my neighbors. I never received any written notification of any type of involvement with Stone Gate and Texas Central Rail. The Stone Gate neighborhood was excluded from this process while the DEIS was being prepared, so our input was not included as the Section above indicates. However, Texas Central reps met with the Townlake neighborhood two miles up the road from Stone Gate and the proposed route. Here's the problem with this process. TCR and its third party vendors have not included all homeowners in the Stone Gate community. They may have a public outreach after the March 9th comment period is over. That means Stone Gate residence concerns will not be part of the Final EIS. That's a huge problem. I am requesting the following: Certified return receipts letters be sent to everyone in StoneGate inviting them to a community meeting sponsored by Texas Central. An advance notification of two weeks to allow residents to make allowances in their schedule to attend. The meeting time to be set at 7pm to allow residence who have longer commute times to attend. The meeting to be set at a location to accommodate all community members and close to our neighborhood. Details of how TCR will mitigate sound disturbance, vibrations, decreased land values, visual pollution and other concerns of the community. The comments from this meeting must be included in the final DEIS or a decision of the No Build Alternative should be selected. Respectfully, Connie Shivvers	Refer to AS-1.
Connie Shivvers	3/4/2018	Website	Federal Rail Administration March 4, 2018 RE: AS-MM#1 Public Outreach - Lack of involvement of the Stone Gate Community As per the Section 3.10.6.1 Mitigation Measures - The following Mitigation Measures (MM) would minimize the aesthetic and scenic impacts of Build Alternatives A through F. Prior to construction, TCRR or its contractors shall present visual impact mitigation strategies to the following neighborhoods: Saddle Creek Forest Development (Grimes and Waller counties), Plantation Drive (Grimes and Waller counties), Mallard Crossing (Harris County), Stone Creek Ranch (Harris County), Mallard Crossing (Harris County), Stonegate (Harris County) and White Oak Falls (Harris County). For all other residential areas, public comments from the Draft EIS will be incorporated into the Final EIS. The responses and comments would be used to guide mitigation measures implemented during construction and operation of the HSR system. I am a Stone Gate homeowner. I have lived here for 16 years with one address. I have been following the Texas Central High Speed Rail project from 2014 when CLS contacted me to see if my home was for sale on two occasions. I have requested verbally and in writing that the Stone Gate neighborhood be involved, be notified and included in open house meetings and requested a neighborhood meeting for the residents. At the initial open house meeting at the Tin Hall in 2014, very few residents were sent an email from the HOA 30 minutes before the meeting. Not every homeowner got the email as many are not on the list. This gave no one time to plan to attend that meeting from the start. I requested at the open house meeting written notifications be send to each homeowner in the community. This was totally ignored. I continued my requests during the Surface Transportation Board (STB)	Refer to AS-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			process and in other forums and YET NOT ONE letter was sent to the homeowners. I would know since I have been activity following this and interviewing my neighbors. I never received any written notification of any type of involvement with Stone Gate and Texas Central Rail. The Stone Gate neighborhood was excluded from this process while the DEIS was being prepared, so our input was not included as the Section above indicates. However, Texas Central reps met with the Townlake neighborhood two miles up the road from Stone Gate and the proposed route. Here's the problem with this process. TCR and its third party vendors have not included all homeowners in the Stone Gate community. They may have a public outreach after the March 9th comment period is over. That means Stone Gate residence concerns will not be part of the Final EIS. That's a huge problem. I am requesting the following: Certified return receipts letters be sent to everyone in StoneGate inviting them to a community meeting sponsored by Texas Central. An advance notification of two weeks to allow residents to make allowances in their schedule to attend. The meeting time to be set at 7pm to allow residence who have longer commute times to attend. The meeting to be set at a location to accommodate all community members and close to our neighborhood. Details of how TCR will mitigate sound disturbance, vibrations, decreased land values, visual pollution and other concerns of the community. The comments from this meeting must be included in the final DEIS or a decision of the No Build Alternative should be selected. Respectfully, Connie Shivers	
Connie Shivers	3/5/2018	Website	Federal Rail Administration March 4, 2018 RE: TCR DEIS - Drainage and detention In south Texas, drainage is a major topic of concern for all residents and the government. Every proposed project is required to supply new independent adequate drainage and detention to be identified and implemented and NOT push the "run off" into existing drainage systems. According to the Appendix F_TCR Constructability v4 Report Section 2.6, it states TCR would incorporate existing drainage systems into design approach. This can not be allowed. I live in the Stone Gate neighborhood. The drainage ditches built around this neighborhood were designed to prevent flooding to our homes. In 2015 and 2016, we received 20 +/- inches of rain in a 12 hour or less timeframe. The drainage ditches worked but were at capacity, no homes flooded but some streets were under water. In 2017 we were hit with Hurricane Harvey that dumped 50 +/- inches of rain. The drainage ditches failed to protect the homes due to the amount of rain, the runoff, the over flow of Cypress Creek and the over flow of Addicks reservoir. We could not get out of the neighborhood for days, and numerous homes were under water. TCR proposes to build a 65 foot super structure that is 48 feet wide and a 12 to 15 foot wide access road that will be abutting the drainage ditch. The rain "run off" of the super structure will erode the ditches. This will cause additional flooding problems when we get torrential rain storms, tropical storms or hurricanes. Homes that never flooded before will flood as a result of this structure and road since TCR is not providing their own independent detention and drainage that is adequate for the amount of impervious area they are creating. The drainage ditch along Stone Gate was not designed for TCR's capacity. After reviewing the alignment sheets and project footprint drawings, I found that from Loop 610 to Fry Road, TCR will be adding 175.43 acres of impervious cover (that does not include the station area) while only adding 20 acres of detention from Jones Road to Fry Road. There is no drainage detention provided from Loop 610 to Jones Road. That includes zero detention ponds or drainage at the station locations. 1.3 acres of detention will also being removed. Harris Counties existing infrastructure has proven it can not support this type of increase. The environmental consequences caused by flooding has some of the most devastating impacts. Flooding can decimate key ecosystems functions and biodiversity, spread unknown contaminates, loss of human life, damage to property, loss of merchantable crops, loss of livestock and deterioration of health due to waterborne diseases. DEIS, Impervious Cover and Detention page 3.8-26 states "construction of stations and other infrastructure in highly urbanized areas would contribute additional volumes of stormwater runoff to existing stormwater drainage systems. Increasing stormwater runoff flow rates and volume would increase the risk of flooding in areas that are lacking stormwater infrastructure or in areas where existing infrastructure cannot support an increase." Since it is not feasible or possible for TCR to supply adequate detention and its own independent drainage, I request the Federal Rail Administration to implement the No Build Alternative. Respectfully, Connie Shivers	Refer to SS-16 and WW-1.
Connie Shivers	3/5/2018	Oral	I want to talk to the FRA, and I hope you understand. So my issues are related to Harris County. In reviewing the Draft EIS and the roadway closure of Harris County, it doesn't list Beltway 8. However, on the civil -- general civil rail typical sections, the existing Beltway 8 structure spans and columns to be modified as required. The Houston segment civil plan and profile, page 14, says -- printed on top of the Beltway, "Roadway structure modification." If the Beltway undergoes structural modification, it will require it to be closed. Do you all remember Harvey? Two weeks of sheer hell. We had four- to six-hour commutes to and from work. I find the DEIS to be deceiving when it doesn't list the Beltway; yet, in the fine print, it's on your drawings. I have a problem with that. I think millions of Houstonians will have a problem with their commute as well. Another review of the alignment sheets and the footprint drawings from Loop 610 to Fry Road, TCR would be adding 175.43 acres of impervious cover, which does not include the station areas; and they would only be adding 20 acres of detention from Jones Road to Fry Road. There's no detention provided from 610 to Jones Road, so hope you like flooding. This includes zero detention ponds and drainage at the station locations. 1.3 acres of detention will be removed. TCR states they're going to use existing drainage systems. Harris County has already proven our infrastructure can't handle a rain event, and they want to push off their drainage into our easements that were not designed for their capacity? You will ensure that my neighborhood in Stonegate -- we will flood, and that's unacceptable. The next point that I	Refer to NE-9, PI-1, VA-1, SS-16, SS-17 and TR-5. State Highway 8 would not be closed. The Project would travel underneath the highway through retention-cut (below-grade) designs.

			have is: In the public outreach, public meetings with impacted neighborhoods, it states, "As part of the LID approach, TCR shall continue to incorporate stakeholder input into design throughout the project to inform their decision-making process." "Shall continue"? Hasn't even started. I have been asking for four years from the first meeting that they had at Tin Hall in 2014 through the STB and at other meetings that they include Stonegate, and they have not included it. I am stating it again for the record: TCR and their affiliates are not including impacted homeowners. We will be detrimentally affected not just by sound, but by flooding and our decreased land values. And one of our other speakers tonight has an interesting statement from Mayor Turner's office that will just really knock it off the ballpark. Thank you. Sorry.	
Connie Shivvers	3/7/2018	Website	Kevin Wright Federal Railroad Administration 1200 New Jersey Ave. SE, MS-20 Washington, D.C. 20590 February 4, 2018 - Mailed with signature required RE: Dallas to Houston High-Speed Rail, DEIS Chapter 3.0 Section 3.5 Hazardous Materials and Solid Waste page 3013.5-21 Properties located south of Hwy 290, west of Telge Road and north of NW Lake Dr Mr. Kevin Wright, After a review of the information published in the DEIS, information for two properties along the proposed route for the High Speed Rail may have been omitted. A review of the current vesting deeds of properties that Wyman Gordon Forgings sold has brought to light some alarming facts about the condition of the properties along and abutting Highway 290, UPRR's easement off of Telge Road and NW Lake Drive in Harris County. A review of aerials from Google Maps (attached Exhibit A) shows these properties never had a structure on them but were used as wastewater lakes for industrial purposes which was used by Cameron Cooper, Cooper Industries, Cameron Forge Company, Cameron Iron Works and Wyman Gordon Forgings starting somewhere around the late 1950's or 1960's. A review of the EPA records shows Wyman has a history of dumping contaminates into water sources and drains which ultimately seep into the ground. This continued negligence has set a precedent which makes these properties high risk. A review of the full title for these properties will reveal more than I am presenting today. The vesting deeds attached to this letter clearly indicate contamination exists and still persist; otherwise Wyman Gordon and NW Lakes would not have put language referring to hazardous contamination and indemnification clause with no liability. Here in Harris County we have experienced recent and past flooding events that have carried contaminates onto adjoining properties. The wastewater pit (as Wyman and NW Lake have acknowledged in the vesting deed) has in the past (prior to it being emptied) overflowed onto the existing pipeline and railroad easements where the high speed rail is proposed to be located. Exhibits B & C - Two Special Warranty Deeds where Wyman sold the 0 Telge Road property to NW Lake in 2012, in that deed it states "present and future use of wastewater and wastewater capacity" along with a restriction of use which prohibits daycares, schools or residential use as well as contamination by hazardous material clause. NW Lake then sells the property off to Angadare Land in 2016 which has additional language to include hazardous material contaminants and a Superfund site. Shortly after the sale the lake was drained and 10 to 15 feet of dirt was put over the lake, the site was not cleaned just covered up. Now a shell of a building and concrete covers the majority of the property near where the high speed rail is to be located. Since the previous deed stated wastewater and contamination by hazardous materials, a further investigation is warranted to ensure this was not used as a tailings pond or a waste pit. Over the past 16 years living in this area, I have personally witnessed flooding from the lake property overflow and flood the pipeline easement and railroad easement, which has occurred numerous times. This property had a chain link fence with three strand barbwire at the top with no trespassing signs every 50 feet. Exhibit D - There was a wastewater pit similar to the NW Lake property located on Gyrodata Land abutting UPRR easement, a drainage ditch and Highway 290. The google map imagery shows this property never had a structure located on it, only wastewater pit. The Correction Special Warranty Deed acknowledges contaminates may persist including hydrocarbons, asbestos, hazardous materials and toxic contaminations. The language as highlighted in the attachments are indication of knowledge of contamination where a party is seeking indemnification against any and all liabilities and cleanups. The high speed rail project is proposing to locate a drainage retention pond on this property, which would connect into an existing drainage ditch. This action would spread unknown and known contaminates affecting surrounding homes and communities exposing residents to harmful substances which are known to cause cancer and other health related problems. I strongly disagree with the findings in the Draft EIS in regards to these sites and area as being of low concern calling for no further investigations. EPA records indicate that Wyman Gordon Forgings has continued to release in the environment; Chromium, Cobalt, Copper, Hydrochloric Acid, Hydrogen Fluoride, Lead, Manganese, Nickel and Nitric Acid. We are not aware of how Cameron Cooper, Cooper Industries, Cameron Forge and Cameron Iron Works may have contributed to possible contaminates on these properties prior to Wyman's use. What we do know, was these lakes were created for wastewater from industrial uses that would not of stayed stationary and would of seeped into the ground and surrounding land. The vesting deeds clearly indicate contaminates persist thus requiring a full investigation to identify and/or rule out a health and safety issue to the public and school children. These properties have not been properly cleaned. They are being modified to hide the issues being presented. A Comprehensive Phase II Assessment should be conducted on the following properties where the high speed rail is proposing to be located, which are listed below: Current Owner Address 1 - Gyrodata Land LP 0 Northwest Lake Drive ownership removed from tax records 2 - Angadare Lane LP 0 Telge Road ownership removed from tax records 3- Hardy Maley Holdings 22770 Northwest Lake Dr 4 - Wyman-Gordon Forgings 0 Northwest Lake Dr Tax Parcel ID # 1272810010001, 1385350010001, 0422320000330, 1272810010010, 1272810010002, 1272810010003 These affected properties by no	Refer to HZ-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>means can be passed over and not have a Comprehensive Phase II Assessment conducted. Since one deed clearly directs the reader to believe that there is the potential for a Superfund site to be discovered on the property and current pictures of active contamination, these properties should be fully investigated. Were these documents and this information presented to FRA for the environmental process? I did not find these properties mentioned in your findings. If a superfund site or hazardous substance contaminates are identified, then these properties should be avoided at all costs and the route along Hwy 290 should be abandoned. Incidentally this is not the only highly contaminated area or site of known contaminations in Harris County along Highway 290, Hempstead Highway and along Post Oak Blvd. As you review this information please remember there are three residential communities west and south of Wyman and three active schools right across Highway 290 which are Cy-Fair Senior High School, Arnold Junior High School and Lamkin Elementary School. The following supporting documents are attached for review; Exhibit A - Google maps imagery of the properties dating from 1944 to 2017; Exhibit B, C &amp; D - Three current vesting deeds of the properties; Alignment sheets from TCPs proposed sites; Pictures of existing contaminated water; Various reports from the EPA TRI websites. Respectfully, Connie Shivvers The file limit would not allow the complete file to be uploaded. Please refer to the mailed copy of this submittal for additional documents.</p>	
Connie Shivvers	3/7/2018	Website	<p>The statement made by TCR below, is not sufficient for the FRA to make a determination on the FEIS or the record of decision. According to the Appendix F TCRR Constructability v4 Report page 94 which states; "As this is a privately developed project, we are not seeking public funding. As such, our capital cost and construction schedules are considered proprietary and we prefer not to share additional details at this time. Nonetheless, based upon your data requests, we believe that the level of detail provided is sufficient to meet your economic analysis needs for the EIS." It appears TCR is getting preferential treatment since they are not required to follow the same procedures as other privately owned railroad projects. Concealing additional relevant details about the capital cost and true construction schedule does not allow the public to be informed since they will be impacted and inconvenienced by these activities. A company can not claim to be private or proprietary when they are actively impacting the lives of millions of people daily. The construction period is willfully insufficient, for example TCP can not complete the chart as to how many total months the construction activities will require. The construction cost of approximately 16.5 - 18 billion is an under estimation as every major linear project has adjustments and they always go way over the established budget. By displaying a chart and throwing out random numbers, is not sufficient for the public to make informed decisions. So here's the problem with the supplied chart for the construction schedule which will take it well beyond the stated three years in one chart and five years in another chart in the DEIS. New laws in rural counties have been implemented which will prohibit closing any roads within seven counties. The DEIS will have to be modified to accommodate to these requirements. Additional cost to the project will be incurred. To do a structural analyst on the Beltway 8 and make modifications could take 3 years or more. Construction of the proposed HSR would not be able to commence in this area until after these modification are completed. Thus it will halt the construction schedule and extend it beyond the three to five years quoted in the DEIS. Not to mention the negative impact closing this road will be during daily commutes. If a hurricane hits during this construction period, another major evacuation route will be closed preventing millions of people escaping to save their lives. To do pipeline relocations and modifications will require FERC and PHSMA's involvement which allow for public intervention. Pipeline companies will have to acquire additional right of way which will be at a premium price compared to the dollar a rod looping rights these companies would be forced to surrender. Gather additional requirements and re-design the pipeline network to accommodate to the proposed rail. This whole process will be a minimum of three years if they are lucky and will cost tens of millions of dollars which these companies will require reimbursement for. The relocations of the hazardous Liquid Products lines have limitations on how close it can come to existing residential structures. With the layout of White Oak and Stone Gate subdivisions, this line can not be moved any closer to the houses. The vibration impact radiating off of the super structure could set up for a perfect disaster. Relocation of major transmission lines would require a process similar to the pipelines but reporting to different agencies. Moving these major utility lines may not be possible due to established development. It is quite possible that the companies who have common carrier status, may not be able to condemn additional properties for this type of project since TCR's claim to being a railroad and possession of eminent domain status is challengeable in a court of law. Thus the pipeline and utility relocations are not a necessity but rather an economic development classification. The relocation of these pipelines and utilities is not required as a part of infrastructure improvement. To move these utilities may cost these companies tens of millions of dollars. Those dollars are not accounted for in the construction budget. The pipeline and utility companies do not have to relocate their facilities and if they chose to do so, TCR must reimburse those costs as mentioned above. Even if TCR is able to overcome the above obstacles, the cost to the budget would exceed the CAL HSR project along with extensive delays that will guarantee an extended construction period beyond five years. The CAL HSR project has just experienced the perfect storm. It will happen in Texas too, if this project is allowed to proceed. The Utility Corridor or the UPRR Corridor (the route along highway 290) is NOT the environmental responsible choice. I request the FRA to consider the No Build Alternative. Respectfully, Connie Shivvers</p>	Refer to BA-5, BA-6, BA-8, BA-10, ED-1, EU-1, EU-2, EU-5, NE-1, NV-5, PN-4, TC-6, TR-6 and TR-8.

Connie Shivvers	3/8/2018	Website	March 8, 2018 RE: Adverse Impacts The City of Houston Mayor Sylvester Turner made numerous written comments on August 1st 2015 that would also apply to residential neighborhoods along the entire proposed route. These predictions are not limited to any one route but to all routes being considered. Those comments noted below are: "The adverse impact to all of these neighborhoods would negate the benefits of the high speed train going to downtown Houston. The character of these neighborhoods would be destroyed." "Property values would decline, and in these very neighborhoods where homes are being built and neighborhoods revitalized, the progress may very well be halted. Already, some prospective homeowners are delaying their decisions to purchase property in the area uncertain of the route that the high speed train may take." "Furthermore, the safety of families in these dense urban areas would be compromised." How could the above statements be any less true for the Utility Corridor route also? The adverse impact, decreased property values, and safety apply equally to all the residents in the state of Texas no matter who their representative is. I believe these statements may have influenced the proposed Utility Corridor as the preferred route. I ask you to apply these equally to all proposed routes. For many reasons the proposed Utility Corridor is not anymore a viable solution than the other proposed routes Mayor Sylvester Turner was protesting against. I request the FRA to consider the No Build Alternative. Respectfully, Connie Shivvers.	Refer to VA-1.

Connie Shivvers	3/8/2018	Website	March 8, 2018 RE: Flooding impact. Having flood waters rise quickly in front of your home, is unsettling, nerve racking, and extremely distressing. There is absolutely nothing you can possibly do to stop the rising water while it is happening. Currently Harris County does not have a proper drainage protocol that hold developers and developing projects accountable to supplying their own independent drainage and detention that exceeds 1% of the impact. So Harris County will continue to experience flooding events. I share with you the feeling of distress with the attached photos of homes in Stone Gate that had flood waters rising in people's driveways and front doors. The feeling of gut wrenching sickness sinks in as everything you have worked hard for, is slowly inching away from you. Possibly being swept away or merely floating in a cesspool of mire. Nothing is salvable, absolutely nothing. The distress doesn't end there. It carries on through the rebuilding process while you have to avoid not being taken advantage of by crooks that will steal anything left including money to rebuild. Your dream home is now worth 50% less after the flood even if the home is restored. Flooding robs people of peaceful entitlement. Attachments A and B is the current flooding level in Stone Gate. The drainage easement surrounding Stone Gate can not take on TCR's capacity or run off. Please do not bring this disaster to my doorstep and in my home. I have every right to defend my way of living and to preserve my property. This is a distress that TCR will be afflicting on homeowners abutting the proposed project. When they can not provide adequate and independent drainage that exceeds county requirements which are grossly inadequate. Our county and state leaders have acknowledged this ongoing flooding problem but to date there is no solution offered to correct it. I beg of the FRA, to please take the human factor, the flood factor into consideration and impose the No Build Alternative. Respectfully, Connie Shivvers Attachments A and B.	Refer to FP-1, WW-1 and WW-2. The route near the Stone Gate subdivision is parallel to Highway 290 and on viaduct.
Jon Shrubsole	2/8/2018	Website	As the rail line is financed and run by private investors and the US is so desperately in need of modern train service, it is a no-brainer to approve the service. It appears that the study has looked at all the possible routes and the environmental impacts. This service would minimize the negative environmental impact of additional traffic on I-45 and the future cost to taxpayers. It would increase productivity and the connections that the modern economy requires. Please approve the service.	Comment noted.
Nicole Shupe	12/29/2017	Email	I would like to received updates during this project. Thank you!	Refer to PI-1.

Jennifer Sickman	2/6/2018	Website	Hello. I want to register my full support of the Dallas-Houston High Speed Rail project. This is just the kind of investment in transportation infrastructure that Texas needs. We, the residents of this state have known this for decades, but for some reason we have political leadership that doesn't understand the fact. I would also like to register my support for the company who is leading the effort to get this needed service a reality. We are familiar with a number of the people involved, and they have proven their dedication to the needs of our community...as opposed to their own personal gain. The steps they have taken to take care of our precious environment AND to be open and fair in their dealings with land owners is impressive. It is critical that this project go ahead to keep the state viable for future generations. Thank you for listening.	Comment noted.
Mark Sikes	2/16/2018	Website	I support the Dallas to Houston High Speed Rail Project.	Comment noted.
Eric Simon	3/9/2018	Website	The project is good for the state of Texas.	Comment noted.
Janice Simon	2/25/2018	Website	I love the idea of the train between Houston and Dallas. It will make it easier to travel. It would ease travel on I-45.	Comment noted.
Greg Simpson	3/8/2018	Website	On behalf of North Houston District, I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be a economic driver for the region, the state and our county. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because in part it will: * Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational - at least 25% of them in rural counties along the route; * Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 240; * Bring the safest mass transpotation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation; * Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status; * Preserve land access for property owners - a mojority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other; * Give travelers with disabilities a safe, comfortable alternative to driving or flying - system meets or exceeds the requirements of the Americans with Disabilities Act (ADA). The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035 - and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the United States - a transportation infrastucture project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review.	Comment noted.
Thomas Simpson	2/27/2018	Website	I support the Dallas-Houston high speed rail project and believe it will be a critical expansion and diversification of our transportation choices in Texas.	Comment noted.
Scheri Sims	3/2/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military and many of my co-workers have benefited from spending time on this property at no charge.	Refer to LU-5 and NR-2.
Mark Singleton	2/16/2018	Website	What are we waiting for? Let's connect Dallas, Houston, Austin and San Antonio so as to leverage the offerings each has. Texas can be the best in the world IF we have the best infrastructure.	Refer to BA-2.
Wendy Skains	2/18/2018	Email	Can you tell me why you changed the comment area? It went from a secured .gov page to an unsecured .com page. When accessing <a href="https://www.fra.dot.gov/Contact/Email">https://www.fra.dot.gov/Contact/Email</a> the screen that displays says "Oops"; has a blue button with the text "Public Comment Form" and beside the button a teeny-tiny red icon that traditionally means "hey this link is taking you outside our website". Hmmm... most people would miss this. It seems a government agency would have the wherewithal to come upwith a simple comment area. It's rather disturbing to me that you are now using an outside resource to gather comments.	Due to the anticipated number of comments, FRA chose to implement a comment management tool to facilitate the comment collection process. This tool was made available to public hearing attendees via laptops and was accessed from individual computers via the FRA Project website. All comments received through the tool are stored in a secure database. TCRR does not have access to this

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				database. FRA offered this online comment submission capability to expand the number of ways in which public comments could be submitted, thus making it possible for anyone wishing to submit a comment to find the method that worked best for them.
Andrew Skola	3/5/2018	Website	While I love the idea of the bullet train and am supportive of it as a whole, I hope that the land acquisition is as painless as possible in terms of impacting ranchers, farmers and other family landowners. I believe that the current routing will destroy or impact many ranches, including a ranch and family holding that are incredibly valuable to the greater community - the Morgan Legacy Farm - located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Land ownership and community values must be at the center of this project, or else it will fail to serve the needs of Texans, and in the long run, fail to gain the support of communities. I want this rail project to succeed. Please be smart and sustainable about these selections so that it can.	Refer to ED-2, LU-5 and LU-11.
Andrew Skola	3/9/2018	Website	I love the idea of the bullet train and support a big infrastructure investment. This project must utilize existing right of ways and utility lines as much as possible as to minimize damage and impact to landowners and the environment. In particular, I'm concerned that the Morgan Family Ranch, which is a real asset to the community, would be harmed and forever altered for the worse.	Refer to LU-5 and LU-9.
Laura Sladeczek	1/29/2018	Handwritten	I am opposed to this project and the negative impacts that it would have on our county. It would not benefit out county at all. beyond some short term construction income. It will cost our citizens a great deal in land and productivity, destroying family owned farms and ranches in the name of progres. Since you would impose a ban that no shooting would be allowed within 2 miles of the line, control of predator populations and several hunting ranches would be unable to operate. These businesses do make economic impact in our community each and every day which would be lost. The proposed fees to ride the train I think would not result in high enough ridership to make the train viable When the train fails we do not get the land back. The farm is already done and cannot be undone. Please reconsider this project. Thank YouP.S. Eminent Domain Authority should not be granted to a private Foreign company. If you want the land you should pay the price the land owner request.	Refer to ED-1, ED-2, GN-2, RF-2, SC-19 and SC-21. No ban on shooting would be imposed due to the construction or operation of the HSR System.
Don L. Slaton	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Larry Slaughter	3/8/2018	Website	I oppose this high speed rail which will run right beside my home. I fear for my and my family's safety being so close to this train. My property value will be negatively effected. Being a light sleeper I will not be able to sleep. No passenger train is profettable and Texas tax payers will end up paying for this boondoggle.	Refer to GN-4, NE-1, SS-1, SS-12, SS-13 and VA-1. Other mitigation and compliance measures targeted at improving safety outcomes for passengers, employees and others in the vicinity of the Project are documented in <b>Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation.</b>
Ellen Sloan	2/17/2018	Website	High-speed rail is a great opportunity for Texas.	Comment noted.
Oscar Slotboom	3/7/2018	Website	I support the recommended alternative, ALT A. It is the shortest, straightest and most efficient route. I am against the alternative along Interstate 45 (ALT C). In addition to the risk of vehicle impacts, building an elevated structure along IH 45 will ruin the scenic qualities of that section of the highway.	Refer to BA-7.
Krista Morgan Hairstylist	3/8/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.

SM Aviation	2/22/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
SM Aviation	2/22/2018	Website	I do not like the current high-speed rail route running through Morgan Legacy Farm located near FM 709 and 3194. I think the environmental impact of running a rail on that route will be detrimental to livestock and wildlife. The current routing will impact the water run off that feeds the multiple stock tanks on this property. Migratory gamebird use these stock tanks. I think that route further north or route that goes along interstate 45 would be a better route.	Refer to LU-5.
SM Aviation	2/23/2018	Website	The current high-speed rail routing will be detrimental to Morgan legacy Farm on 709. Dividing this Property and running a rail through it will make it next to impossible to keep a relaxed atmosphere that this Ranch has always provided. I can't even count the number of times that I've sat down there just listening to nature. I have always looked forward to my children been able to go to the ranch and play in the outdoors and learn about nature there. Rerouting the train further north with the powerlines or down I 45 would be a better option.	Refer to LU-5.
SM Aviation	2/23/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.

SM Aviation	3/2/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

SM Aviation	3/4/2018	Website	The current routing of the high-speed rail will be disasters for the Navarro county community. The rail will be dividing private properties that supply hay, water and grazing for horse and cattle. The current routing is traversing Morgan Legacy Farm (7755 FM 709) at its highest point and continuing to one of its lowest points next to Richland creek. The water run off will not only contaminate stock tanks on Morgan Legacy Farm but will also pollute Richland creek and every thing down stream. The affects of the water contamination on livestock can be disastrous. I have seen waterfowl and other migratory bird use the tanks on Morgan Legacy Farm and travel up and down the Richland Creek. The duck and goose migration has been moving more westerly in the last 5-10 years polluting more water could result in pushing the migration further west. Moving the route north to parallel the power lines or strait down I45 would be less detrimental to Navarro county and would have less water pollution.	Refer to LU-5.

The duck and goose migration has been moving more westerly in the last 5-10 years polluting more water could result in pushing the migration further west. Moving the route north to parallel the power lines or strait down I45 would be less detrimental to Navarro county and would have less water pollution.	Refer to LU-5.
SM Aviation	3/5/2018	Website	The current routing of the high-speed rail will be disasters for the Navarro county community. The rail will be dividing private properties that supply hay, water and grazing for horse and cattle. The current routing is traversing Morgan Legacy Farm (7755 FM 709) at its highest point and continuing to one of its lowest points next to Richland creek. The water run off will not only contaminate stock tanks on Morgan Legacy Farm but will also pollute Richland creek and every thing down stream. The affects of the water contamination on livestock can be disastrous. I have seen waterfowl and other migratory bird use the tanks on Morgan Legacy Farm and travel up and down the Richland Creek. The duck and goose migration has been moving more westerly in the last 5-10 years polluting more water could result in pushing the migration further west. Moving the route north to parallel the power lines or strait down I45 would be less detrimental to Navarro county and would have less water pollution.	Refer to LU-5.

Amy Lou Smith	1/18/2018	Website	As a healthcare provider, I will argue that Barack Obama has royally screwed over healthcare. Therefore most of the folks who live in this rural part of Texas where you plan to take our land and build your railroad go to the Emergency Room for healthcare. It is already an hour drive to the local emergency room so God forbid one of us need the ambulance to come get us. Since the FRA study does indicate an increase in ER times, is even ONE single public fatality due to increased ER times acceptable by this FRA DEIS?	Refer to SS-23.
Amy Lou Smith	1/18/2018	Email	How are country folks such as myself who have family land stretched among this shit-show project going to benefit from this project? You plan to take my family's land; there is a reason we live in the country and it is NOT to hear loud high speed Jap-Ass railroads. Tell me, FRA, how will I benefit from this, along with other rural landowners with cattle	Refer to ED-2, LU-11, NV-1 and SC-19.
AmyLou Smith	1/18/2018	Email	I live in a community full of elderly folks and am a healthcare provider to them. I know that this concept that I am about to explain to you is above your low level of Jap-Ass education, but I would like to inform you that when an elderly person such as my grandparents and MY patients have a heart attack or a stroke, that TIME IS EVERYTHING. It is essential that they make it to a PCI capable facility (don't worry about what this means, you are incapable of understanding it) within 60 minutes from the onset of the crisis. With your ridiculous HSR project, you predict that there will be an increase in emergency response time. As I stated earlier TIME is key to save a patient who is having a heart attack or a stroke. Again, this is about 60 minutes. So how many of my dear patients and/or grandparents will have to die before you see these increased emergency response times as an issue and decide to do something about it? Your railroad is of little benefit to me or my patients. I want to know how many of them you want to die before you plan to be concerned about increased ambulance times? This is very near and dear to my heart	Refer to SS-23.
AmyLou Smith	1/18/2018	Email	Is any data shown on the maps where landowners, such as my father with severe Alzheimers, did not provide environmental surveyors the permission to inspect their property? As an example, my family's own property in Leon county shows the potential or existence of the Houston Toad, however, I nor my family gave permission to the TCRR for any surveyors, land or environmental to have access to my property? Theres a special place in hell for this bull.	Refer to GN-1, NE-8 and NR-4.
AmyLou Smith	1/18/2018	Email	What do you plan to do when this project fails financially? Will you raise my taxes? Will I be responsible for paying for this nonsense of a project? You claim it will be privately funded	Refer to GN-4 and NE-1.
AmyLou Smith	1/18/2018	Website	Have you met Jesus Christ? He is my Savior and should be yours too. I am irritated to no end that you are putting this much stress on my family and their hard earned money and land to take it away. What also irritates me is that you are searching for these Endangered Species on my property without consent from us. How is SO MUCH endangered species data shown on these environmental maps, knowing that few private land owners such as my own actually signed over permission to TCRR to access their property.	Refer to NE-8 and NR-4.
AmyLou Smith	1/18/2018	Website	What is the maximum noise level in dBA of 2 trains, NOT ONE, passing each other any point along the HSR route while traveling in opposite directions on adjacent tracks?	Refer to NV-1.
AmyLou Smith	1/18/2018	Website	What gives you the right to think that you can just take land from my family and I that has been in our possession for well over 100 years? Land that my family has, and continues to, farmed on for generations, as our way of life...	Refer to ED-1 and ED-2.
Billy Smith	2/6/2018	Oral	D.R. Smith My name is Billy Smith. rm a property owner with roots in Leon County. In 1879, my great-grandfather left the government tyranny ofthe time in the southeast US. in search of freedom and liberty in Leon County to raise his family with a limp: lead bullet fragments in his body: and pure determination: he was able to pass on a heritage to his family: all of whom are now Texans. My dad carried this heritage for 96 years. Now I'm passing this history to my children and grandchildren. There' s many reasons this train is "Tong for Texas and should not be built, just a few of which I'll discuss generally _ Texans are believers in liberty and freedom. Governments, or especially big business, should not take that which is not for sale from the rightful owner regardless of eminent domain without strictly demonstrated public necessity: not just the desire of business venture. No viable business investor will likely put their money or place risk on their stockholders into such an unlikely profitable economic venture without government backing or the people of Texas. The utility route will destroy not only the homes, farms, cattle ranches and the livelihood of many native Texans: but it will also destroy the rolling hills: creeks: trees: deer: eagles: other animals: and the natural country scenery of Central Texas that God placed there long before us. Erosion will be a continuing problem: as Leon County's land is generally hilly and sandy; and once disturbed, no business has the knowledge or will to control such erosion. Owners of mineral rights should also be concerned. If you don't live on the land: a din berm or trestle will likely make it prohibitive for drilling or extraction of natural resources, and the rail company will likely intervene in any permits for exploration nearby I recently was traveling through the San Joaquin Valley, where many of the farmers there are in dire necessity for water: and at the same time: fighting a train there. There are many farming signs that say "More dams: not trains. " There are many other reasons not to build this project: but for those of you who may still support the project, I have one comment for you to consider: You can't eat a train.	Refer to AS-1, BA-5, ED-1, ED-4, GN-4, LU-11, PN-3 and SG-1.
Brian G Smith	3/5/2018	Handwritten	Please approve This Very Important Project For our Region. This Project Will Connect Two Major Cities Houston and Dallas. Also Consider the access to These Two major Cities That The small towns will have in Between. I am expecting That Development will increase Around each	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Station. Citizens in the Dallas will be able to catch the High-Speed Train and come to Houston connect to the BRT Going to the Galleria and Shop. This will have a Major impact to the Galleria and Keep It Valuable.	
Chi Smith	1/25/2018	Email	Please reconsider the placement of the route. We recently purchased a home near the intended route in Cypress and it will only create more noise pollution and bring down our home values.	Refer to NV-1 and VA-1.
Chi Smith	3/9/2018	Website	The cypress 290 corridor does not need anymore construction! We live on the proposed route and our area flooded terribly after Harvey. More concrete in the area will increase flooding. Not to mention the ridiculous noise, traffic etc. We built our house less than a year ago and are so disappointed that this project will literally be in our backyard! Please reconsider.	Refer to FP-1, SS-17, WW-1 and WW-2. See <b>Section 3.4, Noise and Vibration</b> in the Final EIS.
David Smith	1/29/2018	Oral	David Smith. I urge the rapid approval by the FRA, Federal Railroad Administration that allowed to allow Texas Central progress to proceed with construction of the high-speed rail between Dallas and Houston. These great Texas businessmen are building the first for-profit high-speed train in the world. This would demonstrate to the world that the great State of Texas is a fantastic place to invest. In following with the traditions of Houston, I urge the FRA administrator, Patrick Warren to arrange a signing of these documents in the oval office by President Trump. We wish the Texas Central team god speed. This project is no less significant than the completion of the first transcontinental railroad in 1869. I look forward to being in the crowd in Grand Prairie where the Houston and Dallas lines will meet and hopefully join with President Trump and Governor Abbott to drive the last golden spike into this system. Thank you	Comment noted.
Sheriff R. Glenn Smith	3/9/2018	Email	Texas Central nor the Federal Railroad Administration ever found time to coordinate with any Of Our County Officials, commissioners' courts or sheriffs, to properly coordinate the public safety aspects of the Draft EIS, or the project as a whole. In addition to the many apparent errors, inconsistencies and conflicting information, the most serious concern I have about the document is the lack of regard for public safety specific to the communities the HSR will pass through. Prior to the publication of this document, not one Sherff's Office had ever been contacted by Texas Central or the FRA to coordinate the public safety aspects of this project as it relates to our counties. Because Of this lack Of coordination, the Draft EIS and the entire project planning process do not accurately reflect the priority that needs to be placed on Public Safety, Public Security, and the realities of law enforcement capabilities and challenges within my county. Within the DEIS is a list Of first responders' service name and location. This tells the public nothing about how well those first responders are prepared for a critical incident or how the county will be able to provide adequate service to Our citizens if resources are diverted to respond to issues with the HSR. One issue noted in the Draft EIS that we take particular exception to is the FRA's assumption that increased response times due to rerouted roads during and after construction would be within acceptable limits. Any increase in response time is unacceptable. The DEIS states, "Traffic control plans would be established to ensure emergency response times are within regulatory limits across the entire Study Area." "Regulatory limits" for response times do not exist. The DEIS also loosely uses "within acceptable limits" and "no significant impact" as it relates to public safety and security issues. This is entirely subjective, and unless Texas Central or the FRA has spoken to anyone in my Office, no measure exists for what is "significant" or "acceptable" within my County. As a note of correction, in Texas, the Office of Sheriff is a statutory/constitutional office having and authority under state law and/or state constitution. My Office is not a department within our County government. Any and all references to Sheriffs Department should be updated to Sheriff's Office. We also have concerns about not only the first response to a critical incident involving this HSR, but our supporting medical facilities. And while the DEIS mentions "Construction Site Safety" related largely to traffic accidents, it fails to mention of Construction Site Securitiv. We know from experience that with a construction project of this scale comes increased crime at the construction site and as a result of the temporary workforce, as they are seeing with the California HSR already.	Refer to PI-1, SS-7, SS-18, SS-23 and SS-26.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would not be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community.	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.

			NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	
H.J. Smith	2/6/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one Of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train. I feel our family has supplied generations to come with the lifestyle Of animal life, which so many never benefit from. As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to GN-3, NE-1 and NR-1.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of Jobs, and businesses. But, none will be able to be completed Train Cuts through. which will also be Stifling to All Future Economics Development in this area. HC-4 route through Waller/Harris County: This route is some three miles west Of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County. FRA Failed to Coordinate With The Local Waller County Government. No Build Option Should Be Chosen As The Only Viable Option For Texas Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to BA-3, PI-1, SC-13, SC-19 and TR-8.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON FLOODING AND DRAINAGE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community. Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR. Stop this future flooding issues from adding to our drainage issues, stop the HSR. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS. Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to FP-1, WW-1, WW-2 and WW-8.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON THE CITY OF WALLER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility. FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to AQ-7, GN-3, LU-4 and NE-1.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual	Refer to LU-3, LU-4, RF-1 and VA-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/HARRIS County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to SC-5 and SC-8.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY". NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to CR-9.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON HEWLETT PACKARD DATA CENTER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property. FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area. As a resident of Waller/Harris County, I do not feel the "Need and Purpose" of this project has "not" been shown. It does not benefit our Waller County Community in any way. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to SC-11.
H.J. Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more	Refer to RF-4, NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected</b>

			these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR. Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in Waller/Harris County, say: No To High Speed Rail, save our Communities, save our Texas Heritage, Save Our Land. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	
Howard Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER INDEPENDENT SCHOOL DISTRICT NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/HARRIS County area, the proposed alignment of the High Speed Rail will run through a large portion of the Waller ISD's district. This would negatively impact bus routes, which may cause Waller ISD to purchase addition school buses to transport student, and accommodate delays to county and private roads being impacted and/or closed by the proposed High Speed Rail project. The safety of our children is the utmost concern for our Waller/Harris County residents, parents, and school factuality. Why add the risk? Why add the tax dollars, to withstand this unneeded debt to our community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to SC-5 and SC-8.
Howard Smith	2/5/2018	Handwritten	REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community Of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Howard Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY". NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to CR-9.
Howard Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON HEWLETT PACKARD DATA CENTER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property. FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area. As a resident of Waller/Harris County, I do not feel the "Need and Purpose" of this project has "not" been shown. It does not benefit our Waller County Community in any way. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to SC-11.
Howard Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.

			concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	
Howard Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to NR-1, NR-2, RF-2 and WW-2.
Howard Smith	2/5/2018	Website	REFERENCE: IMPACT ON PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as we move from location to location within our community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! No one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again, FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT !!!!!!!!!!!	Refer to EU-2, EU-6, EU-7 and PI-1.
Howard Smith	2/6/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact Of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to NR-2, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Howard James Smith	2/5/2018	Handwritten	Reference: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would *beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.
Howard James Smith	2/5/2018	Handwritten	REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show	Refer to GN-3, NE-1 and NR-1.

Jarius Smith	3/9/2018	Website	I think the Houston- Dallas high speed rail protect will be very useful.	Comment noted.
Jeff Smith	1/29/2018	Oral	<p>Good evening, and thank you for letting us be here tonight. I'm not here in my capacity as city council, Precinct 4. I'm here as a 20-year experienced real estate agent in Navarro County with Walker Realty. We had an agent who also had land that this is supposed to go through. We had an agent in the very beginning come by our office and was requesting to get access onto our property for a survey. We denied that access, and the next comment from this gentleman was, The next people you'll hear from will be Central Texas attorneys. You don't even have imminent domain. I don't understand that concept. During the time when it first started out, I had personal knowledge of a contract on an approximately 250-acre tract at approximately \$2500 an acre. That's right at \$625,000 Upon hearing about the proposed high speed rail, which this property is going to be close to, not even on, the gentleman canceled his contract and said, I wouldn't even pay a thousand dollars an acre for it. If that's the case, that's a \$375,000 loss. You know, also my last request is that I would like to get a PowerPoint of the beginning that you-all had up here. Can we get that? Okay. That's all I have to say. Thank you.</p>	Refer to ED-1, ED-2, VA-1 and PI-6.

Linda Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON HEWLETT PACKARD DATA CENTER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Waller County welcomes large growth for our community, Hewlett Packard Date Center Enterprise is currently not in a position to approve or disapprove the proposed route of HSR. This Data Center would bring jobs to the Waller/Harris County. However the proposed route would have very serious negative impact on our Waller/Harris County property of the critical outcome of the data center operations at the proposed property. FRA FAILED TO COORDINATE WITH LOCAL WALLER COUNTY GOVERNMENT. Our Waller/Harris County Community deserves to be abreast of our county government functions happening in our surrounding county area. Our Government cannot do their job property if FRA failed to coordinate with our local county government, for the High Speed Rail in our area. As a resident of Waller/Harris County, I do not feel the "Need and Purpose" of this project has "not" been shown. It does not benefit our Waller County Community in any way. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.	Refer to SC-11.
Linda Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON WALLER HARRIS EMERGENCY SERVICES DISTRICT NO. 200 NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of the Waller/Harris County Area, the "Need and purpose" of this project has not been shown to date. A High Speed Train would not be beneficial to our land, our city, our community, our schools, our roads, our emergency services, and neighboring communities. HC-4 route through Waller County, is some three miles west of the original publicity noticed route, and changed without any opportunity for public input from those affected. EMERGENCY SERVICES could be negatively impacted by the HSR line, due to its potential impact on our county and private roads. Many of which are used for emergency vehicles that now service the District and provide an 8 — minute response time. This HSR goal is to service from only one city central to the next city central with a possible ONE stop in-between. This HSR will not benefit Waller residents in any way. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely from a Concerned Citizen of Waller/Harris County	Refer to BA-3, PI-1, PI-8, PN-3, SC-7, SC-19 and SS-23.
Linda Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON KATY PRAIRIE CONSERVANCY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, I am worried about the impact of the High Speed Rail would have on the Katy Prairie Conservancy, which is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one miles of this migratory bird sanctuary is going to cause bird collisions and accidents. This Is also where important wetlands of the Waller County area exist, which will be directly or indirectly affected by a HSR corridor. As our community grows, with progress, why tear each mile Stone down, with an un-needed, un-wanted high speed rail. How can Waller County grown with this no-nonsense HSR in our area! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to NR-2, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Linda Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON G&W WATER NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY As a resident of Waller/Harris County, and after the research on the devastating affects the high speed rail would put on our community, my concern with the quality of local drinking water which would have a potential impact, with a High Speed Rail Track and Train operating within feet of this Water Tower. Feasibility of Proposed High Speed Rail, by The Reason Foundation, concludes that proposed high speed rail project could lose over \$500 Million a year. Please don't subject Waller/Harris County to this devastating loss. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Linda Smith	2/5/2018	Handwritten	REFERENCE: IMPACT ON WATERFOWL AND HUNTING NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY	Refer to NR-1, NR-2, RF-2 and WW-2.

			<p>I moved to this area to have property, acreage to spread out on, acreage to watch nature, and for an area for hunting. The route of the HSR cuts through and will destroy the north end of one of the major wetlands in this region, where duct hunting is vital to the economy and where waterfowl and their hunting will be diminished, if not destroyed by a HIGH SPEED TRAIN. Again, "The NEED AND PURPOSE" of this HSR project has not been shown, to date!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	
Linda Smith	2/5/2018	Handwritten	<p>REFERENCE: IMPACT OF PUBLIC SAFETY NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY To me public safety is a big issue, a factor in our day to day operations, as wemove from location to location within OUT community as it is, day to day!!! The HIGH SPEED RAIL TRACKS would pass with approximately of 580 feet of a Natural Gas Pipeline Compressor Station. THIS HAZARD IS NOT ADDRESSED!!! NO one has considered the lives of the residents that live in our community, or our safety of an explosion, from the speed of the train. Again FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT!!!!!!!!!! NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to EU-2, EU-6, EU-7 and PI-1.
Linda Smith	2/5/2018	Handwritten	<p>REFERENCE: IMPACT OF QUALITY OF LIFE NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY "Quality of Life", would be a huge devastating issue for the residents, and community of Waller/Harris County. Our residents, and our community area would be living, working, functioning day to day within the noise and vibration within noticeable distance. The sight of the rail, as well as the 90 minute train, that will pass several times a day. These high speed rails are elevated, which would add to the distracting visible eye sight of Waller/Harris County. HSR's are known for derailing, and that would add devastating issues to the surround area of Waller/Harris County. This would add concerns of safety for our Waller/Harris County residents in that existing surrounding area, as well. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Resident of Waller/Harris County.</p>	Refer to AS-1, NV-1, NV-5, SS-1 and TC-4.
Linda Smith	2/5/2018	Handwritten	<p>REFERENCE: IMPACT ON HISTORICAL SITES NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY Today in our community we are very fortunate to be able to drive by, admire, and learn the history of this community of Waller County. An Army Corps of Engineers Section 4 Permit report has revealed four archeological sites, and two pre-historic sites considered at this time for inclusion in the National Register of Historical Places. Why deprive our County of this Historical Event. Due to the fact that FRA FAILED TO COORDINATE WITH THE LOCAL WALLER COUNTY GOVERNMENT, stop this disaster from destroyed our "HISTORY". NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to CR-9.
Linda Smith	2/6/2018	Handwritten	<p>REFERENCE: ECONOMIC IMPACT ON PROPERTY VALUES AND TAX BASE OF WALLER COUNTY (A Historical Minority Population County) - DEVALUATION OF HOMES LAND HOMESTEAD PROPERTY NO HIGH SPEED RAIL WALLER/HARRIS COUNTY This project will create an Obsolescence that will negatively impact the property values in Waller/Harris County. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. As a resident of the Waller/Harris County area, FRA, High Speed Rail, failed to coordinate with the local Waller County Government, and it is obvious it would not be beneficial to our area. Looking at the proposed route, the HSR will run through a large number of pieces of private property owned by myself and many of neighbors and friends. The train will be felt by the surrounding residents up to 2 miles (either side of the rail), which would definitely cause future foundation issues to surrounding homes in the close proximity of the proposed route. This proposed route of HSR's goal is to service from only one city central to the next city central with a possible one stop in-between. This HSR will not benefit one Waller resident in anyway. In fact it will add many safety concerns. Why make our community pay the price of a future disaster to take place in our wonderful small community. NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL IN TEXAS Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to EJ-1, NV-5, PN-3, PN-5, SC-19, SS-1 and VA-1.

Linda Smith	2/6/2018	Handwritten	<p>REFERENCE: FARM, AND SHOW ANIMALS. AND THE MAJOR IMPACT OF HIGH SPEED RAIL WILL PLACE ON THEIR GROWTH PERFORMANCE, PRODUCTION AND SUPPLY OF LAND TO TABLE                      NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY                      Our Homestead in Waller/Harris County supplies numerous benefits as the pleasant viewing of the farm animals, as as the High Dollar Show Lambs, my family enjoys on a day to day basis. Each one of these is a big source of our daily nourishment. As we know, all animals are sensitive to the vibration sounds, panic, that they would be subjected to these continued effects, every 90 minutes due to the High Speed Train.                      I feel our family has supplied generations to come with the lifestyle of animal life, which so many never benefit from.                      As all know THE FEASIBILITY OF THE PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Stop this madness, let today's, tomorrows, and future generations enjoy this lifestyle of Farm Of Nature, Land and Animals, which so many miss in today's world.                      NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS                      Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to GN-3, NE-1 and NR-1.
Linda Smith	2/6/2018	Handwritten	<p>REFERENCE: IMPACT ON ECONOMIC DEVELOPMENT                      NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY                      I am a resident of Waller/Harris County. Our community has dozens of roads planned, that will make transportation times more do-able, that will bring more residents to this area, as well of Jobs, and businesses. But, none will be able to be completed Train Cuts through. which will also be Stifling to All Future Economics Development in this area.                      HC-4 route through Waller/Harris County: This route is some three miles west Of the original publicly notice route, and changed without any public input from those affected: Waller/Harris County.                      FRA Failed to Coordinate With The Local Waller County Government.                      No Build Option Should Be Chosen As The Only Viable Option For Texas                      Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to BA-3, PI-1, SC-13, SC-19 and TR-8.
Linda Smith	2/6/2018	Handwritten	<p>REFERENCE: IMPACT ON FLOODING AND DRAINAGE                      NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY                      As a resident of Waller/Harris County, I am devastated each time there is volume-over abundance of rain in our Community, now! Waller/Harris County cannot take the impact of more water entering or be retained by the development of the holding walls the High Speed Rail will add to our community.                      Local Environmental Impact includes the Spring Creek Watershed where five creeks will cross the tract of the HSR.                      Stop this future flooding issues from adding to our drainage issues, stop the HSR.                      NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR TEXAS.                      Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to FP-1, WW-1, WW-2 and WW-8.
Linda Smith	2/6/2018	Handwritten	<p>REFERENCE: IMPACT ON THE CITY OF WALLER                      NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY                      As a resident of the Waller/Harris County Area, I take pride in my neighbors, and community. The IMPACT ON THE CITY OF WALLER, one of my main surrounding areas in my community I feel the HSR will affect. The HC-4 Route passes through the city's extraterritorial jurisdictions and through the planned Waller Town Center. HC-4 passes through the Delta Troy Interests, a 990 —a tract being held for housing and commercial development. HC-4 also passes within 4,000 feet of the Daikin/Goodman facility.                      FEASIBILITY OF PROPOSED HIGH SPEED RAIL, The Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 Million a year. Why pass that future disaster and clean up debt on to the surrounding communities of the Waller/Harris County Area.                      NO BUILD OPTION SHOULD BE CHOSEN AS THE ONLY VIABLE OPTION FOR HIGH SPEED RAIL FOR TEXAS                      Sincerely From a Concerned Citizen of Waller/Harris County.</p>	Refer to AQ-7, GN-3, LU-4 and NE-1.
Linda Smith	2/6/2018	Handwritten	<p>REFERENCE: IMPACT ON RESIDENTIAL COMMUNITIES IN NORTHERN WALLER COUNTY                      NO HIGH SPEED RAIL FOR WALLER/HARRIS COUNTY                      As a resident of Waller/Harris County, I feel that the Northern Portion of Waller/Harris County Communities: Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest, Six Pines and the Kickapoo Preserve, on these developments, the HC-4 route travels directly through these developments and destroys the economic viability of them and the value of everyone's property, which is devastating to each individual and or piece of property of each resident. Why! Why destroy this TEXAS sole with a HSR.                      Our community is made up of beautiful acreage, and residents that have paid high dollar for their Texas Soil. Stop the High Speed Rail in</p>	Refer to LU-3, LU-4, RF-1 and VA-1.

Liz Smith	1/29/2018	Oral	Well, I never seem to know what I'm going to say, so I'll start anyway. Okay. First of all, I have a question. That's what this is supposed to be. Okay. How are you going to stabilize that track on our good old black land? When it rains, it's a sponge. When it don't, it's concrete. Oh, wait a minute. And it cracks eight, 10, 12, 15, I don't know, maybe to the center of the either deep. You gonna foundation drill that hole puppy? Good question. Okay. Next. You-all live in a nice community and you-all like it. True? Everybody happy here? All right. What are you going to do when they put a train in here that takes all these riders that they say they're going to take Oh, wait a minute. They're not going to stop and buy gas. They're not going to stop and check out your little stores. They're not going to stop at the restaurant. Wait a minute Hold it. We ain't going to have no sales tax income, are we? Is that an economic development for us? It sure as hell is, but I call it negative. Think maybe? Okay. So you're going to have a cute little train that's made in Japan because, guess what, American technology has never discovered a monocoque? Really? That's what Air Force One is made out of, and I promise you it's bigger, faster, and tougher. Okay? So explain me this just one time why I should be happy if you put it here? I'm real interested, because you take everything that's American, make America great again in Navarro County.	Refer to SC-15, SG-1, SG-2 and WW-1. Costs associated with vehicles and specialized systems, which may be sourced from outside of the economic analysis area, were excluded from employment and earnings calculations.
Liz Smith	1/30/2018	Email	Who will pay for reroute game of existing roadways?	Refer to TR-7.
Liz Smith	1/30/2018	Email	What is the method that you have chosen to stabilize the rails when traversing our uniquely unstable black land?	Refer to SG-1 and SG-2.
Liz Smith	1/30/2018	Email	What is the method that you have chosen to stabilize the rails when traversing our uniquely unstable black land?	Refer to SG-1 and SG-2.
Marc Smith	2/28/2018	Website	Please, please, please reconsider the Houston station as well as the route through the Brazos Valley. The stations should be at dense populations centers like the Galleria, downtown Houston and Texas A&M University (50,000 plus students) where people don't have to rely on cars. It should also connect to the airport. Common sense. If you want this to succeed, reconsider your station and route locations. Going through Texas A&M is a no-brainer since a majority of the students come from Dallas and Houston.	Refer to GN-6, GN-7 and TC-4.
Melodie Smith	3/6/2018	Website	It's still not specifically clear from the Texas Central Railway's site where the proposed train will enter and exit in Houston, or at least I didn't catch that...were is the route proposed, as it was through Garden Oaks at one point? Also, I would like to know how a list of who the investors are in the project can be obtained.	Refer to GN-4. Segment 5 is located in Grimes, Waller and Harris counties (Appendix D, Project Footprint Mapbook, Sheets 420-537). Segment 5 continues south along the utility easement, crossing FM roads 155 and 39, before crossing SH 30 just west of Roans Prairie. It crosses several additional FM roads before crossing SH 105 as it reaches Waller County. The alignment veers southwest away from the utility easement and crosses Joseph Road west of Kickapoo Road and then parallels Kickapoo Road as it continues south. It crosses SH 6 and US 290/Hempstead Road and then curves southeast skirting south of Hockley. It crosses Warren Ranch Road and travels east to cross Grand Parkway/SH 99. It joins Hempstead road near Cypress and parallels US 290/Hempstead Road into Houston. It continues along Hempstead Road to the Northwest Mall area just south of IH-610 and US 290 where the alignment terminates.
Michael Smith	2/24/2018	Website	I am concerned about the high speed rail projects's proposed location in Navarro County near the intersection of 709 and 3194 splitting the Morgan Legacy Farm. This farm is the highest elevation in Navarro County and I believe the proposed location will cause significant damage to the environment, wildlife and the water shed on this farm. I have been there and observed the wildlife. The Morgan family also generously	Refer to LU-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			donates the use of their farm to charitable organizations to assist in raising money for many causes. the proposed location will divide the farm in a way that diminishes the ability to use the farm for such purposes.	
Rev. B.L. Smith	NA	Handwritten	Hurry Up!!! Good project.	Comment noted.
Roberta Smith	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Sam Smith	2/21/2018	Website	I am a supporting of this project and think it's time has come. The benefits to Texas are many. The residual benefits are many as well like the pressure it will take off of I-45, and some airports. Both will work better because of the train. I will be one for sure to ride it every time I travel from Houston to Dallas. Please support this project.	Comment noted.
Scott Smith	2/6/2018	Handwritten	FOR THE "NO BUILD" ALTERNATING: THERE IS NOT ENOUGH IN-DEPTH ANALYSIS ON FUTURE CAPACITY @ THE 4 MAJOR AIRPORTS TO MEET DEMAND AN ACCOMODATE WHAT WOULD BE THE POTENTIAL TCR RIDERSHIP. THERE HAS BEEN AND WILL CONTINUE TO BE A LARGE PUBLIC INVESTMENT IN THESE AIRPORTS (\$BILLIONS). AIR CARRIERS ADD CAPACITY TO MEET DEMAND - THAT IS THEIR BUSINESS REALITY. AND THEY DO SO, OR COULD DO SO WITHOUT: - TAKING PRIVATE PROPERTY - BIFURATING RANCHES, HOMES, ROADS, & COMMUNITIES - CHANGING WILDLIFE HABITAT I REQUEST THAT THE COMMENT PERIOD SHOULD BE EXTENED AND THAT THE DEIS IS DEFICIENT IN ITS ANALYSYS, AND I SUPPORT THE NO - BUILD ACTERNATIVE.	Refer to BA-6, BA-12, ED-1, NE-1, NR-5, PI-3 and PN-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Scott Smith	2/6/2018	Oral	There is not enough in-depth analysis on the future capacity at the four major airports that we have in Dallas and Houston to meet demand and accommodate what would or could be the potential for the TCR ridership. There has been and will continue to be a large public investment in these airports, and that's billions of dollars. Air carriers add capacity to meet demand. That is their business reality. And they do so or could do so without taking private property, bifurcating ranches, homes, roads, communities, denigrating the environment for many people, changing wildlife habitat. I request that the comment period should be extended and that the DEIS is deficient in its analysis, and I support the no-build alternative. My comment is specific to Mr. Wright for the Federal Railroad Administration and to the consultants regarding the DEIS for the no-build alternative.	Refer to BA-6, BA-12 and PI-3.
Scott Smith	3/9/2018	Website	The DEIS attempts to convince us that the major airlines that fly between the two cities are focusing on long haul routes and away from short haul city-pairs, so that the estimated future congestion on I45 that is central to the project's purpose and need will not experience any relief from future potential airline traffic. The treatment of this subject is shoddy, relying on hearsay from Southwest Airlines and never references other major and low cost carriers such as United, American, Frontier. Recently some airlines are starting to shift focus back towards medium and short haul routes. No study or data was submitted to support the statements made about this subject and the DEIS is deficient without a study from a professional consulting firm that specializes in air transportation planning. It is possible that the airlines can address a significant portion of the future estimated congestion because they are market-driven, and the four major airports that serve Dallas-Houston are able to accommodate much more traffic. The DEIS needs to evaluate this in depth and unless it does, it is deficient.	Refer to BA-12 and PN-3.
Steven Smith	3/9/2018	Website	this is not needed or wanted.only a few none residents want this so called train.it will never make a dime and you will not take other folks land to build on.	Refer to ED-1, GN-4 and PN-3.
Velma Smith	2/28/2018	Letter	The following comments are in opposition to Texas Central R R's plan for a high speed train that would run from Houston to Dallas and from Dallas to Houston. I am very much opposed to such a project as it appears to me to be a land grab by a private company composed of private investors. It is not a company that should have eminent domain rights. My opinion is that they will not have the ridership they envision and then who will pay for the project? Much of the land in the county where I live is devoted to agriculture and the proposed route will cut through these lands and create hardships for the ranchers whose lives and livelihoods will be affected. Also, this would have a negative affect	Refer to BA-6, BA-9, BA-12, ED-1, GN-2, GN-4, LU-2, LU-11, LU-14, NV-1, NV-5, PI-1, PN-3, SC-3, SC-6, SS-18, SS-23 and TR-8.

			on our food supply if they lose productive land to the train. I envision safety problems in getting ambulances, fire trucks, law enforcement personnel and other emergency responders in should there be an accident along the tracks. Even though they claim there has been no accidents involving a high speed rail train, there is always a first time. Never say Never! Since the tracks are in a mostly rural area, response times would be affected. We have deer in this area and deer are able to jump high fences and could cause an accident. Roads would have to be rerouted and/or built or rebuilt causing problems and inconveniences for law enforcement, ambulances, fire trucks, school buses, and the general public. The amount of land required for this project has greatly increased since the first proposal that was presented. Eminent Domain rights should not be given to this company since it is a private company with private investors. I read somewhere they might apply for federal loans. I do not want any of my tax dollars used for a project such as this. Our country has many much more important needs than a high speed rail. I feel a lot of people will consider the train a novelty and ride it once in a while. A lot of students at the colleges nearby carpool from nearby towns and would not ride the train. The fares as proposed today may not be the fares in use when the project is completed. Noise and vibration will be a problem for some living near the tracks. That is not what they expected when they chose to live in rural areas. Please reference the problems the high speed rail is encountering in California According to what I have read, it is way over budget, way behind schedule, and may never be completed. What a waste of money!. What if the same thing happens here in Texas? There are many plane flights each day between the two cities and probably at a cheaper ticket cost. Please issue a 'NO BUILD" order for the Texas Central RR favored route and the alternative routes in Texas as proposed. If there has to be high speed rail from Dallas to Houston and Houston to Dallas, it should follow the 1-45 Corridor. Thanks for your consideration of my comments.	
Walter Smith	2/6/2018	Oral	My name's Walter Smith. live in Waller County: Precinct 2. This train does not pass near my home: but it passes through many neighborhoods in my precinct Someone mentioned engineers earlier. I'm an engineer: but rm not for the train. I'm against the train. So not all engineers are for the train. I had a chance to look not only at the alignment maps which I've seen on the Internet: but for the first time — for me, anyway, I got to look at the engineering drawings back there that are you know: it — they're preliminary drawings. They're not they're certainly not final drawings. So a lot of things can change. But there were a few things I saw on there that gave me some concern. In terms of drainage: I noticed they had several detention ponds along the route. Basically: since the drainage in that area flows from northwest to southeast: they were on the southeast side of the right-of-way. But they didn't show where they were going to drain those ponds to. You know, so: great; you collect the water but where does the water go from there? How are they going to get the water from there to some creek? Riley Road: I saw something that caused me some great concern. You know: they published all along that this would be 60 percent elevated: the train, on average across the state: at least that's what I remember. What I looked at in drawings there: most of it was on embankment: which is dirt built up out of you know: basically a dam. But at Riley Road, it transitions from an embankment; and right at the road the train's about at the road level And then it goes into a cut or down a depression. So how do you have a train at a road level? Well: what they're planning to do is build an overpass over the train that will have an embankment you know: when you see bridges built, you know: they have to build the dirt up and everything and it gets wider and wider and wider. And so by the time you get to the entrance to Saddle Creek: for instance: you're still in part of that overpass. It's going to be down closer to the ground level: but you're still going to be exiting the subdivision that has a hump in the road where there could be danger. And the big question I asked there's two questions- Number one: what are the standards that that bridge have to be built to? Are they Waller County standards? Are they TXDOT standards, or are they whatever the railroad wants to build? And then who's going to maintain that bridge? Waller County has no way, at this time, to maintain a bridge of that magnitude. So what does that mean? That means the Commissioners Court is going to be faced with having to buy equipment and hire people: or contract it out. There are going to be economic impacts on our county even if all these other issues are taken care of. School bus routes it's up completely? Okay UNIDENTIFIED SPEAKER: Please keep going. MR SMITH: The superintendent of the Waller ISD gave a presentation at a breakfast I was at this morning: and he talked about that the Waller ISD is so huge that there are some students that right now face an hour-and-a-half commute to school. Can you imagine what they feel like when they get to school and then when they get to home? I mean: that's even worse: right? So what is this - without with the way this is going to be limiting access across there, what's that going to do to the school bus routes? Anyway, those are several issues I noticed. I want to say one more thing Today is Ronald Reagan's birthday. Ronald Reagan said that the elites on the East Coast and the elites on the West Coast considered the rest of the country flyover country. I wish the elites in Dallas and the elites in Houston would leave us fly over country _	Refer to LU-4, SC-5, TR-7, TR-8, WW-1 and WW-2.
Teresa Smith	3/9/2018	Website	It will cause more problems and pollution then it fixes. Taking land from people to create this boondoggle is absurd and just plain wrong! We don't need it. I want more wide open spaces, not an ugly train and more concrete. I just don't see positives to this at all. The noise will probably be horrendous too.	Refer to AS-1, NV-1, PN-3 and SC-19.
Frank C. Smith, Jr.	2/28/2018	Letter	In my opinion, Texas Central R R is not a railroad company since it has no tracks or trains operating. Therefore, it should not have eminent domain rights. The traffic would not be any less in Dallas or Houston as riders would still need to get to the train station terminal-by private car, taxi, Uber,	Refer to BA-9, ED-1, LU-11, SS-3, SS-19, TR-3, TR-4, TR-12 and VA-1. Through coordination with local emergency responders (as required by several safety and security and transportation compliance

			<p>public transportation, or having someone drop them off. Roads would have to be moved, rerouted, etc causing problems for emergency vehicles, school buses, and the general public for no telling how long.</p> <p>There could be a serious situation if there is an accident (no train is fool proof) in getting ambulances, fire trucks, law enforcement, etc to an accident scene as the tracks would be located in rural areas for most of the way.</p> <p>Our county is a food producing county cattle for human consumption and hay to feed the cattle as well as other crops in the counties affected. No one can eat train tracks or train cars. They propose to build tunnels under the tracks in some areas so the cattle and other animals can cross from one side of someone's property to the other side when their property is split by the train tracks. Do they believe this would really work?? Parcels of land that are split may be owned by different people and some landowners may not have a tunnel on their property to get their livestock to the other side. That would render their land useless for ranching. There are a lot of ranchers in rural counties for whom ranching is their livelihood. What would happen to them if they can't move cattle on their own land because of no access to the other side of their land because of train tracks?</p> <p>Put yourselves in their shoes. Property values would be impacted! My property is very close to favored route. I am greatly concerned about this invasion of property rights. I am sure residents of all the counties involved would have these same concerns.</p> <p>If there is to be a high speed rail, why not let it run along the I- 45 corridor from Houston to Dallas?</p>	measures), locations with limited off-road or over-creek access would be determined as well as plans for continued access during Project construction and operations.
Lois Smitherman	2/28/2018	Email	I am against the proposed route of the HSR as it effects the Morgan Legacy Farm located near FM 709 and 3149. Moving the route to the north paralleling the existing power lines is a better solution. The present route would virtually destroy the functionality of the Morgan Legacy Farm. The route would separate the main house from the guest cottages, stables and rodeo arena. Invision the HSR being built between your house and your backyard, garage, pool etc.. Ending the use of the property for the numerous charitable events it hosts every year in support of the community. The Morgan Legacy Farm is unique and it should not be destroyed.	Refer to LU-5.
Lois Smitherman	2/28/2018	Email	There has to be another "way." Please save the Morgan Legacy Farm located near FM 709 and 3194. The proposed route of the HSR will end any of the regular daily uses of the ranch, such as access to the cattle pastures, rodeo arena events and use of the guest cabins for the overnight charity events. Moving the route to the north adjacent to the present power lines would eliviate the disruption of the numerous property uses. Please save the Farm!	Refer to LU-5.
Lois Smitherman	3/5/2018	Website	"I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and proved less damage to the county long term."	Refer to LU-5, NR-2 and WW-1.
Lois Smitherman	3/5/2018	Website	"I recently became aware of the possible loss of a property due to the proposed route of the HSR. This property listed as Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur."	Refer to LU-5.
Lois Smitherman	3/5/2018	Website	I am writing this comment to oppose the location of the High Speed Rail. Currently the route cuts through Morgan Legacy Farm located on FM 709 and 3194. This ranch serves as a retreat (free of charge) to many medical service providers. The location of the route goes directly in front of the main lodge separating the rodeo arena, cabins and pastures (that are used for cattle). There will be no way to access these areas with the needed equipment to provide care for the cattle. Also this takes away from the ones using the ranch for retreat purposes. If the route was moved north of the existing power lines it would be saving Morgan Legacy Farm so it can continue to serve the community.	Refer to LU-5.
Lois Smitherman	3/5/2018	Website	There has to be another "way." Please save the Morgan Legacy Farm located near FM 709 and 3194. SNCF America, Inc.	3/9/2018	Website	<p>The Federal Railroad Administration (FRA) is preparing an Environmental Impact Statement (EIS) for the proposed Dallas to Houston High-Speed Rail Project. The project would connect Dallas and Houston with a dedicated High-Speed Rail (HSR) system proposed by a private company, Texas Central Railway (TCR). The FRA in furtherance of this EIS is soliciting comments on the project.</p> <p>SNCF, the French National Railway, is one of the largest operators of high-speed, as well as traditional passenger rail services, in the world. With 270,000 employees, it transports approximately 14 million passengers on an average day. SNCF, through its various subsidiaries, carries almost twice the number of daily passengers in the U.S. as Amtrak does. Subsidiaries of SNCF currently employ approximately 15,000 people in the U.S. producing more than \$2.2 billion in annual revenues.</p> <p>SNCF America, Inc. offers the following comments to the Dallas to Houston High-Speed Rail Draft Environmental Impact Statement (Draft EIS):</p> <p><b>A Modern Texas Passenger Rail System Must Be Planned as a Network</b></p> <p>Modem passenger rail services can only be successful if they are conceived and planned as networks. For this to be a credible EIS, it is necessary to determine what is the best transportation system for the people of Texas who live on the Texas triangle defined as the Dallas/Fort Worth (DFW) Metroplex to the north, San Antonio to the southwest and Houston to the southeast. Further, the primary and secondary environmental impacts on this same geographical area must be considered as well. Given the enormous costs involved in building rail infrastructure, it is crucial, before making a decision, to analyze and disclose the financial/economic parameters and environmental and societal implications of the proposal for the entire Texas triangle area. The Draft EIS starts off on the wrong foot by adopting an artificially constrained framing of the project's "purpose and need" - one that assumes a need for high-speed rail connection between Dallas and Houston, rather than examining that corridor in the context of the rail transportation needs of the Texas triangle as a whole. See, e.g., Draft EIS ,i 2.4.3 (Corridor Screening Methodology) (concluding that higher speed and conventional speed passenger rail service will not meet the project's purpose merely because they "would not be able to employ the N700 Tokaido Shinkansen HSR system as proposed" by TCRR). Furthermore, by viewing the DallasHouston corridor in isolation, rather than as one link of a larger interconnected network, the Draft EIS's "purpose and need" section arbitrarily narrows the range of alternatives to be studied, contrary to NEPA' s directives.<sup>1</sup></p> <p>To ensure as high a return as possible on the infrastructure investment to both the citizens of Texas as well as private investors and owners, the customers traveling between the DFW Metroplex and the southeastern and southwestern comers of the triangle should use the same rail infrastructure between the DFW Metroplex, through Waco to Temple. From Temple, a southeastern track should go to College Station continuing to Houston. A southwestern track should go from Temple to Austin and then San Antonio at conventional speeds. With this indirect routing, the additional traveling time required between the DFW Metroplex area and Houston would be slightly less than 30 minutes at high speeds. However, the advantages of this "T-Bone" network configuration are numerous:</p> <ul style="list-style-type: none"> <li>• All major cities on the Texas Triangle (Houston -College Station -Dallas -Fort Worth - Waco-Temple -Georgetown -Austin-San Marcos -San Antonio) would be connected with 480 miles of tracks instead of 763 miles of tracks if the entire Texas triangle were to be built.</li> <li>• At \$45 million a mile, the savings are (763 -480) X 45 = \$12.7 billion.</li> <li>• By having a common "backbone" for travel from the DFW Metroplex to the southeast and the southwest, the Federal Government 1-35 project becomes financially more viable. Without the southeastern traffic, the 1-35 corridor most likely cannot financially stand on its own and cities located on the 1-35 corridor will not be connected by rail to Houston and the DFW Metroplex.</li> <li>• Utilizing the Texas Triangle would provide high-speed rail access to 2.6 million more Texas residents than the Dallas-Houston route. It would also provide for future linkage to points further south.</li> </ul> <p>The cities of College Station, Fort Worth, Waco, Temple, Georgetown, Austin, San Marcos, San Antonio and even points south, would be severely disadvantaged with the proposed TCR pointto-point system.</p> <p>The Draft EIS ignores reality by not considering any comprehensive network-based alternatives, notwithstanding the obvious environmental advantages and economic efficiencies of a more compact rail footprint for the Texas triangle area as a whole. The Draft EIS omits consideration of network-based alternatives because it unreasonably limits the purpose and need for the project based on an assumed need</p>	Refer to AQ-7, AQ-12, BA-1, BA-2, BA-4, ED-1, GN-2, GN-7, GN-8, GN-9, NE-1, NV-1, PI-1, PN-2, PN-3, SS-7, SS-9, SS-19 and TC-7.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>for high-speed rail on this one segment. This unduly narrow perspective renders the Draft EIS fundamentally flawed. See Citizens Against Burlington, Inc. v. Busey, 938 F.2d 190, 196 (D.C. Cir. 1990) ("an agency may not define the objectives of its action in terms so unreasonably narrow that only one alternative from among the environmentally benign ones in the agency's power would accomplish the goals of the agency's action, and the EIS would become a foreordained formality"). FRA should correct this problem by broadening the purpose and need to facilitate analysis and consideration of reasonable network-based alternatives.</p> <p>The Appropriate Passenger Rail Technology Must be Selected: Higher-Speed or HighSpeed                      High-speed passenger rail trains operate from 125 to 210 miles per hour. Higher-speed train systems operate at speeds no higher than 125 miles per hour. These are very different technologies.</p> <p>In the United States, any discussion about new passenger rail infrastructure most always defaults to the more expensive high-speed technology. In some cases, due to passenger ridership, the distances between stations, and other factors, high-speed technology serves no logical purpose, cannot be justified by the potential market and may be impractical, if not impossible.</p> <p>The Draft EIS is flawed because it fails adequately to address the comparative advantages and disadvantages of high-speed versus high-speed technologies for the Dallas-Houston corridor, whether considered in isolation or as part of a larger Texas triangle rail network. Indeed, the Draft EIS fails to consider the relative environmental, economic and social impacts of any alternatives that involve rail technology other than high-speed. As with the Draft EIS's failure to consider any network-based alternatives ( discussed above), the omission of any non-high-speed alternatives is grounded in the myopic definition of the project's "purpose and need," which assumes the need for high-speed rail from Dallas to Houston and hence arbitrarily excludes other technologies from its array of alternatives.</p> <p>Eminent domain is always a difficult issue when building a new high-speed infrastructure. High speeds can't be accommodated on tight curves and steep slopes. However, higher speeds (max 125 mph) can take tighter turns and can use much more of the existing rights of ways, thus reducing the need to use eminent domain. The Draft EIS fails adequately to consider the potential for higher-speed technologies to reduce eminent domain impacts, because it omits consideration of any higher-speed alternatives.</p>	
			<p>Only the Right Vision Can Lead to The Right Plan                      The Federal Railroad Administration (FRA) is preparing an Environmental Impact Statement (EIS) for the proposed Dallas to Houston High-Speed Rail Project. The project would connect Dallas and Houston with a dedicated High-Speed Rail (HSR) system proposed by a private company, Texas Central Railway (TCR). The Draft EIS starts off on the wrong foot by adopting an artificially constrained framing of the project's "purpose and need" - one that assumes a need for high-speed rail connection between Dallas and Houston, rather than examining that corridor in the context of the rail transportation needs of the Texas triangle as a whole. See, e.g., Draft EIS ,i 2.4.3 (Corridor Screening Methodology) (concluding that higher speed and conventional speed passenger rail service will not meet the project's purpose merely because they "would not be able to employ the N700 Tokaido Shinkansen HSR system as proposed" by TCRR). Furthermore, by viewing the DallasHouston corridor in isolation, rather than as one link of a larger interconnected network, the Draft EIS's "purpose and need" section arbitrarily narrows the range of alternatives to be studied, contrary to NEPA' s directives.<sup>1</sup></p> <p>To ensure as high a return as possible on the infrastructure investment to both the citizens of Texas as well as private investors and owners, the customers traveling between the DFW Metroplex and the southeastern and southwestern comers of the triangle should use the same rail infrastructure between the DFW Metroplex, through Waco to Temple. From Temple, a southeastern track should go to College Station continuing to Houston. A southwestern track should go from Temple to Austin and then San Antonio at conventional speeds. With this indirect routing, the additional traveling time required between the DFW Metroplex area and Houston would be slightly less than 30 minutes</p>	<p>Refer to AQ-7, AQ-12, BA-1, BA-2, BA-4, ED-1, GN-2, GN-7, GN-8, GN-9, NE-1, NV-1, PI-1, PN-2, PN-3, SS-7, SS-9, SS-19 and TC-7.</p>

			<p>at high speeds. However, the advantages of this "T-Bone" network configuration are numerous:</p> <ul style="list-style-type: none"> <li>• All major cities on the Texas Triangle (Houston -College Station -Dallas -Fort Worth - Waco-Temple -Georgetown -Austin-San Marcos -San Antonio) would be connected with 480 miles of tracks instead of 763 miles of tracks if the entire Texas triangle were to be built.</li> <li>• At \$45 million a mile, the savings are (763 -480) X 45 = \$12.7 billion.</li> <li>• By having a common "backbone" for travel from the DFW Metroplex to the southeast and the southwest, the Federal Government 1-35 project becomes financially more viable. Without the southeastern traffic, the 1-35 corridor most likely cannot financially stand on its own and cities located on the 1-35 corridor will not be connected by rail to Houston and the DFW Metroplex.</li> <li>• Utilizing the Texas Triangle would provide high-speed rail access to 2.6 million more Texas residents than the Dallas-Houston route. It would also provide for future linkage to points further south.</li> </ul> <p>The cities of College Station, Fort Worth, Waco, Temple, Georgetown, Austin, San Marcos, San Antonio and even points south, would be severely disadvantaged with the proposed TCR point-to-point system.</p> <p>The Draft EIS ignores reality by not considering any comprehensive network-based alternatives, notwithstanding the obvious environmental advantages and economic efficiencies of a more compact rail footprint for the Texas triangle area as a whole. The Draft EIS omits consideration of network-based alternatives because it unreasonably limits the purpose and need for the project based on an assumed need for high-speed rail on this one segment. This unduly narrow perspective renders the Draft EIS fundamentally flawed. See Citizens Against Burlington, Inc. v. Busey, 938 F.2d 190, 196 (D.C. Cir. 1990) ("an agency may not define the objectives of its action in terms so unreasonably narrow that only one alternative from among the environmentally benign ones in the agency's power would accomplish the goals of the agency's action, and the EIS would become a foreordained formality"). FRA should correct this problem by broadening the purpose and need to facilitate analysis and consideration of reasonable network-based alternatives.</p> <p>The Appropriate Passenger Rail Technology Must be Selected: Higher-Speed or HighSpeed                      High-speed passenger rail trains operate from 125 to 210 miles per hour. Higher-speed train systems operate at speeds no higher than 125 miles per hour. These are very different technologies.</p> <p>In the United States, any discussion about new passenger rail infrastructure most always defaults to the more expensive high-speed technology. In some cases, due to passenger ridership, the distances between stations, and other factors, high-speed technology serves no logical purpose, cannot be justified by the potential market and may be impractical, if not impossible.</p> <p>The Draft EIS is flawed because it fails adequately to address the comparative advantages and disadvantages of high-speed versus high-speed technologies for the Dallas-Houston corridor, whether considered in isolation or as part of a larger Texas triangle rail network. Indeed, the Draft EIS fails to consider the relative environmental, economic and social impacts of any alternatives that involve rail technology other than high-speed. As with the Draft EIS's failure to consider any network-based alternatives ( discussed above), the omission of any non-high-speed alternatives is grounded in the myopic definition of the project's "purpose and need," which assumes the need for high-speed rail from Dallas to Houston and hence arbitrarily excludes other technologies from its array of alternatives.</p> <p>Eminent domain is always a difficult issue when building a new high-speed infrastructure. High speeds can't be accommodated on tight curves and steep slopes. However, higher speeds (max 125 mph) can take tighter turns and can use much more of the existing rights of ways, thus reducing the need to use eminent domain. The Draft EIS fails adequately to consider the potential for higher-speed technologies to reduce eminent domain impacts, because it omits consideration of any higher-speed alternatives.</p> <p>When the terrain along a route is flat and stable, it is relatively "cheap" to build new rail infrastructure. But cheap means \$23 million per mile for two conventional electrified tracks, compared to \$45 million per mile for two high-speed tracks.</p> <p>A higher-speed train would take three hours to go from Dallas downtown to Houston downtown through Temple. The present driving time from DFW to downtown Houston is four hours. Before doubling the infrastructure costs and using abundant eminent domain, there should be a hard look at whether high-speed is possible, needed or expected for each segment of a proposed route. FRA should correct this flaw in the Draft EIS by broadening the purpose and need to facilitate analysis and consideration of reasonable alternatives based on higher-speed technologies.</p> <p>This Draft EIS Ignores Previous Texas Passenger Rail Policy                      The Texas Central Partners, LLC (TCP)/Japanese project would only connect the outskirts of Dallas to the suburbs of Houston roughly along the route of Interstate 45.</p> <p>In 2008 and again in 2016, the USDOT and the FRA issued at the request of the U.S. Congress a Request for Expressions of Interest (2008)<sup>2</sup> and a Request for Proposals (2016)<sup>3</sup> for high-speed rail systems within 11 corridors in the United States. In these requests responders were asked to study a new rail infrastructure along the Interstate-35 (I-35) corridor.</p> <p>The first phase of the Texas Oklahoma Passenger Rail Study was completed in November of 2017. Sponsored by the Texas Department of</p>	

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Transportation (TXDOT), the study determined that upgraded passenger rail service between Oklahoma City and South Texas using the 1-35 corridor was feasible.</p> <p>This \$7 million Texas-Oklahoma Passenger Rail Study sponsored by Texas Department of Transportation covers an 850-mile corridor broken into three segments going from Oklahoma City to Dallas-Fort Worth; Dallas-Fort Worth to San Antonio; and San Antonio to South Texas. Before building a direct link between the outskirts of Dallas and the outskirts of Houston, the Federal Government's Interstate-35 Corridor and the full Texas T-Bone passenger rail network must be an alternative that is seriously considered.</p> <p>Moreover, the draft EIS is flawed because it does not adequately analyze the various interrelationships between the proposed high speed rail project between Dallas and Houston and the 1-35 rail corridor alternatives analyzed in the Texas-Oklahoma Passenger Rail Study, Combined Service-Level Final EIS and ROD (2017). NEPA prohibits a decision-making agency from viewing proposed projects in isolation; rather, the agency must take a hard look at both the "indirect effects" and the "cumulative effects" of the proposal.<sup>4</sup> Yet the Draft EIS fails to consider, for example, how moving forward with the Dallas-Houston high speed rail project could alter, modify or foreclose options for the 1-35 rail corridor; how a network-based approach that combines certain aspects of both projects could produce more economically efficient and environmentally beneficial outcomes (see discussion of network-based alternatives above); or the cumulative environmental, economic and social impacts of proceeding with the Dallas-Houston high-speed corridor and the 1-35 rail corridor as separate and independent projects. The FRA should correct this flaw by expanding its analysis to take a hard look at the cumulative impacts, indirect effects and interrelationships of these projects in the context of Texas Passenger Rail policy as a whole.</p> <p>To our Knowledge, the Draft EIS is Not Supported by a Published Investment-Grade Ridership Study</p> <p>Given the enormous costs involved in building rail infrastructure, it is crucial, before making a decision, to fully analyze and disclose the financial/economic parameters of all alternatives. Such measurement can be achieved by performing investment-grade ridership studies where the total market can be assessed and reasonable market share estimated. To our knowledge, these investment-grade ridership studies have not been done and/or made public.</p> <p>Investment-grade ridership studies for each possible alternative must be made a part of this EIS public process.</p> <p><b>This Project Fails the Crucial Interoperability Test</b></p> <p>Interoperability is a broad array of passenger-rail infrastructure standards that allow conventional, higher-speed and high-speed rail operations over common rail networks within urban areas. The Draft EIS fails adequately to address these issues.</p> <p>The Amtrak Acela Express operating in the Northeast Rail Corridor is a perfect example of an interoperable network. It is highly successful because it serves the hearts of Boston, New York City, and Washington, DC. Going to city centers allows a rail system to be time-competitive with air travel that operates from the outskirts of cities. If the trains also depart from the outskirts of the cities, they can't compete with air travel, which also departs from the city outskirts.</p> <p>A new passenger rail system must be able to use existing tracks into the city center. Obviously, at high speeds, the rolling stock must be operated in a fully sealed rail corridor, but this is not true of the "last miles" when penetrating into densely populated areas. The Acela express shares the same tracks as commuter trains when penetrating in the three densely populated urban areas cited above. The Acela Express is an interoperable system.</p> <p>If such tracks do not exist, they must be built at substantial costs. Construction costs close to and within city centers are financially extravagant, and it is doubtful that any private funding can be found. If the taxpayers provide the funding, then these urban infrastructures must be made available to the highest number of people aggressively managed for the highest efficiency possible. If high-speed intercity trains are the only trains using the new infrastructure penetrating in the city center because of monopoly technology, the new infrastructure system will only serve a selected few but will have been paid for by a vast majority.</p> <p>New and old infrastructure must be able to accommodate commuter trains as well as longdistance high-speed trains on the "final miles" located within urban areas.</p> <p><b>Interoperability Failure Multiplies Consequences and Risks</b></p> <p>The Draft EIS fails to take a hard look at the full array of environmental, economic, and social impacts that could result if the proposed project fails to account for these critical interoperability issues. While the Japanese N700 Series Shinkansen technology is safe, reliable and comfortable, the interoperability standards currently used in the United States, the United Kingdom, and in the European Union are not compatible with this Japanese technology. Should the U.S. abandon these pending interoperability FRA Tier III standards for this project in Texas, there will be consequences and risks.</p> <ul style="list-style-type: none"> <li>• There are operational consequences. New train sets won't be able to use existing tracks and rights-of-way to penetrate the urban-core or commuter trains will not be able to use newly built urban rail infrastructure.</li> <li>• There are significant economic consequences. Accepting an incompatible proprietary technology creates a monopoly. Local populations will</li> </ul>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>face an element of monopoly pricing since only the proprietary technology used can be operated on the newly built track infrastructure.</p> <ul style="list-style-type: none"> <li>• There are taxpayer risks. If a privately funded system with incompatible infrastructure and rolling stock, financed with government loans or loan guarantees, becomes financially troubled, the taxpayers are left with no choice but to pay for the monopoly technology. The probability of financial weaknesses is significant considering that, unless we are mistaken, and to our limited knowledge, worldwide there are only two high-speed systems that cover infrastructure amortization with the revenues they generate. These two systems (Tokyo-to-Osaka and Paris-to-Lyon) have low infrastructure amortization costs because they were built approximately a half-century ago.</li> <li>• There are national security risks. It could be dangerous to allow incompatible infrastructure and rolling stock engineered and manufactured by foreign entities to be used for critical transportation. If the entities supplying the monopoly technology decide to stop providing the technology or block the systems with software changes, passenger traffic between major Texan cities could be severely disrupted, and the remedy would be extremely costly and time-consuming (measured in years, rather than months).</li> </ul> <p>The EIS Must Consider the Characteristics of Interoperability</p> <p>On April 5, 2017, at a hearing in the Texas State Senate, Senator Lois Kolkhorst asked Tim Keith, president of Texas Central Partners (TCP), the company developing the Dallas to Houston high-speed rail project, "These tracks are compatible with multiple types of trains, correct?" Keith responded: "Correct. Would also. Standard gauge of 4 feet and 8.5 inches."</p> <p>For tracks to accommodate different train technologies, track gauge, or more precisely, the width between the two rails of a track, is only one of many technical parameters that must be met. While Mr. Keith's response was factually correct, it was not complete and perhaps purposefully left the impression that track gauge is the only important factor.</p> <p>Other parameters must be taken into consideration for a rail technology to be interoperable:</p> <ul style="list-style-type: none"> <li>• Spacing between two sets of tracks</li> <li>• Width of rolling stock</li> <li>• Space between the tracks and station platforms</li> <li>• Electromagnetic compatibility</li> <li>• Crashworthiness specifications</li> <li>• Signaling systems</li> <li>• Safety systems such as Positive Train Control (PTC)</li> <li>• Communications systems</li> <li>• Door mechanisms (an issue in conventional train stations with the Japanese technology)</li> <li>• Power supply specifications</li> </ul> <p>This Project Does Not Serve City Centers</p> <p>Neither higher-speed rail systems (maximum 125 mph) nor high-speed rail systems (above 125 mph) should be expected to be successful and profitable if they do not serve city centers of their primary destinations or connect to established commuter train networks serving city centers.</p> <p>To address these issues, SNCF America makes the following recommendations:</p> <ul style="list-style-type: none"> <li>• Ensure that high-speed trains are compatible with the pending FRA Tier III standards.</li> <li>• Ensure that urban infrastructure to be built can be used by long-distance trains as well as commuter trains.</li> <li>• Ensure that downtown residents who wish to travel long distance by rail can avoid city traffic by using higher- and high-speed trains from downtown locations.</li> </ul> <p>At a minimum, the FRA must consider, analyze, and disclose the potential environmental, economic, and social impacts of the project's failure to serve city centers.</p> <p>A Realistic Funding Plan Must be Considered in this EIS</p> <p>On its website, TCP is very straightforward by declaring that: "As for federal loans, the project will explore all forms of capital available to private companies to finance debt for the project, including federal loan programs like RRIF and TIFIA."</p> <p>While TCP may be 100 percent privately funded as long as the loans are being repaid to the lenders, should future revenues not allow for the lenders to see their loans (principal plus interest) being repaid in compliance with the initial plans, Federal taxpayers could end up being liable if the loans were contracted under RRIF and/or TIFIA as cited in 1.1.2.2 of the Draft EIS. This would result in taxpayer funding of equipment and infrastructure not obtained through competitive methods, that would have been required if federal funding had been initially used, even though there could be a funding activity which "constitutes a major federal action."</p> <p>As previously stated, revenues from high-speed rail operations are seldom sufficient to pay back infrastructure costs. Under such circumstances, claiming that the project is not backed by public funds seems daring. As with the other issues discussed above, the FRA at a</p>

			minimum must supplement its Draft EIS to consider, analyze and disclose the risks and potential impacts of an inadequate private funding plan.	
David Snow	1/31/2018	Oral	Good evening. My name is David Snow. I'm chief of the Shiloh Volunteer Fire Department. I'm also president of the Limestone County Fire Association. As such, I represent all 13 Volunteer Fire Departments of Limestone County, 8 fire departments, and the EMS. As a whole, we are opposed to this. As the chief of the Shiloh Volunteer Fire Department, I respond to the majority of the calls in this area. My southern boundary for my fire response area takes in this railroad. These Lake Limestone fire departments, which I provide mutual aid for, and I respond to multiple calls, including one that would be directly affected last Tuesday morning at 6:00 a.m., where we would not be able to get our ambulances and equipment in, because they are going to landlock us. And if we have great big fires, which we have fought numerous ones in that area, where we've got to bring in tenders, which are large trucks that haul 3,000 and 4,000 gallons, when it gets out of hand and we can no longer handle it, we've got to call the Forest Service, who bring bulldozers, and heavy equipment. And if that fire is running, a 12-foot fence that is protecting your land and your house is going to stop me from protecting you. I want to do what's best for this county, but we're just little country folks. I should be the rider, because in 2005, I lived in Dallas, Texas. I would fly from Dallas to Houston. I would be a guy that takes this train. I'm not going to take it. I wouldn't take it living there. I moved here to make a difference. I put myself on the line every day because I care about the people in this county. This is going to stop us, the people that go out there and put their lives on the lines as volunteers to protect you, to protect the needs of this county, to protect our property, our livestock, the very thing that we will give our lives for. But it's just a railroad. No, it's our life, and it's time to stop it. Amen?	Refer to SS-23 and SS-27.
Sheila Snyder	2/6/2018	Handwritten	To whom it may concern, As a homeowner and landowner near a proposed rail, I want to express my TOTAL DISAPPROVAL of this project. It will only hurt our area. It will be a benefit very few Houstonians but not us. Once again, big money will most likely win, the investors and Chinese will win. The citizens will lose. Shame on you for allowing this to proceed.	Comment noted.
Richard Socki	2/27/2018	Website	It would be fantastic to have a new rail system to surpass the system we have here in the N.E (the Electric Amtrak along the I-95). A Houston to Dallas Bullet train would be such an inspiration for the rest of the country to aspire to. and 205MPH! I support this project wholeheartedly.	Comment noted.
Ana Solis	1/25/2018	Website	I think the bullet train would be revolutionary. Dallas and Houston are two of the biggest cities in Texas, so to be able to cut the travel time between them in half would be amazing. I also think this could really help those of us who have loved ones in Dallas that we do not get to see as often as we would like due to the distance.	Comment noted.
Jean Soliz	2/16/2018	Website	The high speed rail has disrupted our life in Ferris. We do not feel as if our home and land still belong to us even though we have not signed any agreements with Contract Land Staff. This has disrupted our plans for the future as we were building a green house to start a tree farm and to continue raising goats and chickens. When I first heard about the rail I was excited but when we were made an offer on our house and property by Contract Land Staff we were shocked how low the offer was. We were told to counter offer after we were given the Eminent Domain information. We felt threatened by them. You can not purchase 5 acres of land,a 3 bedroom home,mature trees,5 storage buildings and fenced property for what they have offered. I am AGAINST the High Speed Rail as I feel it will not benefit the general public. The traffic on I 45 between Dallas and Houston is not bad and it is easier and cheaper to fly out of Love Field to Houston Hobby than a one way train ticket of \$199.00.There is not one person I have spoken to in Ellis County that feels it will be a benefit.	Refer to BA-12, ED-2, PN-3, SC-3, SC-19 and VA-1.
Francis sean Somoano	2/21/2018	Website	The high speed rail line between Dallas and Houston is long overdue! Air congestion and roadway traffic congestion is only going to get worse as Texas continues to grow. This line is the perfect solution for Making travel between Dallas and Houston quicker and more efficient!	Comment noted.
michael sordill	2/9/2018	Website	I support high speed rail in TX. Good for people, good for business, good for the environment.	Comment noted.
Paul SoRelle	2/27/2018	Website	I support the building of the high-speed rail between Dallas and Houston. The line will provide an efficient way to travel this highly congested corridor. The United States is behind in employing high-speed rail. This project will bring this rail line to Texas without a major expenditure of public money. Please approve the this rail project.	Comment noted.
Michelle Sorenson	2/5/2018	Website	As a resident of Waller County, living near the proposed HSR, I have grave concerns regarding the impact it will have on the quality of life in the Kickapoo Preserve. The HC-4 route travels right through the development and destroys the economic viability of every property owners holdings. No one will be able to recoup the financial investment they have made, much less sell property at a gain following the construction. The NO BUILD OPTION should be chosen as the only viable option in the final Environment Impact Statement. Respectfully, Michelle Sorenson	Refer to LU-4 and SC-12. Mitigation measures that address neighborhood quality of life concerns are included in <b>Section 3.4.6, Noise and Vibration, Avoidance, Minimization and Mitigation; Section 3.10.6, Aesthetic and Visual Resources, Avoidance, Minimization and Mitigation; and Section 3.14.6, Socioeconomics and Community Facilities, Avoidance, Minimization and Mitigation.</b>
Michelle Sorenson	2/5/2018	Website	As a property owner near the line proposed for the DallasHouston High Speed Rail system, I have grave concerns regarding issues raised by the Draft EIS. As a teacher, I am very concerned with the proposed alignment, as it will run through a large portion of Waller ISD's district. If constructed as proposed in the Draft EIS, it will negatively impact bus routes, causing Waller ISD to purchase additional school buses to	Refer to SC-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			transport students and accommodate delays due to county and private roads being either impacted or closed by the proposed HSR project. The NO BUILD OPTION should be chosen as the only viable option in the final EIS. Respectfully, Michelle Sorenson	
Sandy Southern	3/9/2018	Website	I absolutely support this idea. This not only allows business persons to go back and forth, but also allows for increased tourism between the cities. We can decrease car traffic and pollution also.	Comment noted.
Sheriff Don Sowell	2/6/2018	Oral	I didn't intend to speak tonight, but I am Sheriff Don Sowell. I can't follow up some of the other speakers that have spoken before, but some of them have talked a little bit about public service public safety. I have yet to be contacted by anybody personally. I've attended meetings. But public service public safety, I've never had a clear answer to how routes will be determined for fire, ambulance, sheriff's office, troopers, et cetera, et cetera. Now, as the chief law enforcement officer of a county--Texas has 254--it would be kind of nice if TxDOT and/or -- I've been dealing with TxDOT and others to try to come through here for years and I've never got a clear answer. I go to all the meetings. No disrespect to your organization or TxDOT, but you cannot color the truth any other way. But I don't get any cooperation with the people on public service. Everything else that's been said on the other issues. I'm not trying to get other comments, but public service public safety, ambulance, et cetera, law enforcement, fire, first responders, if there's seconds that are counted to be on a response to a potential heart attack and you got to go around, I cannot get in my mind to answer my constituents' questions on what is going to shorten the route, or is there going to be a block or a barricade or a diversion. Is the county going to be cut in quarters? It is already north and south. Are we going to go east and west? Is there going to be a blockage that would cause minutes -- when you are in a rural county -- I retired from an urban county, Harris County Sheriff's Office. I was nothing but a mere patrolman, but I saw -- all I did was respond to real stuff. Now, here I need to know something. Other folks have asked other eloquent questions. I just need to do something about public service public safety. And I continually have this argument with TxDOT on so many other issues because they don't listen to the local people. And I'm saying that respectfully, not disrespectfully, but they do not listen to the local people. And I'm quite available. I'm here as a citizen. I'm here -- I go to all the meetings to keep a little bit of symbolic peace and harmony, but I'm answering --my constituents want to know what is -- and I can't get a straight answer. Now, if anybody wants to contact me with that, I would love to have that information. I am making inquiries and I have not got a reasonable, responsible person in the hierarchy to tell me how the routes are going to be done so I can answer that. And I don't want anybody rolling their eyes at me because I've offended them. So be it. But I just want to know the answer to the simple question, and I appreciate your time. Thank you.	Refer to PI-1, SS-18 and SS-23.
Sheriff Don Sowell	3/5/2018	Oral	I'm going to talk to the audience. I'm Sheriff Don Sowell, Grimes County. I represent eight sheriffs from Ellis County to Waller County. We reached out to Dallas and Harris County. But our coalition is a group of guys who got together February 7th after a meeting and got together February 14th in Centerville to talk about like-minded concerns. Now, I want to tell you right now, we have -- some of the metro areas look at us as expendable. We're not expendable. Our lives matter, too. Our lives matter, too, in all counties. Now, I'm not going to get into some of the arguments of economics and all that. That's -- I don't have a problem with progress. Nobody does. But people's lives in Ellis County, Grimes County, Waller, Navarro, Freestone, Leon, Limestone, Madison, they matter, too. The quality of life has been attacked by many, many ways. You can't make this up: Intimidation, threats, manipulations -- and it may be bad agents from -- representing these rails that go around wanting to discuss and/or survey. Our point for forming this coalition was two-fold -- three-fold, maybe: Public service, public safety, and security. Going to the quality of life of people, we're linked by our constituents, about 254 counties, the Texas sheriffs are, number one. Number two, we're asked to represent them on issues that concern them: The detours, delays, et cetera, the things go on and on and on. Now, not one person -- that's been disputed by some people, I understand, right before our -- our conference last week. Some people went and tried to discredit me a little bit in our coalition. Not one person has ever got with us since -- they're claiming they have been working with us since July -- May of 2016. That's not happening. County judges, (inaudible), and I think that the metro area ought to look at our concerns. Our concerns matter, too. You want to build something? Look at other ways. Don't go through property that could be avoided; otherwise, people's -- people's lives do matter. Economic development does matter, but the way some of this is being done is not acceptable. Totally not acceptable for eight sheriffs that matter, and we represent thousands of people who do matter. Yes, we're outnumbered, way outnumbered by the metro Harris. We know that. But I want people to know from the heart that other people do have a stake in this, also. With that, I appreciate your time. I'd like to have this registered. Our coalition will be coming to other meetings, if there are any in the future; but thank you for your time tonight.	Refer to ED-2, NE-9, PI-1, PI-7, SS-1, SS-23, TR-6 and TR-8.
Ellen Spahni	3/9/2018	Email	I am a very concerned citizen and land owner in Waller County, where there is a proposed High Speed Rail Project being assessed. I do NOT understand the selected pathway nor the feasibility of this rail system. This is a high speed railway that connect Houston and Dallas... so why isn't it running up Interstate 45 directly? What does Our farming community Of Waller County have to do with this? Why is a private company being allowed to rough shod over our citizens many of whom are of minority decent? Why is the intolerable noise from this train being brought to our back yard??? It doesn't belong hew, but Bill Gates doesn't care about our citizens, he is simply an interested investor. Why have these agencies been able to ignore the laws of Texas and ignore our Waller County Sub-Regional Planning Commission? This	Refer to BA-9, ED-1, EJ-1, GN-2, GN-4, GN-7, NE-1, NV-1, PI-1, SC-19 and VA-1.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>commission was formed under the constraints of the law and it is a local government with jurisdictional authority and fiduciary responsibilities to the citizenry of our county. Why was Texdot lowered to an advisory position outside the governing laws of Texas? It appears that there are closed door negotiations and deliberate attempts to stop negotiations between FRA, WCSRPC, and Texdot. This all seems "Fixed" to benefit the private company and the high rolling investors who do not care about our lives. There are overtones of racism here with our high minority demographics. Once this train is built and the novelty wears off in a couple of months, it will continually loose ridership and then need to be subsidized by ALL the citizens of Texas. Then the trash from it falling into disrepair will be in our back yard too !</p> <p>There is talk of additional substations that will make the "90 minute" trip impossible. No one is mentioning that little fact. This is an amazing boondoggle that is grossly obvious to anyone who is not profiting from this scam. What does Waller County get outofthis? NOTHING. We get noise, the hazard of the train itself, lowering of sales tax brought it, money required to restructure the town and roads that won't be available, displaced families who can not afford to go anywhere else, lower propeny values with again hurts the county and schools. This needs to go back to the city to the people who actually think they want this.</p> <p>The HSR will decimate our county. The rail is proposed to go through the areas that actually pmduce sales tax at this time. It will reduce our property values to an all time low. It almost seems like someone is trying to to destroy this area. The farming and ranching community feeds the people of the USA, you need to remember that when you are making these decisions. Don't complain about the cost of your gmcerics when you are the one costing them to rise.</p> <p>You have not done your due diligence. You have developed a plan outside of the required restrictions and specifications of our Texas laws. Send this train and it's private developers back into the city where the noise and the route belongs. The citizens of Waller County do NOT want this</p>	
Wade Spang	2/23/2018	Letter	<p>The USDA Forest Service has launched an Agency-wide effort to improve efficiencies and effectiveness related to our environmental analysis and project decision making processes. In doing so, we know it is critical that we work with our partners to identify issues and solicit creative ideas for addressing them. To help us identify challenges and solutions, the Forest Service is launching Partner Roundtables across the country. On March 12, 2018 from 8:30 a.m. to 4:00 p.m. CST, Forest Service units across the east will host Partner Roundtables. We would very much appreciate your participation at the Midewin National Tallgrass Prairie Partner Roundtable. We will have presentations covering national and regional efforts to date, then engage in local dialogue to help frame these efforts around what is occurring on the Midewin National Tallgrass Prairie. As a partner who engages with us on how we make decisions on our projects. we look forward to your valuable insights. The Roundtable is an information sharing opportunity and NOT intended to supplant formal Tribal Consultation with Tribal Governments nor formal rulemaking processes. The Roundtable will be located in the main conference room in the Supervisor's office at Midewin National Tallgrass Prairie. On site lunch will be available. Please RSVP by phone or email to Joseph Wheeler, Archeologist of my staff directly at [...], or Again. I hope you will join us for this important USDA Forest Service change effort.</p>	Refer to NE-10.
Jim Spaniolo	3/8/2018	Email	<p>On behalf of the members of the North Texas Commission, a public-private non-partisan, non-profit organization committed to enhancing the vitality of the North Texas region, I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes.</p> <p>The Texas Bullet Train will be an economic driver for the region, the state and our country. This milestone infrastructure project connects two of Texas' thriving economies. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections.</p> <p>We support this project because in part it will:</p> <ul style="list-style-type: none"> <li>* Create jobs for Texans more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational -- at least 25% of them in rural counties along the route;</li> <li>* Increase tax rolls in ALL impacted counties \$6.5-\$7 billion net positive tax impact by 2040;</li> <li>* Bring the safest mass transportation technology in the world to Texas Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation;</li> <li>* Be a cleaner way to travel an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status;</li> <li>* Preserve land access for property owners a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other;</li> <li>* Give travelers with disabilities a safe, comfortable alternative to driving or flying system meets or exceeds the requirements of the Americans with Disabilities Act (ADA).</li> </ul>	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035 and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the United States a transportation infrastructure project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review.	
Chi Smith	2/2/2018	Email	I am writing to state that I am in support of this project and the findings of the Draft EIS.	Comment noted.
Joy Spears	2/7/2018	Website	The speed rail is a detriment to a way of life for rural Texas land owners. (An unlawful land grab) It threatens property that has been passed down generation after generation. It threatens retirement properties purchased for the sole purpose of escaping big cities and a quiet rural life. The eco systems: animals, ground water, and in general disruption of nature's order. Farmers and ranchers struggle to survive and maintain Texas land and now this all in the name of so called progress. Progress for who? A small handful of so called people who say they wish to avoid driving, avoid flying to speed thru for one big city to another. I could go on and on about how it cuts off mostly volunteer 1st responders, its effect on school zones, bus routes, the sound pollution and that effect on humans and animals. The truth about eminent domain does not apply here as a private intitee is the underlying motivation. Greed by some at the cost of others. Cost at what expense. Private money for the initial cost then a bail out. Who are u kidding. Perhaps the construction companies or the big city officials that see only dollar signs. I.e. Dallas and Houston temporary money but long time debt. Please stop this.	Refer to ED-1, GN-4, LU-11, NE-1, NE-9, NR-1, NR-5, NV-1, PN-3, SC-6, SC-7 and SS-23.
George Speer	2/16/2018	Website	Build this train. Great for Texas. Northwest Mall would be a great Train station	Comment noted.
Christof Spieler	3/9/2018	Website	A high speed train between Houston and Dallas would be significant improvement on current forms of transportation, both flying and driving. It would be faster, more convenient, and more comfortable for travelers, quieter and less intrusive for neighbors, and better for the environment. As a privately funded project, it would also be better for the taxpayers than either the taxpayer-funded highway or publicly operated airports. The demand is there for this project, the technology and alignment have been designed to minimize impacts, and the private sector is proposing to pay for it. There's no good reason for it not to move forward.	Comment noted.
John Spinelli	2/16/2018	Website	I want to work at Site Safety on this project. I am a competent site safety professional, who will lower your rate of loss time and recorded mishaps. I completed 27 miles of night time construction for the expansion of the Dallas Area Rapid Transit Authority with ZERO lost time or recordable accidents. I've taught OSHA classes within Gerdaul Steel, General Motors, Raytheon, and other industrial sites. Authorized to instruct and certify workers in 10 & 30 Hour OSHA Safety in both construction and general industry fields. Also I am an MSHA Site Safety Trainer. I will maintain a meaningful behavior based safety culture that will gain the participation of both management and employees. No employer where I have served, has ever received a violation citation from OSHA, EPA, DOT, the Fire Marshal, or any other compliance authority during my tenure. As a former commercial master electrician, I understand equipment and most importantly, the views of a worker as well as the view of a safety professional. As an IBEW master electrician, I worked on the DFW terminal expansion projects. I was an IBEW Union steward and understand the importance of conflict resolution. I like what I do and I am very good at it. Respectfully, JOHN SPINELLI, CSHO, STSC, CESCO, MOS CREDENTIALS Master of Science Degree, 2010, Occupational Safety & Health/Environmental Management, Columbia Southern University, & Texas A & M University/Teex Engineering NFPA Certified Electrical Safety Compliance Professional (CESCP) 2015 Transportation Worker's Identification Certification (TWIC) 2020, United States Department of Homeland Security Authorized Flagger safety instructor Transportation Safety Institute Training Center, Oklahoma City, Oklahoma. Certified, in Aviation/Airports process safety management. 2006, FAA Center. Certified Safety & Health Official, (CSHO), Tx. A & M (Teex Engineering). Certified Red Cross CPR/AED Instructor, 2015 Safety Trained Supervisor (STSC) Board of Certified Safety Professionals 2007 Authorized OSHA Construction Outreach Trainer; US Dept., of Labor 2005 Authorized OSHA General Industry Outreach Trainer, US Dept.,of Labor 2005 FEMA, "NIMS" National Incident Management System trained 2008 MSHA Surface Mine Safety Certified Instructor 2006 40 Hour Hazwoper Certification, Teex Eng./Tx. Teresia Staben	3/9/2018	Email	My name is Teresia Staben. My husband Paul and I own 10 acres of land at 15503 Rustling Oaks Lane, Plantersville, Texas 77363-8505 in Grimes County. Our FRA Station number is HNS 160+00. We have attended three of the town hall meetings you held and Paul left a recorded message at the site of the most recent one at the Sheraton Hotel in Houston. Paul and I have many concerns regarding the construction of the bullet train and the affect it will have on the aesthetic value of our land, the intrusion on our privacy and the resale value of the property. The back of our property abuts with the easement for the power line corridor. We have many concerns about the bullet train being built basically in our backyard. We purchased the property to have a quiet place in the country to go on the weekends and at which to retire in just a few short years. We certainly didn't envision a high speed rail right behind our land in addition to and all that goes along with the construction of such a project. We are concerned that the view from our property and the ambiance of our property will be destroyed, in addition to the noise and vibration of passing trains. We have concerns regarding the water that flows through our land and fills our lake. Our lake is at the front of our property. The grade of the land from the back of the property to the front slopes to make the front 20 feet lower than the back, thus the water-flow keeps our lake full. We have many below ground level streams that come through our land. We feel that building a bullet train will create a change to the drainage pattern thus affecting our property and possible causing contamination to our lake and drinking water. Which brings me to our concerns regarding the quality of our well water. The project will create areas of deep excavation and cause ground disturbances that may adversely affect the aquifer. My husband and I enjoy the wildlife in our area. We have many types of animals and birds that inhabit our land and surrounding vicinity. We enjoy the deer, turkeys, jackrabbits and many song birds including endangered woodpeckers that occupy our land. We feel all the activity of the construction will chase away these creatures, and that once the train is built, it will change the course their natural migration routes. We bought our property many years ago to get away from all the sights and sounds of the city. We now feel that will all be taken away from us. We are very concerned that the High Speed Rail will adversely affect the value of our property. We would like to come to terms regarding fair compensation for restitution of the losses we will suffer due to the construction of the High Speed Rail directly behind our property.	Refer to AS-1, NR-2, NR-5, NR-6, NV-1, VA-1, WW-1, WW-2 and WW-6. The parcel referenced in this comment is located outside of the limits of disturbance of Segment 5 on the preferred alternative. It is west of the existing electrical transmission line and therefore would not be directly impacted by the project. Additionally, as detailed with <b>Section 3.13.3, Land Use, Methodology</b> , as this property, or access to this property would not be directly impacted by the project, it is anticipated that it would not be acquired by TCRR. Anticipated impacts to wildlife and waters of the U.S. are discussed in <b>Section 3.6.5.2, Natural Ecological Systems and Protected Species, Build Alternatives</b> and <b>Section 3.7.5.2, Waters of the U.S., Build Alternatives</b> respectively. Avoidance, Minimization and Mitigation Measures for each resource is also identified in <b>Section 3.6.6, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation Measures</b> and 3.7.6, <b>Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation Measures</b> .

James Stanphill	2/21/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique, irreplaceable property.	Refer to LU-5.
Ann Staples	2/5/2018	Handwritten	1. I think this project will not be successful because not enough people will ride it. By the time a person travels to a station then has to find transportation at the the destination that person will have spent a lot of extra time and money. How competitive, price wise, will it be with an airline, vehicle or bus? Has the cost of the ride been figured? Also, there is to be no freight so a person couldn't carry a large object. 2. More good rural land does not need to be taken for a project that is supposed to benefit Houston and Dallas. If a person's land is taken and the project fails, lives have been hugely disrupted for naught. Could they get the land back and if so in what condition? We don't need to lose anymore agricultural land or land for wildlife. What will be the overall environmental impact? Not good I think. 3. If a mass transportation project is tried, then perhaps, a short route should be tried first-Woodlands area to Houston or Katy area to Houston-so we could see if people will ride it. 4. Houston to Dallas plan could go elevated above I-45 . I understand the train goes too fast for this route, slow down the speed so it can. Very little extra land would be taken. 5. I understand there is some talk of later perhaps adding more stops besides the one at Roans Prairie. Extra stops would slow down the time to get to a destination. A short travel time is the current major selling point. 6.If this project fails who pays for it or subsidizes it, the federal government hence taxpayers?	Refer to BA-9, GN-2, GN-4, GN-7, NE-9, PN-3 and SC-3.
Brenda Stardig, Houston City Council Member, District A	1/11/2018	Email	I am Houston City Council Member Brenda Stardig. The high speed rail's proposed location runs through my council district. It does not appear that there is a public meeting inside City Limits. I am requesting a meeting in the City of Houston to allow my constituents to comment. If you have any questions, please call my office at 832-393-3010.	Refer to PI-10.
Brenda Stardig, Houston City Council Member, District A	1/18/2018	Email	I would like to follow up on my request to hold a public hearing for the high speed rail in Houston city limits. I spoke with a representative from Texas Central, and they agreed to have a public meeting for my constituents after the comment period. They also agreed to provide transportation for my constituents who cannot drive to one of the other planned public hearings. I appreciate you reviewing my request, and I would like to respectfully withdraw my previous request for an additional meeting. Thank you, Brenda Stardig Houston City Council Member, District A 832-393-3010	Comment noted.
Brenda Stardig, Houston City Council Member, District A	1/18/2018	Email	As Houston City Council Member for District A, I would like to provide some additional concerns that I heard from my constituents because my district will be impacted by the proposed high speed rail line. First, they would like for the utilities to be placed underground in the rail corridor. Second, they would like sound mitigation. Many people live very close to the proposed rail line, and I am concerned about the noise levels for the residents. Third, I am concerned about blocking traffic during construction. These roads are used heavily by my constituents to get to and from work, and I want to make sure that they are not impacted during construction.	Refer to EU-2, NV-1 and TR-6.
Zofy Stat	2/7/2018	Website	How long will taxpayers pay for tickets for riders? Will it ever be off the taxpayers' backs?	Refer to GN-4.
Erica Stead	2/17/2018	Website	Texas needs to complete this safe, greener alternative to flying or driving. As the region attracts more and more new residents move into the area, having a high speed train system will set us ahead.	Comment noted.

Jan Stell	2/18/2018	Website	We are thrilled to have a high speed bullet train coming to Texas !! It is wonderful that our terrain will allow for such transportation that will have the ability of Texas to grow and not have clogged streets like Los Angeles and New Jersey !! I am proud of the private investors that have stepped up to the plate !! They know what it takes to keep a great state going ! Thousands of people drive between Houston and Dallas every day and sometimes several times a week . Not everyone can fly on a plane It is all about choice of transportation - and it will be wonderful to have another way to get between Dallas and Houston . 90 minutes will be a gift of time !! Jan stell	Comment noted.
Richard Stephens	1/26/2018	Website	What is there not to like about High Speed Rail (HSR) between Houston and Dallas? Its cleaner, faster, cheaper than flying, creates jobs, reduces I-45 traffic, isn't going to use tax money, will generate tax money that will help local governments and schools, and isn't another concrete road. 60% will be elevated so impact to residents, animals and the local traffic will be minimally impacted. Help make Texas a Leader in this exciting new area of transportation. The US, as well as Texas, is falling way behind other countries regarding HSR. Come on folks, this is a no-brainer.	Comment noted.
Sid Stephens	3/9/2018	Website	The proposed High-Speed Rail project would be a great addition to the state of Texas. Fast commercial movers that do not rely on weather conditions and potentially are quicker than commercial air flights (considering arrival times, boarding, etc.) would be advantageous for everyone. Concerns about land access and noise are something that probably happened when the freeways were built, but no one can even consider what life would be like without the advantages that the freeway system brings now. I believe the environmental impacts would be minimal, especially considering the power source and footprint impact of the project.	Comment noted.
Susan Stephens	3/9/2018	Website	It's about time! There is passenger rail service all over the country-Tx needs it badly because our state is so large. Will benefit business and residents alike!	Comment noted.
Vickie Sterh	1/29/2018	Handwritten	We have lived on our land, raised our boys and paid taxes and now you want to take it away from us. You will ruin a lot of families and their ways of life. We don't need or want the Bullet train. It makes no sense at all for us to give up our livelihood just for a few upper class people to ride to Houston. Our land is not for sale. One of these days you are gonna wake up and there will be no meat or vegetables to eat because all of the land is taken up.	Refer to ED-2, LU-2, LU-11 and NE-1.
Billy Sterh Jr.	1/31/2018	Handwritten	This is the most stupid idea anybody could think up. No sense at all. Wreck all the good land for something so stupid. They don't make land anymore and its leaving in [sic] because nobody cares. My family has been here for six generations. Our land means everything to us. Its not for sale at no amount of money. Land means more to me than money.	Comment noted.
Emma and Edward Sterling	1/31/2018	Handwritten	We want to know when will we get an offer for our home and property.	Refer to ED-2.
Thomas Stern	2/8/2018	Website	My wife and I own property on the north side of Houston and another piece of property half way between Dallas and Houston close to where the proposed High Speed Rail (HSR) reportedly would be constructed and operate. Being a taxpayer and property owner means I have a 'dog in this fight'. We've been assured by those in favor of this very expensive project that all manner of funds have been secured and that land right of way will be covered by eminent domain since this project will serve the entire public. Supposedly constructions costs along with operating expenses have been calculated and support going ahead with a fancy technologically advanced Bullet Train that will take passengers from Houston to	Refer to BA-5, BA-7, BA-9, ED-1, ED-2, GN-4, GN-5, GN-6, GN-7, SC-3, SS-6, SS-7, SS-12, SS-13 and TC-4.

			<p>Dallas with a few stops along the way.</p> <p>It has been suggested that a one-way fare on this train will cost approximately \$200. I hope this information is inaccurate; but even so that's not competitive with existing air fare that is already in place and that existing air transportation is not taxpayer subsidized, something which the HSR package will heavily depend upon for operational expenses and maintenance.</p> <p>Aside from the assurance (same as any promise made by a politician) that funding has been or will be secured for the entire project, there are other factors which should be of concern. The highest on that list, very few folks I've talked to think the project is even wanted; except by those who would make a considerable pot of money for building this boondoggle of a money pit.</p> <p>The folks along the path of the HSR concern me the most. Eminent Domain is a sticky subject, one that has been abused more and more over the years. We are being asked to take the government's word that property rights will be respected, that any land required will be obtained in an equitable manner. If that were true then the existing corridor between Houston and Dallas would be the site of the HSR.</p> <p>I read where the proposed Houston Terminal for the HSR might be near the old Northwest Shopping Mall (Highway 290 and 610 Loop). There was a picture posted, an artist's conceptual image that would make us all proud to have such a structure. Why build the terminal adjacent to a financially rundown location when a real hot spot would be closer to a financially robust area such as the Galleria?</p> <p>It would make more sense to have the HSR along the I-45 corridor, one that already exists, as there are multiple Park and Ride lots stationed along that route. Folks wanting to use such a Bullet Train back and forth, Houston to Dallas, would in all probability want to be dropped off at convenient locations where they could access their car(s) or be picked up in a timely manner rather than add additional expenses such as taxi, Uber or rental units.</p> <p>Some folks are pushing for this never-ending taxpayer money pit, not an exaggeration of terms. Passenger rail service has proven to be a huge burden on taxpayers as Amtrak must be subsidized (taxpayer funded forever) just to keep afloat, according to a report by the Cato Institute. I'd forgotten; we've been promised (same as any promise made by a politician) that would never happen with this new Bullet Train project. Projected expenses will be kept and the HSP would come in under budget and within the time frame assigned without the need for taxpayer funding. (There's some beach front property in Arizona for sale if you believe that.)</p> <p>Nothing has been said about recent passenger rail accidents that have killed and maimed so many folks in the past month or so. Three major Amtrak (government run) passenger train accidents doesn't exactly build public confidence for building yet another, a chance to ride into the eternities via a Bullet Train traveling at speeds approaching 200mph (guided missile), one that runs on railroad tracks.</p> <p>What about protecting this vast stretch of rail, approximately 240 miles depending on where terminals are located, what about protecting this investment from acts of terrorism? I didn't see any mention of how that might be accomplished; but then again, what difference would it make? (borrowing a line from Hillary Clinton when several Americans were killed in Benghazi).</p> <p>My last concern has to do with a recent Court Decision wherein it was ruled that governments, local, State or Federal were not obligated to keep contractual agreements. This ruling was attached to police and fire fighter's pensions in Rhode Island; however, this ruling sets the president upon which any and all contracts made with government entities will look to. It validates my insistence, promises from government officials aren't worth the paper they are written on. (same as any promise made by a politician)</p> <p>Sorry; but these and a host of reasons that I've not even considered make such a proposed HSR project unacceptable.</p>	
Thomas Stern	2/8/2018	Email	<p>My wife and I own property on the north side of Houston and another piece of property half way between Dallas and Houston close to where the proposed High Speed Rail (HSR) reportedly would be constructed and operate. Aaron Stewart	3/9/2018	Website	I think the bullet train is much needed for the area. It will promote use of public transportation which helps the environment and it will also aid the state in gaining new companies and expanded growth. It will also make travel convenient to large portions of the state and alleviate traffic congestion and the environmental impacts that has on all of us.	Comment noted.
Cody Stewart	2/5/2018	Oral	Cody Stewart My name is Cody Stewart and I am landowner in Shiro: Texas. First off wanted to ask: how many of you carl put your trust and confidence in a program that can't reserve a room or get a power point within an hour? I'm not able to make the meeting tomorrow night in Glimes county so that's why I'm here today. I support you guys all the way and I know that's true vice versa. I know there's a lot of people here from other counties because we stand as one. It's very important. Again: Cody Stewart wholeheartedly is against the project. I would also add that the student body of Texas A&M is against this because of the impact of rural Texas. No resident here needs a reminder: but I will remind everyone else that the A in A and M is for agriculture. You want to pull students from a university founded on what you're trying to take away from us. We all know the real reason is to put money in the pocket of that particular landowner who owns the program. As you know, this has never been done before in the United States: highs-speed rail of this capacity and speed. Another similar rail project that happened in California has gone from 4.6 billion proposed additionally to almost 10.6 billion. That would be almost double of what the proposed cost initially. They're not even down and we really haven't gotten past that quarter, I believe: and they're at that In my research there is no high speed rail in the world, that is not government subsidized: including the one that this is modeled after in Japan And what I didn't see in the report is: and maybe I missed it: under this ridiculous project of that magnitude: is when the project fails and when the voters of Texas refuse to subsidize the project: that was promised not to be subsidized: where does the report say about impact of an abandoned infrastructure from Houston to Dallas. But we can't ask questions, so.	Refer to GN-4, NE-1 and PN-3.
Mindy Stewart	3/9/2018	Website	Please consider passing this motion for Texas to build this bullet train. I know individuals who drive across Dallas to Ft worth for work and THAT takes 90 minutes in rush hour. Now we would have the option to live in Houston and travel to work in Dallas. You open up so much potential for jobs and economy.	Comment noted.
Taylor Stewart	2/14/2018	Website	I am so excited for a new and exciting option to travel to Houston. I normally drive, but would rather ride the bullet train. I love that this project is going to eventually provide funds back into Texas infrastructure.	Comment noted.
John Stich	2/16/2018	Website	The High Speed Rail system will be a big plus for the Texas environment by slowing the growth of cars on I-45 between Dallas and Houston. Every train can probably replace at least 25 cars, and probably a lot more. And it will be much safer.	Comment noted.
Sands Stiefer	3/9/2018	Website	This is a wonderful project and will be great for Texas.	Comment noted.
Charles Stigall	3/6/2018	Website	As a Native Texan I am appalled how much this state continues to be carved up by roads, pipelines and now this rail project that "promises" to relieve traffic on I-45. This is nonsense and will eventually result in the state of Texas footing the bill. The small numbers of people who might use this "High speed rail" does not justify the taking of individuals property. This same plan was killed a number of years ago when Southwest Airlines opposed it for their own selfish reasons and now it is rearing it's ugly head again. It is not in the public's interest that this rail be built, it is only in the developers interest.	Refer to GN-4 and PN-3.
Cindy Stites	2/16/2018	Website	I want to respectfully request that you please move forward with the building of the Dallas-Houston high-speed rail. This is a much needed mode of transportation between two major cities in our state. This is the right route as far as impact on communities. Not only does it bring jobs but it only lessens the traffic on our highways which has a positive affect on our environment. After traveling Europe, especially Norway, it is evident that this mode of transportation is efficient, clean, and productive. It is surprising and somewhat unbelievable that we don't have something like this already. It's past time for us to move to the next generation of transportation. Please make this a priority and get started! Thank you!	Comment noted.
Mara Stokes	2/20/2018	Website	My family and I currently live in Bryan and are planning to buy land in Grimes county and build our forever home in the next 2 years. We highly oppose this rail and are even considering no longer moving to Grimes county because of it. We want to move to a rural area away from the city and this rail will bring people, construction and increased traffic. I highly doubt people will even ride this thing seeing as how it will cost the same price, if not more, than a plane ticket. If I were to spend that much I would just fly, no brainer. Horrible idea all the way around. Y'all should be ashamed of yourselves taking away people's land. It's not right, it's not necessary and huge waste of money. We fully oppose it and want y'all to go away!!!!!!! #notwelcome	Refer to ED-1 and SC-3.
Jason Stone	2/5/2018	Website	Can't Wait for come in	Comment noted.
Robert Stone	1/22/2018	Email	Please send any updates and notices of public meetings in Dallas or Ellis Counties.	Refer to PI-1.
Sharon Stone	2/16/2018	Website	I think this is a really bad idea. The amount of usage is not that much, the land taken in eminent domain is just wrong, and I am not going to drive downtown to get on a train to ride to Dallas and have to be picked up there. I may as well fly. I think this is a wasteful way to spend money.....maybe, years ago before it would cost so much to build. I would be more for it if it went along side our existing highway and not through people's land. Even then, I think the cost far outweighs what usage people would have for it.	Refer to ED-1, GN-2 and GN-4.

John Stoneham	2/6/2018	Oral	I'm John Stoneham, and I have property in Grimes County that the high-speed rail cuts right through the middle of. I'm concerned about the impact on my cattle operation--that I will have to sell cattle or move around to some other place while this construction is going on. No one's explained to me how much of the land will be utilized during this construction. I don't have any full time labor. I just have to have part time, and this will increase my cost of operation because I know I'll have to hire some other people to help me. Also I have some tanks on the farm that this high-speed rail is going through. The first one is a pond that has got a pipe in the middle for the drainage if there's excess water, and it has a natural spillway if the pipe cannot take that excess water. The high-speed rail is going to take that spillway. And they have explained to me that -- the first time I met them that they're going to be evaluated and it won't affect the natural spillway. The second time I met with them, the line will not be elevated and they have not explained to me how they will maintain this tank without it reaching the dam. Further down the property I had constructed a diversion along the branch that drops off about ten feet and it's causing a lot of erosion. That diversion goes to a holding pond, it collects water when it rains, and it has a pipe at the bottom that the water drains into the branch. It also has a natural spillway when the water cannot be drained through the pipe. The high-speed rail, as far as I can see, is going to take this natural spillway, and they have not addressed that problem at all. In the middle of the property I have a road I constructed that -- or my daddy constructed that goes through the middle of the property and it's all on a hill. The high-speed rail is going to cut this road in two, which adversely will affect me being able to move cattle, feed cattle, and take care of them properly. They proposed a road that goes around that rail, but it goes through a -- part of the land a hillside that's steep, and I'm afraid there will be a lot of expense to maintain that road. Thank you.	Refer to ED-2, LU-11 and WW-1.
Russell Straw	2/21/2018	Website	This is a much needed project to improve transportation options in Texas. The benefits far outweigh any negative impacts. Using existing utility right of ways has the least effects on rural communities and residents.	Comment noted.
Bobby Jo Strawhon	2/5/2018	Oral	The high speed rail will be bad for the environment. Number 2, this project will impact, we, the people that have home sites and the way that the project goes, this is going to tear up the road and the people shouldn't have to pay for the overpasses. I am sure the group from HS rail were surprised at the Madisonville turnout. It should have taken place at the school standing room only, over fire code also from all attempts, remind the people of the high speed rail. This has been around many years and they're pushing, keep trying to push this down our throats. And that isn't right. How about the owners and bite the bullet. I sure hope this does not go through and pray for the families that have places that it may go through. Thanks again.	Refer to NE-9, PI-11 and TR-7.
Bobby Strawther	2/5/2018	Handwritten	This project will also be bad for wildlife, the environment. This project impact we the people that have home sites in the ways that the project goes. This is going to tear up Strawther Road which I am a Strawther myself, we the people should not have to pay for overpasses.	Refer to NE-9 and NR-5. Strawther Road would be crossed by the Project. Strawther Road is categorized as a "road under rail", which means it will not be reconstructed over the rail. No overpass will be needed for Strawther Road.
Ms. Betty Strawther	2/5/2018	Handwritten	I'm sure the group from H.S. rail were surprised at the Madisonville turnout. It should have taken place at the school so more could have attended! Standing room only. Over fire code also. From all accounts the project benefits only the owners money-minded people of high speed [sic]. This deal has been around many years and the pushers keep trying to push this down our throats. Not right! How about the big owners who have been working on this just STOP AND BITE THE BULLET!	Refer to PI-1 and PI-11.
Patsy W. Strawther	2/5/2018	Handwritten	ALERT: 82 acres in Amy Boatwright League owned by Charles Strawther (Patsy) is in the Texas Land Heritage Program. Land has been in the E. L. Strawther and wife, Laula Beatrice family for 118 years.	Refer to CR-11. FRA will apply the processes outlined in the PA to farmsteads on land recognized by Texas Family Land Heritage (FLH) Program. The Texas FLH Program is a recognition program but does not provide any tax benefits, nor does it provide any additional historic considerations beyond the Section 106 process.
Patsy W Strawthes	NA	Website	Please stop this foolish idea crafted by greedy careless men!	Comment noted.
Hayes Stripling	2/19/2018	Website	Build the high speed train. The sooner the better.	Comment noted.
Karen Strittmatter	3/9/2018	Website	I feel that it is unlawful for the government to enact "eminent domain" for the purposes of development by a PRIVATE company. If the project fails, then this will be a complete mess. I think it's terrible to take private land from the citizens of Texas for a project such as this.	Refer to ED-1.
Holly Stroud	2/5/2018	Handwritten	The train (High Speed Rail) will take in my family land. My grandfather left it to my father and my father plans to leave it to me and my husband. And we plan to leave it to our children. We are against the HSR.	Comment noted.
Holly Stroud	2/5/2018	Website	I am against the High Speed Rail	Comment noted.
Kerry Stroud	2/5/2018	Email	The Rail Project will go through the property of Union Baptist Church of Normangee. This is where we worship God and it is a declared Historical Site.	Refer to CR-8, NR-6, LU-11, WW-2 and WW-9.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>2. The Rail Project will go through the property of the Ten Mile Cemetery, the site of burials for hundreds of years. Is is also a declared Historical Site.</p> <p>3. The planned path of this transit system will ruin farms, ranches, homes, cemeteries, and churches. Texans have worked for their farms, ranches, and homes for generations. Texans have worshipped in their churches for generations. Loved ones have been buried in these cemeteries for generations. This rail project will destroy all of this to make way for a project that is not needed, wanted and does not have state or government assistance, which you claim you do not need.</p> <p>4. The Rail Project will destroy water ways for Texans and our livestock and our wildlife.</p> <p>5. Emergency Fire and Medical response teams will be forced to reroute and critical time will be lost which will result in the loss of lives and property.</p> <p>6. This project serves very few people and very few will prosper, and it will leave in it's wake destroyed families, lives, property, churches, ranches, farms, cemeteries, and businesses.</p> <p>7. My family and I stand strongly against this project. No one should be allowed to take away our Texas land.</p>	
Kerry Stroud	2/5/2018	Email	5. Emergency Fire and Medical response teams will be forced to reroute and critical time will be lost which will result in the loss of lives and property.	Refer to SS-23.
Kerry Stroud	2/5/2018	Oral	Hey, everybody. My name is Kerry Stroud. I am the pastor of Union Baptist Church. The reason I am here is I stand to talk for our congregation in which this transit system is going to run right through. As a matter of fact, if you look on the map our church has now been removed. We meet in certain places to worship. We come here and we gather and then all of a sudden they tell us they are going to go through and take our property. The railway will go through the church which is also being listed as a historical site and we have been there for over 100 years. And we are right next to the 10-mile cemetery, which is also a historical site, which will also be impacted by this. This transit system will run through farms, ranches, homes, cemeteries and now churches. Texans here have worked hard for generations for the right to their land and to pass it on to their children. This railroad will also destroy waterways and natural resources for our wildlife and our livestock which we depend on every day in Texas. Here in Madison County we know about that. It will also be in the way for emergency transport for fire and medical when they go through some of these dirt roads they will now be cut off. And if they have to be rerouted and if we lose one life because of that, then one life is too many. My family and my church stand strongly against this project. Once again, my name is Kerry Stroud and I am the pastor of Union Baptist Church and thank you.	Refer to CR-8. Historic and archeological resources can include structures, buildings, sites, districts, and objects such as cemeteries, churches, historic districts, and farm sites. The Programmatic Agreement outlines a comprehensive methodology to identify historic properties eligible form or listed in, the National Register of Historic Places, and to consider avoidance and minimization measures to, as well as ways to resolve adverse effects for, those properties that may be affected.
Larry Stroud	3/9/2018	Website	We do not support the building of the bullet train. If people want to go to Houston they can leave early and fly or drive.	Comment noted.
James Stubblefield	3/9/2018	Website	The answer to the question nobody asked, and nobody wants.	Comment noted.
Jeffrey Stubbs	3/1/2018	Website	We would like to voice our support for the Dallas to Houston High-Speed Rail.	Comment noted.
Matthew Stubbs	1/30/2018	Handwritten	To get smaller cities on board it may make sense to make allowances in the row to allow for a future slower speed train around 80 mph. This slower line could allow for the connection of smaller cities such as Ennis, Corsicana, Fairfield, Huntsville and Conroe. Establish the high speed first then once it is successful you can explore the slower speed line. I am very for the high speed rail line. Most people's argument may be that it won't service the smaller towns. The above may be a way to compromise to these people.	Comment noted.
Jeffrey Stvan	3/9/2018	Website	Both my spouse (Laurel Smith Stvan) and I enthusiastically support the construction of the Dallas to Houston high-speed rail line being proposed by Texas Central Partners. We have used similar high-speed lines in both Asia and Europe and feel that the introduction of such an economically sound and environmentally smart transportation option is long overdue here in Texas. Moreover, we think that the project - as currently configured - will not only be highly successful in efficiently moving individuals between our state's two largest metro areas, but will also stand as an excellent example to other forward-looking regions of our nation. Thank you! Jeffrey A. Stvan, Fort Worth, TX	Comment noted.
Lindy Suarez	1/25/2018	Website	I am in the process of moving to Dallas but will be keeping my job in Houston. I would LOVE to have a train between Houston and Dallas as I'll be going back to Dallas every weekend. The sooner the better!	Comment noted.
Ryan Submetto	3/9/2018	Website	I believe it's a good idea. It's about time TX got a bullet train. It makes sense. We are the biggest state in the lower 48 and we don't have any good transportation means between the 4 major cities, Houston, Dallas, Austin, and San Antonio. I believe we should have bullet trains to all 4 of these cities that would cut down travel time significantly. Also, having car rental companies at these bullet train stations would be helpful as well as UBER/LYFT spots where they could pick up passengers, like in airports. Just make sure they don't get into accidents like the Amtrak trains have been recently all over the country!!	Refer to BA-2, GN-6 and SS-12.
Vic Suhm	1/26/2018	Email	I have ridden the Shinkansen from Tokoyo to Osaka. It is clean, quiet, fast and safe and would be huge asset to the U.S. and Texas as a new mode to travel between Dallas and Houston. Build it.	Comment noted.
Tarrant Regional	3/5/2018	Website	On behalf of the TRTC, I ask that the Federal Railroad Administration swiftly move forward with the approval of your environmental review and approval of the Texas Bullet Train that will connect Houston to North Texas in 90 minutes. The Texas Bullet Train will be an economic	Comment noted.

Transportation Coalition			<p>driver for the region, the state and our country. Not only does it plant the seed of a new industry in Texas and the United States, but it is projected to generate a \$36 billion economic impact over its first 25 years. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this with detailed data and projections. We support this project because in part it will:</p> <p>Create jobs for Texans - more than 10,000 direct jobs per year during construction and up to 1,000 jobs permanently when operational -- at least 25% of them in rural counties along the route;</p> <p>Increase tax rolls in ALL impacted counties - \$6.5-\$7 billion net positive tax impact by 2040;</p> <p>Bring the safest mass transportation technology in the world to Texas - Shinkansen trains boast a 53-year history with ZERO crashes or fatalities while in operation;</p> <p>Be a cleaner way to travel - an environmentally-friendly alternative to flying or driving in an area where 4 of the counties served are already air quality non-attainment status;</p> <p>Preserve land access for property owners - a majority of the 240-mile route will be built on elevated viaducts, allowing easy access from one side of the tracks to the other;</p> <p>Give travelers with disabilities a safe, comfortable alternative to driving or flying - system meets or exceeds the requirements of the Americans with Disabilities Act (ADA).</p> <p>The need for this project is clear. According to the Texas Transportation Institute, I-45 will see an increase in vehicular traffic of more than 200% between Dallas and Houston by 2035 - and current state and local transportation plans cannot adequately address these growing population concerns. We are excited to support the first true high-speed passenger train system in the United States - a transportation infrastructure project of national importance that will provide a safe, reliable and convenient travel alternative between Houston and North Texas and we ask that you expeditiously process the remaining steps in the review.</p>	
Carma Sullivan	3/7/2018	Website	I believe TCR and TCP have been lacking transparency and integrity from the onset of this project. They continually guarantee no interruption to our farming and this simply isn't possible I have concerns about the rerouting of our road. Sullivan Road in Ellis County will have an overpass/bridge replacing the at grade road. I would like to know how much weight the bridge can bear and what are its dimensions? These are critical to our work.	Refer to LU-11 and TR-8. Due to engineering refinements between the release of the Draft EIS and the Final EIS, Sullivan Road is no longer crossed by the Project. Both Segments 3B and 3C have shifted approximately 3,800 feet to the west. Sullivan Road is no longer listed in <b>Section 3.11, Transportation</b> as a road over rail or any other type of roadway modification.
Carma Sullivan	3/7/2018	Website	I have heard rumors there may be pipelines somewhere in this train ROW. I know many people would be VERY upset by this. Please address HOW this could happen and what type of notice and compensation would there be for US, not for TCR!!	Refer to EU-2.
Carma Sullivan	3/7/2018	Website	What kind of social impact study has been done regarding land impacted by families who have owned their properties for generations?? This is one of the biggest travesties of this whole project!! The emotional toll taken on everyone who is impacted is HUGE!!How is this being addressed?	Refer to ED-1 and ED-2.
William Sullivan	3/8/2018	Website	Comment noted.	Refer to NR-6 and LU-11.
William Sullivan	3/8/2018	Website	How is the HSR going to compensate for future values of crop loss( small grains, corn, cotton, etc.)?	Refer to ED-2, LU-2 and LU-11.
William Sullivan	3/8/2018	Website	How will the HSR address the access to family members that are separated by the trains, especially for aging family members requiring care?	Refer to EH-1 and TR-10.
William Sullivan	3/8/2018	Website	How will the HSR compensate individuals for the loss of health benefits, such as organically grown food from a garden, wild game, fruit, berries, pecans, etc?	Refer to ED-2.
William Sullivan	3/8/2018	Website	For individuals losing a home, how will the HSR compensate for the loss of privacy and the serenity of a country life?	Refer to ED-2.
William Sullivan	3/8/2018	Website	How will the natural water supply be impacted by the train? How is HSR going to provide for the disruption of individuals using a natural water supply?	Refer to WW-1, WW-2 and WW-6. Compliance measures to be implemented are outlined in WQ-CM#1: Section 401 Water Quality Certification, WQ-CM#2: TPDES General Construction Permit (TXR150000) and Multi-Sector General Permit (TXR050000) and WQ-CM#3: Stormwater Management/Stormwater Pollution Prevention Plan.
Gordon Sumner	2/1/2018	Email	I attended the hearing in Navarro County and would like to add my comments. Why hasn't the Sheriff been interviewed regarding the closure and rerouting of county roads? Regarding environment, check the state of Texas website regarding wildlife and specifically endangered	Refer to NE-1, NR-2, NR-3 and PI-1. The Monarch Butterfly is currently "Under Review" for listing by FWS

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			species: Do you realize there are American Bald Eagles living in the area of the proposed railway? Do you realize Navarro County is in the center of the Monarch Butterfly migration? There is no Eastern Turkey hunting season in Navarro since we are trying to restore habitat for them. Western Navarro Bobwhite Restoration Initiative is also a program to bring back these birds which have been decimated by disease and fireants. We are working for them to. Finally Why won't HSR divulge their proforma? Thanks for your hearing and allowing inputs.	and is not currently a protected species. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Siva Sundaram	2/18/2018	Website	It is a must that we have good public transportation system... This high speed rail will take so much of traffic out of I-45 which is one of the worst free ways in the country. I strongly support this HSR.. In fact this should be expanded to include Austin, Baton Rouge, and New Orleans...	Comment noted.
Bertha Sustaita	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Robert Sutton	2/16/2018	Website	Please move approval of the Environmental Impact Statement for the Texas Central project along as quickly as possible. The project will have a tremendous positive impact on not only Houston and Dallas but the economy of Texas. Travel by car is already difficult because of congestion on IH 45. Texas Central will make this trip quicker, safer and environmentally less impactful. Please approve the construction of this project immediately.	Comment noted.
Robert Sutton	3/5/2018	Website	ROBERT SUTTON: I'm Robert Sutton and I live in Houston, not far from the proposed station here in Houston. I also lived in Dallas and I work in Houston, have a business in Dallas and I very much want the train built. I would use the train to travel to Dallas on business but also for pleasure. I think it would be a great opportunity for me to save time as well as expense in that corridor from Houston to Dallas. Right now I use Southwest Airlines to make the trip for business primarily. When I drive, the traffic between Houston and Dallas is awful. It's just terrible and it's also unsafe. To get out of Houston, I have to really manage my time to try to avoid the congestion and I have a terrible time doing that. Getting out of Houston is hard. Getting into Dallas is bad and the travel even in the rural areas is really congested. Lots of trucks. It's just not safe to do it. I think the train would offer me an opportunity to travel safely. I could work some. I hope to retire in five years or so and it will give me an opportunity to do some traveling when I didn't have to drive. I just think it would be a great opportunity for this town and for the economy in the state of Texas.	Comment noted.

Robert Sutton	3/8/2018	Website	The alignment of Segment 3Z from the previously proposed 3B to 3C was designed to follow the divide between the Broad Creek – Pin Oak Watershed and the Little Pin Oak Creek – Richland Creek Watersheds. This area provides a good opportunity for Segment 3Z to be lowered into an embankment/cut section without creating some of the watershed issues associated with 3A (detailed in Part 1 of these comments).	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Another area that presents itself to enter an embankment/cut section would be the FM 709 crossing. The location where Segment 3Z crosses FM 709 is more desirable than 3A since it does not require a realignment of another FM road, there is less development in the immediate vicinity, and it is 20' lower in elevation so the large retained cut would not be necessary. I understand that reducing the impact of the rail on existing properties is one of the reasons for utilizing the "utility corridor." Aside from the physical rail attributes, alternate route 3Z was able to avoid every residence and agricultural structure over the 13.41 mile stretch, whereas Segment 3A displaces 24 structures. The overall cost of these displacements may not affect the price of the entire project, but some of these displacements may include relocating families from their homes. Reducing these impacts should be one of the highest priorities. Transportation impacts are greatly improved by selection of alternative 3Z in this area. Segment 3A crosses over/under seven public roads. Of these seven crossings, Segment 3A has to reconstruct three state roads and two county roads and adds two bridges to the state roads. Segment 3Z crosses over/under six public roads. Of these, segment 3Z only has to reconstruct two of the county roads (both of which are simple 20' gravel roads). In revising these crossings, Segment 3A requires 31% more roadway reconstruction than Segment 3Z and effects Farm to Market roads instead of cheaper County Roads. I was initially concerned that the impact on electrical utilities posed by Segment 3Z might exceed 3A; however, upon further research, Route 3Z appears to impact the same number of High Transmission lines and fewer local distribution lines. The DEIS report only shows one adverse visual effect for the entire route from Dallas to Houston; the Bravos Valley Station. Since Navarro County was not considered to have any adverse visual impacts I have attached the Exhibits 8 &amp; 9 to compare the visual impacts of Segment 3A versus Segment 3Z. There is a very different visual feel for the areas surrounding Segment 3A and Segment 3Z. As you can see in Exhibit 8 (KVP #21 from the DEIS report), by staying closer to the high transmission lines like Segment 3Z there is not a new visual impact because the high transmission lines already exist. On the other hand, looking at Exhibit 9, this visual impact is more clearly negative. For instance, today, an observer can overlook a 100' drop in elevation and view the beautiful scenery below. However, the current trajectory of the high speed rail completely inhibits the observer's view. Based on the data available and my personal observations, Segment 3Z substantially reduces the impacts reported in the DEIS for Segment 3A. While Segment 3Z appears to be superior to Segment 3A, there may be similar or improved alternatives that would likewise reduce the environmental impacts. Further, as mentioned above, the rail may choose to lower the Segment 3Z alignment into embankment/cut sections to reduce costs as opposed to the extended viaduct section. However, even with the large viaduct section, Segment 3Z has the potential to reduce costs over 3A, among many other advantages. The bridge section may cost more per mile, but displacing families, purchasing large parcels, reconstructing roadways, mitigating ponds, streams, and wetlands, and surveying Native American remains would also cost substantial amounts of money. CONCLUSION There are many questions and concerns regarding Segment 3A over this 13.17 mile stretch. The impacts of departing from the high transmission alignment and cutting through this area are significant. The alternative route 3Z presents an opportunity for significant benefits by reduction of environmental, cultural, monetary, and personal impacts upon the families especially those who will be displaced from their homes. Segment 3Z also allows Morgan Legacy Farms to continue its charitable purposes and allow police officers, doctors, nurses, mental health workers, and children to experience rural Texas. I respectfully suggest the FRA and project planners reexamine the High Speed rail route through this segment of Navarro County and recommend an approximate alignment more consistent with blended route 3Z as depicted on the attached exhibits. Thank you for your review and serious consideration of this comment. Respectfully Submitted Johnathan Zimmerer, P.E. Attachments: Exhibit 1: Drainage Exhibit of Morgan Legacy Farms Exhibit 2-4: General Segment 3A Comments Exhibit 5: Power Line Adjustments Exhibit 6: Alternate Route 3Z Exhibit 7: Topo Comparison 3A to 3Z Exhibit 8: Visual Impact for Route 3Z Exhibit 9: Visual Impact for Segment 3A</p>	
Lori Jo Svrcek	2/12/2018	Website	<p>Much Needed Bullet Train! In the future, which is really now! We will all utilize all the modern advances of robotic cars, electric cars, and planes, and RAIL! I would certainly appreciate, as would many people, less traffic on our highways, and have more viable, reasonable choices when it came to travel! The West was won with Rail! There were lots of differing opinions and disagreements about the coming of the Railroad even back then when Trains were invented, and started heading West! But the Railroad came anyway! And it's coming made our Nation more connected, stronger, greater, and poised for the future! You look around now at all our cities, and suburban neighborhoods we're living in, and ones continuing to be built, this land was once all farm and ranch land! Of course various corporations and developers built all these houses and businesses, and look around, it's flourishing here in Texas! And more's coming! Our citizens need Rail badly with all this new infrastructure, and continued growth! To say that Rail isn't successful is wrong! Rail is very successful all over the world! I believe all citizens can easily and profitably utilize all modern modes of transportation, especially if more Trains are upgraded to High Speed, have better route systems, and are more accessible to our citizens. Why not use every form of modern transportation available for our people to continue to thrive, work and succeed in our great State of Texas and our Country? Why limit us to just driving or having to take an airplane? Not everyone can afford a plane ticket cost regularly! Nor even Gasoline, at times! But more people could afford the Bullet Train! I have No doubt the Train will be competitively priced, and profitable! The Nation will watch what Texas does, when the High Speed Train is up and going! With our success, other States will probably start to consider putting High Speed Trains in their own State's too! In conclusion, I'm in support</p>	Comment noted.

			of the Dallas to Houston High Speed Bullet Train and I want to ride the Bullet Train! I think It will help all Texans for generations to come and our Nation too! Thanks!	
Lori Jo Svrcek	2/22/2018	Website	Please build this High Speed Bullet Train! With the present traffic we have now, plus the expected growth of traffic traveling between Houston and Dallas daily, we absolutely need this High Speed Bullet Train! It will most definitely help to alleviate our traffic issues and will provide a safe, quick, and convenient additional travel solution for Texans and visitors!	Comment noted.
Clara Swain	3/9/2018	Website	I THINK THIS WOULD BE NICE SINCE IM FROM FORT WORTH IT WOULD BE EASIER FOR TO SEE MY FAMILY IT I THINK IT WAS A GOOD IDEAL IS THE PRICE GOING TO BE RESONABLE	Comment noted.
William Swearingen	3/9/2018	Website	I am vehemently opposed to the high speed rail for multiple reasons. First and foremost, almost every time one of these projects is taken on, they costs exceed the estimates and the ridership is well below estimates. I don't believe there is any way that the ridership meets the estimates in this case. Second, I oppose the taking of land - either by eminent domain or by creating a noise issue that lowers the property value of the landowner.	Refer to ED-1, GN-2 and GN-4 and VA-1.
Brittney Swiggum	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military.	Refer to LU-5, WW-1 and WW-2.
Brittney Swiggum	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment.	Refer to LU-5.
Steven Swindell	2/17/2018	Website	I would like too express my support for building this high speed rail line and for the alignment which brings it closest to Texas A&M University. I grew up in the Houston area and wanted to take a trip via rail with friends as part of a senior trip, but my options were limited, we drove 5 hrs one way by SUV instead. In addition, I attended Texas A&M University, traveling back to Houston via rail would have been a great option. By allowing this line to be built, more options and opportunities will be available for those in the Houston, Dallas, and B/CS areas.	Comment noted.
Cheryl Swonke I	2/13/2018	Website	The Dallas to Houston high speed rail will devastate the historical community of Field's Store, cutting it in half. And given the fact that the two mile either direction that Texas Central Rail has said they will need encompasses the entire community, it will be non existent. All for a project that a PRO High Speed Rail group has deemed to be doomed for failure given the published data does not hold up under examination, it is unconscionable for any government agency to allow it to proceed.	Refer to GN-2, GN-3 and NE-1. The community of Fields Store is located approximately one mile to the west of the current proposed Area of Potential Effects, and therefore, will not be physically impacted by the project.
Brandon Sylvester	1/28/2018	Website	Please make this train a reality as soon as possible. Also please don't make it cost more than a tank of gas to get to Dallas for family of three or four.	Comment noted.
Allan Symmank	3/8/2018	Website	I'm a drywall contractor. Harvey flooded so many people. It seems the berm will make this problem worse. If the run off from the new impervious area is going to utilize the existing drainage. Wouldn't it cause more flooding issues. I am amazed at how much of Houston continues to flood. Wouldn't this become worse and with less rainfall? Houston is supposed to 10 Million people is 30 years. It isn't going to happen if the flooding isn't addressed first.	Refer to FP-1, SS-17, WW-1 and WW-2.
Allan Symmank	3/8/2018	Website	My uncle lives across IH 610 from Northwest Mall. He is worried about traffic through the neighborhood. But, his children live in Dallas. he thought he might ride the train. I ask him what he would be willing to pay for a round trip. He said about \$100 each person. Can you please post what you believe the actual price would be. Then adjust what actual ridership projections will be.	Refer to GN-2 and SC-3.
Allan Symmank	3/8/2018	Website	SH 130 Concession Company used the same type of smoke and mirrors to promote its toll way. It opened in 2012 and went bankrupt in less than three years. I use SH 130 regularly. It's nice to drive 80 MPH mostly alone..... This costs tax payers 430 Million dollars for me to do this. I want to have all true cost projections reviewed. Why can't TCR run a an ad about the railroad and include the facts? If they are truthful I bet public reaction would be outrageous	Refer to GN-4, NE-1 and SC-3.
Allan Symmank	3/8/2018	Website	The traffic at Hwy 290 and IH 610 (West Loop) is awful. The improvements to Hwy 290 when complete won't improve it. At the Brookhollow meeting the Representative from Metro said they were going to work alongside TCR to provide acessability. Why don't we do this first? Where's their Light rail that was supposed to connect Northwest Houston to downtown? Shouldn't we get regular commuter traffic off of 290 first? Lets build a rail station around Jersey Village for lightrail first. Let's get Houston moving First! Then folks from Dallas can enjoy Houston and want come back often. Repeat business is good	Refer to PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

<b>Submitted By</b>	<b>Date Submitted</b>	<b>Submission Type</b>	<b>Comment</b>	<b>Response</b>
Allan Symmank	3/8/2018	Website	I spoke with a friend who works for Slumberjay. He said business travel is discouraged and should not be done unless all other options have failed. Electronic group meetings are encouraged to reduce expenses. He said companies that don't commute as often are saving emissions. I wonder if the ridership report is correct from TCR. Has this type of business management been considered?	Refer to GN-2 and PN-3.
Allan Symmank	3/8/2018	Website	TCR stated it would need 3000 acres to complete the HSR. The DEIS stated 8000 acres are needed. Which is it? Has this been computed in the final expense? Only Beltway 8 was supposed to be overpassed with no road closures. What about the 66 private road closures that leave the landowner responsible for the reroute? 139 public road reroutes! 463 public road crossings! Are the counties whose land is already being devalued with lowered tax appraisals going to be responsible for the rebuild and maintenance of these overpasses? How will this affect EMS times during construction? Are the counties Hospital systems going to be responsible for construction injury or will TCR provide helicopter service?	Refer to BA-3, LU-9, LU-14, TR-6, TR-7, TR-8, SS-23 and VA-1. TCRR shall promote safety in the construction zone by using signage, barricades, flaggers and other traffic safety devices. TCRR does not plan to provide helicopter service.

<b>T</b>				
Scott T	3/9/2018	Website	Absolutely, Unequivocally Opposed!!!! I am opposed to the train entering the area around FM 709 and 3194 for many environmental reasons, bald eagle habitat, economic impact, and historical significance. Environmental concerns alone should be a sufficient enough reason to move the current proposal further north of the power lines. It is important to note that although the plans are in place, movement of the tracks north of the power lines would be a win-win situation for the current residents, community, environmental, and the state of Texas.	Refer to LU-5.
T McC	2/13/2018	Website	I do NOT want this high speed rail in my area. It is a complete waste of money.	Comment noted.
Dave Tabor	2/26/2018	Website	I am concerned about the high speed rail project's proposed location in Navarro County near the intersection of 709 and 3194 - splitting the Morgan Legacy Farm. I believe the proposed location will cause significant damage to the environment, wildlife and the water shed of the Morgan Legacy Farm - which I understand is located at the highest elevation in Navarro County. I have personally observed an abundance of wildlife at the Morgan Legacy Farm on multiple occasions - including deer, small game, migratory waterfowl and at least one bald eagle. I understand that the proposed route will separate the farm's lodge from its rodeo arena, stables and guest houses and I believe that the damage the proposed route will cause to the farm's charitable mission to host and entertain groups like the Salesmanship Club, the staff of Children's Hospital, the Boy Scouts of America and others would be irreparable. I would ask that the 5-7 mile portion of the proposed route scheduled to parallel 3194 be moved north of the existing power lines to lessen the harmful environmental, economic, charitable and historic impact the proposed route will have on the Morgan Legacy Farm.	Refer to LU-5.
David Tabor	2/23/2018	Website	I am concerned about the high speed rail project's proposed location in Navarro County near the intersection of 709 and 3194 - splitting the Morgan Legacy Farm. I believe the proposed location will cause significant damage to the environment, wildlife and the water shed of the Morgan Legacy Farm - which I understand is located at the highest elevation in Navarro County. I have personally observed an abundance of wildlife at the Morgan Legacy Farm on multiple occasions - including deer, small game, migratory waterfowl and at least one bald eagle. I was also a guest on the Morgan Legacy Farm in 2014 when they hosted and entertained (at no charge) a 16 member class of the Salesmanship Club of Dallas - a civic organization committed to funding the Momentous Institute - a Dallas-based charity that aspires to promote social emotional health for all children across the United States, so they can achieve their full potential. My Salesmanship Class' experience at the Morgan Legacy Farm has helped solidify our commitment to raise funds for the Momentous Institute - and since then, our class (alone) has raised over \$2,000,000 for Momentous through ticket sales to the AT&T Byron Nelson PGA Golf Tournament and development efforts. In turn, Momentous has assisted thousands of at risk kids and families and trained thousands of educators and mental health professionals on best practices. I understand that the proposed route will separate the farm's lodge from its rodeo arena, stables and guest houses and I believe that the damage the proposed route will cause to the farm's charitable mission to host and entertain groups like the Salesmanship Club, the staff of Children's Hospital, the Boy Scouts of America and others would be irreparable. I would ask that the 5-7 mile portion of the proposed route scheduled to parallel 3194 be moved north of the existing power lines to lessen the harmful environmental, economic, charitable and historic impact the proposed route will have on the Morgan Legacy Farm. Paula Tabor	2/6/2018	Oral	Very passionate guy. Very tall, too. My name is Paula Tabor and, as you may guess, I am not from around here. I'm originally from Florida, and I came here as an economic refugee during the recession. I have seen what unbridled real estate speculation did to my state. You guys have no idea how lucky you are because your housing laws were based on the Texas value of ain't no one gonna take my land. I have major concerns, not just about the train--everyone's talking about no build--but I began to wonder if Texas Central Railroad has no intention of building. One environmental fact we can all agree on is that Houston has hit water. It cannot expand any further south, which means it's coming our way, which means our land in Grimes County is going to be worth a lot of money in 10 or 15 years. So my main concern is that they plan for this whole project to fizzle out at some point after they have huge tracts of very valuable real estate. And maybe they'll build a little something in the middle, and then all of the sudden the project will be unviable and it will just have to console themselves with prime real estate that is worth millions of dollars. This is a main concern, I think, because Texas Central railroad has said--as many people here have said--one untruth after another. From the imminent domain, for a while they were saying it was privately funded, but I was hearing from Texans Against HSR that they were fighting tooth and nail to keep any language that would keep them responsible for no private funding -- for no public funding going into the project, they were fighting that tooth and nail. So we can't trust what they're saying. So if you can't trust what they're saying about how they're going to build the railroad, can we trust what they're saying about if they're going to build the railroad? And is this really not about a train, but about the land that's under your feet? And I think that we should all tell our elected officials that just because we're rural doesn't mean we're stupid. This stinks to high heaven. And thank you very much for your time, and thank you for allowing me to be a Texan.	Refer to ED-1, GN-4 and NE-1.
Joshua Tackett	1/29/2018	Oral	Good evening. My name's Joshua Tackett. I'm on my eighth year as district clerk for Navarro County. I'm the past chairman of the chamber of commerce. And that is about all the credibility I have. I don't own anything that I'm not paying a bank for, but my dad owns a little land. I don't envy you guys sitting here listening to this but, you know, it's also kind of self-induced. But the only thing I wanted to bring up that hadn't been mentioned yet is the potential impact of the imminent domain cases that are brought on through condemning of the land. If the railway gets the imminent domain control, which they have, those are cases that are brought on by the state, which in my office as district clerk the litigant is then able to have a court-appointed attorney if they're not able to afford one. So my question would be, I guess, who is going to pay for that attorney. Would it be the county? Because that's how it is now. Or would you guys be covering the costs of the imminent domain proceedings as they come in. Because I know through budget talks last year and through continuing budget talks of what we spend on court-appointed attorneys, I would estimate around 300 cases through landowners the number of landowners that I've heard being potentially impacted in Navarro County, it could be up to 300 condemnation cases that will come through my office. In turn, those people would either have to hire attorneys or be appointed one. So the question remains, who would pay for those attorneys for those landowners who shouldn't have to come out of pocket to, you know, secure their own land that they've already paid for once and again every year in taxes. Thank you.	Refer to ED-5.
Margaret Tackett	2/10/2018	Website	No, do not build a high speed rail line in Texas! It will distroy too much private property and will never be cost effective, Just look at Am track's history! Can you imagine an accident at 200 mph? A prime target for terrorists! NO! Texas does not need this built!	Refer to ED-2, LU-11, LU-14, NE-1, SS-6, SS-7 and SS-12.

Submitted By	Date Submitted	Submission Type	Comment	Response
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>Texans Against High Speed Rail (TAHSR) submits this comment to the Draft Environmental Impact Statement (DEIS) for Texas Central Railroad's (TCRR) Dallas to Houston High-Speed Rail (the "Project") prepared by the Federal Railroad Administration (FRA). TAHSR is a not-for-profit organization whose members include citizens, landowners, farmers, ranchers, business owners, interested organizations, and elected officials who share TAHSR's core belief of combating the abuse of eminent domain for private economic use, and preventing unnecessary government subsidies. In addition to its goal of protecting private property rights and maintaining efficient modes of transportation, TAHSR seeks to protect the environment along the affected corridor through preservation of farmland and community interests, enhancement of wildlife, protection of waters, wetlands, and endangered and protected species, and recognition of the rural lifestyle. I.</p> <p>Introduction. Congress designed the National Environmental Policy Act (NEPA), in the words of the United States Supreme Court, to prevent an agency from doing something uninformed, rather than something unwise.<sup>1</sup> Unfortunately, it appears the FRA is about to do both. First, the FRA is about to do something uninformed. Specifically, while both the FRA and TCRR admit that properties along the affected corridor must be surveyed in order to properly assess the Project's environmental impacts, approximately 35% of the total lineal mileage and at least 47,000 acres of affected property has not yet been surveyed. Without these on-the-ground surveys, the FRA's environmental assessment is, by 1 <i>Robertson v. Methow Valley Citizens Council</i>, 490 U.S. 332, 351 (1989). definition, uninformed. It should therefore come as no surprise that the DEIS inadequately addresses or altogether ignores numerous material impacts. In spite of the incomplete data contained in the DEIS, TAHSR will attempt to address these deficiencies in this comment. Moreover, not a single local, state, or federal regulatory agency or authority has conducted any independent analysis of the Project's economic viability. Instead, those who stand to lose their property to TCRR, along with thousands of Texans whose lives and communities will be forever impacted, have been left to take TCRR at its word that the Project will succeed financially. The real shame is the FRA is letting TCRR get away with this instead of requiring full transparency and conducting its own, independent economic analysis. Until the FRA does so, it cannot make an informed assessment of the Project's environmental impacts, and the public cannot play an informed role. Second, the FRA is about to do something unwise. Put simply, TCRR has greatly exaggerated the Project's ridership projections while underestimating its costs, a sure-fire recipe for financial disaster. Given that all objective, verifiable data reveals that the Project will fail spectacularly, the FRA's regurgitation of TCRR's economic propaganda has been a tough pill for Texans to swallow. Regarding the issue of economic viability, the FRA should also consider that TCRR has raised, in cash, less than 1% of its estimated construction costs. In truth, TCRR's financing pressures have been driving its hurry-up approach from day one—a \$20 billion tail wagging this dog of a Project. Even more concerning is TCRR's admission that it plans to aggressively pursue federal loans.<sup>2</sup> If the FRA continues to blindly accept TCRR's representations regarding the Project's viability, it should expect a similar result to the high-speed rail calamity in California, where costs have ballooned from \$33 billion to over \$67 billion,<sup>3</sup> with passenger service pushed back to 2029.<sup>4</sup> Before proceeding any further, TAHSR respectfully requests that the FRA do its job, start its environmental assessment over, and take a good faith, "hard look" at this Project as required under NEPA.</p>	Refer to GN-2, GN-4, NE-1 and NE-8.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>II.</p> <p>Because the FRA was forced to rely heavily on aerial and outdated maps, the DEIS is based on incomplete information. TCRR has not established that it possesses eminent domain authority under Texas law. Consequently, TCRR has only been able to survey private property by obtaining owner consent. This has proven to be a difficult task given the vocal, coordinated opposition to the Project along the corridor. In fact, thousands of landowners have denied survey access. As a result, TCRR (and, in turn, the FRA) has been forced to rely on aerial and outdated maps with respect to properties where access has been denied. Other agencies, such as the Surface Transportation Board, have attempted to substitute aerial surveys and stale data for actual on-the-ground surveys, due to limited access to rural, private property.<sup>6</sup> Regardless of the circumstances, reliance on such data does not satisfy the requisite "hard look" under NEPA.</p>	Refer to GN-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>A.</p> <p>In forty landowner injunction lawsuits, TCRR swore that it must obtain on-the-ground surveys in order to provide the FRA with the information it needed to complete the DEIS. In counties along the affected corridor and throughout Texas, TCRR filed verified lawsuits against landowners seeking injunctive relief. Specifically, TCRR requested that landowners be enjoined from interfering with TCRR's access to property "for the purposes of conducting examinations and surveys." In these lawsuits, TCRR swore that it must have surveys or the planning and other preliminary activities associated with the Project "cannot continue." TCRR swore further that without a survey it would be impossible to determine the feasibility of construction "given the natural and cultural resources that may exist" on the property and, as a result, the Project "will be indefinitely suspended." In addition, TCRR swore that the FRA and the U.S. Army Corps of Engineers had requested "the physical inspection of the routes being considered" for the Project "in order to obtain the information to satisfy the environmental review and permitting process." TCRR also swore that it was told by the FRA that it must "walk the [property] and inspect it for various types of flora and fauna" and "dig 2' x 2' x 2' holes...in order to inspect...for potential archeological/historical artifacts." TCRR swore further that without surveys it "would be unable to provide information needed by FRA and Army Corps to conduct the evaluations needed to select the</p>	Refer to GN-1, NE-1 and NE-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			most advantageous route and minimize impacts on cultural resources, environmental conditions, wetlands, or other features." TCRR concluded by swearing that without these on-the-ground surveys, "there will be no Project." TCRR's sworn statements make clear that it must conduct on-the-ground surveys of affected property in order to provide the FRA with the information it needs for its environmental assessment. Yet, TCRR did not survey these properties, dig holes on these properties, or walk them to inspect for flora and fauna. In fact, TCRR dropped all of its remaining lawsuits despite having failed to obtain surveys of the properties at issue.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	B. Notwithstanding TCRR's lawsuits and constant harassment of landowners, a vast amount of affected property has not been surveyed. Based on information obtained through lawsuits, at public meetings, and directly from landowners, TAHSR has determined that TCRR failed to perform surveys on a vast amount of affected property. Due to the sheer magnitude of property yet to be surveyed, there is no question that the DEIS is based on incomplete information. Regarding identification of properties that have or have not been surveyed, TAHSR has purposely erred on the side of caution. In all likelihood, the amount of property yet to be surveyed is much higher. Subject to this qualification, TAHSR's sets forth its conclusions below: Total lineal mileage and acreage. The FRA has failed to conduct on-the-ground surveys on approximately 35% of the lineal mileage along the proposed right-of-way. In other words, the FRA has not set foot on over 80 miles of property directly on the route where TCRR intends to build its Project. In addition to the property directly on the proposed right-of-way, the FRA must conduct on-the-ground surveys on adjacent and other affected property. The FRA has failed to survey at least 47,000 acres (73.5 square miles) of total affected property.	Refer to NE-8.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	2. Waller County. In Waller County, TCRR failed to survey 63% of the lineal mileage and over 3,800 acres of affected property. Examples showing the vast amount of acreage in Waller County left to be surveyed are shown below. The blue line is the projected right-of-way. Red parcels have not been surveyed. Green parcels have been surveyed. White parcels may or may not have been surveyed. In Grimes County, TCRR failed to survey approximately 57% of lineal mileage and over 15,000 acres of affected property. This accounts for more than 10% of the total affected property along the 240-mile corridor. Examples of Grimes County property that has not been surveyed are shown below. In Leon County, TCRR failed to survey approximately 46% of lineal mileage and over 6,600 acres of affected property. An example showing the vast amount of acreage in Leon County that has not been surveyed is below. One of the properties yet to be surveyed belongs to Jim Miles, a Leon County landowner who has challenged TCRR's claim of eminent domain authority. Neither TCRR nor the FRA will set foot on Mr. Miles' property prior to resolution of his lawsuit. In Ellis County, TCRR failed to survey approximately 26% of lineal mileage and over 7,274 acres of affected property. Examples showing the vast amount of acreage in Ellis County that has not been surveyed are shown below. In Harris County, TCRR failed to survey approximately 23% of lineal mileage and over 6,619 acres of affected property. <sup>14</sup> A few examples are shown below: Madison County. In Madison County, TCRR failed to survey approximately 21% of lineal mileage and 2,100 acres of affected property. Limestone County. In Limestone County, TCRR failed to survey approximately 11% of lineal mileage and over 1,900 acres of affected property. Examples are shown below: One of the Limestone County properties shown above contains wetlands home to the Houston Toad, a federally-protected endangered species Freestone County. In Freestone County, TCRR failed to survey approximately 10% of lineal mileage and 1,900 acres of affected property. Navarro County. In Navarro County, TCRR failed to survey approximately 9% of lineal mileage and over 1,783 acres of affected property.	Refer to NE-8.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	C. The FRA's environmental assessment is based on outdated maps. According to maps contained in the DEIS, it appears that the FRA has based its assessment on stale data. Two examples are shown below. The DEIS contains the following map on Sheet 507 of Project Footprint Segment 5: The paved roadway running north/south through the middle of the map is Fry Road, with an apartment complex neighboring to the east. The projected permanent right-of-way is identified by red stripes, with the temporary right-of-way outlined in green. Heading southeast from the apartment complex along the projected right-of-way, one should notice the vast amount of acreage consisting of raw land. Compare the map above from the DEIS with a current map of the same property: Fry Road is located in the upper left-hand corner of the map, with the same apartment complex to the southeast. However, this current map reveals another apartment complex situated along the projected right-of-way in the area where nothing but raw land is shown on the outdated DEIS map. As another example, the DEIS contains the following map on Sheet 511 of Project Footprint Segment 5: The large body of water surrounded by trees located in the center of the map directly along the projected right-of-way. Compare the map above from the DEIS with a current map of the same property: Notice the large body of water from the outdated DEIS map has been replaced with a large building. The DEIS is filled with countless other examples like the two above, proving that the FRA's assessment is based on outdated maps and stale data. In order for the FRA to perform the requisite "hard look" at the Project's environmental impacts, it must first identify the existence and location of all residences and structures that will be impacted.	Refer to GN-1 and NE-8.
Texans Against High-Speed Rail	3/9/2018	Website	D. Although the FRA admits that additional surveys must be conducted, TCRR does not have the legal right to conduct the remaining surveys. At the public hearings recently held along the affected corridor, FRA representatives admitted that additional properties must be surveyed in order for the FRA to complete its environmental assessment. However, the FRA has ignored two key facts: (1) TCRR does not have the legal	Refer to NE-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
(Comment Report)			right to conduct on-the-ground surveys on private property absent owner consent, and (2) the remaining surveys concern properties whose owners have already told TCRR, time and time again, that they will not consent to a survey. For the reasons explained below, this roadblock is not likely to be overcome soon, if ever. In order for TCRR to access private property to conduct surveys, it must qualify as a "railroad company" under the Texas Transportation Code. That issue-whether TCRR is a railroad company with the power of eminent domain-is the subject of pending, but stayed, litigation in Leon County, Texas. Even TCRR Vice President David Hagy admitted that the eminent domain issue "is in dispute." <sup>20</sup> Given that it could take years for the litigation to end, the FRA's decision to proceed with its assessment is imprudent. Moreover, when a court ultimately determines that TCRR does not have eminent domain authority, the FRA will have wasted an extraordinary amount of time and resources.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	E. There has been no coordination with rural county governments regarding the impacts of the Project on their communities. Soon after TCRR began promoting its Project, the following counties and agencies requested coordination and planning meetings with TCRR: Ellis County, Navarro County, Freestone County, Limestone County, Leon County, Grimes County, Madison County, Waller County, the Leon County Sub-Regional Planning Commission, the Waller County Sub-Regional, and the Ellis County Sub-Regional Planning Commission. After refusing these requests for years, TCRR sent a letter to the counties on January 12, 2018, several weeks after the FRA published the DEIS and just days before the scheduled public comment hearings. <sup>21</sup> TCRR told the county judges that it "would like to set up a meeting with you and key members of your staff and [TCRR's] technical and environmental team." TCRR stated that it would like to discuss the following issues: specific road/rail intersections, planned rerouting or rebuilding of county facilities, plans to minimize road runoff and drainage, plans to accommodate community development, plans to accommodate emergency vehicle access and school bus routes, emergency management coordination and preparedness. None of these critical issues had been previously addressed from a county perspective. The counties responded that this was the first request by TCRR for actual coordination and that they would need additional information in order to engage in a productive conversation. TCRR has not responded. As a result, there has been no coordination with the rural counties regarding critical issues impacting their communities.	Refer to PI-4.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	F. The FRA refused to extend the comment period to allow adequate time for the public to review the DEIS and voice their concerns. In addition to TAHSR, several other concerned parties requested an extension of the public comment period, including the following: United States Representative Kevin Brady, Texas State Senator and Transportation Committee Chairman Robert Nichols, Leon County Judge Byron Ryder, Madison County Judge Butch McDaniel, Grimes County Judge Joe Fauth, Ellis County Judge Carol Bush, Navarro County Judge H.M. Davenport, Limestone County Judge Daniel Burkeen, Freestone County Judge Linda Grant, and Waller County Judge Trey Duhon. TAHSR, along with these other parties, provided the FRA with numerous good faith reasons why an extension of the comment period was reasonable and necessary under the circumstances. For simplicity, TAHSR includes this non-exclusive list of the reasons communicated by the parties to the FRA: The FRA published the DEIS on December 22, 2017, the Friday before Christmas. On the same date, the Army Corps published its request for two wetland permits. As a result, valuable time for public comment was lost over the Christmas and New Year's holidays; The initial deadline for the comment period for both the FRA and Army Corps environmental reviews was February 20, 2018. The FRA and Army Corps agreed to a minor, 15-day extension of the deadline, to March 9, 2018, in spite of the fact that all interested parties had requested extensions of at least 45 days; The truncated comment periods for both the DEIS and Army Corp notice ran concurrently; The DEIS is a 5,600-page document with over 300 Tables and Figures filled with highly technical data; The FRA was responsible for a confusing, unorganized public comment hearing notice process. Changes to public hearing locations and times were not adequately and uniformly communicated; On January 18, 2018, Kevin Wright of the FRA sent a letter describing in detail the various changes in times and locations related to the public hearings. Notably, AECOM distributed a list of the time and locations of public meetings. Then, in the January 2018 edition of On Track, the Dallas to Houston high-speed rail newsletter, stakeholders were notified of changes in venues and address corrections. None of these changes was reflected on the FRA's website until weeks later; Numerous commenters have reported delivery failures after attempting to submit their comments via email to the FRA. These failures were reported as recently as March 8; This "kickback" issue regarding public comments was not limited to email submissions. Numerous commenters also reported delivery failures after attempting to submit their comments via the FRA's online portal as recently as March 9; The public hearings in several counties were held in locations with inadequate capacity, such as elementary schools. Numerous citizens were denied entry; In Harris County, citizens waited outside hearing before being denied entry; The FRA waited several weeks before scheduling an additional meeting in Harris County held on March 5. As a result, attendees of the March 5 meeting were allowed only four days to submit their comments; In Madison County, the public hearing reached capacity and citizens were denied entry. Madison County requested that another meeting be held to allow for all citizens to comment, but the FRA refused to hold another public hearing; The FRA "doubled-up" the public hearings, meaning that two hearings were held on each night in neighboring counties. As a result, owners of property in multiple counties were unable to attend hearings in each county where they own land; The federal government shutdown limited access to the FRA and further disrupted and truncated the public comment period; TAHSR was initially	Refer to PI-3, PI-6, PI-8, PI-11 and PI-12.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			promised answers to several central questions related to the DEIS to allow for a more informed and thorough review. Subsequently, FRA officials refused to answer those questions; and This Project is the first of its kind in the U.S. The Project will erect a 240-mile electrified wall across Texas, permanently impacting eleven counties, thousands of private property owners and citizens along with the communities in which they live. Given these circumstances, the FRA's refusal to grant a reasonable extension of the public comment period is indefensible.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	III. At TCRR's direction, the FRA removed economic viability from the "Purpose" of the Project. Under NEPA, the FRA "bears the responsibility for defining at the outset the objectives of an action." With respect to this responsibility, the FRA "must look hard at the factors relevant to the definition of purpose." Those factors, as announced by TCRR at the outset, are: Is the Project safe? Is the Project reliable? Is the Project economically viable? Yet, the DEIS contains no "look" at economic viability, let alone a "hard look." The FRA removed this factor from the DEIS entirely, choosing instead to accept TCRR's exaggerated, unsupported claims regarding economic viability without further inquiry.	Refer to NE-1 and PN-4.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	A. In March 2015, TCRR told stakeholders that the Project must be "economically viable" in order to meet its purpose. On March 22, 2015, TCRR issued a Step 1 Screening of Corridor Alternatives Report ("Screening Report") to all stakeholders along the affected corridor. In the Screening Report, TCRR told stakeholders that advancing the Project will require, among other things, a favorable Record of Decision resulting from the Environmental Impact Statement (EIS) as required under NEPA. TCRR acknowledged that "[o]ne requirement of the EIS effort will be evaluation of all reasonable alternatives," which would necessarily include the "No Build Alternative." Moreover, TCRR stated: "The purpose of the privately proposed Project is to provide reliable, safe, and economically viable passenger rail transportation using proven high-speed rail technology." In order to achieve this objective, TCRR told stakeholders that the Project must meet certain criteria, including economic viability: Economic: achieve a favorable return on investment when weighing expected ridership and revenue against estimated project capital investments, project delivery schedule, and long-term operations and maintenance expense. The Screening Report also included answers to frequently asked questions. In the FAQ section, TCRR's former CEO Tim Keith stated, "[a]dditionally, the FRA must carry forward potential corridor alternatives that meet the Project's purpose and need, which includes the requirement that the project be 'economically viable.'"	Refer to NE-1 and PN-4.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	B. In April 2015, the FRA announced that it would take TCRR at its word that the Project is economically viable. In April 2015, the FRA released its Dallas to Houston High-Speed Rail Environmental Impact Statement Scoping Report ("Scoping Report"). In the Scoping Report, the FRA stated that through the screening process, TCRR determined that "the Project is feasible and economically viable from Dallas to Houston." TCRR estimated ridership of "12,000 passengers per day," which totals 4.38 million passengers per year. In the "Comments on Proposed Purpose and Need" section, the FRA admitted that it "is not responsible for verifying TCRR's ridership forecasts" and that it "does not maintain financial information on TCRR." As such, the FRA could not answer the following questions in the Scoping Report: "Why does TCRR think people will ride this train?" "What ridership data is TCRR using?" "What will the Project cost and who will get the profit?" Even though TCRR had just told stakeholders that the Project must be economically viable to achieve its purpose, the FRA stated that those issues "are not directly applicable to the NEPA process and should be addressed directly to TCRR on their website."	Refer to NE-1 and PN-4.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	C. In August 2015, the FRA endorsed TCRR's claims that there was a "need" for the Project and that it would be "profitable." On August 10, 2015, the FRA released its Dallas to Houston High-Speed Rail Project Corridor Alternatives Analysis Technical Report ("Technical Report"). In the Technical Report, the FRA listed a number of "constraints" related to travel between Dallas and Houston on the I-45 corridor. The FRA concluded, "[a]s a result of these constraints, combined with the distance between the two metropolitan areas and potential ridership demand, TCRR identified an opportunity to develop a profitable privately-financed and operated high-speed passenger rail system." According to the FRA, the traffic issues along the I-45 corridor that the Project potentially addresses represented "identification of the typical 'need' for a FRA Project, which FRA usually addresses through service-level corridor planning." Much like in its Scoping Report, the FRA accepted TCRR's representations that the Project will be "profitable" and that there is a "need" for it, instead of conducting its own, independent evaluation of these critical issues.	Refer to PN-3.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	D. In the DEIS, the Project's purpose no longer includes providing "economically viable" transportation. The FRA states that the purpose of the Project "is to provide the public with reliable and safe high speed passenger rail transportation between Dallas and Houston." In a mere footnote, the FRA concedes that "[a]n initial version of the Project Purpose included economic viability. As the Project developed and through coordination with cooperating agencies, FRA determined that economic viability is an objective of TCRR, not a component of the Project Purpose." This statement is false. That is not what happened. In March 2015, TCRR told stakeholders that the Project's purpose included providing "economically viable" transportation. A month later, in April 2015, the FRA announced that TCRR had determined that "the Project is feasible and economically viable from Dallas to Houston." The FRA's removal of economic viability was not based on any "development" or "coordination with cooperating agencies." Rather, the FRA simply accepted TCRR's representation that the Project is economically viable, and promptly removed that criteria from its DEIS analysis altogether.	Refer to NE-1 and PN-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	IV. By removing economic viability, the FRA has defined the Project's purpose such that rejection of the No-Build Alternative was a mere formality. Why TCRR directed the FRA to remove economic viability from its analysis is clear. If the defined purpose of the Project is to provide "safe, reliable, and economically viable passenger rail transportation," as TCRR represented to stakeholders, and the FRA determined that the Project is not economically viable, then the No-Build Alternative is a reasonable alternative that must be closely evaluated. Likewise, under this scenario, none of the Build Alternatives could meet the Project's purpose, and there would be no Project. On the other hand, if the purpose is only to provide safe, reliable transportation, all of the Build Alternatives are in play, and the No-Build Alternative can be dismissed out of hand. In short, with the FRA's help, TCRR stacked the deck. By failing to conduct its own independent analysis of economic viability, the FRA failed to meet its requirements under NEPA. Specifically, the FRA failed to explain the nature of the relationship between creating environmental impacts in the short-term (through construction of a 240-mile-long, 40-foot-high electrified wall across east Texas) and the long-term public productivity to be gained by the Project (through safe, reliable, and economically viable passenger rail transportation). Instead, the FRA has merely accepted TCRR's representations at face value.	Refer to BA-8, GN-2, NE-1 and PN-4
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	V. The DEIS is based on misleading economic assumptions: all objective, verifiable data reveals that the Project is not financially feasible. The EIS for this Project must serve two functions. First, it ensures that the FRA will take a hard look at the environmental impacts of the Project. Second, it ensures that relevant information is available to the public so that citizens may play a role in the decision-making process. To serve these functions, it is essential that the EIS not be based on misleading economic assumptions. Misleading economic assumptions can defeat the first function of an EIS by impairing the FRA's consideration of the adverse environmental effects of the Project. NEPA requires the FRA to balance the Project's economic benefits against its adverse environmental effects. The use of inflated economic benefits in this balancing process may result in approval that would not have otherwise occurred due to the Project's adverse environmental effects. Similarly, misleading economic assumptions can also defeat the second function of an EIS by skewing the public's evaluation of the Project. In addition to defeating the main functions of an EIS, misleading economic assumptions can lead to disastrous environmental consequences. The FRA must understand and consider that if this Project fails, the affected communities will be left with a hulking or half-built rail facility scarring the countryside while it slowly rusts away.	Refer to LU-4, SC-10, SC-14, SC-19, SC-20 and SC-22.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	A. Although TCRR has admitted on numerous occasions that it will pursue federal loans, the DEIS misleads the public into believing that TCRR is not seeking public funding. The DEIS contains the following TCRR statement: "As this is a privately developed project, we are not seeking public funding." However, TCRR's prior statements contradict this claim. In 2014, TCRR entered into a Memorandum of Understanding with the FRA that specifically states that TCRR "may submit applications to the [FRA] for loans." On other occasions, TCRR has admitted that it may rely on other taxpayer- subsidized Transportation Infrastructure Finance and Innovation Act loans, Railroad Rehabilitation and Improvement Financing loans and potentially Transportation Investment Generating Economic Recovery and other federal funding. Former Ambassador Ron Kirk, a TCRR advisor and spokesman, conceded that TCRR will aggressively pursue these federal loans. As such, the DEIS misleads the public into believing that the Project will be funded exclusively with private financing. Since taxpayers will be at risk, the FRA should disclose this fact as part of the public comment process.	Refer to GN-4.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	B. Common sense dictates that TCRR's ridership projections are greatly exaggerated. In the DEIS, the FRA adopted TCRR's projection of 4.4 million passengers per year by 2026, the year the Project is expected to commence service. This annual total equates to 12,394 passengers per day. By comparison, 2,685 passengers flew from Dallas to Houston per day from 2015 Q3 through 2017 Q2. Even assuming that TCRR could divert all airline passengers, TCRR must also convince nearly 10,000 Dallas to Houston vehicle travelers-each and every day-to take its the high-speed train. The heavily trafficked Union Station in Washington, D.C., which has been in service since 1907, currently serves approximately 5 million passengers annually, including a large number of daily commuters who transfer to the subway to get to work along with travelers headed to BWI Airport. TCRR's Project will serve neither of these constituencies. In Philadelphia, 30th Street Station currently transports approximately 4.3 million passengers annually. Given these statistics and the fact that there is no existing customer base for its Project, the notion that TCRR will achieve its 4.4 million annual ridership projection, or anything remotely close to it, is pure fantasy.	Refer to GN-2.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	C. Infrastructure experts from the Reason Foundation concluded that the Project will "fail spectacularly." The Reason Foundation is a non-partisan think tank whose public policy research "promotes choice, competition, and a dynamic market economy as the foundation for human dignity and progress." According to its website, Reason produces "rigorous, peer- reviewed research and directly engages the policy process." One of Reason's transportation infrastructure experts, Baruch Feigenbaum, published a study in 2013 titled High-Speed Rail in Europe and Asia: Lessons for the United States. In his study, which examined the prospects for high-speed rail in the U.S., Feigenbaum noted that only two high-speed rail lines in the world are profitable: Paris- Lyon in France and Tokyo-Osaka in Japan. Feigenbaum concluded that most U.S. high-speed rail lines would "lose substantial amounts of funds. Only the Northeast Corridor could potentially break even." In 2017, after a thorough analysis of TCRR's Project, the Reason Foundation released a report titled Texas High Speed Rail: Caution Ahead that included both a summary and 65-page detailed analysis of its conclusions. The following table displays an overview of Reason's concerns with TCRR's Project: [TABLE 1]	Refer to GN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Based on its review of "verifiable data from U.S. and Texas public and private transportation services, historic data taken from worldwide high-speed rail operations, and the unique land use and transportation characteristics of the Dallas to Houston corridor," Reason estimated TCRR's 2035 annual ridership at 1.4 million passengers. According to Reason, TCRR's "ridership projection of 4 to 5 million annual passengers is not grounded in reality." Reason stated that TCRR's overstated projections are symptomatic of "demand exaggeration" and that "to the best of our knowledge and despite repeated requests, [TCRR] has not provided any objective or verifiable data to support its projections." With respect to costs, Reason believes that "actual construction costs may exceed \$20 billion." Reason concluded its analysis with several stern warnings related to the Project. First, Reason cautioned that "Texas elected officials, lenders, investors and taxpayers should demand full disclosure and pay close attention to the details because we do not believe that Texas Central can build the rail line without significant public subsidies." Second, Reason commented that although it strongly supports privately constructed high-speed rail, it cannot support TCRR's Project. According to Reason, "[i]n spite of their large and growing populations, Dallas and Houston are poster children for big cities where high-speed rail has no chance of succeeding without public funding unless land use and transit patterns change dramatically." Third, Reason conceded that it truly hopes high-speed rail becomes a reality in the U.S., preferably through private development and implementation. However, Reason is concerned that TCRR's Project "will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Back in 2008, a Reason Foundation review of the California high-speed rail plan called its ridership projections "the most unrealistic projections produced for a major transport project anywhere in the world." Unfortunately, those words fell on deaf ears. A decade later, California finds itself mired in a boondoggle with no end in sight. Reason is sounding the alarm again. The FRA must heed this warning and conduct its own economic analysis before allowing TCRR to permanently alter the Texas environmental landscape.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	D. Based on a report issued by the Texas Department of Transportation, TCRR's ridership projections and cost estimates are misleading. In 2013, the Texas Department of Transportation (TxDOT) issued its Texas Statewide Ridership Analysis Report Statewide Analysis Model - Version 2.5. TxDOT, an agency with decades of experience analyzing massive infrastructure projects, forecasted 2035 annual ridership between 1.7-2.7 million passengers for TCRR's Project. As for costs, TxDOT estimated upfront capital costs of \$18.3 billion.	Refer to GN-2 and SC-22.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	E. The former Chief Maglev Scientist of the FRA concluded that the Project is destined for "certain failure." John T. Harding, PhD, former Chief Maglev Scientist for the FRA, performed an analysis of TCRR's projections compared with facts contained in TxDOT's report. Much like the Reason Foundation and TxDOT, Dr. Harding concluded that TCRR's ridership projections are greatly exaggerated, to the tune of almost six times that of his projections, which he based on objective, verifiable data. Dr. Harding ran a financial feasibility scenario in which he gave TCRR the full benefit of the doubt. Using TCRR's own projections and cost estimates, Dr. Harding believes that by 2035 its Project will run an annual loss of \$250 million. To clarify, this quarter billion-dollar deficit occurs after 15 years of operation, when the Project should be running at or near optimal levels. Based on his analysis, Dr. Harding determined that there appears to be no reasonable likelihood that TCRR could repay its investment, much less cover operating costs, with a realistic appraisal of ridership. In fact, he concluded that the Project is destined for "certain failure."	Refer to GN-2 and NE-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	F. The FRA blindly adopted TCRR's unsupported conclusions regarding economic impacts. At page 3.14-25, the FRA begins its discussion of the Project's economic impacts by stating: "TCRR reported that it would pay a total of \$2.5 billion in taxes to state and local jurisdictions by the year 2040." Instead of referencing a study or some research or analysis, the FRA references only the "Facts" section of TCRR's website, which coincidentally does not contain any study, research or analysis either. Since the publication of the DEIS, TCRR has actually refuted some of the information contained in the DEIS. Along these same lines, the FRA states that "ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion in local tax revenue." These are the same figures TCRR has been touting for years, without any supporting research or data. In fact, according to the Texas Comptroller's Office, Texas does not have a sales tax on transportation. On numerous occasions, TAHSR requested clarification regarding this multi-billion-dollar issue from both the FRA and its consultant AECOM. The FRA, through representative Kevin Wright, declined to reply to the inquiry. Finally, the FRA states: "All Economic Analysis Areas would experience positive sales and use tax growth for all Build Alternatives." There is absolutely no data to support this conclusion. In fact, as previously explained, all objective, verifiable proves the opposite outcome to be true. In sum, the FRA's entire assessment of the Project's economic impacts is predicated solely on TCRR's unproven word. Such a baseless, empty analysis of the Project's impacts does not satisfy NEPA's "hard look" requirement.	Refer to LU-4, SC-3, SC-17, SC-19, SC-20, SS-26, VA-3.  FRA conducted an independent assessment of the potential tax revenues in the Draft EIS and Final EIS.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	VI. The public has not been allowed to play an informed role in the decision-making process due to TCRR's lack of transparency. On its website, TCRR promises that this Project will be "an example of how big things can be done in a transparent way, the right way." As will be shown, TCRR has broken its promise. TCRR's lack of transparency, which the FRA has sanctioned through its regurgitation of TCRR's representations in the DEIS, has prevented the public from engaging in the comment process on an informed basis. TAHSR respectfully	Refer to GN-2 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			requests that the FRA hold TCRR to its word and require full disclosure of all information related to the Project as part of the environmental review process. A. The FRA should make TCRR disclose its feasibility studies. In early 2013, TCRR's main partner, the Japan Bank for International Cooperation, commissioned a High-Speed Rail Feasibility Study to be conducted on the Project. The Feasibility Study contains TCRR's ridership projections and fare estimates, among other data. TCRR disclosed the Feasibility Study to both TxDOT and the FRA. Yet, TCRR refuses to release this critical data to the public. TAHSR sought disclosure of the Feasibility Study through an open records request to TxDOT. TCRR intervened to prevent TxDOT's release of the Feasibility Study, claiming to the Texas Attorney General that the projections "may eventually become public through the EIS." In a subsequent state court lawsuit brought by TAHSR, TCRR intervened again and fought for over two years to prevent disclosure. TAHSR also submitted a Federal Open Information Act (FOIA) request for the Feasibility Study, but the FRA responded that it "is currently experiencing a high number of FOIA requests and is addressing backlogged requests with all due diligence on a first-in, first-out basis." In 2016, TCRR appointed LEK Consulting to conduct a new ridership study. LEK increased TCRR's ridership projections to a shocking 5 million annual passengers by 2025 and 10 million annual passengers by 2040. Just like the 2013 study, TCRR has refused to release LEK's ridership study to the public.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	B. The FRA should make TCRR disclose all studies supporting the Project's alleged tax revenue and economic benefits. The only document TCRR has every mentioned as support for its grossly inflated alleged economic benefits is a report created by Insight Research Corporation titled Texas Central's High Speed Rail Corridor and Related Private Development Houston to Dallas/Fort Worth, Texas (the "Insight Report"). In fact, TCRR relied on the Insight Report in its verified petition filed before the Surface Transportation Board (STB). Yet, TCRR refuses to release the Insight Report to the public, and it does not appear the FRA has seen it either. There is no mention of the report in the DEIS. Before the STB, TCRR's counsel stated that TCRR refuses to produce the Insight Report because it contains "certain proprietary, commercially sensitive information, the public disclosure of which would be highly prejudicial to Texas Central." To be clear, on the one hand TCRR claims that the report bolsters its argument that the Project will result in billions of economic benefits to the public-the very same benefits regurgitated by the FRA in the DEIS. On the other hand, TCRR claims public disclosure of the report would be highly prejudicial. The FRA should not allow TCRR to continue hiding behind these baseless, inconsistent excuses. Rather, the FRA should require that TCRR disclose the Insight Report, along with any other studies allegedly supporting its claim of economic benefits, so that the public may play an informed role in the EIS process. The FRA must ensure that the alleged benefits are not merely disinformation being used to window-dress the Project.	Refer to NE-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	C. The FRA should make TCRR disclose all source data allegedly supporting its cost estimates. Regarding costs, TCRR has steadfastly refused to produce any objective, reliable data in support of any of its constantly changing cost estimates. In doing so, TCRR has ignored repeated requests for source documentation supporting projected construction costs. In truth, it seems TCRR is plucking these estimates out of thin air. The FRA should require a comprehensive accounting of construction costs, backed by objective, reliable data from independent experts. TCRR has yet to provide an operating plan, operational or maintenance data, or any estimates of annual operating and maintenance ("O&M") costs. Not only will TCRR have to pay back massive construction loans and service the high-risk interest returns to its investors, it will also have to cover substantial O&M costs in order for the Project to be financially feasible. The FRA should require TCRR to produce its operating plans, estimated O&M costs, and all supporting data, so that the information may be made available to the public for review and comment.	Refer to NE-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	D. The FRA should make TCRR disclose its business plan and financial information. TCRR has not disclosed even a rudimentary business plan, even though it has admitted in sworn pleadings that such a plan exists. With respect to financial information, not only has TCRR admitted that it has secured less than 1% of the financing it needs to construct the Project,70 it has failed to disclosed how (or when) it expects to raise the remaining \$20 billion needed for construction. Without assurance that sufficient funding is in place, it is premature for the FRA to proceed with its assessment. TCRR should first be required to demonstrate the extent to which funds for financing are now available, and a timeline regarding when remaining funds will be acquired. The public has a right to review this information as part of the comment process to ensure that Texans are not left saddled with a half-built project.	Refer to NE-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	VII. The DEIS fails to adequately address alternatives to the Project. NEPA requires the FRA to study, develop, and describe appropriate alternatives to the Project. The range of alternatives is essential to "sharply defining the issues and providing a clear basis for choice among options by the decision maker and the public." The FRA must "rigorously explore and objectively evaluate all reasonable alternatives." "The existence of a viable but unexamined alternative renders a [draft] EIS inadequate." By limiting itself to considering only the alternate routes for the Project, the FRA has improperly limited the scope of its alternative analysis to a single, predetermined outcome: where to build the Project. A proper alternatives analysis under NEPA requires the FRA to examine other, less environmentally damaging alternatives. Here, those alternatives include other companies' proposals to build high-speed rail serving Dallas and Houston, interoperative use of existing railroad facilities, and use of railroad technologies other than the 50-year-old Shinkansen technology proposed for this Project. And, this analysis must include a thorough examination of the environmental impacts and benefits of not building the Project-the No-Build Alternative.	Refer to BA-4 and BA-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>A. The FRA failed to adequately analyze the No-Build Alternative. A critical component of any EIS, and a requirement under NEPA, is careful examination of the no-action alternative (here, the No-Build Alternative): what would the environmental impacts be if the Project is not constructed? The FRA failed to analyze the No-Build Alternative, stating that it simply would not accomplish the purpose of the proposed action-the construction of a high-speed rail. By disregarding the No-Build Alternative at the outset (apparently assuming that the Project must be constructed), the FRA failed to present the decision-maker with vital information on which to compare the environmental impacts with the impacts and benefits of not constructing it. The DEIS presents environmental impact information only on alternative routes for the Project, and not on the reasonable alternative of not constructing the Project at all. The FRA improperly used the No-Build Alternative as a baseline for the alternative railroad routes A through F rather than comprehensively and independently analyzing it as NEPA requires. But even in describing this baseline, the DEIS fails to take into account important disruptions and innovations already underway in the transportation industry, particularly with regard to autonomous vehicles, which will affect safety, reliability, and speed of travel in the Dallas-Houston corridor and across the country. According to automotive and assembly consultants at McKinsey and Company, "autonomous vehicles represent a major innovation for the automotive industry," but the DEIS does not even mention them or their possible impacts with respect to the No-Build Alternative. Instead, the DEIS assumes erroneously that by 2025, when this Project is slated to come on line, Interstate 45 will carry vehicles just like those it carries today-ignoring the enormous changes in vehicle configuration and traffic engineering that autonomous and self-driving vehicles will bring. The DEIS discusses historic and current fatality statistics for rail, automotive, and air travel, but fails to consider that autonomous vehicles, which consumers and freight companies will be using by 2040, may reduce accidents by up to 90% and save the economy about \$190 billion. The FRA did not adequately consider the No-Build Alternative, especially as it relates to new types of vehicles that will utilize existing and planned infrastructure. The No-Build Alternative, according to the DEIS, "would not provide congestion relief, improve safety on the IH-45" or "meet current and future transportation needs." This is mere conjecture without a discussion of future technologies that will soon be on the existing and planned roads between Dallas and Houston.</p>	Refer to BA-6.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>B. The FRA failed to analyze the alternative of interoperative use of existing facilities. The DEIS failed to analyze, as an alternative to the Project, a high-speed rail under the European model. These models can operate on existing rights-of-way and would share infrastructure with existing trains and rail lines in urban areas. Using the European model, there would be no need for constructing exclusive rights-of-way in urban areas, reducing many of the negative impacts on the environment, including the human environment. By failing to consider the European model alternative, the FRA did not comply with NEPA. That the FRA did not consider using the European model as an alternative is inexplicable, considering that the FRA has recognized that the European model would have fewer impacts on the environment in a rulemaking expected to be final in June 2018. The proposed rule, Passenger Equipment Safety Standards Amendments (RIN: 2130-AC46), would add a new tier of passenger equipment safety standards (Tier III) to facilitate the safe implementation of nationwide, interoperable high-speed passenger rail service at speeds up to 125mph on shared tracks and up to 220mph on exclusive rights-of-way. The European model would allow a Dallas-to-Houston high-speed rail to make interoperative use of about 100 miles of existing track in existing right-of-way, rather than building an entirely new 240-mile track in an entirely new, sealed corridor across presently undisturbed Texas countryside. The environmental impacts of the European model, which is capable of using existing facilities for much of the route, has far less impact on the environment-both natural and human. Moreover, this system could be deployed far more quickly and economically, just as Amtrak is currently doing in the Northeast Corridor (expected to be up and running by 2021 and fully deployed by 2022). Instead, the only technology alternative analyzed in the DEIS is the electric- powered passenger rail system based on Central Japan Railway Company's N700 Tokaido Shinkansen technology. This would require a fully sealed right of way, 100-foot wide, which the FRA has rejected the use of in other contexts for several reasons. First, constructing sealed, exclusive rights-of-way would unnecessarily impact urban environments. This is especially pertinent because the tracks would run between Dallas and Houston, two of the larger and faster growing urban populations in the U.S. In its notice of proposed rulemaking for the safety amendments the FRA stated: Specifically, the proposed rule would generate cost savings benefits by enabling high-speed rail operators to avoid new right-of-way acquisition and infrastructure construction for dedicated rail lines in dense urban areas. Instead it would allow such trains to travel on existing, non-dedicated rail lines but at slower speeds than permissible for travel on dedicated rail lines. As the DEIS notes, comments at public scoping meetings have raised issues with impacts to property value, landowner rights, communities, land use, and noise and vibrations. Failing to consider an alternative that can run on both shared and exclusive track ignores the concerns the FRA is already aware of and has sought to minimize in the safety standard amendments. Second, the Japanese model would cost more and disturb more property rights in these urban environments. In its Regulatory Impact Analysis, the FRA estimated that modifying a \$50 million European Trainset to meet Tier III regulations would cost \$310,000, while modifying a \$50 million Japanese trainset would cost roughly \$4.7 million. An alternative that utilizes both existing shared tracks and new exclusive tracks would reduce the need for purchasing land in urban environments, which is more expensive than rural land. Or the purchases would be of cheaper land in economically disadvantaged neighborhoods. The Executive Summary to the proposed rule's Regulatory Impact Analysis also said this favored using existing</p>	<p>Refer to BA-4 and BA-7.</p> <p>An interoperable high-speed passenger rail service at speeds not to exceed to 125mph on shared tracks would not meet TCRR's objective to employ the N700-Series HSR system as proposed in TCRR's petition for a Rule of Particular Applicability or meet a Purpose and Need of the Project to reach high-speed passenger rail travel speeds not to exceed 205 mph.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			track. This benefit is especially attractive to railroad operators that provide service in areas with high population density because right-of-way acquisition and new railroad construction is significantly more expensive and complex. This alternative would increase the probability that new services are introduced and reduce the need for new construction in densely populated areas. Third, using the Japanese model would contravene the forthcoming rule and lead to a mismatch of track that inconveniences passengers and manufacturers. As the FRA noted in the notice of rulemaking, the proposed rule "would help avert a potential patchwork in the U.S. passenger rail fleet that would perpetuate the current unattractiveness of the U.S. passenger equipment market to manufacturers." If the Japanese system is used for this Project, its trains and railways will stand apart from, rather than integrate with, future high-speed rail projects and routes consistent with the alternative in the forthcoming final rule. Finally, safety benefits would accrue by using existing shared tracks in urban environments. Existing railway rail infrastructure and rights-of-way would be improved to accommodate the operation of high-speed trains, according to the notice of proposed rulemaking for the amendments, which would benefit all rail travel on these tracks. By failing to consider the European model as an alternative to the proposed Japanese model, the FRA failed to comply with NEPA and its DEIS is inadequate.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	VIII. The DEIS fails to identify and adequately address the environmental impacts of the Project. A. The DEIS fails to identify and address noise and vibration impacts. 1. The DEIS assumes that screening distances used to analyze impacts of ordinary rail are sufficient for high-speed rail. The DEIS states that procedures from its guidance manual were applied for establishing the extent of the Study Area. Consequently, the FRA limited its screening distances to 1,300 feet for noise impact and 275 feet for vibration. According to the FRA, these distances "are based on assumptions for the HSR operations and existing environment." However, the FRA did not disclose the "assumptions" it relied on. Instead, the FRA merely concluded that, "[b]eyond these distances, no impacts would occur." The FRA provided no data or other support for this conclusion. The FRA's undisclosed assumptions are critical to the noise and vibration analysis because TCRR's Project is the first of its kind in the United States. In fact, TCRR is in the process of seeking a Rule of Particular Applicability relating to its proposed high-speed rail, which will exceed speeds of 200mph. Obviously, the stark differences between the configurations of a high-speed rail and an ordinary passenger rail line will result in unique noise and vibration impacts. The FRA guidance manual is not designed to assess such differences. As such, the DEIS does not even mention, let alone assess, this possibility.	Refer to NV-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	2. The FRA did not base its noise and vibration assessment on the Shinkansen N700 system that TCRR intends to use for its Project. The DEIS states that in order to conduct a proper assessment the FRA must consider each sub-source noise component with each component that is defined in terms of a noise generating mechanism. For example, propulsion, wheel-rail and aerodynamics should all be encompassed in a detailed noise assessment. In the 2012 FRA study, the FRA relied on data related to several high-speed trains, but there is no data or assessment for the Shinkansen N700 train system. In section 5 of the DEIS, the FRA laid out what should be included in a detailed noise analysis. In order to properly assess noise and vibrations impacts of this Project, the FRA must base its assessment on the actual Shinkansen system. However, in Appendix F of the DEIS, TCRR states that the Shinkansen N700-series trainset would be modified and adapted to fit the regulatory and environmental conditions in the proposed corridor. TCRR claims that the system's design and aerodynamic features have evolved from the original Shinkansen design. Yet, the FRA made no attempt to assess the modification nor does the DEIS indicate whether those modifications were assessed in determining the noise and vibration impact.	Refer to NV-6.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	3. The FRA has underestimated the noise impact of the Project. In Table 3.4-12, the FRA states that the Project will produce only 47 decibels within 125 feet of the track. According to the FRA, the Project will not result in severe noise impacts on residential homes. However, in an article published by the BBC in 2011, a group opposing the construction of the high-speed train in England estimated that a train going 155 MPH would create 85 decibels 82 feet from the track. Additionally, a report published by the High-Speed Rail Authority in California projected that a train going 106 MPH would create 71 decibels 150 feet from the track, and 83 decibels at 220 MPH. Regardless of the extent the FRA has underestimated the decibel levels, the fact is the Project will cause substantial noise pollution, especially in the eight rural counties where the Project does not make stops. Many of these counties and communities rely on livestock and agricultural use of their land. The noise pollution and vibrations created by construction and operation of the Project will negatively affect the agricultural use and possible result in panic flight of livestock (causing death or injury). The DEIS provides no answer to the cattle raisers who are trying to figure out how to herd cattle through a 14-foot pipe with a 200 MPH train zooming by. In the public hearings, the FRA and TCRR refused to take any responsibility for potential injury, death or damages due to panic flight of livestock. The DEIS is silent on this critical issue as well.	Refer to NR-1 and NV-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	4. The FRA failed to assess the impact of noise and vibration on soil composition. In its analysis, the FRA did not assess how unique soil composition plays a significant role in noise and vibration assessments. However, there are several studies that show material impacts on soil and soil composition caused by high-speed train noise and vibrations. For example, in a 2014 study published by Soil and Dynamics Earthquake Engineering, researchers found that the tools used to assess noise and vibration for high-speed trains were insufficient. The study looked at models used by the Norwegian Geotechnical Institute, Brahekazemi, and the FRA. Researchers concluded that all assessment tools used by the institutions were insufficient to gauge the correct noise and vibration measurements. They found that as train speed increased so	Refer to NV-1 and NV-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			did the levels of vibrations. The limitations of the vibration model used by the FRA ignores the effect of soil composition in wave propagation. "This omission is high relevant because the soil properties have been shown to contribute significantly to the levels of ground vibrations generated by railway tracks, particularly in the free field. Thus, ignoring soil properties is likely to reduce the accuracy of a prediction model." In order for the DEIS to have assessed noise and vibration, accurate assessment tools must be employed. As another example, a case study done in Portugal found that soil type, rock layers, soil laying, depth to water table, and frost depth all relate to vibrations due to trains. <sup>102</sup> None of these factors are identified or sufficiently addressed in the DEIS. The study emphasized the necessity of accurate vibration measurements, concluding that without such measurements damage could result from vibrations.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	5. The FRA used outdated assessment tools. The DEIS states that the FRA used Project information provided by TCRR, including a TCRR report titled Texas High Speed Rail Revised Draft Conceptual Engineering Report. This report is not included within the DEIS and does not appear to have been disclosed for public review and comment. In addition, the FRA states it relied on "sound data gathered in Japan for the Tokaido Shinkansen N700-A train" from 2012. Yet, there is no discussion regarding the propriety of using sound data gathered in Japan to assess the noise and vibration impacts on the unique land characteristic in rural Texas. Further, the FRA relied on the High-Speed Ground Transportation Noise and Vibration Impact Assessment (2012) and the Transit Noise and Vibration Impact Assessment (2006) to analyze field noise and vibration. However, both manuals are out of date and employ the wrong analysis tool. Therefore, the DEIS assessment is based on stale data. In a 2017 study, researchers found that the American technique of using five noise sources was not appropriate for considering train speeds over 250-300 km/h. In addition, the researchers concluded that it is impossible to consider train design features, such as train noise, using the American technique.	Refer to NV-1.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	6. The FRA failed to consider many affected land uses in its assessment of noise and vibration impacts. The DEIS describes the three levels of noise impact: No Impact, Moderate Impact, and Severe Impact. <sup>108</sup> With respect to Severe Impact, the DEIS states that, "if a next door neighbor begins to use a leaf blower or chain saw, it would likely disrupt normal conversation and be highly annoying." According to the FRA, Severe Impacts "should be avoided if possible. Noise mitigation should be applied for severe impacts wherever feasible." It is impossible for the FRA to properly assess the potential Severe Impacts on the properties it has not surveyed. Put another way, the FRA cannot merely assume that the Project will not "disrupt normal conversation and be highly annoying" given that it has no intimate knowledge of the specific characteristics and land uses of the affected properties. In fact, there are many yet-to-be-surveyed properties where there is a high likelihood of Severe Impacts based on unique land use characteristics. The following are a few examples: Cotton Mesa Trophy Whitetail Hunting Lodge in Navarro County has been selectively breeding trophy whitetails for the past thirty years. It has 4,200 acres of premium whitetail deer habitat; and The House Estate is one of the premier wedding facilities in Texas, set on 18 acres in Harris County and centered around an 1890's Victorian mansion. Regarding impacts to wildlife (mammals and birds) and domestic animals (livestock and poultry), the FRA states that the DEIS addresses these impacts based on the "noise exposure limits" for domestic and wildlife animals (100dBA) shown in Table 3.4-4. However, there is no explanation of how these impacts were addressed or what tests or analyses, if any, were performed. Without citation to any studies or supporting data, the FRA states that the noise exposure limits for train operating at maximum speeds of 205 MPH "would only be exceeded with 15 feet from the HSR tracks." According to the FRA, no animals will be within this fenced-in area at grade and, where the HSR is elevated, "noise levels would be reduced by shielding either below the viaduct of within the culvert." The FRA merely concluded-in this single paragraph-that "noise impact on wildlife will not be significant." This assessment falls well short of the requisite "hard look" under NEPA.	Refer to NV-1 and NV-8.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	7. The DEIS ignores the noise and vibration impacts caused by high-speed rail trains crossing paths. The FRA ignores a noise impact unique to this Project, i.e., the scientifically proven "slapping" or popping noise resulting from air flow between two passing high-speed trains. Rather than assess the noise impact of two high-speed trains passing each other at close proximity, the DEIS records noise levels for one passing train on one rail.	Refer to NV-10.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	8. The DEIS contains no clear specifications or requirements related to noise and vibration mitigation. At page 3.4-60, the DEIS states that "TCRR shall investigate the application of sound barriers at affected locations where feasible" and "TCRR shall seek input from the impacted landowners and local jurisdictions on barrier types and designs." The DEIS continues, "[w]here sound barriers are not practical, TCRR shall evaluate and install building sound insulation treatments where feasible." In other words, the FRA acknowledges that TCRR has not investigated the feasibility of sound barriers or sought input from landowners or county governments. Additionally, if barriers are not a feasible mitigation measure, the FRA acknowledges that TCRR has not conducted any feasibility analysis regarding alternative insulation treatments. As a result, if it is later determined that noise impacts exceed acceptable levels, the FRA is merely speculating that 1) there are feasible mitigation measures, and 2) TCRR will be able to coordinate with landowners and county governments in order to install any such measures.	Refer to NV-1.

Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>B. The DEIS fails to identify and address the Project's impact on hazardous materials and solid waste. The FRA's NEPA procedures for considering environmental impacts direct the agency to consider "any impacts due to hazardous materials." The DEIS is inadequate because it improperly classifies some hazardous waste sites near the high-speed rail project as low-risk when they are in fact high-risk sites. According to the DEIS, moderate and high-risk sites require further investigation into potential soil or groundwater contamination. The Wyman-Gordon Forgings site at 10825 Telge Road in Houston, Texas is one such site that the DEIS improperly classified as low risk. The site produces closed-die forgings used mainly for aerospace applications and extruded pipe. The DEIS describes the site's environmental contamination and enforcement history as Industrial Hazardous Waste: "Inactive corrective action. Completed workload in 2014. LPST [Leaking Petroleum Storage Tank]: Final concurrence issued, case closed in 1996. RCRA: Active SQG. Site had seven emergency responses and ten NOVs that have all been resolved." However, according to the Environmental Protection Agency's (EPA) Toxics Release Inventory, 2,032 pounds of chemical releases were reported for the site in 2012. Chromium, cobalt, copper, acids, hydrogen fluoride, lead, manganese, nickel, and nitric acid were among the chemicals released. Moreover, 915 pounds of chemical releases were reported at this site in 2008 and 876 pounds of chemical releases were reported in 2016. The Toxics Release Inventory's Risk-Screening Environmental Indicators, EPA's screening-level model that analyzes factors that contribute to human health risk, scored the site roughly 40,000 times higher than the U.S. median for primary metals in 2015. The DEIS states that workloads related to the site are complete, notices of violation have been resolved, and the site is complying with federal solid waste requirements. But a June 2017 EPA Region 6 inspection found multiple concerns with the Wyman-Gordon facility. Among approximately a dozen concerns raised by the EPA, the agency said the requirements of its National Pollutant Discharge Elimination System (NPDES) permit are not being followed and accurately submitted. The sampling does not represent discharges of many of the substances listed above from the facility. Three Schools are located north of the Wyman-Gordon site, the proposed railway segment, and Highway 290. The DEIS fails to discuss how, if the Wyman-Gordon site is disturbed, students at Cy-Fair High School, Arnold Middle School, and Lamkin Elementary School will be impacted by exposure to airborne toxics, contaminated soil, and groundwater from this site. And the inadequacy of this analysis casts doubt on the thoroughness of the FRA's investigation and discussion of other hazardous waste sites along the affected corridor.</p>	Refer to HZ-2.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>C. The DEIS fails to adequately analyze the Project's impact on wetlands and waterways. Wetlands provide invaluable ecological functions such as filtration of pollutants, habitat for aquatic and amphibious species, and flood attenuation. While admitting that the Project will destroy or significantly impact critical wetland areas, the DEIS fails to analyze or discuss the functions and values these wetlands provide, how those functions and values will be impaired by the Project, and what (if any) mitigation of these adverse wetlands effects will be mitigated. In essence, the DEIS seems to assume that wetlands protection is the role of the Army Corps and that the FRA, as the lead agency, may ignore wetlands impacts in preparing the DEIS. That assumption is wrong. NEPA provides no exceptions; it requires the FRA to analyze all significant impacts on the human environment- including wetlands impacts. The DEIS states nebulously that its goal is to avoid wetland disturbance, and that future actions will be implemented with the assistance of the Army Corps to avoid and minimize impacts. The DEIS makes clear that it is unknown at this point what the nature and extent of those impacts will be, although the DEIS recognizes that between 100.9 and 106.2 acres of wetlands will be permanently impacted, depending on which project alternative is selected. The DEIS, however, provides no substantive analysis regarding the Project's impact on those wetlands, offering instead only general descriptions. For example, in section 3.7 the FRA states: Permanent impacts would occur for the placement of culverts, viaduct support structure and within the permanent footprint of access roads, stations, MOWs, TMFs and where any of the Build Alternatives would be on embankment. Short-term impacts would include grading and temporary fill from construction access, staging and laydown areas. Operational impacts to waters of the U.S. would be limited to maintenance of culverts or bridges, and ongoing vegetation maintenance within the permanent HSR ROW. The DEIS has no other qualitative descriptions of the Project's impacts on wetlands. The DEIS instructs readers to review Appendix E, Waters of the U.S. Technical Memorandum, for a more detailed breakdown of the impacts. However, Appendix E is merely 113 pages of charts that show where the estimated impacts to streams, wetlands, and waterbodies in each county will occur. The charts do not describe how the crossings will actually affect the wetlands. Because the DEIS does not specify the actual impacts the Project will have on wetlands, the DEIS is inadequate. The DEIS states that TCRR has applied to the Army Corps for two Section 404 permits, but the Army Corps has not yet determined if it will issue those permits. Because the Project is not water-dependent, it does not qualify for such permits. The DEIS's assumption that the Corps will issue Section 404 permits, allowing discharge of dredge or fill material into waters of the U.S., is thus purely speculative. Equally problematic is the fact that the DEIS includes no discussion of which portions of the Project will impact U.S. waters (requiring Section 404 permits). Instead, the DEIS states, "[w]here avoidance of impacts to waters of the U.S., including wetlands, would not be practicable, TCRR shall obtain an Individual Permit from the appropriate USACE districts (Fort Worth and Galveston) prior to initiating construction." In addition, the DEIS fails to analyze what impacts on what wetlands might be allowed if a Section 404 permit is issued. That is, what wetlands functions and values might be destroyed or impaired, and what (if any) mitigation of those impacts the Army Corps might require. The DEIS thus improperly truncates all</p>	Refer to NE-8, WW-1 and WW-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>analysis of wetlands impacts. Instead of analyzing wetlands impacts, the DEIS clarifies that its mitigation plans will be developed sometime in the future, which makes issuance of a final EIS premature: To facilitate the development of the mitigation plan, TCRR shall evaluate the ecological condition of jurisdictional streams and wetlands, of waters of the U.S. that would be impacted by the HSR system using the Texas Rapid Assessment Method (TXRAM) Version 2.0 in the Fort Worth District and the Hydrogeomorphic (HGM) Model in the Galveston District. The results of the assessments shall then be used for calculating the change in function and compensatory mitigation requirements associated with USACE authorized activities. During the USACE review of the draft mitigation plan, TCRR shall continue to revise and refine the mitigation plan as part of the WW-CM#4: CWA Section 404, Individual Permit. The mitigation plan shall include sufficient detail to demonstrate measures taken to avoid, minimize and mitigate the aquatic functions that would be lost or impaired as a result of any of the Build Alternatives. Pending USACE approval, a final mitigation plan for wetlands and waters of the U.S. will be adopted by FRA as a part of the Final EIS. In short, the FRA made no attempt to analyze the Project's impact on waters and wetlands, assuming incorrectly that this is the Corps' job. NEPA does not exempt wetlands from the environmental impacts that must be evaluated in the EIS, including this one.</p>	
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>D. The DEIS fails to adequately assess the Project's impact on flood plains and drainage. Under NEPA, the FRA must consider flood hazards and flood plain management. Specifically, if an alternative will affect a base flood plain, the DEIS must discuss: "any risk associated with each such alternative; the impacts on natural and beneficial flood plain values; the degree to which the alternative supports incompatible development in the base flood plain; and the adequacy of the methods proposed to minimize harm." The DEIS fails to adequately address these factors, particularly as they relate to the Houston metropolitan area. According to the DEIS, the proposed rail project will impact 606 acres of the 100-year floodplain and 46 acres of the 500-year flood plain. But the DEIS fails to discuss the nature and effect of these impacts-and what they will mean for local flooding and flood management. Particularly in the Houston area, where catastrophic flooding has occurred several times in recent years, the impairment of flood plains and flood management operations is a critical environmental impact that NEPA does not allow the DEIS to ignore. The DEIS fails to present a clear picture of the changing Houston-area landscape and flood challenges. A National Oceanic and Atmospheric Administration (NOAA) analysis of rainfall trends suggests baseline standards used for flood plain regulations, control projects, and flood zone maps underestimate the amount of rainfall during storms that cause floods. The DEIS does not consider increased rainfall during storms in the Houston area. Moreover, the DEIS does not take into account, or even mention, the frequency or intensity of flooding events in the area, such as those caused by Hurricane Harvey, Tropical Storm Allison, the "Tax Day" Flood, or "Memorial Day" Flood, and whether the railway project is designed to withstand such events. It also fails to discuss whether the railway will, as a result of rainfall increases during storm events, contribute to flooding in Harris County and Houston. The agency's favored route would also include 332 stream crossings via bridge or viaduct, 100 of which are in Federal Emergency Management Agency (FEMA) high risk flood zones. The DEIS fails to analyze how these crossings will impact the ability of these streams to carry floodwaters. The DEIS also fails to analyze the impacts of possible flooding or washout of these crossings. The DEIS states that TCRR will obtain floodplain development permits and use best management practices during construction, such as erosion and sedimentation controls. But the DEIS fails to specify those best management practices by segment, nor does it specify the environmental impacts remaining after implementing those practices and complying with issued permits. Moreover, the DEIS does not explain how the railroad will obtain those permits in the multiple counties that have passed resolutions stating they will not issue building permits for the Project. The DEIS states that the project will abide by the City of Houston Ordinance, "Rules and Regulations for Chapter 19, Guidelines Houston City Code: Floodplain," which requires special flood hazard areas to be elevated by 12 inches above the base flood elevation, but the DEIS does not explain how this will prevent flooding. Although the DEIS says the Project will abide by the city ordinance, that is not sufficient evidence to show that the Project will not cause flooding. To make a fully informed decision, the DEIS should present scientific evidence and studies showing that the Project will not impose a greater risk of flooding in Houston-a city that could not afford such a risk prior to Hurricane Harvey and certainly cannot do so now. Finally, the DEIS fails to identify or discuss the flood impacts of constructing an elevated dirt berm that will block the natural sheet flow across the land and channel large quantities of water along the berm's base. The DEIS must analyze the nature and quantities of channeling these flood waters along the sealed rail corridor if it is to adequately describe the environmental impacts of the Project.</p>	<p>Refer to FP-1 and FP-4.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>E. The DEIS fails to identify and address the Project's impact on public utilities and energy. In California, the high-speed rail authority attempted to use its EIS to suggest that high-speed rail will produce large energy savings. The authority went so far as to claim that energy savings from operating the rail system would repay the energy cost of construction in just five years. However, Projections by the California Air Resources Board bemoaned that the California High-Speed Train would only account for 1.5% of California's goal for reducing emissions, and at a substantial cost. Any assessment of energy usage must also account for improvements to the energy efficiency of cars and planes. If cars and planes become more fuel-efficient, then the energy payback period for high-speed rail rises. The FRA took none of these factors into account. In truth, building a so-called "Green Train" is not really green. The Project will derive significant amounts of power from coal burning plants that rely on strip-mined, lignite coal. The FRA has not even attempted to quantify the natural destruction caused by the additional strip-</p>	<p>Refer to AQ-13 and AQ-14.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>mining that will be need to meet its electricity demand. While rail can offer lower energy usage than highway or air travel, that is only the case when it runs at or near capacity. In all likelihood TCRR's Project will never run at capacity.</p>	
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>1. The FRA overestimates energy savings. The DEIS states that 2014 CAFE standards were used to calculate fuel and energy savings. In addition, the FRA used TCRR's exaggerated ridership projections to calculate the fuel and energy savings resulting from the reduction in vehicle passengers. Based on these calculations, the FRA estimates that "annual" energy savings will be over 9.33 MMBTUS. For a number of reasons, the FRA's estimate is inflated. First, CAFE standards are likely to increase in the future and therefore cars will become more fuel efficient. Second, the FRA offers no explanation regarding its determination that the Project will consume 1.59 MMBTUs annually. No studies are referenced as support for this figure. Third, at page 3.9-14-15, the FRA relies on stale data in setting forth Texas's 2013 energy consumption by use, instead of the following recent data: Residential: 13.15%; Commercial: 12.34%; Industrial: 50.08%; and Transportation: 24.42%. Similarly, the FRA references an outdated ERCOT reports at pages 3.9-19 and 3.9-20, even though updated versions are available. Finally, at page 3.9-21, the FRA relies on outdated Texas Electricity Generation Estimates, instead of available updated estimates. 2. The DEIS fails to adequately assess the energy and utilities impacts for the No-Build Alternative. The FRA concludes that under the No-Build Alternative, "[t]here would be no direct impacts to existing utilities because no construction activities would take place. There would be no additional service demand placed on these utilities." There is no discussion of the costs of moving utilities that interfere with the Project. This is a glaring omission. The FRA must consider the cost of building new utilities and new oil and gas wells. Moreover, the DEIS lacks any in-depth cost-benefit analysis of the No-Build Alternative.</p>	<p>Refer to AQ-13 and AQ-14.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>3. The DEIS contains many unsupported conclusions related to public utilities and energy. The FRA states that "[u]tility realignment and/or protection methods, for construction or post-construction purposes, typically would not negatively impact the effectiveness of the utility infrastructure." No evidence is presented to support this conclusion. Nor is there any discussion of the negative impacts to existing utility infrastructure. For instance, if the construction harms the utility enough to where it does not make economic sense to keep it running, then construction of the Project will negatively impact the utility. Furthermore, the FRA states that TCRR will construct and operate an on-site water treatment system to treat wastewater from the construction of the Project. This is no small task. The FRA does not explain how wastewater will be gathered and transported to the treatment site. Nor does the FRA describe the quality of the water to be treated or specifications including bacteria level as measured by an ATP test, salinity level as measured by the quantity of total dissolved solids, the quantity of total suspended solids, turbidity, the quantity of hydrogen sulfide, the quantity of iron, and the quantity of other constituents required to fully describe the quality of the incoming water. The DEIS does not contain any explanation of the treatment process or equipment required, including type of process, the type and quantity of chemicals required, size and type of water filters to be used, size and type of tanks to be used, and any other equipment and techniques to be used. Moreover, the FRA fails to discuss the costs of any such processes or equipment. The FRA claims that construction power usage will not require significant additional capacity or result in peak demand. However, the FRA does not disclose usage and demand levels employed to make this conclusion.</p>	<p>Refer to EU-2.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>F. The DEIS fails to adequately address all measures needed to mitigate the impact on aesthetic and scenic resources. The DEIS admits that the project will harm residents' views of rivers and open landscapes when driving on IH-45 northbound toward Dallas due to the height of the viaduct. Despite acknowledging the reduction in the view when on IH-45, the DEIS does not consider using buffer zones to minimize the reduction in the view. Overall, the DEIS lacks sufficient analysis of buffer zones required to mitigate impacts of the HSR proposal on aesthetic and scenic resources in pristine areas of the State. While the DEIS identifies locations where natural tree buffer zones already exist, the discussion of adding additional buffer zones in the mitigation section focuses only on the cities of Houston and Dallas. That discussion is limited to: "[i]ntegrate trees and landscaping into the station streetscape where possible to soften and buffer the appearance of guideways, columns and elevated stations." The DEIS includes no discussion of using buffer zones in rural areas despite acknowledging that rural agricultural and pasture land are the primary terrain of the Build Alternatives. Additionally, the DEIS does not state how wide of a buffer zone the Project will create. The final EIS must include information regarding the locations, potential use, and size of buffer zones in rural areas in order to provide the FRA with sufficient information to make an informed decision. The DEIS also does not adequately analyze the impact nighttime lighting will have on rural communities. Section 3.10.6.1 of the DEIS identifies nighttime lighting as a potential issue in rural communities, but the mitigation section simply asserts that "[p]rior to operations, TCRR shall develop an operational lighting plan that shall outline required nighttime lighting limits to safely operate the system." TCRR must establish its lighting plan before the publication of the final EIS. Otherwise, the Final EIS will not adequately analyze the Project's impact on rural communities. Finally, the DEIS says that existing vegetation will be maintained but it does not adequately discuss how TCRR will decide how much vegetation will be maintained. The DEIS claims that "TCRR's LID approach shall minimize impacts by locating the HSR system adjacent to existing utilities and highways in order to limit impacts to undeveloped areas and avoid wildlife habitat fragmentation." The DEIS includes no estimate of how much of the project actually can be built adjacent to existing utilities, so the FRA has no clear estimate of what impacts this project will have on scenic resources. Because</p>	<p>Refer to AS-1.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>the DEIS does not include buffer zone mitigation analysis for rural terrain or an estimate of the amount of track that can be built adjacent to existing utilities, the DEIS does not adequately analyze ways to mitigate the Project's impacts on scenic lands. Finally, the DEIS fails to consider the impacts the Project will have on properties where visual and noise impacts negatively affect the property's use, value, and appeal, along with the human environment. The Project will traverse otherwise quiet, peaceful, and visually-pleasing tracts where these attributes are integral to the property's land use, value, and overall environment. Failing to survey all properties has resulted in an assessment of low to moderate impacts, rather than severe. In short, the FRA has underestimated the aesthetic and scenic resource impacts, thus rendering its assessment inadequate.</p>	
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>G. The DEIS fails to identify and address the Project's impact on transportation networks and roadways. The Project's proposed 240-mile-long right-of-way, a sealed corridor, will bisect the ten Texas counties through which it passes. While the DEIS states that viaducts will be used to accommodate existing roadways, the DEIS utterly ignores the fact that construction of the railroad embankment will freeze in place the existing road network, obstruct future community development of roadways and transportation networks like school bus routes and bike paths. This gross oversight renders the DEIS entirely inadequate under NEPA. The DEIS fails to address the insurmountable physical and jurisdictional issues surrounding roads in the counties through which it is proposed to be constructed. The DEIS describes a number of possible configurations for railway and road intersections, such as road under railway, road over railway, relocation of existing road, rerouting of existing road, and closure of road. Depending on the alternative selected by the FRA, between 231 and 237 roads would be crossed by the high-speed railway and between 147 to 246 roads would be impacted. The DEIS correctly notes that the Texas Department of Transportation and various counties are responsible for roadway crossings, but its discussion is incomplete because it fails to recognize the powers counties and county Commissioners Courts exercise under the Texas Transportation Code-and that many of the counties have adopted resolutions stating they will not permit the road-crossing construction described in the DEIS. In Texas, the Commissioners Court oversees the construction and maintenance of all public roads. It "may make and enforce all necessary rules and orders for the construction and maintenance of public roads." Moreover, the Commissioners Court "may exercise general control over all roads, highways, and bridges in the county." The DEIS is silent as to the effect of these provisions, and how the described project can be built if and when the Commissioners Court exercises this control over county roads. Importantly, several counties have already passed resolutions stating that they will not close, abandon, vacate or alter any county road to accommodate the Project. The counties resolved further that all county roads must be maintained for use by the traveling public at all times during and after construction. Although these resolutions were sent to the FRA, they are not reflected in the DEIS. Along with several other county judges along the affected corridor, Navarro County Judge H.M. Davenport, Jr. has voiced his concerns over jurisdictional issues in the DEIS to the FRA. For example, Navarro County has more than two dozen roadway crossings considered in the DEIS, including fifteen entries for local roads. The DEIS also states that 45 roads, both public and private, would be permanently impacted by the Build Alternatives. On Feb. 26, 2018, the Navarro County Commissioners Court passed a resolution that it intends "to decline to discontinue, abandon, close, vacate or alter a county road in connection with the proposed" project. The DEIS fails to discuss how the Project can be built in the face of this opposition. Nor does it discuss which environmental impacts of the required route changes might be. The passage of these county resolutions constitutes a material change to the design assumptions included in the DEIS, assumptions that are inconsistent with county law. As a result, it is impossible for stakeholders to evaluate the impacts based solely on the data currently in the DEIS. In addition, the DEIS discussion of roadways and transportation fails to comply with NEPA, which requires the FRA to consider whether the Project will be consistent with state and local laws. "Where an inconsistency exists, the statement should describe the extent to which the agency would reconcile its proposed action with the plan or law," according to NEPA regulations. Until the FRA reconciles the conflict between the proposed project and local law, the EIS will not comply with NEPA.</p>	<p>Refer to TR-6, TR-7 and TR-8.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>H. The DEIS fails to identify and address the Project's impact on land use. The Project will adversely impact cattle and other livestock, agricultural operations, and farmers and ranchers. The DEIS fails to adequately address a number of significant issues in this regard. The FRA states that the Project, "would not result in a significant impact or loss to crop yields, livestock numbers or the state agricultural economy." This false statement is the result of the FRA's failure to conduct an adequate assessment of the Project's impact on land use. Agricultural operations, especially cattle-raising and other related operations, will be significantly impacted. The DEIS states the total market value of agriculture is more than \$25 billion. This estimate merely reflects cash receipts for agricultural commodities, such as livestock. When the significant upstream and downstream sectors of the industry are accounted for, the agricultural industry in Texas is valued at over \$100 billion. The FRA must take into account the full economic impact of the Project on the agriculture industry. Otherwise, the loss in value of Texas agriculture is unknown and the DEIS is inadequate. Texas has experienced a decline in agricultural lands as those lands are converted to non-agricultural use. The Project will only accelerate this decline. While the DEIS appears to account for the actual acreage that will be taken for the physical components of the Project, the DEIS fails to account for the loss of agricultural lands due to hardships placed on current and future owners of property that will be indirectly impacted by people traversing their land, excess noise, and the unsightly Project. The FRA</p>	<p>Refer to LU-6, LU-11, NE-7, NR-1 and WW-9.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>must assess these indirect impacts. The DEIS also ignores the fact that the Project will render adjacent property relatively useless. Many Texans in the agricultural industry will be unable to conduct their operations efficiently due to future uncertainties. The FRA should conduct a study of land loss for specific tracts within the Study Area. The majority of counties that the Project will cross through have significant agricultural operations, including cattle. As the DEIS states, livestock contribute significantly to the viability of rural economies. While the study uses 2012 Agricultural Census data, more recent 2017 USDA County Estimates indicate that the 10-county study area is home to more than 582,000 head of cattle. The DEIS attempts to show how the Project would not have a significant impact on agriculture. However, it fails to provide support for this claim. Importantly, the DEIS completely disregards the microeconomic impact on individual producers, animals and communities. Until the FRA conducts an extensive microeconomic analysis on the impact to affected producers and rural communities, the DEIS is grossly inadequate. A memo published by the High-Speed Rail Authority in California shows that a train going 106 MPH would create 71 decibels 150 feet from the track and a train going 220 MPH would create 83 decibels 150 feet from the track. According to the DEIS, the FRA's analysis of noise impact often occurred at distances in excess of 200 feet from the nearest rail. The FRA's measurement of noise levels does not provide any information on how animals and their caretakers close to the track will be impacted by Project's noise. According to the National Institute of Health's National Institute on Deafness and Other Communication Disorders, noise-induced hearing loss can occur in humans from long or repeated exposure to sounds at or above 85 decibels. Ranchers working near the tracks may regularly be exposed to such noise levels. The DEIS does not provide any information for the impact on ranchers in such proximity to the rail line. Cattle are greatly affected by what they hear. In fact, they are able to hear a much wider range of sound frequencies than humans, 16 to 40,000 Hz in cattle, compared to 12,000 to 15,000 Hz in humans. The DEIS does not provide adequate analysis of the noise frequency and level to which livestock will be regularly exposed. Table 3.4-4 appears to arbitrarily set a noise exposure limit for livestock and wildlife despite the report's own assertion that "for animals, the effects are not easily determined." For cattle, intermittent sounds can be particularly stressful, especially if they are sudden and at a loud volume. A train passing every 30 minutes could have a significant impact on cattle by way of added stress and changed routine. It may also inhibit, due to noise stress, the grazing of otherwise viable pasture land. This is likely to reduce productivity in weight gain and will thus have a detrimental effect on the overall economic productivity of ranchers in the area impacted by high-speed rail noise. In fact, in a court decision that reached the Minnesota Supreme Court, Poppler vs. Wright Hennepin Cooperative Electric Association, such an impact on lost productivity due to nuisance and change of routine in livestock resulted in an award of significant damages. The FRA must adequately assess the impact of noise and vibration to health and productivity specific to livestock operations in the Study Area. There will also be significant issues regarding how landowners access, use, and maintain their land after the Project is built. This is especially important for agricultural uses, as these landowners depend on their land for their livelihoods and that of their families. The DEIS appears to simply accept TCRR's scheme for allowing landowners to access portions of their property separated by the rail line without further analysis. TCRR has no requirement nor oversight to ensure that it will work with impacted landowners to provide whatever access to bifurcated property necessary. TCRR has merely stated that all landowners will have a pass-through, but this promise is nowhere in writing. TCRR has proposed the implementation of "animal crossings" within the raised- berm portion of the Project. Their engineering drawings, presented in Appendix G of the DEIS, demonstrate that these "crossing plans" are little more than box culverts. In addition, the proposed dimensions of these culverts are not sufficient to allow for continued agricultural operations on the separated portion of property. The animal crossing plans proposed by TCRR include several types and sizes of culverts for different types of animals, separating large and small species. For small animals, the plans call for a six-and-half-foot square culvert with a ledge on which animals may cross. If a landowner does not have large animals, such as cattle, on the property at the time of construction, this effectively curtails the landowner's ability to ever raise such large animals on the separated portion of the property, as the dimensions are not sufficient to allow for their easy passage. The size also does not allow for even a pickup truck, a vehicle that is essential to caring for all manner of livestock, to pass. The Ford F-250 is a prime example of a common vehicle used on cattle ranches. From the factory, it measures 80 inches wide by 82 inches tall. This is two inches wider and four inches taller than the proposed culvert. The culvert design for large animals is larger at 23 feet wide by 11.5 feet tall. However, it too faces similar limitations. Ranchers frequently supplement cattle grazing with hay, and pastures are also regularly used to grow hay that is baled and stored for use during drought or winter. Both of these activities require the use of farm tractors. Large tractors often used in these jobs come dangerously close to the culvert height. A 2016 John Deere 8400 is almost 11 feet tall, while others easily eclipse its height, especially with implements attached. Even a simple hay cutter, a supplemented instrument that is necessary for bailing hay, poses a significant concern in relation to the proposed crossing dimensions: the cutter far exceeds cab height when folded for transport. This size of culvert could also prevent the landowner or future landowners from repurposing their land from a livestock operation to a row-crop operation, which often requires even larger equipment. Finally, the DEIS does not adequately account for regular flooding and waterlogged soil within the proposed crossings. These considerations are essential as a rain event may strand livestock on one side of the tracks without sufficient access to food, care or clean drinking water. Further, deep mud within a crossing may imperil the lives of cattle and other animals should they become stuck.</p>

			Regardless of the type of animal crossing employed, the DEIS is unclear as to how and when these types of crossings will be implemented and by what standards their use will be overseen to prevent irreparable damage to current and future land uses. The FRA should conduct a more thorough review of these animal crossing plans and provide specific recommendations to mitigate the impact on animal and human access to land separated by the rail line on a tract specific basis.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	I. The DEIS fails to adequately analyze threats to endangered and protected species and migratory birds. NEPA regulations direct agencies to prepare "to the fullest extent possible" a DEIS "concurrently with and integrated with environmental impact analyses and related survey and studies required by the Fish and Wildlife Coordination Act, National Historic Preservation Act, and Endangered Species Act . . ." The DEIS is procedurally flawed. According to the DEIS, the FRA is currently undertaking an informal consultation with the United States Fish and Wildlife Service (FWS) to identify any other federally-listed species through future and presence/absence surveys. If the FRA discovers any other listed species, it will submit a Biological Assessment (BA) for approval. If the FWS approves the BA, it will issue a Biological Opinion and Incidental Take Statement. This procedure falls short of NEPA's requirement to conduct an analysis "concurrently with and integrated with" surveys and studies required by the Endangered Species Act. If the survey is incomplete, the FRA should complete the survey and then include it in the DEIS. The habitat fragmentation analysis is also inadequate. As the DEIS notes, the all- build alternatives "would result in the direct loss of wildlife habitat, increase habitat fragmentation and contribute to impediments of the movement of wildlife across the landscape." The DEIS contains data for habitat fragmentation by segment and alternative and then breaks them down by grassland and shrub/woodland. The DEIS does not, however, specifically address habitat fragmentation for the endangered Houston Toad in Leon County. "Habitat loss and fragmentation continues to occur throughout the species' range," FWS wrote in its November 2011 review of the Houston Toad. The FWS further notes that "[t]his habitat loss has been recorded as preceding population declines in at least two counties." Yet, the DEIS fails to describe what effects this habitat fragmentation will have on this and the many other species in the path of the Project. The Texas Parks and Wildlife Department (TPWD) has also recognized that habitat fragmentation negatively affects the Houston Toad. The TPWD reported that "[o]ther linear features such as pipelines and transmission lines can create barriers between foraging, hibernating, and breeding sites, especially if native vegetation has been removed." The DEIS makes no specific findings as to fragmentation and the Houston Toad. Instead, the DEIS directs the construction contractor to have mowing height restrictions within Houston Toad habitat and remove vegetation from potential toad breeding sites. However, these are measures to be taken during the construction of the railway. There is no discussion as to how the railway, a permanent structure, would impact the endangered Houston Toad and cause habitat fragmentation. The DEIS also notes that the Project could potentially impact migratory birds by disrupting their roosting and nesting habitat, but the DEIS does not adequately discuss this issue. The DEIS identified "one type of animal assemblage, identified as a 'rookery,' that is located within the EIS Study Area," but fails to go on to describe the impact of the railroad project on this rookery. "Rookeries, or breeding grounds of colony-forming species, are important in an ecosystem as they are home to migratory and resident wading birds and shorebirds." The DEIS concluded that "[r]emoval of, or disturbance to the habitat during the bird nesting season (February 1 to September 15) could result in effects on nesting species that are protected by the MBTA." Further, "[s]uch effects would have a noticeable effect on wildlife, including sensitive species, but could be reduced by the use of best management practices." However, the DEIS does not provide any detail as to what those best management practices might be. Nor does the DEIS describe the adverse impacts on the presently quiet and undisturbed countryside home to these migratory birds. In addition, the DEIS fails to identify or discuss the effects of the Project on an important endangered species, the golden-cheeked warbler, whose habitat includes Dallas County. Listed under both the federal and Texas endangered species acts, this bird migrates throughout Central and Southern Texas, to Central America, and back. And the species is particularly jeopardized by fragmentation of its habitat. Additionally, the Texas Park and Wildlife website lists six bird species under the section on Migratory Routes of Selected Species. Those species are: Eastern Kingbird, Scarlet Tanager, Canada Warbler, Ruby-Throated Hummingbird, Bobolink, and Purple Martin. The maps listed on that website show all six species as having a migration pattern that goes through the eastern half of Texas. All six species will therefore likely be impacted by the Project. Yet, the DEIS fails to discuss the impact on these species. Finally, the Ruby Throated Hummingbird can specifically be found in the eastern edge of the Post Oak Savannah and Blackland Prairie and in the fringes of South Texas, including Brazos County. Therefore, the Project will likely interrupt the Ruby Throated Hummingbird's migration pattern from Southern Mexico to Southern Canada. In addition, the Purple Martin's breeding grounds include all of Texas except for the Trans Pecos regions and the western Panhandle. The Project would certainly disrupt some of the Purple Martins' migration route. Without adequately examining the impacts of the Project on these and other migratory birds, the DEIS does not meet the requirements under NEPA.	Refer to NR-2, NR-4 and NR-5.
Texans Against High-Speed Rail	3/9/2018	Website	J. The DEIS fails to identify and address the Project's impact on soils and geology. In the DEIS, the FRA suggests that any impacts of the Project on soil erosion can be mitigated. However, the FRA did not survey a vast amount of affected property. Consequently, the DEIS does not include coal mines in its soils and geology analysis. The delicate nature of coal mines necessitates a more thorough assessment. As previously stated, the FRA has not surveyed over 46% of lineal mileage along the proposed right-of-way in Leon County. A portion of this unsurveyed	Refer to SG-1, SG-2 and SG-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
(Comment Report)			property contains an old coal mine, shown at DEIS Appx. D, Project Foot Print Set 4 of 5, Sheets 359-60. Approximately 1.2 lineal miles of the Project's proposed right-of-way passes through this coal mine. The mining company dug at least 300 feet into the ground to mine coal. Around 18 years ago, the property was filled in with dirt in an effort to stabilize the soil. However, the soil remains unstable. As an example, when ranchers attempted to run cattle on the property, the cattle sank into the soil, broke legs, and died. Needless to say, the property cannot support the infrastructure needed for the Project, whether that be a land berm or elevated structure. Despite these facts, the DEIS contains no explanation as to how TCRR expects to build its Project on this unstable soil.	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	K. The DEIS fails to adequately address the Project's impact on greenhouse gas emissions. In its mere fifteen page discussion of the Project's impact on greenhouse gas (GHG) emissions, the FRA summarily concludes that "the Build Alternatives would have a small, but long-term positive effect on GHG emissions." In reaching this conclusion, the FRA failed to properly assess the Project's impact on GHG emissions. 1. The FRA's estimate of the Project's net impact on GHG emissions is grossly inaccurate. The FRA estimates the maximum total annual construction period GHG emissions for the years 2018-2021 by combining the annual GHG emissions (in million metric tons) for Off-Road Construction Equipment, On-Road Construction Vehicles, and Locomotive Hauling. Yet, TCRR's "Summary Schedule" indicates that civil construction activities are not scheduled to begin until mid-2019. As such, the FRA's calculation of the annual GHG construction period emissions is inaccurate. Rather than attempting to estimate annual construction period GHG emissions (a methodology hindered by obvious pitfalls), the FRA must estimate GHG emissions for the total construction period. With respect to estimating "net GHG operational impacts," the FRA added operation emissions to vehicle emissions reduction. The FRA calculated vehicle emissions reductions using an EPA model and TCRR's ridership estimates and assumptions. In short, the FRA first used TCRR's ridership numbers to estimate how many travelers will switch from car to high-speed train. Next, the FRA plugged those estimates into the EPA model to calculate annual vehicle emissions reduction. As for operation emissions, the FRA relied on power consumption information provided by TCRR. As demonstrated above, the FRA's assessment is flawed on the front and back end. First, its construction period GHG emissions estimate is inaccurate. Second, its "net GHG operational impacts" figure is inaccurate because it is predicated on TCRR's exaggerated ridership projections. Therefore, the FRA's conclusion that the "long-term impact on the Build Alternatives would be beneficial" is the result of two inaccurate data points. In order to properly assess the Project's impact on GHG emissions, the FRA must base its analysis on total construction period GHG emissions and realistic ridership projections. 2. The FRA has drastically underestimated the Project's impact on GHG emissions impacts. Based on information provided by TCRR, the FRA states that of the Project's estimated 5 million passengers, 3.7 million passengers (74%) will be diverted from vehicle travel to high-speed rail. This is pure fantasy. The Reason Foundation concluded that by 2035 TCRR could reasonably expect to divert 536,000 Dallas to Houston vehicle travelers (a mere 5% of the 10.7 million total travelers). In addition, the FRA concluded that the Build Alternatives operation emissions would result in a long-term net reduction of GHG emissions that would offset the construction emissions within less than 2 years at full operation. Here again, this is pure fantasy. Researchers at the University of California at Berkeley concluded that it would take 71 years for high speed rail to save enough greenhouse gas emissions to negate the emissions from construction of the California high-speed rail.	Refer to AQ-6 and AQ-7.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	3. The FRA's VMT calculation is grossly inaccurate. The emissions reduction calculations for CO, NOx, VOC, PM10, PM2.5, SO2 and CO2 are inaccurate, including with respect to the DFW and HGB nonattainment areas. IT appears that the FRA has doubled the Vehicle Miles Traveled (VMT) used in the calculation of removed emissions. DEIS Appx. E, p. 36-37 shows: 7,200,000 passengers/year X 89% car share = 6,408,000 passengers using car 6,408,000 passengers/1.2 passengers/car = 5,340,000 cars/year Since the 7.2 million passengers assumes 7.2 million one-way trips, using roundtrip distance to calculate VMT appears to be incorrect. The correct calculation would be one-way distance X cars/year = VMT: 239 X 5,340,000 = 1,276,260,000 VMT removed. The VMT removed is also used to calculate the gallons of gasoline saved, resulting in a doubling of this figure in the DEIS: 81.5 million gallons instead of 40.8 million gallons.	Refer to AQ-13 and AQ-14.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	L. The DEIS fails to adequately address the Project's impact on public safety and security. 1. The DEIS does not contain any plans for public safety and security. At multiple county meetings, public hearings, and to the press, TCRR has told the public its Project will not have any invasive security procedures like Transportation Safety Administration ("TSA") airport security, which cause long lines for passengers. However, TCRR has not disclosed what level of security, if not TSA-level, it will employ. In the DEIS, the FRA states that "TCRR will prepare a System Security Plan (SSP) that will document processes for mitigating and/or eliminating the security threats, vulnerabilities, and risks identified through TCRR's Preliminary Hazards Analysis and Final Hazards Analysis." In making this statement, the FRA admits that no such plan has been prepared. In addition, the FRA's analysis is restricted to the state and national level. It did not consider any worldwide data. Had it done so, it would have encountered critical information regarding safety and security. From January 2004 through July 2008, there were 530 terrorist attacks worldwide against passenger rail targets, resulting in more than 2,000 deaths and 9,000 injuries. The TSA considers passenger railroads to be high consequence targets in terms of potential loss of life and economic disruption as they carry large numbers of people in a confined environment, offer the opportunity for specific populations to be targeted at particular destinations, and often have iconic structures such as	Refer to PN-3 and SS-9. The EIS assessment of terrorism (see <b>Section 3.16.4, Safety and Security, Affected Environment</b> ) is based on an inventory of terrorism events occurring within the study area as defined in <b>Section 3.16.3, Safety and Security, Methodology</b> . The Final EIS has been updated to incorporate more recent 2017 data from University of Maryland's National Consortium for the Study of Terrorism and Responses to Terrorism (START). Inclusion of global incidents in the analysis would not change the severity rating associated with terrorism, already classified as "High" in the Final EIS. Frequency classifications are dependent on the number of historic incidents in the area for which the frequency is being defined. The Dallas to

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>TCRR's Project. Between 1970 and 2012 there were 33 high-speed rail attacks worldwide, killing 32 people. More recently, in 2015, an Islamic terrorist attacked a high-speed train while in transit between Belgium and France. The terrorist had knives, pistols, high-powered assault rifles, and a bottle of gasoline. The attack was intended to be a mass arson and murder. In response to this attack, Belgium is instituting increased baggage checks, and the European Union is considering introducing metal detectors and body scans at all train stations. Additionally, in July 2015 there was a suicide attack on the high-speed rail in Japan. The terrorist immolated himself, and smoke filled the train coach. The windows on a high-speed train cannot be opened, and the doors can only open once the train fully stops, which takes several minutes. Any fire creates an imminent risk of death by smoke inhalation for the passengers in that coach. Indeed, a female passenger was choked to death by smoke from the fire. TCRR misleadingly claims that there has never been a fatality on Japan's high-speed rail, when in this attack alone, there were two. Experts in train transportation safety in Japan have admitted that there are blind spots in the security system on its high-speed and have proposed changes in risk management and security checks. Given the current state of terrorism, the FRA must require TCRR to present a comprehensive safety and security plan before proceeding further.</p>	<p>Houston HSR Project is a privately financed project. FRA's evaluation of the Project is based off of making a safety determination on its operation. Claims made in marketing or promotional materials of a private company are not the purview of NEPA analysis.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>2. The FRA did not consult with local law enforcement regarding impacts on emergency response issues. On March 1, 2018, a coalition of eight Texas sheriffs whose counties are along the affected corridor held a press conference to announce that they were never contacted in regards to any emergency plans involving the Project. The sheriffs are concerned that road detours caused by construction could affect emergency response times. For example, Grimes County Sheriff Don Sowell said, "I take particular exception to the Federal Railroad Administration saying response times increased due to detours during construction to be within acceptable limits. I don't find that acceptable because I haven't had any conversations with anybody."</p>	<p>Refer to SS-18, SS-19, SS-23 and SS-26.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>3. The FRA does not even mention Hurricane Harvey in its safety and security assessment. Hurricane Harvey, a Category 4 hurricane, hit Texas on August 25, 2017. It had a diameter of 280 miles with winds of 130 mph during its first landfall. Harvey dumped a record-breaking 51 inches of rain in parts of Texas. Texas Governor Greg Abbott activated the entire Texas National Guard, bringing the total number of deployed Guardsmen to roughly 12,000. Harvey caused \$125 billion in damage according to the National Hurricane Center, more than any other natural disaster in U.S history except Hurricane Katrina. It affected 13 million people from Texas through Louisiana, Mississippi, Tennessee, and Kentucky. At least 88 people died from the storm. Without justification, the FRA does not even mention it in the DEIS. In Table 3.16- 3, Safety and Security Hazards Inventory, the FRA lists tropical storms and hurricanes for the years 2000-2015. As a result of excluding Harvey from its inventory, the FRA determined the average property damage in Harris County from hurricanes to be \$45 million per event, and \$1.7 billion for tropical storms. These averages are extremely misleading given the monumental damage caused by Harvey.</p>	<p>Refer to SS-17.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>M. The DEIS fails to adequately address the Project's impact on parks and recreation. The DEIS fails to adequately address the impacts to the El Camino Real de Los Tejas National Historic Trail. Although recognizing it as a trail system, the FRA failed to evaluate the temporary and permanent impacts to the trail. Instead, the FRA merely concluded that a lack of integrity to the trail precipitates a finding of "no impact." The DEIS fails to address the permanent impacts to seasonal hunting within the Lake Bardwell property. Section 3.17.5.2.3 of the DEIS discusses the temporary impacts and concludes "construction activities could serve as a deterrent to wildlife." Noticeably absent is any discussion related to the permanent impacts the Project will have on wildlife availability and preservation for hunting. The affected region along the corridor consists of prime hunting land. Deer and other wildlife are not going to come anywhere near the train, assuming hunting is allowed at all. The DEIS does not adequately address this issue.</p>	<p>Refer to RF-2. The El Camino Real de los Tejas Trail was assessed and determined would have no impacts as a result of the Project. A discussion of the resource can be found in <b>Section 3.17.5.2.4, Recreational Facilities, Segments 3A, 3B and 3C.</b></p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>N. The DEIS fails to adequately address the Project's impact on minority and low-income neighborhoods and populations. NEPA requires that the DEIS describe all significant impacts on the human environment, including the environmental justice impacts affecting minority communities. Executive Order 12898 requires the FRA to identify and address the disproportionate adverse effects that its programs may have on minority and low-income populations. While the FRA identified minority and low-income communities that would likely be adversely affected by the Project and pursued outreach activities to cater to these communities, this was not enough to protect the unique aspects of those communities. The Project will therefore disproportionately impact the well-being of minority and low-income populations by intersecting these communities with the high-speed rail and by failing to adequately reach out to and engage with these communities in advance. The DEIS also fails to adequately assess the impacts on community growth, cohesion, and character. Given that the FRA hosted a listening session in only four communities identified as being adversely affected, it is not surprising that the DEIS fails to adequately discuss impacts on minority communities. These sessions were held in 2016. The FRA failed to acknowledge that community members may not have received notice of these meetings, or that they simply did not attend due to disinterest in the program or community engagement, lack of time due to employment or child care obligations, or other reasons. In low-income populations, there is a higher propensity that individuals must work multiple jobs to make ends meet, and those individuals would not have been able to attend the listening sessions. In addition, one listening session was attended by a majority of people who are not even members of that particular community, and the majority of</p>	<p>Refer to EJ-1.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>attendees at another session were not familiar with the program. The DEIS simply does not demonstrate adequate concern for the particular attributes of minority and low-income communities. The DEIS correctly states that many of these minority and low-income communities are also linguistically diverse, with more proficiency in Spanish than English. This language barrier presents problems with community outreach, listening sessions, and gathering feedback. Although listening sessions offered translation services, important information is often lost in translation. And, when materials were offered in Spanish only, this required a Spanish-speaking citizen to first be familiar with the issues in English before they could know to request information in Spanish. These citizens, unless they have English-speaking acquaintances who will inform them about the Project's impacts, are completely in the dark about how the Project will impact their lives. Moreover, while listening sessions may be an effective means of engaging with an average community, this may not be the best approach with minority and low-income populations, who may be working multiple jobs and have limited resources. Information was sent to food banks and mailed out, but if an individual is only receiving information from TCRR itself, this individual is only hearing one viewpoint and loses the exposure to multiple viewpoints that may be expressed at a listening session. Mailing information is better than nothing, but it does not allow the community members to engage in a dialogue and have their voices heard. The FRA could air televised debates so that individuals who cannot attend sessions may listen to the countering viewpoints on the Project. The FRA could also host online listening sessions so that community members may participate more conveniently, yet still have their voices heard. Furthermore, the DEIS fails to adequately address the project's impact upon community character and cohesion. In the DEIS, "community character is defined by a community's geographic location, typology, diversity, and spatial location of physical structures (including transportation and/or utility infrastructure and residential structures), general population density, general aesthetic and visual appearance (including green and or open/recreational space), and general assessment of land uses." Cohesion is reflected in the neighborhood's ability to function and be recognized as a singular unit. Community cohesion is a function of density and can be a concern, particularly in urban and suburban areas where a transportation infrastructure can create a localized barrier between a residential community and social or commercial resources. Although the DEIS mentions impacts to community character and cohesion, the discussion is limited to two pages and does not address many of the adversely impacted neighborhoods and communities as described below. In Dallas County, the neighborhoods are a mix of urban and suburban developments and semirural/farming communities. Urban neighborhoods are primarily located in the City of Dallas along the Build Alternatives from downtown Dallas to approximately Ledbetter Drive. Near downtown, the neighborhood is composed of multi-family apartments, some commercial services, industrial buildings, vacant lots and large parking lots. South of downtown Dallas, the Study Area is characterized by urban single-family residential areas buffered by industrial uses adjacent to the Trinity River. Established urban single-family communities are also located south and east of the Trinity River. Following the IH-45 corridor southeast, industrial uses and floodplains serve as a buffer to many residential neighborhoods. Suburban communities exist from Ledbetter Drive to IH-20 within the City of Dallas. The Study Area within the cities of Hutchins, Lancaster, and Wilmer are primarily comprised of semi-rural, agricultural communities. The DEIS fails to address the environmental impact on lower economic communities, such as southeast Dallas. The FRA admits that minority communities will be affected by the implementation and operation of the Project. However, the DEIS fails to adequately assess the widespread impact on these communities' growth, displacement, and obvious disparate treatment. Apparently, these communities have been left to accept the destruction of their neighborhoods in exchange for a promise of jobs and revenue that the Project will allegedly create. These alleged benefits do not outweigh the negative impacts of the Project on the impacted communities. Building the Project directly through the middle of the community will cut the community in half, resulting in two different communities. A similar situation occurred with the construction of Interstate 345 in Dallas, which ultimately destroyed a south Dallas community and devastated its residences. The highway project destroyed the community's cohesion and erased its common cultural and historical heritage. To this day on either side of the interstate there are two different facial compositions and two different growth rates. The promise of jobs and development did not sustain either of these newly formed communities. Much like the I-345 highway, this Project will destroy community growth and cultural and historical heritage, and require redistricting of local government. The DEIS does not consider these impacts. In order to adequately address the environmental impacts of the Project, the DEIS must assess the impacts on the minority and low-income communities in southeast Dallas. Moreover, the Project will displace thousands of residents who do not have anywhere to migrate. The FRA failed to consider this impact. The DEIS merely states that since public housing will not be impacted, the residents would not need assistance. In fact, the overwhelming majority of affected residents are underrepresented minorities that do not have the funds to relocate or make a living in another part of the city. The vague, unsupported promise of "jobs" is not a solution to this impact. Furthermore, all six Build Alternatives break up communities of underrepresented minorities in Dallas. The FRA has ignored this clearly disparate treatment of low-income and minority communities.</p>	
Texans Against High-Speed Rail	3/9/2018	Website	<p>O. The DEIS fails to adequately address the Project's impact on community growth and employment. The FRA failed to assess the Project's impact on several communities, towns, cities, and neighborhoods along the affected corridor, including the following:</p>	Refer to SC-19 and SC-21.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
(Comment Report)			<ul style="list-style-type: none"> <li>• Dallas: southeast Dallas (previously discussed);</li> <li>• Navarro: Corsicana, Richland, and Barry;</li> <li>• Freestone: Fairfield and Teague;</li> <li>• Limestone: Communities around Lake Limestone;</li> <li>• Leon: Jewett; and</li> <li>• Waller: City of Waller.</li> </ul> <p>If the Project is constructed through these communities, accessibility to these communities will be restricted. Specifically, the placement of the Project will result in irreparable harm to the character and cohesion of these communities. This disruption will directly impact community growth and employment. Moreover, these communities will also incur severe adverse economic impacts. In particular, the Project will result in a decrease of sales tax revenue and forced reallocation of community budgets for relocation and rerouting of county roads. First, nearly all the rural counties rely heavily on sales tax as a main form of revenue. Many stores, businesses, hotels, and motels in these counties generate vast amounts sales tax revenue, which the counties rely on for community growth and development. The Project would result in a decrease of revenue for the community businesses (gas stations, general stores, hotels, motels). Without this revenue, community growth and employment will be decimated. Second, construction of the Project would require relocation of county roads, an expensive task that cannot be funded by the counties. TCRR will not commit to covering the costs required to remedy the disruptions to the county road system caused by the Project. Nor has TCRR committed to fund future expenses in the event a county road needs to cross the Project. Such a crossing could easily exceed \$1 million per crossing, an expense the counties cannot afford. Furthermore, each of the rural counties has passed or intends to pass a resolution prohibiting TCRR from crossing any county road without a permit. TCRR has yet to coordinate with the counties regarding such crossings. TCRR has never applied for a permit in compliance with any such resolution. Unless and until TCRR commits to financially responsible for all negative financial impacts to the counties, no permits will be granted.</p>	
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>P. The DEIS fails to adequately address the Project's impact on children's health and safety. The DEIS fails to adequately describe the impacts the noise and vibration of the proposed high-speed railroad operation will have on the health of children in schools, daycare and homes near the proposed rail corridor—particularly those who have learning disabilities. In addition to NEPA's requirement that the EIS adequately describe these impacts on the human environment, Executive Order 13045 also requires federal agencies to "make it a high priority to identify and assess environmental health risks and safety risks that may disproportionately affect children" and to "ensure that their policies, programs, activities, and standards address disproportionate risks to children that result from environmental health risks or safety risks." The DEIS acknowledges that fumes and hazardous materials may impact children's health and safety because of schools in the area where the rail would be constructed, but the DEIS fails to consider the impact that the noise and vibrations of high-speed rail operations will have on those children. Children are "more susceptible than adults to a range of environmental factors," such as noise. Children are especially impacted by factors like noise because they do not have control over their environments, like where they go to school, or what train may be adjacent to their school. Noise has proven to affect children's cognitive performance, negatively impacting their education. One study showed that children taught in a classroom where railway noise could be heard demonstrated a lower reading level than the control group. Exposure to such noise can also impact speech perception, especially in children. Children in schools near noisy transportation have also shown elevated blood pressure and cortisol levels, indicating environmental-induced stress.</p>	Refer to NV-1 and SC-8.
Texans Against High-Speed Rail (Comment Report)	3/9/2018	Website	<p>Q. The DEIS fails to adequately address the impacts that electromagnetic fields will have on heart patients or facilities sensitive to EMFs. The powerful electric currents used to power the Project can interfere with the operation of sensitive medical equipment, including heart pacemakers. Yet the DEIS gives only passing reference to EMF impacts on those whose lives depend on proper operation of their pacemakers, while providing even less analysis of the medical and other public facilities that lie within impact range of the proposed route. The DEIS identifies five facilities that it calls "EMF sensitive receptors," but it does not describe how those facilities will be impacted by the project. Those facilities include: Fruitdale Park, Trinity River Greenbelt Park, Northern Cypress Medical Center, Panda Path School, and Weiser Airport. The DEIS must include a specific analysis of how those medical and other public facilities-"sensitive receptors"-will be impacted by the Project. In addition, the DEIS does not fully analyze how long a patient with an older model pacemaker can be exposed to electromagnetic fields before the EMFs cause a possibly fatal malfunction of their pacemaker. The DEIS states that the EMFs generated "may be of sufficient magnitude to impact operation of a few older-model pacemakers; in such cases, the older-model pacemakers may revert to an asynchronous pacing while in the presence of the HSR system." But the DEIS does not describe how many pacemaker-carriers will be adversely impacted by this project or how many will die or suffer serious medical consequences. While the DEIS argues that "[c]ardiovascular specialists do not consider prolonged asynchronous pacing to be a problem," it fails to cite any study or source for this assertion. Given the life-or-death consequences of a pacemaker malfunction, the mere say-so of the FRA that such malfunctions are no problem is insufficient to provide the</p>	<p><b>Section 3.15.4.2, Electromagnetic Fields, Literature Review</b> references (Central Japan Railway Company, "Environmental Report. 2010," Global Environmental Committee, <a href="http://jr-central.co.jp">http://jr-central.co.jp</a>.) states, "JRC notes that their N700-Series Tokaido Shinkansen train abides by all environmental laws. Further, the document states that JRC conducted EMF testing of both the interior and exterior of their N700-Series Tokaido Shinkansen train. The EMF inside the train and along the tracks is approximately one-third of the amount permitted by/recognized as safe by the International Commission on Non-Ionizing Radiation Protection guidelines and is safe for persons with medical pacemakers. The JRC has been able to achieve these low values through the implementation of high performance magnetic shields on the trains." Regarding traction power facilities, only workers would be potentially exposed to elevated EMF levels. These</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>decisionmaker a hard look at the health consequences of EMFs generated by this Project. Additionally, the DEIS includes references in multiple sections to traction facilities, but it does not address the potential harm that traction power facilities may pose to heart patients. In contrast, the EIS for the California High-Speed rail project concluded that "EMF levels above the recommended limits for employees with implanted medical devices could exist inside traction power facilities and emergency power generators." The California EIS determined that workers with implanted medical devices would not be allowed near traction power facilities. Given that the suggested remedy in California was to prohibit workers with implanted medical devices from entering those facilities, this DEIS is inadequate because it does not include analysis of how the EMFs generated by traction power facilities will impact people with heart conditions or the environment more generally. The DEIS provides inadequate analysis of how the EMFs generated by the Project will impact heart patients and the public facilities it identifies as "sensitive receptors" of EMFs. As a result, the DEIS does not provide sufficient information for the FRA to make an informed final decision on whether to approve the Project.</p>	<p>workers would be subject to OSHA regulations. <b>Section 3.15.3, Regulatory Context, Electromagnetic Fields</b> summarizes the regulations, "OSHA 29 C.F.R., Sub Part G, §1910.97 contains safety standards for occupational exposure to non-ionizing electromagnetic radiation. As noted in <b>Section 3.15.5.2, Electromagnetic Fields, Build Alternatives</b>, all Build Alternatives would comply with all federal regulations.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>R. The FRA failed to consider mitigation costs in the context of economic viability. In light of the removal of economic viability from the criterion, the FRA should explore all potential environmental mitigation measures, regardless of their cost. Examples include but are not limited to the following: noise and vibration barriers, including insulation to residences; light pollution mitigation such as specialty lighting or shields; tunneling 100% of the Project; elevating 100% of the Project at 15' AFG, 20' AFG, 30' AFG; station locations in each county along the affected corridor; sight impact mitigation such as tree mitigation programs; construction of independent green-energy power source such as solar panels; and structured pass-through tunnels on each property minimum 20' wide and 20' tall, and minimum 80' wide at all public and private roads. Finally, the impacts of a partially constructed Project, or fully constructed but bankrupt Project, must be evaluated at regular intervals during system operation.</p>	<p>Refer to NE-1 and PN-4.</p>
<p>Texans Against High-Speed Rail (Comment Report)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>S. S. <p>Texans Against High Speed Rail (Exhibit S)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>"The assessment identified potential locations where the HSR system could constitute a significant aesthetic or scenic impact. FRA identified 13 landscape units, a defined boundary within the Project's area of visual effect, along the Study Area, as well as key viewpoints (KVPs), or a location that represents the view of the landscape unit." How the FRA could only identify 13 landscape units with scenic value is an absolute mystery. Every landowner views his land as scenic as do all the people who live or pass through our country paradise. Putting an at grade or elevated track will not enhance beauty anywhere.</p>	<p>Refer to AS-1.</p>
<p>Texans Against High Speed Rail (Exhibit S)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>As per the Section 3.10.6.1 Mitigation Measures - The following Mitigation Measures (MM) would minimize the aesthetic and scenic impacts of Build Alternatives A through F. AS-MM#1 Public Outreach-Public Meetings with Impacted Neighborhoods. As part of the LID approach, TCRR shall continue to incorporate stakeholder input into design throughout the project to inform their decision-making process. Prior to construction, TCRR or its contractors shall present visual impact mitigation strategies to the following neighborhoods: Saddle Creek Forest Development (Grimes and Waller counties), Plantation Drive (Grimes and Waller counties), Mallard Crossing (Harris County), Stone Creek Ranch (Harris County), Mallard Crossing (Harris County), Stonegate (Harris County) and White Oak Falls (Harris County). For all other residential areas, public comments from the Draft EIS will be incorporated into the Final EIS. The responses and comments would be used to guide mitigation measures implemented during construction and operation of the HSR system. I am a Stone Gate homeowner. I have lived here for 16 years with one address. I have been following the Texas Central High Speed Rail project from 2014 when CLS contacted me to see if my home was for sale on two occasions. I have requested verbally and in writing that the Stone Gate neighborhood be involved, be notified and included in open house meetings and requested a neighborhood meeting for the residents. At the initial open house meeting at the Tin Hall in 2014, very few residents were sent an email from the HOA 30 minutes before the meeting. Not every homeowner got the email as many are not on the list. This gave no one time to plan to attend that meeting from the start. I requested at the open house meeting written notifications be send to each homeowner in the community. This was totally ignored. I continued my requests during the Surface Transportation Board (STB) process and in other forums and YET NOT ONE letter was sent to the homeowners. I would know since I have been activity following this and interviewing my neighbors. I never received any written notification of any type of involvement with Stone Gate and Texas Central Rail. The Stone Gate neighborhood was excluded from this process while the DEIS was being prepared, so our input was not included as the Section above indicates. However, Texas Central reps met with the Townlake neighborhood two miles up the road from Stone Gate and the proposed route. Here's the problem with this process. TCR and its third party vendors have not included all homeowners in the Stone gate community. They may have a public outreach after the March 9th comment period is over. That means Stone Gate residence concerns will not be part of the Final EIS. That's a huge problem. I am requesting the following: Certified return receipts letters be sent to everyone in StoneGate inviting them to a community meeting sponsored by Texas Central. An advance notification of two weeks to allow residents to make allowances in their schedule to attend. The meeting time to be set at 7pm to allow residence who have longer commute times to attend. The meeting to be set at a location to accommodate all community members and close to our neighborhood. Details of how TCR will mitigate sound disturbance, vibrations, decreased land values, visual pollution and other concerns of the community. The comments from this meeting must be included in the final DEIS or a decision of the No Build Alternative should be selected</p>	<p>Refer to PI-1 and PI-4.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	3.2 mil cars above they are counting each car saved is removing a round trip. Following this logic, the 3.2 mil cars from the Table E3.2-9 would be removing 6.4 mil cars on ISL which means 17-18k cars a day of AATD along 46. That is from a low point of about 28-30k AADT that includes semi/local and feeder road traffic. Hugely inflated if my logic is correct.29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf Table	The comment cites a comparison vehicle per day count (28-30K vpd) that is not a future corridor wide average. The corridor wide average from TxDOT's HSR application cited in the EIS, was 106K vpd.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"The long term forecast for annual ridership in 2040 would be 7.2 million passengers per year. TCRR estimates that 89 percent of the existing travel for the Dallas-Houston corridor currently occurs by car (private vehicle), while the remaining 11 percent occurs by air or bus. Based on this majority share, it was assumed for this EIS analysis that potential HSR passengers would primarily shift from private vehicle to rail. For the air quality emissions estimation at the full-service level (2040) scenario, the annual ridership of 7.2 million passengers, existing 89 percent share of people using passenger cars to travel between Dallas and Houston and average passenger occupancy of 1.2 passengers per car were then used to calculate the number of annual car trips of 5,340,000 cars per year. It should be noted that this number of vehicles that would no longer travel IH-45 between Houston and Dallas would equate to 14,630 vehicles per day, or about 14 percent of the 2035 annual average daily traffic of 106,475 vehicles per day projected in transportation planning documents for this corridor. Therefore, the mode shift would not be assumed to constitute the majority of travel along IH-45. Because station planning focuses on accommodating the long term and peak capacity facility needs, annual passenger ridership was not projected by TCRR for the initial service (2024) level. However, the number of trains was projected, which was used along with the train passenger capacity, and the average occupancy rate derived from the future service level ridership, to estimate an initial service level passenger ridership. With 68 trains per day, at a 62 percent occupancy rate of each 400 passenger-capacity train for 365 days per year, an annual ridership of 6,155,360 passengers was estimated." Assuming that all 89% of the people traveling by auto between Dallas and Houston in 2040 would switch to HSR is ludicrous at best. Assuming that 6,155,360 people would switch from car to HSR in 2024 is even more ludicrous. This is Texas, not Japan or France. Our transportation system is set up for automobiles. In addition, HSR will be too expensive for most people as it will be comparable in cost to air travel. The Amtrak High Speed Acela, which operates in the most densely populated corridor in the US, only carries 3.4 million passengers a year after being in service for 18 years and the cities served by Acela have the job density and transit infrastructure to support HSR. All of the decreases in air emissions based on these numbers are flawed. There may be a slight decrease in auto emissions but the HSR emissions are accurate and will increase overall emissions as the trains will run whether they have passengers or not. In addition, the emissions for ongoing maintenance, switching, and the nightly track sweeping operations were not included. "For the air quality emissions estimation at the full-service level (2040) scenario, the annual ridership of 7.2 million passengers, existing 89 percent share of people using passenger cars to travel between Dallas and Houston and average passenger occupancy of 1.2 passengers per car were then used to calculate the number of annual car trips of 5,340,000 cars per year. It should be noted that this number of vehicles that would no longer travel IH-45 between Houston and Dallas would equate to 14,630 vehicles per day, or about 14 percent of the 2035 annual average daily traffic of 106,475 vehicles per day projected in transportation planning documents for this corridor.19" This data is flawed as it using an average per station for the entire route which factors in traffic in Houston and Dallas who are very unlikely to travel to the other city. In order to achieve a more realistic data point one must use a data point near the center of I45. If you look at a data point just north of Fairfield you come up with these figures based on the AADT Route ID IH0045-KG "For the air quality emissions estimation at the full-service level (2040) scenario, the annual ridership of 7.2 million passengers, existing 89 percent share of people using passenger cars to travel between Dallas and Houston and average passenger occupancy of 1.2 passengers per car were then used to calculate the number of annual car trips of 5,340,000 cars per year. The text does not say 89% of all travelers using IH-45 would use the HSR. The 89% car share is the share of passengers that without high speed rail in place, would have used cars to travel between Houston and Dallas as opposed to bus or airplane. It is not the percent of all cars traveling along IH-45 that would instead take the HSR. It was used only to derive out of the projected ridership, how many would have been using cars as opposed to airplane or bus if they didn't take the train. Also, the 106,475 vpd cited is not an average at each station, but is a corridor-long average from TxDOT's 2035 forecast of average AADT along the whole Houston-Dallas corridor in the report cited. Since it is a corridor-long average, it is a useful metric for numbers of travelers originating in Houston and traveling to Dallas (or vice versa). Regarding power for ongoing maintenance, switching, and nightly track sweeping operations, power consumption provided by TCRR included train maintenance facilities (TMF), sectioning post and substations, and traction power at TMFs, which would account for consumption for those items.

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	15 mph speed limit how is that enforced. AQ-MM#3: Construction off-road vehicle speed limitations. During the construction TCRR and its construction contractor shall limit vehicle travel speeds on unpaved roads to 15 mph. 1 Dallas To Houston High Speed Rail Deis_Main Text 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf 3.2.6.2	Refer to AQ-11.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	2015 AADT 28,380 2035 Estimated AADT 54,490 24 Hour Truck Percentage 32.4 Please see the link <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> and highlight AADT and future traffic on the left hand side. Follow the data points along I-45 Using these figures of 54,490 of daily traffic and accounting for 32.4% of truck use and 35% of local traffic supported by TX Dot appendix, this leaves a total of 67.4% than would definitely not use the train. This figure leaves 32.6% that may travel this route to Houston and Dallas. This is estimated to be 17,763 cars per day.. 14% which is what they are using above of this figure puts the number at 2,486 vehicles a day removed. This greatly affects the emission and VMT estimation. We can also run the data with ridership as well to prove that their ridership numbers are absolutely unproven and flawed. Please let me know if you need to see the work regarding ridership as we have done a lot of work on this. We are working on a table now to show everything with citations.	Refer to AQ-11.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	how is all this enforced? AQ-MM#4: Road surface maintenance. During construction within urban areas, TCRR and its construction contractor shall promptly remove track out of soil on area roadways when it extends 50 or more feet from the construction site and at the end of each workday. AQ-MM#5: Construction equipment. During construction, TCRR and its construction contractor shall limit idling of construction equipment during periods when the equipment is inactive, and properly maintain construction equipment in accordance with the manufacturer's specifications. AQ-MM#6: Ground disturbing activities. During the construction period, TCRR and its construction contractor shall phase ground disturbing activities to the greatest extent possible to reduce the amount of disturbed surfaces at any one time. Implementation of the above mitigation measures during construction period would reduce localized PM10 and PM2.5 emissions by reducing fugitive dust and exhaust from construction and on-road vehicles. These mitigation measures could also reduce the quantity of other criteria pollutants (NOx, VOC and CO) and GHG emissions by limiting idling or otherwise controlling exhaust emissions from construction and on-road vehicles. No new air quality violations of the NAAQS would occur during operation of the Build Alternatives; therefore, no adverse significant long term operational impacts would occur and thus, no operational mitigation measures would be required. 1 Dallas To Houston High Speed Rail Deis_Main Text.1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf 3.2.6.2	Refer to AQ-11.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Same deal except the double is being doubled again to get emissions to NAA. i.e. E-19e you have Dallas cars at 1.5 mil and trip in Freestone being 31.9 31.9=63.8. So, the return trip is included to get the 97 mil that would be then adds Houston to the mix same way. Take the208,200,709 FRE NAA VMT divide it by 31.9 and you get 17,881 VEH per day on HSL. Which if you take the 1.2 passengers per car get you to 7.8 mil passengers at ISL level. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf Table E3-19	Refer to AQ-12.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	They are using I assume the N-S distance of Harris County to get the 56.8 miles for Harris County. This inflates the VMT and emissions for car reduction portion of this data. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf Table E3-19C	A duplicate GIS feature caused a doubling of the calculated HGB miles that has been revised to correctly reflect the approximate 27 miles from the Houston city center to the northern edge of Harris County. VMT and emissions have been recalculated in the Final EIS. The HGB NAA NOx did not show a net increase. Only the DFW NAA in 2040 showed a negligible net gain that was 0.1% of the de minimis threshold for general conformity applicability. The conclusion of no significant impacts to air quality from operational emissions in the Final EIS would not change.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	again the 2040 is about 2.5 bil miles the math does not work at 240 miles but only at 480 miles also the increase from 2024 to 2040 is to even close to each other Dallas or Houston. I think they are doubling the VMT to increase the emissions? 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf Table 3.2-13	Refer to AQ-3.

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	There is a 7.5% excise tax to Feds on airline tickets. This is omitted in the DEIS tax table 3.14-22. This is only for airline tickets and is not on rail tickets. This will be a net loss to the federal govt. Did a flight on saw for Monday RT. See below for price breakout. Saw the excise tax and found what that is. Also wonder if any TSA fees will be assessed? Federal Excise Tax: A federal excise tax of 7.5% is charged on airfare. Segment Fee: A segment fee of up to \$4.00 USD does apply per flight segment. A flight segment is defined as one takeoff and one landing. Jan 11, 2018 But anyways the money lost to the state should actually be 7.5% vs the 6.25% and be contributed to a loss for the federal government. None of this is shown in the table Please let me know if you need to see the picture of the airline ticket to see all the different fees (there is no state sales tax) Deis Tax Table 3.14-22	Refer to SC-16.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Cost breakout 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf	Comment noted.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Texas Central continues to dispute the \$199 average ticket price in the DEIS (Table 3.14-22) that is used for "various economic calculations": However, they continue to tout the results of the "various economic calculations" that use the \$199 average HSR ticket price. Texas Central also disputes the \$199 average airfare the DEIS uses, and says the average airfare is \$147. However, while the DEIS provides a source for the \$199, Texas Central provides no source for their number. At the press conference announcing the preferred Houston Station location, a Texas Central official said that the proposed HRS's ticket price would be sort of an average of 2/3 of airfare. At 2/3 of \$147, the average HSR ticket price would be \$98, or less than half of \$199. Plugging \$98 into Table 3.14-22 will reduce the calculated sales tax revenue by more than half. Texas Central touts the sales tax revenue computed in Table 3.14-22 on their website. Under the heading "The DEIS findings on the North Texas Bullet Train Station's many economic benefits:" they state: "\$10 million - Estimated local sales tax produced from the train's ticket sales in Dallas County." Directly under that they urge people to contact FRA about the DEIS. The \$10 million is calculated using \$199 HSR average ticket price. Patch.com says "[Mayor] Turner said the privately-funded project will nit [sic] cost the taxpayers, but rather the city will benefit from the sales tax - projected at \$12 million a year." Is this number also calculated using an average \$199 HSR ticket price? This is not insignificant. Elected officials and the public both may be influenced by the projected sales tax revenues. It is unethical for Texas Central to simultaneously tout the results of a calculation that uses the \$199 average ticket price and say that the \$199 ticket price is a "rumor". FRA should immediately issue a result of NO BUILD due to Texas Central's lack of ethics. Barring that, FRA should require that Texas Central not only fix the numbers in Table 3.14-22 but all items in the DEIS that they say are incorrect - an errata sheet should be provided - only then should the 60 day period re-start and public meetings should be re-held.	Refer to SC-3.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"As shown in Table 3.14-22, HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue." As flawed as Table 3.14-22 is, it does not show that "HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue". According to Table 3.14-22, it would take 694 years to reach \$39 billion in sales tax for the state. This is absurd. This is a simple math issue. If the people creating the DEIS can't do math, then every number in the DEIS is called into question. This is not a minor error. If it were insignificant, it would not be in Texas Central's video. Members of the public and public officials both could very well be influenced by the state of Texas getting \$39 billion in sales tax revenue. The DEIS and the DEIS comment period are fatally flawed. FRA should immediately issue a decision of NO BUILD.	Refer to SC-17.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"Dallas to Houston High-Speed Rail Draft Environmental Impact Statement" dated December 2017 uses Texas Central's proprietary documents as a basis for ridership. Texas Central refuses to release these proprietary documents. These documents are described in the DEIS as the "proprietary market demand study undertaken by TCRR" and the "TCRR ridership and revenue report". This is not open government. The FRA could have chosen several different public documents, such as the Reason Foundation's February 2017 report "Texas High Speed Rail: Caution Ahead", or TxDOT's December 2013 "Statewide Ridership Analysis Report: Statewide Analysis Model-Version 2.5" for ridership numbers. Why did they choose a proprietary report instead? The proprietary report is an extreme outlier, with 7.2 million riders per year, compared to Reason's 1.4 million and TxDOT's 700,000 to 2.7 million. The ridership numbers are not unimportant as they inform such things as reduction of vehicle miles traveled (VMT) which informs emissions calculations. Using Texas Central's proprietary documents, the DEIS says 14,630 cars per day will be taken off the road. Using Reason's numbers only 816 cars per day would be taken off the road. The proprietary report's ridership numbers give 18 times the number of cars per day taken off the road as using publicly available numbers. The emissions removed and reduction in traffic could inform many people's opinion of the HSR, both members of the public and public officials. Another instance the DEIS uses ridership from the proprietary report is calculating sales tax revenue. The DEIS states \$20 million a year for Houston and Dallas combined. Based on the DEIS table 3.14-22, this number could be overstated by 2.5 to 10 times, compared to publicly available sources. This could easily influence both the public and public officials. Additionally, Texas Central is saying the \$199 average fare is a "rumor" (implying it will be lower but not saying what the average train fare will be) used to calculate the sales tax revenue while simultaneously promoting the	Refer to BA-4, BA-6, BA-12, GN-1, GN-2, GN-3 and SC-3

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			sales tax revenue of \$10 million for Dallas. This is unethical. Another private project, All Aboard Florida, does include a ridership and revenue study in its DEIS - Appendix 3.3 F Ridership and Revenue Study Summary. FRA cannot use a secret, proprietary report as its basis for ridership in the DEIS. This is not open government. If Texas Central wants to keep its ridership and revenue report secret, that's fine, but the DEIS must use another source for ridership and revenue. As a result, the DEIS is fatally flawed and must be rescinded. FRA should immediately issue a decision of NO BUILD.	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Texas Central is still spreading the manure from the DEIS that the HSR will generate \$15 - \$39 Billion in sales tax revenue from ticket sales on its website AND telling people to comment on the DEIS: <a href="https://www.texascentral.com/itstime/">https://www.texascentral.com/itstime/</a> Even if every number in the DEIS's Table 3.14-22 were correct (big hint: they are not), it would take over 600 years to reach \$39 billion in sales tax revenue. This process is irretrievably broken. The DEIS must be scrapped and FRA must immediately issue a decision of NO BUILD.	Refer to SC-3.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	110 is on this page before 124 BV station since some of the positions are very thin so reduction of 14 full time folks will be a major impact. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 28 Of 199	The direct Project employment estimates in <b>Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts</b> are based on the latest available operational data from TCRR. Project employment in Grimes County would be equivalent to well over a quarter of existing unemployment.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	A talked to 12 people about the land use near stations. Was any for Grimes and any increase in growth included for Grimes county. Burden on ISD in area with a 12 mil station and track will not pay for the huge increase in student enrollment. Iola ISD has 700-800 students total, Richards ISD has 200 and Anderson Shire has 800 or more. So, if 2000-4000 new students in Midstop area will tax school infrastructure, can we get the list of the 12 people???? 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 4.3	Refer to SC-19. Comment includes insufficient detail to address the source of the 2,000-4,000 estimated new students. Any additional growth around the Brazos Valley Intermediate Station area would generate additional property and sales tax revenue beyond the conservative estimates reflected in this analysis. That additional revenue would offset the need for any additional county services.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No build has no access to save, reliable and efficient mode. 199 each way not useable for the Environmental justice as one county will have zero facilities - Madison so no jobs and no access 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 3.18.5.1	Refer to SC-3. Although TCRR does not propose a station or maintenance facility in Madison County, some job growth associated with the Project is expected. During construction of the Project, a significant temporary workforce will be needed to construct the alignment through Madison County, to accommodate the Project's demand for materials, and to meet demand driven by the construction labor force's additional income and spending. During operations, direct Project employment at maintenance facilities or stations could be filled by residents living in the study area. Proposed station and maintenance facility locations in Grimes and Leon Counties would be within a reasonable commuting distance for some residents of Madison County. Additionally, the total permanent employment documented in <b>Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts</b> , reflects the Project's ripple effects through the economy, and could include additional jobs for Madison County residents in supporting industries located in or near Madison County. Potential impacts to environmental justice communities within Madison County are documented in <b>Section 3.18.5, Environmental Justice, Environmental Consequences</b> .
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Why not more yellow with black dots? As Megan explained to me was that you have to look at the section that defines partial or full takings. That is not what tcp supplied but an aecom standard practice. So using that same method allows each route to be analyzed the same. No good way to determine impacts on door to door case as no one knows the actual takings that tcp does. Using the rules on takings and if the house is on a tract that would fit a full taking then it's not counted as a noise impact but as a taking. We went through maps and found one on a 45 route that I could tell by tree lines the Tract boundaries. Had one that it clipped the Tract decent amount with a house and no yellow dot. Then next door had a Tract with house that it barley caught the edge and it had a yellow dot. But white oaks yellow dots did not make sense. Only thing she said was maybe due to the closeness of the houses that some yellow dots were left off. If a house that has no yellow dot today due to aecom saying full taking. Then tcp either can buy the Tract or have to install sound barriers. Hence why I think tcp wants to buy out	Refer to NV-1.  The residences shown as moderate impacts are just above the threshold for moderate impact. For residences further from the tracks, there would be no impact, as the noise levels are lower at those locations.

			Dana. But another thing is if tcp must install sound barriers or improve the house to sound is ok. The. What happens with raw land that needs to be built on? Tcp will not pay for barrier wall so builder would have too which decreases the price. 16 Dallas To Houston High Speed Rail Deis Appendix D_Communityandculturalresources_Set_3Of3.Pdf Segment 5 Sheet 246 Of 257	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	More yellow with black dots Noise- Per DEIS rules of partial takings and full takings that the noise impacts was measured using that rule. So that is why you see some that has the noise impact yellow dot and others don't. If it's a full taking the house is put in the taking list and not the noise list. We went to White oaks falls subdivision and she could not answer why those were different and some had noise impacts where the 3 between them did not but none was in the full taking area. I forgot to ask that if TCR is taking full on the northern row of house why where they included in the sound impact. I think the rules that AECOM used for full taking did not apply there. AECOM rules of takings is not the SAME as TCP. SO if the AECOM full taking house is not where TCP will take full taking then TCP will have to mitigate the sound somehow. I keep bringing up to her that AECOM method may not be the real world so trying to count noise impacts across routes is tough. 16 Dallas To Houston High Speed Rail Deis Appendix D_Communityandculturalresources_Set_3Of3.Pdf Segment 5 Sheet 252 Of 257	Refer to NV-1.  The residences shown as moderate impacts are just above the threshold for moderate impact. For residences further from the tracks, there would be no impact, as the noise levels are lower at those locations.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Disagree with the demand of law enforcement under no build. You can see Grimes is way lower than Harris or Dallas so natural growth will skew that a little while a Midstation would increase that at a faster rate costing more money to the county 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 3.16.5.1	Refer to SS-1 and SS-6.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	TCR failed to label a cemetery right next to its route which could easily be affected and within permit range which would justify a cultural survey according to section 106 of the USACE. The Whitfield Lake Cemetery Memorial marker is on Strawther Road at coordinates 30.896089,-96.026603. This is only the stone memorial, not the actual burial ground. The graves are so old, most if not all are marked any longer. The marker is 203.67ft to the South West of being directly under the transmission lines. <a href="http://files.usgwararchives.net/TX/Madison/cemeteries/whitfield.txt">http://files.usgwararchives.net/TX/Madison/cemeteries/whitfield.txt</a> Ms. Stephenson comments about Whitfield Lake Cemetery: She said her understanding is that when they ran the transmission lines through, the company working the project removed the tombstones, but did NOT move the bodies. This was before she moved to Madisonville so she does not know exactly how far away from the memorial stone the actual cemetery is. She did state that she had been told that there could be up to 100 people in the cemetery. She also said in her estimation, if they start working in that area they very well could dig up bodies. Please contact Christie for pics <a href="http://www.spk.usace.army.mil/Portals/12/documents/regulatory/Reg_workshop/2016-04-01/RPW_Section106_2016_April-1.pdf">http://www.spk.usace.army.mil/Portals/12/documents/regulatory/Reg_workshop/2016-04-01/RPW_Section106_2016_April-1.pdf</a> This is the Campbell's property and he stated that the cemetery is still here and the parcel has not been surveyed 10 Dallas To Houston High Speed Rail Deis Appendix D_Project_Footprint_Set_40 f5 Page Page 79	Refer to CR-6. The potential for unmarked burials related to the Whitfield Lake Cemetery will be carefully assessed so that impacts can be avoided.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Smith Family Cemetery has the train or temporary construction area right on top of it. The DEIS footprint maps do NOT have this cemetery marked. Details for Smith Family The cultural maps have this cemetery and it will be impacted (Atlas Number 7113024705) 3820 East Illinois Ave Directions: At the intersection of East Illinois Avenue and Mayforge, turn south onto Mayforge which runs parallel to Interstate 45. Then immediately turn right onto private property which is fenced. The cemetery is located between the fence and a brick building which was originally the Linfield Elementary School built before 1954. Three gravestones are clearly visible near the fence not far from the right-of-way of East Illinois Avenue. Historic Texas Cemetery? Yes Designation Date 8/16/2016 Number of graves estimated 16 Burial Dates 1866-? Speed Rail (Exhibit S)				
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	During final design, TCRR shall coordinate with utility providers such as Oncor and CenterPoint to provide connections to the electric grid. The modifications required to make these connections include relocating existing lines, connecting new lines and vertically adjusting existing poles. The location of these modifications would be determined by the utility provider. The utility provider may choose to include these modifications into existing plans to support the operation of their system. As the owner of the utility, the provider would manage and lead the environmental process associated with the modifications to provide the connections to TCRR's infrastructure." The utility providers will have to use Eminent Domain to take more land to run power lines to this train possibly at some distance from the ROW. This is a further burden on adjacent landowners.Eu-Mm#5	Refer to EU-2 and LU-14. As defined in <b>Section 3.9.5.2.1, Utilities and Energy</b> , the Project LOD includes the potential locations of electrical utility modifications, including new connections to HSR facilities, and these areas are included in the assessment of impacts in the Final EIS.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	7.5MWH for a round trip But 68 trains 68 times 7.5=510 close enough to 448 if they remove the power from regen braking But the number of trips per day at 68 and using the RT MWH does not compute. This has to be 34 trains heading one direction per day so 34 and 34 to make the 68. But the power should be 34*7.5 mwh this hurts us So is the 7.5 for RT wrong or is the 68 trips wrong? TCRR engineers provided the data Geez but another example of being 200% or more wrong and how can anyone comment on data so flawed and not have a second chance to comment on updated info.	Refer to AQ-3
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	They will condemn and take over wells to shut them in. What happens to the minerals in place? Almost sounds like the well will be shut in but minerals still available to recover 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 176 Of 199	Refer to ED-4
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The FRA is responsible for RR Safety & Security. But yet, the FRA was silent on any Comprehensive Risk Management System applied to Assess the Risk of Crossing Large Live Pipelines (2) and a Transmission Line in the Utility Corridor within Leon County. A Comprehensive Risk Management System must be applied including Specific Risk Assessments that identify disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce, eliminate or manage the risk. This must be done for the Utility Corridor Crossing and the crossing of any other potentially dangerous systems for a credible understanding of the safety risks associated with the HSR for the Public Safety. The FRA will be held accountable if this risk work is not performed Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Fdce V7 Report Sect. 3.12, Pg. 49 Of 199 Sect 4.1, Pg. 62 Of 199 Sect. 4.2, Pg. 63 Of 199 Sect. 4.4, Pg. 64 Of 199	Refer to EU-2, SS-18 and SS-19. In Leon County, Segment 3C is proposed along the 1-45 corridor and would not affect transmission lines any more than the existing infrastructure. Where Segment 4 crosses transmission lines south of Concord, TX, engineering refinements will be conducted in consultation with the utility provider to address any hazard controls identified through TCRR's Hazard Analysis (Refer to <b>SS-CM#4</b> ).
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	State solar panels will be used but no amounts listed. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 60 Of 199	Solar panels are incorporated in the FDCE as an option for sustainable development of the stations in <b>Section 3.14.2.4, Socioeconomics and Community Facilities</b> and will continue to be evaluated during project design.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Grimes has 2 with 2330 and 342090 high with avg of 69054. Math is not correct. I will see if I can get on RRC site and confirm where the two are located and get Grimes CAD to get value. If data is a few years old and wells are recent that value is way wrong. East of me more gas and lower value oil well. North and west of me is the sweet spot for oil and Madison County is huge on nice wells from last boom. Lots and lots of horizontal east west all over that area. Some where else they just plan to buy the wells and close them. So, driller would have to spend 4-7 mil to redrill for a well that is producing 300-700 barrels a month. Mineral owners get screwed and especially if TCP buys the minerals estates. Or will it be buy the well and close it down, therefore minerals get released back to the owners or lease out later. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf Table	Refer to LU-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Environmental Considerations Evaluation of Lessons Learned by the Public Utilities Commission of Texas regarding the use of the Utility Corridor in Leon County for a previously proposed Cross Texas Transmission Line. The FRA must communicate the results of the significantly Westward movement of the Cross Texas Transmission line a year or so ago away from the Leon County Utility Corridor due to Environmental Reasons and why that information did not influence the FRA on the selected Utility Corridor Route. The Utility Corridor was one of 64 shortlisted routes.	Refer to BA-5, BA-8 and BA-11.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	5.340 mil cars a year saved but that should be 236 miles vs the charts 478 miles. Increasing the BTU by 2. Cannot make the math work on this one. If 5.3 mil is for RT then passenger count would be 5.3mil X 1.2 (pass per car) that would be 35,000 passengers a day. Huge inflated number 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf Table 3.9-19	Refer to AQ-3 and GN-2
Texans Against High	3/9/2018	Website	After reviewing the DEIS, I found it troubling that the FRA would suggest that the Pipelines, utilities and roads be consider as independent projects. The Pipelines, utilities and roads would not require modifications, relocations or removals if the high speed rail wasn't coming through. The CAL HSR FEIS included FERC and public Utilities. Are there different requirements between states and corporations proposing	Refer to EU-2, EU-1 and SS-18.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Speed Rail (Exhibit S)			high speed rail projects? I contacted FERC about this troubling fact, that they were excluded from the FRA process for the TCR HSR project. FERC stated and I quote "Request the FRA to include FERC and PHMSA in the Texas Central High Speed Rail project." Today I am requesting that FERC and PHMSA be included so they may become contributing agencies in this environmental impact statement since they are the responsible agencies to the management of pipeline safety. All affected pipelines, roads and utilities should be considered as the full impact of the project in one environmental impact statement. Yes this means, a little more time will be required to come to a final determination, but in the long run everything will work seamlessly. Including FERC and PHMSA in the overseeing the 142 affected pipelines is the only responsible action.	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	TCR's construction and daily operations will have a critical impact to the safety of pipelines that crosses and/or runs parallel to this proposed project. The introduction of a new constant source of electricity and vibrations will cause fatigue upon the existing pipelines. This fatigue will lead to failure. Failure will result in an explosion where loss of life is highly probable, there will definitely be property damage, companies will have to make apologies and lawyers will settle in court. There are impacts from this project that I have very little confidence will make it to the pipeline companies if TCR is left with the responsibility of making that happen. TCR wants us to believe the impacts are less than reality. <a href="http://www.gisp.rrc.texas.gov/GISViewer2/">http://www.gisp.rrc.texas.gov/GISViewer2/</a> The FRA can not afford to have its reputation tarnished, you are here to protect the public and the environment. By allowing pipelines, utilities and roads to be treated as separate projects, the possibility of critical operational data may not make it to the relevant parties so that necessary precautionary steps can be taken.	Refer to EU-2 and SS-18. The zone for potential vibrational damage to structures is not likely to extend beyond the operational corridor, as explained in <b>Section 3.4.5, Noise and Vibration, Environmental Consequences.</b>
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	NLT one year is conducted and two more needed but it has 2017-2019 that FRA will conduct more surveys Navasota Lady Tresses (endangered species) 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf Nr-Cm#7:	Refer to NR-4. For information regarding the Endangered Species Act and federally listed species with potential to occur within the Project see 3.6.4 Affected Environment". Section "3.6.4.4.2 Protected Wildlife Species" discusses federally and state-listed species reported by USFWS and TPWD. All species listed as threatened or endangered by either the ESA or by state for Navarro County are included in "3.6-8: Protected Wildlife Species with Potential to Occur within the Study Area.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	There are numerous sightings of threatened species such as bald eagles along the entire route. The mortality of such birds and high speed rail has not been addressed in the DEIS. Here is one such study. <a href="https://phys.org/news/2018-01-birds-collide-high-speed-rail.html">https://phys.org/news/2018-01-birds-collide-high-speed-rail.html</a>	Refer to NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife.</b> Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b>
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The amount of Environmental Survey Inspection performed with "Boots on the Ground" vs. the use of Regional data or data taken from unidentified sources. Also, how much of the field data used in the DEIS is supported by Signed Landowner Survey Permission Forms. It seems there is an enormous amount of Regional non-specific data used in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without reconfirming all of the data from other sources by a comprehensive inspection program all across the proposed route, the data the FRA is using is Not Project Specific and is suspect of being Out of Data. The DEIS is Fatally Flawed because of this.	Refer to GN-1, NE-8.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Wolf, panther and cougars or mountain lions not listed. Wolf for sure in area. Some big cat in area also. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 1 Of 4	Red and Gray wolves are considered extirpated from the state. Mountain lion (Puma concolor), also called cougar and panther, is the only species of large cat that occurs in Texas. Any impacts to mountain lions would be temporary as their ranges can vary from 10 to over 300 square miles (Schmidly and Bradley's "The Mammals of Texas" copyright 2016 by the Texas Parks and Wildlife Department).
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"There are several pairs of bald eagles that roost at Gibbons creek and have fledglings that could be prepared to make nests outside of Gibbons. The Maxwell property has seen a pair on their family property every weekend since deer season this year." This is a mile from the train route and the FRA maps do not include the bald eagle information or sightings in their documents. This info is noted from an environmental scientist. 21 Dallas To Houston High Speed Rail Deis Appendix D_Naturalresources_Set_4Of 4 Grimes County Section	Refer to NR-3. For information regarding impacts to wildlife and vegetation refer to <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife.</b> Impacts to wildlife and vegetation will be minimized due to

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"TCRR designed 52 percent of the Build Alternatives adjacent to existing infrastructure, which typically includes areas that have previously been disturbed by development. This design approach minimized impacts to more environmentally sensitive areas and potentially reduces the fragmentation of existing habitat." Building beside a Power line ROW is not the same as building next to a Rail Road or a Highway. While all are infrastructure, a Power Line ROW does not have nearly the impact or disruption as a highway or railroad Es.7	Refer to BA-5, BA-8, BA-9, BA-10.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The public roads as evidenced in the drawings fragments almost the entire route even the viaduct sections. This is not what was proposed to the public and in order to mitigate this clear damage, the train should run alongside existing roads. http://www.iene.info/wp-content/uploads/COST341_final_report.pdf Dallas county- about 50% new public roads. Ellis county- about 50% new public roads. Navarro county- about 10-20% new public roads. West of Teague segment (Madison, Limestone, Freestone, Leon) about 90% new public roads. Houston segment (Harris, Waller, grimes)- about 40-50% new public roads or realigned public roads with the majority of Grimes county with new public roads and a significant portion of beginning of Houston section with no designation. These new public roads will not allow free passage of livestock and wildlife and will further fragment our wildlife and go against what they are claiming in their wildlife crossing maps. 53 Dallas To Houston High Speed Rail Deis Appendix G_Tcrr Fdce V7 Dwgs Volume 5 Pg 13-End Plus Review Corresponding Maps 45-52	Refer to BA-5, LU-11, NR-6, TR-8.
Texans Against High	3/9/2018	Website	TCR is proposing to use existing drainage ditches which were not designed for their capacity. One very important concern is TCRs runoff will contribute to flooding since they will not be creating their own adequate drainage. Then to top it off they will add additional trains below their	Refer to FP-1 and WW-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Speed Rail (Exhibit S)			structure which will not have its own drainage. Every project is supposed to supply their own drainage retention and not push it off or use existing. An example is in stone gate they said they would use existing drainage. They also don't have all the detention reservoirs next to train. What will happen to all the runoff drainage?	Near Stone Gate, drainage infrastructure would be incorporated into the project to ensure negative impacts to existing drainage would be minimized and avoided.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"FRA's updated Procedures for Considering Environmental Impacts states that this EIS shall assess impacts of the Build Alternatives on floodplains. This document requires acknowledgment in NEPA documents that a proposed action would occur within a base floodplain, defined as the limits of a floodplain determined by using the Department of Housing and Urban Development floodplain maps or best available data. An EIS is required to discuss alternatives located in the base floodplain; the risks associated with those Build Alternatives; impacts on natural and beneficial floodplain values; and the adequacy of the proposed methods to minimize harm." Only considering floodplains in the modeling is shortsighted as this 239 mile rail way will actually create floodplains by inhibiting sheet water flow from flood events. A Harvey type rain event for the entire length should be modeled to truly see the impact from flooding and what mitigation measures are necessary 3.8.2	Refer to FP-1, SS-17, WW-1 and WW-2.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	They list Madison as subject but use Navarro county hazard mitigation plan. 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 3.16.2	Navarro was a typo as the section was discussing the Madison County Hazard Mitigation Plan Update. This text has been updated in the Final EIS in 3.16.2, Safety and Security, Regulatory Context.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Why does the emissions from the activity of getting the resources not included, they include the transport of the goods? So, no build will save more emissions if you don't need the raw materials. 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 3.21.5.2	Construction emissions estimates did include delivery of the major bulk components such as concrete, aggregate, rail ballast, structural steel, and rail steel, as described in Section 3.2.3, Methodology. Transportation emissions included emissions from light trucks, short-haul trucks, long-haul trucks, concrete trucks, and freight rail locomotives.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	15% of peak of 2280 then if you take 2280 time 6 hours of peak (I think 3 and 3 hours for peak). You are over 13,000 Riders for peak times while 5 mil is just under 14,000 riders. Maybe using 2040 ridership?? If 15% of peak is 342 then you are over 2000 passengers from Midpoint daily which 30/90 has traffic counts around and just under 5K a day. So, adding maybe 50% to traffic counts would those peak travels have more of an adverse effect on Roans Prairie than normal larger highways? 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 3.11.5.2.8 99.13 out of de minimis of 100 tons per year. Kind of nice for them. 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf Table 3.2-15	Refer to AQ-3
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	14,630 vehicles per day at 7.2 mil passengers 89% car at 1.2 per car it states 14% of the 2035 AADT of 106,475 from the 59- 39 mph chart used in STB taking 14,630 off the road In the middle will be a lot larger which is a larger market share that shows it not feasible. So, if today service at 5 mil and 89% is by car that would equate to about 10,205 cars a day. That is well over 30% of traffic counts on middle 45 also that is total traffic counts for semi and local feeder traffic. Are 1.2 riders per car the correct number? 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf 3.2.3.2.2	Refer to AQ-4
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No determination was made of applicability under the Toxic Substances Control Act of whether any chemicals imported will be on the TSCA Inventory.	As discussed in Section 3.5.6.2, Hazardous Materials and Solid Waste, Mitigation Measures, and mitigation measure HM-MM#2, Hazardous Materials Management, all hazardous materials/chemicals handling would comply with applicable federal and local regulations, including the requirement that any imported chemicals would be on the TSCA Inventory. ((RESPONSE MAY NOT BE FINALIZED))

Speed Rail (Exhibit S)			Management Practices will eliminate the possibility of generating less than 220 pounds per month of Ignitable, Corrosive, or Toxic waste for a 240 mile Rail Road with 10 eleven acre TPSS transformer substations, 8 twenty acre MOW Maintenance facilities with the attendant Sweeper and Shunting vehicles, 3 terminal facilities, and the 2 one hundred acre TMF stations with the attendant Shunting vehicles, paint shops, repair and assembly shops, and washing facilities is not realistic. There should be adequate data from the Japanese Operations for each of these.	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No assessment has been made and therefore no discussion for the required TPDES waste water discharge Permits for the TMF Facilities with the attendant maintenance, assembly, paint and washing facilities. These point source discharges are covered in Effluent Limitations Guidelines and New Source Performance Standards for the Metal Products and Machinery Point Source Category 68 FR 25685. This permit is required before construction can begin. Again data should be available from Japan.	Refer to WW-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Disturbance of all the hazardous waste sites could potentially put the public in harms' way. ?According to the EPA Toxic Release Inventory, it shows Harris County to be one of the most polluted counties in Texas. ?Once polluted and hazardous waste areas are disturbed it opens the door to releasing all sorts of toxins that could harm the public. ?This is a proven fact as it has already happened in other parts of Harris and Galveston Counties. ?A good example of this is the dioxin waste pit sites on the San Jacinto River, that have been exposed due to flood water and storm damage weather events which released the dioxin into neighborhoods causing cancer cells or pockets within the communities. ?These toxins seeped into the ground and water. It took years for people to discover this since so many parties did their best to deny and hide relevant information that endangered human life and the environment. To this day there is no permanent solution to this environmental disaster. The route along Highway 290 (Utility Corridor) is no different. According to the DEIS, 307?hazmat sites were identified in Harris County. Forty six (46) are adjacent to the limits of disturbance (LOD) and twenty nine (29) are inside the LOD, however only forty (40) out of these seventy five (75) sites will be investigated. A site that was not appropriately rated was the Wyman Gordon properties (which have changed hands in the last two years). If research on all the previous owners is performed in the Harris County Judicial courts along with Wyman Gordon, you will find that people have sued Wyman and Cameron Forge because employees have died of different types of cancers from the products or by- products or hazardous waste that Cameron and Wyman Gordon used and disposed of on and off site. Additional concerns stated in the public forum, are, that TCR understated their construction workspace and if the record of decision and the final EIS are issued, nothing prevents TCR and its third party vendors to stay strictly within the footprint that was reviewed. Thus, meaning those sites they listed as low and outside of the reviewed footprint would be disturbed and no oversight on these hazmat sites would occur, nor would a proper investigation be done on these sites. These sites would not be properly cleaned thus causing contaminates to be exposed that would put the public in harms' way. The FRA can not be 100% certain that construction of the HSR will not release toxins in the environment. ?The FRA also can not be 100% certain, all relevant information about hidden hazardous sites have been given to you or reviewed. These will be discovered after construction starts and then there will be no oversight of how those sites will be handled. If the federal government won't protect the people, then who will? The Utility Corridor (route along Highway 290) is not a viable solution as there are too many factors going against it. Due to the numerous road closures, such as the Beltway 8 which is a main thoroughfare, road relocations, the pipelines and utility relocations, not enough adequate drainage or detention and the numerous hazmat sites that would be disturbed. The Utility Corridor (route along Highway 290) is not a viable solution as there are too many factors going	Refer to BA-5, HZ-1, HZ-2 and LU-14.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Mr. Kevin Wright, After a review of the information published in the DEIS, information for two properties along the proposed route for the High Speed Rail may have been omitted. A review of the current vesting deeds of properties that Wyman Gordon Forgings sold has brought to light some alarming facts about the condition of the properties along and abutting Highway 290, UPRR's easement off of Telge Road and NW Lake Drive in Harris County. A review of arials from Google Maps (attached Exhibit A) shows these properties never had a structure on them but were used as wastewater lakes for industrial purposes which was used by Cameron Cooper, Cooper Industries, Cameron Forge Company, Cameron Iron Works and Wyman Gordon Forgings starting somewhere around the late 1950's or 1960's. A review of the EPA records shows Wyman has a history of dumping contaminates into water sources and drains which ultimately seep into the ground. This continued negligence has set a precedent which makes these properties high risk. A review of the full title for these properties will reveal more than I am presenting today. The vesting deeds attached to this letter clearly indicate contamination exists and still persist; otherwise Wyman Gordon and NW Lakes would not have put language referring to hazardous contamination and indemnification clause with no liability. Here in Harris County we have experienced recent and past flooding events that have carried contaminates onto adjoining properties. The wastewater pit (as Wyman and NW Lake have acknowledged in the vesting deed) has in the past (prior to it being emptied) overflowed onto the existing pipeline and railroad easements where the high speed rail is proposed to be located. Exhibits B & C - Two Special Warranty Deeds where Wyman sold the 0 Telge Road property to NW Lake in 2012, in that deed it states "present and future use of wastewater and wastewater capacity" along with a restriction of use which prohibits daycares, schools or residential use as well as contamination by hazardous material clause. NW Lake then sells the property off to Angadare Land in 2016 which has additional language to include hazardous material contaminants and a Superfund site. Shortly after the sale the lake was drained and 10 to 15 feet of dirt was put over the lake, the site was not	Refer to HZ-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>cleaned just covered up. Now a shell of a building and concrete covers the majority of the property near where the high speed rail is to be located. Since the previous deed stated wastewater and contamination by hazardous materials, a further investigation is warranted to ensure this was not used as a tailings pond or a waste pit. Over the past 16 years living in this area, I have personally witnessed flooding from the lake property overflow and flood the pipeline easement and railroad easement, which has occurred numerous times. This property had a chain link fence with three strand barbwire at the top with no trespassing signs every 50 feet. Exhibit D - There was a wastewater pit similar to the NW Lake property located on Gyrodata Land abutting UPRR easement, a drainage ditch and Highway 290. The google map imagery shows this property never had a structure located on it, only wastewater pit. The Correction Special Warranty Deed acknowledges contaminants may persist including hydrocarbons, asbestos, hazardous materials and toxic contaminations. The language as highlighted in the attachments are indication of knowledge of contamination where a party is seeking indemnification against any and all liabilities and cleanups. The high speed rail project is proposing to locate a drainage retention pond on this property, which would connect into an existing drainage ditch. This action would spread unknown and known contaminants affecting surrounding homes and communities exposing residents to harmful substances which are known to cause cancer</p>	
<p>Texans Against High Speed Rail (Exhibit S)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>[CONTINUES FROM ABOVE] I strongly disagree with the findings in the Draft EIS in regards to these sites and area as being of low concern calling for no further investigations. EPA records indicate that Wyman Gordon Forgings has continued to release in the environment; Chromium, Cobalt, Copper, Hydrochloric Acid, Hydrogen Fluoride, Lead, Manganese, Nickel and Nitric Acid. We are not aware of how Cameron Cooper, Cooper Industries, Cameron Forge and Cameron Iron Works may have contributed to possible contaminants on these properties prior to Wyman's use. What we do know, was these lakes were created for wastewater from industrial uses that would not of stayed stationary and would of seeped into the ground and surrounding land. The vesting deeds clearly indicate contaminants persist thus requiring a full investigation to identify and/or rule out a health and safety issue to the public and school children. These properties have not been properly cleaned. They are being modified to hide the issues being presented. A Comprehensive Phase II Assessment should be conducted on the following properties where the high speed rail is proposing to be located, which are listed below: Current Owner Address 1 - Gyrodata Land LP 0 Northwest Lake Drive ownership removed from tax records 2 - Angadare Lane LP 0 Telge Road ownership removed from tax records 3- Hardy Maley Holdings 22770 Northwest Lake Dr 4 - Wyman-Gordon Forgings 0 Northwest Lake Dr Tax Parcel ID # 272810010001, 1385350010001, 0422320000330, 1272810010010, 1272810010002, 1272810010003. These affected properties by no means can be passed over and not have a Comprehensive Phase II Assessment conducted. Since one deed clearly directs the reader to believe that there is the potential for a Superfund site to be discovered on the property and current pictures of active contamination, these properties should be fully investigated. Were these documents and this information presented to FRA for the environmental process? I did not find these properties mentioned in your findings. If a superfund site or hazardous substance contaminates are identified, then these properties should be avoided at all costs and the route along Hwy 290 should be abandoned. Incidentally this is not the only highly contaminated area or site of known contaminations in Harris County along Highway 290, Hempstead Highway and along Post Oak Blvd. As you review this information please remember there are three residential communities west and south of Wyman and three active schools right across Highway 290 which are Cy-Fair Senior High School, Arnold Junior High School and "between 3,145 and 4,394 acres (Build Alternatives E and D, respectively) of special-status farmland would be permanently converted to transportation use. However, given the quantities of special-status farmland within the 10 counties (2.3 million acres), the Project would require 0.2 percent for the construction of the Build Alternatives, this would not result in a significant impact or loss to crop yields, livestock numbers or the state agricultural economy. Overall, between 7,957 and 8,218 acres (Build Alternatives A and D and Build Alternative F, respectively) of existing land would be converted." While the loss of 0.2% of the agricultural land is not significant statewide, it has a devastating effect on everyone in the local area, not just the land that is taken. People live in the country because they want the peace and quiet of a rural atmosphere. They don't want a High Speed train on their property or anywhere near it. The HSR will be heard for miles, especially if it is elevated. And one train every 30 minutes is almost a constant disturbance.</p>	<p>Refer to HZ-2, HZ-3 and LU-2. Wyman Gordon Forging facility is addressed in standard response HZ-2. Parcel ID# 1385350010001 (22400 NW Lake Rd) and parcel IDs# 1272810010010 (0 NW Lake Dr.) are addressed in standard response HZ-3. Parcel ID 1272810010002 (22770 NW Lake Dr.) is not included in the Final EIS because based on historic aerial maps review, there are no water bodies at this parcel. Parcel ID 0422320000330 (7708 Jensen Dr. Houston, TX) is not located within the study area and is not included in the Final EIS for this reason.</p>
<p>Texans Against High Speed Rail (Exhibit S)</p>	<p>3/9/2018</p>	<p>Website</p>	<p>Skewed data if the 354M in livestock in the middle vs statewide 18bil. Panhandle has huge feedlots that rec cattle from all over the country. We have no feedlots in Grimes to speak of so our \$600 calves get sent north and sold for slaughter and \$2K. so without our feeder cattle the state income would drop due to less calves hitting the market. The sale barns in Grimes alone sells close to 120-150K head a year. Old sale barns sell about 1500 to 1900 a week and new barns sell maybe 1000 to 1200 a week from Grimes county and nearby counties. Plus, all the cattle that gets send elsewhere that are not sold in the barns. 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 3.13.4.2.2</p>	<p>The 10-county Study Area still accounts for approximately 2% of all livestock sold in Texas, but as noted, the majority of the counties in the Study Area raise significant levels of beef cows.</p>

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" affect. Finally, there are no specific boundaries or conditions for Noise Mitigation place on TCRR except to state it will be looked at after more detailed design is completed. That is giving way too much discretion to TCRR The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix E Combined Tech Memos Set 1 Of 2 Pgs. 4-8	Refer to NV-1 and NV-10.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	the LOD should be specified for each criteria discussed such as noise, vibration. Etc.	Refer to LU-14, NE-9.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"Between the county's northern boundaries where the proposed route crosses SH 99, the land use is mostly rural with scattered single family residences." They failed to address noise levels where the train will be right next to a wedding venue which will greatly impacted this business and will result in shutting it down. Again they have this site mislabeled as agricultural when it is a business and sound levels were not accounted for in this area at all. Any increase of noise would be detrimental to this business and was not addressed at all. They were not consistent with their noise measurements for any of the counties and used various time intervals for certain locations. They did not state exact measurements as well from structures to train. Highly subjective results and too many variables and data points not addressed to be accurate. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2 Pg 91	Refer to NV-1 and VA-4.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"Calculation of noise impacts began with capturing baseline ambient noise measurements at key locations near sensitive receptors along the Build Alternatives. FRA compared these baseline noise measurements against modeled noise levels for both construction and operation of the HSR system." Unfortunately, FRA used Ldn(Day-Night Sound Level) as a baseline to compare to modeled rail noise. While this is a useful comparison for total average noise, Lmax (Maximum Sound Level) at a location should be used to add to Lmax from the train to get a true picture of the maximum noise at a location. Decibel levels are not numerically additive but they are additive and peak noises can be dangerous. Es 9.5	Refer to NV-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	<a href="https://physics.stackexchange.com/questions/259639/slapping-sound-when-trains-pass-each-other">https://physics.stackexchange.com/questions/259639/slapping-sound-when-trains-pass-each-other</a> <a href="https://www.researchgate.net/publication/222156045_Aerodynamics_of_high_speed_trains_passing_by_each_other">https://www.researchgate.net/publication/222156045_Aerodynamics_of_high_speed_trains_passing_by_each_other</a> The fact remains they Only Assumed One Train Passing and Nothing about the Slapping Sound was used in the Noise Study which makes it ALL Incorrect or Inaccurate The Design Sound Level Criteria must be Accurate to validate ALL other analysis work. This is not to mention they used the WRONG TRAIN Speed which I bet does have an important affect on the Slapping Sound impact since Speed does play a roll per what I had read on the Slapping Sound. I don't know the accurate number, but my	Refer to NV-10.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"There is only one single-residence on NB and SB sides projected to have moderate noise impact." My question is: Did they measure every residence in order to give a definite number of only one residence? Nv - Pages 3124-3125 (Comb. Pdf), Deis Page Numbers 64-65	Projections of HSR noise and vibration were made for all residences within the screening distances for all alternatives.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Roy and I tried our best to find someone with AECOM or TCR to get to the bottom of the true Noise Methodology used by them in the DEIS as an entire basis for all of the Noise Analysis. Other than a bit of information about likely a small increase in DBA for the Second Train, we could only get them to say for sure they have the sound for one train in the numbers, not for two trains. they did acknowledged there will have two trains passing (wow) but the DBA increase would be small because of the logarithmic noise curve, AND regarding the "Slapping Sound", they must have done some recent checking as they knew someone out there was asking the question about it. all they could say was the slapping sound was while a hsr is traveling through a tunnel which is only part of the story. that is actually how the slapping sound was discovered. but obviously they did not have time to read up any further on the slapping sound analysis work that was done with two HSR trains passing each other in opposite directions that had nothing to do with a tunnel. I had to ask some very specific questions so they could not do the "side step" just to get that much out of them. they claimed the people who did the detailed noise work were not available at the meeting. I told them I thought since august 8, 2016 when I advised Michael Johnsen with the fRA about the Slapping Sound, they should have had enough time to look into the matter if they really wanted an Accurate Noise Criteria Number on which to base their Entire Noise Analysis- When you double the sound source you increase it by 3 dba is the rule of thumb used. He could not answer the passing comment but just if you had 100 trucks on freeway makes x sound level and you double that source to 200 trucks the rule of thumb is X 3 for total Think of it this way on jet	Refer to NV-1, NV-6 and NV-10.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			engine if you hear one plane at full throttle and another one right beside it fires it engines up its not double the sound pressure and its an additive effect in a logarithmic way. So a 3 dba is a decent amount of increase although 85-88 dba may not look like it but it is. The below explains it a little better. DO NOT forget the sound demo per Greer is 125-175 mph and that alone should be an huge issue <a href="http://www.noisehelp.com/decibel-scale.html">http://www.noisehelp.com/decibel-scale.html</a> See link below Got to 3:40ish and you will see the 125-175 (all noise impacts measured on falsely lower speeds) <a href="https://www.youtube.com/watch?v=JxJAEDgNxrw">https://www.youtube.com/watch?v=JxJAEDgNxrw</a> Greer told me that the speed of the trains during the test went from 125mph to 175 mph!!!!!! Now we have to find out how that ties into everything else in the DEIS and see what data or impacts were using this 175 mph top end speeds. The Aero noise as yall know takes over about 150ish so they are not including the 205 actual levels? I think the sound demo was based on this research so that train in the film was only going 175 mph? it was 85-86 dba at 50 yards. SO 205 mph is how loud??	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No speed indicated. Most Japan trains run at 186 mph 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 193 Of 199	Refer to TC-3.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Rice Field - If ready to harvest it would be dry, thick and absorbing sound. If it was under water it would reflect more sound. Rice harvest in Japan is August to September. So, dried out rice field would skew the noise to the downside. What was the speed of the train? 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 194 Of 199	Refer to NV-1 and TC-3.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	All the sound measurements do not list how many trains per day, if any repairs every night, or speed of train is being measured. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf	Refer to NV-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Since all this measurement on sounds makes sure there are no issues, doesn't this admit that nearby open property is going to be lower in demand for building therefore reducing value. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf	Refer to NV-1 and VA-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Gathering of sound - was the train going 205 MPH? They assume the 87 DBA for all speeds regimes. Any measurements of nightly maintenance crews? That should skew the LDN up as due to the different rate this applied to night rural sound sources. 29 Dallas To Houston High Speed Rail Deis Appendix E_Combined Tech Memos_Set 1 Of 2.Pdf Pg.	The noise assessment assumed an operating speed of 205 mph for the entire corridor. The FRA noise assessment is conducted on a cumulative basis, which looks at the total noise over a 24 hour period. The assessment is based on the reference noise level of a train passby at a known speed, the total number of trains per day and night, the length of each train, and the actual speed of the trains at a given location. The cumulative effects are for a typical 24 hour period of operations. Because activities such as maintenance only occur occasionally, they are not included in the noise assessment.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Goes to Glenn statement that rules on a particular applicability rules to a specific railroad operation. Does the RPA have to be in place before they can operate a RR? Since the rules are not even in place how could they have been operating a railroad they claimed that they were?! 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf Pg.7.1	Refer to NE-1 and NE-2.

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. Also, the safety of a train passing in rural Texas where Hunting is at the highest level was never mentioned. Finally, there is the issue of High Elevation Rescues from on top of the raised tracks in case of an Emergency or Breakdown. Rural Texas is significantly hunted. What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FRA was not specific on what type of monitoring system would be used to make sure every INCH of the route is detected for any animals on the track. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use to keep Feral Hogs off the tracks. A train hitting a 300# Feral Hog would be devastating. It takes special fencing as well as a methodology to minimize the digging under the fences to keep Feral Hogs out of an area they are unwanted. More specifics specifications should be provided to TCRR. Who will develop the specifications for Emergency Response on top of a Viaduct or tall Berm including requirements for High Elevation Evacuation of the Train sets? Again, an area totally missing in the DEIS. And Finally, there must be a Risk Assessment performed on the ability for Emergency Vehicles to reach any remote area along the 240 mile route. There is no mention of this in the DEIS. In any wet or winter months, it will be next to impossible to reach the track in the middle of a very remote pasture along the route. Will special Emergency Response Vehicles be purchased by TCRR and kept along the route for fast emergency use? Where is this covered in the DEIS? Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Fdce V7 Report Sect. 3.12, Pg. 49 Of 199 Sect 4.1, Pg. 62 Of 199 Sect. 4.2, Pg. 63 Of 199 Sect. 4.4, Pg. 64 Of 199	Refer to SS-2
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Public Daily Travel Increased traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, Negative Impact to the General Flow of Business and potentially Negative Impact of times for First Responders to reach required destinations. The FRA seems willing to accept the loss of One Life due to response time based on the Conclusion regarding Response times (Impact not Significant?). There Must Be Zero Impact to Emergency Response Times. The HSR is a Huge Construction Project. FRA's report is too General and not specific to Increases in Traffic Flow, Permit Loads, and not to mention First Responder Impact times for ALL Qualitative Levels of Impact to Response time. FRA Concludes "Impacts to Emergency Response Times Not Anticipated to be Significant". The FRA Identified Low, Medium and High Impacts but focused only on the Red highlighted High scenarios. Not Good Enough. This Project is Not worth a Single Public Life. ANY ADDITIONAL DELAYS OF FIRST RESPONDERS times to reach required ultimate destinations as a result of this Project will be UNACCEPTABLE TO THE PUBLIC. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters, particularly when it comes to First Responders reaction times, must be provided to TCRR. The FRA must make sure the Environment of Travel and Conducting of Normal Business as well as the Public's Safety/Security is minimally negatively impacted to say the least by this project, but have Zero impact to First Responders. Will the Project furnish its own Emergency Response Vehicles & Personnel or will they use County Resources? Have the Emergency Response times been calculated based on the identification of all road closures, modifications, and lane closures that would be underway at that time or is it based on current undisturbed roads? Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Constructability V4 Report Sect. 2.5, Pgs. 5-6 Of 34 Also Sect. 4.22, Pg. 24 Of 34 Also Sect. 5.1.1, Pg. 27 Of	Refer to TR-6 and SS-23. TCRR does not plan to supply separate emergency response vehicles or services beyond the private security force described in <b>Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation.</b>
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how it applies to the Safety of the Public during Construction. Is the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and placed on TCR and its Contractors. As an example, Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Constructability V4 Report Nothing In The Deis On Construction Safety	Refer to SS-19, SS-21, SS-23 and TR-6.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Looking at the TxDOT traffic deaths by type of road the Dallas and Harris counties has over 2/3rd of total deaths vs the middle counties. Middle only had 45, but Harris and Dallas have lots of interstates so hard to compare. Have not looked at accident rates by road type 1 Dallas To Houston High Speed Rail Deis_Main Text I.Pdf 1.2.2.4	Comment noted.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Viaducts no need for herbicide and fertilizer. But nothing is being said about the use of herbicide and fertilizer along other parts. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 59 Of 199	As stated in the Executive Summary (ES.7) approximately 55 percent of the Alternative A would be constructed on viaduct (bridge type structure). On viaduct sections, the need for herbicide and fertilizer would be reduced because there is no ground cover to maintain. Per the Final Conceptual Engineering Report Section 3.14, Low Impact Development (LID), native species ground cover, where appropriate,

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	750 for general parking and if 70% stated elsewhere to BV would be by car then is 750 spots enough. How many passengers a day at BV and is BV being overlooked for capacity. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 79 Of 199	Refer to TR-2.  As noted in <b>TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F</b> , the parking demand study did not include an analysis for the Brazos Valley Intermediate Station. An estimation for parking was drawn between the estimates at the terminal stations.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	TCRR has continuously communicated to the public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closure might be left up to the Landowner to remedy themselves. TCRR has NOT applied for a County Permit as required by a number of the Counties being negatively impacted by this Project. Those Permits also require TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads may be performed without that Permit. The FRA is Silent on this issue and it should be displayed by FRA because it is the LAW. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The re-routing of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. The sacrifices have just gotten much larger for those who will receive no benefit Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Fdce V7 Report Appendix C, Pg. 1 Of 14	Refer to ED-1, ED-3, SC-19, TR-1, TR-6, TR-7, TR-8, TR-8 and TR-11.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"As part of the Coarse Screening Analysis, FRA determined that higher-speed and conventional speed passenger rail service, direct bus service and expansion of travel lanes on IH-45 would not meet the Project purpose to provide the public with reliable and safe high-speed passenger rail transportation between Dallas and Houston. Although higher-speed and conventional rail service may be able to use existing railroad ROW on either the BNSF or UPRR corridors, these potential corridor alternatives would not be able to employ the N700 Tokaido Shinkansen HSR system as proposed in TCRR's petition for a Rule of Particular Applicability or reach travel speeds of 200 mph, one of TCRR's identified objectives for the Project. Direct bus service or expanding IH-45 may temporarily relieve congestion on IH-45, meeting the transportation need of the Project. However, these alternatives rely on vehicular travel as the primary means of transportation between the Dallas and Houston metropolitan regions and would not offer a long-term alternative to travel on IH-45 and they would not offer a one-way trip in 90 minutes or less. Additionally, these other potential transportation alternatives would not provide passenger rail service, as per TCRR's objectives for the Project. Therefore, FRA eliminated these alternatives from further consideration based on failure under the Purpose and Need criterion." FRA admits that TxDOT's expansion of I45, that will occur, or expansion of bus lines will meet the Transportation needs of the project; it was rejected because it was not HSR and would not be a one way trip of 90 minutes or less. If the HSR runs at 240 mph from station to station, the trip will take 70 minutes and that is with instant acceleration and deceleration. Obviously, that will not happen. It will take time to accelerate, slow down for curves such as that in Hockley, and to decelerate. In addition, there will be ticket purchase, passenger screening through TSA, passenger and baggage loading, passenger and baggage unloading, and departure to some other mode of transportation. The actual transit time will be the same as airline or more as HSR is slower than a jet. So nothing will meet the needs of FRA but HSR because the criteria only support HSR. If your only tool is a hammer..... It also states "FRA eliminated the BNSF and UPRR corridors predominantly because BNSF and UPRR declined consent to share ROW for the majority of distance between Dallas and Houston, which made them operationally infeasible, and the immediate adjacency to the corridors would require a cost-prohibitive barrier wall along the 240-mile length of the corridor." If BNSF and UPRR can decline to share the ROW, why can't actual land owners exercise the same right. 2.4	Refer to BA-4, BA-10, ED-1, NE-1 and PN-3 ((COMMENT MAY NOT BE COMPLETE))
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No public roads closed - chart elsewhere list a public road in Madison County closed. Speed Rail (Exhibit S)			total U.S. workforce, work from home at least half of the time, up from 1.8 million in 2005 (a 115 percent increase since 2005). In more than half of the top U.S. metro areas telecommuting exceeds public transportation as the commute option of choice. It has grown far faster than any other commute mode. <a href="https://www.flexjobs.com/2017-State-of-Telecommuting-US/">https://www.flexjobs.com/2017-State-of-Telecommuting-US/</a> <a href="http://www.federaletc.org/pdf/NIH.pdf">http://www.federaletc.org/pdf/NIH.pdf</a> <a href="https://www.mysolutionis.com/hr-management/_images/CS-Telework_CaseStudies-102808.pdf">https://www.mysolutionis.com/hr-management/_images/CS-Telework_CaseStudies-102808.pdf</a> <a href="http://globalworkplaceanalytics.com/telecommuting-statistics">http://globalworkplaceanalytics.com/telecommuting-statistics</a> <a href="https://www.citylab.com/transportation/2014/02/why-telecommuting-really-matters-6-charts/8227/">https://www.citylab.com/transportation/2014/02/why-telecommuting-really-matters-6-charts/8227/</a> <a href="http://www.latimes.com/opinion/op-ed/la-oe-kotkin-telecommute-20170623-story.html">http://www.latimes.com/opinion/op-ed/la-oe-kotkin-telecommute-20170623-story.html</a> <a href="https://www.spartnerships.com/telecommuting-will-state-of-texas-employees-be-next/">https://www.spartnerships.com/telecommuting-will-state-of-texas-employees-be-next/</a> <a href="https://www.tribtalk.org/2017/09/21/is-the-uberization-of-public-transportation-the-future-for-texas-cities/">https://www.tribtalk.org/2017/09/21/is-the-uberization-of-public-transportation-the-future-for-texas-cities/</a>	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	ath not adding up on the % by type of mode to station. Looks like they only count one-way traffic at the station. 2.4 passengers per shuttle should be a joke. They do count drop-off, pick-up, taxi and shuttle as double traffic counts. But they are using about 1300 passengers at station but the above is just for those using to leave. Not for the 1200 or so leaving the station. Does this transfer to the LOS data? 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Pages 71-73 Of 199	Shuttle buses (from nearby hotels) were considered to be twice the average passenger occupancy as the cars. Drop-off, pick-up, taxi and shuttle services are not counted as double. It would be expected that driving alone (and parking), pick up/drop off, and taxi would be the highest vehicle generators. LOS data is used to analyze intersections and roads by assigning quality levels to the traffic (A-F). Traffic to the stations (including, for example, the 1,415 vehicle trips generated per hour to and from the Dallas Terminal station), would be affected by LOS analysis results. LOS analyzed how traffic will flow through intersections and does not distinguish the mode of travel (i.e., shuttle vs private car vs. taxi).
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	They are claiming that there will be a >200% increase in traffic but midpoints both north of Fairfield and Streetman data points only show an 83% increase from 2016 dates until 2035 Per the DEIS: "According to the Texas Transportation Institute's 2010 report, even taking into account forecasted improvements, vehicular traffic on IH-45 between Dallas and Houston will increase more than 200 percent by 2035, resulting in average speeds decreasing from 59 to 39 mph." This is a simple math issue. Again looking at the TxDot Statewide Planning map various data points only show an 83% increase from 2016 to 2035 <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> Station Flag 82H75 Site ID H75 AADT 2016 29,802 Route ID IH0045-KG 2015 AADT 28,446 2035 Estimated AADT 54,620 24 Hour Truck Percentage 32.4 Deis, Page 1-10	Refer to GN-1 and NE-1
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"Therefore, while transit has the lowest average fatality rate among transportation modes, when rail data is adjusted to remove trespassers and highway-rail crossing fatalities (as depicted in Adjusted Railroad values, Table 1-2), rail has the lowest fatality rate with a 10-year annual average of 41." I'm not sure what an annual average comparison means in comparing fatality rates for transportation modes does except to disguise trends. Comparing fatalities per vehicle mile traveled would make more sense. In looking at Table 1.1, highway, rail and air travel fatalities have all decreased by at least 25% from 2004- 2013, while transit fatalities have increased by 50% in that same time period. 1.2.2.4	Refer to SS-14.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	If 99 from College Station on 30 then how many car trips will be added on 30 for the day? 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 78 Of 199	99 represented the trip distribution for inbound trips to the Brazos Valley Intermediate Station. Outbound trips would generate the same amount of traffic in the opposing direction. The daily was expected to be 198. Between the release of the Draft EIS and the Final EIS, the trip distribution data was updated. Refer to <b>TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F.</b>
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	With the date of the CE stuff being 11/17/2017 did TXDOT have 30 days to review. They said they would have 30 days to poke holes in it since its released on 12/18/17. IS	Refer to PI-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"According to the Texas Transportation Institute's 2010 report, even taking into account forecasted improvements, vehicular traffic on IH-45 between Dallas and Houston will increase more than 200 percent by 2035, resulting in average speeds decreasing from 59 to 39 mph." However, when I look at the source data in the footnote, <a href="https://static.tti.tamu.edu/tti.tamu.edu/documents/0-5930-2.pdf">https://static.tti.tamu.edu/tti.tamu.edu/documents/0-5930-2.pdf</a> Table 3. Corridor Traffic Data & Projections 2002 and 2035 FHWA Freight Analysis Framework 2.2. shows a 126% increase in traffic, which is not greater than 200% (it is less than 200%).	Refer to NE-1

Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Every number in the DEIS is called into question. This is not a minor error. If it were insignificant, it would not be in Texas Central's video. Members of the public and public officials both could very well be influenced by a greater than 200% increase in traffic. The DEIS and the DEIS comment period are fatally flawed.	Refer to GN-1, NE-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	FRA should immediately issue a decision of NO BUILD	Comment noted.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The FRA Dismissed the Route along 1-45 due to the need for a barrier for auto/train separation. This would be feasible but costly. Also, there seemed to be NO Cost/Benefit Analysis done evaluating the fact that Those who are hurt the worst and sacrificing the most, their lives the way they know it and their land, are those who will Benefit the Least or None At All from this project.	Refer to BA-8, BA-9, NE-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	In fact property values all across the region will be sacrificed.	Refer to VA-1.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Because Cost should not be the controlling parameter to eliminate a Route Alternative, the dismissal of the I45 route that would likely be less harmful to the Environment, should be Reconsidered.	Refer to BA-9.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Also, because there is NO REGULATORY BODY TO HAVE ESTABLISHED A Credible PUBLIC NEED supported for this project in many ways that might be considered, and those who are hurt the worst will sacrifice the most and benefit basically none at all,	Refer to NE-1, NE-2, PN-3, SS-5.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	the FRA should suspend any further work for TCRR on this Project and wait until TCRR has proven its false claim of having Eminent Domain and Condemnation rights. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER THEY HOLD EMINENT DOMAIN POWERS. TCRR has run away from lawsuits that would have resolved this issue. Also, as the FRA should already understand, TCRR is required to obtain a County Permit from many if not most of the Rural Counties AND those Permits require Proof from TCRR of Eminent Domain Powers. Therefore, No further work should be done towards the HSR DEIS for TCRR until the Public Need issues and County permits related to Eminent	Refer to ED-1, ED-3, NE-1 and NE-8.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Dallas county- about 50% new public roads. Ellis county- about 50% new public roads. Navarro county- about 10-20% new public roads. West of Teague segment (Madison, Limestone, Freestone, Leon) about 90% new public roads. Houston segment (Harris, Waller, grimes)- about 40-50% new public roads or realigned public roads with the majority of Grimes county with new public roads and a significant portion of beginning of Houston section with no designation. We passed a law to prevent taxpayer funding for this project and now each county is responsible for maintaining a number of new public roads solely because of this project. If we don't have the train, the taxpayers will not have to use tax dollars for these new roads. 126 miles of new public roads Maps Section 45-52	Refer to TR-7 and TR-8. <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b> provides a summary of new public road mileage by Build Alternative.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Texas Central is quoting the DEIS in stating that 14,630 vehicles per day will be taken off the road. This not only unbelievable, it is calculated using Texas Central's proprietary (secret) data of 7.2 million passengers per year. Texas Central is promoting this incredible number while asking people to comment on the DEIS. Based on TxDOT's projected traffic on I45 in 2035, 14,630 vehicles per day would mean a 61% diversion rate from cars to HSR. This is simply absurd. The diversion rate predicted for the HSR is 5%, not 61%. This is not open government. The DEIS must be based on publicly available data, not secret and false Texas Central ridership reports. This process is irretrievably broken. The DEIS must be scrapped and FRA must immediately issue a decision of NO BUILD.	Refer to GN-2, GN-4 and PN-3
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	From the DEIS: "For the air quality emissions estimation at the full-service level (2040) scenario, the annual ridership of 7.2 million passengers, existing 89 percent share of people using passenger cars to travel between Dallas and Houston and average passenger occupancy of 1.2 passengers per car were then used to calculate the number of annual car trips of 5,340,000 cars per year. It should be noted that this number of vehicles that would no longer travel IH-45 between Houston and Dallas would equate to 14,630 vehicles per day, or about 14 percent of the 2035 annual average daily traffic of 106,475 vehicles per day projected in transportation planning documents for this corridor." The DEIS reverse engineers the number of cars taken off the road due to car drivers and passengers taking the train using a 1.2 passenger per car average occupancy. Where does this number come from? It seems the DEIS pulled this number out of the air. While Appendix F does use a 1.2	The comment misinterprets the text. The text does not say 89% of all travelers using IH-45 would use the HSR. The 89% car share is the share of passengers that without high speed rail in place, would have used cars to travel between Houston and Dallas as opposed to bus or airplane. It is not the percent of all cars traveling along IH-45 that would instead take the HSR. It was used only to derive out of the projected ridership, how many would have been using cars as

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			passenger per car average occupancy, that is for traffic going to train stations, not traffic between Houston and Dallas. Using a 1.8 average occupancy (as the Reason Foundation report "Texas High Speed Rail: Caution Ahead" from February, 2017 does), and keeping all the other numbers the same, the number of cars taken off the road would be 9,753 a year, or 33% fewer cars taken off the road. This it itself would cause all of the emissions calculations to be flawed. None of the calculations based on the 7.2 million riders can be verified, as the 7.2 million ridership number itself can't be verified. There is no way to know what average passenger occupancy went into the 7.2 million ridership number, as the FRA is using a proprietary, secret document to get the ridership number. Was it 1.2? Was it 1.8? Is the 7.2 million riders even based on cars on the road? This is not open government. The DEIS and the public comment process is fatally flawed and the DEIS should be scrapped and a decision of NO BUILD should be issued immediately.	opposed to airplane or bus if they didn't take the train. Also, the 106,475 vpd cited is not an average at each station, but is a corridor-long average from TxDOT's 2035 forecast of average AADT along the whole Houston-Dallas corridor in the report cited. Since it is a corridor-long average, it is a useful metric for numbers of travelers originating in Houston and traveling to Dallas (or vice versa).
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	The formula used was "Round trip distance X cars/year = VMT" when it should have been "One way distance X cars/year = VMT". According to the other data in the chart, using the VMT (Million) (based on other data in the DEIS) of 1,276 VMT (Millions) would result in 40,775 (000s) [gallons], or 40.8 million gallons, which is half of 81.5 million gallons. This is so important that Texas Central used the doubled figure in the video that they have shown at all 10 public meetings, that has been viewed at least 29K times on their Facebook page and that they have on their website on the same page where they urge people to contact the FRA about this project: The public process for the DEIS has been fatally compromised. The DEIS itself is worthless, as none of the numbers have any integrity or value. The DEIS should be scrapped. The FRA should immediately issue a decision of NO BUILD. Barring that, AECOM should be fired and competent professionals hired to create a new DEIS.	TCRR was consulted to verify if passenger ridership numbers were associated with one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the vehicle miles traveled (VMT) avoided for the Final EIS were revised with this assumption to recalculate the resultant fuel and energy use reductions. The assumption of one-way trips was checked for its impact on the conclusion of HSR net energy saved and no adverse impact on energy usage, and is summarized below for the largest emission alternative (A). This change halved the VMT, gallons of fuel saved, and associated energy usage reduced by HSR use, but there was still a net reduction of energy used. Even in the case of initial service level in 2024, net energy savings is estimated. This is summarized below for 2040 and detailed in the Final EIS. Therefore the conclusion of no adverse long term impacts on energy consumption and depletion of energy sources does not change. This revised assumption was included in the Final EIS.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Did AECOM even have access to Texas Central's secret ridership report? The hoops they jump through to come up with their incorrect calculations make me think that AECOM didn't review the secret report at all, and were only told there would be 7.2 million riders per year. This is awful. What a waste of everyone's time and resources to produce the horrible DEIS. What a shame that so many Texans have had this awful project hanging over their heads for years and years. How much development has been suppressed in path of this monstrosity? How much stress has been forced on families? The FRA needs to immediately issue a decision of NO BUILD and tell AECOM and Texas Central to go away and never bother Texans	Refer to GN-2 and PN-4
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Total is 166 and this must be hour type deal. What is the peak travel? And small issue on parking due to Midpoint have 600 public spots. So, if this chart is for start or end is big issue. Has TRCC a source we can get at? 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf Table 3.11-48	Refer to TC-5.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Development beyond station is not reasonably foreseeable. Dallas has development potential included in various ways but Brazos Valley does not have it included. Direct shuttle will be from BV Transit, which will not pay for itself so added cost to taxpayer and Houston the site not selected could be used for development/contradicts. Regardless of which station site FRA selects, it is reasonably foreseeable that development around the improvements to the nearby roadway network station area similar to an airport terminal could occur to accommodate travelers. 3 Dallas To Houston High Speed Rail Deis_Main Text Iii.Pdf 4.3.1.2	Comment noted.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Proprietary info due to private and not seeking public funds. Is the cost of upkeep on public roads a form of public funding of the project? 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 34 Of 34	Refer to GN-4, GN-5 and TR-7. Public funds are already used to maintain the public roads impacted by this project. Disputes over maintenance costs for modified roads would be discussed between TCRR and affected municipalities and counties.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	February 20, 2018 RE: Dallas to Houston High-Speed Rail, DEIS. Research based on need and viability. Mr. Kevin Wright, The Federal Highway Administration documented the "Peak Period Congestion on National Highway System 2012" (diagram A) which shows congestion currently exists between Houston and San Antonio along I-10 as well as San Antonio to Dallas along I-35. They also documented on the "Peak Period forecast for 2035" (diagram B) which shows the demand is highly congested on I-10 as well as I-35 but NOT Houston to Dallas on I-45. According to TXDOT Statewide planning map website, three traffic congestion monitoring sites between San Antonio to Dallas (I-35), Houston	Refer to AQ-7, BA-2, GN-2, GN-3, NE-1 and PN-3

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			to San Antonio (I-10) and Dallas to Houston (I-45), the I-45 route has the least growth consistently over the past 10 years, which pales in comparison to the San Antonio to Dallas (I-35) corridor which has about three time more daily volume. Station No. 110703 along I-35 route between San Antonio to Dallas had a daily volume from 2006 to 2016 from 85,000 to 110,703 with only one year reporting decreased volume. (diagram C) Station No. 45180 along I-10 from San Antonio to Houston had a daily volume from 2006 to 2016 from 37,000 to 45,180 with one year of significant decrease. (diagram D) Whereas Station No. 236H88A along I-45 route from Houston to Dallas between Harris County and the City of Madisonville has a daily volume from 2007 to 2016 from 32,000 to 35,762. A fractional increase over 10 years, five of which had a decrease in daily volume. (diagram E). This information provided by TXDOT and Federal Highway Administration does not support claims made by Texas Central to justify constructing a high speed rail from Houston to Dallas. The FRA board did approve the Oklahoma City - South Texas Corridor project which addresses the need and the only need for mass transit to Dallas. Even by projections from the Federal Highway Administration, Houston to Dallas still would not provide enough ridership to sustain the proposed Texas Central HSR project. If the Federal Highway Administration shows no need, it is critical that Texas Central provide the evidence displaying their interpretation of Purpose, Need and Viability since section ES.4 Purpose of and Need for the Project lacked substantial proof and substance. Predictions being made on forecasted growth does not take in consideration, that Houston may continue to have 500 year floods from here on as predicted by the National Weather Services which does look at data objectively. This will cause a decrease in growth, simply because people will move out of the Houston area since rebuilding year after year has an emotional, financial or psychological toll on people's lives.	
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	By the evidence of data from the Federal Highway Administration and TXDOT statewide planning map, there is not enough evidence to support Texas Central proposed High Speed Rail from Houston to Dallas. TR/CG Right Of Way (Row) 3.3 Inconsistency Turn over all public roads to taxpayer for upkeep. Only MOW yellow will be maintained by TCP- This goes against new laws just passed 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 36 Of 199	Refer to PN-3.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Again, the public roads and overpasses to be turned over to local taxpayers or state taxpayers. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 107 Of 199	Refer to TR-7 and TR-8.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	In south Texas, drainage is a major topic of concern for all residents and the government. Every proposed project is required to supply new independent adequate drainage and detention to be identified and implemented and NOT push the "run off" into existing drainage systems. According to the Appendix F_TCR Constructability v4 Report Section 2.6, it states TCR would incorporate existing drainage systems into design approach. This can not be allowed. I live in the Stone Gate neighborhood. The drainage ditches built around this neighborhood were designed to prevent flooding to our homes. In 2015 and 2016, we received 20 +/- inches of rain in a 12 hour or less timeframe. The drainage ditches worked but were at capacity, no homes flooded but some streets were under water. In 2017 we were hit with Hurricane Harvey that dumped 50 +/- inches of rain. The drainage ditches failed to protect the homes due to the amount of rain, the runoff, the over flow of Cypress Creek and the over flow of Addicks reservoir. We could not get out of the neighborhood for days, and numerous homes were under water. TCR proposes to build a 65 foot super structure that is 48 feet wide and a 12 to 15 foot wide access road that will be abutting the drainage ditch. The rain "run off" of the super structure will erode the ditches. This will cause additional flooding problems when we get torrential rain storms, tropical storms or hurricanes. Homes that never flooded before will flood as a result of this structure and road since TCR is not providing their own independent detention and drainage that is adequate for the amount of impervious area they are creating. The drainage ditch along Stone Gate was not designed for TCR's capacity. After reviewing the alignment sheets and project footprint drawings, I found that from Loop 610 to Fry Road, TCR will be adding 175.43 acres of impervious cover (that does not include the station area) while only adding 20 acres of detention from Jones Road to Fry Road. There is no drainage detention provided from Loop 610 to Jones Road. That includes zero detention ponds or drainage at the station locations. 1.3 acres of detention will also being removed. Harris Counties existing infrastructure has proven it can not support this type of increase. The environmental consequences caused by flooding has some of the most devastating impacts. Flooding can decimate key ecosystems functions and biodiversity, spread unknown contaminates, loss of human life, damage to property, loss of merchantable crops, loss of livestock and deterioration of health due to waterborne diseases. DEIS, Impervious Cover and Detention page 3.8-26 states "construction of stations and other infrastructure in highly urbanized areas would contribute additional volumes of storm water runoff to existing storm water drainage systems. Increasing storm water runoff flow rates and volume would increase the risk of flooding in areas that are lacking storm water infrastructure or in areas where existing infrastructure cannot support an increase." Since it is not feasible or possible for TCR to supply adequate detention and its own independent drainage, I request the Federal Rail Administration to implement the No Build Alternative.	Refer to FP-1, SS-17, WW-1 and WW-2. The entire route from Loop 610 to Fry Road, with the exception of where the route crosses Beltway 8, would be constructed on viaduct allowing for free movement of water.

Submitted By	Date Submitted	Submission Type	Comment	Response
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No assessment has been and therefore no discussion made for the required TCEQ Storm water Permit for the operation of the 240 mile Rail Road, 10 TPSS substations, 8 MOW facilities, 3 terminal facilities, and the 2 TMF facilities as required by 40 CFR 122.26(b)(14)(I)-(xi). This permit is required before construction starts. Again data should be available from Japan.	Refer to WW-1 All required permits would be obtained prior to construction of the project.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	"These results resulted in the use of viaduct on approximately 60 percent of the Build Alternatives, which allows for greater movement around and under the HSR system." Does this mean that 60% of the rail line will be raised on viaducts with free access underneath without fencing? Es.7	Refer to TC-7, SS-2.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Overpasses over HSR will create new structure that a local entity must maintain, inspect and repair. This I feel will be used to twist the arms of small counties to close down a road vs. the liability to upkeep. So technically TCP won't close the road, the county will. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 110 Of 199	Refer to TR-7.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	As described in the Abstract of the DEIS, the FRA has jurisdiction over all areas of RR Safety. However, the FRA is not accountable for the entire execution of this project nor how TCRR interacts with the Public in addressing what could be huge issues and negative impact on the public during the Construction Phase. The FRA should suspend any further work for TCRR on this Project until the Texas Legislators can determine what State Regulatory Body would be responsible and accountable to provide Oversight on all aspects of this project except what is being overseen by the FRA, RR Safety. This would also require that a State Regulatory Body is ensuing the new State requirements on HSR Security are being appropriately carried out. Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Main Text I Deis Abstract	Refer to NE-1, NE-2, SS-5.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	There is no map showing the "new road" that will be built parallel to the rail in the section of land crossing the floodplain. There is a map of the rail and new road immediately before and after that section of land. Reference: Maps RDY-EW-04007 and RDY-EW-04008. There should be a map showing the land between these two maps which is the floodplain. Footprint map in the Natural Resources maps, Sheet 20 shows the "missing" section of floodplain land I am referencing. Was this studied and what is the plan for putting the "new road" beside the rail in that section of land without obstructing Mustang Creek? Reference: Maps Rdy-Ew- 04007 And Rdy-Ew-04008. Footprint Map In The Natural Resources Maps, Sheet 20	Preliminary determinations for this area were made using publicly available FEMA Floodplain Insurance Rate Maps. Prior to construction, the entire preferred route will be surveyed to determine base flood elevations and conduct a hydrologic model analysis.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Don't see one for cattle picture below under viaduct. Is not correct as most of the route will have a public fenced off road running along side of the HSR. Picture is deceptive and inconsistent with how a viaduct will actually be on this project. 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 183 Of 199	Comment noted.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	No mention of impacts to schools and no mention of BV TOD issues. County will have to take care more of the roads, law enforcement, EMS and such with no money from TCP. Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and the use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the area? The FRA does not cover the use or source of water, but simply Assumes it will be available from "Somewhere" at the construction sites. Lots of water will be required continuously not only for concrete batch plants, for construction sites, for mitigating the dust levels during construction for Air Quality, but also for watering erosional control plantings along newly constructed embankments and road shoulders Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Constructability V4 Report Sect. 7.1, Pgs. 32-33 Of 34	Refer to HZ-5, WW-1 and WW-6
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Not Listed by the FRA in the DEIS) that provide valuable water to wild and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to evaluate the Damage to many sources of extremely valuable water sources particularly in Leon Counties (but may extend to other nearby counties). This fact was not only ignored by the evaluations of surface water, but also the fact these Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. These water sources provide a valuable source of water where tanks are unavailable or normal tanks not around these sources are dried up. One can also see on the sides of hills where the hay fields are still green in the summer heat that is a result of water flowing just below ground. Dallas To Houston High- Speed Rail Draft Environmental Impact Statement (Deis) Appendix F Tcrr Fdce V7 Report Sect. 13.5, Pg. 148 Of 199	Refer to WW-2.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	Shows embankment at 100 yr. flood plain. Shows some culverts but question is will the road be above grade in order to have the culverts pass water? If road at grade it will be even with the 100 yr. flood plain and culverts are useless? 34 Dallas To Houston High Speed Rail Deis Appendix G_Tcrr Fdce V7 Dwgs Volume 2-1.Pdf Cvl-Hn- 01145	Refer to FP-1.  Additional information regarding stream crossings including viaduct and culverts is outlined in <b>TCRR Final Conceptual Engineering Design Reports, Appendix F</b> , specifically Section 13.5. The access roads would be constructed to allow for movement of water through culverts.
Texans Against High Speed Rail (Exhibit S)	3/9/2018	Website	This EIS does not address any of the required permits except for a general floodplain development permit and a Class V UIC permit to inject the 29,654 gallons of sewage contaminated water at the Roans Prairie Substation. Milican was to have a reservoir that would almost reach of lola to College Station. Don't know if it has been defeated or not and don't know the ground water district. That was working on it. Probably 7-8 years ago it was hot in the news 31 Dallas To Houston High Speed Rail Deis Appendix F_Tcrr Fdce V7 Report Page 164 Of 199	Based on the 2017 Texas Water Development Board State Water Plan, the Millican Reservoir is no longer included on the list of planned reservoirs.

Texans Uniting for Reform and Freedom	3/9/2018	Website	Texans Uniting for Reform and Freedom is a non-partisan grassroots group that networks with over 300 grassroots groups to defend property rights and watchdog transportation issues. It's hard not to draw comparisons to the Trans Texas Corridor when scrutinizing the push for high speed rail in Texas by Texas Central Railway (TCR). Indeed, we shudder to think what this state would look like today if Cintra had had the power of eminent domain to build its Trans Texas Corridor, which also included high speed rail, against the will of Texans and involved the confiscation of 580,000 acres of private property for private gain. Before the most recent round of hearings in late 2014, TxDOT also held public meetings through its Texas-Oklahoma Passenger Rail Study in early 2014 to explore the impact of potential rail service projects between Oklahoma City and the Texas-Mexico border. In January of 2014, TxDOT officials announced plans to "expand the scope of the study" south, to Monterrey, Mexico, to account for interest in building a high-speed rail line between Monterrey and San Antonio. At a rail conference in Dallas in January 2014, TxDOT Rail Director Erik Steavens predicted the study would guide future efforts to develop various passenger rail services with the potential to serve millions of passengers along a route that stretches more than 800 miles. TxDOT also created a high-speed rail commission of its own. Yet there is still the claim that HSR does not involve public money. Twelve public meetings were held in select communities in 2014, but several cities in the path of the proposed routes were left out. Many affected property owners were never formally notified of the project or the public hearings before the comment period was closed. Those who did attend found out largely through word of mouth from their neighbors, not through any official TCR or government notices. Virtually 100% of attendees opposed high speed rail	Refer to BA-12, ED-1, GN-2, GN-3, GN-4, GN-5, GN-7, LU-2, LU-11, NE-1, NR-1, NR-2, NR-6, PI-1, PN-3, SC-3, SC-6, SC-19, SS-9, SS-12, SS-23, TR-6, TR-8, VA-1 and VA-3.  For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .

			<p>in Texas. As an example: Navasota (December 2014) - 350 people, all opposed Whitehall (January 20, 2015) - 180, all opposed Montgomery County (February 2015) - 800 people, all opposed.</p> <p><b>FOREIGN OWNERSHIP</b> In several recent and current European high-speed rail public-private partnerships the public sector has been responsible for more than half the capital cost of the high-speed rail line. TCR would not disclose the nature or specifics of its business arrangement with its partner in the DFW to Houston HSR project. Whether the foreign company, US-Japan High Speed Rail, LLC, which has 80% ownership, led by the Central Japan Railway Co. has a minority or majority ownership interest in the project has become a significant 'transparency' issue with the project. Because TCR has eminent domain rights (while only operating about 30 miles of Texas railroads), the public is entitled to understand who the owners of TCR are, their respective ownership benefits and the full nature of the business arrangement, including capital disclosure statements. The TCR does not have the financial strength to fund the eminent domain activities, construction or on-going operations. This means that Central Japan Railway Co. would own a majority of the project. Consequently, this means the foreign corporation is technically buying the eminent domain rights of an otherwise insignificant Texas railroad company. Profits from the private project will not be staying in Texas, let alone the United States.</p> <p><b>ECONOMICS</b> Substations are the only possible economic generator of HSR. But the more substations (stops) the longer the travel times between Dallas and Houston which will negatively affect the economic feasibility of the project. Low population density renders HSR unfeasible One key ingredient, population density, does not meet that of successful HSR projects. a. Distance from Dallas Union Station to Downtown Houston is 240 miles. b. Vehicle driving time is 3 hours &amp; 30 minutes @ 65 mph and at a fuel cost of \$21 per vehicle. c. HSR rider time is 90 minutes @ 187 average MPH and per advertised ticket prices of \$100 to \$350 per passenger. d. The addition of substations will add additional travel time between the HSR end points, thus reducing the project feasibility. e. Flying from Dallas Love Field which is about 7 miles from downtown Dallas to Houston Intl Airport (IAH), distance is 230 miles, flying time is 45 minutes. Note that IAH is about 23 miles from downtown Houston. f. Population density per square mile of Japan (873) and China (368) are significantly higher than that of the United States (83). Differences of specific city pairs with HSR are even more revealing. Tokyo (11,400), Osaka (13,900), Beijing (13,300), Tianjin (13,000) and Shanghai (16,200). Compared to DFW (3,000), Houston (3,000), Austin (2,900) and San Antonio (3,200). Both HSR and airlines require parking and security check prior to loading. Airlines require passengers to check-in an hour early. After reviewing all data the HSR will save little time compared to flying when you consider driving time from congested traffic and parking in order to reach the HSR station in downtown Houston and Dallas. The price of \$100 to \$350 a ticket does not benefit the average citizen as does a freeway.</p> <p><b>IMPACTS TO FARMERS/RANCHERS/COMMUNITIES</b> The representatives of TCR explained that they could not guarantee that all roads would have an over or underpass because only so many miles are allocated in their budget to be elevated between Dallas and Houston. Understand there are no standard railroad crossings only overpasses or underpasses. The amount of right of way needed for the rail lines, substations, and security fencing will bisect farms and ranches. The limited ability to cross over or under the rail lines will render wide swaths of farmland useless/inaccessible to existing farmers and ranchers, not unlike the Trans Texas Corridor. Will partial acquisition of agricultural property render the existing farming enterprise inoperable and remove them from agricultural production (and hence imperil the local economy and future land productivity as well as imperil local governments by reducing the property values? a. Emergency Services driving time especially to medical facilities, fire and police departments would be impacted greatly. b. School districts may be divided affecting student allocation boundaries to certain schools and economic hardship for some school districts due to student population changes and loss of property taxes. (see Eminent Domain) c. Families and communities would be forced to drive long distance to the next over or underpass to see family or friends or neighbors that were once accessible in minutes. d. Roads that receive an over/underpass will be built to TXDOT standard of 18 Feet in height. Farmers have expensive farm equipment that is higher than 18ft. They may not have access to maintain their farms on the other side of this HSR. Overpasses and underpasses are expensive to construct considering the many state and county roads therefore there may well be only a few built.</p> <p><b>WILDLIFE</b> The county dissection by the HSRs would impact numerous migratory routes of Texas wildlife. a. Water fowl b. Deer c. Wild Hogs d. Other unknown species b. Ellis County has recently announced a finding of ancient dinosaur remains along the Dallas to Houston HSR route. c. Sound from HSR would impact wild life and citizens expectations of tranquility. d. An assessment by TCEQ of environmental and EPA concerns has not been performed.</p> <p><b>EMINENT DOMAIN</b> The proposal will force farmers, ranchers, and homesteaders to be required to obligate 80ft to 300ft wide surface access rights through their properties or sell their property. The 'surface access rights' would give Texas landowners the right to retain complete ownership of the land's oil, mineral and gas rights. However, the federal constitution states that 'due process' must be ensured and 'just compensation' must be paid to the owner for only the condemned property. The Texas Constitution provides that only 'adequate compensation' must be rendered. However, the impact to the remaining property of the original owner is not considered in determining the condemned property value. TxDOT testified in the Texas Senate Finance Committee that this private company does indeed have the power of</p>	

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>eminent domain in Texas. Public information about HSR indicates that eminent domain would also be required for limited substations. The DFW to Houston HSR will not have any substations between the two points. Only one potential substation is under consideration in the Bryan-College Station region. The Dallas to San Antonio HSR indicates possible stations in nearly every county seat except Waxahachie. The use of eminent domain will create multiple security corridors that will split counties like Ellis County into multiple, mutually exclusive, sections. No economic gain is identified for counties that will not have substations.</p> <p>SAFETY a. China 2011: The high speed rail accident in China on the Yongtaiwen rail line where two HSR collided then derailed in 2011 killing 40 people and injuring 192. b. Germany 1998: HSR derailed and crashed into a road bridge killing 101 and injuring around 100 people. The cause was one single fatigue crack in one wheel. c. Spain 2013: The HSR derailed at high speed on a bend, killing 79 and injuring around 140 people. d. France 2014: HSR collision with a regional express train in southern France, injuring 25 people.</p> <p>OTHER PERTINENT CONCERNS WITH HIGH SPEED RAIL 1. Texas Central Railway is a new company and has never owned, operated or built a rail line. 2. Most of TCR's senior staff is comprised of former politicians and former bureaucrats. Among the top four officials on their web site are a former Harris County (Houston) judge, a former mayor of Dallas and a former ambassador to Japan. 3. On the TCR web site this is stated at the bottom of their home page;( TCR will not be the owner, developer, implementer nor operator of the railroad. (If TCR is not going to build or operate the train, who is? Why isn't the builder/operator applying for the approval directly? What and why, is information about the true builder being kept hidden from the public? 4. TCR projects the one time construction cost to be \$10 billion. Based on the projected costs per mile of the new California HSR, the cost of the rail line in Texas would be closer to \$30 billion. TCR claims they won't need or use public funds. There is no scenario under which TCR can be profitable with costs of construction between \$10 billion - \$30 billion. 5. The federal and state government should not be spending billions of dollars of taxpayer money for a private entity's benefit, that is planning to take thousands of Texas landowners' properties and that will destroy the value of thousands of acres of adjacent property, for a HSR that is not needed nor wanted. 6. The TCR route being proposed goes through 200 miles of rural countryside about 30 miles west of Interstate 45 and does not go through any major population areas. TCR's current preferred route only provides one stop between downtown Houston and downtown Dallas and that one stop would be many miles from any major population area. ( 7. HSR requires its own unique track and due to its high speed, no animal, vehicle or person can be allowed access to that track. Therefore, it must be entirely enclosed. Imagine an 80' diameter pipe being laid on the ground from downtown Dallas to downtown Houston. That is what HSR is. To cross an HSR you must either go over it with a bridge or under it with an underpass. 8. If allowed, the Japanese HSR would be another abuse of eminent domain for private gain, as TCR is a private company. Taking a portion of landowners' properties for HSR would be disastrous to the landowners' remaining property value. One private company (landowner) should not have to give up their property for another private entity's gain (TCR). 9. What is extremely hard to understand is why the Federal Railroad Administration is considering granting a new company, with no funds, no revenue, no assets and no HSR experience, the approval to build a HSR. Is this another case of big government, looking for a mission to justify its existence? "The biggest issue that will have to be confronted is that no high-speed rail system in the Western world has been built without significant government subsidies," said Yonah Freemark, creator of the Transport Politic website, which examines transport infrastructure projects.</p> <p>CATO INSTITUTE ON HSR Here are a few comments on high speed rail, by Randal O'Toole of the CATO Institute that are relevant and pertinent points to consider in this HSR plan in Texas; "The reality is that high-speed rail systems are extraordinarily expensive and serve only a small and elite group of people even in those nations that have the longest experience with them. "While high-speed trains in Europe and Japan are technologically impressive, nearly all the routes in those jurisdictions lose money and need large subsidies to stay afloat. America's geography is even less suited for a successful high-speed rail system than Europe or Japan because our cities are less dense and spaced farther apart. "The federal government should withdraw its support for high-speed rail, and instead focus on major aviation and highway reforms to improve the nation's mobility. America faces major transportation challenges, but throwing taxpayer funds down a high-speed rail money pit will not solve them." Texas Central Railway - Foreign, not Texas-based Texas Central Railway put out a press release Friday, February 6, 2015, that revealed TCR's two preferred sites for the Dallas HSR station. The release also names the "independent development company" Texas Central Partners (TCP), that will "be responsible for the high-speed rail system's design, finance, construction, operation and maintenance." At the end of the press release the description of TCP states: "Texas Central Partners (TCP) is a private, Texas-based company that will develop the high-speed passenger railway and associated facilities. TCP and its affiliated entities will be responsible for the system's design, finance, construction, operation and maintenance.&amp;#65533; The proposed project will not request or require grants or operational subsidies backed by taxpayers for its eventual construction and operation." Who is Texas Central Partners? Part of the answer can be found in the Secretary of State's records for these two entities: Texas Central Partners, LLC - SOS Filing (020615) Texas Central Holdings, LLC, is designated as the "Manager" of TCP in the filing. Texas Central Holdings, LLC - SOS Filing (020615) Unfortunately, the filing(s) as the Secretary of State indicate that neither TCP, nor TCH, are "Texas-based", rather foreign limited liability companies managed from Washington, DC. Perhaps, TCP, and/or TCH, has a Texas office, but they appear to be managed elsewhere. Complicating matters, TCR, who is clearly identified in the press release as</p>

What is extremely hard to understand is why the Federal Railroad Administration is considering granting a new company, with no funds, no revenue, no assets and no HSR experience, the approval to build a HSR. Is this another case of big government, looking for a mission to justify its existence? "The biggest issue that will have to be confronted is that no high-speed rail system in the Western world has been built without significant government subsidies," said Yonah Freemark, creator of the Transport Politic website, which examines transport infrastructure projects. High Speed Rail Here are a few comments on high speed rail, by Randal O'Toole of the CATO Institute; The reality is that high-speed rail systems are extraordinarily expensive and serve only a small and elite group of people even in those nations that have the longest experience with them. While high-speed trains in Europe and Japan are technologically impressive, nearly all the routes in those jurisdictions lose money and need large subsidies to stay afloat. America's geography is even less suited for a successful high-speed rail system than Europe or Japan because our cities are less dense and spaced farther apart. The federal government should withdraw its support for high-speed rail, and instead focus on major aviation and highway reforms to improve the nation's mobility. America faces major transportation challenges, but throwing taxpayer funds down a high-speed rail money pit will not solve them. One cautionary note on high-speed rail costs comes from California. In November 2008, California voters agreed that the state should sell nearly \$10 billion worth of bonds to start constructing a 220-mile-per-hour high-speed rail line from San Francisco to Los Angeles. The state's estimated cost for the entire system jumped from \$25 billion in 2000 to \$45 billion by 2008. However, one independent analysis concluded that the rail line would cost up to \$81 billion. In sum, a cost-effective high-speed rail system is a fantasy. Modern airliners go much faster than the fastest trains and they do not require expensive infrastructure along their entire routes. Even with a massive government investment, high-speed rail would not likely capture more than about 1 percent of the nation's market for passenger travel. High-speed rail should be killed before it diverts tens of billions of transportation dollars into a black hole, producing negligible benefits. We demand the no build option.</p>	
Texas Association for Public Transportation	3/9/2018	Website	Connectivity is crucial to all effective transportation projects, particularly for proposed passenger rail projects linking large urban conurbations like Houston and Dallas. In this case the Dallas to Houston HSR proposal needs to connect to Dallas Union station, the epicenter of DFW DART/TRE system to be successful. Having the Dallas TX HSR terminus more than a mile away from Union station is a fatal flaw that needs to be corrected before the EIS is approved. Thank you for your attention to this matter.	Refer to GN-6.
Terry Tallian	2/7/2018	Website	This is a no-brainer. Rail is the most environment friendly transportation mode. This project should be approved and be an example for others to follow.	Comment noted.
Diana Tamayo	3/9/2018	Website	People are already stupid enough without trains. And add a high speed train like Amtrak to the list will be a disaster	Comment noted.
Elmer Tanner	1/29/2018	Oral	Good evening. My name is Elmer Tanner. I'm the third generation of my family to live here in Navarro County, and I'm also proud to serve as the sheriff of this fine county. I was employed by the Navarro County Sheriff's Office 29 years ago this March, with the last five being the sheriff, and I believe one this -- of the big things was to protect and serve, and I believe exactly that's what I'm doing tonight is continuing to	Refer to PI-1 and SS-23.

			protect and serve our citizens and our community by being here at this meeting. My concern with this project is why wouldn't anyone associated with such an important project not contact the chief law enforcement official or officer of the county to discuss any potential emergency response concerns or any other issues that may be associated with this project? I also have personal knowledge that no one with the project has communicated anything with our emergency management coordinator of this county as well. So I have questions there. Simply put, this project should be of great concern to our citizens if, for no other reason, its potential impact on emergency response. Police, fire, and EMS response times will be affected. I do not and will not support this project which can have nothing but a negative impact on the citizens of Navarro County.	
Elmer Tanner	1/29/2018	Oral	Also I ask the citizens, what happens to this privately-funded project if it were to go defunct? Will we the tax payers then be asked to pick up the bill for this project and try to subsidize it and bring it back to life again?	Refer to NE-1 and SS-5.
Elmer Tanner	1/29/2018	Oral	Good evening. My name is Elmer Tanner. I'm the third generation of my family to live here in Navarro County, and I'm also proud to serve as the sheriff of this fine county. I was employed by the Navarro County Sheriff's Office 29 years ago this March, with the last five being the sheriff, and I believe one this of the big things was to protect and serve, and I believe exactly that's what I'm doing tonight is continuing to protect and serve our citizens and our community by being here at this meeting. I do not and will not support this project which can have nothing but a negative impact on the citizens of Navarro County. Also I ask the citizens, what happens to this privately-funded project if it were to go defunct? Will we the tax payers then be asked to pick up the bill for this project and try to subsidize it and bring it back to life again? To this day I have not spoken to one citizen in Navarro County, Freestone County, or Lyon County that support this project. We simply ask tonight that you listen to the citizens and hear what we're saying. We do not want this project. Thank you.	Refer to GN-4, PI-1 and SS-23.
Sheriff Elmer Tanner	3/9/2018	Email	<p>I am the current elected sheriff of Navarro County, Texas. I have served in Law Enforcement for 29 years in Navarro County with the last six as Sheriff. I am the third generation of my family to live in Navarro County.</p> <p>I have had no contact with any representative of the HSR project until Feb 13, 2018 when an email was sent. I have only spoken with surveyors and their supervisor while they were working for HSR in Navarro County. Our Texas Sheriffs Coalition has agreed to have one message from one voice that represents all our sheriffs concerns. We will speak in unison concerning this unnecessary project.</p> <p>I write to you today to express my concern regarding the Draft Environment Impact Statement for the Dallas Houston High-Speed Rail. The public comment period for the Draft EIS will end today, March 9. The public has been given 75 days to review a 5,647-page document of highly technical information that took years to produce and is a first of its kind project with no assumptions or historical reference. Yet in all that time, it's my understanding that Texas Central nor the Federal Railroad Administration ever found time to coordinate with any Of our County Officials, commissioners' courts or especially sheriffs, to properly coordinate the public safety aspects of the Draft EIS, or the project as a whole.</p> <p>In addition to the many apparent errors, inconsistencies and conflicting information. the most serious concern I have about the document is the lack of regard for public safety specific to the communities the HSR will pass through.</p> <p>I stand with seven other County Sheriffs who have also taken an oath to protect and serve the citizens of this great State. Each day we work to ensure their protection and quality Of life is maintained. This coalition of Sheriffs representing the counties between Dallas and Harris came together to stand for public safety and security because we are concerned about the proposed Dallas Houston HSR project and the safety Of our citizens.</p> <p>For well over 4 years now, Texas Central has been working in Texas to advance their project. And within the Draft Environmental Impact Statement published by the Federal Railroad Administration, there is a lengthy, albeit generic, section on Public Safety. Prior to the publication of this document, not one Sheriff's Office had ever been contacted by Texas Central or the FRA to Coordinate the public safety aspects of this project as it relates to our counties. And only after they learned all us sheriffs were meeting together to discuss our concerns, did they provide us with any substantive information. Finally, a company rep has reached out to me to coordinate a meeting between myself and their chairman of the board. Since the time Of Our press conference on March 1 , Texas Central has also told the media that they were in touch with Sheriffs Offices as early as May 201 6, but we do not have any record Of this. They have talked a big talk in the media about equipment and training for first responders, but, frankly, they have no idea what equipment and training we already have because they never even acknowledged us, yet set forth with their public safety assessments in the FRA's Draft EIS.</p>	Refer to ED-1, ED-2, NE-8, PI-1, SS-7, SS-18, SS-23 and SS-26.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>To be very clear, I am the top law enforcement and public safety officer in my county. It is absolutely unacceptable that this company failed to conduct the proper coordination with our Sheriffs Offices.</p> <p>Because of this lack of coordination, the Draft EIS and the entire project planning process do not accurately reflect the priority that needs to be placed on Public Safety, Public Security, and the realities Of law enforcement capabilities and challenges within my county. Within the DEES is a list of first responders' service name and location. This tells the public nothing about how well those first responders are prepared for a critical incident or how the county will be able to provide adequate service to our citizens if resources are diverted to respond to issues with the HSR.</p> <p>One issue noted in the Draft EIS that we take particular exception to is the FRA's assumption that increased response times due to rerouted roads during and after construction would be within acceptable limits. We take our response times very seriously. This is truly a matter of life and death in some cases. Any increase in response time is unacceptable. The DEIS states, "Traffic control plans would be established to ensure emergency response times are within regulatory limits across the entire Study Area." "Regulatory limits" for response times do not exist. The DEIS also loosely uses "within acceptable limits" and "no significant impact" as it relates to public safety and security issues.</p> <p>This is entirely subjective, and unless Texas Central or the FRA has spoken to anyone in my Office, no measure exists for what is "significant" or "acceptable" within my County.</p> <p>As a note Of correction, in Texas, the Office Of Sheriff is a statutory/constitutional office having an authority under state law and/or state constitution. My Office is not a department within our County government. Any and all references to Sheriffs Department should be updated to Sheriffs Office.</p> <p>We also have concerns about not only the first response to a critical incident involving this HSR, but our supporting medical facilities. And while the DEIS mentions "Construction Site Safety" related largely to traffic accidents, it fails to mention of Construction Site Security. We know from experience that with a construction project Of this scale comes increased crime at the construction site and as a result of the temporary workforce, as they are seeing with the California HSR already.</p> <p>This project has already created issues within Our communities related to reports Of trespass and harassment by agents of Texas Central Railway. With these problems arising so early in the progression Of this project, and having no coordination with company officials, we are very concerned about the future impact to our citizens and their personal property, especially since the eminent domain authority of Texas Central is still the topic of ongoing litigation in Leon County and they have been ordered by the court to not survey specific property in Harris, Grimes, and Waller Counties.</p> <p>As such. we have made Our citizens aware that any violations including, but not limited to, the mishandling of paper service, any reports of harassment or intimidation, especially Of the elderly and infirm, and all cases Of trespass or illegal survey by any agent of Texas Central, including those Of the Federal Railroad Administration, will immediately be handled by our Offices and referred to the District Attorney for review and possible prosecution to the fullest extent of the law. Our Citizens deserve to have their private property and quality of life protected.</p> <p>Texas Central often claims they are working closely with landowners.. -based on calls we have received from citizens, we can each attest that is about as true as their claim that they are working closely with elected officials in each county. Keeping that in mind, as well as our commitment to public safety, this coalition Of Sheriffs will be coordinating a meeting with Texas Central at a time and location that we can all be in attendance together with a court reporter to ensure that the information we are told is documented and consistent. We understand that it is difficult to get this company to commit to and stand by their word, so we feel a court reporter would be beneficial.</p> <p>In our line of work, it is paramount that we plan for the worst-case scenario and still expect the unexpected. But when we are intentionally kept in the dark by Texas Central and the Federal Railroad Administration about a project of this magnitude, the safety and security of our citizens are put in jeopardy. ..and we will not allow this to happen on our watch.</p> <p>Thank you,</p>	
Sheriff Elmer Tanner	3/9/2018	Letter	<p>March 28, 2018 Dear Mr. Kevin Wright, Upon conferring with Sheriff Glenn Smith of Waller County, Sheriff Elmer Tanner of Navarro County, Sheriff Travis Neeley of Madison County, Sheriff Dennis Wilson of Limestone County, Sheriff Kevin Ellis of Leon County, Sheriff Jeremy Shipley of Freestone County, and Sheriff Charles Edge of Ellis County of our Sheriffs Coalition, we are unable to meet with Texas Central until a time when the company can provide updated information that is consistent with our County policies. As you are aware, resolutions have been passed by each of our County Commissioners Courts confirming that no rerouting or realignment of public roads within our jurisdictions is allowable. Clearly, this presents a conflict between your project and our County; thus, we have two requests at this time from Texas Central:</p> <p>1) Texas Central needs to provide each County and our Offices with the updated plan(s) for the proposed Dallas Houston HSR that clearly</p>	Refer to ED-3, PI-1, PI-1, PI-4, SS-9, SS-18, SS-19, SS-23 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>memorializes that no rerouting or realignment of public roads within our jurisdictions is proposed. Then, we can, both individually and collectively, review your proposals for consistency with our policies to ensure no disruption to public safety and security within our jurisdictions and verify your plans are compliant with County policy.</p> <p>2) Texas Central needs to undertake a detailed and thorough evaluation of current response times to ensure the project has a net zero or positive impact on response times for first responders in each area. As we have stated before, any increase in response times due to this proposed HSR project is unacceptable.</p> <p>Once we have this information and have had ample time to review, we would be obliged to meet with Texas Central's head of safety and security, as well as the most appropriate and knowledgeable representative from the Federal Railroad Administration, Texas Department of Transportation and Texas Department of Public Safety. As we have stated publicly, this meeting shall be conducted with a court reporter present and must include substantive coordination, along with concrete proposals, not just promises of additional equipment and training. Additionally, I was made aware of comments you provided to members of the media following our March 1 news conference. Please provide the requested supporting data: From Texas Central's "statement" to the media: "There are very specific state and federal statutes that describe Texas Central's requirements for safety and security and we are working to ensure we meet or exceed those requirements." Please provide those state and federal statutes to our Offices so we can have shared understanding about the requirements. "49 CFR 239.191(a)(5)" does not produce any statutes related to public safety or security. "POTENTIAL RESPONSE TIME IMPROVEMENTS: In the DEIS, the FRA said many of the modifications the project will make along the 240-mile route "represent a potential improvement for emergency response." Please provide the assumptions and data used to support this statement.</p>	
Rick Tantlinger	2/1/2018	Email	<p>(13) Have you taken into account the impact this will incur for Police, Fire and Ambulance service to these rural areas, considering you will be bisecting counties with limited cross overs?</p> <p>(14) But most of all - I want to know WHO IS GOING TO BENEFIT from this venture? Certainly not the residents of Texas! Oh, it was said that, there will be shops and restaurants to eat at in the stations, again, only Dallas and Harris counties will benefit from that. A foreign entity will get the revenue and with outdated 53 year old technology! Whatever happened to America First? I am 100% Opposed to this High Speed Train.</p> <p>We were told we would receive a detailed response addressing our concerns. I hope so!</p>	Refer to GN-7, PI-1, PI-7, SC-19, SS-23 and TC-2.
Rick Tantlinger	2/1/2018	Email	<p>At the meeting it was said that the ridership of this train would be 36%. How was that determined? How can that be when Amtrac Could not make it and they already had existing tracks? You say the cost of the one way ticket was reasonable - \$200.00 each way is not reasonable. Who is going to Pay for the maintenance and upkeep of the tracks, and the adjoining "secure" property? I am 100% Opposed to this High Speed Train. We were told we would receive a detailed response addressing our concerns. I hope so!</p>	Refer to GN-2, GN-5 and SC-3.
Rick Tantlinger	2/1/2018	Email	<p>(O)My Email address is [...] I had to establish the [...] so could voice my questions and thoughts.</p> <p>(1) I would like to know why the 1-45 corridor cannot be used, instead of trying to take peoples land. The center median would provide an excellent elevated area for the train, providing much better security than going through corn fields.</p> <p>(2) What are the effects and side effects of the Electro-Magnetic Field that will be generated around the tracks, and how far will it reach from the tracks. What will it do to the environment, wildlife, and the residents?</p> <p>(3) Who is going to pay for the Electric that will be needed to operate this train.</p> <p>I am 100% Opposed to this High Speed Train.</p> <p>We were told we would receive a detailed response addressing our concerns. I hope so!</p> <p>Will the train have "qualified cabin crew members trained in AED and CPR" to take care of the passenger who has a heart attack, or seizure? I am 100% Opposed to this High Speed Train. We were told we would receive a detailed response addressing our concerns. I hope so!</p>	<p>Refer to BA-9 and GN-5.</p> <p>You have raised 4 questions, which are individually discussed below:</p> <p>1. Effects and side effects of EMF: The Draft Environmental Impact Statement (Draft EIS) discussed the health effects of EMF. Please see <b>Section 3.15.2, Heath Effects of EMF, Electromagnetic Fields:</b> "Reputable authorities on the subject of EMFs include the World Health Organization and the International Commission on Non-Ionizing Radiation Protection (ICNIRP). The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects."</p> <p>2. Distance from the tracks: As stated in the Draft EIS, <b>Section 3.15.4, Methodology, Electromagnetic Fields</b>, EMFs fall off markedly with distance from the source. EMFs are expected to be at ambient levels within 500 feet of the alignment. "The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."</p> <p>3. Environment, wildlife, and residents: Potential effects to human beings were discussed in point #1 above. No reputable research on the effects of EMFs and wildlife/environment have been conducted, although several studies that have been questioned by the scientific community are available on the internet. However, since EMF levels follow the inverse-square law, the effect to wildlife and the environment are expected to be negligible.</p> <p>4. Who is going to pay for the Electric: Electricity is a utility. Just as you pay for your own electric consumption, so, too, will the Project. As described in <b>Section 3.13, Safety and Security, SS-CM#1, Emergency Preparedness Plan</b>, TCRR's Emergency Preparedness Plan shall include details regarding employee emergency preparedness training, an inventory of emergency equipment, procedures regarding passengers with disabilities, and a program for passenger awareness of emergency procedures. The specific first aid equipment to be available on board as well as targets for employee certifications in CPR and AED will be documented in the emergency preparedness plan and will reflect identified needs and capabilities.</p>
Kristine Tanzillo	1/31/2018	Email	Has the draft EIS deadline for Texas been extended?	Refer to PI-3.
Evelina Tapia	3/9/2018	Website	I'm very excited about this proposal and really hope it moves forward to completion! Public transit is critical for our ever-growing communities and will have a more positive environmental effect than private transportation options.	Comment noted.
Jamie Tatum	1/25/2018	Website	Please build the bullet train! For the past 12 years I have been making round trips to Dallas to pick up my daughter and my ex makes a round trip to Houston to pick her up from me at least 3 times a year. Its expensive, hard on our vehicles, and if this train were to happen, I could see her much more often than just a couple of times a year. Please consider it.	Comment noted.
Valanta Taveirne	2/20/2018	Website	We have been waiting for this project to take place for SO many years. As I sit in Houston traffic EVERY day going my 20 miles to work, I long to live in a city/state that offers a more viable form of transportation besides building ten lane highways that are STILL full of traffic. Thank you very much for hearing our statements.	Comment noted.
Dave Taverner	2/21/2018	Website	This will be a real asset for the state of Texas and from what I have read the impact will be minimal. I support the train and feel it should be approved.	Comment noted.

Carolyn Taylor	1/25/2018	Email	What type of security will be provided on the train during commute?	Refer to SS-6 and SS-9.
Christopher Taylor	3/9/2018	Website	As a resident of Dallas County, I fully support the Texas High Speed Rail project. I have spent my career planning and studying transportation improvement projects. The Texas terrain is ideally suited to the development of high speed rail. Additionally, the population density of Dallas and Houston are more than sufficient to support ridership demand for the proposed service. I travel frequently between the two cities and find the choices of driving between the two cities entirely inadequate. The drive time between the two cities is too long to make the trip safely without rest, and is too long to make a round trip in a single day safe. Moreover, highway congestion on IH-45 continues to worsen and drivers on the highway drive too fast. Air travel between the two cities is subject to frequent delay. Texas Central has done an excellent job at studying alternatives between the two cities and the identified impacts along the corridor, while not insignificant, are incredibly low relative to typical impacts associated with a project of this magnitude. The Texas Central High Speed Rail project would provide a new travel alternative that would be reliable, fast, and safe. It would provide an excellent travel choice that would be especially good to the young, the disabled, and the elderly. It would also offer an excellent travel choice for business travelers who want to make day trips, which would be helpful to the economy of each city and the state as a whole. Construction jobs during development, long term high skilled jobs during operation, and jobs associated with induced development near the three stations would be great for the people of Texas as a whole.	Comment noted.
Cozy Taylor	1/30/2018	Oral	Okay. I really don't need this. I can talk without it. You can hear me just as well without it. I have been blessed with one of those nice outside voices that carry. I am one of the people that moved in late. We lived here in -- well we bought property here in 1964. Just under 100 acres off 1512. Now if the line isn't supposed to come straight through our property but we will be definitely affected. Now I realize this is the environmental impact town but that covers a lot of things. I am like the others and don't want to give up the idea of looking out the window watching the black panther going across the field pasture behind me. But another thing that really bothers me is that we all know all of us who came from Houston we are quite sure that this train will never make any money. It will not have the ridership they are saying it will and it will fail. Now they say they're getting the money from the banks in Japan that they're going to finance it. Well, when all this happens and they foreclose on the land who is going to own that strip of land all the way from Houston to Dallas? That's quite a corridor through there. Do we want Japan to own that corridor? We've been through problems with Japan before. We solved it thought. And I realize that this is an environmental impact study. The other things that really bothers me is that the kids in school, you know, if you been to any of the meetings where they had the trains simulated and going through or what it was like and the amount of noise there was. With the train going through every 15 to 30 minutes, what is that going to do to the kids that are trying to study in school? What's going to happen to you if you are at home and you are trying to do something? Anything you're in the pasture or in the house and the train goes through every 30 minutes. Are we suppose you get on your horse and do something. Well, don't tell me that that horse isn't going to notice the train is going through making that noise. Those I don't get to ride anymore. I am only 87 years young. I just don't get to do that. But one of my main worries is this Japan is to going end up owning a swap of land in Texas.	Refer to GN-2, GN-4, NE-1, NR-1, NV-1, SC-6, SC-7 and SC-8. Black panthers in America are Black Jaguars (Panthera onca) which have been extirpated from the state. There are only a couple of Jaguars known to exist north of the Mexican border in Arizona. None are known to occur in Texas.
Jennifer Taylor	1/27/2018	Website	I want the rail!	Comment noted.
Laura Taylor	1/30/2018	Email	I know I am a small fish in a big pond but I also have a story. In 1995 we found a piece of property for sale and we bought it, we worked hard on it clearing and putting roads in, camping out on it all weekend long to work in 100 degree weather, because we lived in Arlington Tx and we both had full time jobs to work. (We were young back then) Finally we got to the point to build our dream home. This is the home we would live out the rest of our lives in the quiet Texas country side. So now you want to build a HSR right through my front porch!! When we don't even have a congestion problem out here!! Even if you bought us, frankly we don't have the youthful energy that we had 23 yrs ago to put into another place! So all we are left with is a place that is worthless with a big ugly screaming piece of concrete on it. My childrens inheritance gone!! NO HSR!	Refer to VA-1.
Wenona Taylor	1/30/2018	Website	My ancestors came to Leon County nearly 200 years ago. My mother likes to say that our blood and sweat is in this land. Generations of us have lived and died here. My grandmother's generation had to leave after WW2 to find good jobs, but most of them came back when they retired. I spent my childhood summers visiting my grandparents in Leon County, and I have now made my home here. I have built a home where I plan to raise my children and have my grandchildren visit me someday. Our land looks much the same as it did when my great grandfather bought it over 100 years ago. And we would like to keep it that way. My family understands that change is inevitable, but if change must come to our land, let it come in the form of a project that will benefit society. This project will NOT. You will destroy both the natural and economic value of our property and what will you do then? Do you love this place the way we do? Are you connected to this place the way I am??? You will not build this railroad on our land without a fight.	Refer to VA-1.
Donella Teague	2/22/2018	Website	This is a failed project from the beginning and will leave taxpayers holding the bill as the private company dances into the sunset. Very few would pay \$200. one way to Dallas when you can fly Southwest every 30 minutes to Dallas daily. What we need is rail systems from	Refer to GN-4, PN-3 and SC-3.

			Katy,Pearland,Sugarland,Conroe,Woodlands,Tomball,Clearlake to downtown Houston. Not from Houston to Dallas. I cannot believe that this is being considered as the majority are against it. Do something right and squash this before it costs the state (taxpayers) billions. Put the money where it belongs,,,,rebuilding after Harvey people are still suffering.	
Jeff Teasley	1/29/2018	Email	I have property at Corinth and Riverfront and would like to receive updates.	Refer to PI-1.
Macie Tenne	NA	Website	I am of the opinion that the high speed rail will ruin our environment and I resent eminent domain taking our land.	Refer to ED-1.
Pavel Terechine	2/16/2018	Website	I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% o them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!	Comment noted.
Ashley Ternan	2/23/2018	Website	I am opposed to the High Speed Train route that divides the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals. A move to north of the already existing high power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/23/2018	Website	I am in opposition to the High Speed Train route that divides the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals. A move to north of the already existing high power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/23/2018	Website	I disagree with the proposed route of the High Speed Train that would divide the exceptional property referred to as the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals, such as first responders. Moving the HST route north of the already existing power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/23/2018	Website	I am opposed to the high speed train route. The preferred route travels in one of the highest elevations which will create, in my opinion, significant watershed issues, causing a loss of migratory waters of the U.S. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5.
Ashley Ternan	2/23/2018	Website	I am in opposition to the proposed route of the high speed train. The preferred route travels in one of the highest elevations which will create, in my opinion, significant watershed issues, causing a loss of migratory waters of the U.S.. I am also concerned about the impact it will have on the Bald Eagle Habitat. Moving the HST route north of the already existing power lines would have less impact on the protective environment Morgan Legacy Farm provides the wildlife and prove less damaging to the county in the long term.	Refer to LU-5.
Ashley Ternan	2/23/2018	Website	I am opposed to the high speed train route. The preferred route travels in one of the highest elevations which will create, in my opinion, significant watershed issues, causing a loss of migratory waters of the United States. Furthermore, I am concerned about the impact it will have on the economy. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county, including the economy, in the long term.	Refer to LU-5.

Ashley Ternan	2/23/2018	Website	I disagree with the proposed route of the High Speed Train that would divide the exceptional property referred to as the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals, , such as physicians and nurses. Moving the HST route north of the already existing power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/24/2018	Website	I am opposed to the High Speed Train route that divides the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals, such as first responders. A move to north of the already existing high power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/24/2018	Website	I am opposed to the High Speed Train route that divides the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals, such as physicians. A move to north of the already existing high power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/24/2018	Website	I am 100% oposed to the High Speed Train route that will divide the Morgan Legacy Farm. The proposed route will occupy high elevation, which in my opinion will create significant watershed issues. The proposed route also cuts off significant attributes to the Ranch, causing a negative economical impact not only for Morgan Legacy Farm, but for the Navarro County Community. Making a change in the route by moving it North of existing power lines would have less of an impact on Morgan Legacy Farm, as well as the sustainability of Morgan Legacy Farm and the economy of the Navarro County Community.	Refer to LU-5.
Ashley Ternan	2/24/2018	Website	I am adamantly opposed to the route proposed for the High Speed Train. This route runs right through a working ranch, Morgan Legacy Farm. Not only are there significant changes in elevation that, in my opinion will cause incredible watershed issues, I am also concerned with the historical impact it will have on Navarro County. A move north of the already exisiting power lines would have less of an impact on Morgan Legacy Farm, and preserve history.	Refer to LU-5.
Ashley Ternan	2/25/2018	Website	I adamantly oppose the proposed route of the HST. The route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. Moving the route north of the existing will prove less damaging to the county and Morgan Legacy Farm.	Refer to LU-5.
Ashley Ternan	2/25/2018	Website	I firmly oppose the route of the High Speed Train. The proposed route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. These watershed issues, in my opinion, would negatively affect the wildlife on Morgan Legacy Farm and surrounding areas. Moving the route north of the existing will prove less damaging to the Morgan Legacy Farm and county.	Refer to LU-5.
Ashley Ternan	2/25/2018	Website	I absolutely oppose the route of the High Speed Train. The proposed route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. These watershed issues, in my opinion, would negatively affect the wildlife, including the Bald Eagle Habitat. Moving the route north of the existing power lines will prove less damaging to the environment.	Refer to LU-5.
Ashley Ternan	2/26/2018	Website	The proposed route of the High Speed Train that cuts through Morgan Legacy Farm is an abomination. Not only has this property provided sanctuary to wildlife, but to hundreds of individuals as well. Physicians, First Responders, and Nurses retreat to this beautiful ranch to spend time with their families and loved ones. Please let the individuals that serve our community and wildlife continue to use this beautiful land and move the HST route north of the already existing power lines.	Refer to LU-5.
Ashley Ternan	2/26/2018	Website	I oppose the proposed route of the High Speed Train that cuts through Morgan Legacy Farm. It is a disgrace that this property would no longer be able to serve as a retreat for hundreds of individuals that serve our community, but that it could also, in my opinion, do great damage to the migration due to the watershed that would change with a large fluctuation from below level elevation to an extremely sudden high elevation. Please move the route north to the already existing power lines, allowing this farm to continue to serve our community, wildlife that migrates included.	Refer to LU-5.
Ashley Ternan	2/26/2018	Website	I am opposed to the proposed route of the High Speed Train that cuts through Morgan Legacy Farm. It is deplorable that this property would no longer be able to serve as a retreat for hundreds of individuals that serve our community, but that it could also, in my opinion, do great damage to the wildlife, including the Bald Eagle Habitat, due to the watershed changes that would be caused by extreme changes in elevation. Moving the route north of the already existing power lines, will allow this farm to continue to act as a place of refuge for individuals like First Responders and wildlife, such as the Bald Eagle.	Refer to LU-5 and NR-3. For information regarding impacts to wildlife and vegetation refer to <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance</b>

				<b>Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b>
Ashley Ternan	2/26/2018	Website	I oppose the proposed route of the High Speed Train that will divide Morgan Legacy Farm. It is so sad that this property would no longer be able to serve as a teaching environment about farming and ranching, but that a piece of history will also be destroyed. By moving the route north of the already existing power lines, Morgan Legacy Farm will be able to preserve history and continue to make history.	Refer to LU-5.
Ashley Ternan	2/26/2018	Website	I 100% oppose the proposed route of the High Speed Train. It is my opinion that Morgan Legacy Farm will no longer be able to function as a working ranch due to changes in watershed because of the extreme changes in elevation of the proposed HST route. Local companies will no longer be able to thrive without the business provided by Morgan Legacy Farm. By moving the route north of the already existing power lines, Morgan Legacy Farm will be able to function and continue to support the local businesses.	Refer to LU-5.
Ashley Ternan	2/28/2018	Website	I am 100% opposed to the High Speed Train route that will divide the Morgan Legacy Farm. This property that has served a significant number of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for tons of individuals. Instead of using the proposed route that will destroy a property that provides incredible support to their community, I am of the opinion that moving the the HST would have less of an impact by moving the route north of the already existing power lines.	Refer to LU-5.
Ashley Ternan	2/28/2018	Website	I am 100% opposed to the High Speed Train route that will divide the Morgan Legacy Farm. Furthermore, I am concerned about the historical impact it will have on our community. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county, including preservation of our history, in the long term.	Refer to LU-5.
Ashley Ternan	2/28/2018	Website	I adamantly oppose the proposed route of the HST. The route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. These watershed issues, in my opinion, would adversely affect the wildlife on Morgan Legacy Farm and surrounding areas. Moving the route north of the existing power lines will prove less damaging to the county and Morgan Legacy Farm.	Refer to LU-5, WW-1 and WW-2.
Ashley Ternan	2/28/2018	Website	I firmly oppose the route of the High Speed Train. The proposed route divides a family property, Morgan Legacy Farm, but in my opinion will create significant watershed issues, due to a large rise and fall in elevation. These watershed issues, in my opinion, would negatively affect the US migratory waters. Moving the route north of the existing power lines will prove less damaging to the environment.	Refer to LU-5, WW-1 and WW-2.
Ashley Ternan	2/28/2018	Website	I am adamantly opposed to the proposed route of the High Speed Train that will divide Morgan Legacy Farm. It is so sad that this property would no longer be able to serve as a learning environment to individuals such as students. Moving the route north of the already existing power lines, will allow this farm to continue to act as a teaching environment.	Refer to LU-5.
Ashley Ternan	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about charitable benefits.	Refer to LU-5.

			will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	
Ashley Ternan	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement	Refer to LU-5 and TR-10.
Ashley Ternan	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5.
Ashley Ternan	2/28/2018	Email	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.
Ashley Ternan	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about historic impact.	Refer to LU-5.
Ashley Ternan	2/28/2018	Email	I disagree with the proposed route of the High Speed Train that would divide the exceptional property referred to as the Morgan Legacy Farm. Morgan Legacy Farm has supported a numerous amount of charities by providing lodging and activities such as horseback riding and fishing. Morgan Legacy Farm would be divided, separating amenities that have provided support for thousands of individuals. Moving the HST route north of the already existing power lines would have less impact on the charitable support the Morgan Legacy Farm Provides to the community.	Refer to LU-5.
Ashley Ternan	2/28/2018	Email	The proposed route of the High Speed Train that cuts through Morgan Legacy Farm is a disgrace. This property has provided sanctuary to wildlife, as well as to hundreds of individuals. Medical Residents and First Responders are just a few that serve our community that retreat to this beautiful ranch to spend time with their families. Please let this property continue to serve the wildlife and our community by moving the HST route north of the already existing power lines.	Refer to LU-5.
Ashley Ternan	3/1/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. Daniel Ternan	2/22/2018	Website	I am concerned the train will irreparably remove the charitable ability of the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. One of the primary purposes of the ranch is to provide emotional respite for hospital employees, nurses, fire and police personnel along with a multitude of charitable events. Furthermore, I am opposed to the train destroying a cultural, economical, and historical ranch. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others.	Refer to LU-5, WW-1 and WW-2.
Daniel Ternan	2/25/2018	Website	I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5.
Daniel Ternan	2/27/2018	Website	I am deeply troubled and completely opposed to the proposed routed through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. The route will bisect all the vital structures to run the ranch. At that point the ranch will no longer be a economical advantage to the surrounding area. Countless numbers will no longer travel through the area. All the local business used to support and run the ranch will feel a significant loss. Moving the route north of the power lines and paralleling the existing lines in an established easement would be less detrimental to the economy.	Refer to LU-5.
Daniel Ternan	3/1/2018	Website	I am opposed to the train destroying a cultural, economical, historical, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the impact of obliterating a huge part of a family's legacy by completely removing the ability to use this property for its intended multi-generational purpose. This ranch has been used for a multitude of charitable functions at no cost, a place of relaxation for all types of people and organizations, a center of education, and a place of work. By dividing this property and destroying buildings and infrastructure the ranch will no longer be able to do serve its purpose.	Refer to LU-5.
Daniel Ternan	3/3/2018	Website	I am opposed to the proposed route of the train through the ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I am concerned about the loss of habitats for the animals (deer, horses, cows) who live on the ranch and the wildlife (bald eagles and other birds) that use the ranch. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the existing structures.	Refer to LU-5 and NR-3. For information regarding impacts to wildlife and vegetation refer to <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Daniel Ternan	3/4/2018	Website	I am strongly opposed to the proposed route of the train through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. I am troubled that the route will destroy all the vital structures of the ranch that provide a place of relaxation, enjoyment, and an emotional release for health care providers, first responders and military (never at a cost). All the local business used to support and run the ranch will feel a significant loss. Moving the route north of the power lines and paralleling the existing lines in an established easement would be less detrimental to the economy.	Refer to LU-5.
Daniel Ternan	3/5/2018	Website	I am opposed to the proposed route through the ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I am deeply concerned about the loss of a great place that has always been offered at free of cost to any individual. This ranch is an amazing place that is used to immerse one-self in a wide variety of animals (bald eagles, horses, deer, fish, birds), wildlife conversation, agricultural life and processes, farming, rodeos, fishing, and business (running a ranch). I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5 and NR-3.
Daniel Ternan	3/7/2018	Website	I am extremely opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. I am concerned about the economical impact of destroying	Refer to LU-5.

			a ranch that is used for charitable and personal events almost every week. There is a ton of individual traffic that comes through the area to visit the ranch and the resources purchased to provide for them.	
Daniel W Ternan	3/3/2018	Website	I am very opposed to the proposed route of the train through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. I am concerned about the economical impacts of bisecting and destroying the vital structures of the ranch. The ranch is constantly being visited by organizations and individuals from all over North Texas and this brings a ton of economical traffic through the area. Also, the revenue generated by maintaining the ranch will also be negatively affected. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the existing structures.	Refer to LU-5.
David Ternan	2/27/2018	Website	I oppose the train which currently plans to split and ruin the Morgan Legacy Farm located near FM 709 and 3194. A move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique resourceful property. The current route impacts the environment and property in turn impacting the city, citizens, charitable organizations that use the ranch, and wildlife living in the area. The current route blocks watershed needed to fill several bodies of water needed on the lake used for cattle raising and hay bailing. I and several high school/college students used to or still work on the ranch paying for college tuition. I oppose this current route as it would destroy the opportunity of employment for future workers as it provided me. Furthermore, the ranch provides resources to the community and beyond. The ranch provides not only agricultural resources, but charitable as well. The Boy Scouts have used the ranch. As an Eagle Scout and a benefit of the program, I find it hard for the organization to find educational places such as the Morgan Legacy Farm for no cost. The current route would destroy the current bald eagle habitat I hope to show future boy/girl scouts. From my understanding, the ranch also provides a getaway from the various cabins, which would be split by the current route, for several other noteworthy citizens such as doctors, nurses, and other students. I even had friends, co-workers, and foreign acquaintances from various states and countries visit the property, tour the facilities, and in turn spending money at various stores and restaurants in the community. The ranch provides this tourism revenue to the community due to various hospitable cabins, historical rodeo arena, rare wildlife at a little to no cost. The current route splits and destroys the property in an unusable way causing all these benefits to be no longer be accessible. David Ternan	Refer to LU-5 and NR-3.
Jack Ternan	3/3/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about charitable benefits.	Refer to LU-5.
Joan Ternan	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment, economy and save a unique irreplaceable property. The destruction of the Morgan Legacy Farm would not only destroy the ranch but would also have drastic economic consequences to local suppliers. Morgan Legacy Farm would no longer need to purchase from these local suppliers because the ranch would no longer be able to serve as a working ranch.	Refer to LU-5.
Joan Ternan	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment, economy and would save a unique irreplaceable property. The destruction of the Morgan Legacy Farm would not only destroy the ranch but its property value would be greatly reduced. City, County and School tax jurisdictions would be adversely affected.	Refer to LU-5.
Logan Ternan	2/27/2018	Website	As an individual of the generation that will truly be affected, I am concerned by the proposed route through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. This ranch is always open freely to individuals and groups to be used as a place to learn and interact with wildlife. It provides a safe and loving home to a large collection of animals. I am strongly opposed that the route will eliminate the ability to provide a home for these animals. I recommend the route be moved north of the power lines paralleling the existing lines.	Refer to LU-5.
Logan Ternan	3/3/2018	Website	I am completely opposed to the proposed route through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. As an individual of the generation that will truly be affected, I am deeply concerned by losing the ability to use this ranch (free of cost) as a place to learn about wildlife, agriculture, and outdoor living/activities. I recommend the route be moved north of the power lines paralleling the existing lines.	Refer to LU-5.

Nicholas Ternan	2/23/2018	Website	I am very saddened by the proposed route that will destroy the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194 and remove its very valuable educational component. It is a great place that has always been offered at free of cost where I have the ability to learn about a wide variety of animals (bald eagles, horses, deer, fish, birds), wildlife conversation, agricultural life and processes, farming, rodeos, fishing, and business (running a ranch). I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5 and NR-3.
Nicholas Ternan	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. This is a wonderful property that allows people to go back to nature and restore the spirit. It has been generously donated to those in need particularly to those that serve others like doctors, nurses, first responders, military, students and residents. Please reconsider the current route to preserve this treasure.	Refer to LU-5.
Nicholas Ternan	2/28/2018	Website	I am opposed to the Dallas to Houston High-Speed Rail going through the current proposed path in particular regards to the Morgan Legacy Farm located near FM709 and 3194. The current pathway would lead to the train destroying this charitable ranch. I believe moving the pathway north along existing power lines would be less likely to ruin this ranch. Furthermore, I am concerned about the impact this would have on the unique and endangered animals that live on and pass through the property. Bald eagles have been spotted on the property. A multitude of birds migrate through and it is home to many different species of Texas wildlife. Please reconsider the current path that will destroy this irreplaceable property that serves so many and consider moving it somewhere less detrimental to the Morgan Legacy Farm. Thank you	Refer to LU-5, NR-1, NR-2, NR-3 and NR-6. For information regarding impacts to wildlife and vegetation refer to <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Nicholas Ternan	3/3/2018	Website	I am opposed to the Dallas to Houston High-Speed Rail going through the current proposed path in particular regards to the Morgan Legacy Farm located near FM709 and 3194. The current pathway would lead to the train destroying this culturally, economically, historically valuable and charitable ranch. I believe moving the pathway north along existing power lines would be less devastating to the ranch and the environment, improving watershed runoff impacts and limiting the impact of the railway on the property. Moving the proposed pathway to the north to the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. By separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including nurses, physicians, police officers, EMTs, and many other individuals. Furthermore, I am concerned about the impact this would have on the charitable benefits of the property. Limiting access to the parts of the ranch that currently are available would make it less valuable as a resource for the folks it has been used by for emotional support and that would be a terrible loss to the first responders, nurses, physician and students would have used it in the past and those that will need it in the future. Please reconsider the current path that will destroy this irreplaceable property that serves so many.	Refer to LU-5.
Nico Ternan	3/3/2018	Website	I am strongly opposed to the proposed route through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. Building the train route right in the middle of this great property would impact the many who have benefitted from their time at this property and ruin it's purpose. Please consider a move to the north where less of an impact would be seen preserving this wonderful retreat. Thank you.</p>	Refer to LU-5, WW-1 and WW-2.
Shannon Ternan	3/4/2018	Website	<p>I am opposed to the Dallas to Houston High-Speed Rail going through the current proposed path in particular regards to the Morgan Legacy Farm located near FM709 and 3194. The current pathway would lead to the train destroying this culturally, economically, historically valuable and charitable ranch. I believe moving the pathway north along existing power lines would be less devastating to the ranch and the environment, improving watershed runoff impacts and limiting the impact of the railway on the property. Moving the proposed pathway to the north to the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. By separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including nurses, physicians, police officers, EMTs, and many other individuals. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the impact this would have on the charitable benefits of the property. Limiting access to the parts of the ranch that currently are available would make it less valuable as a resource for the folks it has been used by for emotional support and that would be a terrible loss to the first responders, nurses, physician and students would have used it in the past and those that will need it in the future. Please reconsider the current path that will destroy this irreplaceable property that serves so many. Thank you.</p>	Refer to LU-5.

Please reconsider the current path that will destroy this irreplaceable property that serves so many. Thank you	Refer to LU-5.
Shannon Ternan	3/6/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. Building the train route right in the middle of this great property would impact the many who have benefited from their time at this property and ruin it's purpose. Please consider a move to the north where less of an impact would be seen preserving this wonderful retreat. Thank you.	Refer to LU-5 and NR-2.
Thomas Ternan	2/23/2018	Website	The owners of Morgan Legacy Farm near FM 709 and 3194 are very generous people. I know this because they constantly offer the ranch as a vacation package in various charitable auctions. People love to visit the charming lands, home, and history on the ranch. I remember fondly one time when the owners offered the ranch to my family when a relative came here from Great Britain to visit Texas for the first time. It was a special visit, and my relative departed with a love of Texas he did not previously have. The Morgan Legacy Farm is a special place, and it is disheartening to hear that its charm and beauty might be destroyed by the high speed rail. Especially because I hear that there is an alternative route just north of some nearby power lines where there is already an easement and route alternative that would serve the purpose of the high speed rail without driving a line through the core of this historical and charitable farm. Please save this farm by going with the alternative power line route!	Refer to LU-5.
Thomas Ternan	2/27/2018	Website	Please move the train line out of the Morgan Legacy Farm near FM 709 and FM 3194. This property is used for charitable purposes and will be ruined if the train line goes down the center of the property. There is an alternative route following existing power line easements that would serve the rail line purposes while saving this farm.	Refer to LU-5.
Shannon Ternan MD	2/22/2018	Website	I am opposed to the Dallas to Houston train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe that a move of the route to the north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save this unique irreplaceable property. The current preferred route travels in one of the highest elevations which will create significant watershed issues causing a loss of migratory waters of the US. Furthermore, by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. I am also concerned about the environmental impact this will have on migratory waters and animal habitat. The Morgan Legacy Farm provides a safe clean place for animals to migrate through and others live. To interrupt and destroy this lovely ranch's environment, the proposed route would be cutting off access to the rodeo, stables, and amenities needed to maintain this property. A move to the north would hopefully prevent this.	Refer to LU-5.
Shannon Ternan MD	3/9/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a	Refer to LU-5.

			unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Further because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. Perhaps one of the greatest purposes has been the service to health care providers, first responders and military. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. Building the train route right in the middle of this great property would impact the many who have benefitted from their time at this property and ruin its purpose. Please consider a move to the north where less of an impact would be seen preserving this wonderful retreat. Thank you.	
Daniel Ternan RN	2/23/2018	Website	I strongly do not approve of the train obliterating the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194 because of the effects it will have on the local suppliers. Morgan Legacy Farm will no longer need to purchase from these local suppliers because it will no longer be able to serve as a working ranch. The route proposed bisects all the large and vital structures of the ranch and honestly will cause the removal of most of them. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Daniel Ternan RN	3/3/2018	Website	I am strongly opposed to the proposed route of the train through the ranch referred to as the Morgan Legacy Farm located near FM 709 and 3194. I am troubled that the route will destroy all the vital structures of the ranch that provide a place of relaxation, enjoyment, and an emotional release for health care providers, first responders and military (never at a cost). A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the existing structures.	Refer to LU-5.
Jack Ternan Sr.	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This property belonged once to the Campbell's Soap company and was developed as the company retreat, and should be considered "AS IS" as a Texas historical site. The running of a train through this property will destroy a great deal of past history which can never be recovered.	Refer to LU-5.
Jack Ternan Sr.	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. The current owner allows numerous organizations such as schools and scouts to use the property for their functions without charge. The train will destroy the property in such a way as to prevent charitable functions to take place. The train running through the property will result many of the structures being used for these functions being lost.	Refer to LU-5.
Jack Ternan Sr.	3/3/2018	Website	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route	Refer to BA-5, BA-7, BA-8, LU-5 and TR-8.
Jack Ternan Sr.	3/3/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5.

Shannon Ternan, MD	2/24/2018	Website	I am opposed to the Dallas to Houston High-Speed Rail going through the current proposed path in particular regards to the Morgan Legacy Farm located near FM709 and 3194. The current pathway would lead to the train destroying this charitable ranch. I believe moving the pathway north along existing power lines would be less likely to ruin this ranch and the surrounding environment, improving watershed runoff impacts and limiting the impact of the railway on the property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the impact this would have on the unique and endangered animals that live on and pass through the property. Bald eagles have been spotted on the property. A multitude of birds migrate through and it is home to many different species of Texas wildlife. Please reconsider the current path that will destroy this irreplaceable property that serves so many.	Refer to LU-5 and NR-3.
Shannon Ternan, MD	2/25/2018	Website	I am opposed to the Dallas to Houston High-Speed Rail going through the current proposed path in particular regards to the Morgan Legacy Farm located near FM709 and 3194. The current pathway would destroy this wonderful charitable ranch. I believe moving the pathway north along existing power lines would be less likely to do so. The current preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the impact this would have on the ability to use this property for charitable purposes. It has been used by many nurses, physicians, first responders, and students for no cost. Childrens Medical Center has used it for retreats. Interrupting the property by bisecting it with a high speed train would greatly detract from one of the most important aspects of this property that makes it unique and special. It is a place of peace with nature, relaxation to restore the soul, and it is generously given to those who have a need for these aspects. Please reconsider the current pathway being proposed and consider a move to the north with the existing power lines where the impact on the environment, animals, watershed, and functions of this property will be less adversely affected. Thank you.	Refer to LU-5.

Shannon Ternan, MD	2/28/2018	Website	I am opposed to the Dallas to Houston High-Speed Rail going through the current proposed path in particular regarding the Morgan Legacy Farm located near FM709 and 3194. The current proposed pathway will destroy this wonderful charitable ranch. I believe moving the pathway north along existing power lines would be less detrimental. The current preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the impact this would have on the ability to use this property for charitable purposes. It has been used by many nurses, physicians, first responders, and students for no cost. Boy scouts have utilized this. Charitable hospital groups have benefited as well. Interrupting the property by bisecting it with a high speed train would greatly detract from one of the most important aspects of this property that makes it unique and special. It is a place of peace with nature which will undoubtedly be ruined by a loud high speed train bisecting the property. Please reconsider the current pathway being proposed and consider a move to the north with the existing power lines where the impact on the environment, animals, watershed, and functions of this property will be less adversely affected. Thank you.	Refer to LU-5.
Shannon Ternan, MD	3/1/2018	Website	I am opposed to the Dallas to Houston high speed train destroying the Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save this unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena (one of the first in the county historically) and by cleaving the property, block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. Furthermore, there are environmental concerns; because of the high location it appears the proposed route will cause watershed issues reducing the available migratory waters and have significant negative impact on the environment. It has been used multiple times charitably to provide respite to first responders, police, nurses, physicians, tired residents, etc as a retreat from a emotionally charged service to others. Taking all these things into account, there can be no other conclusion that the current path will have devastating consequences not just for the Morgan family but the very many lives it has already impacted and will in the future. Please consider a move from the proposed path to the north where less impact to the functions of the ranch will be seen. Thanks you.	Refer to LU-5, NR-2 and WW-1.
Shannon Ternan, MD	3/3/2018	Website	I oppose the current proposed path of the Dallas to Houston high speed railway that will destroy the Morgan Legacy Farm. The property is very important to very many people, is used frequently in a charitable way, and is home to animals, migratory wildlife, and provides employment for those that work the ranch. Building the current proposed pathway will require the destruction of two guest houses and literally cleave the property in half, cutting off access to the stables and rodeo arena. Moving to a more northern route along the existing easement where the power lines run will be much less destructive to this very special unique property. Please reconsider the current pathway and preserve this families farm. Thank you.	Refer to LU-5.
Shannon Ternan, MD	3/7/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the economical impact of destroying a ranch that is used for charitable and personal events almost every week. There is a ton of individual traffic that comes through the area to visit the ranch and the resources purchased to provide for them. This will have a long term effect on the area that can't be fixed. Please consider a pathway move to the north where less long term destruction will be seen. Thank you.	Refer to LU-5.
Daniel Ternan, RN	2/22/2018	Website	I am opposed to the train destroying a cultural, economical, historical, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the impact of obliterating a huge part of a family's legacy by completely removing the ability to use this property for its intended multi-generational purpose. It will teach over 50 children, grandchildren, nieces, nephews, grand-nieces, grand-nephews, and respective in-law relationships that the government doesn't care and will take what you have worked your whole life to build, provide, maintain, and established as a representation of how to live life. This ranch has been used for a multitude of charitable functions at no cost, a place of relaxation for all types of people and organizations, a center of education, and a place of work. By dividing this property and destroying buildings and infrastructure the ranch will no longer be able to do serve its purpose.	Refer to LU-5.
Daniel Ternan, RN	2/24/2018	Website	I am opposed to the Dallas to Houston train proposed route through the ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. The current preferred route travels in one of the highest elevations which will create significant watershed issues. Furthermore, by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary	Refer to LU-5, NR-2, NR-3, WW-1 and WW-2. 			charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. Bald eagles have been spotted on the property. A multitude of birds migrate through and it is home to many different species of Texas wildlife. Please reconsider the current path that will destroy this irreplaceable property that serves so many. I believe that a move of the route to the north of the power lines paralleling the existing lines in an established easement is the best option.	<b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife.</b> Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b>
Daniel Ternan, RN	2/27/2018	Website	I am strongly opposed to the train destroying a cultural, economical, historical, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term.	Refer to LU-5.
Daniel Ternan, RN	3/1/2018	Website	I am deeply opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This facility is highly developed with multiple amenities including multiple guest houses, a lodge, a fully operational rodeo arena, horse barn, colt barn all within walking distance of each. The proposed path of the train would destroy the guest houses, part of the rodeo arena and by cleaving the property block access to the colt and horse barns and lodge rendering this property useless for fulfilling its primary purpose. It is important to recognize that this facility has served as an emotional release for health care providers, first responders and military. Please consider moving the proposed route to a readily available area that won't effect these individuals and the ranch that provides so much to so many people.	Refer to LU-5.
Texas Academy of Physician Assistants	2/24/2018	Website	TAPA has several members stay at the ranch, at no cost, the charitable contributions of Morgan Creek Ranch would be lost if it is destroyed by the high speed rail.	Refer to LU-5.
Texas and Southwestern Cattle ...	3/9/2018	Website	Their engineering drawings, presented in Appendix G, page 4539 of the Draft EIS, demonstrate that these "crossing plans" are little more than box culverts. In addition, the proposed dimensions of these culverts are not sufficient to allow for continued agricultural operations on the separated portion of property. The animal crossing plans proposed by TCR, and blindly adopted within the Draft EIS, propose several types and sizes of culverts for different types of animals, separating large and small species. For small animals, the plans call for a six-and-a-half-foot square culvert with a ledge on which animals may cross. If a landowner does not have large animals, such as cattle, on the property at the time of construction, this effectively curtails the landowner's ability to ever raise such large animals on the separated portion of the property, as the dimensions are not sufficient to allow for their easy passage. The size also does not allow for even a pickup truck, a vehicle that is essential to caring for all manner of livestock, to pass. The Ford F-250 is a prime example of a common vehicle used on cattle ranches. From the factory, it measures 80 inches wide by 82 inches tall. This is two inches wider and four inches taller than the proposed culvert. Regardless of the type of animal crossing employed, the Draft EIS is unclear as to how and when these types of crossings will be implemented and by what standards their use will be overseen to prevent irreparable damage to current and future land uses. TSCRA urges FRA to conduct a more thorough review of these animal crossing plans and provide specific recommendations to mitigate the impact on animal and human access to land separated by the rail line on a tract specific basis.	Refer to LU-11, NR-6 and TR-8.
Texas-Kickball	2/22/2018	Website	Current trajectory for the high-speed rail bisects Morgan Creek Ranch. That ranch has hosted our team, at no cost, and has provided relief and offered an escape to hundreds of others, especially healthcare workers and first responders. There is nothing else like this ranch and the high-speed rail should be moved north to preserve the ranch.	Refer to LU-5.
Aija Thacher	2/7/2018	Website	All developed countries have high quality train systems (even third world countries have lower grade systems) that are funded by the government, as are highways, airports and seaports. Private cars are wasteful of time and fuel, as well as create more pollution than mass transportation. We need real rapid train systems, with the passive protection systems that are required by law but not enforced (to protect profits for individual rail companies). The Northeast area is making progress but the rest of the country, especially the long distance areas, like Texas, are left without adequate rapid passenger rail lines.	Comment noted.
Kristen Tharp	2/22/2018	Website	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory water fowl of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about migratory waters.	Refer to LU-5, NR-2 and WW-2.
Kristen Tharp	2/23/2018	Website	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory water fowl of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities	Refer to LU-5 and NR-3.

			the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about bald eagle habitat, one of the most recognizable symbols of our great country, the United States of America.	
Kristen Tharp	2/27/2018	Website	To whom it may concern, I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property. Thank you, Kristen Tharp	Refer to LU-5.
Kristen Tharp	3/5/2018	Website	The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory water fowl of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the historical impact on the land from construction and separation of the land by industry. Thanks, Kristen Tharp	Refer to LU-5, NR-2, WW-1 and WW-2.

I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable, historical, and emotional support to thousands of individuals including first responders, nurses, physicians, students, and other helping professionals. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Thank you for giving thoughtful consideration to these comments.	Refer to LU-5.
Therapy Dallas	3/9/2018	Website	Building this train along the proposed route will undermine a multitude of opportunities for continued charitable giving, both to first responders and other helping professionals. Specifically, I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable, historical, and emotional support to thousands of individuals including first responders, nurses, physicians, students, and other helping professionals. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable, historical, and emotional support to thousands of individuals including first responders, nurses, physicians, students, and other helping professionals. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Thank you for giving thoughtful consideration to these comments.	Refer to LU-5.
Therapy Dallas	3/9/2018	Website	Building this train along the proposed route will undermine a multitude of opportunities for continued charitable giving, both to first responders and other helping professionals. Specifically, I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable, historical, and emotional support to thousands of individuals including first responders, nurses, physicians, students, and other helping professionals. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. The preferred route travels in one of the highest elevations, which will likely create significant watershed issues with broad-scale impact. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities, the proposed route will destroy a property which has provided -- and continues to provide -- charitable, historical, and emotional support to thousands of individuals including first responders, nurses, physicians, students, and other helping professionals. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Thank you for giving thoughtful consideration to these comments.	Refer to LU-5.
Therapy Dallas	3/9/2018	Website	Building this train along the proposed route will undermine a multitude of opportunities for continued charitable giving, both to first responders and other helping professionals. Specifically, I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique and irreplaceable property. Jonathan Thiele	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. Alexander Thomas	2/5/2018	Oral	Good evening. Howdy. My name is Alexander Thomas, and I'm a resident -- a new resident of Harris County. I just heard this morning about this whole thing, thanks to mayor -- the Houston mayor's Facebook live broadcast, and I literally within the few hours got in touch with various entities. And just as part of full disclosure, the gentleman, he's still back there, Mr. Curtis, who got up and spoke in favor of this, although I don't necessarily agree with him per se, what I will say is I did join up on multiple Facebook groups. And I say all that just to say that I'm just now getting started in this conversation. The last I heard about something along these lines was a few years ago. My background's in engineering, oil and gas. I resigned a couple of years ago. Took last year to travel basically, especially in Israel and Europe, and other parts of the world. I've got family around the world. I was born in India, grew up in Kuwait, and I proudly hang my hat in Texas. I love this state, I love this country, and I love the city. And what I have to say is, is that -- and I wish I could look at each of you in your eyes, in your face, and I'm going to try to do that right now. I can't do it for every single one of you, but I want to hear you. Like I wish I could somehow get with some of you personally and find out, you know, more than just what I've heard here. There's some of you who probably didn't get up and speak, and I wanted to find out what really works for you guys; like what makes sense. I heard a lot about what didn't make sense tonight; a few things about what might make sense and could make sense and what the FRA could do in an effort to bridge that gap of how do we as Texans, as Houstonians, as Harris County folks and Waller, whatever, that entire corridor and more, because the goal is for Texas, how do we move forward, how do we make an impact for not just us. Excuse me. I had the flu and a couple of infections and lost my voice completely a couple of days ago. Excuse me.	Comment noted.
Alexander Thomas	3/5/2018	Oral	All right. So good evening. My name is Alexander Thomas, and my comments are obviously for the record but really to everyone here. Thank you that the FRA is doing this and everyone else is a part of this conversation and like I mentioned the last time that I was brought to comment on this in the Cypress meeting, I used to live in Cypress and I moved into Houston proper just, you know, a couple weeks ago kind of thing and we're still moving. So my big concern was that people's concerns weren't being heard and now that I've been to the second meeting, I feel like people's concerns are being heard and then today there are some people who engaged me from Cypress -- from the Cypress meeting, who recognized me, and they brought up some things with me as well and it was great to see more people coming up and speaking against and for and others saying, hey, don't be for or against, just ask more questions. I have one scenario I want to present and since I already mentioned about my background in emergency management, community emergency response and Harris County Citizen's Corps and a former firefighter and EMT and all this kind of stuff, 20-plus years of doing engineering work, been doing IT since I was little, on and on it goes. Major projects that I'm working on that I'm doing infrastructure and building cities and all that. My question is this: How many of you here just by quick show of hands would give just about anything to protect their family, especially their kids or their parents or something like that? Everyone would. We're Texans. We're Houston strong. We know what happened around the time of Harvey. Most of us are the kind of people, I would say, in this room, all of us are the kind of people that care for whom people matter, right, especially our family. And it was really touching to see the lieutenant colonel and his -- I think his wife and his son, his daughter, all up here sharing their thoughts. Personally, from an emergency perspective, one of the questions that I have is, what if it's a night like in the night for those of you may remember, Tropical Storm Allison, where it just started raining, right? I remember being a firefighter that night and it didn't stop. How many	Refer to SS-15, SS-16 and SS-17.

			<p>of you remember Allison? It did not stop. This was before all the flooding that would ensue, right? The emergency services were going, when is this going to stop? Look at what happened in the last three years. Harvey, similar kind of situation, right? We're still dealing with Harvey. We're still dealing with the Tax Day flood, the Memorial Day flood and on and on it goes. And they tell us it's going to get possibly worse. I'll tell you this, if the airports get shut down and the roads get shut down, you're going to need to have some sort of, you know, the Cajun Navy, you know, taking us on hydro flow boats up north or if we have a high speed form of transport -- I'm not saying this is the best answer right now -- but if we have something like this, it could be an alternative, right? Just something to consider. That's all I've got to say. Thank you.</p>	
Courtney Thomas	3/9/2018	Website	<p>I do not like the idea. It takes away from valuable farm land. Will add more crap to the environment it does not need. Not to mention our tax dollars wasted for years to come. No we do not need it at all</p>	Refer to GN-4, LU-2, NE-1, NE-9 and PN-3.
Lance Thomas	1/30/2018	Letter	<p>See attached comments. I am opposed to this HSR project. The DEIS is inadequate. FERC is the Federal Energy Regulatory Commission. FERC is a United States government agency established to oversee the country's interstate transmission of natural gas and oil. PHYMSA is the Pipeline and Hazardous Materials Safety Administration. PHMSA develops and enforces regulations for the safe, reliable, and environmentally sound operation of the nation's 2.6 million mile pipeline transportation system. DEIS 3.9-4.1 Utility Crossings states that "The utilities crossing analysis focuses on major utilities such as large diameter ...natural gas pipelines and petroleum/crude oil pipelines... Comment: Table 3.9-1 shown in Appendix D lists 19 major oil and gas lines crossed by the proposed HSR in Harris county. There is no mention of consultation with or evaluation by FERC or PHMSA by FRA or TCR. These are the two federal agencies responsible for pipeline construction, operation and safety. FRA has consulted with PHMSA on other projects and failure to do so in this analysis is a dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHYMSA have evaluated the environmental and safety hazard Of every Oil and gas pipeline crossing and make plans with all the stakeholders to eliminate or mitigate environmental and safety hazards during construction and/or operation of the proposed HSR. Until this critical step is taken, this project should never move forward. DEIS continued: "The utilities analysis also included those utilities that run parallel to the Study Area. Similarly, they are grouped by county, segment and utility owner in Table 3.9-2, and shown in Appendix D, Mineral and Utility Resources Mapbook" Comments: Table 3.9-2 identifies 2 major natural gas lines paralleled by the proposed HSR in Harris county. Again, there is no mention Of consultation / evaluation by FRA with FERC or PHMSA regarding these lines. FRA has consulted with PHMSA on other projects and failure to do so in this analysis a dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHYMSA have evaluated the environmental and safety hazard of every oil and gas pipeline that is in close-proximity and/or parallel to the proposed HSR track and make plans with all the stakeholders to eliminate or mitigate these known hazards during construction and/or operation of the proposed HSR. Until this critical step is taken, this project should never move forward. Specifically, the ATMOS pipe line is the gas pipeline presumably identified in table 3.9-2. (see attached RRC map of affected ATMOS pipeline). This large gas pipeline is just 50 steps from the proposed track superstructure running parallel to Binford Rd on the east side. Images contained in the DEIS show large overhead cranes extending overhead and beyond the sides of the rail super structure by several hundred feet. Although there is extensive discussion regarding the location and capacity of every sewer water plant along the proposed route, there is no discussion or protecting or moving the huge ATMOS natural gas pipe that is just 50 steps away! The failure to address a specific and known environmental and safety hazards in the DEIS of the proposed Dallas to Houston HSR is a fundamental flaw. The DEIS should be redrafted to include analysis from all stakeholders including ATMOS, FERC, PHYMSA, Waller county officials and land owners to mitigate or eliminate this known hazard. Until that happens, the DEIS cannot and should not be finalized and the plan should not be approved. Finally, giving individual landowners such a short time to review and prepare comments to a DEIS that covers hundreds of miles and hundreds of topics is not fair. Before the DEIS is finalized more time should be granted to those who are affected by this proposed HSR to study and comment.</p>	Refer to EU-1, EU-2, EU-6, NE-1, NE-9, PI-1 and PI-3.

FERC is a United States government agency established to oversee the country's interstate transmission of natural gas and oil. PHYMSA is the Pipeline and Hazardous Materials Safety Administration. PHMSA develops and enforces regulations for the safe, reliable, and environmentally sound operation of the nation's 2.6 million mile pipeline transportation system. DEIS 3.9-4.1 Utility Crossings states that "The utilities crossing analysis focuses on major utilities such as large diameter ...natural gas pipelines and petroleum/crude oil pipelines... Comment: Table 3.9-1 shown in Appendix D lists 19 major oil and gas lines crossed by the proposed HSR in Harris county. There is no mention of consultation with or evaluation by FERC or PHMSA by FRA or TCR. These are the two federal agencies responsible for pipeline construction, operation and safety. FRA has consulted with PHMSA on other projects and failure to do so in this analysis is a dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHYMSA have evaluated the environmental and safety hazard Of every Oil and gas pipeline crossing and make plans with all the stakeholders to eliminate or mitigate environmental and safety hazards during construction and/or operation of the proposed HSR. Until this critical step is taken, this project should never move forward. DEIS continued: "The utilities analysis also included those utilities that run parallel to the Study</p>	Refer to EU-1, EU-2, EU-6, NE-1, NE-9, PI-1 and PI-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>Area. Similarly, they are grouped by county, segment and utility owner in Table 3.9-2, and shown in Appendix D, Mineral and Utility Resources Mapbook" Comments: Table 3.9-2 identifies 2 major natural gas lines paralleled by the proposed HSR in Harris county. Again, there is no mention Of consultation / evaluation by FRA with FERC or PHMSA regarding these lines. FRA has consulted with PHMSA on other projects and failure to do so in this analysis a dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHYMSA have evaluated the environmental and safety hazard of every oil and gas pipeline that is in close-proximity and/or parallel to the proposed HSR track and make plans with all the stakeholders to eliminate or mitigate these known hazards during construction and/or operation of the proposed HSR. Until this critical step is taken, this project should never move forward. Specifically, the ATMOS pipe line is the gas pipeline presumably identified in table 3.9-2. (see attached RRC map of affected ATMOS pipeline). This large gas pipeline is just 50 steps from the proposed track superstructure running parallel to Binford Rd on the east side. Images contained in the DEIS show large overhead cranes extending overhead and beyond the sides of the rail super structure by several hundred feet. Although there is extensive discussion regarding the location and capacity of every sewer water plant along the proposed route, there is no discussion or protecting or moving the huge ATMOS natural gas pipe that is just 50 steps away! The failure to address a specific and known environmental and safety hazards in the DEIS of the proposed Dallas to Houston HSR is a fundamental flaw. The DEIS should be redrafted to include analysis from all stakeholders including ATMOS, FERC, PHYMSA, Waller county officials and land owners to mitigate or eliminate this known hazard. Until that happens, the DEIS cannot and should not be finalized and the plan should not be approved. Finally, giving individual landowners such a short time to review and prepare comments to a DEIS that covers hundreds of miles and hundreds of topics is not fair. Before the DEIS is finalized more time should be granted to those who are affected by this proposed HSR to study and comment.</p>	
Lance Thomas	1/30/2018	Handwritten	<p>See comments attached. Public needs more time to comment. TCR has had years to prepare, landowners have had very little time. I am against the Dallas-Houston HSR project. Finally, giving individual landowners such a short time to review and prepare comments to a DEIS that covers hundreds of miles and hundreds of topics is not fair. Before the DEIS is finalized more time should be granted to those who are affected by this proposed HSR to study and comment.</p> <p>Topic: Lack of Gas Pipeline Environmental and Safety analysis by FERC &amp; PHYMSA. FRAhas jursidiction over railroad safey (not pipeline safety)                  Definitions: FERC is the Federal Energy Regulatory Commission. FERC is a United States government agency, established in 1977 to oversee the country's interstate transmission and pricing of a variety of energy resource including electricity, natural gas and oil.                  PHYMSA is the Pipeline and Hazardous Materials Safety Administration. PHNISA develops and enforces regulations for the safe, environmentally sound operation of the nation's 2.6 million mile pipeline transportation system. and the nearly 1 million daily shipments of hazardous materials by land, sea, and air.                  DEIS 3.9.4 Affected Environment                  3.9.4.1 Utility Crossings                  "The utilities crossing analysis focuses on major utilities such as large diameter water/wastewater lines, large diameter natural gas pipelines, large diameter petroleum/crude Oil pipelines and high voltage electrical ransmission lines. Major utilities located within the Study Area are grouped by county, segment and utility owner in Table 3.9-1, and shown in Appendix D, Mineral and Utility Resources Mapbook.                  " Comment: There are 19 major oil and gas lines crossed by the proposed HSR in Harris county. There is no mention of consultation with or evaluation by FERC or PHMSA. These are the two federal agencies responsible for pipeline safety. This is a glaring and dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHYMSA have evaluated every oil and gas pipeline crossing evaluated these hazards and made plans to eliminate or mitigate ese hazards during construction and/or operation of the proposed HSR.                  DEIS continued: "The utilities analysis also included those utilities that run parallel to the Stud Area. Similarly, they are grouped by county, segment and utility owner in Table 3.9-2, and shown in Appendix D, Mineral and Utility Resources Mapbook"                  Comments: Table 3.9-2 identifies 2 major natural gas lines paralleled by the proposed HSR in Harris county. Again, there is no mention Of consultation / evaluation by FRA with FERC or PHMSA. This is a another glaring and dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHYMSA have evaluated potential conflicts and hazards with the parallel pipelines and have made plans to eliminate or mitigate these hazards during construction and/or operation of the proposed HSR.                  Conduct all necessary environmental work - Can't do that until you look at property.                  Specifically, the ATMOS pipe line is the gas pipeline presumably identified in table 3.9-2. (see attached RRC map of affected ATMOS pipeline). This large gas pipeline is just 50 steps from the proposed track superstructure running parallel to Binford Rd on the east side. Images contained in the DEIS show large overhead cranes extending overhead and beyond the sides of the rail super structure by several hundred feet. (Vibration studies show impact out at least 600 feet) Although there is extensive discussion of the location and capacity of every Sewer water plant along the proposed routes and how conflicts with sewer systems will be addressed, there is no discussion or analysis regarding</p>	Refer to EU-1, EU-2, EU-6, PI-1 and PI-3.

			<p>protecting or moving the huge ATMOS natural gas pipe that is just 50 steps away! The failure to address a specific and known environmental and safety hazard in the DEIS of the proposed Dallas to Houston HSR is a major flaw. The DEIS should be redrafted/amended to include analysis and plans made by and with all stake holders including ATMOS, FERC, PHYMSA, county officials and land owners to mitigate or eliminate this known hazard. Until that happens, the DEIS cannot and should not be finalized and the plan should not be approved. Finally, giving individual landowners such a short time to review and prepare comments to a DEIS that covers hundreds of miles and hundreds of topics is not fair. Before the DEIS is finalized more time should be granted to those who are affected by this proposed HSR to study and comment.</p>	
Lance Thomas	1/30/2018	Handwritten	<p>Topic: 138Kv electric towers. DEIS section 3.9 The TPSS would provide the electric power to the trains and would be composed of the following components: 138kV electrical transmission line connections, TPSS substations, sectioning posts, subsectioning posts, auto transformer posts and a 25kV 60 cycle overhead catenary system. Therefore, the energy (electricity) required for propulsion of the HSR trains between Dallas and Houston is estimated at 248,200 MWh per year, or 846,894 MMBTUs per year. There are no images, diagrams or environmental impact assessment of the 138Kv lattice tower structures that will be used to feed the electrical requirements Of the proposes I-ISR. (see image below). Does anyone want these in their backyard? These towers have a huge environmental, economic, safety and aesthetic impact on landowners, neighbors and wildlife. Again, failure to address this impact in the DEIS is another glaring error. This intentional omission must be addressed with all stakeholders to minimize or eliminate this impact before the project moves forward.</p>	Refer to EU-5, NE-1 and NE-9.
Lance Thomas	2/6/2018	Oral	<p>I'll be brief. My mom did a better job than I will. I'm against the Dallas to Houston High-Speed Rail Project. The FRA in your nice exhibits over there says the FRA has jurisdiction over railroad safety. Specifically, the FRA does not have jurisdiction over pipeline safety. And it's interesting because in Table 3.9-1, there are 19 major oil and gas pipelines crossed by the proposed HSR in Harris County, and there's no mention of the consultation or any consultation or evaluation by FERC or PHMSA. These are the two federal agencies responsible for pipeline safety. This is a glaring and dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC, PHMSA, and all the other stakeholders have had a chance to evaluate these hazards and make plans to mitigate and eliminate these hazards. Next, Table 3.9-2 says that the identifies two major natural gas pipelines that parallel the proposed HSR in Harris County. Again, no mention of consultation, evaluation by FRA with FERC or PHMSA. This is another glaring and dangerous environmental and safety omission. The FRA should not move forward or finalize the DEIS until FERC and PHMSA have evaluated potential conflicts and hazards with the parallel pipelines and have made plans to eliminate or mitigate these hazards. Finally, as my mom mentioned, the Atmos pipeline is the natural gas pipeline that is presumably one of them that's presumably identified on 3.9-2. This gas pipeline is just 50 steps from the proposed track superstructure running parallel to Binford Road. Images contained in the DEIS show large overhead cranes extending well beyond the 50 feet or 150 feet. Also, I noticed over there that the vibratory damage caused by construction and/or operation extends at least out to 500 if not 600 feet. Although -- this is interesting also. Although there's extensive discussion of the location and capacity of every sewer water plant along the proposed route, there's no discussion of an Atmos line that's 50 feet away from the dang trucks. The failure to address a specific and known -- Dang wasn't a bad word, by the way. The failure to address a specific and known environmental safety hazard in the DEIS of the proposed HSR is a major flaw. The DEIS should redrafted, amended, and include analysis and plan from Atmos, FERC, PHMSA, county officials, Waller City, landowners, and anybody else who has a stake on it. For all these reasons, I stand against this stinking railroad.</p>	Refer to EU-1, EU-2, EU-6, NV-5 and PI-1.
Lance Thomas	2/6/2018	Oral	<p>My name is Lance Thomas. I'm Lavonne Thomas' son, and she's going to do a better job than me. Bottom line: I have some things I could read, but I'll shorten it up for you guys. If I ask if I ask you to go to go build something, oh, a hundred miles long, and I'd be digging and trenching and putting pylons in, the very first thing you might ask me - if you do anything about that, you'd say, "Am I going to hit any gas lines while I'm doing that? Is there going to be a problem with me running into, say, some oil-and-gas transfer line?" The reason why I say that is because what the responsibility for the Draft Environmental Impact Statement is, is to evaluate those very things. There's two -- there's two federal agencies that do that all day long, FERC and PHMSA. There's not one single mention of an environmental impact study on every single one of those gas pipelines -- there's 19 of them that it's going to cross, and the one that's 50 steps away from the proposed -- the proposed line on our property, not a single mention of FERC, PHMSA. Not even a question. Not even a, "Hey, I wonder if this is going to affect the environment?" Hmm. Question. So the other thing, somebody also - somebody already mentioned was: How are you going to get electricity to the line? No mention of the environmental -- have you seen -- have y'all seen those big truss tower things that -- this is going to be a 138kV line that has to feed this alleged bullet train, right? No mention - not one mention of the environmental impact, the visual impact of building additional lines, not one mention. See, if you're hiring somebody to do an environmental impact study and they fail to address all the gas pipelines that it's going to cross, they fail to address the visual impact of huge truss towers, you'd say you failed. You just say it failed. And you'd say, "Go back and try again." In the meantime -- in the meantime, what you would all. It's not going to work." I don't call this -- this isn't going to be a high-speed rail. It's going to be a high-speed fail.</p>	Refer to AS-1, EU-1, EU-2, EU-4 and EU-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Lance Thomas	3/8/2018	Website	There is a 30" gas pipeline laid in 1967 fifty steps away from the proposed location of the two track superstructure on our land on Binford Rd near Waller, Tx. Digging footings for pillars, pounding pilings, operating dozers, cranes and other heavy equipment on or near this big old active pipeline will create an extremely dangerous and potentially explosive situation. Also, the proximity of the pipeline is also well with the 275 feet zone of heaviest destructive vibration from constant train operations. Constant vibrations from passing high speed trains will weaken the old gas pipeline and create an extremely dangerous and potentially explosive situation. In fact, having a high speed train around any aging pipeline corridor, such as exists in Harris County along Highway 290, is a catastrophic TCR, AECOM, and the FRA did not consult FERC or PHMSA in their planning process despite the approximate 142 pipelines that would be impacted by this proposed project and the pipeline on our property in particular. It is imperative that FERC and PHMSA be included as contributing agencies in the Environmental Impact Statement, since they are the responsible agencies in the management of pipeline safety. Until this has been done and the environmental impact of disturbing this and other gas pipelines has been addressed in full in the DEIS, we request that no building approval be given to the project.	Refer to EU-1, EU-2 and NV-5.
Lance Thomas	3/9/2018	Website	DEIS Neglected to address HAZMAT Sites The DEIS identifies over 100 hazmat sites along the proposed route along Hwy 290 that have been designated as containing hazardous waste materials. There is no provision or detailed plan made by Texas Central or by government agencies for clean up or remediation of these sites prior to or during proposed construction of the project contained in the DEIS. When hazardous waste areas are disturbed, toxins are released that harm the public and/or the environment. Therefore, we request that a comprehensive phase II assessment be completed on each site before this project is approved by the FRA. Further, the DEIS must be amended to contain a detailed plan for cleanup of each site before FRA approval. Until the environmental impact of disturbing these sites has been addressed, and a mitigation plan for each is in place, we request that no building approval be given to the project.	As discussed in <b>Section 3.5.6.2, Hazardous Materials and Solid Waste, Avoidance, Minimization and Mitigation, Mitigation Measures, HM-MM#1: Environmental Site Assessments</b> , all high-risk sites and moderate-risk sites that are within or adjacent to the limits of disturbance would require further investigation prior to construction. Further investigation may include TCEQ files review, Phase I ESA, and/or Phase II ESA. If site assessments indicate the presence of contamination, mitigation and/or remediation measures will be implemented as discussed in <b>HM-MM#1</b> .
Lance Thomas	3/9/2018	Website	Environmental impact of affected Wetlands not addressed: Designated wetlands on our property off of Binford Rd near Waller, Tx. will be destroyed by rail construction, rail operation, necessary gas pipeline relocation, electrical tower construction, emissions and drainage pattern disruption. No assessment or environmental impact study was made pertaining to the destruction of these wetlands during the construction or operation of the HSR in the DEIS. The forest of trees planted around the wetlands on our property 40 years ago is one of the few wildlife habitats in the area. Among the animals whose havens there would be destroyed by pipeline removal, railroad construction and operation, as well as flooding, are water fowl, migratory birds, road runners, bobcats, coyotes, deer, doves, hawks, owls, squirrels, raccoons, skunks, and opossums. No assessment or environmental impact study was made pertaining to the destruction of the woodlands and wetlands by the proposed project. The DEIS should be amended to address these critical environmental issues. Because these fragile area will be permanently destroyed, our family wants the no build option for this proposed TCR/TCP high speed rail project.	Refer to NE-8, WW-1 and WW-2.
Lance Thomas	3/9/2018	Website	Road, infrastructure and building destruction Images provided by TCR show heavy construction equipment and massive cranes being utilized in the construction process. The DEIS did not address the environmental, human and economic impact of the destruction of existing roads, pipelines, ditches, culverts and bridges by during construction and/or operation of the project. The DEIS did not address the environmental, human and economic impact of the necessary remediation of this destruction after construction and during operation of the train. In the TCR/TCP proposed HSR plan many homes, commercial buildings and schools would be within the maximum vibration and noise damage range of the construction and operation of high speed trains. The FRA "High-Speed Ground Transportation Noise and Vibration Impact Assessment" of September 2012 did not address or assess the noise and vibration damage caused by two trains high speed trains passing each other frequently. TCR expects 68 trains to pass every 30 minutes from 5:30 a.m. to 11:30 p.m. at speeds of 185 to 205 mph. The effects of constant vibrations on pipelines, infrastructure, buildings and their foundations must be fully and accurately assessed by the FRA in its Environmental Impact Study. Because the environmental impact of these known issues have not been assessed and cannot be mitigated our family wants the no build option for this proposed TCR/TCP high speed rail project.	Refer to LU-10, NV-1, NV-5 and TR-6. The noise analysis did not result in any impacts to schools as a result of the proposed project.
Lance Thomas	3/9/2018	Website	Safety Road closures, disruptions and detours of traffic patterns causing accidents and delays for law enforcement, emergency vehicles and other vehicular travel will cause immediate and permanent delays during the construction of the proposed project and resulting berms and superstructures. The DEIS did not adequately address the environmental, human and economic impact of the road closures, disruptions and detours for law enforcement, emergency vehicles and other vehicular traffic during construction and during operation of the train. Until the health and safety impact of disrupting and impeding normal traffic patterns and the delays for cars, law enforcement and emergency vehicles has been fully assessed and approved by local law and emergency providers, we request that no approval be given to the project by any local, federal or state agency. Because the environmental, human and economic impact of these known issues have not been assessed and cannot be mitigated our family wants the no build option for this proposed TCR/TCP high speed rail project.	Refer to SS-18, SS-23, TR-6 and TR-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
Lance Thomas	3/9/2018	Website	Time and BNSF I-45 corridor According to the FRA public meeting exhibits, TCR was put together information for the FRA to use in the DEIS process. TCR team of engineers and promoters had years to gather and present their information in the light most favorable to their proposed project. The result is a DEIS that is well over 5000 pages with exhibits. It contains terms, abbreviations and exhibits that are unfamiliar to the average citizen landowner. The proposed project will ruin land that has been in our family since the 1800's. Giving landowners a few weeks to prepare adequate responses to a project that will destroy our land environmentally and economically is grossly unfair and un-American. Further, the DEIS contains no explanation of why any particular route was chosen over the obvious BNSF I-45 corridor tying into the established Union Station in Houston's center. The BNSF I-45 corridor avoids a number of problems that the TCR and the FRA omitted from the DEIS such as failing to accurately included the amount of impacted land, failing to assess wetland and wildlife habitat destruction, failing to assess gas pipeline crossings and replacement from a safety and environmental standpoint, failing to address environmental and safety hazards in crossing and disturbing hazardous waste sites, failing to address environmental and safety hazards pertaining to flood control and drainage systems, failing to address environmental and safety hazards in road, culvert and bridge closures and destruction, failing to address environmental and safety hazards in noise, vibration, dust, and light pollution, and failing to address environmental and safety hazards in crossing or building on or near active oil and gas pipelines and failing to include FERC and PHMSA in the DEIS process pertaining to crossing, relocating, digging, driving pilings or operating a HSR within the zone of maximum vibration damage. For grossly unfair time limitations placed on property owners to respond to a DEIS that has the above failures and more, our family stands firmly against this project, and requests the no build option.	Refer to BA-8, BA-9, BA-10, EU-1, EU-2, FP-1, GN-1, HZ-5, NE-1, NE-9, NR-5, PI-1, PI-3, TR-8, WW-1 and WW-2.
Lance Thomas	3/9/2018	Website	NOISE Noise and vibrations will ruin the quiet and peaceful environment of our land along Binford Road near Waller, Texas. It will also ruin living conditions for nearby homes and the educational environment for schools. The proposed project states that high speed train tracks would be elevated in some places from 10 to 70 feet. This would cause the area of audio disturbance to be greater than disclosed, as there are no high structures or foliage to absorb or minimize the repeated audio impact. The noise and vibration of frequently passing high speed trains will ruin the natural environment of our property's refuge for wildlife and human habitation. The planned tracks are too close to seven Cypress Fairbanks schools and many homes. Effects of steady noise, vibration, electromagnetic fields, dust, light and glare on children caused by high speed train passing by homes and schools every 30 minutes from 5:30 a.m. until 11:30 p.m. and maintenance crews working on tracks the rest of the night. Noise pollution and environmental destruction by vibration have not been adequately treated in the DEIS. Until noise pollution and environmental destruction by vibration has been addressed in full in the DEIS and plans are in place to mitigate or eliminate this environmental and habitability hazard, our family stands firmly against this project.	Refer to NR-1, NV-1, NV-5 and NV-7. According to the FRA guidelines described in <b>Section 3.4.3.2.3, Noise and Vibration, HSR Operational Noise Impacts</b> , schools are included in land use Category 3 for the purpose of noise impact assessment. Based on the noise analysis in <b>Section 3.4.5.2.4, Noise and Vibration</b> , HSR Operational Noise Impacts no severe or moderate noise impacts have been identified at any schools within the Study Area. Electromagnetic fields (EMFs) follow the inverse-square law, meaning that the strength of the field decreases markedly with distance. Please refer to <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> , "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the High Speed Rail (HSR) track. Beyond this distance, the EMF would be below background levels." As part of the study, potential sensitive receptors were identified, as summarized in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> , "Sensitive receptors include universities, medical institutions, high-tech businesses, airports and governmental facilities (i.e., police and fire) that may use equipment that could be affected by new sources of EMFs. For completeness, the review of potentially impacted sensitive receptors was expanded to include schools, which may have wireless networks for tablets and laptops, and parks, which could be used for flying remote-controlled planes and drones." Regarding the effects of long-term exposure to EMFs on children, the Draft EIS summarized current research and scientific conclusions. Please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> , "Reputable authorities on the subject of EMFs include the World Health Organization (WHO) and the International Commission on Non-Ionizing Radiation Protection (ICNIRP). The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences with studying and making recommendations on EMF and human health. The National Institute of Environmental Health Sciences published reports outlining their interpretations and recommendations. The National Institute of Environmental Health Sciences concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." Please also note that the principle of the ICNIRP has been to build in "safety factors" to their published guidelines. For example, once the ICNIRP determined the level of EMF strength necessary to observe an effect, the ICNIRP then applied a reduction factor of 5 as a means of arriving at a precautionary value for occupational exposure. The value was reduced by an additional factor of 5 for public exposure, arriving at the extremely cautious values for EMF restriction discussed in the Draft EIS. Thus, the ICNIRP values already have built-in precautionary levels.</p>
Lance Thomas	3/9/2018	Website	<p>Flooding Harris County has extreme problems with drainage and flood control. These issues were not addressed in the DEIS. Our property is on Binford Road near Waller, Texas. Flooding from overflow of two creeks north of our property and rerouted by the planned berms south of the creeks, would direct excessive water to our land causing damage to wetlands, forest, domestic animals and wildlife, nearby houses, businesses roads and infrastructure. Environmental damage and destruction caused by the construction of proposed berms and track superstructure has not been adequately evaluated and addressed in the DEIS. TCR indicates in the DEIS that it will divert additional runoff water using existing drainage ditches for the runoff. The DEIS is void of project engineering and environmental impact analysis regarding the diversion of projected runoff onto adjoining properties and existing drainage systems. Such a glaring omission is grossly negligent in a county that has suffered tremendous flood damage due to hurricanes and excessive rainfall. Added drainage reservoirs must be specified by FRA throughout the proposed line because existing drainage resources are already overburdened and subject to flooding. This project, like every other project in Harris County must include its own water detention and drainage systems and an environmental assessment of these detention areas and systems. The FRA, USACE and county officials should not allow TCR to burden existing fragile drainage systems with additional runoff causing additional damage to the environment, roads, infrastructure and private property. Until the environmental impact of disrupting, altering or burdening existing drainage patterns and systems has been evaluated and included in the DEIS, we request that no approval be given to the project by any local, federal or state agency. Until these issues are fully mitigated or eliminated, our family stands firmly against this project and demands the no build option.</p>	<p>Refer to FP-1, WW-1 and WW-2. The route near Binford Road would be constructed on a mix of embankment and viaduct. All of these areas will be constructed to avoid resulting in negative impacts to flooding.</p>
Lance Thomas	3/9/2018	Website	<p>CATHODIC PROTECTION The proposed project includes an electric train supplied by 138kv lines running to and through the superstructure. This new constant source of electricity and/or electromagnetic energy will cause electrolysis that will compromise the integrity of the 30" active gas pipeline on our property that is located about 150 feet from the proposed project route. This line was buried about 16 inches below the surface more than 50 years ago. Any compromise of this line would pose serious safety concerns for humans, animals and property. TCR</p>	<p>Refer to EU-1, EU-2, NV-5 and SS-19.</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			and FRA failed to address this known issue in the EIS. Introducing any additional source of electricity near an active oil and gas pipeline will, at minimum, require cathodic protection units to be added to the entire route, especially in Harris County along Hwy 290. Cathodic protection units run diagonal to pipelines taking hundreds of feet. There are numerous areas where the layout of the surround land does not allow for such installations necessary to operate the rail and pipelines safely. Cathodic protection units require routine replacement because they deteriorate. Pipeline companies would conduct yearly anomaly checks on active pipelines affected by this high speed train due to the electricity and constant vibrations. Anomaly checks put a financial burden on pipeline companies, as pipelines must be taken out of commission affecting services to the public. If the integrity of the pipeline has been affected, the pipeline must be replaced which will require FERC PHMSA involvement, thus delaying delivery of the product to consumers and affecting the price they pay. TCR and FRA did not address the environmental impact of adding cathodic protection to the multitudes of pipeline crossings and specifically did not address this issue concerning the old ATMOS pipeline on our land. TCR, AECOM, and the FRA did not include FERC or PHMSA in their planning process despite the approximate 142 pipelines that would be impacted. FERC and PHMSA must be included as contributing agencies in the Environmental Impact Statement, since they are the responsible agencies in the management of pipeline safety. Because the environmental, human and safety impact of these known issues have not been assessed by the FRA and cannot be eliminated our family wants the no build option for this proposed TCR/TCP high speed rail project.	
Lance Thomas	3/9/2018	Website	Economic Viability Though the economic viability of this HSR project is highly speculative, the project places almost 100% of the real permanent environmental and economic burden on rural Texas landowners. The DEIS waives these burdens off, as if they do not exist or do not matter. FRA dismisses its duty to evaluate the economics of the project because the project will allegedly use private funds. However, the TCR and FRA did not hesitate to use economic analysis to eliminate the use of the BNSF corridor between Dallas and Houston being because it was considered "too expensive." Devaluation of land caused by construction and operation of this project will bring financial ruin to rural landowners, schools and public services because of the devaluation of land prices along the proposes route. This project is "too expensive" for private citizens and local taxing entities. This is exactly why the BNSF I-45 corridor should be used! The proposed taking of our land and the projected placement of tracks on our land near Waller, Tx would land-lock about eighty-five percent of our property rendering it useless. FRA completely failed to assess the human environmental impact of the actual or constructive taking of thousands of acres of private land. Because the human environmental impact and the devastating economic impact of the destruction of private land has not been assessed and/or cannot be eliminated or mitigated our family wants the no build option for this proposed TCR/TCP high speed rail project.	Refer to BA-10, GN-4, LU-7, NE-1, NE-9 and VA-1.
Lavon Thomas	1/30/2018	Handwritten	<p>I am Lavon Thomas, an 88 year Old resident Of Jersey Village. My family has owned land on Binford Rd. in Harris County since the 1800's. The proposed bullet train route cuts across our land north to south. I stand firmly against the Dallas to Houston HSR project. Though the economic viability of the HSR project is highly speculative, the project places almost 100% of the real permanent environmental and economic burden on rural Texas landowners. The DEIS waives these burdens off, as if they do not matter.</p> <p>Section 5.0 of the DEIS is telling: The law requires federal agencies to evaluate...the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity. The problem with the DEIS analysis is that almost ALL of the "Temporary impacts" listed are PERMANENT NEGATIVE IMPACTS FOR RURAL LAND!</p> <ol style="list-style-type: none"> <li>1. DEIS states: Temporary disruption of normal traffic patterns with delays for cars and emergency response vehicles.... In reality, the disruption of normal traffic patterns and detours for cars and emergency response vehicles will be a permanent negative impact for all Binford Rd land.</li> <li>2. DEIS states: Temporary disruption and change in how properties would be accessed during construction - In reality, because the track landlocks 90% Of Our properW, it will cause a permanent negative impact on land value.</li> <li>3. DEIS states: Temporary loss of income to some businesses. In reality, this high-speed rail will cut off 90% of our property, permanently causing loss of income and devaluation of our land for all uses.</li> <li>4. DEIS states: Temporary increases in noise, vibration, dust, light and glare generated by construction. In reality, this High-speed train would sound like a jet plane landing on your yard all day until 11:30 at night. Maintenance crews working the rest of the night WILL permanendy create noise, vibration, dust, light and glare negatively impacting our land.</li> <li>5. DEIS states: Temporary increases in waste and hazardous materials disposal - In reality, our designated wetlands will be affected during construction. Also, the proximity of an active gas pipeline just 50 steps away, is a potential environmental and safety hazard.</li> <li>6. This analysis includes FRA's and TxDOT's Texas-Oklahoma Passenger Rail Study (TOPRS) of passenger rail options, including: conventional rail, higher speed rail, and high speed rail. The 2017 Tier I Record of Decision (ROD) formally identified seven Selected Alternative to serve as the framework for future investment in new and improved conventional and high-speed passenger rail service in three regions between Oklahoma City and South Texas. The ROD did not grant approval for construction, but selected alternatives for specific geographic sections along the corridor, to be carried forward in a more detailed, Project-Level EIS in the future. A Dallas to Houston geographic region was not assessed by TOPRS.</p>
Lavon B Thomas	2/27/2018	Website	<p>In spite of a long history of failed, wrecked and bankrupt passenger train systems in the US, a foreign company wants to build another passenger train system with antiquated technology using inflated financial and bogus ridership projections that will destroy ecosystems, negatively impact sensitive and overloaded drainage systems and render our rural land useless. Passenger trains have failed in the US because there are more economic, flexible and efficient means to move information, goods and people. Now in use from Houston to Dallas are mega buses, private cars, commercial and private planes. Commercial plane ticket costs equal to TCR's projected \$199.00 one-way HSR ticket cost, plus available cheaper plane tickets, are too competitive for rail in a population far less dense than Japan's. As technology advances, the need to take and ruin land for an outdated model train defies reason and existing research. Hyperloop Texas and driverless cars are already on the table. Most importantly, the TxDOT Statewide Ridership Analysis Report of December 2013 already researched ridership and cost effectiveness for various corridors in Texas finding that "the Austin-Houston core ex-press service corridor had the highest forecasted ridership, followed by Dallas to San Antonio". TxDOT's own research should be employed by themselves and FRA in making decisions regarding Need and Purpose for Texas passenger trains. I refer the FRA to the Reason Foundation Report, "Texas High Speed Rail: Caution Ahead" of February 2017 and four other studies of high-speed rail in the Dallas-Houston corridor which all reached the same conclusion: high-speed rail is not feasible in Texas. These studies were "High-speed Rail in the Rearview Mirror" written by Marc Burns, "Policy and Financial Analysis of High-speed Rail Ventures in the State of Texas" written by Craig Roco and Leslie Olson of Texas A&amp;M Transportation Institute, "Independent Ridership and Passenger Revenue Projections for the Texas TGV Corporation High Speed Rail System in Texas" written by Charles River Associates and the "Lone-Star High Speed Rail Market Study" com-missioned by Texas Central Railroad itself. Our family sees the no build option as the feasible choice in the final Environmental Impact Statement on this HSR project. We request the FRA to respond in writing.</p>	<p>Refer to AQ-7, BA-2, BA-4, BA-12, GN-2, GN-3, NE-1, NE-9, PN-3, SC-3 and TC-2.</p>
Lavon B Thomas	2/27/2018	Website	<p>Though the economic viability of this HSR project is highly speculative, the project places almost 100% o the real permanent environmental and economic burden on rural Texas landowners. The DEIS waives these burdens off, as if they do not matter.</p> <p>By contrast, Japanese and Private Investors of TCR have been benefitted by the BNSF corridor between Dallas and Houston being eliminated in the DEIS because it was considered too expensive for their proposed project.</p> <p>To be considered are the facts that Dallas and Houston urbanites get their oil, gas, timber, food, much of their water and other essentials from rural areas. Production and delivery of such urban needs would be permanently impacted by this HSR project, causing both urban and rural citizens' business losses.</p> <p>Devaluation of land caused by construction and operation, as now projected, would bring financial ruin to rural landowners. TCR's demands for constantly increasing land width control on either side of the tracks would render most affected properties useless. The projected placement of tracks on our land would landlock eighty-five to ninety-five percent of our property.</p> <p>Quietly TCR's Japanese and Individual Investors have been working on their landgrab for years seeking the help and support of FRA, the U.S. Army Corps of Engineers, and other government entities.</p> <p>Conversely, Texas landowners, many of whose families have nurtured their land for over 100 years, have been hit with no forewarning by high pressure techniques, including late night threats and lawsuits, for refusing to sign survey permissions containing no protections for the landowner. Owners, without ade-quate FRA notice, have been given a short time to submit written questions and concerns, as well as an exceedingly limited time to peruse thousands of DEIS pages. For a lifetime of protecting their land assets, owners have been given three minutes to defend their land rights in one FRA county meeting, some of which have been scheduled in buildings too small to accommodate the crowd, in addition to their having insufficient parking space.</p>	<p>Refer to BA-6, BA-7, BA-8, ED-2, LU-7, NE-8, PI-1, PI-3, PI-6, PI-11, TC-7, TR-8 and VA-1.</p> <p>Operation of the TCRR will not impact the access of goods and utilities to urban areas via transportation networks or utility systems.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Our family sees the no build option as the feasible choice in the final Environmental Impact Statement on this HSR project. For the sake of hypothetical urban productivity, the FRA has a legal and ethical duty to identify and quantify the permanent negative impact on the rural landowner's land value and use in an EIS.	
Lavon B Thomas	2/28/2018	Website	<p>Infrastructure and Building Structure Effects</p> <p>Destruction of existing roads, ditches, culverts and bridges by heavy construction vehicles, equipment and supplies, as well as later maintenance equipment and materials have not been adequately calculated and addressed in the DEIS. Also, remedial standards and costs were not assigned in the DEIS. These omissions must be accurately researched with remedial standards and costs assigned for inclusion in a final EIS.</p> <p>In the TCR/TCP proposed HSR plan many homes, commercial buildings and schools would be within damage range of the high speed trains. The FRA "High-Speed Ground Transportation Noise and Vibration Impact Assessment" of September 2012 must be revisited with the facts of the TCR/TCP planned schedule of not only one, but two trains passing each other frequently. With the projected daily 68 train passings every 30 minutes from 5:30 a.m. to 11:30 p.m. at speeds of 185 to 205 mph, the effects of constant vibrations on buildings and their foundations should be accurately stated in a final FRA Environmental Impact Study</p> <p>Our family wants the no build option for this TCR/TCP high speed rail project.</p>	Refer to NV-5 and TR-7.
Lavon B Thomas	2/28/2018	Website	<p>Of primary importance are environmental and safety hazards of construction activities for the track, including large cranes, dozers, pounding pilings and digging large footings on or near an active natural gas pipeline only 50 steps away from proposed track. The proximity of the pipeline is also well with the 275 feet zone of heaviest destructive vibration from constant train operations. This 30" pipe was installed in 1967. Obviously, any damage to the integrity of the pipe would pose serious environmental and safety hazards.</p> <p>The location of the proposed train cuts across and will destroy at least one of the designated wetlands on our wooded property. Additionally, the proposed train will ruin the natural environment and our property's sizeable refuge for wildlife, one of the very few in the area.</p> <p>To be noted also is that a 38Kv electric service is required to power the proposed train. Generating that much electricity does not come without a heavy environmental cost in terms of pollution.</p> <p>A new constant source of electricity will also compromise the integrity of the pipeline on our property, resulting in failure and possibly causing an explosion.</p> <p>Introducing this source of electricity will require cathodic protection units to be added to the entire route, especially in Harris County along Hwy 290. Cathodic protection units run diagonal to pipelines taking hundreds of feet. There are numerous areas where the layout of the surround land does not allow for such installations necessary to operate the rail and pipelines safely.</p> <p>Cathodic protection units require routine replacement because they deteriorate. Pipeline companies would conduct yearly anomaly checks on active pipelines affected by this high speed train due to the electricity and constant vibrations. Anomaly checks put a financial burden on pipeline companies, as pipelines must be taken out of commission affecting services to the public.</p> <p>If the integrity of the pipeline has been affected, the pipeline must be replaced which will require FERC PHMSA involvement, thus delaying delivery of the product to consumers and affecting the price they pay.</p> <p>TCR, AECOM, and the FRA did not include FERC or PHMSA in their planning process despite the approximate 142 pipelines that would be impacted. FERC and PHMSA must be included as contributing agencies in the Environmental Impact Statement, since they are the responsible agencies in the management of pipeline safety.</p> <p>Our family wants the no build option for this proposed TCR/TCP Japanese and Private Investor high speed rail project.</p>	Refer to EU-2, EU-1, NV-5, NE-8 and WW-2. For information regarding impacts to wildlife and vegetation refer to <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Lavon B Thomas	3/2/2018	Website	<p>TCR/TCP, composed of Japanese and Individual Investors, projects over 100 million gallons of clean water would be used to operate and maintain the high speed trains on a yearly basis.</p> <p>The FRA must consider in an EIS the current water shortages, plus predicted future increases in the scarcity of needed clean water for our people. This proposed TCR/TCP high speed rail plan would result in a heavy environmental impact by this venture, which realistic, accurate cost projections of construction, operation and income ridership figures reveal will never break even.</p> <p>Our family wants the no build option for this proposed TCR/TCP Japanese and Private Investors' high speed rail project.</p>	Refer to FP-1, NR-5, WW-1, WW-2 and WW-6.
Lavon B Thomas	3/6/2018	Website	<p>Hunting will be impossible with the habitats of wildlife abandoned and destroyed because of constant noise and vibrations caused by years of construction and subsequent possible operation of every 30 minute high speed train passings through 18 hours daily and by maintenance crews' working through the rest of each night.</p> <p>Not only noise, vibration, dust, light and glare levels, but visual pollution caused by berms, pillars, electric fences, and numerous electrical towers would obliterate camping, wildlife observation and relaxing visits to affected rural land.</p>	Refer to LU-11, NR-1, NR-2 and RF-2. Visual impacts would be mitigated where adverse impacts occur to recreational areas. Location-specific mitigation has not yet been determined. FRA will hold community workshops to determine where visual impacts occur. These community workshops are identified in <b>Section 3.10.6.1, Aesthetics and Scenic Resources</b> .

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			For these and many other reasons, our family is fully against this Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.	These neighborhoods were identified as vulnerable to adverse visual impacts due to their immediate adjacency to the Project's limits of disturbance. For specific cases outside of these areas, TCRR and the impacted landowner could negotiate mitigation measures, as described in <b>Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation</b> which could include planting trees or vegetation to limit the views of the Project.
Lavon B Thomas	3/6/2018	Website	Despite a long history of bankrupt passenger train systems in the US, a group of Japanese and Private Investor promoters want to sell us a passenger train system using outdated technology and equipment, inflated financial data, and bogus ridership projections. The cost to Texans would be high. The project would destroy ecosystems, overload drainage systems, imperil natural gas pipelines and hazardous waste sites, endanger health and safety of people, damage schools and neighborhoods, and render our private land useless. If passenger trains in Texas were viable, Amtrak would have already started building the high speed rail system from San Antonio to Dallas, which the FRA has already approved. However, Amtrak cannot prove economic feasibility. The project is dead in the water. This, regardless of the 2013 Statewide Ridership Analysis Report by TxDOT finding the San Antonio to Dallas corridor had a much higher forecasted ridership than a Houston to Dallas corridor. On top of that, the "Lone-Star High Speed Rail Market Study" commissioned by Texas Central itself, along with at least four other studies of high-speed rail in the Dallas-Houston corridor, all reached the same conclusion: high-speed rail is not feasible in Texas. Passenger trains fail in the US because there are more economic, flexible and efficient means to move information, goods, and people. As technology and other modes of transportation have improved, there is simply no sound economic or practical reason to take and ruin private lands for a sure-to-fail train. Also, totally absent from DEIS papers are dedicated funds, construction bonding, decommissioning bonding, and plans for remediation and restoration of the land, after the promoters have left town. Oversights by FERC and PHMSA have been omitted. This irresponsible type of planning would leave private landowners and Texas taxpayers holding the bag. For the sake of hypothetical urban productivity, the FRA in its final EIS has an administrative, legal and ethical duty to identify and quantify the permanent negative impact on the environment, as well as the value and use of rural private lands. For these and many other reasons, our family fully opposes this project and wants the "NO BUILD" option.	Refer to AQ-7, BA-4, BA-6, EU-1, GN-2, GN-3, GN-4, LU-10, NE-1, NE-9, PN-3 and TC-2.
Lavon B Thomas	3/7/2018	Website	Many waste and hazardous materials sites have been identified on and along the proposed route south of Hwy 290. We have not seen any provision made by Texas Central or by government agencies for clean up or remediation of these sites. When polluted and hazardous waste areas are disturbed, all sorts of toxins can harm the public. That has already happened in other parts of Harris and Galveston counties. .Dioxin waste sites on the San Jacinto river, disturbed by storms and flood water carried dioxin into neighborhoods causing increased cancer rates. Highway 290 is no exception, since according to the DEIS there are several hazardous waste sites of high level concern along that highway, which could be disturbed by construction for and operation of a bullet train. We request a comprehensive phase II assessment on each site and a detailed clean up action in an EIS. . For these and many other reasons, our family is fully against this Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.	Avoidance, minimization, and mitigation measures for hazardous materials sites are discussed in <b>Section 3.5.6, Hazardous Materials and Solid Waste, Avoidance, Minimization and Mitigation</b> . All high-risk sites and moderate-risk sites that are within or adjacent to the limits of disturbance would require further investigation prior to construction as discussed in <b>Section 3.5.6.2, Hazardous Materials and Solid Waste, Mitigation Measures, HM-MM#1: Environmental Site Assessment</b> . Further investigation may include TCEQ files review, Phase I Environmental Site Assessment (ESA), and/or Phase II ESA. If site assessments indicate the presence of contamination, mitigation and/or remediation measures will be implemented as discussed in <b>HM-MM#1</b> .
Lavon B Thomas	3/8/2018	Website	Public Safety In the list of related issues on the web is a 17 page Waller County Sub-Regional Commission Discussion of Impacts in Waller county and the Federal Rail Administration's Failure to Analyze Potential Corridors for the Dallas to Houston High Speed Rail, Pursuant to the National Environmental Policy Act. Section 8 on Public Safety discusses the Atmos Energy Turbine Powered Natural Gas Com-pression Station, which uses a jet engine to pressure up to a 30 inch natural gas pipeline between Waxahachie and Katy Texas. The pipeline is pressured up to 930 psi and was installed in 2006. There have been at least three known accidental releases of natural gas: On August 9, 2011, there was a planned Emergency Shutdown Simulation that released thousands of pounds of gas that neighbors experienced over a mile away. Mandatorily, Atmos has to perform emergency simulations twice a year creating potential hazardous situations, especially with an electric train traveling nearby. What would happen during one of these accidental or planned events should a train traveling 185 to over 200 mph ignite the natural gas? This would cause an unprecedented catastrophe with tremendous loss of life, damage to private property and environmental destruction.. The train adds the ignition source to an already volatile and potentially dangerous scenario that creates an unacceptable risk to the health, safety, and welfare of our community and local residents, as well as the passengers on the train, should an explosion occur. Atmos Energy also controls a 30" pipeline installed on our land in 1967. The pipeline is only 50 steps away from the planned location of the bullet train tracks. This pipeline and the Atmos Energy Turbine Powered Natural Gas Compression Station are among the	Refer to EU-1, EU-2, EU-6, EU-7 and SS-18.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>concerns about approximately 142 pipelines that would be endangered by the construction of tracks on the ground, on berms or on pillars up to 70' high, as well as the projected operation of 68 bullet train passings each day. TCR, AECOM, and the FRA did not consult FERC or PHMSA in their planning process despite the approximate 142 pipelines and the Natural Gas Compression Station that would be impacted. It is imperative that FERC and PHMSA be included as contributing agencies in an Environmental Impact Statement, EIS, since they are the responsible agencies in the management of pipeline safety For these and many other reasons, our family is fully against this Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.</p>	
Lavon B Thomas	3/8/2018	Website	<p>Health and Safety Concerns Detours of normal traffic patterns with delays for cars, law enforcement and emergency vehicles will be permanent problems caused by the daily eighteen hour every 30 minute travel frequency of the high speed trains. Unnecessary loss of life in the seeking of commercial gain for the Japanese economy and a few Private Investors would be unconscionable. High speed trains traveling 185 to 205 mph on ground, berms, or raised tracks on tall pillars, navigating some 20 plus curves on the proposed route, require research as to wreck possibilities. There have been disastrous train accidents where the train only exceeded 30 to 50 mph.in attempting to traverse curves. Current train accident statistics that happen in daily life, with no terrorist or large weather causes, is alarming. The annual death and property toll caused by trains traveling only 55 mph is excessive.. Trains traveling 55 mph require up to a full mile or more to reach a complete stop. Considering the multi-tude of objects which could cause damage or distress for a high speed train, the length of track needed for stopping such a high speed train should be conscientiously addressed in an EIS report. Proposed electric fences on either side of ground tracks are not adequate protection for people, domestic animals and wildlife. Other means of protection should be researched and required. The fact that the high speed trains would be elevated in some places from 10 to 70 feet would cause the area of audio disturbance to be greater, as there are no high structures or foliage to absorb or minimize the repeated audio impact on the public The planned tracks are too close to seven Cypress Fairbanks schools and many homes. Effects of steady noise, vibration, electromagnetic fields, dust, light and glare on children caused by 68 high speed train passings by homes and schools every 30 minutes from 5:30 a.m. until 11:30 p.m. plus maintenance crews working on tracks the rest of the night, have not been adequately treated in the DEIS. Effects on children by repeated noise and vibration, as well as the detrimental consequences of constant electro-magnetic field, dust, light and glare, should be competently researched. Results of such studies are essential inclusions regarding this TCR/TCP proposed project in the final EIS. For these and many other reasons, our family is fully against this Japanese and Private Investors'high speed rail project. We want the "NO BUILD" option.</p>	<p>Refer to AS-1, NV-1, NV-5, NV-7, SC-8, SS-2, SS-12, SS-15, SS-18, SS-23 and TC-3.</p> <p>The FRA noise and vibration criteria are designed to account for the annoyance effects of noise on people, including children. With regard to the effects of noise on reading problems and academic performance, the noise and vibration analysis did not identify any impacts to schools as a result of the proposed project.</p> <p>Electromagnetic fields (EMFs) follow the inverse-square law, meaning that the strength of the field decreases markedly with distance. Please refer to <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the High Speed Rail (HSR) track. Beyond this distance, the EMF would be below background levels." As part of the study, potential sensitive receptors were identified, as summarized in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> "Sensitive receptors include universities, medical institutions, high-tech businesses, airports and governmental facilities (i.e., police and fire) that may use equipment that could be affected by new sources of EMFs. For completeness, the review of potentially impacted sensitive receptors was expanded to include schools, which may have wireless networks for tablets and laptops, and parks, which could be used for flying remote-controlled planes and drones." Regarding the effects of long-term exposure to EMFs on children, the Draft Environmental Impact Statemnet summarized current research and scientific conclusions. Please see <b>Section 3.15.2, Electromagnetic Fields, Heath Effects of EMF</b> "Reputable authorities on the subject of EMFs include the World Health Organization (WHO) and the International Commission on Non-Ionizing Radiation Protection (ICNIRP). The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences with studying and making recommendations on EMF and human health. The National Institute of Environmental Health Sciences published reports outlining their interpretations and recommendations. The National Institute of Environmental Health Sciences concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." Please also note that the principle of the ICNIRP has been to build in "safety factors" to their published guidelines. For example, once the ICNIRP determined the level of EMF strength necessary to observe an effect, the ICNIRP then applied a reduction factor of 5 as a means of arriving at a precautionary value for occupational exposure. The value was reduced by an additional factor of 5 for public exposure, arriving at the extremely cautious values for EMF restriction discussed in the Draft EIS. Thus, the ICNIRP values already have built-in precautionary levels.
Lavon B Thomas	3/8/2018	Website	Environmental Regulation and Ecosystem Restoration Designated wetlands on our property will be disturbed by pipeline issues, rail construction and possible operation, electrical tower construction and emissions, flooding and numerous other problems forecast and as yet unknown. A forest of trees we planted on our property years ago is now one of the few wildlife habitats in the area. Among the animals whose havens there would be destroyed by pipeline removal, railroad construction and operation, as well as flooding, are road runners, bobcats, coyotes, deer, doves, hawks, owls, squirrels, raccoons, skunks, and opossums. These creatures are fed year round when our cattle man feeds the cows and works on the land. Visual environment will be permanently polluted by high speed rail structures, in addition to numerous tall unsightly electrical towers. Noise, vibration, dust, light and glare pollution of pipeline removal, railroad construction and operation will continually permeate the area, which is now a peaceful country setting. Obsolescence of the planned track to accommodate only one type of already outdated Japanese rail coach will make for necessary upgrading in the future. Such operations would cause even more pollution and disruption of the countryside as well as destruction of publicly funded and maintained roads, culverts and bridges. For these and many other reasons, our family is fully against this Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.	Refer to FP-1, NR-2, NR-5, TC-2, TR-6, TR-7, WW-1 and WW-2. In order to lessen impacts, 48 percent of the alignment would be adjacent to existing infrastructure, such as utility lines, roads, freight rail, in both the urban and rural areas. Additionally, mitigation measures found in <b>Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation</b> describe the use of planting trees to limit views of the Project.
Lavon B Thomas	3/8/2018	Website	Flooding Consequences Flooding from overflow of two creeks north of our property, rerouted by the planned berms south of the creeks and configured north to south, would direct excessive water to our land causing damage to wetlands, forest, domestic animals and wildlife, as well as nearby houses and businesses. TCR indicated they will use existing drainage ditches for the runoff. A project cannot push their runoff onto adjoining properties. They must provide their own detention and drainage not tapping into and using existing drainage designed for another purpose. With the increase of flooding events, existing drainage is maxed out and cannot be burdened with additional runoff Added drainage reservoirs should be specified by FRA throughout the proposed line, as existing drainage ditches were not designed for the high speed rail capacity needs. TCR/TCP projected runoff will contribute to flooding if not adequately controlled, most especially if added trains below their raised structures are allowed in some places, as has been reported. For these and many other reasons, our family is fully against this Texas Central Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.	Refer to FP-1, NR-5, WW-1 and WW-2.
Lavon B Thomas	3/8/2018	Website	Compounding our concerns about close proximity of a 30" pipeline laid in 1967 to the proposed location of the two tracks on our land is news this last week of February 2018 about an explosion in Dallas natural gas lines managed by Atmos, the same company operating the pipeline on our property. In one home the explosion caused by this leak caused the death of a 12-year-old girl. The leak occurred in front of Dallas Fire Station 43 affecting emergency vehicle dispatching. Now the area's mains, service lines and meters must be replaced causing outage for some weeks. News outlets reported that Atmos shut off natural gas to nearly 3,000 homes and apartments in north-west Dallas. According to CBSDFW.COM, Atmos Energy Senior Vice President Kevin Akers explained that the company hired a geotechnical engineer who found irregular formations in the Marsh Lane area. "With the extended rain that we've had, the amount of rain, runoff and how that flows	Refer to EU-1, EU-2, NV-5, SS-16 and SS-19.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>underground, causes certain (parts) of those formations to expand up and put pressure on our system thus causing leakage", he said. So, these experts have stated that excess water alone can cause that much damage to underground formations. It is therefore under-standable that nearby digging of 40 foot square holes for tall pillars, performing construction by heavy equipment, occurring flooding and runoffs, in addition to constant vibrations from passing high speed trains, electrical emissions from towers weakening the integrity of the pipelines, and myriad other causes could give rise to cataclysmic happenings. Having a high speed train around any aging pipeline corridor, such as exists in Harris County along Highway 290, is a catastrophic disaster in the making. Texas Central, AECOM, and the FRA did not consult with FERC or PHMSA in their planning process despite the approximate 142 pipe-lines that would be impacted. It is imperative that FERC and PHMSA be included as contributing agencies in the Environmental Impact Statement, since they are the responsible agencies in the management of pipeline safety.. For these and many other reasons, our family is fully against this Texas Central Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.</p>	
Lavon B Thomas	3/8/2018	Website	<p>Because of an outrageously inequitable time frame and volumes of of heretofore unexamined subject matter to be studied, Texas landowners, the most adversely affected by this project, have been placed in an untenable position. Texans, having defended their private land rights since 1835, fought against great odds for fair treatment. Three minutes to orally defend families' long nurtured private land is inadequate. Likewise, the time window in which affected land and home owners have been given to study, compose and submit comments to the FRA has been unequal. On the other hand, Texas Central has from the outset been shown favoritism in not being obligated to use the existing, permitted BNSF 45 corridor, ending at established Union Station in Houston's center. This was done ostensibly to lower Texas Central's wealthy Japanese companies' and Private Investors' expense. The BNSF 45 corridor should be revisited using accurate numbers of land acquisition, wetland and wildlife habitat obliteration, gas pipeline replacement, hazardous waste site treatment, flood control, clean water requirements, road, culvert and bridge closings and destruction, noise, vibration electromagnetic fields, dust, light, and glare pollution effects on school children, and myriad other related items with which the FRA is charged and experienced. Included in an EIS must be dedicated funds, construction bonding, decommissioning bonding, plus plans and assignment of costs for remediation and restoration of damaged land. Such costs should not be left for taxpayers to cover. Also, oversights by FERC and PHMSA must be EIS inclusions. Federal agencies as FRA are charged with objectively making final decisions based on research and facts that are justly applied Our family is fully against this Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.</p>	<p>Refer to BA-8, BA-9, BA-10, EU-1, GN-1, GN-7, NE-1, NE-9, PI-1, PI-3, PN-3 and SC-22.</p>
Lavon B Thomas	3/9/2018	Website	<p>Texas landowners are experiencing an invasion of sorts. This time, Japanese companies, private investors and some public officials would take and destroy land nurtured by our families since the 1800's. Our family has been harassed, threatened with jail, and sued by Texas Central agents and lawyers to invade our land without proper protection for us as landowners. Having fought since 1835 for the privilege to care for their land in peace, Texans do not deserve threats and lawsuits by those who aim to take and ruin our land. We stand firmly against this Dallas to Houston HSR project. Though the economic viability of this HSR project is highly speculative, almost 100% of the real permanent environmental and economic burden on rural Texas landowners. The DEIS disregards these burdens, as if they do not matter. Section 5.0 of the DEIS is telling. The law requires federal agencies to evaluate...the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity. In reality, these rural land issues would be permanently and negatively impacted by: a. disruption of normal traffic patterns with delays for law enforcement and emergency response vehicles. b. proposed tracks landlocking 85% plus of our property abruptly plunging its value down. c. devaluation of land for ALL uses causing great loss of business. d. sixty-eight trains passing each other daily every 30 minutes 5:30 a.m. to 11:30 p.m., plus maintenance crews working the rest of the night, causing noise, vibration, electromagnetic emissions, dust, light and glare adversely affecting the health of people, especially children. e. damage to building foundations and walls caused by construction and then by strong and vibrations of frequently passing high speed trains f. safety issues involving 185 to 205 mph trains traversing in all weathers roughly 20 curves, with some tracks reported to be 70 feet high. g. danger concerns also regarding protection of both sides of ground tracks plus considrations regarding length of track needed for stopping such trains in emergencies. h. endangering approximately 142 active natural gas pipelines, some old and vulnerable, as well as the Atmos Energy Turbine Powered Natural Gas Compression Station i. additional flooding issues caused by berms, interruption of creeks, increased runoffs with inadequate requirements for additional drainage reservoirs j. clean water shortages caused by the HSR annual need of 100 million gallons of clean water to operate and maintain the high speed trains. k. disturbance of several hazardous waste sites without proper remedial assignments of responsibility and costs. l. destruction our designated wetlands and wildlife habitats. m.elevated high speed train structures and numerous huge electrical towers providing a constant visible eyesore and audible nightmare for people. For unsubstantiated need and purpose, as well as hypothetical urban productivity, the FRA is charged with their legal and ethical duty to identify and quantify the permanent negative impact on the rural landowner's environment, health, safety, and business. Our family is fully against this Japanese and Private Investors' high speed rail project. We want the "NO BUILD" option.</p>	<p>Refer to AS-1, EU-1, FP-1, LU-7, NE-1, NE-9, NR-5,NV-1, NV-5, SC-19, SS-12, SS-13, SS-18, SS-23, VA-1, WW-1, WW-2 and WW-6. Electromagnetic fields (EMFs) follow the inverse-square law, meaning that the strength of the field decreases markedly with distance. Please refer to <b>Section 3.15.4, Electromagnetic Fields, Methodology</b>, "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the High Speed Rail (HSR) track. Beyond this distance, the EMF would be below background levels." As part of the study, potential sensitive receptors were identified, as summarized in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b>, "Sensitive receptors include universities, medical institutions, high-tech businesses, airports and governmental facilities (i.e., police and fire) that may use equipment that could be affected by new sources of EMFs. For completeness, the review of potentially impacted sensitive receptors was expanded to include schools, which may have wireless networks for tablets and laptops, and parks, which could be used for flying remote-controlled planes and drones." Regarding the effects of long-term exposure to EMFs on children, the Draft EIS summarized current research and scientific conclusions. 			places almost 100 percent of the real permanent environmental and economic burden on rural Texas landowners. The DEIS these burdens off as if they do not matter. Section 5.0 of the DEIS is The law requires federal agencies to evaluate the relationship between local and short-term uses of man's environment and the maintenance and enhancement of long-term productivity. The problem with the DEIS analysis is that almost all of the temporary impacts listed are permanent negative impacts for rural land. DEIS states "temporary destruction of normal traffic patterns with delays for cars and emergency response vehicles." In reality, disruption of normal traffic patterns and detours for emergency vehicles will be a permanent negative impact for all in the road lane. The DEIS states, "Temporary disruption and change in how properties will be assessed during construction." In reality, because the land-locks 90 percent of our property, it will cause a permanent negative impact on land value. The DEIS states, "Temporary loss of income to some businesses." In reality, this high-speed rail will 90 percent of our property, permanently causing loss of income and devaluation of our land for all uses. DEIS states, "Temporary increase in noise, vibration, dust, light and glare generated by construction." In reality, 68 trains passing each day every 35 minutes from 5:30 a.m. to 11:30 p.m. plus maintenance crews working the rest of the night, permanent noise, vibration, dust, light and glare will negatively impact our land. The DEIS states, "Temporary increases in waste and hazardous materials disposal." In reality, our designated wetland will be affected during construction. Also, the proximity of an active gas pipeline just 50 steps away is a potential safety hazard. DEIS states, "Temporary adverse changes to the visual and the environment due to the presence of construction equipment, signage, and temporary structures." In reality, based on images provided in the DEIS and recordings provided by TCR, the elevated high-speed train structure will be a permanent visible eyesore and an audible nightmare from every part of our property. In conclusion, for the sake of hypothetical urban productivity, the FRA has failed their legal and ethical duty to identify and quantify the permanent negative impact on the rural landowners' environment. For these and other reasons, I stand firmly against the Dallas-to-Houston High-Speed Rail Project. I want the no-build option. Thank you.	
Melannie Thomas	3/9/2018	Website	To whom this may concern. I think this will be a great asset to the great city of Houston and Dallas this will create jobs for both Houston and Dallas it will revenue money for both city's.	Comment noted.
Sam Thomas	2/8/2018	Website	I can only hope this becomes a reality in my lifetime.	Comment noted.
Shirley Thomas	1/31/2018	Email	How far away from the train do I have to be to hunt pigs, doves, and ducks?	Refer to RF-2.
Travis Thomas	2/6/2018	Oral	I just need to say that nobody even goes down to the monorail to ride so nobody is going to ride these bullet trains. I am talking bullet trains. And now there talking about more than one train. They are going to have to change the way they think. To insist it is only going to have on track argument is ridiculous. It is going to have two- but that train has got to meet somewhere. So I worked the railroad 24 years ago. So I know a little bit about a railroad. So they are lying to us. They have not said they need more than one train. They needs trains and I am Travis Thomas. Thank you	Refer to BA-4, GN-2 and TC-4.
Lee Thompson	2/18/2018	Website	It is time to start construction of the bullet train. The government needs to get out of the way.	Comment noted.
Thompson Hine, LLC	3/9/2018	Website	Delta Troy Interests, Ltd. ("Delta Troy") hereby submits these Comments to the Federal Railroad Administration ("FRA") in response to the Dallas to Houston High-Speed Rail Draft Environmental Impact Statement ("DEIS") issued by the FRA in December 2017.1 As described herein, the analysis in the DEIS fails to comply with regulatory requirements, exhibits flawed reasoning, ignores key issues, relies upon a poor alignment preference, and otherwise includes numerous significant errors. Delta Troy respectfully requests that the FRA require the consideration of other alignments and the preparation of a replacement DEIS or a Supplemental Draft Environmental Impact Statement ("SDEIS"). A new DEIS or a SDEIS would also allow previously-ignored resources and requirements to be addressed in a new environmental analysis. I. Summary of Argument. The ability of citizens to meaningfully participate in the processes of government is enshrined in Constitutional due process rights, and it is one of the core tenets of American democracy. Additionally, federal government agencies are required by the National Environmental Policy Act ("NEPA") to thoughtfully take into account all relevant information in considering the environmental impacts of their decisions. Unfortunately, both of these bedrock principles have been lacking in the development and substance of the DEIS. The DEIS consists of 5,647 pages, yet only two-and-a-half months have been allowed for comment. The insufficiency of the comment period, and the need for more time, have already been described by Delta Troy in a Request for Extension of Time that was filed on January 30, 2018. This request is attached as Exhibit 1 and incorporated herein. Even with this shortened time period, it is clear that the proposed TCR project would have a dramatic and negative impact on Delta Troy and the planned Georgetown Oaks community. Moreover, the substance of the DEIS fails to meet several regulatory requirements. The DEIS fails to take into account numerous local government planning documents, such as the City of Houston Major Thoroughfare and Freeway Plan, and fails to address the conflicts between the proposed TCR project and such land use planning documents. See Section IV.A. The DEIS also fails to take into account	Refer to AS-1, BA-3, BA-5, BA-6, BA-8, BA-9, BA-10, ED-2, FP-1, GN-9, LU-3, LU-4, LU-9, LU-10, NE-1, NV-1, NV-7, PI-1, SC-19, SS-17, TR-1, TR-8, VA-1, WW-1 and WW-2. Additionally, land used for agriculture would be considered disturbed. Undisturbed in this context would equate to land covered by primary growth native vegetation. The Final EIS has been updated based on current regulations. The assessment only looks at existing land uses along the proposed project. Future land uses cannot be assessed, since there is no information regarding location or usage. Additionally, land used for agriculture would be considered disturbed. Undisturbed in this context would equate to land covered by primary growth native vegetation. The Final EIS has been updated based on current regulations. FM 2920, US 290, Hempstead Highway and Old Washington Road would all be crossed by the Project and would not be rebuilt or rerouted. See <b>Table 3.11-31: Roadway Crossings in Harris County</b> for a list of all the roads that will be crossed by viaduct in the area. Placement of access roads would be subject to final designs and would be coordinated between TCRR and individual land owners. Mitigation

			<p>reasonably foreseeable actions in the immediate area, like the Georgetown Oaks community, and the cumulative impacts of such actions in conjunction with the proposed TCR project. See Section IV.B. In reliance on the so-called Utility Corridor, the DEIS is misleading at best because the Utility Corridor has been justified as already significantly disturbed by an overhead transmission line and a Union Pacific Railroad rail line – but this is not true for the HC-4 Alternative across Delta Troy's property. See Section V. The DEIS fails to adequately consider a number of other environmental impacts from the preferred alternative, as described in Section VII. A particularly relevant impact largely ignored by the DEIS is the need to address Hurricane Harvey, which caused over 100 deaths in the U.S. and approximately \$125 billion in damage – mostly in the Houston area and southeastern Texas.</p> <p>The above-described omissions from the DEIS have seriously compromised the public commenting process. By failing to include all relevant information, the DEIS hampers the ability of citizens to meaningfully participate. The pernicious impact of this failure is all the more pronounced due to the shortened time frame for comments. Delta Troy urges the FRA to order a replacement DEIS or, at a minimum, a Supplemental DEIS so that the deficiencies described herein can be addressed. When an agency is presented with information that its earlier environmental findings are incorrect, a supplemental analysis is warranted.</p> <p>II. Identity and Interest of Delta Troy. Delta Troy owns approximately 993 acres of land (the "Property") in the extraterritorial jurisdiction of the City of Houston in northwestern Harris County, Texas. The Property was purchased by C.N. Papadopoulos in 1982 and conveyed to Delta Troy in 2002. The Property adjoins the north and south sides of U.S. Highway 290, a major highway between Houston and the City of Austin. It is currently leased for farming. However, as development has extended westward along the U.S. 290 corridor toward the Property, it became apparent several years ago that the highest and best use of the Property is a mixed-use development incorporating a variety of commercial and residential uses. Recognizing this, for many years Delta Troy has been proceeding with plans for the Georgetown Oaks master planned community on the Property. The proposed TCR project would occur directly on and through the Georgetown Oaks community site.</p> <p>III. Georgetown Oaks. In 2006, Delta Troy engaged a land planning consultant to begin preparing development plans for the site it owns in northwestern Harris County, and Delta Troy has expended years of effort to move the project forward. See, e.g., Exhibit 2. The Georgetown Oaks community is to have a mixture of residential and non-residential uses. See, e.g., Exhibit 3. The residential land uses include traditional single family, multifamily, and townhome parcels, while the nonresidential uses include commercial tracts, a church site, and an elementary school. Delta Troy has successfully obtained numerous governmental approvals for the Georgetown Oaks project over the last decade. In 2007, a General Plan for Georgetown Oaks was submitted and approved by the City of Houston Planning Commission. See Exhibits 4 and 5. The General Plan shows specific platted streets, drainage areas, land use patterns, and related aspects of the Community. These elements must comply with Chapter 42, the land development ordinance of the City of Houston. Although Georgetown Oaks is not within the city limits of Houston, it is within the Extra-Territorial Jurisdiction ("ETJ") of Houston, meaning that land development must comply with Chapter 42. In 2011, Delta Troy was able to secure the enactment of legislation forming Harris County Municipal Utility District No. 524, which encompasses the Georgetown Oaks site and will facilitate its development by allowing the issuance of bonds to finance the construction of roads, utilities, and other infrastructure. Creation of this Municipal Utility District ("MUD") required passage of legislation through the Texas General Assembly. MUD 524 was established for the Georgetown Oaks site as a result of House Bill 709 and Senate Bill 475, which were signed by the Governor on June 17, 2011. A MUD is a political subdivision of the State of Texas that is authorized to provide water, sewage, drainage, and other utility-related services within the defined MUD boundaries. Delta Troy has continued to work toward development of the Georgetown Oaks site over the past few years, with further refinements and details added to the project. Most recently, the updated Georgetown Oaks plan was filed with the Houston Planning Commission in October 2016, with approval granted in May 2017. The approval did not include any conditions regarding the proposed TCR rail project; in fact, the "Platting Approval Conditions" do not even mention the TCR proposal. A wide variety of other planning efforts have occurred. For example, officials from Delta Troy have discussed the need for frontage roads along U.S. 290 with the Texas Department of Transportation ("TXDOT") for several years. Delta Troy has also met with the Gulf Coast Freight Rail District ("GCFRD") regarding rail station planning for a possible commuter rail line on the nearby Union Pacific Railroad ("UPRR") rail line. The GCFRD added a possible station location at "Waller East" in response to the interest expressed by Delta Troy. Plans for the development of the Georgetown Oaks community have been publicly available for several years. The General Plans were publicly filed with the City of Houston Planning Commission, and that same Commission issued approvals for the General Plans. The establishment of MUD 524 required legislation, the Governor's signature, and statutory revisions under Texas law. As a result of these efforts, Delta Troy is ready and able to proceed with the implementation of its development plans for the Property, but it has been unable do so due to the significant uncertainty associated with TCR's proposed rail line.</p> <p>IV. The DEIS Violates Several Regulatory Requirements.</p> <p>A. The DEIS Violates 40 CFR §§ 1502.16(c) and 1506.2(d) Because It Fails to Take Into Account Relevant Regional and Local Land Use Plans. The TCR proposal does not exist in vacuum. There are numerous ongoing planning and coordination efforts in the many counties and cities</p>	<p>measures, such as planting mature evergreen trees around the viaduct, would minimize visual impacts, and can be found in <b>Section 3.10.6.1, Aesthetics and Scenic Resources, AS-CM#1</b>, this compliance measure requires TCRR to meet all local ordinances regarding tree removal or planting new trees. Please also refer to <b>LU-CM#7</b> for a detailed description of TCRR's requirement to adhere to development review. This community has also been identified in <b>MM#1</b> which will receive a presentation from TCRR on proposed mitigation strategies prior to construction.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>traversed by the proposed Build Alternative A preferred by the FRA, which includes the HC-4 Alternative in northwestern Harris County. Unfortunately, the DEIS ignores many of the important ongoing and previous planning and coordination efforts that apply to land use along the preferred corridor and fails to discuss the likely conflicts between the proposed TCR project and such regional and local planning efforts. To address these deficiencies, a replacement DEIS or Supplemental DEIS is necessary so that the TCR proposal fully complies with 40 CFR § 1502.16(c), which requires "discussion of...[p]ossible conflicts between the proposed action and the objectives of Federal, regional, State, and local...land use plans, policies and controls for the area concerned." The creation of a new DEIS or a Supplemental DEIS will also enable compliance with § 1506.2(d), which requires environmental impact statements to "discuss any inconsistency of a proposed action with any approved State or local plan and laws....Where an inconsistency exists, the statement should describe the extent to which the agency would reconcile its proposed action with the plan or law." As described below, several plans were ignored or inadequately addressed in the DEIS.</p> <p>1. Major Thoroughfare and Freeway Plan of the City of Houston. The DEIS fails to acknowledge or address the Major Thoroughfare and Freeway Plans ("MTFP") for several counties and areas, including the MTFP of the City of Houston. The MTFP for Houston functions as the official plan of the Houston Planning Commission; it is revised and updated on a yearly basis. "The Planning Commission has the authority and has assumed the responsibility of creating and maintaining a MTFP applicable within the City of Houston's jurisdiction for the guidance of the development of the street and highway network for this area."12 The City of Houston states that, in compiling the Plan, "the City listens to developers and neighborhoods about such issues as congestion, mobility and future development plans."13 A professional land planner in the Houston area stated that the Houston MTFP is one of the two key documents that "set[s] the requirements for all new developments."14 The DEIS's failure to consider the Houston MTFP is odd because the Ellis County Thoroughfare Plan was addressed.15 It is claimed in the DEIS that consideration was given to "regional and local transportation plans and policies that guide transportation planning, funding and project implementation" (DEIS at 3.11-2), but the failure to even mention the Houston MTFP shows the erroneous nature of this claim. MTFP documents are official local government planning documents. As such, the DEIS should have addressed them as required by 40 CFR §§ 1502.16(c) and 1506.2(d). See, e.g., <i>Openlands v. United States DOT</i>, 124 F. Supp.3d 796, 808-810 (N.D. Ill. 2015) (the court concluded that the EIS for a new expressway was arbitrary and capricious because the agencies did not address the inconsistency between the Illinois and Indiana metropolitan planning organizations' long-range plans and the proposed expressway). This omission in the DEIS is all the more glaring because no high-speed rail line is envisioned through or anywhere near the Delta Troy property in either the City of Houston MTFP or the nearby Waller County MTFP.16 The City of Houston MTFP also envisions widening or altering many roads in northwestern Harris County which would be crossed by the proposed TCR line, including Castle Road and Hempstead Road (Old Highway 290).17 Consequently, the DEIS is inadequate because it fails to address the proposed project's conflict and inconsistency with the City of Houston MTFP.</p> <p>2. The Government-Approved Plans for the Georgetown Oaks Site. As described above, plans for the Georgetown Oaks development have been publicly available since at least 2007. See Section III. These plans have been filed with and approved by the Houston Planning Commission. A new state law created a Municipal Utility District for Georgetown Oaks in 2011. However, the DEIS does not mention, address, or even acknowledge Georgetown Oaks and, crucially, the proposed TCR project conflicts greatly with the already approved Georgetown Oaks community. See, e.g., Sections VI and VIII below. The DEIS should have addressed these conflicts as required by 40 CFR §§ 1502.16(c) and 1506.2(d). The importance of the approved plans for Georgetown Oaks and other similar developments was described by a professional land planner in the Houston area, who stated that the lack of zoning in Houston means that "the existing plans and ordinances which govern the city's development [are] all the more significant." This land planner also noted that the DEIS failed to mention numerous developments that, like Georgetown Oaks, have received approvals and are planned for the nearby area.</p> <p>3. The West Houston Plan 2050. The DEIS fails to acknowledge or address the West Houston Plan 2050. This plan was created by the West Houston Association ("WHA"), a group of property owners, major employers, community interests, and other stakeholders that have worked for 37 years to "to collectively address the problems and potentials associated with a rapidly growing area with major employment and residential growth virtually assured for the next ten years." The WHA represents "a unique attempt by Houston's major land developers, financial interests, and large corporations to bring order and rational planning to the rapidly developing suburban areas on the west side of the City of Houston." The West Houston Plan 2050 is not a legally binding, official government planning document, but it is relevant for revealing the future envisioned by stakeholders in the area. Crucially, the West Houston Plan 2050 does not anticipate or foresee any new rail development along or near the "preferred" corridor described in the DEIS. However, it does envision other types of land development in the area. To comply with 40 CFR §§ 1502.16(c) and 1506.2(d), the DEIS should have addressed the proposed TCR project's conflict and inconsistency with the West Houston Plan 2050.</p> <p>4. The 2040 Houston-Galveston Regional Transportation Plan. The DEIS mentions the 2040 Houston-Galveston Regional Transportation Plan ("RTP"), but does so in a selective and misleading manner. The 2040 Houston-Galveston RTP is created by the Houston-Galveston Area Council ("H-GAC"). H-GAC does not have regulatory authority, but it is "the regional organization through which local governments consider issues and cooperate in solving area wide problems." The DEIS refers to the 2040 Houston-Galveston RTP and repeatedly to the H-GAC. Thus, the DEIS acknowledges the importance</p>	

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>and relevance of the 2040 Houston-Galveston RTP. Among other things, the DEIS cites to the treatment of intercity rail in the 2040 HoustonGalveston RTP as support for the TCR proposal. Specifically, the DEIS asserts that the "No Build Alternative" would fail to meet the intercity rail component of the 2040 HoustonGalveston RTP. Crucially, however, the DEIS fails to recognize, acknowledge, or account for the Downtown Houston Station proposed in the 2040 Houston-Galveston RTP for Dallas-Houston intercity rail service. Thus, the DEIS is misleading because it cites to the 2040 HoustonGalveston RTP as support for the TCR Dallas-Houston intercity rail proposal, but fails to address the Downtown Houston Station location in this same planning document. Consequently, the DEIS violates 40 CFR § 1506.2(d), which requires discussion of conflicts between the proposal and planning documents. See, e.g., <i>Openlands</i>, 124 F. Supp.3d 796, 808-809. B. The DEIS Violates 40 CFR § 1508.7 and Related Requirements Because It Fails to Take Into Account the Reasonably Foreseeable Development of the Georgetown Oaks Community. The significant environmental impacts that would result from the TCR project cannot be viewed in isolation. Governing regulations and applicable court decisions require consideration of the "cumulative" impact of the proposed TCR project in conjunction with other reasonably foreseeable projects in the area. "An EIS...must...assess the impact the proposed project will have in conjunction with other projects in the same and surrounding areas....and must include past, present, and reasonably foreseeable future actions of any agency or person." As described above, Delta Troy has expended significant time, money, and effort for over a decade to develop its plans for the Georgetown Oaks site and obtain necessary government approvals. The Georgetown Oaks plans have been publicly available for several years. The Houston area has been growing rapidly for many decades, and is expected to continue to do so. The DEIS itself estimates an increase of almost one million in the Harris County population between 2010 and 2040. See DEIS at 3.14-13. The 2040 Houston-Galveston RTP, cited repeatedly in the DEIS, anticipates significant growth in the northwestern region of the Houston area over the next few decades. Given the westward growth of the Houston area and Delta Troy's effort and government approval to develop the Georgetown Oaks community, the Georgetown Oaks development is "reasonably foreseeable" under 40 CFR § 1508.7 and related regulations. According to one land planner in the Houston area, there are numerous approved developments, such as Georgetown Oaks, that are planned for the area of the TCR rail line but were ignored in the DEIS. The DEIS should have considered the cumulative impact from the TCR proposal in conjunction with the development of the Georgetown Oaks site. The failure to do so "is a significant oversight." The DEIS asserts that "research" was conducted to determine the existence of other past, present, and reasonably foreseeable actions, but the failure to consider or even mention the Georgetown Oaks plan reveals that this research was wholly inadequate. Indeed, it appears as if the DEIS focused almost entirely on public and quasi-public future road and transportation actions, wholly ignoring private land developments like Georgetown Oaks. The fact that the Georgetown Oaks development may never require NEPA analysis at any stage is no reason to ignore it for cumulative effects purposes. The failure of the DEIS to consider the Georgetown Oaks project is surprising given that one of the seminal "cumulative effects" court decisions regarding NEPA in Texas found that "a tax zone with development incentives" and the granting of permits for a "large housing development" constituted reasonably foreseeable actions that should have been considered. The DEIS is also faulty because it excluded consideration of most environmental resources (water quality, noise and vibration, hazardous materials, floodplains, etc.) from its already-inadequate cumulative impacts analysis. As described on pages 4-13 to 4-17, the DEIS only considered 9 of the 23 environmental resources in its cumulative impacts analysis.<sup>41</sup> This limited review exacerbates the related failure to consider the Georgetown Oaks project as a "reasonably foreseeable" action. The DEIS should have included Georgetown Oaks in its cumulative impacts analysis, and this analysis would then have been required to expand the scope of the cumulative impacts analysis to include additional environmental resources, including noise and vibration, floodplains, and aesthetic and visual.</p> <p>C. The DEIS Fails to Sufficiently Acknowledge the Incompleteness of Field Surveys. TCR is aware that Delta Troy exists. TCR requested permission to enter onto Delta Troy property to conduct surveying, but Delta Troy declined to provide the permission. Delta Troy is aware that many other landowners similarly declined to permit TCR entrance onto their property. Because of this lack of access, the DEIS relied repeatedly on inadequate field surveys for its conclusions. Only occasionally did the DEIS acknowledge or subtly hint that it was unable to conduct adequate field surveys due to a lack of access. Regarding hazardous materials, the DEIS conceded that the "field reconnaissance did not meet Phase I Environmental Site Assessment (ESA) standards since entire corridor was not visually surveyed for hazardous material sites, which is a deviation from standard TXDOT hazardous material identification process." Similarly, the DEIS acknowledged the limited field survey for endangered species. The failure of the DEIS to acknowledge the lack of relevant information in other aspects of the environmental review means the DEIS does not fully evaluate the impacts of the proposed TCR project, thereby rendering the DEIS faulty under 40 CFR § 1502.22.</p> <p>V. The DEIS is Misleading at Best Because the Utility Corridor Has Been Justified as Already Significantly Disturbed by an Overhead Transmission Line and a UPRR Rail Line - But This is Not True for the HC-4 Alternative Across Delta Troy's Property. The Utility Corridor has been presented and justified on the basis that the land contained therein is already substantially disturbed. This is incorrect for the HC-4 Alternative across Delta Troy's property. Moreover, the DEIS fails to include any alternatives to the Utility Corridor in the southern one-third</p>	

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>of the entire proposed TCR route. This failure to consider reasonable alternatives not only violates regulatory requirements found at 40 CFR §§ 1502.2 and 1502.14, but also prevents commenting parties such as Delta Troy from being able to meaningfully participate in the development of the Final EIS. If there are no alternatives for all of Harris County, all of Waller County, and 90% of Grimes County, why would the citizens of those counties expend the effort to participate? Their Constitutional due process rights have already been taken from them, with the TCR alignment for one-third of the route apparently chosen before the DEIS was even issued. Unfortunately, the environmental review process has not seriously considered the "No Build Alternative" as a meaningful option in this case as required under NEPA. The FRA's role is to issue railroad safety rules, including a Rule of Particular Applicability for the high-speed operations proposed by TCR.<sup>45</sup> Given what FRA has said, it appears unlikely that the FRA would not issue safety rules to govern any future TCR operations. Indeed, the FRA introduced the DEIS by stating that it would either (1) "issue a Rule of Particular Applicability," (2) "impose requirements or conditions by order(s) or waiver(s)," or (3) "take other regulatory action(s) to ensure the Project is operated safely."<sup>46</sup> Rightly or wrongly, the FRA did not consider rejection of the TCR proposal as a plausible option. Given this set of circumstances, the FRA must propose, and allow comment upon, true alternative routes for the citizens of Harris and Waller Counties (and 90% of Grimes County). In 2015, the Corridor Alternatives Analysis Technical Report claimed that the "Utility Corridor would follow the Centerpoint Energy and Oncor Electric Delivery high-voltage electrical transmission lines (345 to 500 kilovolts (kV))."<sup>47</sup> This is not true. The Technical Report later contended that, entering Houston, the Utility Corridor "would follow and use the UPRR Eureka Subdivision into downtown Houston." This is also not true. The Georgetown Oaks community site is bisected by the proposed TCR route, yet this route is not following either the high-voltage electric transmission line or the UPRR line in passing through the middle of Delta Troy's property.<sup>48</sup> Moreover, the location proposed by TCR for the Houston Station is in the northwestern part of the city, not downtown. See DEIS at ES-4 and ES-30. The misleading justifications for the Utility Corridor reveal the great need for alternative routings to be considered in this part of Harris County, yet no such alternatives were considered in the DEIS. As mentioned above, there is only a single "alternative" in the DEIS for the southern one-third of the entire TCR project route. Delta Troy is not alone in being gravely concerned about the sequence of events that led to this exclusive focus on the Utility Corridor - which only provides one "alternative" throughout the entire southern one-third of the proposed TCR route. The President of the Waller County Sub-Regional Planning Commission expressed serious frustration with the premature focus on the Utility Corridor before detailed environmental impacts analysis.<sup>49</sup> Several years ago, the FRA considered other possible corridors, including the UPRR Corridor, the BNSF Corridor, and the I-45 Corridor.<sup>50</sup> However, long before the DEIS was issued, the FRA eliminated these corridors for various reasons. The reasons supposedly supporting elimination of the UPRR Corridor are clearly not insurmountable, however, because the preferred "Utility Corridor" itself relies upon a UPRR rail line for part of its length.<sup>51</sup> The FRA's single-minded focus on the Utility Corridor is all the more problematic given that the FRA did not consider various permutations and combinations of the Utility Corridor, the BNSF Corridor, the UPRR Corridor, and the I-45 Corridor. These corridors cross each other multiple times, yet the FRA only considered one curious combination corridor - the "Utility Corridor with I-45 Alignment." This combination would have required a significant length of "greenfield" track to connect the two corridors. This combination would have used the I-45 Corridor in the north and the Utility Corridor in the south. The FRA never explained why it failed to consider the opposite - the Utility Corridor in the north and the I-45 Corridor in the south - even though such a route would have required a "greenfield" track of similar length. More glaring is the omission of a Utility-BNSF combination. The Utility Corridor crosses the BNSF Corridor in Grimes County, yet the FRA did not consider a combination of the Utility Corridor in the north and the BNSF Corridor in the south. All these curious decisions show the great need for further analysis of meaningful alternatives for the entire TCR route at the Draft EIS stage, including the location for the Houston Station. See, e.g., 40 CFR § 1502.14. The FRA has stated that it is open to revisiting the preferred route and that it has "not identified a preferred alternative for the Houston Terminal Station at this time." See DEIS at ES-32 and 2-21. Selection of another route and a Houston Station location should be done in tandem, because an alternate route into Houston would facilitate use of a downtown Houston Station rather than the ill-conceived northwest Houston site proposed in the DEIS. See Section VII.D.</p> <p>VI. The Proposed TCR Project Would Have a Dramatic and Negative Impact on Delta Troy and the Georgetown Oaks Community. The TCR project would devastate the planned Georgetown Oaks community by bisecting the site. As proposed in the DEIS, the HC-4 Alternative would permanently scar a significant portion of the community land, cause closure of or prevent development of approved roadways, create visual blight, depress property values, cause water retention problems, harm the job creation that would otherwise occur, and otherwise compromise if not prevent the other public goods that would come from the community. The DEIS recognizes that placing the TCR outside existing transportation infrastructure "would cause greater impacts to residential and commercial properties." However, the DEIS failed to implement this understanding with respect to its preference for the HC-4 Alternative through the Georgetown Oaks community site, because this routing does not follow any transportation infrastructure in bisecting Georgetown Oaks. The DEIS naively suggests that "[l]inear projects" like the TCR proposal "have a narrow footprint and typically do not substantially change the pattern, intensity and character of land use." The DEIS also stated that "[m]any of the reasons for decreased property values around other transportation projects, such as noise and vibration</p>	

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>impacts, would not apply to the electrified HSR design." These facile suggestions ignore the inevitable severe impacts from 200 mile-per-hour trains running throughout the day on a thirty-foot high viaduct. "Simple, conclusory statements of 'no impact' are not enough to fulfill an agency's duty under NEPA." Foundation on Economic Trends v. Heckler, 756 F.2d 143, 154 (D.C. Cir. 1985). Many of the negative impacts on Georgetown Oaks are encompassed in the mitigation discussion in Section VIII below. A summary of the negative impacts is also provided in the attached Exhibits 14 and 15. None of these issues have been addressed in the DEIS – which completely ignored Georgetown Oaks – and, therefore, the DEIS fails to comply with NEPA as described in 40 CFR §§ 1502.16(c), 1506.2(d), and 1508.7. Delta Troy would like to highlight a few of the more notable negative impacts below:</p> <p>A. Socioeconomics and Community Facilities. The DEIS is deficient in that it ignores the damaging effects of the proposed rail line on economic development in the area. As mentioned above, the Georgetown Oaks community is planned and approved, but implementation has been complicated and delayed due to the uncertainty caused by the TCR proposal. See Section III. The DEIS disregards this economic harm. In fact, the DEIS claims the TCR will aid economic development, yet the DEIS does not address the deleterious effects of the proposed rail project on the jobs and economic development that would otherwise occur as a result of the Georgetown Oaks community. Delta Troy obtained a professional opinion regarding the number of jobs that would be supported on-site at Georgetown Oaks at full build-out. Dr. Randall Jackson estimated that the Georgetown Oaks community could directly support over 16,000 jobs at full build-out, nearly 9,000 on the community parcel south of U.S. 290 and slightly over 7,000 north of U.S. 290. If the TCR proposal is constructed across Delta Troy's property, job creation at Georgetown Oaks would inevitably be noticeably decreased from this estimated level due to the taking of a significant portion of the Georgetown Oaks southern parcel, the other harms from the rail line, and the reduction in adjacent property values that would result. Property values would be reduced due to a variety of reasons, including noise, visual blight, blocked roads, and inaccessibility. One Houston-area land planner cautioned that noise, vibration, and closed roads "will likely limit what land uses will want to be located near the rail" and, consequently, "there are no compatible land uses other than those directly serving the maintenance or support of the rail itself." The DEIS acknowledges that "transportation infrastructure can create a localized barrier between a residential community and social or community resources." However, the DEIS fails to apply this understanding to the Georgetown Oaks community. The Georgetown Oaks site is in the Waller School District, which has less financial resources than its neighbor to the east, the Cy-Fair ISD. Many schools in the Waller district need extensive rooftop replacement, and the Georgetown Oaks development would have added substantially to the finances available to the Waller School District. In contrast, the proposed TCR project would prevent full realization of the Georgetown Oaks plan, depress property values, and substantially reduce expected finances available to local public schools. The DEIS recognizes that the proposed TCR project could have tax base implications, but improperly limits the analysis to station areas only.</p> <p>B. Floodplains. The DEIS is deficient in that it ignores the dramatic changes that are occurring in southeastern Texas as a result of Hurricane Harvey. This catastrophic event caused over 100 deaths and approximately \$125 billion in damage - most of that in southeastern Texas. A Japanese-led business enterprise may not realize how life-changing Hurricane Harvey</p>	
Thompson Hine, LLC	1/30/2018	Letter	<p>The Draft Environmental Impact Statement ("Draft EIS") for the proposed Dallas to Houston High Speed Rail project sponsored by Texas Central Railroad (the "TCR Project") was released by the Federal Railroad Administration ("FRA") in mid-December 2017. The FRA has established a 60-day comment period, which is scheduled to close on February 20, 2018. 82 Fed. Reg. 60723 (Dec. 22, 2017). Delta Troy Interests, Ltd. ("Delta Troy") hereby respectfully requests that FRA extend the current due date for comments from February 20, 2018 to August 20, 2018 (240 days total) in order to allow parties impacted by the TCR Project and the public sufficient time to review and analyze the Draft EIS which is 5,647 pages in length. A 60-day comment period is wholly inadequate given the character of the proposed TCR Project, the scope and complexity Of the project, and the volume of material in the Draft EIS. This request is submitted pursuant to 49 C.F.R. S 1506.10(d) and the FRA's authority under the National Environmental Policy Act ("NEPA"). Support for this request is provided below. The TCR Project is privately-sponsored and would travel through farms, natural areas, and residential areas in a 240-mile corridor between downtown Dallas and suburban Houston. In its private sponsorship, the TCR Project is similar to the 200-mile DesertXpress high-speed rail proposal between Victorville, CA and Las Vegas, NV, for which the FRA conducted an environmental review under NEPA a few years ago. In the DesertXpress case, the FRA allowed 56 days of comment on the Draft EIS, and an additional 46 days of comment on the Supplemental Draft EIS. I Given that the FRA allowed 56 days of comment for the DesertXpress Draft EIS, a much longer time period is warranted for conunent on the TCR Project' s Draft EIS for two important reasons. I See DesertXpress High-Speed Passenger Train, Final EIS, Volume I: Report, Abstract, page 2 First, the DesertXpress rail construction and operation was planned to occur nearly exclusively within the right-of-way of Interstate 15, thereby limiting impact on landowners and existing land uses.2 The FRA considered two "action alternatives" for the proposed DesertXpress project: alternative A consisted primarily of rail segments "within the median" of Interstate 15, while alternative B consisted primarily Of rail segments "within the fenced area" of Interstate 15.3 In contrast, the TCR Project would cross farms, natural areas, and residential areas, and it would require the crossing or blocking of numerous existing roads. Consequently, the TCR Project would have a dramatically greater effect on</p>	Refer to NE-1 and PI-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>landowners and the use of their property in the immediate vicinity of the proposed rail line. Second, the DesertXpress Draft EIS consisted of a 976-page Volume I, 26 separate PDF appendices, and a total of 2,474 pages in all of Volume and Volume II. In isolation, this seems to be an extensive amount of material, yet the TCR Project DEIS is noticeably larger -- it includes 121 S pages in Volume I, an additional 50 separate PDF appendices, and a total Of 5,647 pages. In other words, the TCR Draft EIS is well over twice the size of the DesertXpress Draft EIS. It would be unreasonable to expect interested parties to read, analyze, and develop meaningful responses to such a massive amount of information in the brief 60-day time period that currently applies, especially when the less disruptive DesertXpress project featured a 56-day comment period for a much smaller Draft EIS. The private sponsorship of the TCR Project also differs substantially from the ongoing California High Speed Rail project, which is being developed by a state agency, the California High-Speed Rail Authority ("CAHSRA"). As a state agency, CAHSRA has engaged in extensive outreach to the public and is subject to various legal requirements regarding transparency, document availability, and similar issues. Moreover, the California project was approved in a statewide referendum several years ago. Despite these characteristics (which inherently enable public participation and engagement), the Draft EIS for the California High Speed Rail project was subject to a 180-day comment period at the programmatic stage' In addition, individual, project-level segments of the California HSR project have been subject to a further comment 2 See. e.g , DesertXpress High-Speed Passenger Train, Final EIS, Volume I: Report, page 2-1 (March 2011 ) ("The Applicant proposes to construct nearly all of the fully grade-separated, dedicated double track, passenger-only railroad either in the median or immediately alongside Interstate 15 (1-15).") 3 See DesertXpress High-Speed Passenger Train, Final EIS, Volume I: Report, pages 2-1 to 2-2 SMarch 2011). <a href="https://www.fra_dot.gov/Page1P0228">https://www.fra_dot.gov/Page1P0228</a> ("The Draft Program EIR/EIS was released in January 2004 for a 180-day comment period, which closed August 31, 2004.") See also FRA Record of Decision, California High-Speed Train System (signed Nov. 8, 2005) at page 4 (referring to a 7- month public comment period from January 27, 2004 to August 31, 2004). period (Often 60 days).<sup>1</sup> In aggregate, this two-tiered comment structure permitted a public commenting period of at least 240 days despite the fact that interested members of the public already benefit from the transparency inherent in the state-sponsorship of the California project. In contrast, the TCR Project is sponsored by a private entity that has not been forthcoming in providing information to the public.<sup>6</sup> Under these circumstances, a significant increase to the 60- day comment period for the Draft EIS for the proposed TCR Project is more than warranted. For all the all above-mentioned reasons, Delta Troy respectfully requests that the deadline for comments on the TCR Draft EIS be extended from February 20, 2018 to August 20, 2018. Given the relatively brief period of time before the February 20th due date, Delta Troy also requests that the FRA issue a decision on this request as expeditiously as possible. 5 See. e.g., California High-Speed Train Project Final EIR/Final EIS: Fresno to Bakersfield Section (April 2014), Summary, page S-4 ("The Authority and FRA circulated the Draft EIR\0198 IS for the Fresno to Bakersfield Section. ...for 60 days from August 1 5 to October 13, 2011."). 6 Sees-e.g., Reply in Opposition to Both the Motion for Leave to File Response to Replies and the Response, filed by Delta Troy Interests, Ltd., in Texas Central Railroad and Infrastructure, Inc.. Rail V \u8226 ti for em -- Auth Between Dallas. TX and Houston. TX, Surface Transportation Board Docket No. 36025 (filed July 11, 2016) (objecting to the dramatic scope of the redactions included in the Response filed by Texas Central Railroad on June 20, 2016, in which over 800 pages Of a 888-page filing were redacted from public view).</p>	
Nick Thorn, AIA	3/8/2018	Website	<p>The forthcoming high-speed rail station in Dallas has caused a buzz of excitement with potential to connect two of the state's largest cities. However, the proposed station and looming parking garages have done nothing to promote connectivity within the vibrant and resurgent Cedars neighborhood. As an architect I am terribly disappointed by the design of the proposed station and the lack of integration with the surrounding community. The design missed an incredible opportunity to provide walkable streets, offer street-level commerce, and engage the neighborhood. This proposed high-speed rail station has the potential to be a flagship project that provides a catalyst for cutting-edge transit oriented development in the southern sector of Dallas. Instead, monstrous parking garages will cast dark shadows over the neighboring streets. I encourage the ARUP designers to meet with the neighborhood, engage with local architects, and elevate their design to offer a forward-thinking development that showcases the future of transportation in our great state. I truly want high-speed rail to succeed in Texas and provide an additional option for statewide mobility. Thank you for taking my comments into consideration. Nick Thorn, AIA</p>	Refer to GN-7.
Kristen Thorp	3/8/2018	Website	<p>To the FRA and Texas Central Rail, I have had the pleasure of being able to visit Morgan Legacy Farms on multiple occasions and each trip has been unique and special. The ranch provides a unique space for relaxation and enjoying the benefits of being outdoors. As a Physical Therapist Assistant, one of the values we try to instill in our patients is movement. Decreased physical movement can lead to decreased quality of life. Upon entering the ranch, you are stimulated to move about the property to take in its many wonders. You are encouraged to walk around the many ponds, visit the various fann animals, try a round at the skeet shooting area or even take in the views from horseback. This is a place where you are able to engage in activity to increase cardiovascular and mental stimulation that you may not otherwise be able to access. The charity that Morgan Legacy Farms shows by allowing my husband and me to visit at no charge combined with the very convenient location outside of the DFW metroplex will not be found elsewhere. The ranch allows my family and friends to bond and gives us an outlet to relax in a safe environment One of my favorite activities to do at the ranch is fishing in the many ponds available and making s'mores under the star</p>	Refer to LU-5.

			light without the sounds of the city. It is a great property to "get away from it all" and enjoy nature. Access to the entirety of Morgan Legacy Farms allows me to de-stress from the professional work week. You are able to see sights and sounds not found in the heart of the metroplex. You can even find Mexican Whistling ducks on the main pond! I fear that if the ranch is destroyed with the placement of the high-speed rail the tranquility, the wildlife and the environment will be put in jeopardy. I have been informed that the FRA would like to build a high-speed rail through the Morgan Legacy Farms and I have concerns about the proposed location. The preferred route travels in one of the highest elevations which will create, in my opinion, significant watershed issues causing a loss of migratory water fowl in the area. I propose to move the route slightly North, above the ranch and near existing power lines. I feel a move to this area would have less impact on the environment and prove less damaging to the county in the long term. The Morgan Legacy Farms is an irreplaceable property that gives back to so many people. Over 900 people have visited this ranch from church groups, Girl and Boy Scouts, Military Personnel, Police and Fire, students, and each has gotten to enjoy the benefits of the ranch. There is no comparable property near DFW that provides so many positive aspects, while remaining free to so many people. I strongly encourage you to consider changing the proposed route of the high-speed rail to that location north of the ranch, near the power lines, as the benefit strongly outweighs the cost to those associated with Morgan Legacy Farms. Sincerely, Kristen Tharp PTA	
Robert Tickner	2/1/2018	Email	I feel the Dallas to Houston High Speed Rail project is extremely important to the future of Texas as well as an example to the country how we can create and construct a new to the USA transportation mode. Please keep this project moving forward.	Comment noted.
Charles Tidwell	2/26/2018	Website	The train will go through my family's property; property that has been in the family for sixty years. It will not only impact my family, but many other residential properties. All of us depend on this property for our livelihood! Not only is this a residential issue, but there is a historical events that have occurred in the past. Furthermore, the train will disrupt migratory fowls and bald eagles. Progress is important, but it makes ethical sense to move the train where no one will be impacted. That can be done by moving it 945 feet to east where power lines are currently located.	Refer to BA-3.
Darrell Tidwell	3/8/2018	Website	Absolutely, Unequivocally Opposed!!!! I am opposed to the train entering the area around FM 709 and 3194 for many environmental reasons, bald eagle habitat, economic impact, and historical significance. Environmental concerns alone should be a sufficient enough reason to move the current proposal further north of the power lines. It is important to note that although the plans are in place, movement of the tracks north of the power lines would be a win-win situation for the current residents, community, environmental, and the state of Texas.	Refer to LU-5.

Larry Tidwell	1/25/2018	Email	I am opposed to the bullet train as it is called for a number of reasons. For one, I believe when land is taken away from homeowners it should be for major good reason. It's a big deal to take someone's land. And the train is not one of those. There are a number of reasonable ways to get to Dallas/Houston, planes, interstate, and getting there by train is not that much faster if any faster than a plane. This is a private company wanting to make money off the traveling public. They do not have the right to just take possession of folks' property for a train they hope to make money on. There is no public demand for this train and no guarantee folks will even use it. The whole idea is just silly. It is wrong to take folks' land for personal use.	Refer to BA-4, ED-1, GN-2 and PN-3.

Tracy Tijerina	2/22/2018	Website	Please build this we frequently travel from Houston to Dallas & this is well needed.	Comment noted.
Miguel Timm	2/7/2018	Website	High speed rail will have a very favorable impact on the environment by reducing the carbon footprint associated with the current modes of transportation, it will provide an economical, safe linking of two major Texas cities. Also, it will reduce congestions in airports and highways by giving the travellers a speedy, efficient and comfortable alternative when traveling between the two cities. I have traveled the proposed high speed trains in Japan and, once available, it would be my number one choice when conmutting between Houston and Dallas.	Comment noted.
Clara Timmerman	2/1/2018	Email	Has anyone seriously looked at the flooding and drainage issues? Have we not learned anything from Hurricane Harvey? How rm_nh concrete can we put down before the water will no longer drain and flooding will occur? Has anyone thought how this will affect the insurance community and the expenses that will be incurred from all of the damage? Will drainage areas have to be built as they now are with new	Refer to FP-1, SS-17, WW-1 and WW-2. The limits of disturbance include all drainage areas.

			commercial construction? How much additional land will this incur? Where is this in the flood plain? Things to be thought about and considered.	
Clara Timmerman	2/1/2018	Email	The lack Of respect shown to our local governments is mind from the FRA. They honestly think that can push this through without the cooperation from the people and their governments....how arrogant can you get? This is very much a sign of the Obama which is not the type of government that Trump is trying to promote.	Refer to NE-1.
Clara Timmerman	2/1/2018	Email	One thing that is not discussed is the disruption it cause to local communities. It Will cause problems With transportation, schools, work, emergency services, etc. We will have issues with public safety and our way of life. A reason for corvern is how many lives will be put in jeopardy if emergency time is lengthened because routes have to be changed to accommodate this construction.	Refer to SC-8, SS-23 and TR-8.
Clara Timmerman	2/1/2018	Email	The land needed for this project has been severely understated...it is said that approximately 3 acres are needed. This is for the actual track. There will also be land needed for staging ami storing materials, construction sites, etc. A more realistic estimate would be about 8,000 acres, Is this truly worth damaging fertile Texas land that you can never get back if this project is not completed? The hunting and fishing, the conservation, farming, raising livestock, etc. that makes this state proud. How about the impact that it will also have on our historical sites that we hold dear that show our glorious past that made our state what it is today...	Refer to LU-2, LU-10, LU-11, LU-14 and RF-2.
Clara Timmerman	2/1/2018	Email	Texans are known world Wide for their common sense. This railway system does not make any sense at all...from cost, travel, time line, wasted land, etc. What a horrible waste of everyone's time....	Comment noted.
Clara Timmerman	2/1/2018	Email	Fake news is all around us in the meda nowadays, and this is a prime TCR is always twisting the truth to put an unrealistic positive spin on this situation. From acquiring land to support of prominent Texans to law legislation, they try to hypnotize people into accepting this without hearing the true facts. They are trying to convince Texans of its value using a Trojan horse.	Comment noted.
Clara Timmerman	2/1/2018	Email	They do not have a rational cost They have tried to promote this as cheaper and safer travel for now it is projected that a one way ticket will cost \$199.00 for one person...what midde income family can afford that? They can spend that on gas for a vehicle on a round trip with a fast food meal included and take as many as 6 people on the trip. If they want to only promote this for business professionals, so they can make this type of money, what are they going to do on the weekends when they are not needed? Also, companies are going to 3 to 4 day work weeks which will extend the down time. Has anyone realized that more people are working from their homes and using Skype and Other forms Of social media to have meetings where so much travel is no longer needed on the business front?	Refer to BA-6, GN-2, GN-3, PN-3 and SC-3.
Clara Timmerman	2/1/2018	Email	We have a very good example Of California's attempt at putting a high speed rail system in their state. They are horribly over budget and beyond their schedule. In fact, discussions have been held by them to abandon the project even though it is only partly done. Where exactly is TCR going to get the funding for this project? They are nowhere near acquiring the monies that they need They have advertised this as being privately funded, but now they are talking about federal loans. The next step is to have the state and federal governments fully fund them. Then we can pay the taxes needed for them to take our land...Duhhh...	Refer to GN-4.
Clara Timmerman	2/1/2018	Email	The people Who are trying to justify this are using the rationalization Of \u8226 The Need Of the Many Outweigh the Need Of the Few". What a crock...this is not a Star Trek movie. They still have not used valki reasoning on why this would be a value to our country and state.	Comment noted.
Clara Timmerman	2/1/2018	Email	The that upsets me the most about this is the lack Of respect that my family and friends have received from not only TCR but also our state and federal transportation departments, TX DOT and the FRA. We have all been hard working Americans and to try to take our property by imminent domain without valid reason is truly dis-respectful. Also, for our government to feel as if we don't deserve answers to our questions because of their common sense is not acceptable.	Refer to ED-2, PI-1 and PI-7.
Clara Timmerman	2/1/2018	Email	I have gone to several meetings and have heard the "WANT" Of this project but never the "NEED". The "WANT" of this project has not out weighed the "NEED".	Refer to PN-3.
Clara Timmerman	2/1/2018	Email	Everyone has seen success With this venture in foreign countries With their government support. The reason for this is because it is in highly areas and very few people have their own motor vehicles. Most of them walk or ride bicycles to get around locally because they are in such dense areas. That is not the case with Dallas ancVor Houston. These cities are widely spread, and most of the population in these cities have their own motor vehicles. People are not going to spend around \$200.00 one way for one ticket when it will only cost them around \$60.00 toget there now with 4 or more people riding in the vehicle. And why drive upto an hour to get on a train that will not fully take you to your destination. You may get a large ridership in the beginning, but it Will die down once the newness wears off. People in these cities are too independent do not like to be tied down to a schedule. They like to come and go as they please. If this happens, the train cannot sustain itself and will be relying on government support.	Refer to GN-2, GN-4, NE-1 and SC-3.
Clara Timmerman	2/1/2018	Email	One Of the big selling points that started this venture was that this was going from downtown Dallas to downtown Houston in a small amount of time. The HC-4 route that seems to be selected at this time will not accomplish this goal. The stopping point in Houston will no longer be Downtown but will now have to be around the Northwest Mall area around 610. You then need to find other transportation to reach your goal in the downtown area. This is a gross mis- representation on the part of TCR. It is also a clear case of false advertisement.	Refer to GN-6, GN-7 and TR-4.

Clara Timmerman	2/1/2018	Email	In looking at this project overall, and not just in our community, this project should be considered a lark and has not been properly developed. 5 studies have been done on this project with all of them condemning the feasibility of its existence. This project is already drastically behind on its schedule in financing and construction. By the time this gets started, it will be behind in technology and considered not feasible any more. rncwe up to date will take its place, and we would have gone through all of this drama for nothing.	Refer to NE-1 and TC-2.
Clara Timmerman	2/1/2018	Email	There are several residential communities in our county that will be affected by this train. It will cause a decline in the residential developments and the value of everyone's property.	Refer to VA-1.
Clara Timmerman	2/1/2018	Email	Property values Will be severely affected by the train. NO one Will want to live by it because Of the noise and the effects Of the vibration to the homes and livestock. With the value of the property decreased, it Will also affect taxes for the towns and counties which will then hinder our quality of life. It will be hard to fund services needed for such things as school districts, emergency services, public entities, etc.	Refer to NR-1, NV-5 and VA-1.
Clara Timmerman	2/1/2018	Website	The biggest question of all is how they plan on getting this in a timely manner. Look how long it has taken the state in this area to work on Hwy 290, and its still not completed, And how this is going to affect several major roads at what type of time. James Timmerman	2/6/2018	Oral	I'm a landowner in both counties. Do not need it in the state of Texas. Thank you.	Refer to LU-7.
Linda Timmerman	1/31/2018	Oral	Thank you very much. I'm Linda Timmerman, I'm an native Texan and I'm a 17-year resident of Freestone County and I am, like everyone else here, 100 percent opposed to the high-speed rail. I'd like to tell you a little story. I grew up on a dairy farm in south Dallas County, and as Dallas extended southward and DeSoto extended northward on the Hampton Road corridor, my dad could not financially afford the mitigation required by the EPA to remain in business. Put simply, the odor created by fermenting maize in a pit silo and those flatulating cows didn't mix well with the Jiffy Lube that now sits on my great-grandmother's homestead and where the dairy farm was. And I only tell you this story to let you know that my family and I have personally lived with financial struggle the heart break, the panic, even the fear, and the sense of violation that comes with losing a part of our heritage, so I oppose this project. Not only because of the family businesses and the agriculture lands that it will likely misplace and most certainly disrupt, but also because of potential impact on the watershed in the Richland Chambers Reservoir where my husband and I currently reside. Because of the potential impact on the eagles that currently nest on Lake Fairfield. Because of the negative impact on the increasing number and species of migrating birds that we are witnessing as a result of the Tarrant Regional Water District Wetlands Project. So on a personal level I believe this project will negatively impact the environment, business, and cultural climate of at least three counties in Texas that I, and my family, have called home. Namely Ellis, Navarro, and Freestone counties. As a candidate for the Texas House of Representatives district eight, I know that Texas Central currently does not have legal eminent domain authority and I am against the State of Texas granting them such authority. Make no mistake, I'm not against progress or economic development for Texas, but that cannot come at the expense of our agricultural industry and our valued rural communities and towns. Thank you.	Refer to ED-1, FP-1, NR-2, NR-3, PN-3, WW-1 and WW-2. Approximately 59 percent of the Build Alternatives in Navarro County, upstream and including Richland Chambers Reservoir, would be constructed on viaduct (bridge type structure) allowing for free movement of water.
John Ting	2/19/2018	Website	I support the train because it will increase business for Texans and provide more jobs. As a business owner, I am already driving, flying, or taking a bus between the cities. The time savings will significantly improve our efficiencies. When this is complete, I will use this as my main mode of transportation. As a board director of Visit Dallas, I have spoken to many who said that they will traveling for pleasure by using this train, such as eating in a different city for lunch and returning in the evening. Any business considering to move to Texas would greatly take into consideration any public or private transportation methods. I agreed to this as long as it does not use taxpayer funds, which a bill was passed to protect that. Thank you for the consideration.	Refer to GN-4.
Christopher Tolar	3/9/2018	Website	I am writing in response to the Draft Environmental Impact Statement to support the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the review and approval of the project. Having served in the transportation industry, in particular planning and constructing Texas Highways, including formerly service to TxDOT for almost 7 years, I have assisted and reviewed hundreds of NEPA Documents, and can fully appreciate the challenge you are facing at this time. The population growth seen within both Dallas and Houston over the past 15 years is only expected to continue. DFW alone is projected to be at over 11 million people over the next couple of decades. We simply can't build our way out of congestion anymore. Our highways have been expanded as much as they can be, with ROW costs prohibiting widening in most areas, and going elevated or underground proves cost prohibitive, and would require massive amounts of money we simply do not have and will not get, without a serious infusion into the nation's infrastructure and/or a substantial increase in the gas tax. Similarly, the Dallas region's Love Field Airport has a limited amount of capacity, and has reduced flights to Houston over the past couple of years since the Wright Amendment was lifted. I can appreciate the opposition to this project and understand where much of it is coming from, having grown up near the proposed alignment. My family still lives very near and has properties less than 1 mile from the project, at two different locations. I have friends along the corridor whose property would be taken, so for these and other reasons, this is a very real and personal proposed project for me. Still, having weighed the costs vs benefits, so long as Texas residents are not subjected to	Comment noted.

			subsidizing this project in any way and all financial risk is borne by the private developer, to me it is clear that this project is a public benefit and I am in full support of it moving forward. Ultimately, the greater good and benefit for what will be tens of millions of people, outweighs the opposition's rationale to attempt delay. This project will serve to reduce severe road congestion which is only expected to worsen, improve the economies of Dallas, Houston, and points in between, and it is my sincere hope that it will ultimately lead to additional similar facilities being developed within the state (and nation), so as to one day connect the major metropolitan areas such as Dallas, Fort Worth, Houston, Austin, and San Antonio. I empathize with affected property owners, but this project is needed and I support it because I believe it ultimately is the right choice for Texas, and the U.S.	
Bertha Tolentino	3/9/2018	Website	I like the idea, but i do not really want the train here.	Comment noted.
Debra Tomczak	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Mary Tomlinson	3/6/2018	Website	Transportation is supposed to make life easier w/o automobiles not to be a real estate deal. Dallas station should be at Reunion location next to current train and DART. Houston is not as easy to fix. If this is to happen people in North Texas will be much better off if trains connect. Let the fat cats make money someplace else not hurting the travelers for decades.	Refer to GN-6, GN-7 and TR-3.
Mashaël Tonroy	3/9/2018	Website	I vote yes, Texas is the state for the rail. It would help reduce car exhaust, reduce traffic congestion, it time we look to the future.	Comment noted.
Dianne Tordillo	2/16/2018	Website	Hello - My name is Dianne and I actually work in the transportation industry for various transit and government agencies. I am in full support of the Dallas-to-Houston bullet train. It would be such an exciting addition to our economic and cultural landscape, and will add so much value to the transportation network in the state/region. I see so much growth in both Dallas and Houston if this crucial connection is created. Thanks, Dianne Tordillo	Comment noted.
Juan Tovar	NA	Website	I, Juan Tovar oppose to the high speed rail. It's bogus, worthless and I do not agree with someone else's investment. There are not needs for scrap metal messing up others land!!	Comment noted.
Amy Townsend	1/22/2018	Website	Just want to encourage you and share how excited our family is about the new speed train. We can hardly wait for it to be finished! We live in Houston and have family in Dallas, so a 90 min ride will be so much easier for us than the long drive that we have now. We will visit more often and it will be so fun because the kids will get to experience the train! Thank you for this!!!	Comment noted.
Scott Townsend	1/29/2018	Website	I have visited Japan and used the Shinkansen system to travel throughout the country. It is much more cost efficient to travel that way versus inter Japan airline flights. If the Dallas to Houston High Speed Rail system can make it economically feasible to travel from DFW to the Houston	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			area then why shouldn't this be done. Our country was once a great rail country using rail technology to span our country. Why wouldn't we have this kind of transportation given the need to be more efficient in transportation. I support this effort to move forward on alternative forms of transportation. I would one day like to see it expanded to Austin and San Antonio and perhaps even to Oklahoma City as well. Ultimately, Texas could serve as the example that starts high speed rail throughout the country.	
Angela Trahan	2/20/2018	Website	Yes this will boost commerce and cultural exchange at all stops.	Comment noted.
Terry Trainrider	3/6/2018	Website	If the pricing to the eventual customer (rider) is going to follow the technique used on the all the new toll roads in North Texas, I am adamantly against this high speed rail project. The auto toll roads are supposed to help the public; instead it penalizes them by raising the fare when the roads are most crowded. Where is the sense of civic responsibility by those legislators that caved in to a system of letting our roads be handled by outsiders? The rail program looks to be more of the same, with an estimated cost of one ticket Dallas - Houston to be the same as flying on Southwest Airlines!!! Is that a bargain? If Southwest Air was a bargain we would be lined up to fly instead of drive, but we are not. That's because the price of an airline ticket is high unless you work for a company that picks up the tab. For all those thousands of normal working people it is absurd to assume they will buy a rail pass for several hundred dollars. They drive a car today because they can't afford to fly, and this rail scheme is designed to primarily benefit the outside investors that are paying for it. This is not a municipal program like roads and bridges.	Refer to GN-2, GN-4, NE-1, PN-3 and SC-3.
Craig Trammell	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. This property has been enjoyed by thousands of people to see nature, hunt/fish, learn firearm safety, an many other things not available in the city. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Craig Trammell	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. My son, a US Air Force officer, had his wedding at the ranch. Many other friends and family have had weddings at that picturesque place. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Craig Trammell	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. This property could not be reproduced elsewhere. It was selected by the Morgans after months/years of searching for the ideal property to be enjoyed by family, friends, and many others (Corsicana local residents, schools, charity groups). I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Craig Trammell	2/26/2018	Website	The Morgan Creek Ranch has been developed over the years into a beautiful haven for thousands of people to enjoy. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Craig Trammell	2/26/2018	Website	It would be a shame to see such a beautiful facility destroyed by a train, which could have been constructed in a much less destructive alternate site. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Craig Trammell	2/26/2018	Website	I have reviewed studies that show better alternatives (both in cost and environmentally) for places to build your train line. It would be a shame to see such a beautiful facility destroyed by a train, which could have been constructed in a much less destructive alternate site. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Craig Trammell	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This has been a place where 100s of people have been allowed to retreat to enjoy nature and get away from the city. The current plan would destroy that. Please choose an alternate plan.	Refer to LU-5.
Craig Trammell	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. My son, a US Air Force officer, had his wedding at the ranch. Many other friends and family have had weddings at that picturesque place. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.

Craig Trammell	3/3/2018	Email	I am concerned about watershed issues and about this high speed train destroying a ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Our son was employed by the Morgans to work on this ranch between his college graduation and when he joined the military in 2016. Our son was engaged to be married during this time as well and they hoped to have their wedding before he had to leave for Officer Candidate School, which was in less than 2 months. Due to the short amount of time and lack of a venue the Morgans graciously offered to host the wedding at their ranch at no charge. There are so many charitable stories like this one involving the ranch, it would be a shame to destroy it when it can easily be avoided.	Refer to LU-5.

It would be horrible to destroy such a facility by running a train line through the middle of it, especially when non-damaging alternatives exist.	Refer to LU-5.
Lisa Trammell	2/26/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena, Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Lisa Trammell	2/26/2018	Website	I am concerned about watershed issues and about this high speed train destroying a ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Our son was employed by the Morgans to work on this ranch between his college graduation and when he joined the military in 2016. Our son was engaged to be married during this time as well and they hoped to have their wedding before he had to leave for Officer Candidate School, which was in less than 2 months. Due to the short amount of time and lack of a venue the Morgans graciously offered to host the wedding at their ranch at no charge. There are so many charitable stories like this one involving the ranch, it would be a shame to destroy it when it can easily be avoided.	Refer to LU-5.
Lisa Trammell	2/26/2018	Website	Our son and daughter-in-law were married at this ranch in 2016 and now it along with the special memories of their wedding are threatened by the high speed rail which, if this route is chosen, will travel through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

Lisa Trammell	2/26/2018	Website	I am concerned for the Bald Eagles and their habitat if the route for the high speed rail goes through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Lisa Trammell	2/26/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.
Lisa Trammell	2/27/2018	Website	Our son and daughter-in-law were married at this ranch in 2016 and now it along with the special memories of their wedding are threatened by the high speed rail which, if this route is chosen, will travel through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. Due to the short amount of time and lack of a venue the Morgans graciously offered to host the wedding at their ranch at no charge. There are so many charitable stories like this one involving the ranch, it would be a shame to destroy it when it can easily be avoided.	
Lisa Trammell	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This has been a place where 100s of people have been allowed to retreat to enjoy nature and get away from the city. The current plan would destroy that. Please choose an alternate plan.	Refer to LU-5.
Lisa Trammell	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. This property has been enjoyed by thousands of people to see nature, hunt/fish, learn firearm safety, and many other things not available in the city. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Lisa Trammell	2/28/2018	Email	It would be a shame to see such a beautiful facility destroyed by a train, which could have been constructed in a much less destructive alternate site. I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing powerlines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.

Lisa Trammell	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This ranch has hosted many charitable events such as when victims of the Japanese tsunami were invited to spend the day enjoying all of the activities provided by the ranch (horseback riding, 4-wheeling, fishing, rodeo demonstration, Texas chili, etc.).	Refer to LU-5.
Lisa Trammell	2/28/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. This ranch has been the location of many weddings, at no charge from the Morgans. It would be horrible to destroy such a facility by running a train line through the middle of it, especially when non-damaging alternatives exist.	Refer to LU-5.
Lisa Trammell	2/28/2018	Email	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena, Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Lisa Trammell	2/28/2018	Email	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement.	Refer to LU-5. Properties that front FM 3194 are no longer impacted and access would not be impacted by the Project. The Project would, however, still impact some landowners in the area, specifically the rear of parcels.
Lisa Trammell	2/28/2018	Email	Our son and daughter-in-law were married at this ranch in 2016 and now it along with the special memories of their wedding are threatened by the high speed rail which, if this route is chosen, will travel through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed. Due to the short amount of time and lack of a venue the Morgans graciously offered to host the wedding at their ranch at no charge. There are so many charitable stories like this one involving the ranch, it would be a shame to destroy it when it can easily be avoided.	Refer to LU-5.
Lisa Trammell	3/3/2018	Email	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. This has been a place where 100s of people have been allowed to retreat to enjoy nature and get away from the city. The current plan would destroy that. Please choose an alternate plan.	Refer to LU-5.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Lisa Trammell	3/5/2018	Website	Our son and daughter-in-law were married at this ranch in 2016 and now it along with the special memories of their wedding are threatened by the high speed rail which, if this route is chosen, will travel through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.

I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property. Our son was employed by the Morgans to work on this ranch between his college graduation and when he joined the military in 2016. Our son was engaged to be married during this time as well and they hoped to have their wedding before he had to leave for Officer Candidate School, which was in less than 2 months. Due to the short amount of time and lack of a venue the Morgans graciously offered to host the wedding at their ranch at no charge. There are so many charitable stories like this one involving the ranch, it would be a shame to destroy it when it can easily be avoided.	Refer to LU-5.
Lisa Trammell	3/5/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena, Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved	Refer to LU-5.

Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena, Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Lisa Trammell	3/8/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena, Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic impact on the county that would occur if Morgan Legacy Farm is traversed.
