<b>P</b>				
Michael Pace	2/6/2018	Website	I have traveled the I-45 corridor and/or flown to and from Houston from Dallas for over fifty years. Travel between the two cities has become more frustrating with each trip. We traveled to Galveston every year or two until the traffic became so heavy. Between the texting drivers and construction it simply isn't worth the trip any longer. Flying has become too expensive and considering that you could drive, (with the aforementioned operators), faster than then you could get through security and endure the flight to the other city. Rail travel is the only way that we could travel to and from Galveston, without the stress as we once had. Sincerely,	Comment noted.
Michael Pace	2/16/2018	Website	Transportation within Texas between Major cities has become incredibly difficult and there is no good means to reduce vehicle traffic on the highways besides trains. Our highway system, even if the money were made available now, will not catch up with the population explosion in this state. I'm in the transportation business and had been out of Texas for six years except for short visits with family. Now that I'm back, I can't believe that traffic has become so congested. Every highway system in the Dallas/Fort Worth area is being expanded and I'll tell you now that it will never catch up. Alternative means of travel must be developed.	Comment noted.
Robert Jeffrey Pack	12/29/2017	Website	I think the project is a great idea. Please proceed. All three Houston terminals are good, but I think the one closest to the Northwest Transit Terminal is best.	Comment noted.
Steve Pack	12/29/2017	Email	I think this is a total waste of money. The Houston terminal is on the north side of Houston and the Dallas terminal is on the south side of Dallas. You can drive this distance in 3 hours. Taking the train you will have to drive an hour to the station, allow another hour to park and get to the terminal in time for boarding, get to the south side of Dallas and take another hour to get a rental car to get where you need to be in Dallas. I don't see any advantage to this project.	Refer to PN-3.
Albert Packa	3/9/2018	Website	I just don't agree with your design. Where are all of the sliding doors on the side? How in the world do you expect hobos and winos to be hobos and winos if they can't even get on the train? Not to mention, it's going to be moving way too fast for them to run and catch while carrying their knapsacks; you'll have to slow it down a bit. What a bunch of inconsiderate quacks.	Comment noted.
Noel Paden	1/31/2018	Email	I would like to receive updates on the Dallas to Houston High-Speed Rail please send to [...].	Refer to PI-1.
Diane Page	2/1/2018	Website	I own property near the proposed high speed rail from Dallas to Houston. I have a small pond that gets many visitors such as coyote, hawks, vultures, bobcats, blue heron, white heron, turkey buzzards, deer and migrating ducks. The pond contains many turtles some quite large that have been residents for years. It appears my property will be just outside of the half mile zone of the rail. I am Sure 34 southbound trains and 34 northbound trains a day will greatly affect the wildlife. I moved to the country on purpose for the peace and quiet, for the wildlife. If I preferred noise and lots of movement I would have moved into the city. What impact does your research show the high speed rail will have on this wildlife? I am very much opposed to the high speed rail.	Refer to NR-1 and NR-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Diane Page	2/2/2018	Website	As a resident of Ennis TX I am against the proposed Dallas to Houston high speed rail. We are told your company will do road improvements. What type of road improvements are you going to do? Are the overpasses that are planned considered "improvement"? Not to me. Especially since two are shown on my county road on your map.	Refer to TR-8.
Ray Page	2/2/2018	Email	I've been told that not signing these missives I stand the chance they will not be considered. So back to my original email concerning the water retention ponds that are shown on the map near my address. What is TCR going to do mitigating the mosquito population that will follow stagnant water.	Refer to SS-16.
Ray Page	2/5/2018	Website	DallasHoustonHSR EIS Concerning the retention ponds to be dug at each overpass. This will affect the proper drainage that has been in place for years. How does the lack of now proper drainage affect our wells?	Refer to WW-1 and WW-6.
Ray Page	2/5/2018	Website	As an environmental impact how does TCR intend to construct the overpasses. Our environment would be drastically hurt if semi-trucks and farm machinery were unable to get to fields and market.	Refer to TR-8.
Ray Page	2/6/2018	Email	RayPage Tuesday, February 06, 2018 9:24 AM DallasHoustonHSR EIS How can you trust a study that was done by the people that want to find a way to get the HSR done no matter what? Ray Page [...]	Refer to NE-1 and GN-1.
Ray Page	2/19/2018	Email	My home is within a half mile of the proposed HSR. I have recently learned Texas Central Railway along with their Japanese partners are attempting to remove my Constitutional 2nd Amendment right by proposing I can't shoot within 1 mile of the tracks they decided to put too close to me. This offends my personal environment. What is the contingency for me to exercise my rights?	Refer to RF-2.
Ray Page	2/20/2018	Website	Concerning the overpasses to be built as the train runs on flat ground. Will they be built to County specs and able to take the weight of farm machinery and loaded semi-trucks? Also the first lie I was told about this project was it would be all raised.	Refer to TR-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Stephen Paiyou	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Kent Pakala	2/26/2018	Website	The high-speed train service would be an incredible help. Air and highway travel today are difficult for various reasons such as the highway congestion, soaring number of elderly who can't or shouldn't take the wheel, and increasing craziness of driving and the hassle, cramped seating, crowds and costs including hidden charges of air travel. Especially for distances such as that between Houston and Dallas the high-speed train would be ideal.	Comment noted.
Mike Palmer	2/8/2018	Website	I travel to Texas from time to time. Adding a high speed rail link from the Dallas area to Houston would open up an additional travel option between the two cities. High speed rail would be a worthwhile choice, especially during rainy days when airport activities are curtailed.	Comment noted.
Jeremy Pampell	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Bryan Panjavan	2/5/2018	Website	I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious watershed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement."	Comment noted.
Susan Pantell	3/2/2018	Website	I support the Dallas to Houston high-speed rail project. It would provide a much-needed alternative to congested roads and air travel. The electric train would produce lower emissions than air travel or all of the cars needed to transport that many people. It is an efficient and relatively fast form of travel. It will help the business community in Texas.	Comment noted.
Mary Papadopoulos	3/9/2018	Letter	Dear Mr. Wright: I am the owner of an approximately 27 acre tract of land located at the Northwest Corner of [...] in Houston, TX. I have owned this property since 1982. Although this property is not currently in the path of the Dallas to Houston High-Speed Rail Alignment, I have grave concerns about the long-term effects of the train's route through our area of Northwest Houston. Specifically I am concerned about: 1) The change in development patterns that will result due to the Alignment's presence in areas to the South and Northwest of my tract. For example, I am worried that single family housing development and other quality projects will cease, or entirely avoid the area within a few miles of the train's path due to the nuisance posed by the train, including its associated noise, visual blight, and vibrations; 2) Residential and commercial development will be less likely to sprout in Northwest Houston if data driven demographic reports used by developers and banks (usually done in 1, 3, and 5 mile radii) show low population numbers and low housing values in the areas near the Alignment; 3) In addition, the actual Alignment, with its vast ROW and LOD footprint comprised of numerous and expansive access roads and secondary facilities, will create physical and psychological barriers that harm, separate, and segregate existing (and possibly yet to be developed) area communities from the rest of the Houston MSA. We are concerned about neighborhoods currently existing near our property, and those	Refer to AS-1, BA-9, BA-10, LU-3, LU-4, NV-1, SC-5, SC-13, SC-14, C-19, TR-8 and VA-1. In Northwest Houston, the Project would operate on viaduct, minimizing permanent impacts and preserving access across the alignment. Impacts to communities and neighborhoods are described in <b>Section 3.14.5.2.2, Socioeconomics and Community Facilities, Impacts to Community Character and Cohesion</b> . Mitigation measures are described in <b>Section 3.14.6, Socioeconomics and Community Facilities, Avoidance, Minimization and Mitigation</b> .

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			<p>either now underway, or soon to be underway, in Northwest Houston;</p> <p>4) All of these negative impacts will result in an overall cumulative harm as land values near the Alignment decline, traffic counts decrease, and the population stagnates or declines due to fewer persons staying or locating in the area. This negative effect on population and housing values, along with negatively altered commercial development patterns, will devastate the area tax base currently zoned for the Waller Independent School District, which is a geographic area of moderate to low income populations and minority block groups;</p> <p>5) I believe that the Alignment will result in irreparable harm to Northwest Houston due to its damage to existing populations, and due to the foreseeable lost demographic and economic potential stemming from the train's Alignment barrier that will separate and isolate our Northwest Houston community from the rest of Houston.</p> <p>6) I request that the Alignment be rerouted out of Northwest Houston and that another route be chosen. For example, the Infrastructure Corridor route could be modified as it approaches Houston to switch to either the BNSF route, or the 1-45 /Hardy option. Using a route where infrastructure and /or ROW is already present, such as along the BNSF route or along the 1-45 and /or Hardy Corridor, would prevent harm to developing communities such as those to the South and Northwest of our tract.</p>	
William Papadopoulos	2/5/2018	Oral	<p>Thanks. Our company owns a parcel in northwest Houston, and if it's not too presumptuous of me, I'd like to speak for our company as well as northwest Houston when I say that this project goes against current trends in urban planning, which are called new urbanism. New urbanism embraces removing barriers and not creating new ones. So if you think about the plan to remove I-69 near the George R. Brown, the Pierce Elevated, or I-345 [sic] in Dallas, they want to take down those walls. This project actually creates a wall, and you're going to cut the state of Texas in two with a berm or a viaduct. And the thing about the viaduct is that there's access roads that parallel the viaduct so you can't cross it in some places, so it's no better than a berm. And if you read the DEIS you'll see that. So the other issue is that a lot of the alignment goes through a majority of minority areas, and if you read the DEIS it says, Well, all four or five routes do that. My point is four or five wrongs don't make a right. You know, why should this happen. There's got to be another way. The main thing is people on the west are going to be the have nots; people on the east will be the haves, so-to-speak, if they're several miles away. We are affected because the Waller School District will be bisected, and that's going to create a lot of problems. Home values will stagnate or decline, there will be no new homes in some areas, or they will be Section 8 housing, most likely. So that's something to digest. Think about this. When I-10 was removed, the railroad north of I-10 was removed, that area flourished. I'm talking about between 620 and Beltway 8. Okay? You know what happened. People got rich, it flourished, it's great. This is the opposite. This is going to barricade basically. The entire area between 99 and Waller is going to become barricaded; an area that was the next big thing. We were going to have 7,000 jobs from Daikin, and we were going to have expansion of business parks and stuff like that. Unincorporated Harris County is going to be bigger than the city of Houston by 2020. This is kind of like a poison arrow put into the middle of that, you know, so think about that. The access roads. I'm going to talk about that again. Terrible stuff. Okay? It's like an octopus spreading out grabbing stuff. You know, the DEIS shows these access roads and they are harmful. They're also going to cut off access to north-south arteries, so if you're going to build something and the traffic counts aren't there, you're not going to be able to get financing. And demographic studies -- 1-, 3-, and 5-mile radius studies within the alignment are going to show a black hole of missing income and missing people, and that's going to harm everybody in northwest Houston. Think about that.</p>	Refer to EJ-1, GN-6, LU-3, LU-4, LU-9, SC-5, TR-7, TR-8 and VA-1.
William Papadopoulos	3/9/2018	Email	<p>I am forwarding comments from Mary V. Papadopoulos, the owner of a 27 acre parcel located in Northwest Houston. Please see the attached letter. Thank you kindly,</p> <p>Dear Mr. Wright: I am the owner of an approximately 27 acre tract of land located at the Northwest Corner of [...] in Houston, TX. I have owned this property since 1982. Christina Papandreou	2/5/2018	Oral	<p>Hi. I agree with everything everyone has said, except for the Boys' Life speaker with the race car. I don't agree with him. I won't take much of your time. I'd just like to say that the one thing I haven't heard mentioned, which is a very important thing after Hurricane Harvey, is whether or not the DEIS actually takes into account the changes that have happened with Houston laws post Hurricane Harvey. I cannot believe that a draft Environmental Impact Statement has been issued without studying the flooding that now happens on a regular basis in Houston. That's really all I want to say. I think the DEIS is fatally flawed because of it, and I think it needs to be redone.</p>	Refer to FP-1, GN-1, NE-1, NE-9, SS-17, WW-1 and WW-2.
Wilson Pape	1/29/2018	Oral	<p>This is my introduction. It shouldn't count against my time. My name is Wilson L. Pape. I'm a fifth generation descendent of German immigrants, the third generation to be born in Texas. Next month I will be 79 years old. I own and operate a cow-calf operation in the deep black-land prairie near Barry, Texas. In the last two years I have been contacted subtly by at least seven individuals or entities claiming to have an interest in purchasing my property. None of which disclosed what had initiated their interest nor what was their intended purpose. Further investigation revealed that they only wanted a strip of five to eight acres across the middle of my pasture. They want to enter at the location of my gate, take out my barn, working pens, a row of shade trees, a dozen young pecan trees, and my pond, which is my only source of dependable water for my livestock. To attempt to recover from such devastating action would be prohibitive, and the value of my remaining acreage would be reduced to a fraction of its value. My home is in one half mile of this line. Now my time should start. I prepared a 553-word essay on two pages, and I'd like to give the entire essay. Three score and 16 years ago our forefathers awoke one cold December morning and found that they were being blind-sided by a sneak attack by a foreign power. There were no warnings and there had been no declaration of war. The attack was designed to weaken the American military and render us unable to defend ourselves. Their intentions were to conquer and to set up rule over us in their imperialistic plans to rule the world. Thousands of Americans lost their lives, and thousands more were maimed and wounded in the war that resulted from their cowardly aggression. The monetary cost was in the billions, and the war could only be brought to an end by the use of nuclear weapons for the only time in the history of mankind. America has often been accused of being imperialistic, but they proved that it was not true when we defeated Japan, then spent billions of American money helping them with rebuilding, restoring, and returning them to a world power once again. The old adage that history repeats itself is true. America, specifically the state of Texas, finds itself being blind-sided once again by Japan. Texas is the largest area of land in all of the contiguous United States, and its people are among the most free in the entire world. Why would any foreign entity want to dissect the state of Texas, cutting it into two segments? Whatever the reason, their plan can only be executed by their getting certified to make use of eminent domain, which provides for an exception to the guarantees of the United States of America Constitution to protect the private property of individual citizens against aggressive takeover by another. It is inconceivable that a foreign entity could be able to use eminent domain to take private property held by a citizen of the United States of America. There are very specific laws for being able to apply the exception of eminent domain to take private property from an American, the most important of which is that it can only be used for the general good or the greater good. The greater good might be interpreted in many different ways, but I believe in a democracy in which the majority ruled it can only mean that it will benefit the majority of the citizens. The population of Texas is approximately 28 million people. For this rail service to benefit a majority of the population, it would have to have a ridership of over 14 million passengers. Logistically that is impossible. Therefore, by the rule of law as spelled out in the United States of America Constitution, it would be a tedious violation to take property held -- privately-held property for this project. A major -- a million riders per year would only benefit about three and a half percent of Texas citizens. It is an atrocity to attempt to rule as the greater good for the taking of private held property for this privately-held project. Even if three and a half percent of Texans were to benefit from this rail service, 100 percent of east and west travelers across the state would be hampered, their progress impeded by the bottleneck effect of building this wall across the great state of Texas. Remember Pearl Harbor, Texas, remember the Alamo.</p>	Refer to ED-1, ED-2, LU-11 and VA-1.

Remember Pearl Harbor. Texas, remember the Alamo.</p>	Refer to ED-1.
Dana Parcel	3/9/2018	Website	<p>My name is Dana Parcel and I am vehemently against the proposed high-speed rail. My comment below is talking to the ticket prices. I can't give you an estimated cost of the train tickets because Texas Central can't seem to tie down a number. The Draft Environmental Impact Statement ("DEIS") says that the average airfare between Houston and Dallas is \$199. The DEIS also uses this as the average ticket price on the proposed High-Speed Rail. However, Texas Central claims on their website that the average \$199 High-speed rail ticket price published in the DEIS is a rumor! Really!?!?! From their website: "RUMOR: "Ticket prices are prohibitively expensive. I read in the DEIS that Texas Central is going to charge \$199 for a one-way ticket. This is going to be a train for rich people." Under REALITY Texas Central states that "The fares used for the purposes of the DEIS were not developed by Texas Central." Texas Central goes on to say that "Average airfare is \$147. " They never actually give an average ticket price for the proposed High speed rail. Why does the DEIS state the average one-way airfare between Houston and Dallas is \$199 and Texas Central claim it is \$147? That's a difference of \$52. That's over \$100 roundtrip! Texas Central is also saying that Dallas County will receive \$10 million in sales tax - calculated at an average of \$199 a ticket AND saying that the \$199 a ticket is a rumor. Well, which is it? A rumor or reality? You can't have it both ways! If the facts aren't even straight on the small issue of a ticket price, how can we trust that the DEIS has anything else straight? Zero confidence in what was allowed in the DEIS. And I say that because I feel SO MANY things were left out that are vital to making the right choice for Texas. THE ONLY OPTION IS NO BUILD!!!!!!!!!!!!!!!!!!!!!!</p>	Refer to SC-3.
Dana Parcel	3/9/2018	Website	<p>A while back, the Federal Rail Administration ("FRA"), released the draft Environmental Impact Statement ("DEIS") for the High-Speed Rail ("HSR") project that has been proposed to connect Houston and Dallas. After reading through the DEIS, I have several areas of concern and wish to address them below. FACT: Waller County is, primarily, made up of small communities and up and coming neighborhoods. The businesses and stores that are located within the county generate the sales tax revenue. Our county counts on the sales tax as a main form of revenue. CONCERN: If the proposed route would become a reality, it would wipe out those stores and businesses. It would have a domino</p>	Refer to SC-21.

Submitted By	Date Submitted	Submission Type	Comment	Response
			effect all the way down through the small communities and the up and coming neighborhoods. It would force these revenue generators to "close up shop," thus resulting in a massive decrease in sales tax. Simple math tells us that when businesses decrease, revenue decreases. Also, when businesses go away, so to the jobs! The domino effect continues because not only will these communities and neighbourhood cease to grow...they will cease to exist...NO BUILD IS MY PLEA!!!!	
Dana Parcel	3/9/2018	Website	FACT: Texas Central Railroad ("TCR") has stated numerous times that there would hardly be any roads would require modification. They use a drawing of the HSR Viaduct over a major highway no modifications necessary on the public road to give the impression that existing roads would be virtually untouched. CONCERN: • Is there a reason why the FRA DEIS shows a completely different plan than what TCR is showing us? There are a number of FM and CR roads across ALL the counties being closed and reconstructed with an overpass. How can that be if no existing road would be touched? • Who pays for Overpass maintenance? I am guessing NOT TCR... • Who pays for the future maintenance of the Access Roads built alongside the HSR route that will be used to get around many of the road closures and modifications? Again, just a guess, but NOT TCR! • Regarding Table 3.11 in the TCT's plan, will roads actually BE CLOSED during reconstruction of the overpass or will bypass roads at that site be provided for continued flow on that FM or CR? Either way, who pays for that? I AM NOT GUESSING ANYMORE, YOU GET MY DRIFT! In looking at ALL the facts I could get my hands on, I don't know how ANYONE would think this is good for Texas. Our culture and ways of live don't warrant a High Speed Bullet Train, tearing through land that once was occupied by good, hard-working folks. I travel quite a bit for my job and I have talked to others and although they say they "MIGHT" ride it a couple of times for the novelty of it...they probably wouldn't continue. Because when it comes down to it...by the time you go through all the pains of paying \$200 a ticket, getting to the station, boarding, inboard, call a cab (or Uber)...you could have already been to Dallas or Houston. Makes no sense to me...NO BUILD IS MY PLEA!!!!	Refer to BA-3, BA-6, GN-2, PN-3, SC-3, TR-6, TR-7 and TR-8.
Mark Parcel	3/9/2018	Website	I Would like to tell you a story of High Speed, greed and fraud that has already happened right here in Texas. The story line centers around the Texas 130 toll road. A 41 mile Toll Road that promised to allow travelers and truck traffic to travel from San Antonio to Austin at the unbelievable speed of 85 mph. This story involves Foreign investors and contractors who would end up making over 1.5 Billion dollars from government grants and investors for the construction of this road. The builders ignored government studies that predicted disaster and hid their intentions by never releasing projected traffic usage. 4 years after it opened to traffic, it has now filled for bankruptcy and we the tax payers have been left to foot the bill. I hope that you can see the parallel between this story and that story that the HSR people are spinning right now. The only option for Texas is the no build option.	Refer to GN-4 and NE-1.
Mark Parcel	3/9/2018	Website	As a middle class Texan, I cannot see where I could afford to travel more than once every couple of years on the proposed high speed train. The suggested one way cost from Houston to Dallas that has been estimated to be \$199.00. I decided to look at the alternatives to see what the cost would be and came up with the following. By Air, it would cost \$149.00 one way. By Vonlane Luxury bus it would cost \$100.00. By Megabus it would cost \$10 one way, and if I drove my own truck (at 20 mpg) it would cost \$29.16 one way, and I would have transportation when I arrived. By my calculations, I could drive 3-1/2 round trips between Houston and Dallas for the cost of a one way ticket on the high speed train. Of course, it would take me 4 hours each way, but I would get to see more of the Texas charm and enjoy the great Texas BBQ along the way. The only economic choice is not to build this disaster.	Refer to GN-4, PN-3 and SC-3.
Mark Parcel	3/9/2018	Website	After looking at all the pretty pictures that were displayed at the HSR hearings, I have questions concerning the necessary road work that will be required to access the proposed terminals and get around the tracks after they are built. Will the HSR group be paying for the building of these roadways as well as the upkeep, or will the counties be responsible? The roads leading to the proposed Grimes county terminal are not designed to handle the traffic that would be required to make the project viable. Who is going to pay for the total rebuild of these roads? As for the counties that only get tracks built thru them, who will pay for the building and maintenance of the roads required to get around the tracks? A no build vote is the only vote.	Refer to TR-2, TR-7 and TR-8.
Jehan-Francois Paris	1/25/2018	Website	I support the Houston-Dallas rail ink because rail transportation is the most energy-efficient way of transporting people.	Comment noted.
Jehan-Francois Paris	2/24/2018	Website	I support the Dallas to Houston high-speed rail because it will pollute much less than alternative travel options such as individual cars or airplanes. In addition, the building of the track themselves will havem a much lower environmental impact than widening Interstate 45.	Comment noted.
Jehan-Francois Paris	2/24/2018	Website	I support the Dallas to Houston high-speed rail because it will pollute much less than alternative travel options such as individual cars or airplanes. In addition, the building of the track themselves will havem a much lower environmental impact than widening Interstate 45.	Comment noted.
James Park	3/9/2018	Website	This is an example of public projects that enable growth, strengthen communities and create opportunities to millions of people. Please do it.	Comment noted.
Christie Parker	1/13/2018	Email	Many people are finding out that some of their comments have been returned undeliverable in their SPAM folder. How can an organization such as the FRA have a flawed system in place that does not capture all the public comments in this process. This has been documented and an extension of the public comment period should ensue along with more public meetings which don't correspond on the same day. Many people have property in various counties and due to the overlapping meetings on the same day and virtually same hours these people are	Refer to PI-7.

			unable to make their comments know in the county where they reside or have property. This again appears to be an unfair process for the public and should be remedied. I actually received an undeliverable on this same message sent to YOUR comments section. What is going on???	
Christie Parker	1/16/2018	Email	Please see an example below. I have already submitted more than a dozen comments and expect to submit at least another 100 or more regarding gaps, inconsistencies, and flawed data but I have the following occur with every single one of my comments and I am not alone in this process. None of my comments had attachments and used the 1000 character rule and were submitted via the comment section on your website. I will be having some comments soon with attachments as there currently is a big discussion of how the DEIS labeled a property as agricultural when in fact it is a business that will have to be shut down due to the train. I will have to send pictures depicting the misrepresentations of this property as the description and tables contain erroneous information. I appreciate you getting back with me in a timely manner and if you can figure out why all my last responses from the FRA are coming back as undeliverable it would be greatly appreciated. Many people are finding out that some of their comments have been returned undeliverable in their SPAM folder. How can an organization such as the FRA have a flawed system in place that does not capture all the public comments in this process. This has been documented and an extension of the public comment period should ensue along with more public meetings which don't correspond on the same day. Many people have property in various counties and due to the overlapping meetings on the same day and virtually same hours these people are unable to make their comments know in the county where they reside or have property. This again appears to be an unfair process for the public and should be remedied. Thank you in advance for your time in this matter.	Refer to PI-3 and PI-8. For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com) or sending a letter to FRA.
Christie Parker	1/19/2018	Website	Wildlife fragmentation will be significant Either build next to an existing ROAD or choose the no build option to prevent disruption of livestock and wildlife.	Refer to NR-6. This is discussed in <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife would be minimized by locating the Project infrastructure adjacent to existing transportation infrastructure, utility corridors and other development. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1 Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Section 3.6.6.1 Compliance Measures and Permitting and Section 3.6.6.2 Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Mitigation Measures</b> .
Christie Parker	1/30/2018	Email	Since the "DEIS is a culmination of over 100,000 hours of work" as stated by Texas Central how can your agency think it is reasonable to extend the deadline by "15 days"? The DEIS appears to have been thrown together as many tables and maps have conflicting data. How could this be with all these "experts" that contributed to this study. Since you have allowed such a large amount of bad and conflicting data, the public deserves more time to review and comment on this information. Please allow a 90 day extension.	Refer to GN-1 and PI-3.
Christie Parker	2/5/2018	Handwritten	My name is Christie Parker and I am a concerned Harris County resident speaking against the train. I have looked over a great deal of the DEIS and have found an astonishing amount of inconsistencies, gaps, and just bad data. Now if you ask TCR about this data, they readily throw the FRA under the bus and say it is their information that is wrong. So who is ultimately responsible for the data presented to the public? One example is ticket prices. TCR completely back peddled once they heard the uproar from the public with the average ticket prices of \$199 each way. They just posted on their site "The fares used for the purposes of the DEIS were not developed by Texas Central." I find this hard to believe as Table 3.14-22 under Socioeconomic and Community Facilities clearly sources TCRR for ticket prices. Then Texas Central recently published that \$10 million — Estimated local sales tax produced from the train's ticket sales in Dallas County. We can do the math here. At a 2% tax rate and a price tag of \$199 and half the proposed ridership 5 million we suddenly arrive at this figure they are publishing on their site. So no need to throw the FRA under the bus for this expensive one way ticket price of \$199 as TCR is using these average ticket prices to project what they will pay out over and over again. <a href="https://wmu.texascentral.com/2018/01/29/north-texas-bullet-train-station/">https://wmu.texascentral.com/2018/01/29/north-texas-bullet-train-station/</a> Texas Central continues to use inflated figures when estimating people that travel this route. "Travelers make roughly 14 million trips between Houston and North Texas per year, with most of those by car, Reed said". I completely disagree and can show tons of data refuting this but let's go with their figures. 14 million. Now let's take a look at their chart Table 3.14-22 on the previous page and they list a market share of 21% for HSR. If we use the 14 million figure stated by Holly Reed we come up with a ridership number of This is well under their stated ridership of 5 million. They won't be able to pay their bills. How can their figures be so wrong? Now if we look at AAF's (All Aboard Florida) report they are using a more reasonable market share of 7.2 percent. Unlike AAF who is a private company, TCR refuses to show their data to us. AAF is transparent and has a ridership and revenue report in their DEIS. TCR refuses to show its economic viability but are	Refer to GN-1, NE-1 and NE-8.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

			<p>attempting to obtain eminent domain privileges and are seeking billions in taxpayer loans. They even state in their new report that investors and lenders will be bearing the risk. Folks that is us. Don't you think we deserve to have evidence of economic viability before going forward? Now let's look at some of their other figures they have in the DEIS and they also just posted a video with these figures in it as well. HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state. HOW could this be? In 100 years can only come up With 6 billion with their projected ridership numbers. There is simply so much wrong data in this report.</p> <p>The no build option should be the only option on the table until the public has all the data to make an informed decision.</p> <p>I am a concerned citizen of Harris County.</p> <p>Are you aware that Harris County is the county most affected by this route in relation to HazMat Impacts. Sixty nine percent of the hazardous impacts will be in Harris County. There are 121 plus sites that will be impacted. This poses an increased danger to all residents as these hazardous sites are disturbed. This could easily affect our drinking water and our health.</p> <p>I wanted everyone to know that according to the DEIS, TCR has proposed approximately 126 miles of new public roads that the taxpayers will have to pay to maintain. This information can be found in sections 45-52 and are labeled in blue. They have new roads up and down the entire alignment fragmenting both wildlife and people's property. This will cause a significant negative environmental impact across Texas. Many endangered, threatened and special class wildlife will be negatively affected on the 8000 permanently impacted acres. TCR originally stated only 3000 acres would be impacted. Their land impact figures have almost tripled from 2 years ago. How is this acceptable?</p> <p>As we all know, the price tag has moved from a 10 billion cost up to 18 billion in the DEIS and does not include ROW costs which will be significant. Here we have all these escalating costs and this company still has less than 1% of the funding in place.</p> <p>Looking at Amtrak's proposal, the congestion is not between the Houston to Dallas route but is between Houston to San Antonio or Dallas to San Antonio. Tx Dot studies also show similar results. Please see the attached charts.</p> <p>The Purpose and Need of this project is frankly not supported by the data. Please also reference the last 10 years of the AADT report just north of Fairfield shows that the traffic count has hardly budged. This Dallas to Houston route is not the route showing the heavy and growing congestion. Either the No build or a different city alignment is therefore recommended.</p> <p>I have to question why we are even spending taxpayer's money and time on this project when this company still has not proven they have eminent domain. They continue to point to a default judgment as their claim to eminent domain which was released in its entirety. This is frankly embarrassing. In the last court case where there was actually a defendant and plaintiff in court, the judge ruled that they did not prove they had eminent domain and therefore were not able to survey the property. This company does not have eminent domain rights.</p> <p>We know that the Dallas Station location is owned by an investor of Texas Central and one of his associates owns the midstop which Tx Dot thought should have been eliminated. We also know that some current City Officials would benefit from this train stop but at what cost to the general public. We already know that the current chief of staff of our mayor's office is a former employee of TCR. It is important to ensure that this process is driven by objective criteria and not special interests. Who is looking out for Harris County residents?</p>	
Christie Parker	2/5/2018	Oral	<p>Good evening. My name is Christie Parker, and I'm a concerned Harris County resident speaking against the train. I've looked over a great deal of DEIS and have found an astonishing amount of inconsistencies, gaps, and bad data. Now, if you ask TCR about this data, they readily throw the FRA under the bus and say it is their information that is wrong. So who is ultimately responsible for the data presented to the public? One example is ticket prices. I know Julie already discussed this, but TCR completely backpedaled once they heard the uproar from the public with the average ticket prices of \$199 each way. They just posted on their site the fares used for the purposes of the DEIS were not developed by Texas Central. I find this hard to believe, as Table 3.14-22 clearly sources TCR for ticket prices. Then Texas Central recently published \$10 million estimated local sales tax produced from the train ticket sales in Dallas County. We can do the math here. At a two percent tax rate and a price tag of \$199 and half the proposed ridership of 5 million, we suddenly arrive at this figure they are publishing on their site. So no need to throw the FRA under the bus for this expensive one-way ticket price of \$199, as TCR is using these average ticket prices to project what they will pay out over and over again to Houston and Dallas. Texas Central continues to use inflated figures when estimating people that travel this route. I quote, "Travelers" -- I don't quote. Reed quotes. "Travelers make roughly 14 million trips between Houston and North Texas per year, with most of those by car," Reed said. I completely disagree and can show tons of data refuting this. But let's go with their figures-- 14 million. Now, let's take a look at their chart, Table 3.14-22, and they list a market share of 21 percent for HSR. If we use the 14 million figure stated by Holly Reed, we come up with the ridership number of 2,940,000. This is well under their stated ridership of 5 million. They won't be able to pay their bills. How can their figures be so wrong? Now, if we look at All Aboard Florida's report, they are using a more reasonable market share of 7.2 percent. Unlike All Aboard Florida, who is a private company, Texas Central refuses to show their data to us. All Aboard Florida is transparent and has a ridership and revenue report in their DEIS. TCR refuses to show its economic viability, but are attempting to obtain eminent domain and are seeking billions in taxpayer loans. They even state in their new report that investors and lenders will be bearing the risk. Folks, that is all of us. Don't you think we deserve to have evidence of economic viability before going forward?</p>	Refer to GN-1, GN-2, GN-4, NE-1 and SC-3.

			Now, let's look at some of their other figures they have in the DEIS, and they also just posted a video with these figures in it as well. HSR ticket sales could generate between \$15 billion and \$39 million in sales tax for the state. How could this be? In a hundred years I could only come up with \$6 billion with the projected ridership numbers. There is simply so much wrong data in this report. The no build option should be the only option on the table until the public has all the data to make an informed decision.	
Christie Parker	2/6/2018	Oral	Good evening. My name is Christi Parker. I'm a concerned citizen of Harris County, and my family owns land in Waller County as well. I'm completely against this project. -According to the DEIS: TCR has proposed approximately 126 miles of new public roads that the taxpayers will have to pay to maintain. That's all of us. These new roads, along with over a hundred miles of MOW roads: all up and down the entire alignment: fragments both Wildlife: people's property. This will cause a significant negative environmental impact across Texas. -Many endangered and special class Wildlife will be negatively affected on the 8,000 permanently impacted acres. TCR originally stated only 32000 acres would be impacted. Their land impact figures have almost tripled from two years ago. How is this acceptable? As we all know: the price tag has moved from a 10 billion cost up to an 18 billion in the DEIS and does not include right-of-way cost: which will be significant. Even with all these escalating costs: this company has only raised approximately 1 percent of the construction cost. Let's talk about the Amtrak proposal where it shows congestion is not between the Houston-to-Dallas route: but is between Houston-to-San Antonio or Dallas-to-San Antonio. Texas DOT also shows similar results. There's plenty of maps to show it. It's all online. FRA has ignored it. The purpose and need of this project is: frankly: not supported by the data. FRA needs to reference the last ten years of the AEP (phonetic) report just north of Fairfield, which shows the traffic count has hardly budged on 45 _ This Dallas-to-Houston route is not the route showing heavy and growing congestion. We need a purpose-and need study by the FRA Where is it? I have to question why are we even spending taxpayers' money and time on this project when the company still has not proven they have eminent domain? They continue to point to a default judgment as their claim to eminent domain which was released in its entirety. This is: frankly: embarrassing. In the last coun case where there was actually a defendant and a plaintiff in court: the judge mled that they did not eminent domain and were therefore not able to survey the property _ This company does not have eminent domain rights. It doesn't any rights for any our properties. It doesn't have right for taking our taxpayer dollars. I recommend a no-build option: and I would like to request a further extension of the comment period. I encourage everyone to join Texans Against High-Speed Rail and let's stop this train.	Refer to BA-2, ED-1, GN-2, GN-3, GN-4, LU-14, NE-1, NE-9, NR-5, PI-3, PN-3, SC-22, TR-7 and TR-8. Private access roads (that would be maintained by TCRR), would be built along many portions of the Project to allow for maintenance. Additional public roads would be created through reroutes and realignments and would range from 16.6 miles to 46.9 miles, depending on the Build Alternative. For the mileage of proposed public roads, please see <b>Section 3.11 Transportation</b> , specifically <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b> .
Christie Parker	2/16/2018	Website	The public meetings did not allow for adequate public involvement. The Madisonville meeting was moved because AECOM never adequately booked the first place and the final forum didn't have enough room and people were not allowed to enter and were turned away. The same thing happened at Harris County forum where people were not allowed to enter and had to stand outside or were turned away. Many left because there was no parking. This violated the NEPA process. Texas Central reps were allowed to stay in these meetings while the public could not enter. We need more time to view the DEIS as many violations have already occurred in regards to public comment and participation. There was overwhelming opposition to the project. No build option should be chosen.	Refer to PI-1, PI-3, PI-8 and PI-11.
Christie Parker	2/16/2018	Website	Regarding the Grimes County meeting this is something that a public participant noticed. The Gym which was very large was used for TCR's and FRA's Posters, but the Public Comment Speaker Period used the relatively smaller Cafeteria. This was the end of the several steps by the FRA to squash the Opposition Voices. I know that some people left not knowing about the smaller separate room for the comments portion and know another person was turned away because the room was packed. How does this not violate NEPA when yet again this is just another public meeting that AECOM and FRA hosted that did not adequately allow for public participation. This occurred in Madison County, Harris County, and Grimes County. The public needs more time and I request the comment period be extended to allow for full public participation and comments since this was violated in at least three meetings. Thank you	Refer to PI-3, PI-6, PI-8 and PI-11.
Christie Parker	2/16/2018	Website	There has been a clear Lack of Involvement and Communication by TCR and the FRA with Local Officials, in particular Law Enforcement. Eight counties of law enforcement is coming out now and stating the lack of coordination which gravely impacts safety of all Texans without their input along with first responders. Both the Leon county and the Grimes County Sheriffs voicing concerns about lack of contact by the HSR group in the public comment forum and this is an important issue of Public Safety and Law Enforcement combined. I am voicing my opinion of No Build at this time. The lack of coordination between law enforcement and first responders and foregoing Texans safety is just another reason to not build the train.	Refer to PI-1 and SS-23.
Christie Parker	2/16/2018	Website	Navarro County Segment 3A Re-examination, Engineering, Constructability Feasibility Alternative Route 3Z, blending of vetted routes 3B and 3C Dear Mr. Wright: I respectfully present these comments on behalf of Morgan Legacy Farms and concerned citizens directly impacted by the portion of the 'Preferred' alignment referred to in the DEIS as Segment 3A. In Part 1 of these comments, I identify key concerns with Segment 3A that were not considered or appear inconsistent with design standards purportedly used in the DEIS report. In Part 2 of this comment, I suggest an alternative route '3Z' that would avoid this particular section of 3A and thereby mitigate many of the identified adverse impacts. COMMENTER BACKGROUND Johnathan Zimmerer, P.E., is a Texas Licensed Professional Engineer with 7 years of roadway, rail, and drainage design experience. Significant projects include IH35W in Tarrant County, TexRail, US-75 in Plano, and US-27 in Chattanooga. Mr.	Refer to GN-9.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Zimmerer has also been named the 2018 ASCE Fort Worth Branch Young Engineer of the Year. PART 1: QUESTIONS AND COMMENTS REGARDING SEGMENT 3A I have the following questions and concerns regarding Segment 3A: 1. Exhibit 1 identifies three large drainage areas in red. If Segment 3A was built with the 20' deep retained cut section that is currently shown, those areas would no longer drain to the lakes and ponds as happens today. How does the rail intend to maintain these existing drainage patterns? a. Pond #1 and Lake: The existing catchment area for Pond #1 and the Lake is 120.6 acres. If the rail was built it would remove 18.9 acres from the 120.6 acres. This is a 15.7% reduction in catchment area. b. Pond #2: The existing catchment area for Pond #2 is 6.8 Acres. If the rail was built it would remove 4.2 acres from the 6.8 acres. This is 61.8% reduction in the catchment area for Pond #2. c. Pond #3: Since Pond #3 is directly downstream of the Pond #1, the Lake, and Pond #2, it will be impacted by the 15.7% & the 61.8% reduction in the catchment areas stated above. Additionally, a 5.1 Acres area would be removed from its existing 32.2 acre catchment area. This is a 15.8% reduction from its catchment area plus the reduction of runoff coming from the Lake and Ponds #1 & 2. 2. The tee intersection of FM 3194 and FM 709 shown in the DEIS report does not meet TxDOT design criteria. As proposed in the report, the reverse curves that re-tie FM 3194 to FM 709 do not even support a 20 mph design speed. However, FM 3194 has a posted 55 mph speed limit. Please review Exhibit 2, which shows the impacts of this realignment if TxDOT design criteria were used. In Exhibit 2, the alignment uses the minimum radius curves for 55 mph with an 8% max superelevation and uses the recommended superelevation transitions for each curve. Note the additional residential	
Christie Parker	2/16/2018	Website	Please refer to <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> and check out Station Flag 82H83 Site ID H83 AADT 2016 29,759 Route ID IH0045-KG 2015 AADT 28,380 2035 Estimated AADT 54,490 24 Hour Truck Percentage 32.4 This is actually under a 90% projected increase from 2016 figures to 2035. It is not >200% as stated by TCR and allowed to be misrepresented in the DEIS. I have included the link to show the true data proving that mid point stations do not show the increase that TCR, FRA, and AECOM is purporting. Look at the Streetman station and the station just north of Fairfield on I45. Please correct all the errors related to this. The purpose and need is not justified and the no build option is the only option that should be considered due to the overwhelming amount of falsified data points arising from the DEIS.	Refer to GN-3, PN-3 and SS-9.
Christie Parker	2/16/2018	Website	Please look at <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> if you actually look at the data it isn't >100 or 200% from midpoint data points. Streetman is actually only 83% if you look at 2016 AADT figures and jump to 2035. So it isn't greater than 100 or 200%. These mid points are under 100%. If someone brings it up I am going to tell them it is actually 83% at midpoint locations. It goes from 29,802 to 54,620. This is less than 100% not greater. An 83% increase in traffic would be 54,537. So I actually rounded up for you guys. Please correct your data as your DEIS and TCR are using inflated figures.	Refer to GN-3, PN-3 and SS-9.
Christie Parker	2/16/2018	Website	This information comes from the DEIS, page 1-10: Per the DEIS: "According to the Texas Transportation Institute's 2010 report, even taking into account forecasted improvements, vehicular traffic on IH-45 between Dallas and Houston will increase more than 200 percent by 2035, resulting in average speeds decreasing from 59 to 39 mph." This is a simple math issue. Again looking at the TxDot Statewide Planning map various data points only show an 83% increase from 2016 to 2035. If the people creating the DEIS can't do math, then every number in the DEIS is called into question. This is not a minor error. If it were insignificant, it would not be in Texas Central's video. Members of the public and public officials both could very well be influenced by a greater than 200% increase in traffic. The DEIS and the DEIS comment period are fatally flawed. FRA should immediately issue a decision of NO BUILD.	Refer to GN-3, NE-1, PN-1 and PN-3.
Christie Parker	2/16/2018	Website	Please review the attachment. The need of this project is not validated by a plethora of maps on the federal dot site and Tx Dot sites. The congestion now and in the future is between San Antonio and Houston and Dallas and San Antonio. Please explain why this Dallas to Houston route is being pushed when not supported by any of these maps or the state of Texas ridership study which shows the Dallas to Houston being the 4th or 5th route of choice with greatest ridership. The no build is the only option for this specific route as future data and congestion maps do not support the statements made in the DEIS.	Refer to AQ-7, BA-2, GN-2, GN-3, NE-1 and PN-3.
Christie Parker	2/16/2018	Website	Texas Central is saying the \$199 average fare is a "rumor" (implying it will be lower but not saying what the average train fare will be) used to calculate the sales tax revenue while simultaneously promoting the sales tax revenue of \$10 million for Dallas. This is unethical. How can they say that they will give Dallas \$10 million in sales tax revenue for ticket sales if this \$199 is a rumor. Because TCR is stating this, all of these figures using \$199 estimating tax payouts should be removed and the public needs to see the new figures. How can AECOM and the FRA work with such a company which can't give straight up info. Please clarify if the \$199 is a rumor as expressed by TCR on their website. Until we can actually obtain verifiable data, the DEIS process should be halted. In the very least an extension of the comment period is warranted.	Refer to PI-3 and SC-3.
Christie Parker	2/16/2018	Website	If AECOM, TCR, and the FRA cannot ensure that validated data is in the DEIS what else is wrong. There is numerous amounts of bad data in this DEIS but this just proves again that experts have used incorrect data for this report and the public. Due to the continued use and findings of inaccurate and bad data that is overinflated to try to prove a need for this project, the no build option is the only viable option.	Refer to GN-1, NE-1, NE-8 and PN-3.
Christie Parker	2/16/2018	Website	Looking at table 3.14-22 the experts that put this table together put more wrong data in it. They have excluded the federal excise tax on airline tickets. I can not understand how so many people that have worked thousands of hours on this project could have missed this simple	Refer to SC-16 and SC-17.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>piece of data. Again, there is ample amounts of wrong data that dismiss the positives of this project. Please also tell me how it is mentioned numerous times that this project would elicit 15-39 billion from sales tax on ticket sales. Please tell me how you arrived at this blatant misrepresentation of data? Is this over a period of 150 years? There is no way looking at your own tax tables that you have provided could one come to this conclusion. Again, there is a great deal of deceptive and manipulated data in order to push the project. Fortunately your figures do not hold up to scrutiny. Due to more wrong data provided to the public, I urge for the NO BUILD option.</p>	
Christie Parker	2/16/2018	Website	<p>Teleworking/Telecommuting (this has not been considered in the future projections of congestion yet has the fastest growth rate of all travel patterns and has already superseded public transportation) Why has this not been looked into and considered in this DEIS report. If this growing work mode has been ignored how much other relevant data has also been ignored? Highlights from The 2017 State of Telecommuting in the U.S. Employee Workforce report include: 3.9 million U.S. employees, or 2.9 percent of the total U.S. workforce, work from home at least half of the time, up from 1.8 million in 2005 (a 115 percent increase since 2005). The average telecommuter is 46 years of age or older, has at least a bachelor's degree, and earns a higher median salary than an in-office worker. Roughly the same population of women and men telecommute. Telecommuting is more common among employees over 35 years of age and most common among Baby Boomers. In more than half of the top U.S. metro areas telecommuting exceeds public transportation as the commute option of choice. It has grown far faster than any other commute mode. The 2017 State of Telecommuting in the U.S. Employee Workforce Report includes information on the following: Trends in the telecommuting workforce over the last ten years Demographics of the average telecommuter (age, gender, education, salary) Telecommuting by industries, occupations and sectors Telecommuting by metro areas (prevalence and growth) Actual and potential economic impact of telecommuting Environmental impact of telecommuting <a href="https://www.flexjobs.com/2017-State-of-Telecommuting-US/">https://www.flexjobs.com/2017-State-of-Telecommuting-US/</a> How can the DEIS be a credible document if data in conflict with the purpose in need is prevented from entering the report? Due to relevant data being omitted from the DEIS along with numerous other bad data points I opt for the No build option</p>	Refer to GN-3 and PN-3.
Christie Parker	2/16/2018	Website	<p>Teleworking needs to be factored into the DEIS report when accurately judging traffic and speeds. The National Institute of Health even did a report and implemented the process. <a href="http://www.federaletc.org/pdf/NIH.pdf">http://www.federaletc.org/pdf/NIH.pdf</a> To ignore this in your report is negligent or is purposely trying to skew the data. Overview While there is no Census Bureau or government produced data provides additional granularity on the frequency of telework, Global Workplace Analytics' research finds that: 50% o the US workforce holds a job that is compatible with at least partial telework and approximately 20-25% o the workforce teleworks at some frequency 80% t 90% o the US workforce says they would like to telework at least part time. Two to three days a week seems to be the sweet spot that allows for a balance of concentrative work (at home) and collaborative work (at the office). Fortune 1000 companies around the globe are entirely revamping their space around the fact that employees are already mobile. Studies repeatedly show they are not at their desk 50-60% o the time. A typical telecommuter is college-educated, 45 years old or older, and earns an annual salary of \$58,000 while working for a company with more than 100 employees. 75% o employees who work from home earn over \$65,000 per year, putting them in the upper 80th percentile of all employees, home or office-based. Summary of trends: Regular work-at-home, among the non-self-employed population, has grown by 115% snce 2005, nearly 10x faster than the rest of the workforce. 3.7 million employees (2.8% o the workforce) now work from home at least half the time. The employee population as a whole grew by 1.9% fom 2013 to 2014, while employees who telecommuter population grew 5.6%.nForty percent more U.S. employers offered flexible workplace options than they did five years ago. Still, only 7% mke it available to most of their employees. Larger companies are most likely to offer telecommuting options to most of their employees. New England and Mid-Atlantic region employers are the most likely to offer telecommuting options. Full-time employees are four times more likely to have work-at-home options than part-time workers. Non-union workers are twice as likely to have access to telecommuting, but union employee access is growing rapidly. <a href="http://globalworkplaceanalytics.com/telecommuting-statistics">http://globalworkplaceanalytics.com/telecommuting-statistics</a> Please consider impacts of this on future congestion and railway purpose. Due to the growth rate of this mode of work and the drop in transit usage, I vote for the No Build option as the only wise choice. This bullet train project has too many negative impacts and they will never be overcome.</p>	Refer to GN-3 and PN-3.
Christie Parker	2/16/2018	Website	<p>Telecommuting must be analyzed in order to achieve an accurate report. "More than just affecting the way people work, the increasing ease of telecommuting will dramatically affect the way we adapt our urban transportation systems. Indeed, an increase in working from home might suggest that we have less to fear about the future of traffic congestion than we might have believed."<a href="https://www.citylab.com/transportation/2014/02/why-telecommuting-really-matters-6-charts/8227/">https://www.citylab.com/transportation/2014/02/why-telecommuting-really-matters-6-charts/8227/</a> "Expanding mass-transit systems is a pillar of green and "new urbanist" thinking, but with few exceptions, the idea of ever-larger numbers of people commuting into an urban core ignores a major shift in the labor economy: More people are working from home. True, in a handful of large metropolitan regions what we might call "legacy cities" trains and buses remain essential. This is particularly true of New York, which accounts for a remarkable 43% o the nation's mass-transit commuters, and of other venerable cities, such as San Francisco, Washington, Boston, Philadelphia and Chicago. Together, these metros account for 56% o all mass-transit commuting. But for most of the rest of the country, transit use despite often-massive infrastructure investment has either stagnated or declined. Among the 21 metropolitan areas that have</p>	Refer to GN-2, GN-3 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			opened substantially new urban-rail systems since 1970, mass transit's share of work trips has declined, on average, from 5.3% to 5%. During the same period, the drive-alone share of work trips, notes demographer Wendell Cox, has gone up from 71.9% to 76.1%.-- <a href="http://www.latimes.com/opinion/op-ed/la-oe-kotkin-telecommute-20170623-story.html">http://www.latimes.com/opinion/op-ed/la-oe-kotkin-telecommute-20170623-story.html</a> "Traffic congestion in Austin and other major Texas cities is notorious and continues to worsen. According to a recent study by a transportation analytics firm INRIX, Dallas, Houston and Austin are the 7th, 11th and 13th most congested urban areas in the United States. Many believe that adding light-rail lines and more bus lanes will encourage more commuters to take public transport and leave their cars at home. However, despite its population growth and large investments by Capital Metro to improve services, Austin's bus actual daily ridership has fallen 20 percent since 2012 (130,000 boardings a day in 2012 vs. 102,000 a day in 2016)" <a href="https://www.tribtalk.org/2017/09/21/is-the-uberization-of-public-transportation-the-future-for-texas-cities/">https://www.tribtalk.org/2017/09/21/is-the-uberization-of-public-transportation-the-future-for-texas-cities/</a> The DEIS needs to analyze this work mode as this will affect future congestion and ridership patterns. I opt for the no build.	
Christie Parker	2/16/2018	Website	Please refer to table 3.14-22 in the DEIS. It has at the \$7.2 million dollar level subtracting out 1.9 million air travelers, and at the 5 million dollar level subtracting out 1.3 million air travelers. This chart incorrectly takes the taxes out for 100% or more of airline traffic. Why is this chart assuming that 100% of airline traffic will be diverted to HSR?	<b>Table 3.14-22: Planned Transportation Projects in Leon County</b> in the Draft EIS reported the expected mode shift for TCRR passengers. By definition, the mode shift represents 100% of the passengers that would be diverted from air travel or personal vehicle to the Project and does not include estimates of total airline or vehicle travel between Dallas and Houston. This analysis has been removed from the Final EIS. The tax revenue estimate provided in the Final EIS in <b>Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts</b> , conservatively reflects only changes associated with capital investment, employment, and property taxes. Additional tax revenue generated through the State of Texas' Franchise Tax would fluctuate with annual changes to the state tax rate as well as TCRR revenue projections and is not included in the estimated tax impact. More information about tax revenue calculation methodology is available in <b>Section 3.14.3.2, Socioeconomics and Community Facilities, Economic Conditions</b> .
Christie Parker	2/17/2018	Website	It is clear that the engineers have realigned county roads that they will be unable to do as all county roads in between will not allow the realignments. Remember Texas Central was ruled to not have eminent domain nor be a railroad in a court case in Harris County so performing all these drawings is frankly putting the horse before the cart. Most of the counties have signed resolutions against the high speed rail so these road drawings are incorrect leaving construction costs and route not specific as well. Also the engineers did not take into account new construction at Highway 6. They have the Train route at the same place and height of Highway 6. This Tx Dot project has been in the works much longer than these preliminary drawings for Texas Central's project. I have a lack of confidence in the engineers on this project. It is questionable that the train can even go under beltway 8.	Refer to ED-1, ED-3, NE-1 and TR-8.
Christie Parker	2/17/2018	Website	Please review the attached maps. Every map that we pull up from Federal DOT and Tx Dot do not show the need for this Dallas to Houston Route. Please put the following data on the record. The congestion is in the cities. The route on I-45 in between does NOT change in peak congestion from 2012 to 2032. Again this goes against the purpose and need of the project. Please explain why all the negative impacts to the environment, communities, landowners, taxpayers is justified when the peak congestion has not budged on I-45 by 2032. Is the federal DOT documentation not accurate? Again looking at data the No build should be the only option.	Refer to BA-2, GN-3, GN-4, NE-1 and PN-3.
Christie Parker	2/17/2018	Website	The Texas Oklahoma Passenger Rail Project put in their purpose and need that it needs to be economically viable and even goes on to say that HSR must be able to operate with 100% of costs covered. All Aboard Florida also has an economic component and has provided a ridership and revenue study in their DEIS. This Houston to Dallas HSR had an economic component and was part of the steps presented to the public. FRA removed this component while also removing routes that were not economically feasible. How can you remove routes based on an economical feasibility and then remove the economic component of the purpose and need? The FRA needs to start over on this process as the public has been misled and the route tainted with variables that were later removed. The FRA had originally removed certain routes based on economics and then removed this component while also leaving routes that had a greater impact on lower income populations and minorities. How is this ethical? Especially when then removing the component of economic viability altogether. Again, please explain why the economic viability was removed from the project when it was first told to the public it would be a component. The public deserves to have a economic viable project as the FRA and TCR initially presented to them. I urge the FRA to halt this process immediately and start over with accurate variables that will be measured and presented to the public. Without any economic feasibility, the NO BUILD Option is the only alternative.	Refer to GN-4, NE-1, PN-3 and PN-4.

Christie Parker	2/17/2018	Website	<p>What did the FRA do with the illegal survey information? There were a number of letters that the FRA received regarding illegal surveys from TCR and its reps so how did the FRA ensure that every survey detail was obtained legally? There are actually pictures of an engineering firm contracted by TCR illegally taking soil samples on a property owners land that refused survey. What was done with this information? The name of the company and information was also sent to the FRA. I request that the FRA confirm that every single piece of survey data collected be verified that it was taken legally. Please contact every landowner and confirm so we can ensure that no data was retrieved illegally. Until this is done, survey results are presumed to be illegal until proven otherwise given the data including pictures presented by landowners. I suggest this project be halted until the illegal survey information is verified not to be in the DEIS and every impacted landowner would have to confirm these results. I am sure that the FRA would not want to be involved in an illegal process especially since their is much evidence of this that was presented so I would urge caution for the FRA not vetting each and every survey result. This process should be halted immediately. Thank you.</p>	<p>Refer to GN-1 and NE-8.</p>
Christie Parker	2/17/2018	Website	<p>Regarding EJ (environmental justice) whole corridors were removed for economic viability so they had economic viability and this trumps all other NEPA variables including EJ. And now the economic viability has been removed as a criteria yet EJ was not accurately reviewed. Please see attachments of how the selected corridor affects blacks and hispanics who will be disproportionately negatively impacted by this project. So the economic viability was removed and consideration was not taken for the increase in minorities being impacted. Please see the attachments to show how these groups will be disproportionately targeted in the preferred route vs their percentage of population in Texas. This needs to be immediately assessed. I feel that the No Build Option is the only alternative if accurately reviewing the environmental justice impacts.</p>	<p>Refer to EJ-1. The NEPA process includes the assessment of many varying topics including Environmental Justice (EJ). The Preferred Alternative was selected based on an analysis of the totality of impacts across all topics studied in the Final EIS. The EJ assessment was conducted with consultation of best practices established by TxDOT, FRA and FTA.</p>
Christie Parker	2/17/2018	Website	<p>Texas is usually around a 4% unemployment rate. If you look at the attached pdf these counties along the route will be disproportionately affected as unemployment is much higher than the state overall. These affected areas show a consistently higher amount of unemployment which correlates to higher levels of poverty. The temporary construction jobs will not help this persistent problem. We need permanent growth and businesses in these counties. The train will not do this so the poor population will be disproportionately negatively impacted by this project. <a href="https://www.urban.org/research/publication/unemployment-and-poverty">https://www.urban.org/research/publication/unemployment-and-poverty</a> <a href="https://www.urban.org/urban-wire/long-term-unemployment-and-poverty-produce-vicious-cycle">https://www.urban.org/urban-wire/long-term-unemployment-and-poverty-produce-vicious-cycle</a> Here is the Bureau of labor statistics link <a href="https://www.bls.gov/eag/eag.tx.htm">https://www.bls.gov/eag/eag.tx.htm</a> Texas had an unemployment rate of 3.9% i Dec. 2017. This route focuses on individuals with a higher rate of unemployment and poverty. <a href="http://www.ncsl.org/research/labor-and-employment/state-unemployment-update.aspx">http://www.ncsl.org/research/labor-and-employment/state-unemployment-update.aspx</a> I am including unemployment maps, poverty maps, and graphs displaying percentages. The poor population will be greatly affected by this project and this has not been fully analyzed in the DEIS. The economic feasibility was placed higher than minorities and the poor population in this project. This is clearly unethical and does not really incorporate the NEPA process. The only ethical alternative is the NO BUILD OPTION.</p>	<p>Refer to EJ-1.</p>
Christie Parker	2/17/2018	Website	<p>Here is the breakdown of sections according to how many new public roads are proposed. I counted the ones outlined in blue only: Houston Segment (section 45) Harris, Waller, Grimes Cty 43.3 miles West of Teague Segment (section 46) Madison, Leon, Limestone, Freestone 64.2 miles IH-45 segment - alternative route (section 47) Madison, Leon, Freestone, and portion of Navarro 4.09 miles Navarro West (section 48) 3.75 miles Navarro East - alternative route (section 49) 2.61 miles Ellis West segment (section 50) 13.07 miles Ellis East - alternative route (section 51) 6.7 miles Dallas Segment- (section 52) 2.5 miles Total proposed mileage for new public roads is 126.82 miles or just over half the entire route in new roads for the taxpayers. Here is info about taxpayers paying for the maintenance of these new roads in the DEIS. Public Roads – Roads that would be accessible to the general public. Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority. Design details, ownership, and maintenance responsibilities for these roads would be closely coordinated with the appropriate Project stakeholders during more advanced design. o Proposed Public Roads – New public roadways. In many cases proposed roads were designed to facilitate ROW access for TCRR and emergency access needs, but would also improve connectivity or provide access to properties along the ROW. As such, they were not designated as HSR MOW Access roads. o Realigned Public Roads – Realignment or reconfiguration of existing public roadways. In some cases, public roads are rerouted along the HSR alignment to achieve grade separation and would also serve to provide access to the HSR ROW. Is the FRA, AECOM, and TCR aware that in the last legislative session SB 977 was passed preventing any taxpayer money to go towards anything related to the construction, operation and maintenance of a high speed rail project. The DEIS clearly states that roads will have to be added that the taxpayers will be paying to maintain. If there was not a HSR dissecting Texas then no new public roads would be built. Maintenance of these public roads by taxpayers is clearly against the signed into law SB 977 regulations. All of the new overpasses that will have to be maintained by taxpayers clearly go against this law as well. All of this information has been sent to Governor Abbott and will be sent to the attorney general. Why was the mileage of proposed public roads omitted from the DEIS? Is the FRA, AECOM, and TCR trying to hide this information from the public and lawmakers? Why was this information not calculated into costs for taxpayers thus negating some of the proposed "tax benefits"? The FRA needs to immediately put these miles into the DEIS and needs to address this while looking at SB 977 and adjusting the tax benefit suggested by this</p>	<p>Refer to GN-4, SC-1, TR-6, TR-7, TR-8 and VA-1. SB 977 prohibits the use of state funds to plan, build, or operate the high-speed rail operated by a private entity. TxDOT owned roads (including overpasses and underpasses), however, would continue to be maintained by the state. For the mileage of proposed public roads, please see <b>Section 3.11, Transportation</b>, specifically <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b>. Reroutes to existing roads would result in the addition of approximately 16.6 miles to 46.9 miles of public roads. For information about roadway modifications per county, Segment, and Build Alternative, refer to <b>Section 3.11.5, Transportation, Environmental Consequences</b>.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			report. This project will negatively impact every taxpayer in Texas and is clearly going against new laws that were just implemented, therefore the NO BUILD OPTION is the only alternative.	
Christie Parker	2/17/2018	Website	I am writing today to request your immediate attention in order to prevent a potential environmental crisis to our community. As you are aware, a private for profit company was formed with joint collaboration with Japan to place a high speed rail train creating a divide across Texas spanning 239 miles. My family and I would be devastated by this project. The impacted land was granted as a League of Land from the State of Texas through Stephen F. Austin on March 10, 1831. Three generations of the House family have lived on this property working this land and keeping it in the family to this date. Calvin House and Pamela House currently live on the impacted property and their son and daughter plan on moving to this plot of land as well and building a house bringing with them their children. This would be five generations on this parcel. Over the years, this land has been utilized for cattle, rice and soybean farming, Jigg Bermuda grass for hay, oak and pine tree farming for wholesale, hunting and a thriving wedding venue business. Next to the wedding venue House Estate, Calvin House has set up a museum which includes pictures of the original home and House ancestors and memorabilia that has been utilized over the years in shaping this property into what it is today. The Texas map inside the museum displays a large red area where the House family ran their cattle. However, what began as a working ranch, raising Brahamas and mixed cattle, eventually changed in 1957 to a rice and soy bean farm tended to by the House family; and then changed again in 1976 to farming live oak and pine trees. Calvin House and his wife Pam still actively maintain the ranch, a tree farm and House Estate which is an 1890's historic home built by Calvin's grandfather. House Estate was renovated in 1998 and rests comfortably on 18 acres designated for special events, such as weddings, that they now host. The train will travel approximately 400 feet from the edge of the pond where outdoor weddings are performed. Texas Central Railway/Texas Central Partners (TCR/TCP) and the FRA have pictures of the back of this property labeled KVP#27 in DEIS section II stating that the train will be a neutral impact. They failed to mention the fountain, pond, 1890's historic mansion, paved lot, numerous gardens, landscaped acreage and large sign that states that this is a wedding venue. It would have been impossible to not notice this when taking these pictures. They mention that the train will only be seen by some residents and agricultural workers yet this is clearly marked a wedding venue with numerous wedding guests on a regular basis and this business will be devastated by this project and will have to close its doors. If they missed these clearly evident characteristics of this one property, how much have they missed along the 239 mile route? Please see the following link to view the wedding venue: <a href="http://thehouseestate.com/">http://thehouseestate.com/</a> . This property was inaccurately depicted in the DEIS and not assessed properly. I would like the negative impacts to actually be put into the document with the loss of income of this business to the community including all those that are employed by this venue which would lose their job. There will definitely be a negative ripple effect caused by the closure of this venue and this KNOWN AND VERIFIABLE data should be subtracted from any presumed economic benefit of this HSR project. I urge that this process be halted until an accurate and detailed analysis of the impacted landowners be assessed. The FRA, TCR, and AECOM are using maps that are dated and since the ones in the DEIS are many years old they are not taking into account many homes and businesses along the route and their negative impacts. How could a proper analysis be done using maps that are a few years old? I recommend the NO BUILD OPTION as the FRA, AECOM, and TCR did NOT accurately assess negative impacts along the preferred route.	Refer to CR-11, GN-1 and NE-1.
Christie Parker	2/17/2018	Website	We currently have 6 ponds on our property and 1 will be directly impacted by the train. TCR has designed a berm over this pond which has many varieties of fish and wildlife and this 8 acre 32 foot deep pond will be filled in killing everything in the pond. Since TCR did not survey the property they didn't take into account the depth of the pond and more dirt will have to be acquired from additional land. Without doing boots on the grounds surveys for the majority of the route many environmental impacts were not assessed by TCR. Since AECOM and TCR did not know that this is 32 foot deep and 8 acre pond they did not accurately outline where they would obtain this dirt to fill in the pond. From an environmental standpoint how is the FRA and TCR justifying this project as there will be huge environmental negative impacts? Due to these negative impacts and lack of detailed analysis by the FRA, TCR, and AECOM I recommend the No Build option be moved forward.	Refer to FP-1, LU-14 and NE-8.
Christie Parker	2/17/2018	Website	Our property has a large variety of wildlife that will be negatively impacted. We have seen bald eagles numerous times flying over our property. Each year we have migratory birds that utilize this land and ponds during their migration journey. We have red pileated woodpeckers as well on the property. There is a great concern due to the vast majority of migratory bird species and threatened birds on our property that a number of these birds will be killed due to the high speed rail transversing our parcel. Please refer to this independent research study regarding the mortality of birds <a href="https://www.frontiersin.org/articles/10.3389/fevo.2017.00117/full">https://www.frontiersin.org/articles/10.3389/fevo.2017.00117/full</a> From the study "Finally, we counted a total of 42 bird collisions, 28 of them recorded from the cabin. Collisions were recorded in 47.0% o the journeys. As a whole, the data are equivalent to a mortality of 0.0029 birds per km traveled by a high-speed train (i.e., one collision every 349.8 km)." We have too many threatened species on our property including those protected as migratory species. This huge negative impact must be analyzed in order to make an informed decision and conclusion of negative impacts on birds and protected species. The HSR will not allow birds to move out of its path and result in many deaths. This has not been studied as we only have existing slower rail. I urge the FRA to look at this study and review this impact to threatened species such as the bald eagle who has numerous nesting spots all along the proposed route. This will	Refer to NR-2, NR-3, and GN-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> . The Pileated Woodpecker is a common resident found in East, TX and is not listed by the Endangered Species Act or by TPWD.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			also affect migratory birds which are also along this route. Due to the detrimental affects of this high speed rail on these species which have not even been evaluated, I opt for the No Build Option. Please protect our protected and threatened species. Thank you	
Christie Parker	2/17/2018	Website	Our property has not been surveyed by TCR as they came out numerous times to our house stating that they had eminent domain privileges but when asked to provide the paperwork showing this designation they never did and instead sued my family. In our court case, TCR lost the summary judgment with the judge declaring they did not have eminent domain privileges, were not a railroad, and could not survey the property. Since no survey was performed by TCR who does not have eminent domain privileges to this date, many critical elements of our property were not taken into account when TCR determined their route. For instance, we have pictures of the property that had a great deal of water during Hurricane Harvey and no such values have been considered when collecting data for the DEIS. Where is the Harvey flooding information? This project especially with the number of berms will exacerbate this flooding problem and needs to be fully assessed, addressed, and mitigated if necessary. We have a large section of berm on our property according to the drawings supplied by TCR in the DEIS. Harvey impacts need to be addressed in the DEIS and it is negligent not to include this in the report. Flooding has not been properly assessed by AECOM, TCR, and the FRA in the DEIS report. Therefore since inaccurate and omitted data is present in the DEIS the No Build Option should be considered.	Refer to ED-1, FP-1 and SS-17. Additional information regarding hydrology, hydraulics, and drainage for the Project are located in <b>TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F.</b>
Christie Parker	2/17/2018	Website	There have been a number of arrowheads that have been found on the property over the years where the train is proposed to travel and before any major construction project is even considered this should be thoroughly investigated once there is proof that this private company has eminent domain privileges. A cultural survey must be performed on our property due to these findings. No surveys will be allowed to be performed until TCR has proven that they have eminent domain which they have been unable to do in a court of law. I request that this process be halted immediately until this can occur. Thank you.	Refer to CR-5.
Christie Parker	2/17/2018	Website	My husband and I own a small parcel adjacent to the property where the train will travel which has a warehouse on it and we were never notified of the public notice by the Corp for this project. Did TCR notify the Corp of this adjacent landowner property as required by the permitting process as we never received any notice from your organization for this comment period?	Refer to NE-6.
Christie Parker	2/17/2018	Website	The maps used in the DEIS were very old and were not updated and many structures were not accounted for in the DEIS documents. They also listed our wedding venue as agricultural in the DEIS when it is clearly a business and has been an LLC for approximately two decades. These structures and designations were incorrectly classified or completely omitted in the DEIS and fall short of what is required in the Corp of Engineers permitting process. Can you please confirm with us that the proper documentation was reported regarding our property in this process as the DEIS has a great deal of incorrect information provided by TCR. Due to the overwhelming amount of incorrect data in the DEIS I recommend the No build as the only alternative in this process.	Refer to GN-1, NE-1, NE-6 and VA-4.
Christie Parker	2/17/2018	Website	TCR is asking for permits but has violated the permitting process of the USACE. It is a requirement of the permitting process for TCR to provide a list of local agencies including all approvals or denials regarding the project. Many rural counties have passed resolutions regarding this project and the permitting procedure and stated that TCR will not receive any permits without the proof of eminent domain and without this would not be able to move forward with construction of this project. TCR has yet to prove they have eminent domain and has not worked with local agencies. Has TCR provided the Corp with a list of these counties and their resolutions against the High Speed Rail project as required in the Corp's permitting process? I respectfully request an extension to the comment period in order to look further into the environmental impacts and NEPA process to ensure that the public is thoroughly able to review the massive first of its kind project. Thank you	Refer to ED-1, ED-3, PI-1 and PI-3.
Christie Parker	2/17/2018	Website	There is a great deal of property that will have to be taken for this project to occur. TCR originally stated that 3000 acres or less will be needed and this has ballooned to more than 8000 acres according to the DEIS. This does not include all of the temporary acres that will be impacted for many years as well. There will be thousands of acres of special farmland that will be taken away forever should this project go forward. Please refer to the Step One Screening process developed by the FRA and TCR page 1-5 in the following link as I was unable to download the attachment on this site <a href="http://www.texascentral.com/wp-content/uploads/2015/09/Step%20Screening-of-Corridor-Alternatives-Report.pdf">http://www.texascentral.com/wp-content/uploads/2015/09/Step"Screening-of-Corridor-Alternatives-Report.pdf</a> . Please adhere to what was stated in this report that was presented to the public when analyzing the process. It is completely wrong and unethical to try to push the project when almost three times the land will be taken vs what was originally stated by TCR. Please start over and keep the environmental and landowner impact closer to what was stated in your earlier reports to the public. Until this happens, I urge the no build option as the public has clearly been misled.	Refer to BA-3, LU-9 and LU-14.
Christie Parker	2/17/2018	Website	Since surveys were not conducted on much of the route as the landowners refused since TCR couldn't prove they have eminent domain, they have not accurately outlined the devastation to Navasota Lady Tresses and other plant and animal species along the path. The process should not move forward until endangered species impacts are thoroughly analyzed. This has not been done to date and vast amounts of endangered species will be forever lost. Therefore the no build option should be the only option that is considered.	Refer to NR-4.
Christie Parker	2/17/2018	Website	The DEIS included a wildlife plan for crossings but did not take into account the new 126 miles of public roads that will be put in along the path. Many landowners will fence these areas as this is a new public access road. Due to this fragmentation of land throughout the route,	Refer to NR-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			wildlife corridors will be splintered as well with obstructed access. There will be a further fragmentation of land due to viaducts, berms, and new MOW access along the route. The current wildlife corridors in the DEIS were not accurately assessed due to the roads described above and with the travel of trains up to every 15 minutes along this path with plans to be as frequent as every 5 minutes in the future according to the DEIS. The wildlife crossings will be perpetually disrupted along the complete 239 mile path. None of this was addressed in the DEIS. To prevent the permanent detrimental impacts to the environment, the No Build Option should be the only option considered at this time.	
Christie Parker	2/17/2018	Website	The carbon footprint will never be overcome on this project due to depressed ridership. Many studies show that in order to be considered a green project there needs to be greater than 10 million annual ridership. Tx Dot has only estimated 0.7-2.7 million and other independent studies had similar ridership reports. The VMT tables in the DEIS are also inflated to show a falsely elevated amount of emissions that will be removed. This data is flawed and incorrect in the DEIS and is further evidence that this project is not truly needed and why they have had to fabricate the numbers entered. The 1.2 passengers per vehicle was not taken into account in this information provided by TCR in the DEIS as well. Another table has the miles traveled inflated to show an increase in amount of VMT saved. Please conduct a full investigation of the data as this project will significantly affect the carbon emissions and damage the environment irreparably. THE NO BUILD SHOULD BE THE ONLY OPTION	Overcoming a carbon footprint is not required in a NEPA analysis or by current executive orders governing NEPA. The TxDOT Statewide Ridership Analysis Report that used the Statewide Analysis Model (SAM) stated that it was a high-level evaluation of forecasted ridership and cost effectiveness for various corridors to determine which ones may warrant further analysis. The report points out that the ridership forecast was conducted probabilistically to address uncertainties in estimated costs and forecasted ridership due to the inherent nature of a statewide high-level study that contained many unknowns that would need to be further evaluated and clarified in more in-depth corridor level studies. The report further states that the analysis was not intended to provide a detailed ridership analysis of an individual corridor, because many assumptions were applied to all corridors statewide, and would need to be modified to more accurately reflect the characteristics of any particular corridor. The range of ridership of 0.7 million to 2.7 million from the report cited in many comments were not the most appropriate Dallas-Houston corridor figures to use from this report. This is because the report states that further analysis was conducted on this corridor due to the results of the preliminary analysis being lower than other corridors, despite having higher numbers of intercity travelers. With further analysis using characteristics derived from publicized assumptions of the TCRR HSR at the 2013 date of the report, the ridership forecasted doubled to 7.8 million annual riders by 2035 with probabilistic results ranging 1.5 million to 5.7 million. The TCRR ridership number of 7.2 million that resulted from specific market analyses and using more specific and current service assumptions, are similar to the TxDOT projection of 7.8 million annual riders. None of the numbers used in the Draft EIS estimate were fabricated as they had bases in assumptions or other studies conducted. TCRR was consulted to verify what passenger ridership numbers meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate. This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for sulfur dioxide, which was also projected to increase under the original round-trip assumption. Therefore the conclusion of no adverse long term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS. Even

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				when adjustments to the passenger trip assumption are made to assume one way travel, and a higher vehicle occupancy of 1.5 passengers/car from newer state-level data, there is still a net reduction of CO2eq. The environment will not be damaged irreparably.
Christie Parker	2/18/2018	Website	The need for this project is unfounded in actual verifiable data. Please refer to the attached validated maps. Clearly the congestion is between Houston to San Antonio and Dallas to San Antonio and NOT from Dallas to Houston. Due to the need being unsupported by various maps and data sets (Tx Dot study as well), the no build option should be chosen.	Refer to BA-2, GN-3, NE-1 and PN-3.
Christie Parker	2/18/2018	Website	Unfortunately, Texas Central Railway/Texas Central Partners (TCR, TCP) have kept the economics of the project hidden and refuse to release to the public feasibility studies of the project. Other private projects that involve the public such as All Aboard Florida (AAF) have released ridership and cost studies demonstrating the financial feasibility of the project before moving forward. AAF released their study in their DEIS which included a market share of 7.2% ad a public usage cost basis of 0.30-0.61 per mile. All TCR has released is a deficient biased report with unverifiable data with a market share of 36% ad a public usage cost basis of 0.83 per mile making the average ticket price of \$199 each way. This is unaffordable to the majority of the public therefore this project would not rise to a "public need" transportation modality. Objective studies have come to the same conclusion of Tx Dot of 0.7-2.7 million annual ridership and not the inflated ridership of 5 million as proposed by TCR who has refused to show their data. Since numerous studies have shown this not to be economically viable and the FRA removed this viability component presumably due to this, I emphatically request the NO BUILD OPTION for this project.	Refer to AQ-7, BA-6, GN-2, GN-3, NE-1, PN-3, PN-4 and SC-3.
Christie Parker	2/18/2018	Website	TCR has also stated numerous times and it is also written in the DEIS that there could be 15-39 billion going towards state taxes due to ticket sales. Please verify how this stated figure could occur. We need a complete detailed independent study of the financial feasibility of the project before going forward as this private company is seeking eminent domain privileges and RRIF and TIFIA federal loans in order to build this development project when the "public need and purpose" has not even been justified. I recommend the NO BUILD OPTION as the taxpayers will be on the hook for this project and there are many blatant errors and miscalculations in the DEIS.	Refer to GN-4, NE-1, PN-3 and SC-3.
Christie Parker	2/18/2018	Website	The public's safety is of extreme concern as TCR, AECOM, and the FRA did not include FERC or PHMSA in their planning process despite hundreds of pipelines being impacted. Pipeline experts are very concerned as some pipelines are only 50 ft of the track and there has not been anything reported in the DEIS in relation to mitigation of vibration damage to the pipelines close to the tracks. There is much evidence that stress waves created by vibration results in dynamic stress (fatigue) on pipelines, causing misalignment, and damage such as crack propagation, which can result in the failure of the pipeline. Other experts are stating that explosions could occur. How could we be more than 2 1/2 years in this process and FERC not even been consulted when this is such a serious matter and hundreds of pipelines are being impacted. If this private company and engineering firm could be so irresponsible with something of this nature, the only option that should be concluded is the no build option in order to keep the public safe.	Refer to EU-1, EU-2 and SS-18.
Christie Parker	2/18/2018	Website	Please look at the attached station information on I45 which again does not support the need of this project. Streetman location. There has been a 2.8% growth over the past 10 years. Many years it has went down. If we used 2015 it would have been a negative growth over the past 10 years. Again, the data does not support the ridership nor the need for the route. <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> Station Flag 82H75 Site ID H75 AADT 2016 29,802 AADT 2015 28,446 AADT 2014 26,256 AADT 2013 25,084 AADT 2012 28,000 AADT 2011 29,000 AADT 2010 30,000 AADT 2009 26,000 AADT 2008 30,000 AADT 2007 29,000 Please refer to the next page of data points for this section showing expected traffic count in 2035 and you will see these figures. Route ID IH0045-KG 2015 AADT 28,446 2035 Estimated AADT 54,620 24 Hour Truck Percentage 32.4 Looking at these calculations you see that 32.4% o the traffic is projected to be trucks and this data can be validated when looking at axels and trailers etc. My point is this is all validated information. Looking at this data we can drill down on ridership as people traveling on I45 to go from Houston and Dallas and vice versa will have to travel through this point. Running these figures you have 2035 figures of 54.620 less the 32.4% o truck traffic and less the 35% fr local traffic leaves us with 17,806 estimated vehicles traveling to Houston to Dallas or Dallas to Houston. The standard for subtracting out local traffic according to the UIC and noted in Appendixes of Tx Dot study is 35%. he estimation used for passengers is 1.2 per vehicle. Factoring this in would lead us to possible 21,367 passengers daily traveling via car(subtracting out trucks traveling 32.4% ad local traffic 35%).Now using TCRR's figures of 16% mrket share (Chapter 1 DEIS page 1-8 footnote - 13 According to TCRR's 2043 ridership forecast, HSR would account for 21 percent of the traveling public market share between Dallas and Houston. This HSR market share would derive from a 16 percent decrease in vehicular traffic market share and a 6 percent decrease in air travel market share (numbers rounded). you will have 1,189,432 passengers projected in 2035 and far fewer at current dates due to very few cars on I45 currently at this date. 1,189,482 is a paltry amount of riders in 2035 and negates all the emission data which is an entirely different figure that is blatantly wrong in the DEIS and will NEVER overcome the carbon footprint and will be a huge economic albatross on the	Refer to AQ-2, AQ-13, GN-1, GN-2, GN-3 and GN-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			taxpayers' back. Since I was able to breakdown the figures and ridership data using accurate and verifiable data, please show your work proving the viability of the project. Keeping this hidden from the public stating it is proprietary when numerous other reliable studies prove their data to be fatally flawed and absolutely preposterous is unethical and wrong. Please show how the vehicle ridership data calculations I performed above is wrong showing a possibility of only 1,189,482 passengers IN 2035 using the inflated market share of 16% b TCRR. I would like to note that reputable research companies do NOT show a market share of 16% a I used above which were TCRR's figures. Some are estimating only 5%. AF used 7.2%. t should be noted that their tickets are not selling out. Now if we used AAF's more reasonable market share for vehicles the ridership projected would only be 561,524 passengers annually from cars. This is completely unacceptable that this private company is trying to obtain taxpayer loans for a project that will surely fail and the FRA has taken out the economic viability study from the process and has allowed their data to permeate the DEIS documents when it can't hold up to scrutiny and is easily proven false. I have included a snapshot of the data I have entered above for tx dot's statewide planning map. Please prove that these station figures are wrong from Tx Dot. The only option that should be carried forward is the NO BUILD ALTERNATIVE.	
Christie Parker	2/18/2018	Website	Please prove the following figures that are in the DEIS a number of times: Additional sales tax revenue would result from the sale of tickets for travel on the new HSR system on an annual basis while it is in operation. As shown in Table 3.14-22, HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue. Local sales tax is assumed to be collected at the point of sale, roughly split between Dallas and Houston jurisdictions. This is from Page 3.14-29 in the DEIS and also on page Executive Summary ES-22. Please see the following chart in the DEIS as well Page 3.14-29 : Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives Mode HSR Car* Air* Bus All Modes Build Market Share 21% 7% 3 2% 10% nNo-Build Market Share 0% 8% 9 2% 10% nAverage Trip Price (2016\$) \$199 *** \$199 \$25 High Impact Assessment based on 7.2 million annual HSR travel demand Ridership Impact 7,200,000 (5,300,000) (1,900,000) - Federal Tax Impact (2016\$)** \$0 \$(8,971,840) \$0 \$0 \$(8,971,840) State Tax Impact (2016\$) \$89,550,000 \$(9,752,000) \$(23,631,250) \$0 \$56,166,750 Local Tax Impact (2016\$) \$28,656,000 \$0 \$(7,562,000) \$0 \$21,094,000 Net Impact \$68,288,910 How are you coming up with 15 to 39 billion in income to the state for ticket sales even using your own incorrect high unrealistic figures which have already been disputed on previous comments? It can easily be calculated that with the over inflated figures of \$89,550,000 in 100 years this only adds up to 8.9 billion in possible sales tax from ticket sales to the state. That is 100 YEARS! Please see how TCR continues to mislead the public with information that the FRA has allowed into the the DEIS in the attachment. There is so much unverified and wrong data in the DEIS that this study is based on. I request an immediate halt and thorough review of all the data on this project. The no build option is the only feasible option for this particular project and route. Patrick Rogers No train. Just repair all the bridges and pot holes in the state first Texas Central - The Texas Bullet Train Hi Patrick, the Texas Bullet Train will be a taxpayer not a tax-taker. The project is market-driven and will not take any government grants or subsidies for operations. It is projected to inject anywhere from \$15 - \$39 billion into the Texas economy (from ticket sales alone) — which can go to help build the bridges and potholes.	Refer to SC-3.
Christie Parker	2/18/2018	Website	Please show how this was omitted in the figures in the DEIS: Federal Excise Tax: A federal excise tax of 7.5% i charged on airfare. Segment Fee: A segment fee of up to \$4.00 USD does apply per flight segment. A flight segment is defined as one takeoff and one landing.Jan 11, 2018 Please see data from the table on page 3 .14-29 Dallas to Houston HSR EIS Chapter 3. 0 Section 3.14 Socioeconomic and Community Facilities : Table 3 .14-22: Annual Ticket Revenue Impacts for all Build Alternatives Mode HSR Car* Air* Bus All Modes Build Market Share 21% 7% 3 2% 10% nNo-Build Market Share 0% 8% 9 2% 10% nAverage Trip Price (2016\$) \$199 *** \$199 \$25 High Impact Assessment based on 7.2 million annual HSR travel demand Ridership Impact 7,200,000 (5,300,000) (1,900,000) - Federal Tax Impact (2016\$)** \$0 \$(8,971,840) \$0 \$0 \$(8,971,840) State Tax Impact (2016\$) \$89,550,000 \$(9,752,000) \$(23,631,250) \$0 \$56,166,750 Local Tax Impact (2016\$) \$28,656,000 \$0 \$(7,562,000) \$0 \$21,094,000 Net Impact \$68,288,910 I am including the attachment showing that TCR, AECOM, and the FRA have not factored in the loss of federal tax on airline tickets. This will be a loss of an estimated 28,357,500 annually using your chart and figures. I would recommend the DEIS process to be stopped immediately as there is so much incorrect data that is falsely propping up the purpose and need and economic benefits of this project. In the end this entire table will be shown to be false with bad data and there will only be a net loss to taxpayers. But for this comment, please explain the incorrect information provided for the federal excise tax on airline tickets. I would suggest that "experts" who put these tables together and information in the DEIS actually look at fees on an airline ticket when putting together such an important study. Due to the massive amount of wrong data in the DEIS the only option carried forward should be the No build option.	Refer to AQ-3.
Christie Parker	2/18/2018	Website	Please refer to the Public Need statement in the the DEIS Dallas to Houston HSR EIS - Chapter 1.0 Pg. 1-6: 1.2.2 Need The need for HSR service is a result of increasing travel demand and the deficiencies of the existing and proposed transportation infrastructure to accommodate this growing demand between Dallas and Houston. Current direct route transportation options between Dallas and Houston are limited to vehicular and air travel.4 Due to increasing congestion on IH-45, automobile travel times between the two regions are projected to increase as travel speeds decrease. Flight time between the two regions is relatively short; however, the overall trip duration when considering pre-arrival	Refer to GN-3, PN-3 and SS-9.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>time more than doubles. Additionally, flights are more sensitive to inclement weather and other delay-causing events from inside and outside of Texas compared to HSR. Please look at the following statement from the above: Flight time between the two regions is relatively short; however, the overall trip duration when considering pre-arrival time more than doubles. If you look at the total trip time of the bullet train you will see that it is more than double as well. If you have a 90 minute bullet train and you have a total trip time of 3.5 hours as purported by TCR themselves you have a more than double trip time as you have stated is why this is a problem with airline traffic. Using simple map, double the trip time for a 90 minute ride would be 3 hours. TCR is purporting their total trip time is 3.5 hours which is more than double the 3 hours. The purpose and need of this project is again not proven when looking at the data. Please see the attachment and you can see where TCR is stating their total trip time is 3.5 hours. This is before the new increased TSA security for HSR that was passed with SB 975. The No Build Option is the only alternative that should be considered. Thank you</p>	
Christie Parker	2/18/2018	Website	<p>KVP#27 is looking at the back of our property. Other segments of the landscape unit have newer suburban developments surrounded by open spaces for agriculture (KVP #27 and Figure 3.10-21). This landscape unit has a moderate visual quality, as shown in Table 3.10-19, and a moderate viewer sensitivity. KVP #27 is a typical view of the landscape unit for all Build Alternatives. The view is from Becker Road facing south (Figure 3.10-80). The simulated view is shown in Figure 3.10-81. As shown in the simulation, the HSR system would be compatible with the area, which includes two large communications towers. The HSR system would be in the distance, and views would be partially limited by trees. Viewers in this area would be mostly residents, with some workers in agricultural and other industries. There would be some travelers on US 290 north of the neighborhood; however, this set of travelers would have a low sensitivity to the HSR system. Viewers nearest to the HSR system would have moderate viewer sensitivity, as shown in Table 3.10-34. Despite a slight reduction in visual quality to the landscape unit, the degree of impact in this landscape unit would be neutral because the HSR system would be compatible with the area and viewer sensitivities are moderate. Mitigation measures for visual impacts are described in Section 3.10.7 All of this information and descriptions are completely skewed and false and much information has negligently or purposely omitted. They clearly ignored that we have a huge wedding sign right next to where they took the picture, they ignored the historic Victorian mansion, the lake, the pond, the landscaped acreage, the gardens, the fountain, the paved lot and drive, etc. They ignored this was a wedding venue and stated this would be a neutral impact which it would actually shut down the business and have a huge negative impact on this business resulting in loss of jobs and tax dollars. The main people that would see the train would be brides and their guests and not agricultural workers. The 18 acres is an LLC and not agricultural. The person taking the pictures clearly omitted the important data points for this property. Please see the attached pictures showing where they turned the camera angle to prevent capturing the lake and wedding venue sign. I am also including a video showing this property and cell phone tower. The train will be on the other side of the lake 600 feet from where the brides get married at the gazebo. Is this a neutral impact??? Please see this video. <a href="https://vimeo.com/230392998?ref=fb-share&amp;1">https://vimeo.com/230392998?ref=fb-share&amp;1</a> As this will destroy our wedding business and income source, I would request the No build option.</p>	Refer to AS-1 and VA-4.
Christie Parker	2/18/2018	Website	<p>"For the air quality emissions estimation at the full-service level (2040) scenario, the annual ridership of 7.2 million passengers, existing 89 percent share of people using passenger cars to travel between Dallas and Houston and average passenger occupancy of 1.2 passengers per car were then used to calculate the number of annual car trips of 5,340,000 cars per year. It should be noted that this number of vehicles that would no longer travel IH-45 between Houston and Dallas would equate to 14,630 vehicles per day, or about 14 percent of the 2035 annual average daily traffic of 106,475 vehicles per day projected in transportation planning documents for this corridor.19" This data is flawed as it using an average per station for the entire route which factors in traffic in Houston and Dallas who are very unlikely to travel to the other city. In order to achieve a more realistic data point one must use a data point near the center of I45. If you look at a datapoint just north of fairfield you come up with these figures based on the AADT Route ID IH0045-KG 2015 AADT 28,380 2035 Estimated AADT 54,490 24 Hour Truck Percentage 32.4 Please see the link <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> and highlight AADT and future traffic on the left hand side. Follow the data points along I-45 Using these figures of 54,490 of daily traffic and accounting for 32.4% o truck use and 35% o local traffic supported by Tx Dot appendix, this leaves a total of 67.4% tan would definitely not use the train. This figure leaves 32.6% tat may travel this route to Houston and Dallas. This is estimated to be 17,763 cars per day.. 14% wich is what they are using above of this figure puts the number at 2,486 vehicles a day removed. This greatly affects the emission and VMT estimation. The net effect will be greatly negative and will irreparably damage the environment. Please use actual verifiable data when putting data in the DEIS and using in the report. It is irresponsible to include a weighted average of traffic stations in Houston and Dallas as it is very uncommon for this traffic to ever go to the other city. The only relevant data should be achieved from mid points and should be from lower midpoints as weighing 250,000 cars in the Houston area doesn't equate to the 30,000 car count in the middle. Why skew the data? Please review data points north of Fairfield in order to obtain a more reliable emission impact. When you examine the data you will be able to conclude that this will be a negative impact to the environment. Therefore, I opt for the NO Build option.</p>	Refer to AQ-9.

Christie Parker	2/18/2018	Website	Oppose TCR failed to label a cemetery right next to its route which could easily be affected and within permit range which would justify a cultural survey according to section 106 of the USACE. The Whitfield Lake Cemetery Memorial marker is on Strawther Road at coordinates 30.896089,-96.026603. This is only the stone memorial, not the actual burial ground. The graves are so old, most if not all are marked any longer. The marker is 203.67ft to the South West of being directly under the transmission lines. http://files.usgarchives.net/tx/madison/cemeteries/whitfield.txt Ms. Stephenson comments about Whitfield Lake Cemetery: She said her understanding is that when they ran the transmission lines through, the company working the project removed the tombstones, but did NOT move the bodies. She also said in her estimation, if they start working in that area they very well could dig up bodies. The owner of this parcel stated the bodies are still there and the parcel was NOT surveyed. Due to this negative impact along with the numerous other detrimental impacts I urge the No build option to be pursued. Cultural Resources TCR failed to label a cemetery right next to its route which could easily be affected and within permit range which would justify a cultural survey according to section 106 of the USACE. The Whitfield Lake Cemetery Memorial marker is on Strawther Road at coordinates 30.896089,-96.026603. This is only the stone memorial, not the actual burial ground. The graves are so old, most if not all are marked any longer. The marker is 203.67ft to the South West of being directly under the transmission lines. http://files.usgarchives.net/tx/madison/cemeteries/whitfield.txt Ms. Stephenson comments about Whitfield Lake Cemetery: She said her understanding is that when they ran the transmission lines through, the company working the project removed the tombstones, but did NOT move the bodies. She also said in her estimation, if they start working in that area they very well could dig up bodies. The owner of this parcel stated the bodies are still there and the parcel was NOT surveyed.	Refer to CR-6. The potential for unmarked burials related to the Whitfield Lake Cemetery will be carefully assessed so that impacts can be avoided.
Christie Parker	2/18/2018	Website	Smith Family Cemetery has the train or temporary construction area right on top of it. The DEIS footprint maps do NOT have this cemetery marked. Details for Smith Family The cultural maps have this cemetery and it will be impacted (Atlas Number 7113024705) 3820 East Illinois Ave Directions: At the intersection of East Illinois Avenue and Mayforge, turn south onto Mayforge which runs parallel to Interstate 45. Then immediately turn right onto private property which is fenced. The cemetery is located between the fence and a brick building which was originally the Linfield Elementary School built before 1954. Three gravestones are clearly visible near the fence not far from the right-of-way of East Illinois Avenue. Historic Texas Cemetery? Yes Designation Date 8/16/2016 Number of graves estimated 16 Burial Dates 1866-? Cemetery ID Number DL-C247 THE NO BUILD OPTION SHOULD BE IMPLEMENTED	Refer to CR-6. The Smith/Kinnard Family Cemetery was designated as a Historic Texas Cemetery in 2016 by the Texas Historical Commission. The cemetery is adjacent to the Limits of Disturbance (LOD) of Segment 1 and is not eligible for listing in the National Register of Historic Places (NRHP), as determined in consultation between the Federal Railroad Administration and the Texas Historical Commission. Construction and operation of the Project has the potential to have an adverse impact on this cemetery.
Christie Parker	2/18/2018	Website	The FRA footprint maps have a permanent system over a portion of this cemetery. This needs to be verified as cultural maps have the cemetery in the woods. Information shows it to be in the pasture and https://atlas.thc.state.tx.us/Map Cemetery ID Number NV-C110 Cemetery Name Ward Cemetery Directions SH 31 west from Corsicana to FM 2452. Turn left and go 5.2 miles to FM 709. Turn right and go 2.3 miles. Cemetery is on the left in pasture. City Retreat County Navarro Historic Texas Cemetery? Yes Designation Date 2/1/2005 Number of graves 320 Burial Dates 1852 to present The No Build Alternative should be used as there will be numerous negative impacts of this project.	Refer to CR-6. In the Draft EIS, Ward Cemetery was reported as Resource NA.040 and is also designated as a Historic Texas Cemetery. Due to changes in the conceptual design, the Ward Cemetery is located outside the Historic Resources Area of Potential Effects and will not be impacted by the Project.
Christie Parker	2/18/2018	Website	The FRA maps have failed to acknowledge bald eagles in Harris County. We have seen bald eagles on our property a number of times and we believe there are nests nearby 15419 House Road Hockley Tx. 77447 21 Dallas to Houston High Speed Rail DEIS Appendix D_NaturalResources_Set_4of4 Harris county section	Refer to NR-3.
Christie Parker	2/18/2018	Website	"There are several pairs of bald eagles that roost at gibbons creek and have fledglings that could be prepared to make nests outside of Gibbons. The Maxwell property has seen a pair on their family property every weekend since deer season this year." This is a mile from the train route and the FRA maps do not include the bald eagle information or sightings in their documents. This info is noted from an environmental scientist. 21 Dallas to Houston High Speed Rail DEIS Appendix D_NaturalResources_Set_4of4 Grimes county section No build option should be used.	Refer to NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Christie Parker	2/18/2018	Website	The public roads as evidenced in the drawings fragments almost the entire route even the viaduct sections. This is not what was proposed to the public and in order to mitigate this clear damage, the train should run alongside existing roads. http://www.iene.info/wp-content/uploads/COST341_final_report.pdf Dallas county- about 50% nw public roads. Ellis county- about 50% nw public roads. Navarro county- about 10-20% nw public roads. West of Teague segment (Madison, Limestone, Freestone, Leon) about 90% nw public roads. Houston segment (Harris, waller, grimes)- about 40-50% nw public roads or realigned public roads with the majority of Grimes county with new public roads and a significant portion of beginning of Houston section with no designation. These new public roads will not allow free passage of	Refer to GN-3, LU-9, LU-11, NR-6, TR-7 and TR-8.

Submitted By	Date Submitted	Submission Type	Comment	Response
			livestock and wildlife and will further fragment our wildlife and go against what they are claiming in their wildlife crossing maps. 53 Dallas to Houston High Speed Rail DEIS Appendix G_TCR FDCE v7 DWGS VOLUME 5 pg 13-end Plus review corresponding maps 45-52 In order to prevent a detrimental impact to the wildlife for the entire 239 mile path the No Build Option is the only option that should be moved forward.	
Christie Parker	2/18/2018	Website	The FRA maps have incorrect labeling of our business House Estate. They have labeled this as agriculture use when we clearly have 18 acres listed as an LLC so it should be listed as a commercial establishment. The facility was also built in the 1890's and doesn't show up in their map as even being a building much less a commercial facility. <a href="http://thehouseestate.com/">http://thehouseestate.com/</a> We also have 5 barns/sheds and a residence on our property that they failed to place on this map as well. 24 Dallas to Houston High Speed Rail DEIS Appendix D_LandUse_Set_3of3 Sheet 241 Because of their incorrect coding they failed to calculate the negative impact to this business which will have to be closed down and fire many employees. The no build option should be elected as the economic impact has not been properly assessed.	Refer to VA-4.
Christie Parker	2/18/2018	Website	"For the Final Operating Scenario (FOS) in the analysis year (2040), it is assumed that trains will run every 10 to 15 minutes in each direction between 05:30 and 23:30, with the last trains departing from Dallas and Houston at 22:00." Seeing that the goal is for trains to pass approximately every 5 mins from one of the directions this will forever cause a divide between Texas. You will see startle scenarios in the tables and if you have a train coming by as frequently as every 5 mins you will never be able to move cattle even if you have a fence over a public road to move them to the other side. This will make the entire route impassable to wildlife and livestock. Please see the data in this report for the true effect of the startle effect which is extended out for quite a distance and will be a severe impact to many wildlife according to these charts. <a href="http://www.hsr.ca.gov/docs/programs/merced-fresno-eir/drft_EIR_MerFres_TR_Noise.pdf">http://www.hsr.ca.gov/docs/programs/merced-fresno-eir/drft_EIR_MerFres_TR_Noise.pdf</a> THE NO BUILD OPTION SHOULD BE CHOSEN.	Refer to NR-1.
Christie Parker	2/18/2018	Website	"Between the county's northern boundaries where the proposed route crosses SH 99, the land use is mostly rural with scattered single family residences." They failed to address noise levels where the train will be right next to a wedding venue which will greatly impacted this business and will result in shutting it down. Again they have this site mislabeled as agricultural when it is a business and sound levels were not accounted for in this area at all. Any increase of noise would be detrimental to this business and was not addressed at all. They were not consistent with their noise measurements for any of the counties and used various time intervals for certain locations. They did not state exact measurements as well from structures to train. Highly subjective results and too many variables and data points not addressed to be accurate. 29 Dallas to Houston High Speed Rail DEIS Appendix E_Combined Tech Memos_Set 1 of 2 Pg 91 If this DEIS cannot use accurate data then the entire report is in question. AECOM reps stated that noise impacts were based at 125 mph to 175 mph. This is not even the travel speed of the train nor what it is expected to travel at. I would like to know which noise impacts were assessed at 125 mph as these data points are completely skewed and provide inaccurate data for the DEIS. Due to all of the incorrect data I opt for the No Build Option.	Refer to NV-1 and NV-6.
Christie Parker	2/18/2018	Website	There is a soil conservation reservoir site adjacent to the train and permanent construction site which appears will be negatively impacted. This is not depicted on the FRA maps. <a href="https://mapcarta.com/21805530">https://mapcarta.com/21805530</a> 7 Dallas to Houston High Speed Rail DEIS Appendix D_Project_Footprint_Set_1of5 Sheet 52,53,84 Please assess. I request an extension of the comment period as many problems are being found in the DEIS and 75 days is not long to review a project that you have have 2 1/2 years to put together. Thank you	Refer to PI-3. Soil Conservation Site 117, shown in the link, is located approximately 1,800 feet east of the limits of disturbance; therefore, no impacts to the site are anticipated.
Christie Parker	2/18/2018	Website	AAF another "private" railroad company has given their ridership and cost data in their DEIS. Why was this omitted in this project? <a href="https://www.fra.dot.gov/eLib/Details/L15932">https://www.fra.dot.gov/eLib/Details/L15932</a> Market share for this private train is estimated to be 7-8% while TCR is stating their market share is 21% which puts ridership at 2.9 million and not the 5 million. The actual ridership suggested of 5 million makes the market share at 36%. This is ridiculous as compared to this other private company. AAF has price per mile costing .35-.61 while TCR has costs averaging .83 TCR numbers not making sense and this private company just like AAF did needs to have their ridership and costs in the DEIS. This is especially warranted as this company is seeking eminent domain and federal tax dollars. Why did the AAF which is a private company have a ridership and revenue study while TCR did not in their DEIS? Please prove ridership details as your own numbers don't work out. The No Build Alternative should be chosen for this project	Refer to GN-2 and NE-1.
Christie Parker	2/18/2018	Website	Dallas county- about 50% nw public roads. Ellis county- about 50% nw public roads. Navarro county- about 10-20% nw public roads. West of Teague segment (Madison, Limestone, Freestone, Leon) about 90% nw public roads. Houston segment (Harris, waller, grimes)- about 40-50% nw public roads or realigned public roads with the majority of Grimes county with new public roads and a significant portion of beginning of Houston section with no designation. We passed a law to prevent taxpayer funding for this project and now each county is responsible for maintaining a number of new public roads solely because of this project. If we don't have the train, the taxpayers will not have to use tax dollars for these new roads. 126 miles of new public roads maps section 45-52 Why was new public roads not included in the DEIS? To prevent the taxpayers and landowners being harmed by this project, I opt for the No Build Option.	Refer to TR-7 and TR-8. <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b> provides a summary of new public road mileage by Build Alternative.
Christie Parker	2/21/2018	Website	In the Deliberative Draft this is stated: The Project will extend approximately 240 miles long, with an estimated right-of-way (ROW) width of approximately 100 feet (ft), and varying depths of impact. Additional acreage is expected to be utilized for ancillary facilities consisting of passenger stations, rail car and track maintenance facilities, electrical substations, maintenance roads, and signal houses. To date, design	Refer to LU-14.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			efforts have focused on the rail alignment, the principal component of the Project. Once the rail alignment is fixed, siting and conceptual design of the ancillary facilities will begin. Notice where it states estimated ROW is approximately 100 ft yet the average ROW that is being sought is 275 ft. This is unacceptable and not what was originally stated to the public. The No build option should be pursued.	
Christie Parker	2/21/2018	Website	3.12 Safety and Security Safety and security considerations would be included in the design of infrastructure, systems, facilities, and stations for the proposed HSR system. The following are key guidelines that would be incorporated during detailed design. The design, construction, testing, and start-up of the HSR would comply with applicable safety and security laws (for persons and property), regulations, requirements and railroad industry practices. Facilities and infrastructure design would provide capacity for safe emergency evacuation and compliance with emergency procedures. Perimeter fencing would be installed on embankment infrastructure configurations with a footing to resist ingress from digging or burrowing animals. Fencing, barrier separation, intrusion detection, and technological devices would be used to secure the right of way. The HSR system would be equipped with an integrated system for detecting, monitoring, and responding to environmental conditions and emergency events. Refer to Section 4 for more information. Please explain how this is NOT a barrier to wildlife and how this is not fragmenting wildlife populations. Thank you. Due to the detrimental effect on wildlife alone the No Build Option should be used.	Refer to NR-6.
Christie Parker	2/21/2018	Website	13.8.7 Material Handling Practices The following list outlines some key measures that may be used to ensure that material handling practices comply with environmental requirements: Source Fill material brought into the ROW from external source areas and used for the construction of any of the features listed would be from known sources with verified chemical properties. Proper source documentation would be obtained by the Contractor and provided to regulatory agencies as required. The use of fill material or soil from non-approved sources, including private landowners, would be in compliance with environmental and other applicable regulatory requirements. Have taking the large amount of fill materials from external sources and areas far from the actual berm been properly assessed when determining flood and drainage impacts around the berm? Where is the expert analysis regarding this? How can you build mounds of dirt and not expect this to impact drainage and flooding especially when the fill material is from external sources and no drainage is accounted for this close by? Where is the analysis of this in the DEIS? To prevent epic drainage issues and flooding which has not been properly analyzed in this report, the No Build Option is requested.	Refer to FP-1, WW-1 and WW-2.
Christie Parker	2/21/2018	Website	15.4.1 Enterprise Products Seaway Pipeline A conflict with a recently constructed 30in (762mm) diameter Enterprise Product Partners Seaway crude pipeline was identified along sections of alignment Segments WT and IH during the course of the utility assessment and investigation EW Segment The overall area of conflict begins near Station WT 130+00 (near the Madison/Grimes county line) and continues to Station WT 1030+00. This is approximately a 17-mile (27km) long stretch where the HSR alignment either crosses, runs along the utility line, or follows too closely to the pipeline. However, within this 17-mile (27km) stretch there are only seven (7) cumulative miles (11km cumulative) that have actual conflicts with the Seaway Pipeline easement. The seven miles of conflicts are not contiguous, but occur intermittently through the 17-mile (27km) section. IH Segment The overall area of interaction between the HSR alignment and the pipeline begins near Station IH1 3925+00 and continues to Station IH2 820+00, approximately 12 miles (19km). Within this zone, the main area of alignment and pipeline conflict happens between Station IH1 4150+00 and Station IH2 245+00, approximately 9 miles (14km). As a part of our due diligence process, we have continued to review the alignment of both the HSR and Seaway pipeline internally, and with Enterprise Product Partners. One of the primary conclusions based on discussions with EPP, is that the amount of right-of-way (ROW) overlap between HSR and Seaway should be kept to a minimum. If a repair is required on the Seaway pipeline in an area where the HSR LOD and the Seaway easement overlap, there is a potential that the HSR service would have to be temporarily halted until the repair is complete. This scenario is particularly valid if the construction type of the HSR is embankment and the slope extends into the Seaway ROW. As the design has developed, coordination with Enterprise Products has been ongoing. Several options have been discussed to mitigate the conflict between HSR and the Seaway pipeline. The options discussed with Enterprise included: Relocating the pipeline outside of the HSR LOD; Protecting the pipeline in place where feasible; Using viaduct to span and avoid pipeline crossings; As the engineering and design of the alignment progresses, we would continue to coordinate with Enterprise Product Partners and their team. In addition, cost estimates for the different options would be refined as more design data is developed and assessed. Selection of the preferred option would strive to minimize cost, scheduling, and environmental impact Have you reviewed clauses in the easements? There are a number of easements that don't allow for relocations. During the due diligence was this looked at and investigated? Many landowners are completely against the project and will be looking closely at their easements. Many will not allow any changes to their easements without strong language in favor of the landowner and against texas central and terms that the pipeline would not be comfortable with taking on the whole liability in many cases. As much of this 2 1/2 year process is chalked full of omissions, gaps, and inconsistencies, I recommend No Build Option for this project to ensure the safety of the public.	Refer to EU-2.
Christie Parker	2/21/2018	Website	1.1.3.3 Other Cooperating Agencies EPA has special expertise in regard to the Clean Water Act of 1972 (33 U.S.C. § 1344), Rivers and Harbors Act of 1899 (33 U.S.C. § 403) and the Clean Air Act of 1970 (42 U.S.C. § 7401). FHWA may have an approval role related to certain road crossings or construction within federal rightof-way (ROW). FTA has special expertise in intermodal passenger service. No approvals or	Refer to ED-1 and TR-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			permits from FTA are anticipated. USFWS may have an approval role related to protected and endangered species and suitable habitat under the Endangered Species Act of 1973 as amended (16 U.S.C. § 1531 et seq.), Migratory Bird Treaty Act of 1918 (16 U.S.C. § 703-712; 50 C.F.R. 1) and Bald and Golden Eagle Protection Act of 1972 (16 U.S.C. § 668). Where is the coordination between state and county regulations for roads, overpasses, and realignments? Please show evidence according to state statute where the supposed "railroad" has authority to realign roads AND go under roads. Since this has not been thoroughly investigated by looking at current laws the No Build Option is the only is the only option that is feasible for this project. Thank you.	
Christie Parker	2/21/2018	Website	City of Houston Chapter 30 of the City of Houston Code of Ordinances specifies noise limits of 65 dBA and 58 dBA at residential property lines for daytime and nighttime periods, respectively. However, noise from railroad equipment on railroad ROWs is exempted. Noise from construction between the hours of 7 AM and 8 PM is also exempted, provided the noise levels do not exceed 75 dBA at residential property lines. Dallas to Houston HSR EIS - Chapter 3.0 Section 3.4 - Noise and Vibration Since they are stating they are exempted as a presumed "railroad" are you saying that they do NOT have to mitigate for these noise levels? Is the COH public aware of this? Due to the noise impacts and many detrimental effects to the public, the No Build Option is suggested.	Refer to NV-1. The noise and vibration assessment was carried out in accordance with FRA guidance. The assessment methodology, criteria for impact, and locations of impacts are contained in <b>Sections 3.4.3, Noise and Vibration, Methodology, 3.4.2, Noise and Vibration, Regulatory Context, and Section 3.4.5, Noise and Vibration, Environmental Consequences</b> , respectively. Because railroads are federally regulated, local noise ordinances are not applicable to HSR projects. However, noise mitigation commitments have been made in <b>Section 3.4.6.2, Noise and Vibration, Mitigation Measures</b> , pursuant to FRA guidance. TCRR has committed to mitigation measures at locations where mitigation is feasible based on the detailed engineering design. FRA must approve all mitigation for the project and will require mitigation where impacts would be severe. TCRR would be responsible for implementation of all mitigation. It is typical to have mitigation commitments at the FEIS phase of the project, without specific measures such as noise barriers locations, but to have detailed studies conducted during design to ensure that mitigation will be practical, feasible, and provide adequate mitigation at required locations. The cost for any mitigation measures will be a part of the Project. The location for project noise level data is referenced in the second footnote on page 3.4-5.
Christie Parker	2/21/2018	Website	To supplement the noise impact criteria in Figure 3.4-3, FRA7 provides guidelines for identifying noise sensitive locations where increased annoyance can occur due to a sudden increase in noise (the startle effect) from the rapid approach of HSR trains. This effect is separate from the impact criteria defined above, and is dependent on the train speed and trainset and would be confined to an area very close to the tracks. For example, 200 mph train operations would have the potential for increased annoyance within about 40 feet of the track centerline. Thus, the area where rapid onset rates of train noise may cause startle would typically be within the ROW limits of the rail corridor. FRA also addresses impacts on wildlife (mammals and birds) and domestic animals (livestock and poultry). Noise exposure limits for each are a Sound Exposure Level 8 of 100 dBA from passing trains, as shown in Table 3.4-4. Dallas to Houston HSR EIS - Chapter 3.0 Section 3.4 - Noise and Vibration Please review this as the startle effect will be detrimental to our wildlife including cattle industry. <a href="http://www.cvzv.sk/slju/14_2/8_Broucek.pdf">http://www.cvzv.sk/slju/14_2/8_Broucek.pdf</a> NO BUILD OPTION SHOULD BE OPTED FOR AS THE BEST CHOICE FOR THIS PROJECT.	Refer to NR-1.
Christie Parker	2/21/2018	Website	Site LT-1: 4019-4099 Bulova Street, Dallas. The Ldn measured at this location was 72 dBA. The dominant noise source was traffic on IH-45. Noise levels were measured for 24 hours near the gate to this parcel. Please tell us the speed of the train at this point. Please give the reference. Other DEIS reports show the exact speed measurements for each location. This report fails to mention this. AECOM has stated that noise impacts were measured with the train traveling at 125-175 mph yet we know that the train will be traveling at 186 mph and eventually over 200 mph. The noise impacts were not adequately assessed therefore the No Build Option is the only viable option until a reliable and accurate noise impact study can be performed. Please provide the speed of the train at this location in order to accurately gauge noise impacts.	Refer to NV-6.
Christie Parker	2/21/2018	Website	Site LT-1A: 5125 Cleveland Rd, Dallas. The Ldn measured at this location was 53 dBA. The dominant noise sources were rural sounds and local traffic. Noise levels were measured during three separate one hour periods throughout the day along Cleveland Rd in front of the property. What time of day were these measurements taken and only three separate one hour periods were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour?	Refer to NV-1 and NV-6.

			the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	
Christie Parker	2/21/2018	Website	Site ST-10: FM 39 at East Yeagua Street, Groesbeck. The Leq measured at this location was 63 dBA. The dominant noise sources were traffic on FM 39 and traffic on East Yeagua Street. Noise levels were measured for one hour on the side of the road within the public ROW. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site ST-11: N Freeway Service Road at County Road 306, Buffalo. The Leq measured at this location was 68 dBA. The dominant noise source was traffic on IH-45. Noise levels were measured for one hour on the side of the road within the public ROW. Site ST-12: 20559 IH-45 Frontage Road. The measured Leq at this location was 61 dBA. The dominant noise sources were local traffic from the frontage road and IH-45. Noise levels were measured in the front yard of the property for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site LT-6: FM 1366, Wortham. The Ldn measured at this location was 43 dBA. The dominant noise sources were local community traffic and farm activity. Noise levels were measured for 24 hours adjacent to the back house on this parcel. Site LT-7: Approximately 132-264 CR 890, Teague. The Ldn measured at this location was 42 dBA. The dominant noise sources were local community traffic and farm activity. Noise levels were measured for 24 hours adjacent to the ranch house. Site LT-11: N Freeway Service Road, Buffalo. The Ldn measured at this location was 55 dBA. The dominant noise sources were traffic on IH-45 and distant freight trains/horns. Noise levels were measured for 24 hours adjacent to the driveway of this ranch. Site LT-13: 2076-2765 West Feeder Road. The measured Ldn at this location was 53 dBA. This 24-hour measurement was taken at the southern edge of the property facing a small pond. The dominant noise sources were local traffic from West Feeder Road, IH-45 and neighborhood activity. What day of the week were these noise levels obtained? Saturday? Sunday? What if there was no farm activity that day? Some months have limited activity. We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site LT-10: Beddingfield Road, Marquez. The Ldn measured at this location was 42 dBA. The dominant noise sources were local community traffic and farm activity. Noise levels were measured for 24 hours in the back yard of the residence. Site LT-12: 534 FM 39. The measured Ldn at this location was 60 dBA. The dominant noise source was distant local traffic. Noise levels were measured for 24 hours on the north side of a dirt road that accesses the property. What day of the week were these noise levels obtained? Saturday? Sunday? What if there was no farm activity that day? Some months have limited activity. Why was the sensor receptor placed so far away from the house in the second measurement? How many feet from the house? We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site LT-15: 1977 Poteet Road. The measured Ldn at this location was 48 dBA. The dominant noise source was local traffic on Poteet Road. Noise levels were measured for 24 hours on the south side of the property facing a corral. What day of the week was this? We need the date and other info from this limited 24 hour study. Please provide this report for the public. Was it on a weekend? No Build Option should be chosen until accurate data can be provided.	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site ST- 13: 5192 Dawkins Road. The measured Leq at this location was 54 dBA. The dominant noise source was local traffic. Noise levels were measured in front of the residence by the gate facing Dawkins Road for a period of one hour. Site ST-14: 3159 Clark Road. The measured Leq at this location was 56 dBA. The dominant noise sources were local traffic on Clark Road, wind, farming activities and electrical noise from power lines. Noise levels were measured at the main gate for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site LT-16: 6113 FM 1696. The Ldn measured at this location was 45 dBA. Noise levels were measured for 24 hours and the measurement was performed at northeast edge of the property overlooking at the power lines. The dominant noise sources were wind and farming activities. What day of the week were these noise levels obtained? Saturday? Sunday? What if there was no farm activity that day? Some months have	Refer to NV-1.

			limited activity. We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	
Christie Parker	2/21/2018	Website	Site LT-17: 10735 Route 90. The Ldn measured at this location was 47 dBA. Noise levels were measured for 24 hours and the measurement was conducted at the eastern side of the property at a distance of about 150 feet from a metallic shed. The dominant noise source was distant local traffic. Site LT-18: 5126 FM 1774. The measured Ldn at this location was 60 dBA. The dominant noise sources were barking dogs and local traffic from FM 1774. Noise levels were measured for 24 hours on the northern side of the property at a distance of 150 feet from FM 1774. Barking dogs? Really? So are there barking dogs often in this area? Wouldn't you want a reputable and accurate data point to use? What day of the week were these noise levels obtained? Saturday? Sunday? What if there were no barking dog activity that day? We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site ST-15: 15619 TX-90. The measured Leq at this location was 53 dBA. The dominant noise source was local traffic from TX 90, livestock and other farm animals and farming activities. Noise levels were measured in front of the house near the driveway for a period of one hour. Site ST-16: County Road 341, Plantersville. The measured Leq at this location was 50 dBA. The dominant noise source was local traffic from County Road 341. Noise levels were measured at the back of the property near a shed for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site LT-19: 119 Plantation Drive, Todd Mission. The measured Ldn at this location was 47 dBA. Noise levels were measured for 24 hours at the front northern edge of the property. The dominant noise sources were local traffic from Plantation Drive and neighborhood activity. What day of the week were these noise levels obtained? Saturday? Sunday? What distance was the sensor from the house? We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site ST-17: 31205 Hegar Road. The measured Leq at this location was 47 dBA. The major noise sources were local traffic from Hegar Road and Joseph Road. Noise levels were measured in the front yard of the residence for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported. Please provide the report with the day of the week and the hour of the day of the week that this measurement was taken.	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site LT-20: 21512 Binford Road. The measured Ldn at this location was 49 dBA. Noise levels were measured for 24 hours at the northern edge of the property at the setback distance of the residence. Traffic noise from Binford Road was not significant during the measurement period. Site LT-21: 12118 Canyon Arbor Way. The measured Ldn at this location was 67 dBA. Noise levels were measured for 24 hours at the northern edge of the property near a residence. The dominant noise source was local traffic from US-290. Site LT-22: 14812 Hempstead Road. The measured Ldn at this location was 44 dBA. Noise levels were measured for 24 hours at the front yard of the property facing Hempstead Road. The dominant noise sources were local traffic on Hempstead Road and UPRR trains, located parallel to Hempstead Road. Site LT-23: 11217 Todd Street. The measured Ldn at this location was 47 dBA. The dominant noise sources were local traffic on Todd Street, Harland Drive and Hempstead Road, plus Union Pacific trains. Noise levels were measured for 24 hours on the northern edge of the property. What day of the week were these noise levels obtained? Saturday? Sunday? We need the actual date of these measurements. Why were known conducted in other rural areas for more accurate measurements? Not enough measurements were conducted in this segment? Where are the rural sensor measurements? We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	2/21/2018	Website	Site ST-18: 6734 Limestone Street. The measured Leq at this location was 57 dBA. The dominant noise source was local traffic on Limestone Street and Hempstead Road. Noise levels were measured in front of the residence for a period of one hour. Site ST-19: 20710 May Showers Circle. The measured Leq at this location was 61 dBA. The major noise sources were local traffic on Hempstead Road, Huffmeister Road and residential activities in May Showers Circle. Noise levels were measured in the front yard of the property for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen	Refer to NV-1.

			until accurate data is able to be reported. Please provide the report with the day of the week and the hour of the day of the week that this measurement was taken.	
Christie Parker	2/21/2018	Website	<p>"TCRR intends to provide high levels of security to safeguard its passengers, employees, and property. TCRR's security strategies and policies are being developed to ensure that foreseeable threats and vulnerabilities are identified and properly mitigated or eliminated. To advance and inform it's planning and design, TCRR would work closely with local, state, and federal law enforcement and emergency response officials. TCRR has had preliminary meetings with the Department of Homeland Security (DHS) and the Transportation Security Administration (TSA) to discuss their recommendations and guidance in these planning efforts. Additionally, TCRR would coordinate security planning with state, county, and city authorities along the entire right-of-way. Unlike security that is provided at airports, passenger rail security must be designed to fit the passenger rail environment. TCRR would follow a number of the best practice guidelines currently used by other rail carriers and would incorporate security counter-measures into the design of its infrastructure and supporting systems. TCRR would also implement additional strategies that incorporate proven security systems and new technologies used by other highspeed rail and large transit systems." S.B. No. 975 AN ACT relating to the security of high-speed rail operated by a private entity. BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS: SECTION 1. Chapter 112, Transportation Code, is amended by adding Subchapter E to read as follows: SUBCHAPTER E. SECURITY FOR HIGH-SPEED RAIL OPERATED BY PRIVATE ENTITY Sec. 112.201. DEFINITION. In this subchapter, "high-speed rail" means passenger rail service that is reasonably expected to reach speeds of at least 110 miles per hour. Sec. 112.202. APPLICABILITY. This subchapter applies only to high-speed rail operated by a private entity. Sec. 112.203. DEPARTMENT OF PUBLIC SAFETY POWERS AND DUTIES. (a) To the extent not preempted by federal law, the Department of Public Safety: (1) shall administer and enforce the provisions of this subchapter; and (2) may adopt rules as necessary to administer this subchapter. (b) In carrying out the powers and duties under this subchapter, the Department of Public Safety: (1) has the same authority granted to the Texas Department of Transportation under Subchapter B, Chapter 111; and (2) shall ensure that rules and standards adopted under this subchapter are consistent with applicable federal rules, regulations, and standards. (c) The Department of Public Safety shall provide the emergency management training course described by Section 418.005, Government Code, to employees of a high-speed rail operator designated under Section 112.204(c). Sec. 112.204. SECURITY. (a) A high-speed rail operator shall: (1) in the manner required by law for intercity passenger railroads, implement all security requirements of the Transportation Security Administration or its successor agency; (2) conduct periodic risk-based threat and vulnerability assessments; and (3) in consultation with the Transportation Security Administration, implement appropriate security measures in response to results of the assessments, which may include: (A) establishing effective intrusion protection and access controls for railroad-owned facilities and the rail corridor; (B) instituting active or passive passenger screening protocols; and (C) providing appropriate levels of onboard security for all revenue service trains. (b) A high-speed rail operator shall collect and investigate security threat reports submitted by members of the public. (c) A high-speed rail operator shall: (1) designate employees who are managers or supervisors and whose position description, job duties, or assignment includes emergency management responsibilities; and (2) require those employees to complete the emergency management training described by Section 418.005, Government Code. (d) A high-speed rail operator may not use the services of a peace officer employed by this state or a political subdivision of this state unless the operator compensates the state or political subdivision, as applicable, for the officer's time. Sec. 112.205. COORDINATION WITH OTHER ENTITIES. (a) A high-speed rail operator shall coordinate security activities and investigations with federal, state, and local law enforcement agencies, including by communicating about credible threats, major events, and vulnerable places along the rail line or on a train. (b) A high-speed rail operator shall communicate as appropriate with the state Emergency Management Council and the Texas Division of Emergency Management about safety and security issues. SECTION 2. This Act takes effect immediately if it receives a vote of two-thirds of all the members elected to each house, as provided by Section 39, Article III, Texas Constitution. If this Act does not receive the vote necessary for immediate effect, this Act takes effect September 1, 2017. How is this law addressed in the DEIS? Doesn't look like this is being incorporated. It is not in the safety sections nor in trip times of the train which will ultimately delay it. Until this can be looked at more thoroughly the no build option should be sought.</p>	Refer to SS-9.
Christie Parker	2/21/2018	Website	Looking at Table E3.2-1: Train Traction Power Consumption the TCRR engineers have given once again very flawed data. Reviewing the chart which is 200% of I am concerned how we need to keep commenting on terrible data provided in the DEIS when it is not going to have a chance to be addressed. Looking at this table is the 7.5 for RT wrong or is the 68 trips wrong? This just shows once again how this report prepared by TCRR is fatally flawed. The NO BUILD OPTION should be chosen.	Refer to AQ-3.
Christie Parker	2/21/2018	Website	The Federal Surface Transportation Board denied Texas Central Railway Eminent Domain Powers and proclaimed they do not have oversight jurisdiction over TCR's Project. The STB ruled that they must go back to Texas for regulation and oversight. Has this occurred? Why are we spending taxpayer money when this has not even been resolved and eminent domain privileges are in dispute? How much taxpayers' money has been spent on this project thus far without this being ascertained?	Refer to ED-1 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Christie Parker	2/21/2018	Website	n the lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed to survey the property. This has been the only judgment after hearing the case and thousands of pages of documents and it was ruled that they were NOT a railroad, did not have eminent domain and could not survey the property. Why are we spending taxpayer dollars when this private company has never proven in court that they have eminent domain?	Refer to ED-1 and NE-1.
Christie Parker	2/21/2018	Website	The attorney general of Texas stated the Miles case in Leon county would provide precedence of whether or not TCR has eminent domain so because they didn't want to lose this case, TCR claimed they did not need to get on Mr. Miles property any longer so the lawsuit and the court case was stayed. They in fact need to get on his property according to the DEIS so this should be resolved in court as stated by the attorney general before any further work is performed by the FRA. Again, why are we spending taxpayer money studying a project that has yet to even prove they are a railroad according to current Texas statutes.	Refer to ED-1, GN-4 and NE-1.
Christie Parker	2/21/2018	Website	Senate Bill 977 passed in the 2017 Texas State Legislature which does not allow TCR to use any State Funds. However, the DEIS shows that taxpayers will maintain overpasses built solely because of the high speed rail and this will cause an increase in Texas tax dollars as overpasses cost a great deal more to maintain than an at grade road. This outline in the DEIS specifically goes against current Texas law.	Refer to TR-7. SB 977 prohibits the use of state funds to plan, build, or operate the high rail operated by a private entity. TxDOT owned roads (including overpasses and underpasses), however, would continue to be maintained by the state.
Christie Parker	2/21/2018	Website	Senate Bill 975 passed in the 2017 Texas State Legislature provides for increased Security and Safety standards more closely resembling TSA Airport standards. The DEIS fails to apply these principles and we cannot leave this up to a private company that has shown to bypass rules when true regulations were passed. These rules were also not taken into account when formulating their trip time of 3.5 hours. They attributed these security guidelines when calculating airport trip times but not their own thus proving once again why the purpose and need for this project is not justified and the no build option should be the outcome of this current study with no further taxpayer funding for a company that has not even proven they are a railroad.	Refer to GN-4, PN-3 and SS-9.
Christie Parker	2/21/2018	Website	Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a permit in order to construct a HSR. The permit also requires that TCR prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. There has been a lack of coordination when drafting this environmental impact study with all of the counties mentioned. How are you able to do an accurate factual study without receiving input from the majority of the route? Texas Central only has 35 miles of the route under option contract according to what they told the Land and Resource Committee so again without coordinating with the majority of counties and landowners how is this not a flawed study?	Refer to ED-1, ED-3, PI-1, TR-6 and TR-8.
Christie Parker	2/21/2018	Website	Is the FRA planning on providing a waiver in regards to its current FRA equipment safety standards as they are not met by TCR's Japanese Equipment?	Refer to SS-4.
Christie Parker	2/21/2018	Website	The FRA currently does not have any regulations in place for trains at this speed. How are taxpayers paying for this study when we don't even have any current regulations regarding high speed rail and no state regulatory agency exists to provide regulatory oversight of TCR's HSR as there was previously when contemplating a high speed rail project.	Refer to GN-4, NE-1, NE-5 and SS-5.
Christie Parker	2/21/2018	Website	TCR and the FRA have not worked with local county emergency response entities to understand the safety and security needs of TCR which will be paid for by the local Counties. It is evident that there will be a delay in response times according to details in the DEIS and even a minute delay can easily result in fatalities. I work in the health care field and to dismiss this delay as not being significant is why the FRA and TCR should have collaborated with emergency response teams as the FRA's conclusions are clearly flawed and will result in deaths. One death is too many and the no build option should be considered further vs risking citizens lives.	Refer to PI-1, SS-18, SS-23 and SS-26.
Christie Parker	2/21/2018	Website	Wildlife fragmentation will be significant <a href="http://www.iene.info/wp-content/uploads/COST341_final_report.pdf">http://www.iene.info/wp-content/uploads/COST341_final_report.pdf</a> Either build next to an existing ROAD or choose the no build option to prevent disruption of livestock and wildlife.	Refer to NR-6. This is discussed in <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife would be minimized by locating the Project infrastructure adjacent to existing transportation infrastructure, utility corridors and other development. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1 Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Section 3.6.6.1 Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2 Natural Ecological Systems and Protected Species, Mitigation Measures</b> .

Christie Parker	2/21/2018	Website	Economic: achieve a favorable return on investment when weighing expected ridership and revenue against estimated project capital investments, project delivery schedule, and long-term operations and maintenance expenses. Technological: bullet train vehicle and operating procedures based on the N700-I, the international version of the Tokaido Shinkansen. Operational: approximate 90 minute travel time between Dallas and Houston, with achievable speeds exceeding 200 mph in a fully sealed corridor. Environmental: minimal impacts to the natural and built environments through context sensitive design and adjacency to existing infrastructure right-of-way (ROW) as appropriate." So why did the FRA eliminate the economic feasibility step from the Step 1 that was presented to the public. AAF and Oklahoma/Tx both had economic feasibility. The process should start over if you have changed the purpose of the project. No build option should be the only option until the process starts over from scratch since the variables have changed and build options were removed because of the economic component. Removing the economic component should have those options put back on the table. Otherwise the FRA is circumventing the process. Why was it removed?	Refer to BA-6, NE-1 and PN-4.
Christie Parker	2/21/2018	Website	"Per the FRA Report, the "FRA is obligated to avoid and minimize impacts to the human and natural environment." Additionally, the FRA must carry forward potential corridor alternatives that meet the Project's purpose and need, which includes the requirement that the project be "economically viable." As such, the various elements of the project construction, including those directly impacting overall cost and the Project's impact on the human and natural environment must be considered at this and future stages of the EIS." "While the BNSF Option 1 alignment was initially found to be the early leader in the evaluation with respect to these issues, risk mitigation and indemnification requirements identified by the freight railroads later indicated that an alignment that closely follows the existing BNSF freight line over a significant length would prove unreasonable and financially unviable." So since the FRA has eliminated routes specifically due to this economic component and then removed the economic variable the entire process should begin again and put back the BNSF option as it was very feasible but eliminated due to a step that was removed by the FRA. This is completely unacceptable and very unethical if this doesn't revert back to the beginning stage. It is simple, since the economic step was removed the FRA needs to start over. There is no other option except the no build option.	Refer to BA-6, BA-8, BA-10, NE-1 and PN-4.
Christie Parker	2/21/2018	Website	Dallas to Houston High-Speed Rail Project Corridor Alternatives Analysis Technical Report August 10, 2015 "As defined by TCR, the purpose of the privately proposed Project is to provide reliable, safe and economically viable passenger rail transportation using proven high-speed rail technology between Dallas and Houston. It would provide a convenient and competitive alternative to automobile travel on Interstate 45 (I-45) or air travel between the two major metropolitan areas and introduce rail capacity in the vicinity of the corridor. To achieve TCR's economic viability and safety requirements, the Project must meet the following technical requirements: Technological: bullet train vehicle and operating procedures based on the N700 Tokaido Shinkansen; Operational: approximate 90 minute travel time between Dallas and Houston, with achievable speeds exceeding 200 miles per hour (mph) in a fully sealed corridor; Environmental: minimal impacts to the natural and built environments by maximizing adjacency to existing infrastructure right-of-way" p 4 (this is where they dropped the economic bullet point) BUT: "FRA eliminated a potential corridor alternative or other potential transportation alternative if it failed to meet Project purpose and need. FRA carried forward into the fine screening analysis only those potential corridor alternatives or other potential transportation alternatives that meet Project purpose and need, as defined below. Purpose and Need: supports the purpose to provide economically viable high-speed (200 mph) safe and compliant passenger rail service competitive with air travel (90 minute travel time from terminal to terminal) using the N700-I Tokaido Shinkansen in a fully sealed and grade-separated corridor" p 9 The cost of an approximately 240-mile barrier wall exceeds TCR's purpose in that the Project would not be economically viable. P 13 Because it was deemed economically infeasible by the Proponent, FRA eliminated the I-45 Greenfield Corridor from further consideration. FRA also determined that the I-45 Greenfield Corridor fails under the Physical Characteristics, Operational Feasibility, and Environmental Constraints screening criteria. P 14 In order to proceed with the project it needs to be economically viable per FRA's and TCR's own analysis. So until the economic viability details are released the No build option should be chosen as potential corridors were eliminated for a process that was omitted in the DEIS.	Refer to BA-6, BA-8, BA-9 and NE-1.
Christie Parker	2/22/2018	Website	Another claim of TC of the DEIS is 1576 jobs . Well in the DEIS is also states displacements of businesses along the route. That number is 1051 people. Some business' will not be able to reopen due to being grandfathered with the county/city or TCEQ. They also didn't include our wedding business that will be shut down and you can't just reopen an 1890's victorian mansion wedding venue just anywhere. Where are these loss of jobs factored in. Why did the DEIS not address this at all. The DEIS is using very outdated maps and data and it should be an embarrassment that the FRA and AECOM is associated with this extremely flawed data. All of your figures are incorrect until you factor in loss of jobs and this entire section should be thrown out and redone. Rescind the DEIS or choose the No Build Option.	Refer to BA-6, GN-1, SC-21 and VA-4.
Christie Parker	2/22/2018	Website	TC claims the 199 is false but at the same time claim, the 81,500,000 million gallons saved per year. Please review the faulty data regarding VMT in the DEIS. Total vehicles mile traveled (VMT) FRA/AECOM,TCR claim is 200% overstated. Which in turn makes the gallons saved per year a 200% OVERSTATEMENT. You need to correct and let's recalculate routes and benefits. Total VMT removed in the DFW NAA is 200% overstated. You need to correct and let's recalculate routes and benefits. Total VMT removed for Harris NAA is 300% overstated. You need to	Refer to AQ-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			correct and let's recalculate routes and benefits. Which in turns the net emissions closer to zero and one is actually a NET GAIN. This project is not a green project and your data is fatally flawed. If they overstated the ridership by 25% tat brings more emissions to a net GAIN. Looking at data on AADT there will be a net gain for emissions. This project needs to be stopped immediately and if it is allowed to proceed everything needs to be started over with correct data. Since the DEIS is basing calculations on this severe overstatement of VMT anything derived from that data needs to be scrapped so we can actually comment on the truth. Since there will not be another comment period after FEIS the FRA needs to correct these SEVERE miscalculations so that we can at least comment on something that is closer to reality From economic benefit, to ridership, to emissions, the DEIS is easily proven false on these points and should be completely reevaluated with factual data. Who will be held accountable in court for all the data that was allowed in the DEIS and routes chosen when it can be easily proven as false and wrong? FRA and AECOM should have vetted this wrong information from TCRR and they didn't and failed the public. Who will be held accountable when this all comes to light? No build should be only option based on the data we have available to us.	
Christie Parker	2/22/2018	Website	Where is the information for Ag structure takings for each route? ALT A IS NOT THE LOWEST in that category, or many other parameters ALT A is not the best. The FRA cannot ethically and legally state the best route with all the wrong data in the DEIS and with removing corridors as they were not economically viable and then removed the economic viability component.	Refer to BA-7, LU-1 and PN-4.
Christie Parker	2/22/2018	Website	Based on \$199 ticket sales and 7.2 million you will have the following:This is in your tables state- 89,550,000 local- 28,656,000 Based on \$199 ticket sales and 5 million you will have the following: This is in your tables state- 62,187,500 local-19,900,000 So how do you come up with 15-39 billion in state taxes from ticket sales as you state in the DEIS even with your own flawed data How do you come up with 5-12 billion in local taxes from ticket sales? I cannot comprehend how so many people looked at this data and thought that it was correct and then based economic findings on it and allowed it to be promoted and circulated to the media. Who can we hold responsible for the very wrong and misleading data found in the DEIS? The credibility of the entire DEIS is in question and the entire process should start from the beginning with accurate data. Since there has been an overwhelming amount of bad data found in the DEIS an extension should be warranted to vet this process as the experts that put the data together have failed the public. Thank you	Refer to NE-1, GN-1, PI-3 and SC-3.
Christie Parker	2/23/2018	Email	I understand that the FRA has granted another meeting in Harris county so this is two for this one county and many rural counties weren't even allowed to participate in a second county where they had land. Madison county didn't even have enough capacity. Another concerning issue is the high speed watch group stated this last night in a meeting: The HSW lady also stated that she had someone inside of FRA that says it's a done deal per say and that no extension would be granted. Done deal as far as the ROD This is very concerning especially since there is a preponderance of evidence of poor quality and bad data used and breaks in the nepa process. Please let me know if other meetings will be scheduled and will there be an extension as has been requested by many. Thank you for your time in advance in this very important matter.	Refer to GN-1, PI-1, PI-31 and PI-11.
Christie Parker	2/24/2018	Website	Texas Central is Forcing onto the Public not only a Huge 5 Year HSR Construction Project, but also a Large Road Construction Project resulting in increases to County Maintenance Costs AND loss of more Private Property to Road ROW. This is a huge environmental concern with all the new emissions related to construction and the impact on drainage and the wetlands. This has not been accounted for in the DEIS. The FRA has not accurately assessed the NEPA process as they have used outdated maps AND they have inaccurately assessed the VMT emissions. Please look at your VMT data which is 200% of. Please also look at your ridership figures as this again is more than 200% of using Tx Dot and FDOT maps and figures. All of these issues need to be addressed as the NEPA process has been inaccurately assessed and the entire DEIS should be rescinded. No build is the only option for this project.	Refer to AQ-3, AQ-7, BA-6, GN-1 and GN-2.
Christie Parker	2/24/2018	Website	Due to this project, many roads will be Closed, Modified, Rerouted or Rebuilt. Some roads are proposed to be built Over the HSR. Please tell us under what state statute this is allowed for a railroad to run under a road. Please tell us what state statute TCR is allowed to reroute city and county roads. Due to this unnecessary project we will see a huge increase in Traffic Flow, Congestion, Longer Travel times, Required New travel routes, Damaged existing roads, New roads and Overpasses for the County to maintain and treat in cold icy weather conditions, and New Congestion around Construction Sites that are non-existent today. I do not see this outlined in the DEIS. Please show how you were able to account for this in the DEIS. State law SB 977 ensures that no state dollars for any maintenance of anything related to high speed rail. So who will be maintaining the roads that are only needed because of the high speed rail? The no build option is the only option that should be chosen.	Refer to TR-6, TR-7 and TR-8. SB 977 prohibits the use of state funds to plan, build, or operate the high rail operated by a private entity. TxDOT owned roads (including overpasses and underpasses), however, would continue to be maintained by the state. For the mileage of proposed public roads, please see <b>Section 3.11, Transportation</b> , specifically <b>Table 3.11-61: Summary of Transportation Impacts by Build Alternative</b> . Reroutes to existing roads would result in the addition of approximately 16.6 miles to 46.9 miles of public roads. For information about roadway modifications per county, Segment, and Build Alternative, refer to <b>Section 3.11.5, Transportation, Environmental Consequences</b> .
Christie Parker	2/24/2018	Website	More Private Property will be taken by TXDOT for New ROW required for the Road Changes In some cases now taking homes that were not originally taken for the HSR itself. The environmental justice was not properly assessed as one route was eliminated due to economic reasons yet this route had a lower impact on minorities and poor people. Please address how this occurred and violated NEPA. No build is the only option. Thank you	Refer to BA-7 and EJ-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Christie Parker	2/24/2018	Website	In many places an ACCESS Road, 126 miles of it, to become a PUBLIC Road is added alongside the HSR on your property cutting off the "Free Movement of Cattle and Equipment" once promised by Texas Central as a justification for the Viaduct. This is not adequately assessed in the wildlife corridors. This project will completely fragment wildlife and land. This will cause irreparable harm to the environment. Please push forward the no build option as the only plausibly alternative.	Refer to NR-6. This is discussed in <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife would be minimized by locating the Project infrastructure adjacent to existing transportation infrastructure, utility corridors and other development. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1 Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Christie Parker	2/24/2018	Website	Over One Hundred Acre size Construction Sites will be needed for this massive project, located on just about every major East-West travel Corridor from I45, will be a magnet for Workers, Raw Materials, Batch Plants & Concrete Trucks, Equipment, Large Heavy Trucking, Permit Loads, Vendors, & Staging areas. Suburban and Rural communities all along roads in the vicinity of the HSR will be negatively impacted by these construction zones for the entire 240 miles. This will adversely affect all communities and this was not adequately addressed in the DEIS. The NO BUILD OPTION should be chosen	Refer to SC-15 and TR-6.
Christie Parker	2/24/2018	Website	While Montgomery County will not receive a PENNY from any HSR Tax money (nor will Houston or Dallas receive any from ticket sales), they will only see devastation in their roads from all the heavy truck usage. Has the traffic types and volumes moving through our small communities like Montgomery and Plantersville, particularly with the 249 construction and the annual Renaissance Festival been assessed? Where are these impacts in the DEIS? The no build option is the alternative that should be chosen.	Refer to SC-19, TR-1, TR-7 and TR-8. Montgomery County is not part of the project area.
Christie Parker	2/24/2018	Website	The FRA should Cease any Further Premature DEIS progression and show the Public a third party view of Quantified impact on Traffic, Quality of Life, Community issues and Damage to ALL Existing Infrastructure. The third party's report should be allowed to be viewed by the public supporting an open government process. FRA, we CANNOT ALLOW these Quality of Life and Cost impacts to be a BIG Surprise to us once you have given Texas Central a Record of Decision. The FRA should adequately assess and mitigate all of these impacts before we advance any further with this project. The no build option should be pursued.	Refer to NE-1, NE-9, TR-6, TR-7 and TR-8.
Christie Parker	2/24/2018	Website	Other concerns on this project include impacts on Housing, Medical facilities, , Emergency Response Times, and the Negative Impact on Small Rural School ISDs? This has not been properly assessed in the DEIS. There is a great deal of literature on child impacts regarding noise that was not at all addressed in the DEIS despite the numerous schools in the proximity of the school. The DEIS is citing Houston ordinances in which the railroad ROW would be exempted from noise levels. How could the FRA fail to address the children's impacts and noise when the DEIS clearly states that TCR does not have to adhere to loud noises according to City Ordinances. The train itself was only tested at speeds of 125-175 mph which is not even the speed of the train. We know that noise is incrementally louder with increasing speeds yet much of the testing was performed at only 125 mph. The DEIS fails to state the speed of the train for various noise impacts. The discrepancy in sound and lack of accurate data to obtain decibels clearly violates NEPA. Sound measurements were also lacking in their measurements in the various data points as some only measured one hour and others 24 hours. Incomplete data was given for each of these measurements. This is simply inadequate and fails the test for accuracy of a solid noise impact report. Emergency services will be impacted and not adequately assessed as well and any increase in response times as shown in the DEIS is unacceptable. One life lost for this fiasco is one too many. Please re assess how the project could be reconfigured to not allow any impacts in first response times or the no build option should be the only option chosen.	Refer to NV-1 and NV-6.
Christie Parker	2/24/2018	Website	The FRA Must Seriously Reconsider With Hard and Verifiable Facts, not qualified comments, the "NO BUILD ALTERNATIVE". The benefits for a very few select elite business people is significantly outweighed by the Public At Large Loss of Quality of Life, Loss in Property Values, Potential Loss of Lives due to longer ER arrival times, and the Additional Cost Burdens being placed on the Counties and Taxpayers. It is evident that much of the public came to each of the public meetings voicing their concerns and opposition to the project. Very very few people came out in support for the project. I am sure that the public comments are huge in opposition with many facts that prove the DEIS is horribly flawed while there is very few comments in support of the project. With all the huge overwhelming public opposition, the no build option should be chosen. Thank you	Refer to BA-6, BA-8, GN-4, NE-1, NE-9, SS-23 and VA-1.
Christie Parker	2/25/2018	Website	There are only 1.3 million annual airline ridership. There is only 89,060 annual workflow commuters according to Amercian Community Survey 2006-2010 Tract to Tract Data (see links below). So how are you calculating 5 million annual ridership when 100% o the airline traffic and	Refer to BA-6, GN-2 and GN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>workflow commuters in under 1.4 million? Please provide data to justify purpose and need. There clearly is not enough traffic or need for this route. Since this process involves the NEPA process with many negative impacts, the ridership and data must be vetted and substantiated. It is evident that it has not been and therefore the No Build Option should be chosen. Dallas county to Harris county commuters- 65 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Rank County Name Commuter Workers Median WCommute Commuter Residents Median RCommute Your Selected Commuters % Tis County % Slected County 2 Harris County, TX 2,124,746 10.5 1,834,924 9.0 65 0.0% 4.2% n Harris county to Dallas county commuters- 179 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Rank County Name Commuter Workers Median WCommute Commuter Residents Median RCommute Your Selected Commuters % Tis County % Slected County 2 Dallas County, TX 1,418,594 10.0 1,081,215 7.9 179 0.0% 3.3% n Data for this visualization is from US Census American Community Survey (ACS) data combined with Google MAPS API</p>	
Christie Parker	2/25/2018	Website	<p>Per the DEIS section Dallas to Houston HSR EIS - Chapter 3.0 Section 3.14 - Socioeconomic and Community Facilities Additional sales tax revenue would result from the sale of tickets for travel on the new HSR system on an annual basis while it is in operation. As shown in Table 3.14-22, HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue. Local sales tax is assumed to be collected at the point of sale, roughly split between Dallas and Houston jurisdictions.17 Tax revenue for ticket sales would be identical for all Build Alternatives. Please show how the sales tax for the state and local communities could happen based on ridership and state laws. If you actually calculate this correctly you will find a loss of more than 40 million a year in lost taxes. Such glaring errors is completely careless, negligent, incompetent and could be classified as fraud as this is a government document and affects the public and skews the data to cause harm to the public. Who is held accountable for this fraudulent data? AECOM? FRA? TCR? The entire DEIS should be rescinded immediately an the no build option should be pushed forward.</p>	Refer to SC-3.
Christie Parker	2/25/2018	Website	<p>Per the footnote in Dallas to Houston HSR EIS - Chapter 3.0 Section 3.14 - Socioeconomic and Community Facilities Table 3.14-21: Permanent Employment Impacts Note: Employment, earnings and tax estimates do not include potential losses for businesses displaced by the project that are unable to relocate within the study area. Why would AECOM be allowed to put this chart together without accurately assessing and accounting for the loss of jobs? How is this accurate data. The FRA/ AECOM inaccurately coded our business as agricultural and it is in fact a wedding venue with weekly weddings. It uses an 1890's victorian mansion and will be irreparably harmed and will go out of business. This was not adequately assessed and since the FRA and AECOM used outdated and stale maps and data THEY VIOLATED THE NEPA PROCESS. How are you remedying this use of outdated maps that doesn't take the negative impacts into account? If the correct process is not pursued many people will sue the FRA and other entities for supplying false and wrong data. I request that this process immediately be halted and started over with updated data and impacts thus being able to accurately crate a report which will reflect the actual negative impacts .</p>	Refer to GN-1, NE-1 and SC-21. Feedback will be used to reclassify the structure type to commercial and add in additional barn points. <b>Chapter 3.0, Affected Environment and Environmental Consequences</b> of the Final EIS identifies the data collection process and data used for analysis within each environmental resource section. <b>Section 3.1, Introduction</b> identifies the updated data used for the Final EIS.
Christie Parker	2/26/2018	Website	<p>Per the Statewide Ridership Analysis Report Statewide Analysis Model -Version 2.5 (SAM-V2.5) December 2013 "It should be noted however, that the Dallas-Fort Worth to Houston corridor has air service within the corridor at a level of competitiveness far above the other corridors as compared to the assumed passenger rail service. For example, there are approximately 50 flights each way with average fares comparable to the federal mileage rate f or the Dallas-Fort Worth corridor, " The Dallas to Houston route was the 5th route as far as ridership and as you see this is with an airline ticket price of \$130 each way. You have listed airline ticket prices of an average of \$199 throughout the DEIS. This is not true. As most people won't switch from an airplane to a more costly transportation modality the ridership studies will even be less. In order to obtain an accurate clean air report you have to have reliable ridership data. All the data from independent studies reveals very low ridership figures of around 1 million annually. This will greatly impact the emissions and make this a net gain in emissions and will affect the Clean Air Act. The fraudulent data in the DEIS violates NEPA because it is clearly wrong and incorrectly skews the results of this governmental review. Please correct the data and start over so a real analysis can be performed of the route. We need a 90 plus day extension as there are so many errors that violate the NEPA process and the public needs more time to review the incorrect data to ensure that accurate information is being considered in this entire project as it is greatly affecting the environment. No build option should be considered at this time.</p>	Refer to AQ-7, BA-4, BA-6, BA-12, GN-1, GN-2, GN-3, PI-3 and SC-3.
Christie Parker	2/28/2018	Website	<p>Because the FRA did not include FERC in the process of putting together the DEIS they have put the public's lives at risk. Please see the following:                  ATMOS ENERGY IS THE COMPANY THAT MANAGES THE 30" PIPELINE INSTALLED IN 1967 LAYING NORTH TO SOUTH ACROSS A BINFORD TRACT Land in Harris County. IT IS ONLY ABOUT 50 STEPS AWAY FROM THE PROPOSED PLAN FOR HSR TRACKS.                  There is a great deal of research regarding vibrations leading to leaks in pipelines and the FRA/AECOM/TCR have not consulted FERC nor mitigated for this pipeline. Again, due to negligently putting together the DEIS, all the publics lives are at risk. This process must stop immediately. Please see the below news from 2-28-18.                  NORTHWEST DALLAS                  Worried about gas leaks after deadly blast, residents demand answers from Atmos Energy                  A meeting quickly turned contentious Tuesday night when northwest Dallas residents worried about their safety voiced their fears and</p>	Refer to BA-6, EU-1, EU-2, EU-6, GN-1, NV-5, PI-1 and SS-19. The National Transportation Safety Board is an independent Federal agency charged by Congress with investigating aviation accidents and significant accidents in other modes of transportation to determine the probable cause and issue safety recommendations aimed at preventing future accidents. No major transportation accidents have occurred on the Project in preparation of its Environmental Impact Statement; therefore, coordination with NTSB has not been required.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			<p>frustrations to city and Atmos Energy officials.</p> <p>It's still unclear whether the explosion is connected to a gas leak that prompted the evacuation of a nearby apartment complex Sunday, or two house fires on a neighboring street earlier in the week. Dallas Fire-Rescue spokesman Jason Evans said the department couldn't say whether the incidents were connected — that's part of the investigation, he said — but they believe those events were gas-related.</p> <p>Atmos Energy's director of public affairs, Jennifer Altieri, told the neighbors that while she would provide them with as much information as possible, questions about what led to the explosion would have to be answered by the National Transportation Safety Board</p> <p><b>WAS THE NATIONAL TRANSPORTATION SAFETY BOARD INVOLVED IN THE DEIS PROCESS?</b></p> <p><b>THERE IS AN OVERWHELMING AMOUNT OF FATALLY FLAWED DATA ALONG WITH NO COORDINATION OF NUMEROUS ENTITIES THAT SHOULD HAVE BEEN INVOLVED IN THE PROCESS. THE NO BUILD OPTION IS THE ONLY SAFE AND ENVIRONMENTALLY FRIENDLY OPTION THAT SHOULD BE CHOSEN.</b></p>	
Christie Parker	2/28/2018	Website	<p>TCR nor the FRA are implementing a Comprehensive Risk Management System that would Assess the safety of the Proximity of these pipelines to the HSR AND likely should be required of the Pipelines. This is yet another reason that FERC should have been involved in the DEIS. Numerous pipeline experts have noted that FERC should have coordinated this process and the vibrations of the train will impact many pipelines in the DEIS that were not accounted for. There is no doubt in my mind, the way this project has been thrown together and the lack of expertise will result in people dying. PIPELINES DO FAIL!! A Full Assessment needs to be done for every crossing, and that INCLUDES the HSR being built over the Utility Corridor with Two Enterprise Pipelines in Leon County, and one of those is a 30" pipeline. Please see the recent explosion resulting in a fatality. WHO HAS TCR AND THE FRA INVOLVED FOR PIPELINE SAFETY FOR THIS PLANNING PROCESS?</p> <p><a href="https://www.dallasnews.com/news/dallas/2018/02/26/state-regulators-join-feds-investigating-house-explosion-northwest-dallas">https://www.dallasnews.com/news/dallas/2018/02/26/state-regulators-join-feds-investigating-house-explosion-northwest-dallas</a></p> <p><b>THE NO BUILD OPTION IS THE ONLY SAFE OPTION</b></p>	Refer to EU-1, EU-2, NV-5 and SS-19.
Christie Parker	3/1/2018	Website	<p>Why was FERC not involved in the planning of the high speed rail in relation to the attached interstate pipeline. This project is not looking out for public safety. This is extremely dangerous. The DEIS has been negligently thrown together and should be rescinded immediately. No build option should be chosen.</p>	Refer to EU-1, EU-2 and SS-18.
Christie Parker	3/1/2018	Website	<p>Environmental experts have stated that there is no way that Navasota Lady Tresses will not be impacted by the proposed route. Current laws prevent this. The FRA have violated NEPA by not properly assessing this impact. Endangered Species Act Prohibitions Section 9 of the Endangered Species Act prohibits the take of any plant or animal species listed as endangered or threatened. Take, as defined by the Endangered Species Act, means "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect, or to attempt to engage in any such conduct."5 Harm is defined in regulations implementing the Act as "any act that kills or injures the species, including significant habitat modification."6 This protection also includes a prohibition of indirect take, such as destruction of habitat. Additionally, Section 9 prohibits removing, cutting and maliciously damaging or destroying federally listed plants on sites under federal jurisdiction. The Endangered Species Act and accompanying regulations provide the necessary authority and incentive for individual states to establish their own regulatory vehicle for the management and protection of threatened and endangered species. <b>NO BUILD TO PREVENT THE LOSS OF ENDANGERED SPECIES</b></p>	Refer to NR-4.
Christie Parker	3/1/2018	Website	<p><b>MORE VIOLATIONS OF NEPA:</b> Where was the proper assessment by USFWS for the Navasota Lady Tresses? Endangered Species Act Authorization Process for Federal Actions Section 7 of the Endangered Species Act requires that federal agencies consult with the USFWS to ensure that projects they authorize, fund, or carry out would not jeopardize the continued existence of an endangered or threatened species or destroy or adversely modify designated critical habitat.7 In effect, Section 7 provides a means for the USFWS to authorize the take of threatened and endangered species and their habitat by federal agencies. Section 7(a)(2) requires that federal agencies review any action they are authorizing, funding or conducting and determine if the action may affect federally listed and proposed species, or proposed or designated critical habitat. If the protected species are present and are likely to be adversely affected the federal agency must complete a Biological Assessment (BA) that identifies the threatened or endangered species that are likely to be affected by the action and consult with the USFWS. Once formal consultation is concluded, the USFWS then formulates a Biological Opinion (BO) that identifies reasonable and prudent alternatives to the proposed action (if the action may jeopardize the continued existence of a species) or an incidental take statement (if the action would not jeopardize the continued existence of a species). Implementation of the project must comply with the BO. To ensure the avoidance of impacts to endangered species the No Build Option is the only choice.</p>	Refer to NR-2.
Christie Parker	3/1/2018	Website	<p><b>MORE NEPA VIOLATIONS:</b> It has been proven that many birds have been killed by high speed rail. The high speed rail is on the path of the migratory bird species path. None of this has been mitigated for and many migratory birds will be wounded or killed which goes against the Migratory Bird Treaty Act. I have submitted articles and studies proving that deaths are occurring. Many people have also documented migratory bird species along this route. Migratory Bird Treaty Act The Migratory Bird Treaty Act (MBTA) (16 U.S.C. §§ 703-712), is the domestic law that affirms, or implements, the U.S.' commitment to four international conventions (with Canada, Japan, Mexico and Russia) for the protection of a shared migratory bird resource. Each of the conventions protects selected species of birds that occur in more than one</p>	Refer to NR-2.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			of the countries at some point during their annual life cycle. The MBTA protects migratory birds and their nests, eggs, young and parts from possession, sale, purchase, barter, transport, import, export and take. For purposes of the MBTA, take is defined as "to pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to pursue, hunt, shoot, wound, kill, trap, capture, or collect" (50 CFR Â§ 10.12). The MBTA applies to migratory birds identified in regulation. The MBTA protects all birds occurring in the U.S. except for several nonnative species (e.g., house sparrow, European starlings and rock pigeons) and non-migratory upland game birds. The USFWS implements and enforces the MBTA; is the lead federal agency for managing and conserving migratory birds in the United States; regulates the take of migratory birds for educational, scientific and recreational purposes; and requires that harvests be limited to levels that prevent overutilization. Special Purpose Permits issued under 50 CFR Â§ 21.27 are required in the event that an action would take, possess or involve the sale or transport of birds protected by the MBTA. THE NO BUILD SHOULD BE CHOSEN	
Christie Parker	3/1/2018	Website	ANOTHER VIOLATION OF NEPA: Many threatened species habitats such as for bald eagles will be taken. Many bald eagles will be killed. Where is the USFWS in this process? Bald and Golden Eagle Protection Act The Bald and Golden Eagle Protection Act of 1940, and as amended (16 U.S.C. 668-668d), prohibits anyone without a permit issued by USFWS from "taking" bald or golden eagles including their parts, nests or eggs. The Bald and Golden Eagle Protection Act defines "take" to include "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb."9 Regulations implementing the Bald and Golden Eagle Protection Act define "disturb" to mean "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding or sheltering behavior or 3) nest abandonment, by substantially interfering with normal breeding, feeding or sheltering behavior."10 The USFWS has a permitting process for activities which may disturb golden eagles or take an eagle nest where their location poses a risk to human or eagle safety. There are two established permit routes regarding Bald and Golden Eagles, a programmatic take permit and an individual take permit. USFWS defines programmatic take as 'take that (1) is recurring, but not caused solely by indirect effects, and (2) occurs over the long term and/or in a location or locations that cannot be specifically identified.' A programmatic permit covers other take in addition to programmatic take but can be a much longer permitting process compared to individual take permits. An individual take permit would be required for removal of a nest, active or inactive. No build option should be implemented	Refer to NR-3. USFWS is a cooperating agency that we are continuing to coordinate with to determine impacts and appropriate mitigation measures.
Christie Parker	3/1/2018	Website	HUGE SAFETY CONCERNS: Why was FERC not consulted in the planning of these attached pipelines that will be impacted and can result in public fatalities? Why has the FRA not ensured the publics safety? I cannot comprehend how many errors, gaps and outright fraudulent data that is in the DEIS. I cannot trust any organization that had such glaringly wrong data to ensure the safety of the public regarding pipelines and the FRA/AECOM/TCR have decided not to consult FERC in the planning process. THE ONLY SAFE OPTION IS THE NO BUILD ALTERNATIVE	Refer to EU-2, EU-1 and SS-18.
Christie Parker	3/1/2018	Website	ANOTHER SAFETY CONCERN: Why was PHMSA not consulted in the DEIS and the attached pipeline. PHMSA's job is the following: The Office of Pipeline Safety ensures safety in the design, construction, operation, maintenance, and spill response planning of America's 2.6 million miles of natural gas and hazardous liquid transportation pipelines. This Design of the project has already been done regarding the route which is on top of this pipeline. This is unacceptable and negigent that the FRA/AECOM/TCR did not consult them regarding the safety of all the numerous pipelines that will be impacted	Refer to EU-1, EU-2 and SS-18.
Christie Parker	3/3/2018	Website	You did not count this as a road closure in the DEIS. Even if temporary it is still a road closure. Please report accurate information for the public to review in a governmental document. Due to vast amounts of road closures and road reroutes this will affect the safety of the public and the no build should be the only option chosen.	Refer to SS-1, TR-6 and TR-8.
Christie Parker	3/3/2018	Website	Below is a prepared comment that TCR presented their viewers with while throwing them in a drawing for a toy train. This is bribery to get submissions to a governmental document. They also solicited these comments while also sending to Gov. Abbott and Lt. Gov Patrick at the same time. Here is the letter that they bribed people to sign: This is illegal to get people to sign a comment while also bribing them. All of these letters should be thrown out and TCR's practices should be looked into. The letter: "I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!" Please see	Refer to PI-4.

Christie Parker	3/3/2018	Website	<p>Most reports show avg people per car is 1.5-1.8 people per car. So using your 1.2 people per car number you reduce the number of cars actually removed from 45. When you factor in the 200% over statement of VMT removed and factor in the true passenger count per car on 45 you get a Larger NET GAIN of NOx. The FRA/AECOM/TCP have committed fraud on these governmental documents and have violated NEPA. Your report has made false claims in its report that directly impact the Clean Air Act. You have doubled the VMT removed by doubling the mileage and used an incorrect count of people in a vehicle. There will also be a net gain in emissions in the Houston area. YOU HAVE COMMITTED FRAUD WITH YOUR FIGURES. THE NO BUILD IS THE ONLY OPTION THAT SHOULD BE CONSIDERED FOR THIS PROJECT. You can't just correct all these erroneous figures without starting over.</p>	<p>Most state planning at the time of Draft EIS preparation, used 1.25 passengers/car, and the rate used by TCRR was project-specific and similar to this figure. It was only after Texas Transportation Institute (TTI) issued an August 2017 memo regarding updating estimates roadway user delay costs, that a revision of the previous rate to 1.5 based on newer national survey data was recommended. It should be noted that using 1.2 instead of 1.5 increases the number of cars removed from the road because it takes more cars to transport the projected annual passengers. The ridership numbers were verified with TCRR to clarify what they meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate and is summarized in tons per year below for the largest emission alternative (A). This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for same as before, sulfur dioxide. Previous assumption: Trip distance = 478 miles; VMT avoided = 2,552,520,000 miles Revised assumption: Trip distance = 239 miles; VMT avoided = 1,276,260,000 miles For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6.0, SO2=113.6, CO = 38.9, CO2eq = 132,316 CO2eq Metric Tons 120,035 Vehicle Emissions: NOx=81.55, VOC=73.46, PM10=23.98, SO2=1.36, CO=1,401.09, CO2eq=203,250, CO2eq Metric Tons=184,385 Net Emissions: NOx = -38.0, VOC = -68.1, PM10=-17.9, SO2=112.2, CO = -1,362, CO2eq = 70,934, CO2eq Metric Tons = -64,350 For 2040: HSR Operation Emissions: NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96,747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 35.33, VOC = 82.91, PM10 = 46.39, SO2 = 1.88, CO = 1045.2, CO2eq = 278,074, CO2eq Metric Tons = 252,264 Net Emissions: NOx = -18.5, VOC = -78.5, PM10 = -43.3, SO2 = 32.2, CO = -1015, CO2 equivalent = -181,327, CO2eq Metric Tons = -164,497 In addition to this change, sensitivity of the net project emissions to the vehicle occupancy rate was tested by using 1.5 passengers/car instead of 1.2 to recalculate vehicle emissions that would be reduced, using the revised one-way trip assumption and the same other inputs and assumptions used in the Draft EIS calculations. For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6, SO2 = 113.6, CO = 38.9, CO2eq = 132,316, CO2eq Metric Tons = 120,035 Vehicle Emissions: NOx = 101.94, VOC = 91.83, PM10 = 29.97, SO2 = 1.7, CO = 1,751.37, CO2eq = 254,062, CO2eq Metric Tons = 230,481 Net Emissions: NOx = -58.4, VOC = -86.5, PM10 = -23.9, SO2 = 111.9, CO = -1712, CO2eq = -121,746, CO2eq Metric Tons = -110,446 For 2040: HSR Operation Emissions:</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 28.26, VOC = 66.33, PM10 = 37.11, SO2 = 1.51, CO = 836.16, CO2eq = 222,459, CO2eq Metric Tons = 201,811 Net Emissions: NOx = -11.4, VOC = -61.9, PM10 = -34.1, SO2 = 32.5, CO = -806, CO2eq = -125,712, CO2eq Metric Tons = -114,044 The results indicate that there would still be a net reduction of overall operational emissions for all pollutants, except for same as before, sulfur dioxide, with HSR usage. Therefore, the conclusion of no adverse long term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS.
Christie Parker	3/3/2018	Website	There are too many errors in the current DEIS to even comment on. You have given the public 75 days to comment on a fatally flawed 5600 page document that too you almost 4 years to put together. YOU HAVE VIOLATED THE NEPA PROCESS by so many false and fraudulent data pieces put in the DEIS. Please see attachment of the NEPA process. I request the DEIS be rescinded and started over so that the public can actually comment on real data instead of fraudulent data. Until the public is allowed to comment on correct data you have violated NEPA and the no BUILD is the only option without starting over.	Refer to GN-1, PI-1 and PI-3.
Christie Parker	3/3/2018	Website	Please see the attachment. The FRA willingly changed the purpose and need between step 10 and 11 of the NEPA process. This changes everything and the scoping comments during this NEPA process were directly affected by this change. This VIOLATES NEPA without starting over. You cannot change the purpose and need in the middle of a NEPA process. You received public comment based on your purpose and need and then changed it. This is completely unacceptable and is a violation of the NEPA process. The NO BUILD ALTERNATIVE should be pursued or the entire process should start over.	Refer to NE-1, PI-1 and PN-4.
Christie Parker	3/3/2018	Website	Safety of TCR's HSR riders as well as security of the HSR Fencing while on Berms or at Natural Grade Level is of grave concern. I see nothing in the Fence design that indicates it will be "Predator" Fence? Where is this? How has this been mitigated. Additionally, I see nothing that states that at least the 200 miles of the very rural portion of the HSR route will be Visually Inspected on a Daily Basis for holes under the security fencing? Please show where this is outlined. In the event the FRA does not know what "Predator" Fencing is, it is at a minimum a Three-Four foot section of horizontal fencing pinned at the outside edge as well as strongly wired to the bottom of the vertical fencing, preferably on both sides of the security fence. I see no evidence of this in the DEIS. In the event the FRA is not aware of rural wild animal habits, Coyotes are known to exist ALL up and down the route, will easily dig under your fencing if there is no Predator Fencing. After that happens, the Wild Hogs will easily exploit the situation left for them by the Coyotes and will end up on top of the HSR. I would suggest the FRA test the Safety of the HSR and its Riders for at least the collision of a 350#-400# hog while the train is traveling at or near 205 mph. Or, of course the FRA can disregard this potential important Safety Hazard and risk the lives of many riders on the HSR as Wild Hogs and Coyotes will find a way onto the HSR's Tracks one way or other. This subject of Wild Hogs is covered by the DEIS but relies only on the vertical security fencing. This is a safety concern that has not been adequately assessed in the DEIS. Please explain how you will ensure all of the riders safety. The No Build is the only safe option. Thank you.	Refer to SS-2, SS-12 and SS-13.
Christie Parker	3/3/2018	Website	Please show evidence of how these were avoided per regulations. Hardly any of the route was surveyed with boots on the ground surveys. 3.6.5.2.3 Protected Species A total of 14 state-listed threatened species, including two federal Candidate species, may be impacted by each of the Build Alternatives. These impacts could be minimized and/or avoided by deploying qualified biologists to conduct surveys prior to construction and during construction activities within or near protected species and their habitat to ensure implementation and compliance with environmental protection measures. These qualified biologists could also identify these protected species and relocate individuals so direct mortality is avoided. Mitigation measures are described in Section 3.6.6. It is important to note that Texas does not have a permitting mechanism for incidental take of state-listed species. Therefore, avoidance is the only path for ensuring compliance with state laws and regulations. In addition, there would be four federally- and state-listed endangered species that have the potential to occur in the Study Area: Houston toad, interior least tern, Navasota ladies'-tresses and the largefruited sand-verbena. The interior least tern, if present, would be anticipated to frequent the streams and waterbodies within the Study Area, as detailed in Section 3.7, Waters of the U.S., that contain sand flats, sand and gravel bars or beaches. For the remaining three federally listed species, Table 3.6-21 provides acreage of potential impacts to habitat by Build Alternative Segment for each county. For mapped potential habitat of each of the federally listed species, please refer to the Natural Resources Mapbook, Appendix D. Dallas, Ellis, Navarro and Limestone THE ONLY OPTION IS THE NO BUILD OPTION TO PROTECT THESE TREATENED AND ENDANGERED SPECIES	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in <b>Section 3.6, Natural Ecological Systems and Protected Species</b> of the EIS.

Therefore, the No Build Option is recommended to save this species and not detrimentally impact</p>	
Christie Parker	3/4/2018	Website	<p>Please see the following mitigation efforts for nesting sites for Bald Eagles.</p> <p>Nesting Habitat                      The protection of an actual nest is important, but so is protection of the nest area and all the surrounding habitat factors that attracted the nesting pair to the area. Once the eagles establish a suitable breeding territory, they will return to the same area year after year, often using several nests within the territory during different years. When a given nest or the tree that it is in falls, a pair generally returns to the same territory to begin another nest. If one member of a pair dies, the nest may go unused for several years and then be recolonized by the surviving member returning with a new mate. Nesting territories can even be inherited by offspring.                      Therefore, protection of nesting territories should apply to "abandoned" nests for at least five consecutive years of documented nonuse.                      The following habitat management guidelines are based on two management zones surrounding each nest site, with certain restrictions recommended for each zone.</p>	Refer to NR-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Primary Management Zone For Nest Sites                      This zone includes an area extending 750 to 1,500 feet outward in all directions from the nest site. It is recommended that the following activities not occur within this zone:</p> <ol style="list-style-type: none"> <li>1. Habitat alteration or change in land use, such as would result from residential, commercial, or industrial development; construction projects; or mining operations.</li> <li>2. Tree cutting, logging, or removal of trees, either living or dead.</li> <li>3. Use of chemicals labeled as toxic to fish and wildlife.</li> <li>4. Placement of above-ground electrical transmission or distribution lines. Since collision with powerlines and electrocution on powerline structures remain an important cause of death, placement of underground lines is recommended near Bald Eagle nests and winter concentration sites.</li> <li>5. Helicopter or fixed-wing aircraft operation within 500 feet vertical distance or 1,000 feet horizontal distance of the nest site during the nesting season (October-July).</li> <li>6. Activities which create minimal disturbance, such as hiking, fishing, camping, and bird-watching can be carried out safely during the nonnesting season if there is no physical alteration of the habitat within the zone. Traditional farming, ranching, and hunting activities which are existing practices and have occurred historically on the site can be carried out safely during the non-nesting season as long as habitat alteration is avoided.</li> </ol> <p>Secondary Management Zone                      For Nest Sites This zone encompasses an area extending outward from the primary zone an additional 750 feet to 1 mile. Recommended restrictions in this zone are intended to protect the integrity of the primary zone and to protect important feeding areas, including the eagle's access to these areas. The following activities are likely to be detrimental to Bald Eagles at any time, and in most cases should be avoided within the secondary zone:</p> <ol style="list-style-type: none"> <li>1. Development of new commercial or industrial sites.</li> <li>2. Construction of multi-story buildings or high-density housing developments between the nest and the eagle's feeding area.</li> <li>3. Placement of electrical transmission or distribution lines between the nest site and the eagle's feeding area.</li> <li>4. Construction of new roads, trails, canals, or rights-of-way which would tend to facilitate human access to the eagle nest.</li> <li>5. Use of chemicals labeled as toxic to wildlife. Certain activities that involve only minimal alteration or disturbance to the habitat can be carried out safely in the secondary zone during the non-nesting season. Examples of these activities include: minor logging or land clearing, minor construction, seismographic exploration employing explosives, oil well drilling, and low-level aircraft operation. However, these activities should avoid major alteration or loss of Bald Eagle habitat as much as possible.</li> </ol> <p>Nesting sites have been noted within 1500 ft. of the train alignment and its construction. There must be a full boots on the grounds assessment for up to a mile outside of the train and construction sites along the entire 239 mile route to ensure NEPA is not being violated. No build is the only safe option to prevent death of these nests and species.</p>	
Christie Parker	3/4/2018	Website	<p>Peregrine Falcon                      Scientific Name: Falco peregrinus                      Federal Status and State Status: the American Peregrine Falcon (Falco peregrinus anatum) is endangered and the Arctic Peregrine Falcon (Falco peregrinus tundrius) is threatened. Both of these subspecies occur in Texas.                      Katy Prairie Conserv.--Warren Ranch Lake area (UTC 099), Harris County, Texas, US ( Map ) (Hotspot )                      Date and Effort Sat Aug 13, 2011 3:15 AM : Nocturnal                      Protocol:Stationary                      Party Size:2                      Duration:4 hour(s), 30 minute(s)                      Observers:Drew Dickert                      Peregrine Falcon                      Peregrine falcon (back to partial side view) perched on top of dead snag on tree at south edge of lake (may have been there all night), I noticed it at dawn silhouetted against the foggy dusky sky (definitely right size and shape - stocky, thick-breasted, with long pointed wings that reached the end of the narrow tail), I was waiting for the light to increase and my scope to quit fogging, I was able to barely discern a white cheek patch as it preened, it then abruptly flew down behind the tree line at about 6:50 am (darting flight and pointed wings noted), this is apparently the same bird I failed to ID over 2 weeks ago that I later saw was photographed by Mark Kulstad earlier that day.                      Katy Prairie Conserv.--Warren Ranch Lake area (UTC 099), Harris County, Texas, US ( Map ) ( Hotspot )</p>	<p>Refer to NR-2.                      Both subspecies of Falcon were noted in <b>Table 3.6-8, LFSV Habitat by Segment</b> as having a potential to occur within the project area.</p>

Christie Parker	3/5/2018	Oral	<p>Good evening. My name is Christie Parker. I want to quickly point out some very disturbing errors with the DEIS report compiled by TCRR_ AECOM and the FRA _First, this document and TCRR in their videos are reporting up to 39 billion in state sales tax revenue based on ticket sales that will be generated They go on to state that the train will generate 12 billion in mobile sales tax from the ticket sales. They then report in Table 3 _ 14-22 that there will be 68 million in net impact from taxes: sales tax on ticket sales. Unfortunately: this information is incoffect_ They have inappropriately put sales tax on both HSR and airline tickets. Looking at state tax laws, there is no state or local tax on transportation. You can simply refer to bus, train or airline tickets or the actual tax code to see that they have easily that they have really messed up these figures. Their own insight research report with their secret ridership members also mentions the sales tax from ticket sales. This is a huge error that isn't the only one in this chart They failed to capture the federal tax impact for airline tickets which includes a 7 _ 5 percent federal excise tax Imposed only on airline tickets and this would result in a loss of more than 28 million a year in federal tax Reviewing their chart with their huge errors, we can all see that instead of generating 68 million annually in taxes: it will actually result in a loss of 47 million annually to the taxpayers. This is unacceptable. That is more than 100 million annual flip and will result in billions of a loss of tax revenue as a result of the traim To put this all into perspective: the City of Houston will not receive 10 to 12 million in sales tax on ticket sales: as is being claimed by Mayor Turner: and the City ofDa11as will not receive 10 million in sales tax revenue annually as well. The State will not get their potential 39 billion and the local areas will not receive their potential 12 billion. They lwill suffer a loss instead. Second: the DEIS report has doubled the emission data of vehicles. Even the unrealistic ridership members: Houston will have a net gain in emissions due to this project. With accurate ridership data: it is estimated by other studies and accurate passenger counts in vehicles on 1-45 there lwill be a net in emissions overall This is a particular concem as this has been proposed to be a green project. Surely: the EPA: following the Clean Air Act, ivill not want to fall backwards on progress m improved air quality we have achieved over the past few decades due to inaccurate and false data in this report. Finally: I would like to talk about the serious safety concerns with the project. TCRR and the FRA have not included first responders and law enforcement and any claim of the DEIS Many roads will be rerouted and closed according to the DEIS_ There will be a significant delay in the public receiving medical attention in health in life-and-death situations when minutes mean everything. I can speak firsthand as a critical care nurse Mith more than 1 5 years' experience to the detrimental effects of delays of medical treatment adjustments. I have seen people die and people remain m vegetative states due to delay in medical treatment. This is very serious: folks: and no one should</p>	Refer to AQ-13, BA-3, GN-2, PI-1, PI-8, PN-3, SC-3, SC-16, SC-17, SS-18, SS-23 and TR-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			die because of the train and the hundreds of relocations: reroutes and closures that will occur. The credibility of the DEIS: along with the TCP Secret Ridership Report: is in question: along with the purpose and need: which has changed since the scopmg report in the middle of a NEPA process. The no build is the only option that should be considered. Thank you.	
Christie Parker	3/7/2018	Website	These figures are incorrect and further analysis needs to be done. Our wedding venue for one will be closed so there would be negative impacts. Would the Project result in adverse impacts to the resource? Is the subject a scarce resource or in poor or declining health? To prevent adverse impacts the No build is recommended.	Refer to AS-1 and VA-4.
Christie Parker	3/7/2018	Website	Please see the following in the DEIS and explain in detail the Economic component. Please include the ridership details with analysis as this contradicts 5 other studies. Please prove the Operational time frames of under 90 mins when you have not done an adequate analysis since the road laws were not looked at and all of the county roads will not be rerouted or crossed underneath. So please start over with these figures after a proper analysis is done since all of the construction details will have to be changed. Please show that you have done all possible to get in touch with all stakeholders who were unable to comment on the environmental impacts. Otherwise your key goals and objectives have not been achieved or thoroughly worked through. The following are the key goals and objectives of the Project that underpinned the development of the DCE and the BOD, and that support the Project Purpose and Need of the Project: Economic: Achieve a favorable return on investment when weighing expected ridership and revenue against estimated project capital investments, real estate requirements, project delivery schedule, and long-term operations and maintenance expenses. Technological: Deploy a state-of-the-art HSR system for service based upon the Tokaido Shinkansen. TCRR would adapt the rolling stock, systems, and operating and maintenance procedures as required to comply with applicable regulatory, environmental, and operational conditions of the Project corridor. Operational: Achieve a travel time of 90 minutes or less between Dallas and Houston. Environmental: Minimize impacts to the natural and built environment along the corridor and at stations through context-sensitive design, adjacency to existing infrastructure ROW, and stakeholder coordination as appropriate.	Refer to BA-5, BA-6, BA-8, GN-3, NE-1, NE-9, PN-3, PN-4 and SC-22.
Christie Parker	3/7/2018	Website	Please explain the difference in ridership numbers in the DEIS. This 2026 estimate will change all of the emission figures. There definitely needs to be an accurate and independent study to confirm that we will not have a positive overall emission impact which would violate the Clean Air Act. This has to be vetted and the figures below along with doubling emissions prove that the DEIS is not handling this risk assessment responsibly and efficiently. 6.4.1 Ridership Forecasts and Passenger Profiles As estimated by the proprietary market demand study undertaken by TCRR, the build year forecast for HSR ridership in 2026 is 4.4 million passengers per year. The long-term forecast for HSR ridership in the 2040 analysis year is 7.2 million passengers per year.	Refer to AQ-3.
Christie Parker	3/7/2018	Website	Please see the following footnote. Since routes were eliminated according to this criteria and during the NEPA process including corridors with lower EJ impacts, the entire process needs to start over with all routes with none eliminated based on economic viability. 3 An initial version of the Project Purpose included economic viability. As the Project developed and through coordination with cooperating agencies, FRA determined that economic viability is an objective of TCRR, not a component of the Project Purpose.	Refer to PN-4.
Christie Parker	3/7/2018	Website	Since Texas Central and the engineers did not use current state laws and the entire project will have to be reevaluated and redrawn, the project must start over with correct data to review. Otherwise, the purpose and need cannot be supported without accurate data and plans. Please review all state laws before proceeding. The public needs to be able to make comment on accurate data and plans. No build until this process can be started over and evaluated by the public with their input. As part of the project development process, TCRR developed the conceptual engineering to support the Project Purpose and Need. This conceptual engineering (included as Appendix F, TCRR Conceptual Engineering Design Report and Appendix G, TCRR Conceptual Engineering Plans and Details) completed as of September 15, 2017 is the basis for the evaluation included in this document	Refer to GN-1, NE-1, NE-9 and PN-3.
Christie Parker	3/7/2018	Website	Again the Purpose and Need was changed in the middle of a NEPA process, therefore the process needs to start over before proceeding with the new purpose and need. Otherwise the NEPA process was not followed but instead violated. See below: The first part, the Coarse Screening Analysis evaluated if the corridor alternatives met the Project Purpose and Need, as required by NEPA. FRA conducted a pass/fail analysis and determined that an alternative "failed" if it did not meet Purpose and Need or "passed" if it did. FRA carried all potential corridor alternatives and other potential transportation alternatives that "passed" into the second part, the Fine Screening Analysis.	Refer to BA-8, PN-3 and PN-4.
Christie Parker	3/7/2018	Website	In line with the following Purpose and Need per the DEIS : "Direct bus service or expanding IH-45 may temporarily relieve congestion on IH-45, meeting the transportation need of the Project. However, these alternatives rely on vehicular travel as the primary means of transportation between the Dallas and Houston metropolitan regions and would not offer a long-term alternative to travel on IH-45 and they would not offer a one-way trip in 90 minutes or less. Additionally, these other potential transportation alternatives would not provide passenger rail service, as per TCRR's objectives for the Project. Therefore, FRA eliminated these alternatives from further consideration based on failure under the Purpose and Need criterion." PLEASE PROVE THE ONE WAY TRIP IN 90 MINUTES OR LESS WITH THE NEW ROAD ALIGNMENTS AND VIADUCT STRUCTURES. THE DEIS CURRENTLY HAS THE TRAIN TRAVELING AN AVERAGE OF 166.93 MPH TO MAKE THEIR TIMES BUT JAPAN SKINKANSEN	Refer to BA-4, PN-3 and TC-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			IS TRAVELING AT AN AVERAGE OF 163 MPH. SO PLEASE REEVALUATE WITH CORRECT PLANS AND ROAD STRUCTURES. NO BUILD IS THE ONLY OPTION UNTIL DATA IS CORRECTED IN THE DEIS AND THE PUBLIC IS ALLOWED TO COMMENT ON CORRECT DATA.	
Christie Parker	3/7/2018	Website	<p>I want to quickly point out some very disturbing errors with this DEIS report compiled by TCR,AECOM, and the FRA. First, this document and TCR in their videos are reporting up to 39 billion in state sales tax revenue based on ticket sales will be generated. They go on to state that the train will generate 12 billion in local sales tax from ticket sales. They then report in Table 3.14-22 the following: Unfortunately this information is incorrect. They have inappropriately put sales tax on both HSR and Airline tickets. Looking at State Tax Laws there is no state or local tax on transportation. You can simply refer to bus, train, and airline tickets or the actual tax code to see that they have really messed up these figures. Their own Insight Research Report with their secret ridership numbers also mentioned the sales tax from ticket sales. This is a huge error but isn't the only one in this chart. They failed to capture the federal tax impact for airline tickets which is a 7.5% federal excise tax imposed only on airline tickets and this would result in a loss of \$28,357,500 a year in federal tax revenue. Reviewing their chart with these huge errors we can all see that instead of generating \$68 million annually in taxes it will actually result in a loss of \$47 million annually to the taxpayers. That is more than a 100 million annual flip and will result in billions in loss of tax revenue as a result of the train. This is just one error we were able to find in this massive document in the very short time frame the public has been allowed to review the DEIS. To put this all into perspective, City of Houston will NOT receive 10-12 million in sales tax on ticket sales as is being claimed by Mayor Turner and City of Dallas will NOT receive 10 million in sales tax revenue annually as well. The state will not get their potential 39 billion and the local areas will not receive their potential 12 billion. They will suffer a loss instead. Second, The DEIS report has doubled the Emission Data from vehicles. Even with the unrealistic ridership numbers, Houston will have a net gain in emissions due to this project. With accurate ridership data as estimated by other studies, there will be a net gain in emissions overall. This is of particular concern as this has been proposed to be a "green" project. Surely the EPA following the Clean Air Act will not want to fall backwards on progress and improved air quality we have achieved over the past few decades due to inaccurate and false data in this report. Third, the ridership numbers provided are flat out wrong and not substantiated by actual data. Looking at AADT station data north of Fairfield, there will be no way that TCR will be able to obtain the ridership numbers they have proposed. Other studies including Tx Dots multimillion dollar study only shows ridership figures of 0.7-2.7 million and the Reason report has only estimated 1.4 million annual ridership. This is extremely concerning as this will lead to not only a detrimental negative impact on the environment but since they are seeking federal taxpayer backed loans will also affect each of our back pockets. Currently there is only 1.3 million annual airline ridership for this route. There is only 89,060 annual workflow commuters according to Amercian Community Survey 2006-2010 Tract to Tract Data (see links below). So how are you calculating 5 million annual ridership when 100% of the airline traffic and workflow commuters in under 1.4 million? Please provide data to justify purpose and need. There clearly is not enough traffic or need for this route. Since this project involves the NEPA process and will lead to many negative impacts, the ridership and data must be vetted and substantiated. Dallas county to Harris county commuters- 65 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Harris county to Dallas county commuters- 179 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a>. Using the 16% market share TCRR has in their footnote will leave us at 1,672,954 1,900,000 (airfare estimated by TCRR) = 3,572,954 with the really high market share of TCRR in 2035 Using All Aboard Florida's ridership of 7.2% it would be 752,829.566 1,900,000 = 2,652,829 in 2035 Work shown below: Traffic count per AADT - 54,490 36,726.26 after truck traffic removed (.674) per AADT 23,872.069 after local traffic and through traffic removed (.65) Per TxDot 1.2 average passenger count per DEIS= 28,646.48 annual commuters by Tx Dot=10,455,966.2 market share by tcrr of 16%= 1,672,954 Estimated airline ridership per TCRR=1,900,000 Total estimated ridership using Tx Dot data and TCR data= 3,572,954 in 2035 13 According to TCRR's 2043 ridership forecast, HSR would account for 21 percent of the traveling public market share between Dallas and Houston. This HSR market share would derive from a 16 percent decrease in vehicular traffic market share and a 6 percent decrease in air travel market share (numbers rounded). Using All Aboard Florida's ridership of 7.2% it would be 752,829.566 1,900,000 = 2,652,829 in 2035 There is a great amount of data I am not able to cover but I wanted to part with a few quotes from our now Mayor regarding this project. These quotes can be found in the scoping report on 8/1/2015.., property values would decline, and in these very neighborhoods where homes are being built and neighborhoods revitalized, the progress may very well be halted. Already, some prospective homeowners are delaying their decisions to purchase property in the area uncertain of the route that the high speed train may take. Sylvester Turner Economic Impact/Property Values Furthermore, the safety of families in these dense urban areas would be compromised... . Sylvester Turner Safety and Security The credibility of the DEIS is in question along with the Purpose and Need which has changed since the Scoping Report. The No Build is the only option that should be considered. Thank you.</p>	Refer to AQ-3, AQ-13, SC-3, SC-16, SS-12, SS-13 and VA-1.
Christie Parker	3/8/2018	Website	<p>Since outdated floodplain information was used in the data compiled in the DEIS, this violates NEPA without a thorough and up to date assessment. Numerous pictures have been submitted to the FRA showing that an inadequate assessment has been done and violates Executive 11988. Please rescind the DEIS and provide an updated accurate analysis of the Harris County parcels that will have the train tranverse them. Executive Order 11988: Floodplain Management This page is about Executive Order 11988: Floodplain Management.</p>	Refer to GN-1 and FP-1.

			Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative.	
Christie Parker	3/8/2018	Website	Since outdated floodplain information was used in the data compiled in the DEIS, this violates NEPA without a thorough and up to date assessment. Numerous pictures have been submitted to the FRA showing that an inadequate assessment has been done and violates Executive 11988. Please rescind the DEIS and provide an updated accurate analysis of the Harris County parcels that will have the train tranverse them. Executive Order 11988: Floodplain Management This page is about Executive Order 11988: Floodplain Management. Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative.	Refer to GN-1 and FP-1.
Christie Parker	3/8/2018	Website	The DEIS is chalked full of outdated and stale information. Here is yet another picture attached that doesn't count a house that will be impacted by this project. How can an accurate assessment be made regarding impacts including noise impacts as required by NEPA if incorrect and inaccurate data was used in the DEIS for the public to comment on. The entire process is fatally flawed and the DEIS should be rescinded. The no build is the only option that should be implemented at this time.	Refer to GN-1 and NE-1.
Christie Parker	3/8/2018	Website	Please do an accurate assessment considering flooding impacts over the past 2 years. Not doing a full assessment with recent flooding events is therefore not providing pertinent data in the NEPA process to truly address flooding and drainage. Please see pictures of the property where the bullet train will travel both on viaduct and berm. There was so much flooding that we have pictures of fish all up and down the road where they were washed out of the lakes. Without proper analysis the DEIS should be rescinded and all areas should be adequately studied. Thank you.	Refer to FP-1, SS-16 and SS-17.
Christie Parker	3/8/2018	Website	The current DEIS is flawed in their stagnant data regarding flooding as it is using old outdated information and nothing in regards to the recent flooding issues over the past two years which were detrimental to the public. By ignoring this data, the FRA violated NEPA by omitting relevant data regarding flooding and drainage. On our property alone where the bullet train will travel on both a viaduct and berm, no flooding impacts have been assessed by the FRA. The FRA was negligent in their data collection and in order to provide a proper analysis of these concerns, the FRA should immediately rescind the DEIS and study these impacts. Otherwise the DEIS is so flawed in their collection of data that the public should not have to comment on such a process that has ommitted such a vast amount of data. Please see the attached pictures that show flooding on the property where the bullet train is proposed to travel. Where is this data in the DEIS. Due to increased flooding projected in the area, the no build is the only reasonable option to protect the public. Thank you.	Refer to FP-1 and SS-17.

Christie Parker	3/8/2018	Website	No confirmations of comments via email in the past 15 mins. What is happening with FRA comment submissions? The public comment process is again not working properly.	For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com) or sending a letter to FRA.
Christie Parker	3/8/2018	Website	Why is Madison county using Navarro counties Fema mitigation plan in the DEIS. This is a violation of the NEPA process. "Madison County Hazard Mitigation Plan Update, Mitigating Risk: Protecting Madison County from All Hazards, 2013 – 2018 The Navarro County Hazard Mitigation Plan uses FEMA's multi-hazards model to identify and rank hazards based on the potential for damages" Dallas to Houston HSR EIS – Chapter 3.0 Section 3.16 – Safety and Security 3.16-3 The DEIS has missed many opportunities to work with the right entities to ensure a safe and efficient study, therefore the entire report should be rescinded and started over.	The requirements of the Madison County Hazard Mitigation Plan are documented in <b>Section 3.16.2, Safety and Security, Regulatory Context</b> . This typographical error has been updated in the Final EIS.

Christie Parker	3/8/2018	Website	Following the current NEPA process the following must occur during the planning process: Under the CAA, FEMA is responsible for (a) ensuring state and local policies are followed for debris burning, equipment exhaust, and construction dust; and (b) considering possible new traffic patterns. FEMA must ensure State and local policies are followed regarding: Debris burning Equipment exhaust Construction dust Also, FEMA must consider the potential for any proposed action to change traffic patterns to cause increased vehicle emissions in the project area. This has not occurred as FEMA has not provided input in this DEIS. How is the public able to make comments when FEMA was not involved nor any of their input considered? The entire DEIS should be rescinded.	The lead Federal Agency for this project is FRA, not FEMA. Therefore, the suggested oversight in this comment by FEMA is not warranted. As detailed in Chapter 9, local jurisdictions would be coordinated with by TCRR for appropriate FEMA-related permits.
Christie Parker	3/8/2018	Website	This process was not enacted and followed in the DEIS as recent flooding was not taken into account in any of the planning regarding EO 11988. Since the information is fatally flawed in the DEIS, adequate public comment on actual data is not being considered in this process. The entire DEIS should be rescinded. Description and Intent Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. In accomplishing this objective, "each agency shall provide leadership and shall take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health, and welfare, and to restore and preserve the natural and beneficial values served by flood plains in carrying out its responsibilities" for the following actions: acquiring, managing, and disposing of federal lands and facilities; providing federally undertaken, financed, or assisted construction and improvements; conducting federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing activities. This section is Expanded. Click to Collapse Summary of Requirements The guidelines address an eight-step process that agencies should carry out as part of their decision-making on projects that have potential impacts to or within the floodplain. The eight steps, which are summarized below, reflect the decision-making process required in Section 2(a) of the Order. 1. Determine if a proposed action is in the base floodplain (that area which has a one percent or greater chance of flooding in any given year). 2. Conduct early public review, including public notice. 3. Identify and evaluate practicable alternatives to locating in the base floodplain, including alternative sites outside of the floodplain. 4. Identify impacts of the proposed action. 5. If impacts cannot be avoided, develop measures to minimize the impacts and restore and preserve the floodplain, as appropriate. 6. Reevaluate alternatives. 7. Present the findings and a public explanation. 8. Implement the action. Among a number of things, the Interagency Task Force on Floodplain Management clarified the EO with respect to development in flood plains, emphasizing the requirement for agencies to select alternative sites for projects outside the flood plains, if practicable, and to develop measures to mitigate unavoidable impacts.	Refer to FP-1, FP-4, GN-4, NE-1, PI-1 and SS-17. The eight-step guideline process was followed for this Project. Executive Order 13690 also expands the management regulations to include identifying a higher vertical elevation and corresponding the horizontal base flood elevation to address current and future flood risk as discussed in <b>Section 3.8.2, Floodplain, Regulatory Context.</b>
Christie Parker	3/8/2018	Website	Our 1890's wedding venue that is right next to the train is eligible for NHPA and this was not considered in the DEIS report and is not even labeled as a business. It was built in the 1890's and will be closed down if the project occurs. We will suffer severe harm and loss of employment to many. This again has not been considered in the DEIS. We will never be able to go and purchase another 1890's house for a wedding venue on another piece of property within the City limits. This will cause irreparable harm to us and this was NOT taken into account in regards to negative impacts of this project. The NO BUILD is the only reasonable offer to prevent harm to this historic venue. "One important component of the National Historic Preservation Act (NHPA) directs federal agencies to take into account the effect of any undertaking (a federally funded or assisted project) on historic properties. "Historic property" is any district, building, structure, site, or object that is eligible for listing in the National Register of Historic Places because the property is significant at the national, state, or local level in American history, architecture, archeology, engineering, or culture. Typically, a historic property must be at least 50 years old and retain integrity."	Refer to CR-13.
Christie Parker	3/8/2018	Website	According to sections listed below the FRA has an obligation to vet the presumed financial aspects of the applicant. "Section 1501.6. Section 1501.7 on "scoping" also provides that all affected Federal agencies are to be invited to participate in scoping the environmental issues and to identify the various environmental review and consultation requirements that may apply to the proposed action. Further, Section 1502.25(b) requires that the draft EIS list all the federal permits, licenses and other entitlements that are needed to implement the proposal. These provisions create an affirmative obligation on federal agencies to inquire early, and to the maximum degree possible, to ascertain whether an applicant is or will be seeking other federal assistance or approval, or whether the applicant is waiting until a proposal has been substantially developed before requesting federal aid or approval" Since the FRA and Kevin Wright knows that TCR will be seeking federal funding additional economic studies and requirements will be necessary during this NEPA process. The FRA should have already ascertained this to be the case and Kevin Wright has told people that they will be seeking federal funding. He stated that they wanted to get through this environmental process before asking for federal funds to skip necessary steps in the NEPA process. If the FRA knows that they will seek federal funding the entire process needs to be completed including necessary economic studies. Otherwise this violates NEPA and provides the groundwork for litigation. It is the responsibility of the FRA to assess the likelihood of an entity seeking federal dollars and to take the appropriate steps in the NEPA process with this information. The DEIS should be rescinded and started over. Thank you.	Refer to GN-4 and NE-1.
Christie Parker	3/9/2018	Website	To whom it may concern, which is kind of a ironic statement because obviously you people in office with some power don't concern yourselves with the ordinary folks. This project is going to be a disaster and a huge tax payer burden. If you look at California's high speed rail	Refer to NE-1.

			you will get the jest of it. Theres was voted in by a narrow margin and is so much over budget they can't afford to abandon the project now. This will be true for us too because sooner or later this so called "private" money will run out and not enough people are going to ride it so we the tax payers will have to pick up the tab. It's going to cause trouble for the local residents in these rural counties with access to their lands and access to local roadways. So you did an environmental impact study, why don'tl you do a real area resident impact study. I for one think I and my family are more important than the flora and animals, but you private money people and politicians don't care about the people. The truth of the matter someone's going to benefit off this project and it won't be the locals. By the time this project is completed the equipment to run, maintain and even the trains themselves are going to be outdated and then there goes the budget because everything will have to be upgraded. We are just a bunch of local yocals that love our families, our lands, and animals. We are God fearing and every year live on faith praying we get enough rain to harvest our crops. We get excited cause hay season is upon us now and the highlight of our week is going to the feed store and grocery shopping. We love our neighbors which for most live way down the road, but we are just a drive or phone call away. Our way of life may be simple and unimportant to you, but you will see what a force we can make when we continue to fight you on this. I live in Grimes county, my property is in the alternate path, but either way we all are going to be impacted. Residents of Grimes County fight on!	
Christie Parker	3/9/2018	Website	To whom it may concern, which is kind of a ironic statement because obviously you people in office with some power don't concern yourselves with the ordinary folks. This project is going to be a disaster and a huge tax payer burden. If you look at California's high speed rail you will get the jest of it. Theres was voted in by a narrow margin and is so much over budget they can't afford to abandon the project now. This will be true for us too because sooner or later this so called "private" money will run out and not enough people are going to ride it so we the tax payers will have to pick up the tab. Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement The public meetings did not allow for adequate public involvement. The Madisonville meeting was moved because AECOM never adequately booked the first place and the final forum didn't have enough room and people were not allowed to enter and were turned away. The same thing happened at Harris County forum where people were not allowed to enter and had to stand outside or were turned away. Many left because there was no parking. This violated the NEPA process. Texas Central reps were allowed to stay in these meetings while the public could not enter. We need more time to view the DEIS as many violations have already occurred in regards to public comment and participation. There was overwhelming opposition to the project. No build option should be chosen.	Refer to PI-3 and PI-11.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Wildlife fragmentation will be significant <a href="http://www.iene.info/wp-content/uploads/COST341_final_report.pdf">http://www.iene.info/wp-content/uploads/COST341_final_report.pdf</a> Either build next to an existing ROAD or choose the no build option to prevent disruption of livestock and wildlife.	Refer to NR-6. This is discussed in <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife would be minimized by locating the Project infrastructure adjacent to existing transportation infrastructure, utility corridors and other development. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting and Section 3.6.6.2 Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation, Mitigation Measures</b> .
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement "Economic: achieve a favorable return on investment when weighing expectedridership and revenue against estimated project capital investments, project delivery schedule, and long-term operations and maintenance expenses. Technological: bullet train vehicle and operating procedures based on the N700-I, the international version of the	Refer to BA-10, NE-1 and PN-4.

			Tokaido Shinkansen. Operational: approximate 90 minute travel time between Dallas and Houston, with achievable speeds exceeding 200 mph in a fully sealed corridor. Environmental: minimal impacts to the natural and built environments through context sensitive design and adjacency to existing infrastructure rightofway (ROW) as appropriate." So why did the FRA eliminate the economic feasibility step from the Step 1 that was presented to the public. AAF and Oklahoma/Tx both had economic feasibility. The process should start over if you have changed the purpose of the project. No build option should be the only option until the process starts over from scratch since the variables have changed and build options were removed because of the economic component. Removing the economic component should have those options put back on the table. Otherwise the FRA is circumventing the process. Why was it removed?	
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement "Per the FRA's Report, the "FRA is obligated to avoid and minimize impacts to the human and natural environment." Additionally, the FRA must carry forward potential corridor alternatives that meet the Project's purpose and need, which includes the requirement that the project be "economically viable." As such, the various elements of the project's construction, including those directly impacting overall cost and the Project's impact on the human and natural environment must be considered at this and future stages of the EIS." "While the BNSF Option 1 alignment was initially found to be the early leader in the evaluation with respect to these issues, risk mitigation and indemnification requirements identified by the freight railroads later indicated that an alignment that closely follows the existing BNSF freight line over a significant length would prove unreasonable and financially unviable." So since the FRA has eliminated routes specifically due to this economic component and then removed the economic variable the entire process should begin again and put back the BNSF option as it was very feasible but eliminated due to a step that was removed by the FRA. This is completely unacceptable and very unethical if this doesn't revert back to the beginning stage. It is simple, since the economic step was removed the FRA needs to start over. There is no other option except the no build option.	Refer to BA-6, BA-8, BA-10, NE-1 and PN-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Dallas to Houston High-Speed Rail Project Corridor Alternatives Analysis Technical Report August 10, 2015 "As defined by TCR, the purpose of the privately proposed Project is to provide reliable, safe and economically viable passenger rail transportation using proven high-speed rail technology between Dallas and Houston. It would provide a convenient and competitive alternative to automobile travel on Interstate 45 (I-45) or air travel between the two major metropolitan areas and introduce rail capacity in the vicinity of the corridor. To achieve TCR's economic viability and safety requirements, the Project must meet the following technical requirements: · Technological: bullet train vehicle and operating procedures based on the N700 Tokaido Shinkansen · Operational: approximate 90 minute travel time between Dallas and Houston, with achievable speeds exceeding 200 miles per hour (mph) in a fully sealed corridor · Environmental: minimal impacts to the natural and built environments by maximizing adjacency to existing infrastructure right-of-way" p 4 (this is where they dropped the economic bullet point) BUT: "FRA eliminated a potential corridor alternative or other potential transportation alternative if it failed to meet Project purpose and need. FRA carried forward into the fine screening analysis only those potential corridor alternatives or other potential transportation alternatives that meet Project purpose and need, as defined below. · Purpose and Need: supports the purpose to provide economically viable high-speed (200 mph) safe and compliant passenger rail service competitive with air travel (90 minute travel time from terminal to terminal) using the N700-I Tokaido Shinkansen in a fully sealed and grade-separated corridor" p 9 The cost of an approximately 240-mile barrier wall exceeds TCR's purpose in that the Project would not be economically viable. P 13 Because it was deemed economically infeasible by the Proponent, FRA eliminated the I-45 Greenfield Corridor from further consideration. FRA also determined that the I-45 Greenfield Corridor fails under the Physical Characteristics, Operational Feasibility, and Environmental Constraints screening criteria. P 14 In order to proceed with the project it needs to be economically viable per FRA's and TCR's own analysis. So until the economic viability details are released the No build option should be chosen as potential corridors were eliminated for a process that was omitted in the DEIS.	Refer to BA-9, NE-1 and PN-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Another claim of TC of the DEIS is 1576 jobs . Well in the DEIS is also states displacements of businesses along the route. That number is 1051 people. Some business' will not be able to reopen due to being grandfathered with the county/city or TCEQ. They also didn't include our wedding business that will be shut down and you can't just reopen an 1890's victorian mansion wedding venue just anywhere. Where are these loss of jobs factored in. Why did the DEIS not address this at all. The DEIS is using very outdated maps and data and it it should be an embarrassment that the FRA and AECOM is associated with this extremely flawed data. All of your figures are incorrect until you factor in loss of jobs and this entire section should be thrown out and redone. Rescind the DEIS or choose the No Build Option.	Refer to GN-1, SC-21 and VA-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement TC claims the 199 is false but at the same time claim, the 81,500,000 million gallons saved per year. Please review the faulty data regarding VMT in the DEIS. Total vehicles mile traveled (VMT) FRA/AECOM,TCR claim is 200% overstated. Which in turn makes the gallons saved per year a 200% OERSTATEMENT. You need to correct and let's recalculate routes and benefits. Total VMT removed in the DFW NAA is 200% overstated. You need to correct and let's recalculate routes and benefits. Total VMT removed for Harris NAA is 300% overstated. You need to correct and let's recalculate routes and benefits. Which in turns the net	Refer to AQ-3, GN-2 and SC-19. TCRR was consulted to verify if passenger ridership numbers were associated with one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the vehicle miles traveled (VMT) avoided for the Final EIS were revised with this

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>emissions closer to zero and one is actually a NET GAIN. This project is not a green project and your data is fatally flawed. If they overstated the ridership by 25% that brings more emissions to a net GAIN. Looking at data on AADT there will be a net gain for emissions. This project needs to be stopped immediately and if it is allowed to proceed everything needs to be started over with correct data. Since the DEIS is basing calculations on this severe overstatement of VMT anything derived from that data needs to be scrapped so we can actually comment on the truth. Since there will not be another comment period after FEIS the FRA needs to correct these SEVERE miscalculations so that we can at least comment on something that is closer to reality. From economic benefit, to ridership, to emissions, the DEIS is easily proven false on these points and should be completely reevaluated with factual data. Who will be held accountable in court for all the data that was allowed in the DEIS and routes chosen when it can be easily proven as false and wrong? FRA and AECOM should have vetted this wrong information from TCRR and they didn't and failed the public. Who will be held accountable when this all comes to light? No build should be only option based on the data we have available to us.</p>	<p>assumption to recalculate the resultant fuel and energy use reductions. The assumption of one-way trips was checked for its impact on the conclusion of HSR net energy saved and no adverse impact on energy usage and is summarized below for the largest emission alternative (A). This change halved the VMT, gallons of fuel saved, and associated energy usage reduced by HSR use, but there was still a net reduction of energy used. Even in the case of initial service level in 2024, net energy savings is estimated. This is summarized below for 2040 and detailed in the Final EIS. Therefore, the conclusion of no adverse long-term impacts on energy consumption and depletion of energy sources does not change. This revised assumption was included in the Final EIS. VMT = 1,276,260,00, Gallons of Fuel Saved = 40,775,080, Net energy saved = 3,074,821 MMBTU. There was also an error in the HGB road miles caused by a duplicate GIS feature that has been revised to correctly reflect the approximate 27 miles from the Houston city center to the northern edge of Harris County. With the revised VMT, NOx and VOC net HGB emissions in 2024 and 2040 respectively are -11.7 and -3.8 tons per year (TPY) for NOx, and -19.9 to -17.8 TPY for VOC, which are all net reductions. Only DFW NAA NOx in 2040, is barely a net positive, at 0.1 tons per year, which is 0.1% of the de minimis threshold to determine if general conformity applies, while other years for NOx and VOC show reduction. Therefore, the conclusion of no adverse long-term impacts to air quality from operational air emissions or within the NAA area, would not change. This revised assumption was included in the Final EIS. With an update to the train power consumption using more up-to-date data from the Energy Information Administration (EIA), the 2040 DFW NAA NOx emissions is expected to show net reduction because the percent of wind power has increased more than was previously forecasted in the Draft EIS.</p>
Christie Parker	3/9/2018	Website	<p>Dallas to Houston High-Speed Rail Environmental Impact Statement Where is the information for Ag structure takings for each route? ALT A IS NOT THE LOWEST in that category, or many other parameters ALT A is not the best. The FRA cannot ethically and legally state the best route with all the wrong data in the DEIS and with removing corridors as they were not economically viable and then removed the economic viability component.</p>	<p>Refer to BA-7.</p>
Christie Parker	3/9/2018	Website	<p>Dallas to Houston High-Speed Rail Environmental Impact Statement Based on \$199 ticket sales and 7.2 million you will have the following: This is in your tables state- 89,550,000 local- 28,656,000 Based on \$199 ticket sales and 5 million you will have the following: This is in your tables state- 62,187,500 local-19,900,000 So how do you come up with 15-39 billion in state taxes from ticket sales as you state in the DEIS even with your own flawed data How do you come up with 5-12 billion in local taxes from ticket sales? I cannot comprehend how so many people looked at this data and thought that it was correct and then based economic findings on it and allowed it to be promoted and circulated to the media. Who can we hold responsible for the very wrong and misleading data found in the DEIS? The credibility of the entire DEIS is in question and the entire process should start from the beginning with accurate data. Since there has been an overwhelming amount of bad data found in the DEIS an extension should be warranted to vet this process as the experts that put the data together have failed the public. Thank you</p>	<p>Refer to SC-3.</p>
Christie Parker	3/9/2018	Website	<p>Dallas to Houston High-Speed Rail Environmental Impact Statement Texas Central is Forcing onto the Public not only a Huge 5 Year HSR Construction Project, but also a Large Road Construction Project resulting in increases to County Maintenance Costs AND loss of more Private Property to Road ROW. This is a huge environmental concern with all the new emissions related to construction and the impact on drainage and the wetlands. This has not been accounted for in the DEIS. The FRA has not accurately assessed the NEPA process as they have used outdated maps AND they have inaccurately assessed the VMT emissions. Please look at your VMT data which is 200% of. Please also look at</p>	<p>Refer to AQ-3, GN-1, GN-2, NE-9, TR-7, WW-1 and WW-2. <b>Section 3.2, Air Quality</b> and <b>Section 3.21, Greenhouse Gas Emissions</b> contain detailed analysis of potential air quality impacts associated with construction and operation of the Build Alternatives. Both sections determined there would not be significant, long term</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			your ridership figures as this again is more than 200% of using Tx Dot and FDOT maps and figures. All of these issues need to be addressed as the NEPA process has been inaccurately assessed and the entire DEIS should be rescinded. No build is the only option for this project.	adverse impacts to air quality, and a net reduction in both major pollutants and greenhouse gases. Temporary adverse air quality impacts associated with construction were discussed, and mitigation measures outline at the end of <b>Section 3.2, Air Quality</b> .
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Due to this project, many roads will be Closed, Modified, Rerouted or Rebuilt. Some roads are proposed to be built Over the HSR. Please tell us under what state statute this is allowed for a railroad to run under a road. Please tell us what state statute TCR is allowed to reroute city and county roads. Due to this unnecessary project we will see a huge increase in Traffic Flow, Congestion, Longer Travel times, Required New travel routes, Damaged existing roads, New roads and Overpasses for the County to maintain and treat in cold icy weather conditions, and New Congestion around Construction Sites that are non-existent today. I do not see this outlined in the DEIS. Please show how you were able to account for this in the DEIS. State law SB 977 ensures that no state dollars for any maintenance of anything related to high speed rail. So who will be maintaining the roads that are only needed because of the high speed rail? The no build option is the only option that should be chosen.	Refer to TR-6, TR-7 and TR-8. SB 977 prohibits the use of state funds to plan, build, or operate the high rail operated by a private entity. TxDOT owned roads (including overpasses and underpasses), however, would continue to be maintained by the state. For the mileage of proposed public roads, please see <b>Section 3.11, Transportation</b> , specifically <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b> . Reroutes to existing roads would result in the addition of approximately 16.6 miles to 46.9 miles of public roads. For information about roadway modifications per county, Segment, and Build Alternative, refer to <b>Section 3.11.5, Transportation, Environmental Consequences</b> .
Christie Parker	3/9/2018	Website	Please refer to table 3.14-22 in the DEIS. It has at the \$7.2 million dollar level subtracting out 1.9 million air travelers, and at the 5 million dollar level subtracting out 1.3 million air travelers. This chart incorrectly takes the taxes out for 100% o more of airline traffic. Why is this chart assuming that 100% o airline traffic will be diverted to HSR? This is just another incorrect data point that is being used in the DEIS. If AECOM, TCR, and the FRA cannot ensure that validated data is in the DEIS what else is wrong. There is numerous amounts of bad data in this DEIS but this just proves again that experts have used incorrect data for this report and the public. Due to the continued use and findings of inaccurate and bad data that is overinflated to try to prove a need for this project, the no build option is the only viable option.	<b>Table 3.14-22: Range of Property Premium Impacts by Station Area, \$2019 (M)</b> in the Draft EIS reported the expected mode shift for TCRR passengers. By definition, the mode shift represents 100% of the passengers that would be diverted from air travel or personal vehicle to the Project and does not include estimates of total airline or vehicle travel between Dallas and Houston. This analysis has been removed from the Final EIS. The tax revenue estimate provided in the Final EIS in <b>Section 3.14.5.2.3, Socioeconomics and Community Facilities, Economic Impacts</b> , conservatively reflects only changes associated with capital investment, employment, and property taxes. Additional tax revenue generated through the State of Texas' Franchise Tax would fluctuate with annual changes to the state tax rate as well as TCRR revenue projections and is not included in the estimated tax impact. More information about tax revenue calculation methodology is available in <b>Section 3.14.3.2, Socioeconomics and Community Facilities, Economic Conditions</b> .
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Looking at table 3.14-22 the experts that put this table together put more wrong data in it. They have excluded the federal excise tax on airline tickets. I can not understand how so many people that have worked thousands of hours on this project could have missed this simple piece of data. Again, there is ample amounts of wrong data that dismiss the positives of this project. Please also tell me how it is mentioned numerous times that this project would elicit 15-39 billion from sales tax on ticket sales. Please tell me how you arrived at this blatant misrepresentation of data? Is this over a period of 150 years? There is no way looking at your own tax tables that you have provided could one come to this conclusion. Again, there is a great deal of deceptive and manipulated data in order to push the project. Fortunately your figures do not hold up to scrutiny. Due to more wrong data provided to the public, I urge for the NO BUILD option. Attachment(s): image.png	Refer to SC-3 and SC-16.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement More Private Property will be taken by TXDOT for New ROW required for the Road Changes In some cases now taking homes that were not originally taken for the HSR itself. The environmental justice was not properly assessed as one route was eliminated due to economic reasons yet this route had a lower impact on minorities and poor people. Please address how this occurred and violated NEPA. No build is the only option. Thank you	Refer to BA-7 and EJ-1.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement In many places an ACCESS Road, 126 miles of it, to become a PUBLIC Road is added alongside the HSR on your property cutting off the "Free Movement of Cattle and Equipment" once promised by Texas Central as a justification for the Viaduct. This is not adequately assessed in the wildlife corridors. This project will completely fragment wildlife and land. This will cause irreparable harm to the environment. Please push forward the no build option as the only plausibly alternative.	Refer to LU-11 and TR-8. Private access roads (that would be maintained by TCRR), would be built along many portions of the Project to allow for maintenance. Additional public roads would be created through reroutes and realignments and would range from 16.6 miles to 46.9 miles, depending on the Build Alternative. For the mileage of proposed

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				public roads, please see <b>Section 3.11, Transportation</b> , specifically <b>Table 3.11-61: Summary of Transportation Impacts by Build Alternative</b> .
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Over One Hundred Acre size Construction Sites will be needed for this massive project, located on just about every major East-West travel Corridor from I45, will be a magnet for Workers, Raw Materials, Batch Plants & Concrete Trucks, Equipment, Large Heavy Trucking, Permit Loads, Vendors, & Staging areas. Suburban and Rural communities all along roads in the vicinity of the HSR will be negatively impacted by these construction zones for the entire 240 miles. This will adversely affect all communities and this was not adequately addressed in the DEIS. The NO BUILD OPTION should be chosen	Refer to LU-10, SC-4, SG-4, TC-6 and TR-6.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement While Montgomery County will not receive a PENNY from any HSR Tax money (nor will Houston or Dallas receive any from ticket sales), they will only see devastation in their roads from all the heavy truck usage. Has the traffic types and volumes moving through our small communities like Montgomery and Plantersville, particularly with the 249 construction and the annual Renaissance Festival been assessed? Where are these impacts in the DEIS? The no build option is the alternative that should be chosen.	Future State Highway 249 would be crossed by the Project approximately 2.5 miles south of State Highway 105. For information about traffic impacts around the proposed Brazos Valley Intermediate Station in Grimes County, see <b>Table 3.11-49: Brazos Valley Intermediate Station Trip Direction and Mode</b> and <b>Table 3.11-50: Brazos Valley Intermediate Impacts 2040 LOS (Delay in Seconds per Vehicle)</b> . It is expected that the Build and modified Build conditions would result in increased traffic delays by about 5 seconds. Transit service could be provided by the Brazos Transit District or other entities to serve the Brazos Valley Intermediate Station. At this time, the Brazos Transit District does not have consistent service to this proposed station, but the agency is currently developing a service plan SH 105 would be crossed by the Project on viaduct, as shown in <b>Table 3.11-26: Roadways in Grimes County Study Area</b> . The Project would be built over the road which would not require SH 105 to be rerouted, closed, or reconstructed.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement The FRA should Cease any Further Premature DEIS progression and show the Public a third party view of Quantified impact on Traffic, Quality of Life, Community issues and Damage to ALL Existing Infrastructure. The third party's report should be allowed to be viewed by the public supporting an open government process. FRA, we CANNOT ALLOW these Quality of Life and Cost impacts to be a BIG Surprise to us once you have given Texas Central a Record of Decision. The FRA should adequately assess and mitigate all of these impacts before we advance any further with this project. The no build option should be pursued.	Refer to LU-9, NE-1, NE-9 and PI-1.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Other concerns on this project include impacts on Housing, Medical facilities, , Emergency Response Times, and the Negative Impact on Small Rural School ISDs? This has not been properly assessed in the DEIS. There is a great deal of literature on child impacts regarding noise that was not at all addressed in the DEIS despite the numerous schools in the proximity of the school. The DEIS is citing Houston ordinances in which the railroad ROW would be exempted from noise levels. How could the FRA fail to address the children's impacts and noise when the DEIS clearly states that TCR does not have to adhere to loud noises according to City Ordinances. The train itself was only tested at speeds of 125-175 mph which is not even the speed of the train. We know that noise is incrementally louder with increasing speeds yet much of the testing was performed at only 125 mph. The DEIS fails to state the speed of the train for various noise impacts. The discrepancy in sound and lack of accurate data to obtain decibels clearly violates NEPA. Sound measurements were also lacking in their measurements in the various data points as some only measured one hour and others 24 hours. Incomplete data was given for each of these measurements. This is simply inadequate and fails the test for accuracy of a solid noise impact report. Emergency services will be impacted and not adequately assessed as well and any increase in response times as shown in the DEIS is unacceptable. One life lost for this fiasco is one too many. Please re assess how the project could be reconfigured to not allow any impacts in first response times or the no build option should be the only option chosen.	Refer to NV-1, NV-6 and SS-23.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement The FRA Must Seriously Reconsider With Hard and Verifiable Facts, not qualified comments, the "NO BUILD ALTERNATIVE". The benefits for a very few select elite business people is significantly outweighed by the Public At Large Loss of Quality of Life, Loss in Property Values, Potential Loss of Lives due to longer ER arrival times, and the Additional Cost Burdens being placed on the Counties and Taxpayers. It is evident that much of the public came to each of the public meetings voicing their concerns and opposition to the project. Very very few people came out in support for the project. I am sure that the public comments are huge in opposition with many facts that prove the DEIS is horribly flawed while there is very few comments in support of the project. With all the huge overwhelming public opposition, the no build option should be chosen. Thank you	Refer to SC-19, SS-23 and VA-1.

Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement There are only 1.3 million annual airline ridership. There is only 89,060 annual workflow commuters according to Amercian Community Survey 2006-2010 Tract to Tract Data (see links below). So how are you calculating 5 million annual ridership when 100% o the airline traffic and workflow commuters in under 1.4 million? Please provide data to justify purpose and need. There clearly is not enough traffic or need for this route. Since this process involves the NEPA process with many negative impacts, the ridership and data must be vetted and substantiated. It is evident that it has not been and therefore the No Build Option should be chosen. Dallas county to Harris county commuters- 65 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Rank County Name Commuter Workers Median WCommute Commuter Residents Median RCommute Your Selected Commuters % Tis County % Slected County 2 Harris County, TX 2,124,746 10.5 1,834,924 9.0 65 0.0% 4.2% n Harris county to Dallas county commuters- 179 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Rank County Name Commuter Workers Median WCommute Commuter Residents Median RCommute Your Selected Commuters % Tis County % Slected County 2 Dallas County, TX 1,418,594 10.0 1,081,215 7.9 179 0.0% 3.3% n Data for this visualization is from US Census American Community Survey (ACS) data combined with Google MAPS API	Refer to BA-4, PN-3 and TC-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Per the DEIS section Dallas to Houston HSR EIS – Chapter 3.0 Section 3.14 – Socioeconomic and Community Facilities Additional sales tax revenue would result from the sale of tickets for travel on the new HSR system on an annual basis while it is in operation. As shown in Table 3.14-22, HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue. Local sales tax is assumed to be collected at the point of sale, roughly split between Dallas and Houston jurisdictions.17 Tax revenue for ticket sales would be identical for all Build Alternatives. Please show how the sales tax for the state and local communities could happen based on ridership and state laws. If you actually calculate this correctly you will find a loss of more than 40 million a year in lost taxes. Such glaring errors is completely careless, negligent, incompetent and could be classified as fraud as this is a government document and affects the public and skews the data to cause harm to the public. Who is held accountable for this fraudulent data? AECOM? FRA? TCR? The entire DEIS should be rescinded immediately an the no build option should be pushed forward.	Refer to SC-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Per the Statewide Ridership Analysis Report Statewide Analysis Model – Version 2.5 (SAM-V2.5) December 2013 "It should be noted however, that the Dallas-Fort Worth to Houston corridor has air service within the corridor at a level of competitiveness far above the other corridors as compared to the assumed passenger rail service. For example, there are approximately 50 flights each way with average fares comparable to the federal mileage rate f or the DallasFort Worth corridor, " The Dallas to Houston route was the 5th route as far as ridership and as you see this is with an airline ticket price of \$130 each way. You have listed airline ticket prices of an average of \$199 throughout the DEIS. This is not true. As most people won't switch from an airplane to a more costly transportation modality the ridership studies will even be less. In order to obtain an accurate clean air report you have to have reliable ridership data. All the data from independent studies reveals very low ridership figures of around 1 million annually. This will greatly impact the emissions and make this a net gain in emissions and will affect the Clean Air Act. The fraudulent data in the DEIS violates NEPA because it is clearly wrong and incorrectly skews the results of this governmental review. Please correct the data and start over so a real analysis can be performed of the route. We need a 90 plus day extension as there are so many errors that violate the NEPA process and the public needs more time to review the incorrect data to ensure that accurate information is being considered in this entire project as it is greatly affecting the environment. No build option should be considered at this time.	Refer to AQ-7, BA-4, BA-6, BA-12, GN-1, GN-2, GN-3, PI-3 and SC-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Teleworking needs to be factored into the DEIS report when accurately judging traffic and speeds. The National Institute of Health even did a report and implemented the process. <a href="http://www.federaletc.org/pdf/NIH.pdf">http://www.federaletc.org/pdf/NIH.pdf</a> To ignore this in your report is negligent or is purposely trying to skew the data. Overview While there is no Census Bureau or government produced data provides additional granularity on the frequency of telework, Global Workplace Analytics' research finds that: 50% o the US workforce holds a job that is compatible with at least partial telework and approximately 20-25% o the workforce teleworks at some frequency 80% t 90% o the US workforce says they would like to telework at least part time. Two to three days a week seems to be the sweet spot that allows for a balance of concentrative work (at home) and collaborative work (at the office). Fortune 1000 companies around the globe are entirely revamping their space around the fact that employees are already mobile. Studies repeatedly show they are not at their desk 50-60% o the time. A typical telecommuter is college-educated, 45 years old or older, and earns an annual salary of \$58,000 while working for a company with more than 100 employees. 75% o employees who work from home earn over \$65,000 per year, putting them in the upper 80th percentile of all employees, home or officebased. Summary of trends: Regular work-at-home, among the non-self-employed population, has grown by 115% snce 2005, nearly 10x faster than the rest of the workforce. 3.7 million employees (2.8% o the workforce) now work from home at least half the time. The employee population as a whole grew by 1.9% fom 2013 to 2014, while employees who telecommuter population grew 5.6%.\nForty percent more U.S. employers offered flexible workplace options than they did five years ago. Still, only 7% mke it available to most of their employees. Larger companies are most likely to offer telecommuting options to	Refer to BA-6, GN-2, GN-3 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			most of their employees. New England and Mid-Atlantic region employers are the most likely to offer telecommuting options. Full-time employees are four times more likely to have work-at-home options than part-time workers. Non-union workers are twice as likely to have access to telecommuting, but union employee access is growing rapidly. <a href="http://globalworkplaceanalytics.com/telecommuting-statistics">http://globalworkplaceanalytics.com/telecommuting-statistics</a> Please consider impacts of this on future congestion and railway purpose. Due to the growth rate of this mode of work and the drop in transit usage, I vote for the No Build option as the only wise choice. This bullet train project has too many negative impacts and they will never be overcome.	
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Per the footnote in Dallas to Houston HSR EIS – Chapter 3.0 Section 3.14 – Socioeconomic and Community Facilities Table 3.14-21: Permanent Employment Impacts Note: Employment, earnings and tax estimates do not include potential losses for businesses displaced by the project that are unable to relocate within the study area. Why would AECOM be allowed to put this chart together without accurately assessing and accounting for the loss of jobs? How is this accurate data. The FRA/AECOM inaccurately coded our business as agricultural and it is in fact a wedding venue with weekly weddings. It uses an 1890's victorian mansion and will be irreparably harmed and will go out of business. This was not adequately assessed and since the FRA and AECOM used outdated and stale maps and data THEY VIOLATED THE NEPA PROCESS. How are you remedying this use of outdated maps that doesn't take the negative impacts into account? If the correct process is not pursued many people will sue the FRA and other entities for supplying false and wrong data. I request that this process immediately be halted and started over with updated data and impacts thus being able to accurately crate a report which will reflect the actual negative impacts .	Refer to GN-1, SC-21 and VA-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Because the FRA did not include FERC in the process of putting together the DEIS they have put the public's lives at risk. Please see the following: ATMOS ENERGY IS THE COMPANY THAT MANAGES THE 30" PIPELINE INSTALLED IN 1967 LAYING NORTH TO SOUTH ACROSS A BINFORD TRACT Land in Harris County. IT IS ONLY ABOUT 50 STEPS AWAY FROM THE PROPOSED PLAN FOR HSR TRACKS. There is a great deal of research regarding vibrations leading to leaks in pipelines and the FRA/AECOM/TCR have not consulted FERC nor mitigated for this pipeline. Again, due to negligently putting together the DEIS, all the publics lives are at risk. This process must stop immediately. Please see the below news from 2-28-18. NORTHWEST DALLAS Worried about gas leaks after deadly blast, residents demand answers from Atmos Energy A meeting quickly turned contentious Tuesday night when northwest Dallas residents worried about their safety voiced their fears and frustrations to city and Atmos Energy officials. It's still unclear whether the explosion is connected to a gas leak that prompted the evacuation of a nearby apartment complex Sunday, or two house fires on a neighboring street earlier in the week. Dallas Fire-Rescue spokesman Jason Evans said the department couldn't say whether the incidents were connected — that's part of the investigation, he said — but they believe those events were gas-related. Atmos Energy's director of public affairs, Jennifer Altieri, told the neighbors that while she would provide them with as much information as possible, questions about what led to the explosion would have to be answered by the National Transportation Safety Board WAS THE NATIONAL TRANSPORTATION SAFETY BOARD INVOLVED IN THE DEIS PROCESS? THERE IS AN OVERWHELMING AMOUNT OF FATALLY FLAWED DATA ALONG WITH NO COORDINATION OF NUMEROUS ENTITIES THAT SHOULD HAVE BEEN INVOLVED IN THE PROCESS. THE NO BUILD OPTION IS THE ONLY SAFE AND ENVIRONMENTALLY FRIENDLY OPTION THAT SHOULD BE CHOSEN.	Refer to EU-1, EU-2 and SS-18. The National Transportation Safety Board is an independent Federal agency charged by Congress with investigating aviation accidents and significant accidents in other modes of transportation to determine the probable cause and issue safety recommendations aimed at preventing future accidents. No major transportation accidents have occurred on the Project in preparation of its Environmental Impact Statement; therefore, coordination with NTSB has not been required.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement TCR nor the FRA are implementing a Comprehensive Risk Management System that would Assess the safety of the Proximity of these pipelines to the HSR AND likely should be required of the Pipelines. This is yet another reason that FERC should have been involved in the DEIS. Numerous pipeline experts have noted that FERC should have coordinated this process and the vibrations of the train will impact many pipelines in the DEIS that were not accounted for. There is no doubt in my mind, the way this project has been thrown together and the lack of expertise will result in people dying. PIPELINES DO FAIL!! A Full Assessment needs to be done for every crossing, and that INCLUDES the HSR being built over the Utility Corridor with Two Enterprise Pipelines in Leon County, and one of those is a 30" pipeline. Please see the recent explosion resulting in a fatality. WHO HAS TCR AND THE FRA INVOLVED FOR PIPELINE SAFETY FOR THIS PLANNING PROCESS <a href="https://www.dallasnews.com/news/dallas/2018/02/26/state-regulators-join-feds-investigating-houseexplosion-northwest-dallas">https://www.dallasnews.com/news/dallas/2018/02/26/state-regulators-join-feds-investigating-houseexplosion-northwest-dallas</a> THE NO BUILD OPTION IS THE ONLY SAFE OPTION	Refer to EU-1, EU-2, SS-18 and SS-19.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Why was FERC not involoved in the planning of the high speed rail in relation to the attached interstate pipeline. This project is not looking out for public safety. This is extremely dangerous. The DEIS has been negligently thrown together and should be rescinded immediately. No build option should be chosen. Attachment(s): Gas Pipelines 312018.jpg	Refer to EU-1, SS-18 and SS-19.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Environmental experts have stated that there is no way that Navasota Lady Tresses will not be impacted by the proposed route. Current laws prevent this. The FRA have violated NEPA by not properly assessing this impact. Endangered Species Act Prohibitions Section 9 of the Endangered Species Act prohibits the take of any plant or animal species listed as endangered or threatened. Take, as defined by the Endangered Species Act, means "to harass, harm, pursue, hunt, shoot, wound, kill, trap,	Refer to NR-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			capture or collect, or to attempt to engage in any such conduct."5 Harm is defined in regulations implementing the Act as "any act that kills or injures the species, including significant habitat modification."6 This protection also includes a prohibition of indirect take, such as destruction of habitat. Additionally, Section 9 prohibits removing, cutting and maliciously damaging or destroying federally listed plants on sites under federal jurisdiction. The Endangered Species Act and accompanying regulations provide the necessary authority and incentive for individual states to establish their own regulatory vehicle for the management and protection of threatened and endangered species. NO BUILD TO PREVENT THE LOSS OF ENDANGERED SPECIES	
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement MORE VIOLATIONS OF NEPA: Where was the proper assessment by USFWS for the Navasota Lady Tresses? Endangered Species Act Authorization Process for Federal Actions Section 7 of the Endangered Species Act requires that federal agencies consult with the USFWS to ensure that projects they authorize, fund, or carry out would not jeopardize the continued existence of an endangered or threatened species or destroy or adversely modify designated critical habitat.7 In effect, Section 7 provides a means for the USFWS to authorize the take of threatened and endangered species and their habitat by federal agencies. Section 7(a)(2) requires that federal agencies review any action they are authorizing, funding or conducting and determine if the action may affect federally listed and proposed species, or proposed or designated critical habitat. If the protected species are present and are likely to be adversely affected the federal agency must complete a Biological Assessment (BA) that identifies the threatened or endangered species that are likely to be affected by the action and consult with the USFWS. Once formal consultation is concluded, the USFWS then formulates a Biological Opinion (BO) that identifies reasonable and prudent alternatives to the proposed action (if the action may jeopardize the continued existence of a species) or an incidental take statement (if the action would not jeopardize the continued existence of a species). Implementation of the project must comply with the BO. To ensure the avoidance of impacts to endangered species the No Build Option is the only choice	Refer to NR-2 and NR-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement MORE NEPA VIOLATIONS: It has been proven that many birds have been killed by high speed rail. The high speed rail is on the path of the migratory bird species path. None of this has been mitigated for and many migratory birds will be wounded or killed which goes against the Migratory Bird Treaty Act. I have submitted articles and studies proving that deaths are occurring. Many people have also documented migratory bird species along this route. Migratory Bird Treaty Act The Migratory Bird Treaty Act (MBTA) (16 U.S.C. §§ 703-712), is the domestic law that affirms, or implements, the U.S.' commitment to four international conventions (with Canada, Japan, Mexico and Russia) for the protection of a shared migratory bird resource. Each of the conventions protects selected species of birds that occur in more than one of the countries at some point during their annual life cycle. The MBTA protects migratory birds and their nests, eggs, young and parts from possession, sale, purchase, barter, transport, import, export and take. For purposes of the MBTA, take is defined as "to pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to pursue, hunt, shoot, wound, kill, trap, capture, or collect" (50 CFR § 10.12). The MBTA applies to migratory birds identified in regulation. The MBTA protects all birds occurring in the U.S. except for several nonnative species (e.g., house sparrow, European starlings and rock pigeons) and non-migratory upland game birds. The USFWS implements and enforces the MBTA; is the lead federal agency for managing and conserving migratory birds in the United States; regulates the take of migratory birds for educational, scientific and recreational purposes; and requires that harvests be limited to levels that prevent overutilization. Special Purpose Permits issued under 50 CFR § 21.27 are required in the event that an action would take, possess or involve the sale or transport of birds protected by the MBTA. THE NO BUILD SHOULD BE CHOSEN	Refer to NR-2.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement HUGE SAFETY CONCERNS: Why was FERC not consulted in the planning of these attached pipelines that will be impacted and can result in public fatalities? Why has the FRA not ensured the public's safety? I cannot comprehend how many errors, gaps and outright fraudulent data that is in the DEIS. I cannot trust any organization that had such glaringly wrong data to ensure the safety of the public regarding pipelines and the FRA/AECOM/TCR have decided not to consult FERC in the planning process. THE ONLY SAFE OPTION IS THE NO BUILD ALTERNATIVE Attachment(s): All Pipelines 312018.jpg	Refer to EU-1, EU-2 and SS-18.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement ANOTHER SAFETY CONCERN: Why was PHMSA not consulted in the DEIS and the attached pipeline. PHMSA's job is the following: The Office of Pipeline Safety ensures safety in the design, construction, operation, maintenance, and spill response planning of America's 2.6 million miles of natural gas and hazardous liquid transportation pipelines. This Design of the project has already been done regarding the route which is on top of this pipeline. This is unacceptable and negligent that the FRA/AECOM/TCR did not consult them regarding the safety of all the numerous pipelines that will be impacted Attachment(s): Product Pipelines 312018.jpg	Refer to EU-1, EU-2 and SS-18.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement You did not count this as a road closure in the DEIS. Even if temporary it is still a road closure. Please report accurate information for the public to review in a governmental document. Due to vast amounts of road closures and road reroutes this will affect the safety of the public and the no build should be the only option chosen. Attachment(s): thumbnail (1).png	Refer to SS-1, TR-6 and TR-8. All public roads would either be built over the Project (road over rail), maintained under the Project (road under rail), or would be

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				rerouted to cross the Project. Temporary construction of a road is not considered a closure.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Teleworking/Telecommuting (this has not been considered in the future projections of congestion yet has the fastest growth rate of all travel patterns and has already superseded public transportation) Why has this not been looked into and considered in this DEIS report. If this growing work mode has been ignored how much other relevant data has also been ignored? Highlights from The 2017 State of Telecommuting in the U.S. Employee Workforce report include: 3.9 million U.S. employees, or 2.9 percent of the total U.S. workforce, work from home at least half of the time, up from 1.8 million in 2005 (a 115 percent increase since 2005). The average telecommuter is 46 years of age or older, has at least a bachelor's degree, and earns a higher median salary than an in-office worker. Roughly the same population of women and men telecommute. Telecommuting is more common among employees over 35 years of age and most common among Baby Boomers. In more than half of the top U.S. metro areas telecommuting exceeds public transportation as the commute option of choice. It has grown far faster than any other commute mode. The 2017 State of Telecommuting in the U.S. Employee Workforce Report includes information on the following: Trends in the telecommuting workforce over the last ten years Demographics of the average telecommuter (age, gender, education, salary) Telecommuting by industries, occupations and sectors Telecommuting by metro areas (prevalence and growth) Actual and potential economic impact of telecommuting Environmental impact of telecommuting <a href="https://www.flexjobs.com/2017-State-of-Telecommuting-US/">https://www.flexjobs.com/2017-State-of-Telecommuting-US/</a> How can the DEIS be a credible document if data in conflict with the purpose in need is prevented from entering the report? Due to relevant data being omitted from the DEIS along with numerous other bad data points I opt for the No build option	Refer to BA-6, GN-2, GN-3 and PN-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Below is a prepared comment that TCR presented their viewers with while throwing them in a drawing for a toy train. This is bribery to get submissions to a governmental document. They also solicited these comments while also sending to Gov. Abbott and Lt. Gov Patrick at the same time. Here is the letter that they bribed people to sign: This is illegal to get people to sign a comment while also bribing them. All of these letters should be thrown out and TCR's practices should be looked into. The letter: "I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local economies and creates new jobs for Texans. I welcome a faster, safer and cleaner transportation alternative to reduce congestion because it's good for Texas!" Please see attached pdf regarding bribery. <a href="https://www.ftc.gov/system/files/documents/public_statements/685041/19301017_ferguson_commercial_bribery.pdf">https://www.ftc.gov/system/files/documents/public_statements/685041/19301017_ferguson_commercial_bribery.pdf</a>	Refer to PI-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Most reports show avg people per car is 1.5-1.8 people per car. So using your 1.2 people per car number you reduce the number of cars actually removed from 45. When you factor in the 200% over statement of VMT removed and factor in the true passenger count per car on 45 you get a Larger NET GAIN of NOx. The FRA/AECOM/TCP have committed fraud on these governmental documents and have violated NEPA. Your report has made false claims in its report that directly impact the Clean Air Act. You have doubled the VMT removed by doubling the mileage and used an incorrect count of people in a vehicle. There will also be a net gain in emissions in the Houston area. YOU HAVE COMMITTED FRAUD WITH YOUR FIGURES. THE NO BUILD IS THE ONLY OPTION THAT SHOULD BE CONSIDERED FOR THIS PROJECT. You can't just correct all these erroneous figures without starting over.	Most state planning at the time of Draft EIS preparation, used 1.25 passengers/car, and the rate used by TCRR was project-specific and similar to this figure. It was only after Texas Transportation Institute (TTI) issued an August 2017 memo regarding updating estimates roadway user delay costs, that a revision of the previous rate to 1.5 based on newer national survey data was recommended. It should be noted that using 1.2 instead of 1.5 increases the number of cars removed from the road because it takes more cars to transport the projected annual passengers. The ridership numbers were verified with TCRR to clarify what they meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate and is

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>summarized in tons per year below for the largest emission alternative (A). This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for same as before, sulfur dioxide. Previous assumption: Trip distance = 478 miles; VMT avoided = 2,552,520,000 miles Revised assumption: Trip distance = 239 miles; VMT avoided = 1,276,260,000 miles For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6.0, SO2=113.6, CO = 38.9, CO2eq = 132,316 CO2eq Metric Tons 120,035 Vehicle Emissions: NOx=81.55, VOC=73.46, PM10=23.98, SO2=1.36, CO=1,401.09, CO2eq=203,250, CO2eq Metric Tons=184,385 Net Emissions: NOx = -38.0, VOC = -68.1, PM10=-17.9, SO2=112.2, CO = -1,362, CO2eq = 70,934, CO2eq Metric Tons = -64,350 For 2040: HSR Operation Emissions: NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96,747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 35.33, VOC = 82.91, PM10 = 46.39, SO2 = 1.88, CO = 1045.2, CO2eq = 278,074, CO2eq Metric Tons = 252,264 Net Emissions: NOx = -18.5, VOC = -78.5, PM10 = -43.3, SO2 = 32.2, CO = -1015, CO2 equivalent = -181,327, CO2eq Metric Tons = -164,497 In addition to this change, sensitivity of the net project emissions to the vehicle occupancy rate was tested by using 1.5 passengers/car instead of 1.2 to recalculate vehicle emissions that would be reduced, using the revised one-way trip assumption and the same other inputs and assumptions used in the Draft EIS calculations. For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6, SO2 = 113.6, CO = 38.9, CO2eq = 132,316, CO2eq Metric Tons = 120,035 Vehicle Emissions: NOx = 101.94, VOC = 91.83, PM10 = 29.97, SO2 = 1.7, CO = 1,751.37, CO2eq = 254,062, CO2eq Metric Tons = 230,481 Net Emissions: NOx = -58.4, VOC = -86.5, PM10 = -23.9, SO2 = 111.9, CO = -1712, CO2eq = -121,746, CO2eq Metric Tons = -110,446 For 2040: HSR Operation Emissions: NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 28.26, VOC = 66.33, PM10 = 37.11, SO2 = 1.51, CO = 836.16, CO2eq = 222,459, CO2eq Metric Tons = 201,811 Net Emissions: NOx = -11.4, VOC = -61.9, PM10 = -34.1, SO2 = 32.5, CO = -806, CO2eq = -125,712, CO2eq Metric Tons = -114,044 The results indicate that there would still be a net reduction of overall operational emissions for all pollutants, except for same as before, sulfur dioxide, with HSR usage. Therefore, the conclusion of no adverse long-term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS.</p>
Christie Parker	3/9/2018	Website	<p>Dallas to Houston High-Speed Rail Environmental Impact Statement There are too many errors in the current DEIS to even comment on. You have given the public 75 days to comment on a fatally flawed 5600 page document that too you almost 4 years to put together. YOU HAVE VIOLATED THE NEPA PROCESS by so many false and fradulent data pieces put in the DEIS. Please see attachment of the NEPA process. I request the DEIS be rescinded and started over so that the public can actually comment on real data instead of fraudulent data. Until the public is allowed to comment on correct data you have violated NEPA and the no BUILD is the only option without starting over. Attachment(s): thumbnail (3).jpg</p>	<p>Refer to GN-1 and NE-1.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Please see the attachment. The FRA willingly changed the purpose and need between step 10 and 11 of the NEPA process. This changes everything and the scoping comments during this NEPA process were directly affected by this change. This VIOLATES NEPA without starting over. You cannot change the purpose and need in the middle of a NEPA process. You received public comment based on your purpose and need and then changed it. This is completely unacceptable and is a violation of the NEPA process. The NO BUILD ALTERNATIVE should be pursued or the entire process should start over. Attachment(s): thumbnail (3).jpg	Refer to PN-3 and PN-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Safety of TCR's HSR riders as well as security of the HSR Fencing while on Berms or at Natural Grade Level is of grave concern. I see nothing in the Fence design that indicates it will be "Predator" Fence? Where is this? How has this been mitigated. Additionally, I see nothing that states that at least the 200 miles of the very rural portion of the HSR route will be Visually Inspected on a Daily Basis for holes under the security fencing? Please show where this is outlined. In the event the FRA does not know what "Predator" Fencing is, it is at a minimum a Three-Four foot section of horizontal fencing pinned at the outside edge as well as strongly wired to the bottom of the vertical fencing, preferably on both sides of the security fence. I see no evidence of this in the DEIS. In the event the FRA is not aware of rural wild animal habits, Coyotes are known to exist ALL up and down the route, will easily dig under your fencing if there is no Predator Fencing. After that happens, the Wild Hogs will easily exploit the situation left for them by the Coyotes and will end up on top of the HSR. I would suggest the FRA test the Safety of the HSR and its Riders for at least the collision of a 350#-400# hog while the train is traveling at or near 205 mph. Or, of course the FRA can disregard this potential important Safety Hazard and risk the lives of many riders on the HSR as Wild Hogs and Coyotes will find a way onto the HSR's Tracks one way or other. This subject of Wild Hogs is covered by the DEIS but relies only on the vertical security fencing. This is a safety concern that has not been adequately assessed in the DEIS. Please explain how you will ensure all of the riders safety. The No Build is the only safe option. Thank you.	Refer to SS-2, SS-12, and SS-13.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Please show evidence of how these were avoided per regulations. Hardly any of the route was surveyed with boots on the ground surveys. 3.6.5.2.3 Protected Species A total of 14 state-listed threatened species, including two federal Candidate species, may be impacted by each of the Build Alternatives. These impacts could be minimized and/or avoided by deploying qualified biologists to conduct surveys prior to construction and during construction activities within or near protected species and their habitat to ensure implementation and compliance with environmental protection measures. These qualified biologists could also identify these protected species and relocate individuals so direct mortality is avoided. Mitigation measures are described in Section 3.6.6. It is important to note that Texas does not have a permitting mechanism for incidental take of state-listed species. Therefore, avoidance is the only path for ensuring compliance with state laws and regulations. In addition, there would be four federally- and state-listed endangered species that have the potential to occur in the Study Area: Houston toad, interior least tern, Navasota ladies'-tresses and the largefruited sand-verbena. The interior least tern, if present, would be anticipated to frequent the streams and waterbodies within the Study Area, as detailed in Section 3.7, Waters of the U.S., that contain sand flats, sand and gravel bars or beaches. For the remaining three federally listed species, Table 3.6-21 provides acreage of potential impacts to habitat by Build Alternative Segment for each county. For mapped potential habitat of each of the federally listed species, please refer to the Natural Resources Mapbook, Appendix D. Dallas, Ellis, Navarro and Limestone THE ONLY OPTION IS THE NO BUILD OPTION TO PROTECT THESE TREATED AND ENDANGERED SPECIES	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement We have seen whooping cranes on some of our many lakes on our property. One of which will be filled in by the high speed rail train. Whooping Crane Scientific Name: Grus americana Federal Status: Endangered, 6/2/70 • State Status: Endangered The project must be halted as this will affect this species and lead to deaths of this endangered species. The only prudent option is the NO BUILD OPTION.	No whooping crane sightings were reported in eBird or Texas Natural Diversity Database (TXNDD) which reports known occurrences of the species. For information regarding endangered species, and how they were assessed and habitat modeled please see Section 3.6.3, Natural Ecological Systems and Protected Species, Methodology.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Piping Plover Piping Plover Scientific Name: Charadrius melodus Federal Status: Threatened in Northern Great Plains and Atlantic Coast, endangered in Great Lakes. • State Status: Threatened Katy Prairie Conserv.--Warren Ranch Lake area (UTC 099), Harris County, Texas, US ( Map ) (Hotspot ) Date and Effort Sun Jul 24, 2011 Protocol:Historical Party Size:3 Observers:Tony Frank Species 1 species total 1 Piping Plover one bird. Found a day or two before. Seen by the three of us from the raised viewing platform. Bird was on far side of drying lake. Katy Prairie Conserv.--Warren Ranch Lake area (UTC 099), Harris County, Texas, US ( Map ) (Hotspot ) Date and Effort Sat Jul 23, 2011 Protocol:Incidental Party Size:N/A Observers:Kendra Kocab Species 2 species total 1 Piping Plover Seen the day before also by Mike & Sarah Kuzio, and Drew Dickert. 1 Marbled Godwit Katy Prairie Conserv.--Warren Ranch Lake area (UTC 099), Harris County, Texas, US ( Map ) ( Hotspot ) Date and Effort Fri Jul 22, 2011 6:35 PM Protocol:Traveling Party Size:2 Duration:1 hour(s), 55 minute(s) Distance:0.2 mile(s) Observers:Drew Dickert , Greg Page List 4 Piping Plover 4 very pale plovers with yellow legs. Narrow breastband, on at least one Plover it was unbroken. Numerous Piping Plovers seen near where the train will travel. To protect our state and federal endangered and threatened species the NO BUILD OPTION should be chosen.	Refer to NR-2 and RF-4. Piping plovers were observed at Warren ranch in 2011 according to eBird. The section of the Project that is within a mile of Warren Ranch is mostly on embankment and would be fenced to avoid collisions with wildlife. Piping plovers would not stop in between the fenced area because there are not wetlands or foraging areas on or near the track that they would need during migration to the coast.

Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Please see the following mitigation efforts for nesting sites for Bald Eagles. Nesting Habitat The protection of an actual nest is important, but so is protection of the nest area and all the surrounding habitat factors that attracted the nesting pair to the area. Once the eagles establish a suitable breeding territory, they will return to the same area year after year, often using several nests within the territory during different years. When a given nest or the tree that it is in falls, a pair generally returns to the same territory to begin another nest. If one member of a pair dies, the nest may go unused for several years and then be recolonized by the surviving member returning with a new mate. Nesting territories can even be inherited by offspring. Therefore, protection of nesting territories should apply to "abandoned" nests for at least five consecutive years of documented nonuse. The following habitat management guidelines are based on two management zones surrounding each nest site, with certain restrictions recommended for each zone. Primary Management Zone For Nest Sites This zone includes an area extending 750 to 1,500 feet outward in all directions from the nest site. It is recommended that the following activities not occur within this zone: 1. Habitat alteration or change in land use, such as would result from residential, commercial, or industrial development; construction projects; or mining operations. 2. Tree cutting, logging, or removal of trees, either living or dead. 3. Use of chemicals labeled as toxic to fish and wildlife. 4. Placement of above-ground electrical transmission or distribution lines. Since collision with powerlines and electrocution on powerline structures remain an important cause of death, placement of underground lines is recommended near Bald Eagle nests and winter concentration sites. 5. Helicopter or fixed-wing aircraft operation within 500 feet vertical distance or 1,000 feet horizontal distance of the nest site during the nesting season (October-July). 6. Activities which create minimal disturbance, such as hiking, fishing, camping, and bird-watching can be carried out safely during the nonnesting season if there is no physical alteration of the habitat within the zone. Traditional farming, ranching, and hunting activities which are existing practices and have occurred historically on the site can be carried out safely during the non-nesting season as long as habitat alteration is avoided. Secondary Management Zone For Nest Sites This zone encompasses an area extending outward from the primary zone an additional 750 feet to 1 mile. Recommended restrictions in this zone are intended to protect the integrity of the primary zone and to protect important feeding areas, including the eagle's access to these areas. The following activities are likely to be detrimental to Bald Eagles at any time, and in most cases should be avoided within the secondary zone: 1. Development of new commercial or industrial sites. 2. Construction of multi-story buildings or high-density housing developments between the nest and the eagle's feeding area. 3. Placement of electrical transmission or distribution lines between the nest site and the eagle's feeding area. 4. Construction of new roads, trails, canals, or rights-of-way which would tend to facilitate human access to the eagle nest. 5. Use of chemicals labeled as toxic to wildlife. Certain activities that involve only minimal alteration or disturbance to the habitat can be carried out safely in the secondary zone during the non-nesting season. Examples of these activities include: minor logging or land clearing, minor construction, seismographic exploration employing explosives, oil well drilling, and low-level aircraft operation. However, these activities should avoid major alteration or loss of Bald Eagle habitat as much as possible. Nesting sites have been noted within 1500 ft. of the train alignment and its construction. There must be a full boots on the grounds assessment for up to a mile outside of the train and construction sites along the entire 239 mile route to ensure NEPA is not being violated. No build is the only safe option to prevent death of these nests and species.	Refer to NR-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Telecommuting must be analyzed in order to achieve an accurate report. "More than just affecting the way people work, the increasing ease of telecommuting will dramatically affect the way we adapt our urban transportation systems. Indeed, an increase in working from home might suggest that we have less to fear about the future of traffic	Refer to BA-6, GN-2, GN-3 and PN-3.

			<p>congestion than we might have believed." <a href="https://www.citylab.com/transportation/2014/02/why-telecommuting-really-matters-6-charts/8227/">https://www.citylab.com/transportation/2014/02/why-telecommuting-really-matters-6-charts/8227/</a> "Expanding mass-transit systems is a pillar of green and "new urbanist" thinking, but with few exceptions, the idea of ever-larger numbers of people commuting into an urban core ignores a major shift in the labor economy: More people are working from home. True, in a handful of large metropolitan regions what we might call "legacy cities" trains and buses remain essential. This is particularly true of New York, which accounts for a remarkable 43% o the nation's mass-transit commuters, and of other venerable cities, such as San Francisco, Washington, Boston, Philadelphia and Chicago. Together, these metros account for 56% o all mass-transit commuting. But for most of the rest of the country, transit use despite often-massive infrastructure investment has either stagnated or declined. Among the 21 metropolitan areas that have opened substantially new urban-rail systems since 1970, mass transit's share of work trips has declined, on average, from 5.3% t 5%. uring the same period, the drive-alone share of work trips, notes demographer Wendell Cox, has gone up from 71.9% t 76.1%.-- <a href="http://www.latimes.com/opinion/op-ed/la-oe-kotkin-telecommute-20170623-story.html">http://www.latimes.com/opinion/op-ed/la-oe-kotkin-telecommute-20170623-story.html</a>"Traffic congestion in Austin and other major Texas cities is notorious and continues to worsen. According to a recent study by a transportation analytics firm INRIX, Dallas, Houston and Austin are the 7th, 11th and 13th most congested urban areas in the United States. Many believe that adding light-rail lines and more bus lanes will encourage more commuters to take public transport and leave their cars at home. However, despite its population growth and large investments by Capital Metro to improve services, Austin's bus actual daily ridership has fallen 20 percent since 2012 (130,000 boardings a day in 2012 vs. 102,000 a day in 2016)" <a href="https://www.tribtalk.org/2017/09/21/is-the-uberization-of-public-transportation-the-future-for-texas-cities/">https://www.tribtalk.org/2017/09/21/is-the-uberization-of-public-transportation-the-future-for-texas-cities/</a> The DEIS needs to analyze this work mode as this will affect future congestion and ridership patterns. I opt for the no build.</p>	
Christie Parker	3/9/2018	Website	<p>Dallas to Houston High-Speed Rail Environmental Impact Statement Peregrine Falcon Scientific Name: Falco peregrinus Federal Status and State Status: the American Peregrine Falcon (Falco peregrinus anatum) is endangered and the Arctic Peregrine Falcon (Falco peregrinus tundrius) is threatened. Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			Need of the Project: • Economic: Achieve a favorable return on investment when weighing expected ridership and revenue against estimated project capital investments, real estate requirements, project delivery schedule, and long-term operations and maintenance expenses. • Technological: Deploy a state-of-the art HSR system for service based upon the Tokaido Shinkansen. TCRR would adapt the rolling stock, systems, and operating and maintenance procedures as required to comply with applicable regulatory, environmental, and operational conditions of the Project corridor. • Operational: Achieve a travel time of 90 minutes or less between Dallas and Houston. • Environmental: Minimize impacts to the natural and built environment along the corridor and at stations through context-sensitive design, adjacency to existing infrastructure ROW, and stakeholder coordination as appropriate.	
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Please explain the difference in ridership numbers in the DEIS. This 2026 estimate will change all of the emission figures. There definitely needs to be an accurate and independent study to confirm that we will not have a positive overall emission impact which would violate the Clean Air Act. This has to be vetted and the figures below along with doubling emissions prove that the DEIS is not handling this risk assessment responsibly and efficiently. 6.4.1 Ridership Forecasts and Passenger Profiles As estimated by the proprietary market demand study undertaken by TCRR, the build year forecast for HSR ridership in 2026 is 4.4 million passengers per year. The long-term forecast for HSR ridership in the 2040 analysis year is 7.2 million passengers per year.	There were two service levels provided by TCRR representing two different points in time after the high speed rail would be built: the initial service level (ISL) slated for 2024 shortly after the HSR is built, and the future service level (FSL) in 2040 after service and ridership ramp up after years in operation. In later versions of TCRR's conceptual engineering report, the ISL was adjusted to two years later. With regards to comment on doubling of numbers, the ridership numbers were verified with TCRR to clarify what they meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate and is summarized in tons per year below for the largest emission alternative (A). This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for same as before, sulfur dioxide. Therefore, there is no change to the NEPA conclusion of no significant adverse impacts on long term air quality from operational emissions. Previous assumption: Trip distance = 478 miles; VMT avoided = 2,552,520,000 miles Revised assumption: Trip distance = 239 miles; VMT avoided = 1,276,260,000 miles For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6.0, SO2=113.6, CO = 38.9, CO2eq = 132,316 CO2eq Metric Tons 120,035 Vehicle Emissions: NOx=81.55, VOC=73.46, PM10=23.98, SO2=1.36, CO=1,401.09, CO2eq=203,250, CO2eq Metric Tons=184,385 Net Emissions: NOx = -38.0, VOC = -68.1, PM10=-17.9, SO2=112.2, CO = -1,362, CO2eq = 70,934, CO2eq Metric Tons = -64,350 For 2040: HSR Operation Emissions: NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96,747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 35.33, VOC = 82.91, PM10 = 46.39, SO2 = 1.88, CO = 1045.2, CO2eq = 278,074, CO2eq Metric Tons = 252,264 Net Emissions: NOx = -18.5, VOC = -78.5, PM10 = -43.3, SO2 = 32.2, CO = -1015, CO2 equivalent = -181,327, CO2eq Metric Tons = -164,497
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Please see the following footnote. Since routes were eliminated according to this criteria and during the NEPA process including corridors with lower EJ impacts, the entire process needs to start over with all routes with none eliminated based on economic viability. 3 An initial version of the Project Purpose included economic viability. As the Project developed and through coordination with cooperating agencies, FRA determined that economic viability is an objective of TCRR, not a component of the Project Purpose.	Refer to BA-8, NE-1 and PN-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Since Texas Central and the engineers did not use current state laws and the entire project will have to be reevaluated and redrawn, the project must start over with correct data to review. Otherwise, the purpose and need cannot be supported without accurate data and plans. Please review all state laws before proceeding. The public needs to be able to make comment on accurate data and plans. No build until this process can be started over and evaluated by the public with their input. As part of the project development process, TCRR developed the conceptual engineering to support the Project Purpose and Need. This conceptual engineering (included as Appendix F, TCRR Conceptual Engineering Design Report and Appendix G, TCRR Conceptual Engineering Plans and Details) completed as of September 15, 2017 is the basis for the evaluation included in this document	Refer to GN-1.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Again the Purpose and Need was changed in the middle of a NEPA process, therefore the process needs to start over before proceeding with the new purpose and need. Otherwise the NEPA process was not followed but instead violated. See below: The first part, the Coarse Screening Analysis evaluated if the corridor alternatives met the Project Purpose and Need, as required by NEPA. FRA conducted a pass/fail analysis and determined that an alternative "failed" if it did not meet Purpose and Need or "passed" if it did. FRA carried all potential corridor alternatives and other potential transportation alternatives that "passed" into the second part, the Fine Screening Analysis.	Refer to PN-4.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement In line with the following Purpose and Need per the DEIS : "Direct bus service or expanding IH-45 may temporarily relieve congestion on IH-45, meeting the transportation need of the Project. However, these alternatives rely on vehicular travel as the primary means of transportation between the Dallas and Houston metropolitan regions and would not offer a long-term alternative to travel on IH-45 and they would not offer a one-way trip in 90 minutes or less. Additionally, these other potential transportation alternatives would not provide passenger rail service, as per TCRR's objectives for the Project. Therefore, FRA eliminated these alternatives from further consideration based on failure under the Purpose and Need criterion." PLEASE PROVE THE ONE WAY TRIP IN 90 MINUTES OR LESS WITH THE NEW ROAD ALIGNMENTS AND VIADUCT STRUCTURES. THE DEIS CURRENTLY HAS THE TRAIN TRAVELING AN AVERAGE OF 166.93 MPH TO MAKE THEIR TIMES BUT JAPAN SKINKANSEN IS TRAVELING AT AN AVERAGE OF 163 MPH. SO PLEASE REEVALUATE WITH CORRECT PLANS AND ROAD STRUCTURES. NO BUILD IS THE ONLY OPTION UNTIL DATA IS CORRECTED IN THE DEIS AND THE PUBLIC IS ALLOWED TO COMMENT ON CORRECT DATA.	Refer to BA-4, PN-3 and TC-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement I want to quickly point out some very disturbing errors with this DEIS report compiled by TCR,AECOM, and the FRA. First, this document and TCR in their videos are reporting up to 39 billion in state sales tax revenue based on ticket sales will be generated. They go on to state that the train will generate 12 billion in local sales tax from ticket sales. They then report in Table 3.14-22 the following: Unfortunately this information is incorrect. They have inappropriately put sales tax on both HSR and Airline tickets. Looking at State Tax Laws there is no state or local tax on transportation. You can simply refer to bus, train, and airline tickets or the actual tax code to see that they have really messed up these figures. Their own Insight Research Report with their secret ridership numbers also mentioned the sales tax from ticket sales. This is a huge error but isn't the only one in this chart. They failed to capture the federal tax impact for airline tickets which is a 7.5% federal excise tax imposed only on airline tickets and this would result in a loss of \$28,357,500 a year in federal tax revenue. Reviewing their chart with these huge errors we can all see that instead of generating \$68 million annually in taxes it will actually result in a loss of \$47 million annually to the taxpayers. That is more than a 100 million annual flip and will result in billions in loss of tax revenue as a result of the train. This is just one error we were able to find in this massive document in the very short time frame the public has been allowed to review the DEIS. To put this all into perspective, City of Houston will NOT receive 10-12 million in sales tax on ticket sales as is being claimed by Mayor Turner and City of Dallas will NOT receive 10 million in sales tax revenue annually as well. The state will not get their potential 39 billion and the local areas will not receive their potential 12 billion. They will suffer a loss instead.	Refer to GN-2 and SC-3.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement It is clear that the engineers have realigned county roads that they will be unable to do as all county roads in between will not allow the realignments. Remember Texas Central was ruled to not have eminent domain nor be a railroad in a court case in Harris County so performing all these drawings is frankly putting the horse before the cart. Most of the counties have signed resolutions against the high speed rail so these road drawings are incorrect leaving construction costs and route not specific as well. Also the engineers did not take into account new construction at Highway 6. They have the Train route at the same place and height of Highway 6. This Tx Dot project has been in the works much longer than these preliminary drawings for Texas Central's project. I have a lack of confidence in the engineers on this project. It is questionable that the train can even go under beltway 8.	Refer to ED-1, ED-3, NE-1 and TR-8. The Project would be on viaduct at the State Highway 6 crossing (road under rail). Preliminary design details show that there will be approximately 43 feet of separation from the rail to the existing road surface at this crossing. This will be a long span; therefore, the structure of the viaduct will need to be about 22 feet deep. This would mean there is about 21 feet of roadway clearance under the viaduct structure. See <b>Table 3.11-31: Roadways in Harris County Study Area</b> or a list of all the roads that will be crossed by viaduct in the area. The Project would be below-grade (retention-cut) at the

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				State Highway 8 crossing. Approximately 985 feet of the Project would be constructed under the crossing.
Christie Parker	3/9/2018	Website	Second, The DEIS report has doubled the Emission Data from vehicles. Even with the unrealistic ridership numbers, Houston will have a net gain in emissions due to this project. With accurate ridership data as estimated by other studies, there will be a net gain in emissions overall. This is of particular concern as this has been proposed to be a "green" project. Surely the EPA following the Clean Air Act will not want to fall backwards on progress and improved air quality we have achieved over the past few decades due to inaccurate and false data in this report.	Refer to AQ-13.
Christie Parker	3/9/2018	Website	Third, the ridership numbers provided are flat out wrong and not substantiated by actual data. Looking at AADT station data north of Fairfield, there will be no way that TCR will be able to obtain the ridership numbers they have proposed. Other studies including Tx Dots multimillion dollar study only shows ridership figures of 0.7-2.7 million and the Reason report has only estimated 1.4 million annual ridership. This is extremely concerning as this will lead to not only a detrimental negative impact on the environment but since they are seeking federal taxpayer backed loans will also affect each of our back pockets. Currently there is only 1.3 million annual airline ridership for this route. There is only 89,060 annual workflow commuters according to Amercian Community Survey 2006-2010 Tract to Tract Data (see links below). So how are you calculating 5 million annual ridership when 100% of the airline traffic and workflow commuters in under 1.4 million? Please provide data to justify purpose and need. There clearly is not enough traffic or need for this route. Since this project involves the NEPA process and will lead to many negative impacts, the ridership and data must be vetted and substantiated. Dallas county to Harris county commuters- 65 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Harris county to Dallas county commuters- 179 <a href="http://bigbytes.mobyus.com/commute.aspx">http://bigbytes.mobyus.com/commute.aspx</a> Using the 16% market share TCRR has in their footnote will leave us at 1,672,954 1,900,000 (airfare estimated by TCRR) = 3,572,954 with the really high market share of TCRR in 2035 Using All Aboard Florida's ridership of 7.2% it would be 752,829.566 1,900,000 = 2,652,829 in 2035 Work shown below: Traffic count per AADT - 54,490 36,726.26 after truck traffic removed (.674) per AADT 23,872.069 after local traffic and through traffic removed (.65) Per TxDot 1.2 average passenger count per DEIS= 28,646.48 annual commuters by Tx Dot 10,455,966.2 market share by tcrr of 16%= 1,672,954 Estimated airline ridership per TCRR=1,900,000 Total estimated ridership using Tx Dot data and TCR data= 3,572,954 in 2035 13 According to TCRR's 2043 ridership forecast, HSR would account for 21 percent of the traveling public market share between Dallas and Houston. This HSR market share would derive from a 16 percent decrease in vehicular traffic market share and a 6 percent decrease in air travel market share (numbers rounded). Using All Aboard Florida's ridership of 7.2% it would be 752,829.566 1,900,000 = 2,652,829 in 2035 There is a great amount of data I am not able to cover but I wanted to part with a few quotes from our now Mayor regarding this project. These quotes can be found in the scoping report on 8/1/2015	Refer to AQ-3.
Christie Parker	3/9/2018	Website	... property values would decline, and in these very neighborhoods where homes are being built and neighborhoods revitalized, the progress may very well be halted. Already, some prospective homeowners are delaying their decisions to purchase property in the area uncertain of the route that the high speed train may take. Sylvester Turner Economic Impact/Property Values	Refer to VA-1.
Christie Parker	3/9/2018	Website	Furthermore, the safety of families in these dense urban areas would be compromised... Sylvester Turner Safety and Security The credibility of the DEIS is in question along with the Purpose and Need which has changed since the Scoping Report. The No Build is the only option that should be considered. Thank you.	Refer to SS-12 and SS-13.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement The DEIS is chalked full of outdated and stale information. Here is yet another picture attached that doesn't count a house that will be impacted by this project. How can an accurate assessment be made regarding impacts including noise impacts as required by NEPA if incorrect and inaccurate data was used in the DEIS for the public to comment on. The entire process is fatally flawed and the DEIS should be rescinded. The no build is the only option that should be implemented at this time. Attachment(s): outdated map.png	Refer to GN-1 and NE-1.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement The current DEIS is flawed in their stagnant data regarding flooding as it is using old outdated information and nothing in regards to the recent flooding issues over the past two years which were detrimental to the public. By ignoring this data, the FRA violated NEPA by omitting relevant data regarding flooding and drainage. On our property alone where the bullet train will travel on both a viaduct and berm, no flooding impacts have been assessed by the FRA. The FRA was negligent in their data collection and in order to provide a proper analysis of these concerns, the FRA should immediately rescind the DEIS and study these impacts. Otherwise the DEIS is so flawed in their collection of data that the public should not have to comment on such a process that has omitted such a vast amount of data. Please see the attached pictures that show flooding on the property where the bullet train is proposed to travel. Where is this data in the DEIS. Due to increased flooding projected in the area, the no build is the only reasonable option to protect the public. Thank you. IMG_7218.PNG IMG_7219.PNG IMG_7220.PNG IMG_7221.JPG IMG_7222.PNG	Refer to FP-1.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement No confirmations of comments via email in the past 15 mins. What is happening with FRA comment submissions? The public comment process is again not working properly.	For approximately 48 hours during the public comment period, the FRA website generated a non-delivery message in response to emails with yahoo.com or aol.com addresses. As soon as this problem was

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				brought to FRA's attention, the problem was remedied. However, this brief issue did not affect other comment tools available to interested parties. These tools included sending an email directly to FRA staff or the project email (DallasHoustonHSR@urs.com) or sending a letter to FRA.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Why is Madison county using Navarro counties Fema mitigation plan in the DEIS. This is a violation of the NEPA process. "Madison County Hazard Mitigation Plan Update, Mitigating Risk: Protecting Madison County from All Hazards, 2013 – 2018 The Navarro County Hazard Mitigation Plan uses FEMA's multi-hazards model to identify and rank hazards based on the potential for damages" Dallas to Houston HSR EIS – Chapter 3.0 Section 3.16 – Safety and Security 3.16-3 The DEIS has missed many opportunities to work with the right entities to ensure a safe and efficient study, therefore the entire report should be rescinded and started over.	The Draft EIS contained a typo under <b>Section 3.16.2, Safety and Security, Regulatory Context</b> , indicating the incorrect title for the Madison County Hazard Mitigation Plan. Details of the Madison County Hazard Mitigation Plan are documented in the Final EIS under <b>Section 3.16.2, Safety and Security, Regulatory Context</b> .
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Following the current NEPA process the following must occur during the planning process: Under the CAA, FEMA is responsible for (a) ensuring state and local policies are followed for debris burning, equipment exhaust, and construction dust; and (b) considering possible new traffic patterns. FEMA must ensure State and local policies are followed regarding: Debris burning Equipment exhaust Construction dust Also, FEMA must consider the potential or any proposed action to change traffic patterns to cause increased vehicle emissions in the project area. This has not occurred as FEMA has not provided input in this DEIS. How is the public able to make comments when FEMA was not involved nor any of their input considered? The entire DEIS should be rescinded.	FEMA does not have dedicated oversight responsibilities for implementing the CAA. The CAA is administered by the EPA and requires compliance from all federal agencies. FEMA is only tasked with the responsibilities stated in the comment when FEMA is the lead federal agency for a project. In this case, FRA is the lead federal agency and therefore, FRA is tasked with those responsibilities for this project. FRA (not FEMA) prepared the EIS in compliance with all NEPA regulations. FRA initiated the EIS to evaluate and document the possible environmental impacts of the Project as required by NEPA. FRA has ensured that state and local policies are followed. Potential air quality impacts associated with equipment exhaust, fugitive dust during construction, and potential increased vehicle emissions are discussed in <b>Section 3.2, Air Quality</b> .
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Since outdated floodplain information was used in the data compiled in the DEIS, this violates NEPA without a thorough and up to date assessment. Numerous pictures have been submitted to the FRA showing that an inadequate assessment has been done and violates Executive Order 11988. Please rescind the DEIS and provide an updated accurate analysis of the Harris County parcels that will have the train tranverse them. Executive Order 11988: Floodplain Management This page is about Executive Order 11988: Floodplain Management. Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative.	Refer to FP-1.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Please review the attached maps. Every map that we pull up from Federal DOT and Tx Dot do not show the need for this Dallas to Houston Route. Please put the following data on the record. The congestion is in the cities. The route on I-45 in between does NOT change in peak congestion from 2012 to 2032. Again this goes against the purpose and need of the project. Please explain why all the negative impacts to the environment, communities, landowners, taxpayers is justified when the peak congestion has not budged on I-45 by 2032. Is the federal DOT documentation not accurate? Again looking at data the No build should be the only option. Attachment(s):2012-congestion.pdf 2032-congestion.pdf	Refer to GN-3, PN-3 and SS-9.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement This process was not enacted and followed in the DEIS as recent flooding was not taken into account in any of the planning regarding EO 11988. Since the information is fatally flawed in the DEIS, adequate public comment on actual data is not being considered in this process. The entire DEIS should be rescinded. Description and Intent Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. In accomplishing this objective, "each agency shall provide leadership and shall take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health, and welfare, and to restore and preserve the natural and beneficial values served by flood plains in carrying out its responsibilities" for the following actions: acquiring, managing, and disposing of federal lands and facilities; providing federally-undertaken, financed, or assisted construction and improvements; conducting federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing activities. This section is Expanded. Click to CollapseSummary of Requirements The guidelines address an eight-step process that agencies should carry out as part of their decisionmaking on projects that have potential impacts to or within the floodplain. The eight steps, which are summarized below, reflect the	Refer to FP-1. The eight-step guideline process was followed for this Project. Executive Order 13690 also expands the management regulations to include identifying a higher vertical elevation and corresponding the horizontal base flood elevation to address current and future flood risk as discussed in <b>Section 3.8.2, Floodplains, Regulatory Context</b> .

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			decision-making process required in Section 2(a) of the Order. 1. Determine if a proposed action is in the base floodplain (that area which has a one percent or greater chance of flooding in any given year). 2. Conduct early public review, including public notice. 3. Identify and evaluate practicable alternatives to locating in the base floodplain, including alternative sites outside of the floodplain. 4. Identify impacts of the proposed action. 5. If impacts cannot be avoided, develop measures to minimize the impacts and restore and preserve the floodplain, as appropriate. 6. Reevaluate alternatives. 7. Present the findings and a public explanation. 8. Implement the action. Among a number of things, the Interagency Task Force on Floodplain Management clarified the EO with respect to development in flood plains, emphasizing the requirement for agencies to select alternative sites for projects outside the flood plains, if practicable, and to develop measures to mitigate unavoidable impacts.	
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement Our 1890's wedding venue that is right next to the train is eligible for NHPA and this was not considered in the DEIS report and is not even labeled as a business. It was built in the 1890's and will be closed down if the project occurs. We will suffer severe harm and loss of employment to many. This again has not been considered in the DEIS. We will never be able to go and purchase another 1890's house for a wedding venue on another piece of property within the City limits. This will cause irreparable harm to us and this was NOT taken into account in regards to negative impacts of this project. The NO BUILD is the only reasonable offer to prevent harm to this historic venue. "One important component of the National Historic Preservation Act (NHPA) directs federal agencies to take into account the effect of any undertaking (a federally funded or assisted project) on historic properties. "Historic property" is any district, building, structure, site, or object that is eligible for listing in the National Register of Historic Places because the property is significant at the national, state, or local level in American history, architecture, archeology, engineering, or culture. Typically, a historic property must be at least 50 years old and retain integrity."	Refer to CR-13.
Christie Parker	3/9/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement According to sections listed below the FRA has an obligation to vet the presumed financial aspects of the applicant. "Section 1501.6. Section 1501.7 on "scoping" also provides that all affected Federal agencies are to be invited to participate in scoping the environmental issues and to identify the various environmental review and consultation requirements that may apply to the proposed action. Further, Section 1502.25(b) requires that the draft EIS list all the federal permits, licenses and other entitlements that are needed to implement the proposal. These provisions create an affirmative obligation on federal agencies to inquire early, and to the maximum degree possible, to ascertain whether an applicant is or will be seeking other federal assistance or approval, or whether the applicant is waiting until a proposal has been substantially developed before requesting federal aid or approval" Since the FRA and Kevin Wright knows that TCR will be seeking federal funding additional economic studies and requirements will be necessary during this NEPA process. The FRA should have already ascertained this to be the case and Kevin Wright has told people that they will be seeking federal funding. He stated that they wanted to get through this environmental process before asking for federal funds to skip necessary steps in the NEPA process. If the FRA knows that they will seek federal funding the entire process needs to be completed including necessary economic studies. Otherwise this violates NEPA and provides the groundwork for litigation. It is the responsibility of the FRA to assess the likelihood of an entity seeking federal dollars and to take the appropriate steps in the NEPA process with this information. The DEIS should be rescinded and started over. Thank you.	Refer to GN-4 and NE-1.
Christie Parker	3/9/2018	Website	Hello Kevin, I understand that the FRA has granted another meeting in Harris county so this is two for this one county and many rural counties weren't even allowed to participate in a second county where they had land. Madison county didn't even have enough capacity. Another concerning issue is the high speed watch group stated this last night in a meeting: The HSW lady also stated that she had someone inside of FRA that says it's a done deal per say and that no extension would be granted. Done deal as far as the ROD This is very concerning especially since there is a preponderance of evidence of poor quality and bad data used and breaks in the nepa process. Please let me know if other meetings will be scheduled and will there be an extension as has been requested by many. Thank you for your time in advance in this very important matter.	Refer to GN-1, PI-1, PI-3, PI-8, PI-10 and PI-II.
Christie Parker	3/9/2018	Website	Hello Kevin, I was wondering if you had a chance to look over any information that I sent below? Also I wanted you to look over the information that is being circulated that is just plain wrong and it is the DEIS. Based on \$199 ticket sales and 7.2 million you will have the following: This is in your tables state- 89,550,000 local- 28,656,000 Based on \$199 ticket sales and 5 million you will have the following: This is in your tables state- 62,187,500 local-19,900,000 So how do you come up with 15-39 billion in state taxes from ticket sales as you state in the DEIS even with your own flawed data How do you come up with 5-12 billion in local taxes from ticket sales? I cannot comprehend how so many people looked at this data and thought that it was correct and then based economic findings on it and allowed it to be promoted and circulated to the media. Who can we hold responsible for the very wrong and misleading data found in the DEIS? The credibility of the entire DEIS is in question and the entire process should start from the beginning with accurate data. Since there has been an overwhelming amount of bad data found in the DEIS an extension should be warranted to vet this process as the "experts" that put the data together have failed the public. How can you base economic data on such wrong information? The FRA said they reviewed the data. How could this be? How could	Refer to SC-3 and SC-16.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			they have left off the federal excise tax on airline tickets? How could they have left off other fees? Has anyone looked at Texas laws or airline tickets? I just can't believe all the wrong data in this report.	
Christie Parker	3/9/2018	Website	Are you aware that the VMT numbers are 200% wrong and there will be in fact a net gain in emissions according to experts looking at your tables?	Refer to AQ-3. The VMT was revised with one-way trip assumptions and calculated emissions do not result in net increases as comment asserts. TCRR was consulted to verify what passenger ridership numbers meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate and is summarized in tons per year below for the largest emission alternative (A). This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of operational emissions for all pollutants, except for same as before, sulfur dioxide. Therefore, the conclusion of no adverse long term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS. Previous assumption: Trip distance = 478 miles; VMT avoided = 2,552,520,000 miles Revised assumption: Trip distance = 239 miles; VMT avoided = 1,276,260,000 miles For 2024: HSR Operation Emissions: NOx = 43.6, VOC = 5.3, PM10 = 6.0, SO2=113.6, CO = 38.9, CO2eq = 132,316 CO2eq Metric Tons 120,035 Vehicle Emissions: NOx=81.55, VOC=73.46, PM10=23.98, SO2=1.36, CO=1,401.09, CO2eq=203,250, CO2eq Metric Tons=184,385 Net Emissions: NOx = -38.0, VOC = -68.1, PM10=-17.9, SO2=112.2, CO = -1,362, CO2eq = 70,934, CO2eq Metric Tons = -64,350 For 2040: HSR Operation Emissions: NOx = 16.86, VOC = 4.42, PM10 = 3.04, SO2 = 34.03, CO = 29.97, CO2 equivalent = 96,747, CO2eq Metric Tons = 87,767 Vehicle Emissions: NOx = 35.33, VOC = 82.91, PM10 = 46.39, SO2 = 1.88, CO = 1045.2, CO2eq = 278,074, CO2eq Metric Tons = 252,264 Net Emissions: NOx = -18.5, VOC = -78.5, PM10 = -43.3, SO2 = 32.2, CO = -1015, CO2 equivalent = -181,327, CO2eq Metric Tons = -164,497
Christie Parker	3/9/2018	Website	The ridership numbers are not based on AADT station points. Who is vetting this data that is being put in the DEIS? Why was the economic purpose removed when that was used to eliminate the BNSFF corridor? The entire process should start over with this corridor UNLESS you choose to put the economic component back into the process. Looking forward to your response. Please answer what you can.	Refer to BA-10, GN-2, NE-1, PN-3 and PN-4.
Christie Parker	3/9/2018	Website	158. Good afternoon Kevin, I have a few questions and some grave concerns which I will delineate below. First it appears that the FRA put various data in the DEIS that is clearly wrong and flawed and my business is already being affected. Per the DEIS it is stated: So it looks like the FRA went and took pictures of these sites. If you look at KVP#27 it clearly does not use accurate information. The picture is facing the back of our property which the person taking the picture is right next to the huge wedding venue sign. They made sure not to include this in the picture or the actual description of the property. They left off the 1890's Victorian mansion, the landscaped acreage, the lake, the fountain, the paved lot, the gardens etc. FRA labeled this as a neutral impact. It said that only some residents and agricultural workers would see the train. We have weddings almost weekly here overlooking the lake which would be looking at the train. Most of our weddings are outdoor. We would have to close our business. This was not included in any of your impacts or descriptions. This wedding venue was just featured in a national glamour magazine due to its views and setting. We were just on KHOU 11 showing the venue as well. The FRA is allowing TCR and Holly Reed to say they will start construction in early 2019. This is already affecting brides booking as we are currently booking for the 2019 season and no one wants to book with a train going by every 15-30 mins. You can see for yourself that this will not be a neutral impact promo houseestate2017 promo houseestate2017 This is "promo houseestate2017" by rob cross on Vimeo, the home for high quality videos and the	Refer to VA-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			people... Notice in the back the cell phone tower and you notice where brides get married. The train will be on the other side of that lake. To call this a neutral impact is not reasonable and again has not used actual data. Many people have commented that the venue would be shut down and no one can understand how FRA deemed this as neutral.	
Christie Parker	3/9/2018	Website	Now you have Holly Reed and TCR keep stating that they are going to start on construction as early as the beginning of 2019. This is allowed to be blasted all across Houston. Do you see how this impacts our wedding business? Why are they allowed to do this when clearly they are not going by your guidelines at all. Railroad Administration holds heated public input meeting Railroad Administration holds heated public input meeting final round of meeting for grimes county public input sessions for HSR You can listen to her say it in the above link. I am just wondering since there is so much bad data in the DEIS what is the remedy of all those affected especially since TCP has not even proven they have eminent domain. It is clear to me that the FRA is allowing these untruths. Have you guys went and stated to the media that the Northwest station wasn't true information? Or that their construction guidelines aren't possible? Who has verified the ridership numbers as we have a number of experts that have shown these numbers to be false? Who has verified this data? Are you aware that the noise impact assessments are not even based on actual speeds of the train?	Refer to ED-1, GN-9, NE-1 and NE-2.
Christie Parker	3/9/2018	Website	17. Dallas to Houston High-Speed Rail Environmental Impact Statement The Texas Oklahoma Passenger Rail Project put in their purpose and need that it needs to be economically viable and even goes on to say that HSR must be able to operate with 100% o costs covered. All Aboard Florida also has an economic component and has provided a ridership and revenue study in their DEIS. This Houston to Dallas HSR had an economic component and was part of the steps presented to the public. FRA removed this component while also removing routes that were not economically feasible. How can you remove routes based on an economical feasibility and then remove the economic component of the purpose and need? The FRA needs to start over on this process as the public has been misled and the route tainted with variables that were later removed. The FRA had originally removed certain routes based on economics and then removed this component while also leaving routes that had a greater impact on lower income populations and minorities. How is this ethical? Especially when then removing the component of economic viability altogether. Again, please explain why the economic viability was removed from the project when it was first told to the public it would be a component. The public deserves to have a economic viable project as the FRA and TCR initially presented to them. I urge the FRA to halt this process immediately and start over with accurate variables that will be measured and presented to the public. Without any economic feasibility, the NO BUILD Option is the only alternative.	Refer to BA-5 and PN-4.
Christie Parker	3/9/2018	Website	Who is the MTAC on this project? AECOM? Can you please tell me if the attachment is the the most recent formal process for an EIS? This project has caused a great deal of emotional distress on many people. I would hope that the FRA would try to be objective in this process. Thank you in advance for your time on this very important matter.	Refer to NE-5.
Christie Parker	3/9/2018	Website	159. My name is Christie Parker. I want to quickly point out some very disturbing errors with this DEIS report compiled by TCR,AECOM, and the FRA. First, this document and TCR in their videos are reporting up to 39 billion in state sales tax revenue based on ticket sales will be generated. They go on to state that the train will generate 12 billion in local sales tax from ticket sales. They then report in Table 3.14-22 the following: Unfortunately this information is incorrect. They have inappropriately put sales tax on both HSR and Airline tickets. Looking at State Tax Laws there is no state or local tax on transportation. You can simply refer to bus, train, and airline tickets or the actual tax code to see that they have really messed up these figures. Their own Insight Research Report with their secret ridership numbers also mentioned the sales tax from ticket sales. This is a huge error but isn't the only one in this chart. They failed to capture the federal tax impact for airline tickets which includes a 7.5% federal excise tax imposed only on airline tickets and this would result in a loss of \$28,357,500 a year in federal tax revenue. Reviewing their chart with these huge errors we can all see that instead of generating \$68 million annually in taxes it will actually result in a loss of \$47 million annually to the taxpayers. That is more than a 100 million annual flip and will result in billions in loss of tax revenue as a result of the train. To put this all into perspective, City of Houston will NOT receive 10-12 million in sales tax on ticket sales as is being claimed by Mayor Turner and City of Dallas will NOT receive 10 million in sales tax revenue annually as well. The state will not get their potential 39 billion and the local areas will not receive their potential 12 billion. They will suffer a loss instead.	Refer to SC-3 and SC-16.
Christie Parker	3/9/2018	Website	Second, The DEIS report has doubled the Emission Data from vehicles. Even with the unrealistic ridership numbers, Houston will have a net gain in emissions due to this project. With accurate ridership data as estimated by other studies and accurate passenger counts in vehicles on I45, there will be a net gain in emissions overall. This is of particular concern as this has been proposed to be a "green" project. Surely the EPA following the Clean Air Act will not want to fall backwards on progress and improved air quality we have achieved over the past few decades due to inaccurate and false data in this report.	Refer to AQ-13.
Christie Parker	3/9/2018	Website	Finally, I would like to talk about the serious safety concerns with this project. TCR and the FRA have not included first responders and law enforcement in any planning of the DEIS. Many roads will be rerouted and closed according to the DEIS. There will be a significant delay in the public receiving medical attention and help in life and death situations when minutes mean everything. I can speak first hand as a critical care nurse with more than 15 years' experience to the detrimental effects of delays in medical treatment of just minutes. I have seen people die	Refer to PI-1, SS-18, SS-23 and TR-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			and people remain in vegetative states due to a delay in medical treatment. This is very serious folks and no one should die because of this train and the hundreds of relocations, reroutes, and closures that will occur. There is a vast amount of data I am not able to cover but I wanted to part with a few quotes from our now Mayor regarding this project. These quotes can be found in the scoping report on 8/1/2015.., property values would decline, and in these very neighborhoods where homes are being built and neighborhoods revitalized, the progress may very well be halted. Already, some prospective homeowners are delaying their decisions to purchase property in the area uncertain of the route that the high speed train may take. Sylvester Turner Economic Impact/Property Values Furthermore, the safety of families in these dense urban areas would be compromised... . Sylvester Turner Safety and Security The credibility of the DEIS along with TCR's secret ridership report is in question along with the Purpose and Need which has changed since the Scoping Report in the middle of a NEPA process. The No Build is the only option that should be considered. Thank you.	
Christie Parker	3/9/2018	Website	160. I am a concerned citizen of Harris County. Are you aware that Harris County is the county most affected by this route in relation to HazMat Impacts. Sixty nine percent of the hazardous impacts will be in Harris County. There are 121 plus sites that will be impacted. This poses an increased danger to all residents as these hazardous sites are disturbed. This could easily affect our drinking water and our health.	Refer to HZ-1.
Christie Parker	3/9/2018	Website	I wanted everyone to know that according to the DEIS, TCR has proposed approximately 126 miles of new public roads that the taxpayers will have to pay to maintain. This information can be found in sections 45-52 and are labeled in blue. They have new roads up and down the entire alignment fragmenting both wildlife and people's property. This will cause a significant negative environmental impact across Texas. Many endangered, threatened and special class wildlife will be negatively affected on the 8000 permanently impacted acres. TCR originally stated only 3000 acres would be impacted. Their land impact figures have almost tripled from 2 years ago. How is this acceptable?	Refer to LU-9, LU-14, NR-5, TR-7 and TR-8.
Christie Parker	3/9/2018	Website	As we all know, the price tag has moved from a 10 billion cost up to 18 billion in the DEIS and does not include ROW costs which will be significant. Here we have all these escalating costs and this company still has less than 1% of the funding in place. Looking at Amtrak's proposal, the congestion is not between the Houston to Dallas route but is between Houston to San Antonio or Dallas to San Antonio. Tx Dot studies also show similar results. Please see the attached charts.	Refer to GN-3 and NE-1.
Christie Parker	3/9/2018	Website	The Purpose and Need of this project is frankly not supported by the data. Please also reference the last 10 years of the AADT report just north of Farfield shows that the traffic count has hardly budged. This Dallas to Houston route is not the route showing the heavy and growing congestion. Either the No build or a different city alignment is therefore recommended. I have to question why we are even spending taxpayer's money and time on this project when this company still has not proven they have eminent domain. They continue to point to a default judgment as their claim to eminent domain which was released in its entirety. This is frankly embarrassing. In the last court case where there was actually a defendant and plaintiff in court, the judge ruled that they did not prove they had eminent domain and therefore were not able to survey the property. This company does not have eminent domain rights.	Refer to GN-2, NE-1 and PN-3.
Christie Parker	3/9/2018	Website	We know that the Dallas Station location is owned by an investor of Texas Central and one of his associates owns the midstop which Tx Dot thought should have been eliminated. We also know that some current City Officials would benefit from this train stop but at what cost to the general public. We already know that the current chief of staff of our mayor's office is a former employee of TCR. It is important to ensure that this process is driven by objective criteria and not special interests. Who is looking out for Harris County residents?	Refer to GN-7.
Christie Parker	3/9/2018	Website	161. My name is Christie Parker and I am a concerned Harris County resident speaking against the train. I have looked over a great deal of the DEIS and have found an astonishing amount of inconsistencies, gaps, and just bad data. Now if you ask TCR about this data, they readily throw the FRA under the bus and say it is their information that is wrong. So who is ultimately responsible for the data presented to the public? One example is ticket prices. TCR completely back peddled once they heard the uproar from the public with the average ticket prices of \$199 each way. They just posted on their site "The fares used for the purposes of the DEIS were not developed by Texas Central." I find this hard to believe as Table 3.14-22 under Socioeconomic and Community Facilities clearly sources TCRR for ticket prices. Then Texas Central recently published that \$10 million – Estimated local sales tax produced from the train's ticket sales in Dallas County. We can do the math here. At a 2% tax rate and a price tag of \$199 and half the proposed ridership of 5 million we suddenly arrive at this figure they are publishing on their site. So no need to throw the FRA under the bus for this expensive one way ticket price of \$199 as TCR is using these average ticket prices to project what they will pay out over and over again. <a href="https://www.texascentral.com/2018/01/29/north-texas-bullet-train-station/">https://www.texascentral.com/2018/01/29/north-texas-bullet-train-station/</a> Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives Texas Central continues to use inflated figures when estimating people that travel this route. "Travelers make roughly 14 million trips between Houston and North Texas per year, with most of those by car, Reed said". I completely disagree and can show tons of data refuting this but let's go with their figures. 14 million. Now let's take a look at their chart Table 3.14-22 on the previous page and they list a market share of 21% for HSR. If we use the 14 million figure stated by Holly Reed we come up with a ridership number of 2,940,000. This is well under their stated ridership of 5 million. They won't be able to pay their bills. How can their figures be so wrong? Now if we look at AAF's (All Aboard Florida) report they are using a more reasonable market share of 7.2 percent. Unlike AAF who is a private company, TCR refuses to show their data to us. AAF is transparent and has a ridership and revenue report in their DEIS.	Refer to GN-1, NE-1 and NE-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			TCR refuses to show its economic viability but are attempting to obtain eminent domain privileges and are seeking billions in taxpayer loans. They even state in their new report that investors and lenders will be bearing the risk. Folks that is us. Don't you think we deserve to have evidence of economic viability before going forward? Now let's look at some of their other figures they have in the DEIS and they also just posted a video with these figures in it as well. HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state. How could this be? In 100 years I can only come up with 6 billion with their projected ridership numbers. There is simply so much wrong data in this report. The no build option should be the only option on the table until the public has all the data to make an informed decision. Christie Parker	
Christie Parker	3/9/2018	Website	One example is ticket prices. TCR completely back peddled once they heard the uproar from the public with the average ticket prices of \$199 each way. They just posted on their site "The fares used for the purposes of the DEIS were not developed by Texas Central." I find this hard to believe as Table 3.14-22 under Socioeconomic and Community Facilities clearly sources TCRR for ticket prices. Christie Parker	3/9/2018	Website	19. Dallas to Houston High-Speed Rail Environmental Impact Statement What did the FRA do with the illegal survey information? There were a number of letters that the FRA received regarding illegal surveys from TCR and its reps so how did the FRA ensure that every survey detail was obtained legally? There are actually pictures of an engineering firm contracted by TCR illegally taking soil samples on a property owners land that refused survey. What was done with this information? The name of the company and information was also sent to the FRA. I request that the FRA confirm that every single piece of survey data collected be verified that it was taken legally. Please contact every landowner and confirm so we can ensure that no data was retrieved illegally. Until this is done, survey results are presumed to be illegal until proven otherwise given the data including pictures presented by landowners. I suggest this project be halted until the illegal survey information is verified not to be in the DEIS and every impacted landowner would have to confirm these results. I am sure that the FRA would not want to be involved in an illegal process especially since there is much evidence of this that was presented so I would urge caution for the FRA not vetting each and every survey result. This process should be halted immediately. Thank you.	Refer to GN-1 and NE-8.
Christie Parker	3/9/2018	Website	2. Dallas to Houston High-Speed Rail Environmental Impact Statement Regarding the Grimes County meeting this is something that a public participant noticed. The Gym which was very large was used for TCR's and FRA's Posters, but the Public Comment Speaker Period used the relatively smaller Cafeteria. This was the end of the several steps by the FRA to squash the Opposition Voices. I know that some people left not knowing about the smaller separate room for the comments portion and know another person was turned away because the room was packed. How does this not violate NEPA when yet again this is just another public meeting that AECOM and FRA hosted that did not adequately allow for public participation. This occurred in Madison County, Harris County, and Grimes County. The public needs more time and I request the comment period be extended to allow for full public participation and comments since this was violated in at least three meetings. Thank you	Refer to PI-11.
Christie Parker	3/9/2018	Website	20. Dallas to Houston High-Speed Rail Environmental Impact Statement Regarding EJ (environmental justice) whole corridors were removed for economic viability so they had economic viability and this trumps all other NEPA variables including EJ. And now the economic viability has been removed as a criteria yet EJ was not accurately reviewed. Please see attachments of how the selected corridor affects blacks and hispanics who will be disproportionately negatively impacted by this project. So the economic viability was removed and consideration was	Refer to EJ-1. The NEPA process includes the assessment of many varying topics including Environmental Justice (EJ). The Preferred Alternative was selected based on an analysis of the totality of impacts across all

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			not taken for the increase in minorities being impacted. Please see the attachments to show how these groups will be disproportionately targeted in the preferred route vs their percentage of population in Texas. This needs to be immediately assessed. I feel that the No Build Option is the only alternative if accurately reviewing the environmental justice impacts. Attachment(s): Black Population 2010 - FHWA HEPGIS Maps.pdf Hispanic Population 2010 - FHWA HEPGIS .pdf	topics studied in the Final EIS. The EJ assessment was conducted with consultation of best practices established by TxDOT, FRA and FTA.
Christie Parker	3/9/2018	Website	21. Dallas to Houston High-Speed Rail Environmental Impact Statement Texas is usually around a 4% unemployment rate. If you look at the attached pdf these counties along the route will be disproportionately affected as unemployment is much higher than the state overall. These affected areas show a consistently higher amount of unemployment which correlates to higher levels of poverty. The temporary construction jobs will not help this persistent problem. We need permanent growth and businesses in these counties. The train will not do this so the poor population will be disproportionately negatively impacted by this project. <a href="https://www.urban.org/research/publication/unemployment-and-poverty">https://www.urban.org/research/publication/unemployment-and-poverty</a> <a href="https://www.urban.org/urban-wire/long-term-unemployment-and-poverty-produce-vicious-cycle">https://www.urban.org/urban-wire/long-term-unemployment-and-poverty-produce-vicious-cycle</a> Here is the Bureau of labor statistics link <a href="https://www.bls.gov/eag/eag.tx.htm">https://www.bls.gov/eag/eag.tx.htm</a> Texas had an unemployment rate of 3.9% in Dec. 2017. This route focuses on individuals with a higher rate of unemployment and poverty. <a href="http://www.ncsl.org/research/labor-and-employment/state-unemployment-update.aspx">http://www.ncsl.org/research/labor-and-employment/state-unemployment-update.aspx</a> I am including unemployment maps, poverty maps, and graphs displaying percentages. The poor population will be greatly affected by this project and this has not been fully analyzed in the DEIS. The economic feasibility was placed higher than minorities and the poor population in this project. This is clearly unethical and does not really incorporate the NEPA process. The only ethical alternative is the NO BUILD OPTION. Attachment(s): Unemployment Rate 2016 - FHWA HEPGIS Ma.pdf nbroker.pdf chart.jpeg	Refer to EJ-1.
Christie Parker	3/9/2018	Website	22. Dallas to Houston High-Speed Rail Environmental Impact Statement Here is the breakdown of sections according to how many new public roads are proposed. I counted the ones outlined in blue only: Houston Segment (section 45) Harris, Waller, Grimes Cty 43.3 miles West of Teague Segment (section 46) Madison, Leon, Limestone, Freestone 64.2 miles IH-45 segment - alternative route (section 47) Madison, Leon, Freestone, and portion of Navarro 4.09 miles Navarro West (section 48) 3.75 miles Navarro East - alternative route (section 49) 2.61 miles Ellis West segment (section 50) 13.07 miles Ellis East - alternative route (section 51) 6.7 miles Dallas Segment- (section 52) 2.5 miles Total proposed mileage for new public roads is 126.82 miles or just over half the entire route in new roads for the taxpayers. Here is info about taxpayers paying for the maintenance of these new roads in the DEIS. Public Roads – Roads that would be accessible to the general public. Ownership and responsibility for maintenance of these roads would be by the appropriate local, municipal, county, state, or federal authority. Design details, ownership, and maintenance responsibilities for these roads would be closely coordinated with the appropriate Project stakeholders during more advanced design. o Proposed Public Roads – New public roadways. In many cases proposed roads were designed to facilitate ROW access for TCRR and emergency access needs, but would also improve connectivity or provide access to properties along the ROW. As such, they were not designated as HSR MOW Access roads. o Realigned Public Roads – Realignment or reconfiguration of existing public roadways. In some cases, public roads are rerouted along the HSR alignment to achieve grade separation and would also serve to provide access to the HSR ROW. Is the FRA, AECOM, and TCR aware that in the last legislative session SB 977 was passed preventing any taxpayer money to go towards anything related to the construction, operation and maintenance of a high speed rail project. The DEIS clearly states that roads will have to be added that the taxpayers will be paying to maintain. If there was not a HSR dissecting Texas then no new public roads would be built. Maintenance of these public roads by taxpayers is clearly against the signed into law SB 977 regulations. All of the new overpasses that will have to be maintained by taxpayers clearly go against this law as well. All of this information has been sent to Governor Abbott and will be sent to the attorney general. Why was the mileage of proposed public roads omitted from the DEIS? Is the FRA, AECOM, and TCR trying to hide this information from the public and lawmakers? Why was this information not calculated into costs for taxpayers thus negating some of the proposed "tax benefits"? The FRA needs to immediately put these miles into the DEIS and needs to address this while looking at SB 977 and adjusting the tax benefit suggested by this report. This project will negatively impact every taxpayer in Texas and is clearly going against new laws that were just implemented, therefore the NO BUILD OPTION is the only alternative.	Refer to TR-6, TR-7 and TR-8. SB 977 prohibits the use of state funds to plan, build, or operate the high rail operated by a private entity. TxDOT owned roads (including overpasses and underpasses), however, would continue to be maintained by the state. For the mileage of proposed public roads, please see <b>Section 3.11, Transportation</b> , specifically <b>Table 3.11-61: Summary of Transportation Impacts by Build Alternative</b> . Reroutes to existing roads would result in the addition of approximately 16.6 miles to 46.9 miles of public roads. For information about roadway modifications per county, Segment, and Build Alternative, refer to <b>Section 3.11.5, Transportation, Environmental Consequences</b> .
Christie Parker	3/9/2018	Website	23. Dallas to Houston High-Speed Rail Environmental Impact Statement I am writing today to request your immediate attention in order to prevent a potential environmental crisis to our community. As you are aware, a private for profit company was formed with joint collaboration with Japan to place a high speed rail train creating a divide across Texas spanning 239 miles. My family and I would be devastated by this project. The impacted land was granted as a League of Land from the State of Texas through Stephen F. Austin on March 10, 1831. Three generations of the House family have lived on this property working this land and keeping it in the family to this date. Calvin House and Pamela House currently live on the impacted property and their son and daughter plan on moving to this plot of land as well and building a house bringing with them their children. This would be five generations on this parcel. Over the years, this land has been utilized for cattle, rice and soybean farming, Jigg Bermuda grass for hay, oak and pine tree farming for wholesale, hunting and a thriving wedding venue business. Next to the wedding venue House Estate, Calvin House has set up a museum which includes pictures of the original home and House ancestors and memorabilia that has been utilized over the years in shaping this property into what it is today. The Texas map inside the	Refer to GN-1, SC-21 and VA-4.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>museum displays a large red area where the House family ran their cattle. However, what began as a working ranch, raising Brahamas and mixed cattle, eventually changed in 1957 to a rice and soy bean farm tended to by the House family; and then changed again in 1976 to farming live oak and pine trees. Calvin House and his wife Pam still actively maintain the ranch, a tree farm and House Estate which is an 1890's historic home built by Calvin's grandfather. House Estate was renovated in 1998 and rests comfortably on 18 acres designated for special events, such as weddings, that they now host. The train will travel approximately 400 feet from the edge of the pond where outdoor weddings are performed. Texas Central Railway/Texas Central Partners (TCR/TCP) and the FRA have pictures of the back of this property labeled KVP#27 in DEIS section II stating that the train will be a neutral impact. They failed to mention the fountain, pond, 1890's historic mansion, paved lot, numerous gardens, landscaped acreage and large sign that states that this is a wedding venue. It would have been impossible to not notice this when taking these pictures. They mention that the train will only be seen by some residents and agricultural workers yet this is clearly marked a wedding venue with numerous wedding guests on a regular basis and this business will be devastated by this project and will have to close its doors. If they missed these clearly evident characteristics of this one property, how much have they missed along the 239 mile route? Please see the following link to view the wedding venue: <a href="http://thehouseestate.com/">http://thehouseestate.com/</a> . This property was inaccurately depicted in the DEIS and not assessed properly. I would like the negative impacts to actually be put into the document with the loss of income of this business to the community including all those that are employed by this venue which would lose their job. There will definitely be a negative ripple effect caused by the closure of this venue and this KNOWN AND VERIFIABLE data should be subtracted from any presumed economic benefit of this HSR project. I urge that this process be halted until an accurate and detailed analysis of the impacted landowners be assessed. The FRA, TCR, and AECOM are using maps that are dated and since the ones in the DEIS are many years old they are not taking into account many homes and businesses along the route and their negative impacts. How could a proper analysis be done using maps that are a few years old? I recommend the NO BUILD OPTION as the FRA, AECOM, and TCR did NOT accurately assess negative impacts along the preferred route.</p>	
Christie Parker	3/9/2018	Website	<p>24. Dallas to Houston High-Speed Rail Environmental Impact Statement We currently have 6 ponds on our property and 1 will be directly impacted by the train. TCR has designed a berm over this pond which has many varieties of fish and wildlife and this 8 acre 32 foot deep pond will be filled in killing everything in the pond. Since TCR did not survey the property they didn't take into account the depth of the pond and more dirt will have to be acquired from additional land. Without doing boots on the grounds surveys for the majority of the route many environmental impacts were not assessed by TCR. Since AECOM and TCR did not know that this is 32 foot deep and 8 acre pond they did not accurately outline where they would obtain this dirt to fill in the pond. From an environmental standpoint how is the FRA and TCR justifying this project as there will be huge environmental negative impacts? Due to these negative impacts and lack of detailed analysis by the FRA, TCR, and AECOM I recommend the No Build option be moved forward.</p>	Refer to FP-1 and NE-8.
Christie Parker	3/9/2018	Website	<p>25. Dallas to Houston High-Speed Rail Environmental Impact Statement Our property has a large variety of wildlife that will be negatively impacted. We have seen bald eagles numerous times flying over our property. Each year we have migratory birds that utilize this land and ponds during their migration journey. We have red pileated woodpeckers as well on the property. There is a great concern due to the vast majority of migratory bird species and threatened birds on our property that a number of these birds will be killed due to the high speed rail transversing our parcel. Please refer to this independent research study regarding the mortality of birds <a href="https://www.frontiersin.org/articles/10.3389/fevo.2017.00117/full">https://www.frontiersin.org/articles/10.3389/fevo.2017.00117/full</a> From the study "Finally, we counted a total of 42 bird collisions, 28 of them recorded from the cabin. Collisions were recorded in 47.0% o the journeys. As a whole, the data are equivalent to a mortality of 0.0029 birds per km traveled by a high- speed train (i.e., one collision every 349.8 km). " We have too many threatened species on our property including those protected as migratory species. This huge negative impact must be analyzed in order to make an informed decision and conclusion of negative impacts on birds and protected species. The HSR will not allow birds to move out of its path and result in many deaths. This has not been studied as we only have existing slower rail. I urge the FRA to look at this study and review this impact to threatened species such as the bald eagle who has numerous nesting spots all along the proposed route. This will also affect migratory birds which are also along this route. Due to the detrimental affects of this high speed rail on these species which have not even been evaluated, I opt for the No Build Option. Please protect our protected and threatened species. Thank you</p>	<p>Refer to GN-3, NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b>. Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b>. The Pileated Woodpecker is a common resident found in East, TX and is not listed by the Endangered Species Act or by TPWD.</p>
Christie Parker	3/9/2018	Website	<p>26. Dallas to Houston High-Speed Rail Environmental Impact Statement Our property has not been surveyed by TCR as they came out numerous times to our house stating that they had eminent domain privileges but when asked to provide the paperwork showing this designation they never did and instead sued my family. In our court case, TCR lost the summary judgment with the judge declaring they did not have eminent domain privileges, were not a railroad, and could not survey the property. Since no survey was performed by TCR who does not have eminent domain privileges to this date, many critical elements of our property were not taken into account when TCR determined their route. For instance, we have pictures of the property that had a great deal of water during Hurricane Harvey and no such values have been considered when collecting data for the DEIS. Where is the Harvey flooding information? This project especially with the number of</p>	<p>Refer to ED-1, FP-1 and SS-17. Additional information regarding hydrology, hydraulics, and drainage for the Project are located in the <b>TCRR Final Conceptual Engineering Design and Constructability Reports, Appendix F</b>.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			berms will exacerbate this flooding problem and needs to be fully assessed, addressed, and mitigated if necessary. We have a large section of berm on our property according to the drawings supplied by TCR in the DEIS. Harvey impacts need to be addressed in the DEIS and it is negligent not to include this in the report. Flooding has not been properly assessed by AECOM, TCR, and the FRA in the DEIS report. Therefore since inaccurate and omitted data is present in the DEIS the No Build Option should be considered.	
Christie Parker	3/9/2018	Website	27. Dallas to Houston High-Speed Rail Environmental Impact Statement There have been a number of arrowheads that have been found on the property over the years where the train is proposed to travel and before any major construction project is even considered this should be thoroughly investigated once there is proof that this private company has eminent domain privileges. A cultural survey must be performed on our property due to these findings. No surveys will be allowed to be performed until TCR has proven that they have eminent domain which they have been unable to do in a court of law. I request that this process be halted immediately until this can occur. Thank you.	Refer to CR-5.
Christie Parker	3/9/2018	Website	28. Dallas to Houston High-Speed Rail Environmental Impact Statement My husband and I own a small parcel adjacent to the property where the train will travel which has a warehouse on it and we were never notified of the public notice by the Corp for this project. Did TCR notify the Corp of this adjacent landowner property as required by the permitting process as we never received any notice from your organization for this comment period?	Refer to NE-6.
Christie Parker	3/9/2018	Website	29. Dallas to Houston High-Speed Rail Environmental Impact Statement The maps used in the DEIS were very old and were not updated and many structures were not accounted for in the DEIS documents. They also listed our wedding venue as agricultural in the DEIS when it is clearly a business and has been an LLC for approximately two decades. These structures and designations were incorrectly classified or completely omitted in the DEIS and fall short of what is required in the Corp of Engineers permitting process. Can you please confirm with us that the proper documentation was reported regarding our property in this process as the DEIS has a great deal of incorrect information provided by TCR. Due to the overwhelming amount of incorrect data in the DEIS I recommend the No build as the only alternative in this process.	Refer to GN-1, NE-1, NE-6 and VA-4.
Christie Parker	3/9/2018	Website	3. Dallas to Houston High-Speed Rail Environmental Impact Statement There has been a clear Lack of Involvement and Communication by TCR and the FRA with Local Officials, in particular Law Enforcement. Eight counties of law enforcement is coming out now and stating the lack of coordination which gravely impacts safety of all Texans without their input along with first responders. Both the Leon county and the Grimes County Sheriffs voicing concerns about lack of contact by the HSR group in the public comment forum and this is an important issue of Public Safety and Law Enforcement combined. I am voicing my opinion of No Build at this time. The lack of coordination between law enforcement and first responders and foregoing Texans safety is just another reason to not build the train.	Refer to PI-1 and SS-23.
Christie Parker	3/9/2018	Website	30. Dallas to Houston High-Speed Rail Environmental Impact Statement TCR is asking for permits but has violated the permitting process of the USACE. It is a requirement of the permitting process for TCR to provide a list of local agencies including all approvals or denials regarding the project. Many rural counties have passed resolutions regarding this project and the permitting procedure and stated that TCR will not receive any permits without the proof of eminent domain and without this would not be able to move forward with construction of this project. TCR has yet to prove they have eminent domain and has not worked with local agencies. Has TCR provided the Corp with a list of these counties and their resolutions against the High Speed Rail project as required in the Corp's permitting process? I respectfully request an extension to the comment period in order to look further into the environmental impacts and NEPA process to ensure that the public is thoroughly able to review the massive first of its kind project.Thank you	Refer to ED-1, NE-6, PI-1 and TR-6.
Christie Parker	3/9/2018	Website	I respectfully request an extension to the comment period in order to look further into the environmental impacts and NEPA process to ensure that the public is thoroughly able to review the massive first of its kind project.Thank you	Refer to PI-1.
Christie Parker	3/9/2018	Website	31. Dallas to Houston High-Speed Rail Environmental Impact Statement There is a great deal of property that will have to be taken for this project to occur. TCR originally stated that 3000 acres or less will be needed and this has ballooned to more than 8000 acres according to the DEIS. This does not include all of the temporary acres that will be impacted for many years as well. There will be thousands of acres of special farmland that will be taken away forever should this project go forward. Please refer to the Step One Screening process developed by the FRA and TCR page 1-5 in the following link as I was unable to download the attachment on this site <a href="http://www.texascentral.com/wp-content/uploads/2015/09/Step" screening-of-corridor-alternativesreport.pdf"="">http://www.texascentral.com/wp-content/uploads/2015/09/Step"Screening-of-Corridor-AlternativesReport.pdf</a> . Please adhere to what was stated in this report that was presented to the public when analyzing the process. It is completely wrong and unethical to try to push the project when almost three times the land will be taken vs what was originally stated by TCR. Please start over and keep the environmental and landowner impact closer to what was stated in your earlier reports to the public. Until this happens, I urge the no build option as the public has clearly been misled.	Refer to BA-3, LU-9 and LU-14.
Christie Parker	3/9/2018	Website	32. Dallas to Houston High-Speed Rail Environmental Impact Statement Since surveys were not conducted on much of the route as the landowners refused since TCR couldn't prove they have eminent domain, they have not accurately outlined the devastation to Navasota Lady Tresses and other plant and animal species along the path. The process should not move forward until endangered species impacts are	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			thoroughly analyzed. This has not been done to date and vast amounts of endangered species will be forever lost. Therefore the no build option should be the only option that is considered.	
Christie Parker	3/9/2018	Website	33. Dallas to Houston High-Speed Rail Environmental Impact Statement The DEIS included a wildlife plan for crossings but did not take into account the new 126 miles of public roads that will be put in along the path. Many landowners will fence these areas as this is a new public access road. Due to this fragmentation of land throughout the route, wildlife corridors will be splintered as well with obstructed access. There will be a further fragmentation of land due to viaducts, berms, and new MOW access along the route. The current wildlife corridors in the DEIS were not accurately assessed due to the roads described above and with the travel of trains up to every 15 minutes along this path with plans to be as frequent as every 5 minutes in the future according to the DEIS. The wildlife crossings will be perpetually disrupted along the complete 239 mile path. None of this was addressed in the DEIS. To prevent the permanent detrimental impacts to the environment, the No Build Option should be the only option considered at this time.	Refer to NR-6.
Christie Parker	3/9/2018	Website	34. Dallas to Houston High-Speed Rail Environmental Impact Statement The carbon footprint will never be overcome on this project due to depressed ridership. Many studies show that in order to be considered a green project there needs to be greater than 10 million annual ridership. Tx Dot has only estimated 0.7-2.7 million and other independent studies had similar ridership reports. The VMT tables in the DEIS are also inflated to show a falsely elevated amount of emissions that will be removed. This data is flawed and incorrect in the DEIS and is further evidence that this project is not truly needed and why they have had to fabricate the numbers entered. The 1.2 passengers per vehicle was not taken into account in this information provided by TCR in the DEIS as well. Another table has the miles traveled inflated to show an increase in amount of VMT saved. Please conduct a full investigation of the data as this project will significantly affect the carbon emissions and damage the environment irreparably. THE NO BUILD SHOULD BE THE ONLY OPTI	Overcoming a carbon footprint is not required in a NEPA analysis or by current executive orders governing NEPA. The TxDOT Statewide Ridership Analysis Report that used the Statewide Analysis Model (SAM) stated that it was a high-level evaluation of forecasted ridership and cost effectiveness for various corridors to determine which ones may warrant further analysis. The report points out that the ridership forecast was conducted probabilistically to address uncertainties in estimated costs and forecasted ridership due to the inherent nature of a statewide high-level study that contained many unknowns that would need to be further evaluated and clarified in more in-depth corridor level studies. The report further states that the analysis was not intended to provide a detailed ridership analysis of an individual corridor, because many assumptions were applied to all corridors statewide, and would need to be modified to more accurately reflect the characteristics of any particular corridor. The range of ridership of 0.7 million to 2.7 million from the report cited in many comments were not the most appropriate Dallas-Houston corridor figures to use from this report. This is because the report states that further analysis was conducted on this corridor due to the results of the preliminary analysis being lower than other corridors, despite having higher numbers of intercity travelers. With further analysis using characteristics derived from publicized assumptions of the TCRR HSR at the 2013 date of the report, the ridership forecasted doubled to 7.8 million annual riders by 2035 with probabilistic results ranging 1.5 million to 5.7 million. The TCRR ridership number of 7.2 million that resulted from specific market analyses and using more specific and current service assumptions, are similar to the TxDOT projection of 7.8 million annual riders. None of the numbers used in the Draft EIS estimate were fabricated as they had bases in assumptions or other studies conducted. TCRR was consulted to verify what passenger ridership numbers meant in terms of a one-way or round trip. They indicated the numbers mean the number of trips in one direction. Therefore, the emissions for the Final EIS were revised with this assumption to calculate the numbers of cars removed from the road due to HSR use. The assumption of one-way trips was checked for its impact on the conclusion of HSR net project emissions impacts for the Draft EIS emission estimate. This change halved the vehicle miles traveled (VMT) and vehicle emissions removed by HSR use, but there was still a net reduction of

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				operational emissions for all pollutants, except for sulfur dioxide, which was also projected to increase under the original round-trip assumption. Therefore, the conclusion of no adverse long-term impacts to air quality from operational air emissions would not change. This revised assumption was included in the Final EIS. Even when adjustments to the passenger trip assumption are made to assume one-way travel, and a higher vehicle occupancy of 1.5 passengers/car from newer state-level data, there is still a net reduction of CO <sub>2</sub> eq. The environment will not be damaged irreparably.
Christie Parker	3/9/2018	Website	35. Dallas to Houston High-Speed Rail Environmental Impact Statement The need for this project is unfounded in actual verifiable data. Please refer to the attached validated maps. Clearly the congestion is between Houston to San Antonio and Dallas to San Antonio and NOT from Dallas to Houston. Due to the need being unsupported by various maps and data sets (Tx Dot study as well), the no build option should be chosen.	Refer to BA-2, GN-3, NE-1 and PN-3.
Christie Parker	3/9/2018	Website	36. Dallas to Houston High-Speed Rail Environmental Impact Statement Unfortunately, Texas Central Railway/Texas Central Partners (TCR, TCP) have kept the economics of the project hidden and refuse to release to the public feasibility studies of the project. Other private projects that involve the public such as All Aboard Florida (AAF) have released ridership and cost studies demonstrating the financial feasibility of the project before moving forward. AAF released their study in their DEIS which included a market share of 7.2% ad a public usage cost basis of 0.30-0.61 per mile. All TCR has released is a deficient biased report with unverifiable data with a market share of 36% ad a public usage cost basis of 0.83 per mile making the average ticket price of \$199 each way. This is unaffordable to the majority of the public therefore this project would not rise to a "public need" transportation modality. Objective studies have come to the same conclusion of Tx Dot of 0.7-2.7 million annual ridership and not the inflated ridership of 5 million as proposed by TCR who has refused to show their data. Since numerous studies have shown this not to be economically viable and the FRA removed this viability component presumably due to this, I emphatically request the NO BUILD OPTION for this project.	Refer to AQ-7, BA-6, GN-2, GN-3, NE-1, PN-3, PN-4 and SC-3.
Christie Parker	3/9/2018	Website	37. Dallas to Houston High-Speed Rail Environmental Impact Statement TCR has also stated numerous times and it is also written in the DEIS that there could be 15-39 billion going towards state taxes due to ticket sales. Please verify how this stated figure could occur. We need a complete detailed independent study of the financial feasibility of the project before going forward as this private company is seeking eminent domain privileges and RRIF and TIFIA federal loans in order to build this development project when the "public need and purpose" has not even been justified. I recommend the NO BUILD OPTION as the taxpayers will be on the hook for this project and there are many blatant errors and miscalculations in the DEIS.	Refer to GN-4, NE-1, PN-3 and SC-3.
Christie Parker	3/9/2018	Website	38. Dallas to Houston High-Speed Rail Environmental Impact Statement On the Txdot AADT maps just North of Fairfield on Highway I-45 you can see that traffic counts haven't moved that much in the past 10 years moving from 27,000 to 29,759 which includes semi trucks and travelers that are not traveling the Houston/Dallas route but just driving in the local area. This would account for 10,862,035 annual vehicles but does not exclude local traffic and semi trucks and such who would have to be subtracted from this travel count. <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> Please ensure that an accurate feasibility study is performed that uses verifiable data that the public can review as the public would be sacrificing a great deal for this private for profit venture before it goes any further. All of those individuals that will be devastated along the path that cannot even ride the train as it passes through their county deserve to see the feasibility of the project and verified "public need and purpose". Thank you in advance for your time and attention to this very important matter. Please move forward the no build alternative	Refer to NE-1 and PN-3.
Christie Parker	3/9/2018	Website	4. Dallas to Houston High-Speed Rail Environmental Impact Statement I request an Immediate Halt of the D-H HSR FRA DEIS Process due to Loss of Credibility of what was supposed to be an Independent FRA Process but now looks like a Political Process with Houston's Mayor Turner interference with the FRA process by placing his finger on the scales by choosing the site of the Houston Mall based on Politics, and prior to the FRA actually making the decision for the Houston Station. This has been announced over and over again on the news By Mayor Turner and TCR and has tainted the process. The FRA is being influenced in this process by the Politics of it as proven by Mayor Turner's actions ahead of that by the FRA. The DEIS process should be stopped immediately as it is clear it is not being driven by an objective process.	Refer to GN-9 and NE-1.
Christie Parker	3/9/2018	Website	39. Dallas to Houston High-Speed Rail Environmental Impact Statement The public's safety is of extreme concern as TCR, AECOM, and the FRA did not include FERC or PHMSA in their planning process despite hundreds of pipelines being impacted. Pipeline experts are very concerned as some pipelines are only 50 ft of the track and there has not been anything reported in the DEIS in relation to mitigation of vibration damage	Refer to EU-1, EU-2 and SS-18.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>to the pipelines close to the tracks. There is much evidence that stress waves created by vibration results in dynamic stress (fatigue) on pipelines, causing misalignment, and damage such as crack propagation, which can result in the failure of the pipeline. Other experts are stating that explosions could occur. How could we be more than 2 1/2 years in this process and FERC not even been consulted when this is such a serious matter and hundreds of pipelines are being impacted. If this private company and engineering firm could be so irresponsible with something of this nature, the only option that should be concluded is the no build option in order to keep the public safe.</p>	
Christie Parker	3/9/2018	Website	<p>40. Dallas to Houston High-Speed Rail Environmental Impact Statement Please look at the attached station information on I45 which again does not support the need of this project. Streetman location. There has been a 2.8% growth over the past 10 years. Many years it has went down. If we used 2015 it would have been a negative growth over the past 10 years. Again, the data does not support the ridership nor the need for the route. <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> Station Flag 82H75 Site ID H75 AADT 2016 29,802 AADT 2015 28,446 AADT 2014 26,256 AADT 2013 25,084 AADT 2012 28,000 AADT 2011 29,000 AADT 2010 30,000 AADT 2009 26,000 AADT 2008 30,000 AADT 2007 29,000 Please refer to the next page of data points for this section showing expected traffic count in 2035 and you will see these figures. Route ID IH0045-KG 2015 AADT 28,446 2035 Estimated AADT 54,620 24 Hour Truck Percentage 32.4 Looking at these calculations you see that 32.4% of the traffic is projected to be trucks and this data can be validated when looking at axels and trailers etc. My point is this is all validated information. Looking at this data we can drill down on ridership as people traveling on I45 to go from Houston and Dallas and vice versa will have to travel through this point. Running these figures you have 2035 figures of 54.620 less the 32.4% of truck traffic and less the 35% of local traffic leaves us with 17,806 estimated vehicles traveling to Houston to Dallas or Dallas to Houston. The standard for subtracting out local traffic according to the UIC and noted in Appendixes of Tx Dot study is 35%. The estimation used for passengers is 1.2 per vehicle. Factoring this in would lead us to possible 21,367 passengers daily traveling via car (subtracting out trucks traveling 32.4% and local traffic 35%). Now using TCRR's figures of 16% market share (Chapter 1 DEIS page 1-8 footnote - 13 According to TCRR's 2043 ridership forecast, HSR would account for 21 percent of the traveling public market share between Dallas and Houston. This HSR market share would derive from a 16 percent decrease in vehicular traffic market share and a 6 percent decrease in air travel market share (numbers rounded). you will have 1,189,432 passengers projected in 2035 and far fewer at current dates due to very few cars on I45 currently at this date. 1,189,482 is a paltry amount of riders in 2035 and negates all the emission data which is an entirely different figure that is blatantly wrong in the DEIS and will NEVER overcome the carbon footprint and will be a huge economic albatross on the taxpayers' back. Since I was able to breakdown the figures and ridership data using accurate and verifiable data, please show your work proving the viability of the project. Keeping this hidden from the public stating it is proprietary when numerous other reliable studies prove their data to be fatally flawed and absolutely preposterous is unethical and wrong. Please show how the vehicle ridership data calculations I performed above is wrong showing a possibility of only 1,189,482 passengers IN 2035 using the inflated market share of 16% by TCRR. I would like to note that reputable research companies do NOT show a market share of 16% as I used above which were TCRR's figures. Some are estimating only 5%. AF used 7.2%. It should be noted that their tickets are not selling out. Now if we used AAF's more reasonable market share for vehicles the ridership projected would only be 561,524 passengers annually from cars. This is completely unacceptable that this private company is trying to obtain taxpayer loans for a project that will surely fail and the FRA has taken out the economic viability study from the process and has allowed their data to permeate the DEIS documents when it can't hold up to scrutiny and is easily proven false. I have included a snapshot of the data I have entered above for tx dot's statewide planning map. Please prove that these station figures are wrong from Tx Dot. The only option that should be carried forward is the NO BUILD ALTERNATIVE. Attachment(s): IMG_7188.JPG IMG_7192.JPG</p>	<p>Refer to NE-1 and PN-4. Ridership was not derived from AADT projections. The equivalent numbers of vehicles removed from the roads were only compared to the future projected volume to see if it was possible compared to the projected volume. The comment's figure of 17,763 vpd is more than the 14,630 vpd derived from the ridership, corroborating it is possible. The 1,189,482-passenger count offered in the comment was derived by applying TCRR's percent change in market share without regard to the number of car trips that may have been used in their specific market analysis. The TCRR market share is not relevant to AADT projected by TxDOT's Statewide Assessment Model (SAM) used in the comment. The SAM AADT is a state-level travel demand modeling used to prioritize road projects statewide and to assist in general corridor studies. AADT figures from past or current years are not relevant for comparison to VMT numbers being projected for 2024 and 2040. By 2035, the AADT in the IH-45 corridor from Dallas to Houston by TxDOT's own estimation is expected to reach 106,475 vehicles per day (vpd). With the percentage of transport trucks constituting 20% in this forecasted AADT, the annual VMT for passenger vehicles would be 7.43 billion miles (106,475 vpd X 0.8 X 239 miles X 365 days/year). The VMT removed assumed in the Draft EIS of 2.55 billion miles would represent 34% of this associated VMT, and not more than 100% of IH-45 2040 VMT. The HSR passenger trip assumption was verified with TCRR to represent one-way trips instead of round trips. The VMT removed has been revised accordingly and the revised 2040 annual VMT removed of 1.28 billion miles represents only 17% of the IH-45 2040 VMT. The scope of NEPA analysis was to use available information to calculate emissions to assess potential environmental impacts, and not to assess the financial viability of the proposed project. The TCRR forecasted annual ridership of 4.4 million and 7.2 million for 2024 and 2040, respectively, represent averages of occupancy of 44% and 62% given the planned service levels of 68 and 80 trains per day with trainsets of a 400-passenger capacity. Insofar as calculating associated vehicle emissions reductions, the ridership was physically plausible with the planned level of service and car capacity. With respect to concerns of unrealistically high train occupancy leading to overestimating the vehicle removal emissions benefits, other high-speed rail planning literature did not indicate these projections to be either extremely optimistic or pessimistic. Studies of the environmental impact of different travel modes by University of California at Berkeley considered high/low occupancy rates to be 90%/10% for high speed rail, and 110%/25% for rail in general for averages of 50% and 67%, respectively. High speed rail price studies</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				in Spain, which had been experiencing low HSR occupancy rates compared with other European Union countries, used 60% as an average planning basis, or cited 66% as actual average occupancies targeted for increase through pricing. The TCRR occupancy rates appear to be neither overly optimistic nor pessimistic.
Christie Parker	3/9/2018	Website	41. Dallas to Houston High-Speed Rail Environmental Impact Statement Please prove the following figures that are in the DEIS a number of times: Additional sales tax revenue would result from the sale of tickets for travel on the new HSR system on an annual basis while it is in operation. As shown in Table 3.14-22, HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue. Local sales tax is assumed to be collected at the point of sale, roughly split between Dallas and Houston jurisdictions. This is from Page 3.14-29 in the DEIS and also on page Executive Summary ES-22. Please see the following chart in the DEIS as well Page 3.14-29 : Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives Mode HSR Car* Air* Bus All Modes Build Market Share 21% 7% 3 2% 10% nNo-Build Market Share 0% 8% 9 2% 10% nAverage Trip Price (2016\$) \$199 *** \$199 \$25 High Impact Assessment based on 7.2 million annual HSR travel demand Ridership Impact 7,200,000 (5,300,000) (1,900,000) - Federal Tax Impact (2016\$)** \$0 \$(8,971,840) \$0 \$0 \$(8,971,840) State Tax Impact (2016\$) \$89,550,000 \$(9,752,000) \$(23,631,250) \$0 \$56,166,750 Local Tax Impact (2016\$) \$28,656,000 \$0 \$(7,562,000) \$0 \$21,094,000 Net Impact \$68,288,910 How are you coming up with 15 to 39 billion in income to the state for ticket sales even using your own incorrect high unrealistic figures which have already been disputed on previous comments? It can easily be calculated that with the over inflated figures of \$89,550,000 in 100 years this only adds up to 8.9 billion in possible sales tax from ticket sales to the state. That is 100 YEARS! Please see how TCR continues to mislead the public with information that the FRA has allowed into the the DEIS in the attachment. There is so much unverified and wrong data in the DEIS that this study is based on. I request an immediate halt and thorough review of all the data on this project. The no build option is the only feasible option for this particular project and route. Attachment(s): image (2).png	Refer to SC-3.
Christie Parker	3/9/2018	Website	42. Dallas to Houston High-Speed Rail Environmental Impact Statement Please show how this was omitted in the figures in the DEIS: Federal Excise Tax: A federal excise tax of 7.5% i charged on airfare. Segment Fee: A segment fee of up to \$4.00 USD does apply per flight segment. A flight segment is defined as one takeoff and one landing.Jan 11, 2018 Please see data from the table on page 3.14-29 Dallas to Houston HSR EIS Chapter 3.0 Section 3.14 Socioeconomic and Community Facilities : Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives Mode HSR Car* Air* Bus All Modes Build Market Share 21% 7% 3 2% 10% nNo-Build Market Share 0% 8% 9 2% 10% nAverage Trip Price (2016\$) \$199 *** \$199 \$25 High Impact Assessment based on 7.2 million annual HSR travel demand Ridership Impact 7,200,000 (5,300,000) (1,900,000) - Federal Tax Impact (2016\$)** \$0 \$(8,971,840) \$0 \$0 \$(8,971,840) State Tax Impact (2016\$) \$89,550,000 \$(9,752,000) \$(23,631,250) \$0 \$56,166,750 Local Tax Impact (2016\$) \$28,656,000 \$0 \$(7,562,000) \$0 \$21,094,000 Net Impact \$68,288,910 I am including the attachment showing that TCR, AECOM, and the FRA have not factored in the loss of federal tax on airline tickets. This will be a loss of an estimated 28,357,500 annually using your chart and figures. I would recommend the DEIS process to be stopped immediately as there is so much incorrect data that is falsely propping up the purpose and need and economic benefits of this project. In the end this entire table will be shown to be false with bad data and there will only be a net loss to taxpayers. But for this comment, please explain the incorrect information provided for the federal excise tax on airline tickets. I would suggest that "experts" who put these tables together and information in the DEIS actually look at fees on an airline ticket when putting together such an important study. Due to the massive amount of wrong data in the DEIS the only option carried forward should be the No build option. Attachment(s): image.png	Refer to PN-3, SC-3, SC-16 and SC-19.
Christie Parker	3/9/2018	Website	43. Dallas to Houston High-Speed Rail Environmental Impact Statement Please refer to the Public Need statement in the the DEIS Dallas to Houston HSR EIS – Chapter 1.0 Pg. 1- 6 : 1.2.2 Need The need for HSR service is a result of increasing travel demand and the deficiencies of the existing and proposed transportation infrastructure to accommodate this growing demand between Dallas and Houston. Current direct route transportation options between Dallas and Houston are limited to vehicular and air travel.4 Due to increasing congestion on IH-45, automobile travel times between the two regions are projected to increase as travel speeds decrease. Flight time between the two regions is relatively short; however, the overall trip duration when considering pre-arrival time more than doubles. Additionally, flights are more sensitive to inclement weather and other delay-causing events from inside and outside of Texas compared to HSR. Please look at the following statement from the above: Flight time between the two regions is relatively short; however, the overall trip duration when considering pre-arrival time more than doubles. If you look at the total trip time of the bullet train you will see that it is more than double as well. If you have a 90 minute bullet train and you have a total trip time of 3.5 hours as purported by TCR themselves you have a more than double trip time as you have stated is why this is a problem with airline traffic. Using simple map, double the trip time for a 90 minute ride would be 3 hours. TCR is purporting their total trip time is 3.5 hours which is more than double the 3 hours. The purpose and need of this project is again not proven	Refer to GN-3, PN-3 and SS-9.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			when looking at the data. Please see the attachment and you can see where TCR is stating their total trip time is 3.5 hours. This is before the new increased TSA security for HSR that was passed with SB 975. The No Build Option is the only alternative that should be considered. Thank you Attachment(s): bullet train travel time_n.jpg	
Christie Parker	3/9/2018	Website	44. Dallas to Houston High-Speed Rail Environmental Impact Statement KVP#27 is looking at the back of our property. Other segments of the landscape unit have newer suburban developments surrounded by open spaces for agriculture (KVP #27 and Figure 3.10-21). This landscape unit has a moderate visual quality, as shown in Table 3.10-19, and a moderate viewer sensitivity. KVP #27 is a typical view of the landscape unit for all Build Alternatives. The view is from Becker Road facing south (Figure 3.10-80). The simulated view is shown in Figure 3.10-81. As shown in the simulation, the HSR system would be compatible with the area, which includes two large communications towers. The HSR system would be in the distance, and views would be partially limited by trees. Viewers in this area would be mostly residents, with some workers in agricultural and other industries. There would be some travelers on US 290 north of the neighborhood; however, this set of travelers would have a low sensitivity to the HSR system. Viewers nearest to the HSR system would have moderate viewer sensitivity, as shown in Table 3.10-34. Despite a slight reduction in visual quality to the landscape unit, the degree of impact in this landscape unit would be neutral because the HSR system would be compatible with the area and viewer sensitivities are moderate. Mitigation measures for visual impacts are described in Section 3.10.7 All of this information and descriptions are completely skewed and false and much information has negligently or purposely omitted. They clearly ignored that we have a huge wedding sign right next to where they took the picture, they ignored the historic Victorian mansion, the lake, the pond, the landscaped acreage, the gardens, the fountain, the paved lot and drive, etc. They ignored this was a wedding venue and stated this would be a neutral impact which it would actually shut down the business and have a huge negative impact on this business resulting in loss of jobs and tax dollars. The main people that would see the train would be brides and their guests and not agricultural workers. The 18 acres is an LLC and not agricultural. The person taking the pictures clearly omitted the important data points for this property. Please see the attached pictures showing where they turned the camera angle to prevent capturing the lake and wedding venue sign. I am also including a video showing this property and cell phone tower. The train will be on the other side of the lake 600 feet from where the brides get married at the gazebo. Is this a neutral impact??? Please see this video. <a href="https://vimeo.com/230392998?ref=fb-share">https://vimeo.com/230392998?ref=fb-share</a> HYPERLINK " <a href="https://vimeo.com/230392998?ref=fbshare&amp;1">https://vimeo.com/230392998?ref=fbshare&amp;1</a> "& HYPERLINK " <a href="https://vimeo.com/230392998?ref=fb-share&amp;1">https://vimeo.com/230392998?ref=fb-share&amp;1</a> "1 As this will destroy our wedding business and income source, I would request the No build option. Attachment(s): IMG_7266.JPG IMG_7271.JPG	Refer to VA-4.
Christie Parker	3/9/2018	Website	45. Dallas to Houston High-Speed Rail Environmental Impact Statement "For the air quality emissions estimation at the full-service level (2040) scenario, the annual ridership of 7.2 million passengers, existing 89 percent share of people using passenger cars to travel between Dallas and Houston and average passenger occupancy of 1.2 passengers per car were then used to calculate the number of annual car trips of 5,340,000 cars per year. It should be noted that this number of vehicles that would no longer travel IH-45 between Houston and Dallas would equate to 14,630 vehicles per day, or about 14 percent of the 2035 annual average daily traffic of 106,475 vehicles per day projected in transportation planning documents for this corridor.19" This data is flawed as it using an average per station for the entire route which factors in traffic in Houston and Dallas who are very unlikely to travel to the other city. In order to achieve a more realistic data point one must use a data point near the center of I45. If you look at a datapoint just north of fairfield you come up with these figures based on the AADT Route ID IH0045-KG 2015 AADT 28,380 2035 Estimated AADT 54,490 24 Hour Truck Percentage 32.4 Please see the link <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> and highlight AADT and future traffic on the left hand side. Follow the data points along I-45 Using these figures of 54,490 of daily traffic and accounting for 32.4% o truck use and 35% o local traffic supported by Tx Dot appendix, this leaves a total of 67.4% tan would definitely not use the train. This figure leaves 32.6% tat may travel this route to Houston and Dallas. This is estimated to be 17,763 cars per day.. 14% wich is what they are using above of this figure puts the number at 2,486 vehicles a day removed. This greatly affects the emission and VMT estimation. The net effect will be greatly negative and will irreparably damage the environment. Please use actual verifiable data when putting data in the DEIS and using in the report. It is irresponsible to include a weighted average of traffic stations in Houston and Dallas as it is very uncommon for this traffic to ever go to the other city. The only relevant data should be achieved from mid points and should be from lower midpoints as weighing 250,000 cars in the Houston area doesn't equate to the 30,000 car count in the middle. Why skew the data? Please review data points north of Fairfield in order to obtain a more reliable emission impact. When you examine the data you will be able to conclude that this will be a negative impact to the environment. Therefore, I opt for the NO Build option.	Refer to AQ-9.
Christie Parker	3/9/2018	Website	46. Dallas to Houston High-Speed Rail Environmental Impact Statement TCR failed to label a cemetary right next to its route which could easily be affected and within permit range which would justify a cultural survey according to section 106 of the USACE. The Whitfield Lake Cemetery Memorial marker is on Strawther Road at coordinates 30.896089,-96.026603. This is only the stone memorial, not the actual burial ground. The graves are so old, most if not all are marked any longer. The marker is 203.67ft to the South West of being directly under the transmission	Refer to CR-6.

			lines. <a href="http://files.usgwarchives.net/tx/madison/cemeteries/whitfield.txt">http://files.usgwarchives.net/tx/madison/cemeteries/whitfield.txt</a> Ms. Stephenson comments about Whitfield Lake Cemetery: She said her understanding is that when they ran the transmission lines through, the company working the project removed the tombstones, but did NOT move the bodies. She also said in her estimation, if they start working in that area they very well could dig up bodies. The owner of this parcel stated the bodies are still there and the parcel was NOT surveyed. Due to this negative impact along with the numerous other detrimental impacts I urge the No build option to be pursued. Attachment(s): 75252-MMS-1514822276000-attachment1-201.jpeg	
Christie Parker	3/9/2018	Website	47. Dallas to Houston High-Speed Rail Environmental Impact Statement Smith Family Cemetary has the train or temporary construction area right on top of it. The DEIS footprint maps do NOT have this cemetary marked. Details for Smith Family The cultural maps have this cemetery and it will be impacted (Atlas Number 7113024705) 3820 East Illinois Ave Directions: At the intersection of East Illinois Avenue and Mayforge, turn south onto Mayforge which runs parallel to Interstate 45. Then immediately turn right onto private property which is fenced. The cemetery is located between the fence and a brick building which was originally the Linfield Elementary School built before 1954. Three gravestones are clearly visible near the fence not far from the right-of-way of East Illinois Avenue. Historic Texas Cemetery? Yes Designation Date 8/16/2016 Number of graves estimated 16 Burial Dates 1866-? Cemetery ID Number DL-C247 THE NO BUILD OPTION SHOULD BE IMPLEMENTED	Refer to CR-6. The Smith/Kinnard Family Cemetery was designated as a Historic Texas Cemetery in 2016 by the Texas Historical Commission. The cemetery is adjacent to the Limits of Disturbance (LOD) of Segment 1 and is not eligible for listing in the National Register of Historic Places (NRHP), as determined in consultation between the Federal Railroad Administration and the Texas Historical Commission. Construction and operation of the Project has the potential to have an adverse impact on this cemetery.
Christie Parker	3/9/2018	Website	48. Dallas to Houston High-Speed Rail Environmental Impact Statement The FRA footprint maps have a permanent system over a portion of this cemetery. This needs to be verified as cultural maps have the cemetery in the woods . Information shows it to be in the pasture and <a href="https://atlas.thc.state.tx.us/Map">https://atlas.thc.state.tx.us/Map</a> Cemetery ID Number NV-C110 Cemetery Name Ward Cemetery Directions SH 31 west from Corsicana to FM 2452. Turn left and go 5.2 miles to FM 709. Turn right and go 2.3 miles. Cemetery is on the left in pasture. City Retreat County Navarro Historic Texas Cemetery? Yes Designation Date 2/1/2005 Number of graves 320 Burial Dates 1852 to present The No Build Alternative should be used as there will be numerous negative impacts of this project.	Refer to CR-6. In the Draft EIS, Ward Cemetery was reported as Resource NA.040 and is also designated as a Historic Texas Cemetery. Due to changes in the conceptual design, the Ward Cemetery is located outside the Historic Resources Area of Potential Effects and will not be impacted by the Project.
Christie Parker	3/9/2018	Website	5. Dallas to Houston High-Speed Rail Environmental Impact Statement Please refer to <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> and check out Station Flag 82H83 Site ID H83 AADT 2016 29,759 Route ID IH0045-KG 2015 AADT 28,380 2035 Estimated AADT 54,490 24 Hour Truck Percentage 32.4 This is actually under a 90% pojected increase from 2016 figures to 2035. It is not >200% a stated by TCR and allowed to be misrepresented in the DEIS. I have included the link to show the true data proving that mid point stations do not show the increase that TCR, FRA, and AECOM is purporting. Look at the Streetman station and the station just north of Fairfield on I45. Please correct all the errors related to this. The purpose and need is not justified and the no build option is the only option that should be considered due to the overwhelming amount of falsified data points arising from the DEIS. Attachment(s): thumbnail.png	Refer to BA-2, GN-3, GN-4, NE-1 and PN-3.
Christie Parker	3/9/2018	Website	49. Dallas to Houston High-Speed Rail Environmental Impact Statement The FRA maps have failed to acknowledge bald eagles in Harris County. We have seen bald eagles on our property a number of times and we believe there are nests nearby 15419 House Road Hockley Tx. 77447 21 Dallas to Houston High Speed Rail DEIS Appendix D_NaturalResources_Set_4of4 Harris county section	Refer to NR-3.
Christie Parker	3/9/2018	Website	50. Dallas to Houston High-Speed Rail Environmental Impact Statement "There are several pairs of bald eagles that roost at gibbons creek and have fledglings that could be prepared to make nests outside of Gibbons. The Maxwell property has seen a pair on their family property every weekend since deer season this year." This is a mile from the train route and the FRA maps do not include the bald eagle information or sightings in their documents. This info is noted from an environmental scientist. 21 Dallas to Houston High Speed Rail DEIS Appendix D_NaturalResources_Set_4of4 Grimes county section No build option should be used.	Refer to NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Christie Parker	3/9/2018	Website	51. Dallas to Houston High-Speed Rail Environmental Impact Statement The public roads as evidenced in the drawings fragments almost the entire route even the viaduct sections. This is not what was proposed to the public and in order to mitigate this clear damage, the train should run alongside existing roads. <a href="http://www.iene.info/wpcontent/uploads/COST341_final_report.pdf">http://www.iene.info/wpcontent/uploads/COST341_final_report.pdf</a> Dallas county- about 50% nw public roads. Ellis county about 50% nw public roads. Navarro county- about 10-20% nw public roads. West of Teague segment (Madison, Limestone, Freestone, Leon) about 90% nw public roads. Houston segment (Harris, waller, grimes)- about 40-50% nw public roads or realigned public roads with the majority of Grimes county with new public roads and a significant portion of beginning of Houston section with no designation. These new public roads will not allow free passage of livestock and wildlife and will further fragment our wildlife and go against what they are claiming in their wildlife crossing maps. 53 Dallas to Houston High Speed Rail DEIS Appendix G_TCR FDCE v7 DWGS VOLUME 5 pg 13-end Plus	Refer to GN-3, LU-9, LU-11, NR-6, TR-7 and TR-8.

			review corresponding maps 45-52 In order to prevent a detrimental impact to the wildlife for the entire 239 mile path the No Build Option is the only option that should be moved forward.	
Christie Parker	3/9/2018	Website	52. Dallas to Houston High-Speed Rail Environmental Impact Statement The FRA maps have incorrect labeling of our business House Estate. They have labeled this as agriculture use when we clearly have 18 acres listed as an LLC so it should be listed as a commercial establishment. The facility was also built in the 1890's and doesn't show up in their map as even being a building much less a commercial facility. <a href="http://thehouseestate.com/">http://thehouseestate.com/</a> We also have 5 barns/sheds and a residence on our property that they failed to place on this map as well. 24 Dallas to Houston High Speed Rail DEIS Appendix D_LandUse_Set_3of3 Sheet 241 Because of their incorrect coding they failed to calculate the negative impact to this business which will have to be closed down and fire many employees. The no build option should be elected as the economic impact has not been properly assessed.	Refer to VA-4.
Christie Parker	3/9/2018	Website	53. Dallas to Houston High-Speed Rail Environmental Impact Statement "For the Final Operating Scenario (FOS) in the analysis year (2040), it is assumed that trains will run every 10 to 15 minutes in each direction between 05:30 and 23:30, with the last trains departing from Dallas and Houston at 22:00." Seeing that the goal is for trains to pass approximately every 5 mins from one of the directions this will forever cause a divide between Texas. You will see startle scenarios in the tables and if you have a train coming by as frequently as every 5 mins you will never be able to move cattle even if you have a fence over a public road to move them to the other side. This will make the entire route impassable to wildlife and livestock. Please see the data in this report for the true effect of the startle effect which is extended out for quite a distance and will be a severe impact to many wildlife according to these charts. <a href="http://www.hsr.ca.gov/docs/programs/merced-fresnoeir/drft_EIR_MerFres_TR_Noise.pdf">http://www.hsr.ca.gov/docs/programs/merced-fresnoeir/drft_EIR_MerFres_TR_Noise.pdf</a> THE NO BUILD OPTION SHOULD BE CHOSEN.	Refer to NR-1.
Christie Parker	3/9/2018	Website	54. Dallas to Houston High-Speed Rail Environmental Impact Statement "Between the county's northern boundaries where the proposed route crosses SH 99, the land use is mostly rural with scattered single family residences." They failed to address noise levels where the train will be right next to a wedding venue which will greatly impacted this business and will result in shutting it down. Again they have this site mislabeled as agricultural when it is a business and sound levels were not accounted for in this area at all. Any increase of noise would be detrimental to this business and was not addressed at all. They were not consistent with their noise measurements for any of the counties and used various time intervals for certain locations. They did not state exact measurements as well from structures to train. Highly subjective results and too many variables and data points not addressed to be accurate. 29 Dallas to Houston High Speed Rail DEIS Appendix E_Combined Tech Memos_Set 1 of 2 Pg 91 If this DEIS cannot use accurate data then the entire report is in question. AECOM reps stated that noise impacts were based at 125 mph to 175 mph. This is not even the travel speed of the train nor what it is expected to travel at. I would like to know which noise impacts were assessed at 125 mph as these data points are completely skewed and provide inaccurate data for the DEIS. Due to all of the incorrect data I opt for the No Build Option.	Refer to NV-1.
Christie Parker	3/9/2018	Website	55. Dallas to Houston High-Speed Rail Environmental Impact Statement There is a soil conservation reservoir site adjacent to the train and permanent construction site which appears will be negatively impacted. This is not depicted on the FRA maps. <a href="https://mapcarta.com/21805530">https://mapcarta.com/21805530</a> 7 Dallas to Houston High Speed Rail DEIS Appendix D_Project_Footprint_Set_1of5 Sheet 52,53,84 Please assess. I request an extension of the comment period as many problems are being found in the DEIS and 75 days is not long to review a project that you have have 2 1/2 years to put together. Thank you	The Final EIS has identified in <b>Table 3.7-59: Estimated Waterbody Impacts – Navarro County</b> that Segment 3B would cross on viaduct at Soil Conservation Service Site 138. This comment appears to reference Soil Conservation Service Site 117, which is located greater than 1,500 feet east of the LOD for Segments 2A and 2B.
Christie Parker	3/9/2018	Website	I request an extension of the comment period as many problems are being found in the DEIS and 75 days is not long to review a project that you have have 2 1/2 years to put together. Thank you	Refer to PI-3.
Christie Parker	3/9/2018	Website	56. Dallas to Houston High-Speed Rail Environmental Impact Statement AAF another "private" railroad company has given their ridership and cost data in their DEIS. Why was this omitted in this project? <a href="https://www.fra.dot.gov/eLib/Details/L15932">https://www.fra.dot.gov/eLib/Details/L15932</a> Market share for this private train is estimated to be 7-8% while TCR is stating their market share is 21% which puts ridership at 2.9 million and not the 5 million. The actual ridership suggested of 5 million makes the market share at 36%. This is ridiculous as compared to this other private company. AAF has price per mile costing .35-.61 while TCR has costs averaging .83 TCR numbers not making sense and this private company just like AAF did needs to have their ridership and costs in the DEIS. This is especially warranted as this company is seeking eminent domain and federal tax dollars. Why did the AAF which is a private company have a ridership and revenue study while TCR did not in their DEIS? Please prove ridership details as your own numbers don't work out. The No Build Alternative should be chosen for this project	Refer to GN-2 and NE-1.
Christie Parker	3/9/2018	Website	57. Dallas to Houston High-Speed Rail Environmental Impact Statement Dallas county- about 50% nw public roads. Ellis county- about 50% nw public roads. Navarro county about 10-20% nw public roads. West of Teague segment (Madison, Limestone, Freestone, Leon) about 90% nw public roads. Houston segment (Harris, waller, grimes)- about 40-50% nw public roads or realigned public roads with the majority of Grimes county with new public roads and a significant portion of beginning of Houston section with no designation. We passed a law to prevent taxpayer funding for this project and now each county is responsible for maintaining a number of new public roads solely because of this project. If we don't have the train, the taxpayers will not have to use tax dollars for these new roads. 126 miles of new public roads maps	Refer to TR-7 and TR-8. <b>Table 3.11-61: Summary of Transportation Impacts by Build Alternative</b> provides a summary of new public road mileage by Build Alternative.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			section 45-52 Why was new public roads not included in the DEIS? To prevent the taxpayers and landowners being harmed by this project, I opt for the No Build Option.	
Christie Parker	3/9/2018	Website	6. Dallas to Houston High-Speed Rail Environmental Impact Statement Please look at <a href="http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html">http://www.txdot.gov/apps/statewide_mapping/StatewidePlanningMap.html</a> if you actually look at the data it isn't >100 or 200% fr midpoint data points. Streetman is actually only 83% i you look at 2016 AADT figures and jump to 2035. So it isn't greater than 100 or 200%. hese mid points are under 100%. o if someone brings it up I am going to tell them it is actually 83% i midpoint locations. It goes from 29,802 to 54,620. This is less than 100% nt greater. An 83% increase in traffic would be 54,537. So I actually rounded up for you guys. Please correct your data as your DEIS and TCR are using inflated figures.	Refer to BA-2, GN-3, GN-4, NE-1 and PN-3.
Christie Parker	3/9/2018	Website	58. Dallas to Houston High-Speed Rail Environmental Impact Statement In the Deliberative Draft this is stated: The Project will extend approximately 240 miles long, with an estimated right-of-way (ROW) width of approximately 100 feet (ft), and varying depths of impact. Additional acreage is expected to be utilized for ancillary facilities consisting of passenger stations, rail car and track maintenance facilities, electrical substations, maintenance roads, and signal houses. To date, design efforts have focused on the rail alignment, the principal component of the Project. Once the rail alignment is fixed, siting and conceptual design of the ancillary facilities will begin. Notice where it states estimated ROW is approximately 100 ft yet the average ROW that is being sought is 275 ft. This is unacceptable and not what was originally stated to the public. The No build option should be pursued.	Refer to BA-3 and LU-14.
Christie Parker	3/9/2018	Website	59. Dallas to Houston High-Speed Rail Environmental Impact Statement 3.12 Safety and Security Safety and security considerations would be included in the design of infrastructure, systems, facilities, and stations for the proposed HSR system. The following are key guidelines that would be incorporated during detailed design. • The design, construction, testing, and start-up of the HSR would comply with applicable safety and security laws (for persons and property), regulations, requirements and railroad industry practices. • Facilities and infrastructure design would provide capacity for safe emergency evacuation and compliance with emergency procedures. • Perimeter fencing would be installed on embankment infrastructure configurations with a footing to resist ingress from digging or burrowing animals. • Fencing, barrier separation, intrusion detection, and technological devices would be used to secure the right of way. • The HSR system would be equipped with an integrated system for detecting, monitoring, and responding to environmental conditions and emergency events. • Refer to Section 4 for more information. Please explain how this is NOT a barrier to wildlife and how this is not fragmenting wildlife populations. Thank you. Due to the detrimental effect on wildlife alone the No Build Option should be used.	Refer to NR-6.
Christie Parker	3/9/2018	Website	60. Dallas to Houston High-Speed Rail Environmental Impact Statement 13.8.7 Material Handling Practices The following list outlines some key measures that may be used to ensure that material handling practices comply with environmental requirements: Source • Fill material brought into the ROW from external source areas and used for the construction of any of the features listed would be from known sources with verified chemical properties. • Proper source documentation would be obtained by the Contractor and provided to regulatory agencies as required. • The use of fill material or soil from non-approved sources, including private landowners, would be in compliance with environmental and other applicable regulatory requirements. Have taking the large amount of fill materials from external sources and areas far from the actual berm been properly assessed when determining flood and drainage impacts around the berm? Where is the expert analysis regarding this? How can you build mounds of dirt and not expect this to impact drainage and flooding especially when the fill material is from external sources and no drainage is accounted for this close by? Where is the analysis of this in the DEIS? To prevent epic drainage issues and flooding which has not been properly analyzed in this report, the No Build Option is requested.	Refer to FP-1, LU-14, WW-1 and WW-2.
Christie Parker	3/9/2018	Website	61. Dallas to Houston High-Speed Rail Environmental Impact Statement 15.4.1 Enterprise Products Seaway Pipeline A conflict with a recently constructed 30in (762mm) diameter Enterprise Product Partners Seaway crude pipeline was identified along sections of alignment Segments WT and IH during the course of the utility assessment and investigation EW Segment The overall area of conflict begins near Station WT 130+00 (near the Madison/Grimes county line) and continues to Station WT 1030+00. This is approximately a 17-mile (27km) long stretch where the HSR alignment either crosses, runs along the utility line, or follows too closely to the pipeline. However, within this 17-mile (27km) stretch there are only seven (7) cumulative miles (11km cumulative) that have actual conflicts with the Seaway Pipeline easement. The seven miles of conflicts are not contiguous, but occur intermittently through the 17-mile (27km) section. IH Segment The overall area of interaction between the HSR alignment and the pipeline begins near Station IH1 3925+00 and continues to Station IH2 820+00, approximately 12 miles (19km). Within this zone, the main area of alignment and pipeline conflict happens between Station IH1 4150+00 and Station IH2 245+00, approximately 9 miles (14km). As a part of our due diligence process, we have continued to review the alignment of both the HSR and Seaway pipeline internally, and with Enterprise Product Partners. One of the primary conclusions based on discussions with EPP, is that the amount of right-of-way (ROW) overlap between HSR and Seaway should be kept to a minimum. If a repair is required on the Seaway pipeline in an area where the HSR LOD and the Seaway easement overlap, there is a potential that the HSR service would have to be temporarily halted until the repair is complete. This scenario is particularly valid if the construction type of the HSR is embankment and the slope extends into the Seaway	Refer to EU-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			ROW. As the design has developed, coordination with Enterprise Products has been ongoing. Several options have been discussed to mitigate the conflict between HSR and the Seaway pipeline. The options discussed with Enterprise included: • Relocating the pipeline outside of the HSR LOD • Protecting the pipeline in place where feasible • Using viaduct to span and avoid pipeline crossings As the engineering and design of the alignment progresses, we would continue to coordinate with Enterprise Product Partners and their team. In addition, cost estimates for the different options would be refined as more design data is developed and assessed. Selection of the preferred option would strive to minimize cost, scheduling, and environmental impact Have you reviewed clauses in the easements? There are a number of easements that don't allow for relocations. During the due diligence was this looked at and investigated? Many landowners are completely against the project and will be looking closely at their easements. Many will not allow any changes to their easements without strong language in favor of the landowner and against texas central and terms that the pipeline would not be comfortable with taking on the whole liability in many cases. As much of this 2 1/2 year process is chalked full of omissions, gaps, and inconsistencies, I recommend No Build Option for this project to ensure the safety of the public.	
Christie Parker	3/9/2018	Website	62. Dallas to Houston High-Speed Rail Environmental Impact Statement 1.1.3.3 Other Cooperating Agencies EPA has special expertise in regard to the Clean Water Act of 1972 (33 U.S.C. § 1344), Rivers and Harbors Act of 1899 (33 U.S.C. § 403) and the Clean Air Act of 1970 (42 U.S.C. § 7401). FHWA may have an approval role related to certain road crossings or construction within federal rightofway (ROW). FTA has special expertise in intermodal passenger service. No approvals or permits from FTA are anticipated. USFWS may have an approval role related to protected and endangered species and suitable habitat under the Endangered Species Act of 1973 as amended (16 U.S.C. § 1531 et seq.), Migratory Bird Treaty Act of 1918 (16 U.S.C. § 703-712; 50 C.F.R. 1) and Bald and Golden Eagle Protection Act of 1972 (16 U.S.C. § 668). Where is the coordination between state and county regulations for roads, overpasses, and realignments? Please show evidence according to state statute where the supposed "railroad" has authority to realign roads AND go under roads. Since this has not been thoroughly investigated by looking at current laws the No Build Option is the only is the only option that is feasible for this project. Thank you.	Refer to ED-1 and TR-6.
Christie Parker	3/9/2018	Website	63. Dallas to Houston High-Speed Rail Environmental Impact Statement City of Houston Chapter 30 of the City of Houston Code of Ordinances specifies noise limits of 65 dBA and 58 dBA at residential property lines for daytime and nighttime periods, respectively. However, noise from railroad equipment on railroad ROWs is exempted. Noise from construction between the hours of 7 AM and 8 PM is also exempted, provided the noise levels do not exceed 75 dBA at residential property lines. Dallas to Houston HSR EIS – Chapter 3.0 Section 3.4 – Noise and Vibration Since they are stating they are exempted as a presumed "railroad" are you saying that they do NOT have to mitigate for these noise levels? Is the COH public aware of this? Due to the noise impacts and many detrimental effects to the public, the No Build Option is suggested.	Refer to NV-1. The noise assessment methodology accounts for elevated structures and viaducts in calculating noise levels. This includes the height of the source and a reduction in the ground effect and shielding.
Christie Parker	3/9/2018	Website	64. Dallas to Houston High-Speed Rail Environmental Impact Statement To supplement the noise impact criteria in Figure 3.4-3, FRA7 provides guidelines for identifying noise sensitive locations where increased annoyance can occur due to a sudden increase in noise (the startle effect) from the rapid approach of HSR trains. This effect is separate from the impact criteria defined above, and is dependent on the train speed and trainset and would be confined to an area very close to the tracks. For example, 200 mph train operations would have the potential for increased annoyance within about 40 feet of the track centerline. Thus, the area where rapid onset rates of train noise may cause startle would typically be within the ROW limits of the rail corridor. FRA also addresses impacts on wildlife (mammals and birds) and domestic animals (livestock and poultry). Noise exposure limits for each are a Sound Exposure Level 8 of 100 dBA from passing trains, as shown in Table 3.4-4. Dallas to Houston HSR EIS – Chapter 3.0 Section 3.4 – Noise and Vibration Please review this as the startle effect will be detrimental to our wildlife including cattle industry. <a href="http://www.cvzv.sk/slju/14_2/8_Broucek.pdf">http://www.cvzv.sk/slju/14_2/8_Broucek.pdf</a> NO BUILD OPTION SHOULD BE OPTED FOR AS THE BEST CHOICE FOR THIS PROJECT.	Refer to NR-1.
Christie Parker	3/9/2018	Website	65. Dallas to Houston High-Speed Rail Environmental Impact Statement Site LT-1: 4019-4099 Bulova Street, Dallas. The Ldn measured at this location was 72 dBA. The dominant noise source was traffic on IH-45. Noise levels were measured for 24 hours near the gate to this parcel. Please tell us the speed of the train at this point. Please give the reference. Other DEIS reports show the exact speed measurements for each location. This report fails to mention this. AECOM has stated that noise impacts were measured with the train traveling at 125-175 mph yet we know that the train will be traveling at 186 mph and eventually over 200 mph. The noise impacts were not adequately assessed therefore the No Build Option is the only viable option until a reliable and accurate noise impact study can be performed. Please provide the speed of the train at this location in order to accurately gauge noise impacts. Thank you.	Refer to NV-6.
Christie Parker	3/9/2018	Website	66. Dallas to Houston High-Speed Rail Environmental Impact Statement Site LT-1A: 5125 Cleveland Rd, Dallas. The Ldn measured at this location was 53 dBA. The dominant noise sources were rural sounds and local traffic. Noise levels were measured during three separate one hour periods throughout the day along Cleveland Rd in front of the property. What time of day were these measurements taken and only three separate one hour periods were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer	Refer to NV-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	
Christie Parker	3/9/2018	Website	67. Dallas to Houston High-Speed Rail Environmental Impact Statement Site LT-1B: 1345 E. Beltline Road, Lancaster. The Ldn measured at this location was 70 dBA. The dominant noise source was traffic on E Beltline Rd. Noise levels were measured during three separate one hour periods throughout the day along E Beltline Rd in front of the property. Site LT-1C: 1786 Nail Drive, Lancaster. The Ldn measured at this location was 45 dBA. The dominant noise source was rural sounds. Noise levels were measured during three separate one hour periods throughout the day along Nail Drive in front of the property. Site ST-1: 1213 Coleman Avenue, Dallas. The Leq measured at this location was 63 dBA. The dominant noise sources were traffic on Lamar Street, traffic on Cedar Crest Boulevard and freight train activity. Noise levels were measured for one hour on the side of the road within the public ROW. What time of day were these measurements taken and only three separate one hour periods were used for some and 1 hour for others? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	3/9/2018	Website	7. Dallas to Houston High-Speed Rail Environmental Impact Statement This information comes from the DEIS, page 1-10: Per the DEIS: "According to the Texas Transportation Institute's 2010 report, even taking into account forecasted improvements, vehicular traffic on IH-45 between Dallas and Houston will increase more than 200 percent by 2035, resulting in average speeds decreasing from 59 to 39 mph." This is a simple math issue. Again looking at the TxDot Statewide Planning map various data points only show an 83% increase from 2016 to 2035. If the people creating the DEIS can't do math, then every number in the DEIS is called into question. This is not a minor error. If it were insignificant, it would not be in Texas Central's video. Members of the public and public officials both could very well be influenced by a greater than 200% increase in traffic. The DEIS and the DEIS comment period are fatally flawed. FRA should immediately issue a decision of NO BUILD.	Refer to GN-3, NE-1 and PN-3.
Christie Parker	3/9/2018	Website	68. Dallas to Houston High-Speed Rail Environmental Impact Statement Site ST-2: 4412 Kolloch Drive, Dallas. The Leq measured at this location was 62 dBA. The dominant noise sources were traffic on IH-45 and freight train activity. Noise levels were measured for one hour in the side yard of this residence. Site ST-3: 6350 J.J. Lemmon Road, Dallas (College Park Baptist Church). The Leq measured at this location was 54 dBA. The dominant noise sources were traffic on J.J. Lemmon Road and distant traffic on IH-45. Noise was measured for one hour in the rear parking area of the church. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	3/9/2018	Website	69. Dallas to Houston High-Speed Rail Environmental Impact Statement Site ST-4: 2607 Ferris Road, Lancaster. The Leq measured at this location was 52 dBA. The dominant noise sources were wind and livestock. Noise levels were measured for one hour in the field behind the residence. Site ST-5: 369 Farmer Rd, Ennis. The Leq measured at this location was 62 dBA. The dominant noise source was traffic on Route 34. Noise levels were measured for one hour on the side of the road within the public ROW. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	3/9/2018	Website	70. Dallas to Houston High-Speed Rail Environmental Impact Statement Site ST-6: SW 1000, Corsicana. The Leq measured at this location was 41 dBA. 			property facing a corral. What day of the week was this? We need the date and other info from this limited 24 hour study. Please provide this report for the public. Was it on a weekend? No Build Option should be chosen until accurate data can be provided.	
Christie Parker	3/9/2018	Website	8. Dallas to Houston High-Speed Rail Environmental Impact Statement Please review the attachment. The need of this project is not validated by a plethora of maps on the federal dot site and Tx Dot sites. The congestion now and in the future is between San Antonio and Houston and Dallas and San Antonio. Please explain why this Dallas to Houston route is being pushed when not supported by any of these maps or the state of texas ridership study which shows the Dallas to Houston being the 4th or 5th route of choice with greatest ridership. The no build is the only option for this specific route as future data and congestion maps do not support the statements made in the DEIS. Attachment(s): TrafficProject_ForecastMaps.pdf	Refer to GN-3, PN-3 and SS-9.
Christie Parker	3/9/2018	Website	78. Dallas to Houston High-Speed Rail Environmental Impact Statement Site ST- 13: 5192 Dawkins Road. The measured Leq at this location was 54 dBA. The dominant noise source was local traffic. Noise levels were measured in front of the residence by the gate facing Dawkins Road for a period of one hour. Site ST-14: 3159 Clark Road. The measured Leq at this location was 56 dBA. The dominant noise sources were local traffic on Clark Road, wind, farming activities and electrical noise from power lines. Noise levels were measured at the main gate for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported.	Refer to NV-1.
Christie Parker	3/9/2018	Website	79. Dallas to Houston High-Speed Rail Environmental Impact Statement Site LT-16: 6113 FM 1696. The Ldn measured at this location was 45 dBA. Noise levels were measured for 24 hours and the measurement was performed at northeast edge of the property overlooking at the power lines. The dominant noise sources were wind and farming activities. What day of the week were these noise levels obtained? Saturday? Sunday? What if there was no farm activity that day? Some months have limited activity. We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	3/9/2018	Website	80. Dallas to Houston High-Speed Rail Environmental Impact Statement Site LT-17: 10735 Route 90. The Ldn measured at this location was 47 dBA. Noise levels were measured for 24 hours and the measurement was conducted at the eastern side of the property at a distance of about 150 feet from a metallic shed. The dominant noise source was distant local traffic. Site LT-18: 5126 FM 1774. The measured Ldn at this location was 60 dBA. The dominant noise sources were barking dogs and local traffic from FM 1774. Noise levels were measured for 24 hours on the northern side of the property at a distance of 150 feet from FM 1774. Barking dogs? Really? So are there barking dogs often in this area? Wouldn't you want a reputable and accurate data point to use? What day of the week were these noise levels obtained? Saturday? Sunday? What if there were no barking dog activity that day? We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	3/9/2018	Website	81. Dallas to Houston High-Speed Rail Environmental Impact Statement Site ST-15: 15619 TX-90. The measured Leq at this location was 53 dBA. 			during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported. Please provide the report with the day of the week and the hour of the day of the week that this measurement was taken.	
Christie Parker	3/9/2018	Website	84. Dallas to Houston High-Speed Rail Environmental Impact Statement Site LT-20: 21512 Binford Road. The measured Ldn at this location was 49 dBA. Noise levels were measured for 24 hours at the northern edge of the property at the setback distance of the residence. Traffic noise from Binford Road was not significant during the measurement period. Site LT-21: 12118 Canyon Arbor Way. The measured Ldn at this location was 67 dBA. Noise levels were measured for 24 hours at the northern edge of the property near a residence. The dominant noise source was local traffic from US-290. Site LT-22: 14812 Hempstead Road. The measured Ldn at this location was 44 dBA. Noise levels were measured for 24 hours at the front yard of the property facing Hempstead Road. The dominant noise sources were local traffic on Hempstead Road and UPRR trains, located parallel to Hempstead Road. Site LT-23: 11217 Todd Street. The measured Ldn at this location was 47 dBA. The dominant noise sources were local traffic on Todd Street, Harland Drive and Hempstead Road, plus Union Pacific trains. Noise levels were measured for 24 hours on the northern edge of the property. What day of the week were these noise levels obtained? Saturday? Sunday? We need the actual date of these measurements. Why were known conducted in other rural areas for more accurate measurements? Not enough measurements were conducted in this segment? Where are the rural sensor measurements? We need more accurate measurements and not skewed results. Please provide what day and the full report of these measurements. The No Build Option should be only option chosen until a more accurate study is performed. Thank you	Refer to NV-1.
Christie Parker	3/9/2018	Website	85. Dallas to Houston High-Speed Rail Environmental Impact Statement Site ST-18: 6734 Limestone Street. The measured Leq at this location was 57 dBA. The dominant noise source was local traffic on Limestone Street and Hempstead Road. Noise levels were measured in front of the residence for a period of one hour. Site ST-19: 20710 May Showers Circle. The measured Leq at this location was 61 dBA. The major noise sources were local traffic on Hempstead Road, Huffmeister Road and residential activities in May Showers Circle. Noise levels were measured in the front yard of the property for a period of one hour. What time of day were these measurements taken and only one hour period were used? Could this provide accurate data. Other data points were for 24 hours. Please show the times and reports of when data was reported for this. Any data during the 11 pm hour? In order to have a reliable and accurate report a longer period of time needs to be measured and the public should have the report. The no build option should be chosen until accurate data is able to be reported. Please provide the report with the day of the week and the hour of the day of the week that this measurement was taken.	Refer to NV-1.
Christie Parker	3/9/2018	Website	86. Dallas to Houston High-Speed Rail Environmental Impact Statement "TCRR intends to provide high levels of security to safeguard its passengers, employees, and property. TCRR's security strategies and policies are being developed to ensure that foreseeable threats and vulnerabilities are identified and properly mitigated or eliminated. To advance and inform it's planning and design, TCRR would work closely with local, state, and federal law enforcement and emergency response officials. TCRR has had preliminary meetings with the Department of Homeland Security (DHS) and the Transportation Security Administration (TSA) to discuss their recommendations and guidance in these planning efforts. Additionally, TCRR would coordinate security planning with state, county, and city authorities along the entire right-of-way. Unlike security that is provided at airports, passenger rail security must be designed to fit the passenger rail environment. TCRR would follow a number of the best practice guidelines currently used by other rail carriers and would incorporate security counter-measures into the design of its infrastructure and supporting systems. TCRR would also implement additional strategies that incorporate proven security systems and new technologies used by other highspeed rail and large transit systems." S.B. No. 975 AN ACT relating to the security of high-speed rail operated by a private entity. BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS: SECTION 1. Chapter 112, Transportation Code, is amended by adding Subchapter E to read as follows: SUBCHAPTER E. SECURITY FOR HIGH-SPEED RAIL OPERATED BY PRIVATE ENTITY Sec. 112.201. DEFINITION. In this subchapter, "high-speed rail" means passenger rail service that is reasonably expected to reach speeds of at least 110 miles per hour. Sec. 112.202. APPLICABILITY. This subchapter applies only to high-speed rail operated by a private entity. Sec. 112.203. DEPARTMENT OF PUBLIC SAFETY POWERS AND DUTIES. (a) To the extent not preempted by federal law, the Department of Public Safety: (1) shall administer and enforce the provisions of this subchapter; and (2) may adopt rules as necessary to administer this subchapter. (b) In carrying out the powers and duties under this subchapter, the Department of Public Safety: (1) has the same authority granted to the Texas Department of Transportation under Subchapter B, Chapter 111; and (2) shall ensure that rules and standards adopted under this subchapter are consistent with applicable federal rules, regulations, and standards. (c) The Department of Public Safety shall provide the emergency management training course described by Section 418.005, Government Code, to employees of a high-speed rail operator designated under Section 112.204(c). Sec. 112.204. SECURITY. (a) A high-speed rail operator shall: (1) in the manner required by law for intercity passenger railroads, implement all security requirements of the Transportation Security Administration or its successor agency; (2) conduct periodic risk-based threat and vulnerability assessments; and (3) in consultation with the Transportation Security Administration, implement appropriate security measures in response to results of the assessments, which may include: (A) establishing effective intrusion protection and access	Refer to SS-9.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			controls for railroad-owned facilities and the rail corridor; (B) instituting active or passive passenger screening protocols; and (C) providing appropriate levels of onboard security for all revenue service trains. (b) A high-speed rail operator shall collect and investigate security threat reports submitted by members of the public. (c) A high-speed rail operator shall: (1) designate employees who are managers or supervisors and whose position description, job duties, or assignment includes emergency management responsibilities; and(2) require those employees to complete the emergency management training described by Section 418.005, Government Code. (d) A high-speed rail operator may not use the services of a peace officer employed by this state or a political subdivision of this state unless the operator compensates the state or political subdivision, as applicable, for the officer's time. Sec. 112.205. COORDINATION WITH OTHER ENTITIES. (a) A high-speed rail operator shall coordinate security activities and investigations with federal, state, and local law enforcement agencies, including by communicating about credible threats, major events, and vulnerable places along the rail line or on a train. (b) A high-speed rail operator shall communicate as appropriate with the state Emergency Management Council and the Texas Division of Emergency Management about safety and security issues. SECTION 2. This Act takes effect immediately if it receives a vote of two-thirds of all the members elected to each house, as provided by Section 39, Article III, Texas Constitution. If this Act does not receive the vote necessary for immediate effect, this Act takes effect September 1, 2017. How is this law addressed in the DEIS? Doesn't look like this is being incorporated. It is not in the safety sections nor in trip times of the train which will ultimately delay it. Until this can be looked at more thoroughly the no build option should be sought.	
Christie Parker	3/9/2018	Website	87. Dallas to Houston High-Speed Rail Environmental Impact Statement Looking at Table E3.2-1: Train Traction Power Consumption the TCRR engineers have given once again very flawed data. Reviewing the chart which is 200% of I am concerned how we need to keep commenting on terrible data provided in the DEIS when it is not going to have a chance to be addressed. Looking at this table is the 7.5 for RT wrong or is the 68 trips wrong? This just shows once again how this report prepared by TCRR is fatally flawed.The NO BUILD OPTION should be chosen.	Refer to AQ-14. The 7.5 MWH is correct for end-to-end power consumption of a single train from Dallas-Houston or vice versa. The 68 trains per day is accurate for the initial service level and are trains going in one direction with 34 from Dallas to Houston and 34 from Houston to Dallas. The column was mislabeled as round trip and has been corrected in the Final EIS. None of the train power consumption numbers are altered by this correction as the consumption was provided by TCRR and the assumption of one way or round trip of trains was not used in the calculation of the total daily train consumption.
Christie Parker	3/9/2018	Website	9. Dallas to Houston High-Speed Rail Environmental Impact Statement Texas Central is saying the \$199 average fare is a "rumor" (implying it will be lower but not saying what the average train fare will be) used to calculate the sales tax revenue while simultaneously promoting the sales tax revenue of \$10 million for Dallas. This is unethical. How can they say that they will give Dallas \$10 million in sales tax revenue for ticket sales if this \$199 is a rumor. Because TCR is stating this, all of these figures using \$199 estimating tax payouts should be removed and the public needs to see the new figures. How can AECOM and the FRA work with such a company which can't give straight up info. Please clarify if the \$199 is a rumor as expressed by TCR on their website. Until we can actually obtain verifiable data, the DEIS process should be halted. In the very least an extension of the comment period is warranted.	Refer to SC-3.
Christie Parker	3/9/2018	Website	88. Since the "DEIS is a culmination of over 100,000 hours of work" as stated by Texas Central how can your agency think it is reasonable to extend the deadline by "15 days"? The DEIS appears to have been thrown together as many tables and maps have conflicting data. How could this be with all these "experts" that contributed to this study. Since you have allowed such a large amount of bad and conflicting data, the public deserves more time to review and comment on this information. Please allow a 90 day extension	Refer to GN-1 and PI-3.
Christie Parker	3/9/2018	Website	89. Dallas to Houston High-Speed Rail Environmental Impact Statement The Federal Surface Transportation Board denied Texas Central Railway Eminent Domain Powers and proclaimed they do not have oversight jurisdiction over TCR's Project. The STB ruled that they must go back to Texas for regulation and oversight. Has this occurred? Why are we spending taxpayer money when this has not even been resolved and eminent domain privileges are in dispute? How much taxpayers' money has been spent on this project thus far without this being ascertained?	Refer to ED-1, NE-1 and NE-5.
Christie Parker	3/9/2018	Website	90. Dallas to Houston High-Speed Rail Environmental Impact Statement n the lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed to survey the property. This has been the only judgment after hearing the case and thousands of pages of documents and it was ruled that they were NOT a railroad, did not have eminent domain and could not survey the property. Why are we spending taxpayer dollars when this private company has never proven in court that they have eminent domain?	Refer to ED-1 and NE-1.
Christie Parker	3/9/2018	Website	91. Dallas to Houston High-Speed Rail Environmental Impact Statement The attorney general of Texas stated the Miles case in Leon county would provide precedence of whether or not TCR has eminent domain so because they didn't want to lose this case, TCR claimed they did not need to get on Mr. Miles property any longer so the lawsuit and the court case was stayed. They in fact need to get on his property according	Refer to ED-1, GN-4, NE-1 and NE-8.

			to the DEIS so this should be resolved in court as stated by the attorney general before any further work is performed by the FRA. Again, why are we spending taxpayer money studying a project that has yet to even prove they are a railroad according to current Texas statutes.	
Christie Parker	3/9/2018	Website	92. Dallas to Houston High-Speed Rail Environmental Impact Statement Senate Bill 977 passed in the 2017 Texas State Legislature which does not allow TCR to use any State Funds. However, the DEIS shows that taxpayers will maintain overpasses built solely because of the high speed rail and this will cause an increase in Texas tax dollars as overpasses cost a great deal more to maintain than an at grade road. This outline in the DEIS specifically goes against current Texas law.	Refer to TR-7 and TR-8. SB 977 prohibits the use of state funds to plan, build, or operate the high rail operated by a private entity. TxDOT owned roads (including overpasses and underpasses), however, would continue to be maintained by the state.
Christie Parker	3/9/2018	Website	93. Dallas to Houston High-Speed Rail Environmental Impact Statement Senate Bill 975 passed in the 2017 Texas State Legislature provides for increased Security and Safety standards more closely resembling TSA Airport standards. The DEIS fails to apply these principles and we cannot leave this up to a private company that has shown to bypass rules when true regulations were passed. These rules were also not taken into account when formulating their trip time of 3.5 hours. They attributed these security guidelines when calculating airport trip times but not their own thus proving once again why the purpose and need for this project is not justified and the no build option should be the outcome of this current study with no further taxpayer funding for a company that has not even proven they are a railroad.	Refer to GN-4, PN-3 and SS-9.
Christie Parker	3/9/2018	Website	94. Dallas to Houston High-Speed Rail Environmental Impact Statement Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a permit in order to construct a HSR. The permit also requires that TCR prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. There has been a lack of coordination when drafting this environmental impact study with all of the counties mentioned. How are you able to do an accurate factual study without receiving input from the majority of the route? Texas Central only has 35 miles of the route under option contract according to what they told the Land and Resource Committee so again without coordinating with the majority of counties and landowners how is this not a flawed study?	Refer to ED-1, ED-3, GN-1, NE-1, NE-8 and PI-1.
Christie Parker	3/9/2018	Website	95. Dallas to Houston High-Speed Rail Environmental Impact Statement Is the FRA planning on providing a waiver in regards to its current FRA equipment safety standards as they are not met by TCR's Japanese Equipment?	Refer to SS-4.
Christie Parker	3/9/2018	Website	96. Dallas to Houston High-Speed Rail Environmental Impact Statement The FRA currently does not have any regulations in place for trains at this speed. How are taxpayers paying for this study when we don't even have any current regulations regarding high speed rail and no state regulatory agency exists to provide regulatory oversight of TCR's HSR as there was previously when contemplating a high speed rail project.	Refer to GN-4, NE-1, NE-5 and SS-5.
Christie Parker	3/9/2018	Website	97. Dallas to Houston High-Speed Rail Environmental Impact Statement TCR and the FRA have not worked with local county emergency response entities to understand the safety and security needs of TCR which will be paid for by the local Counties. It is evident that there will be a delay in response times according to details in the DEIS and even a minute delay can easily result in fatalities. I work in the health care field and to dismiss this delay as not being significant is why the FRA and TCR should have collaborated with emergency response teams as the FRA's conclusions are clearly flawed and will result in deaths. One death is too many and the no build option should be considered further vs risking citizens lives.	Refer to PI-1, SS-18, SS-23 and SS-26.
Christie Parker	3/9/2018	Website	Please see attached how the courts denied they were a railroad and yet we are wasting our taxpayer money and this has yet to be established along with eminent domain which they were also denied. They still are unable to get on people's property as they were denied this as well. The entire DEIS process should be stopped immediately until this issue is resolved. Clearly the no build is the only option at this time. Thank you	Refer to BA-6, ED-1, NE-1 and NE-8.
Christie Parker	3/9/2018	Website	1. How is the FRA receiving comments directly from a Texas Central website comment section? 2. And how if this is possible and a clean process, would Texas Central have the names of these individuals to enter into a drawing for a toy train? 3. Texas Central should not know ONE person that had entered a comment in a fair and unobstructed process. Please see info below regarding the letter and comment page. I feel this is a huge concern that the project and process has been tainted by Texas Central and this is just one glaring example. Here is TC's form letter from their website where the send the comments to Abbot and Patrick and now you can win a toy train. The letter: "I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project. It is a transformational transportation project that will connect the two economic hubs of Texas, Houston and North Texas, with one stop in the Brazos Valley, while respecting Texas lands and providing a safe, convenient and clean alternative to flying and driving. The recent release of the Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. The Texas Bullet Train will utilize the world's safest mass transportation technology, the Shinkansen system, which has had zero crashes or fatalities in 53 years of operation. The project is expected to create more than 10,000 direct jobs per year during construction and more than 1,500 jobs permanently when operational -- at least 25% of them in rural counties along the route. It will be an economic driver for the state as well as all counties along the route. As an electric train, this system will also be the best environmental alternative as 4 of the counties served are already air quality non-attainment status. This innovative new industry reduces road congestion, improves local	Refer to PI-4.

David Parker	2/7/2018	Website	It's about time this country joins the rest of the modern world with high speed rail!	Comment noted.
Christy Parker	2/17/2018	Website	Why were FERC and PHMSA excluded from the FRA process for the TCR HSR project? This is very dangerous and doesn't take pipeline and public safety into consideration. For one there are numerous pipelines that will be impacted by the train both intrastate and interstate. FERC is required to be part of this process but TCR, AECOM, and the FRA has excluded them. Has cathodic protections of the pipelines been studied by TCR, Aecom, or the FRA since FERC and PHMSA were left out of the safety planning of this project? Has the new electrical impacts to pipelines been considered since FERC and PHMSA have been excluded from the planning process? The DEIS states that some pipelines will have to be relocated. Have TCR, AECOM, or the FRA reviewed any easements of current pipelines when evaluating the route? Some easements clearly don't have the ability for relocation in the contract signed. Seeing that only 15% of the route is under option contract and the vast majority of landowners are against this project, I don't see them redoing their easement to allow the relocation. There will also be clauses that will be added that will put the ownership squarely on any problems on the pipeline and I am sure that the pipelines will not take on this liability caused by TCR. This should have already been reviewed before eliminating routes and carrying others forward. It was very irresponsible for the FRA, TCR and AECOM not to include FERC and PHMSA when planning this project around pipelines. I am sending the link for FERC as the FERC offices are wondering why they were omitted in this process. <a href="https://www.ferc.gov/">https://www.ferc.gov/</a> Here is a video link so you can clearly see that FERC which is not mentioned at all in the DEIS should have been involved during this planning and environmental review aspect. <a href="https://www.ferc.gov/multimedia/what-is-ferc.asp">https://www.ferc.gov/multimedia/what-is-ferc.asp</a> I am also attaching an infographic detailing about FERC and how they should be involved in the planning process and since this process has been going on for 2 1/2 years and they have not been consulted I have grave concern that TCR, AECOM, and the FRA have been negligent regarding the public's safety as numerous pipelines will be impacted. I opt for the NO BUILD OPTION as the only alternative route to ensure the public's safety.	Refer to EU-2, EU-1 and SS-18.
Christie Parker	3/9/2018	Website	Please see the following in the DEIS and explain in detail the Economic component. Please include the ridership details with analysis as this contradicts 5 other studies. Please prove the Operational time frames of under 90 mins when you have not done an adequate analysis since the road laws were not looked at and all of the county roads will not be rerouted or crossed underneath. So please start over with these figures after a proper analysis is done since all of the construction details will have to be changed.	Refer to BA-5, BA-6, BA-8, GN-3, NE-1, NE-9, PN-3, PN-4 and SC-22
Christie Parker	3/9/2018	Website	Who has verified the ridership numbers as we have a number of experts that have shown these numbers to be false? Who has verified this data? Are you aware that the noise impact assessments are not even based on actual speeds of the train?	Refer to GN-2

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Christie Parker	3/9/2018	Website	An independent ridership must be performed in order to be able to obtain adequate emission data. This study where the FRA obtains a great deal of data from yet ignoring their ridership estimates of 3.1 million. Using these figures there will be a net gain in emissions. In order to not violate NEPA and seek accurate results an independent third party study must be performed. See below excerpt: Potential Ridership Approximately 3.3 million airline passengers and 4.0 million passenger automobiles travel between Dallas-Fort Worth and Houston each year. Based on an assumption of diversion rates to high speed rail of 70 percent from airline and 20 percent automobile travel, a potential ridership for the Dallas-Fort Worth to Houston core express high speed rail service may be approximately 3.1 million riders. <a href="ftp://ftp.dot.state.tx.us/pub/txdot-info/rail/high_speed/04_2011/dfw_hou/sec5_plan_doc.pdf">ftp://ftp.dot.state.tx.us/pub/txdot-info/rail/high_speed/04_2011/dfw_hou/sec5_plan_doc.pdf</a> The no build option is the only option to prevent all of the negative impacts on the environment.	Refer to BA-12, GN-2 and GN-3.
judy parks	2/12/2018	Website	I believe we need to be pro-active in our preparations for future travel. Now is the time to build the Speed Rail. Texas traffic continues to increase and our interstate highways are already crowded and causes increased time to reach destinations. We must act now for our future.	Comment noted.
Michael Parks	2/8/2018	Website	I am very excited at the possibility of America getting its first true high speed train right here in Texas. We need this. It must be allowed to be built. Texas is facing huge pressures from in migration. We are growing and cannot simply add more lanes to existing roadways. Texas Central Railway is a Class I railroad company that has proposed a solution who's time is come. It's time for America, starting in Texas, to experience and love what much of the rest of the globe has enjoyed for decades. This is a private venture, good for the environment and built on conservative business principles. It is not asking for a federal or state financial handout. Texas needs this job generating business. It will stand on it's own merit. I am 100% i favor of this project as presented in the draft EIS. It will be an asset to our state and nation. I implore anyone who reads this that we should not let fear keep Texas from moving forward. Is this not an entrepreneurial state? Don't we believe in the American Dream? ...that anything is possible? Aren't we a conservative state that believes in good strong business as a core of our stellar economy? Then I have to ask why we would even for a moment oppose a multi billion dollar business that wants to set up shop here? I cannot fathom those who would oppose such a proposition. To the Federal Railroad Administration: Please do what is right for America. Do what is right for Texas! Let this happen. Grant the Record of Decision in favor of the utility easement corridor for the Class I Central Texas Railroad. Do it quickly. Do it now, so that we can get Texans to work. So, that we can reduce taxes in the counties along the route; so we can ensure economic opportunity for future Texans; so that we can have redundant transportation systems in the event of catastrophic emergencies; so, that we can have alternatives that are friendlier to the environment.... so that we can help us help ourselves to a better future. Thank you for the opportunity to speak my mind. Michael Parks, AICP Bryan, TX	Comment noted.
Sharon Parks	2/10/2018	Website	I welcome the idea of the high speed rail system via Dallas to Houston. The rail system will impact cities and states in so many positive ways. It will lessen traffic congestion, less traffic equals less accidents. The rail system will simultaneously improve safety conditions due to less people on the roads. It will also reduce pollution and enhance cleaner air to breathe. The greatest benefit will be less time spent on the roads and more personal and family time to enjoy.	Comment noted.
Pat Parmley	2/6/2018	Handwritten	My wife and I Have Been in Grimes County for about 14 years and in that time we have been Threatened FIRST By The Trans Texas Corridor which did not happen, then we dodged a Bullet From The Institution of The Power Line Towers, Then A Pipeline Company Took Six acres of forest from Us And Destroyed it - Now This Company wants To Run it's Damn Train 1 1/2 Miles From my Home. My wife and I worked 40 years to retire to the peace and Quiet of The country and now This company wants to Destroy my way of life and Devalue my Property. If The State of Texas Grants These people Eminent Domain I Don't Know where we can afford to move too - PLEASE STOP THIS PROJECT!!	Refer to ED-1, ED-2, LU-14 and VA-1.
Pat Parmley	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Pat and Paula Parmley	2/6/2018	Handwritten	We moved from Houston to live in the peaceful and wildlife-abundant rural property which is now threatened. We own and live on rural property 1 h miles from the proposed HSR which will cross County Road 178 in Grimes County. This county road is a one lane road and is the	Refer to NR-1, NR-2, NR-3 and NR-6. 			only ingress/egress for property owners. The currently proposed route will negatively impact all surrounding properties by the noise pollution, the disruption of ground-dwelling wildlife, possibly affecting at risk birds and reduce property values. As bird lovers we currently provide habitat and feeders on our property for a large variety of birds. In the past two years, we have observed three species of birds that are either on the endangered species list or the species at risk list: Bald Eagles, Wood Stork and Red-Headed Woodpeckers. We have sited at least three nesting pairs of Red-Headed Woodpeckers that nest on or near our property and within a mile from the HSR crossing. Recent logging and deforestation has already reduced the available nesting sites for these birds. With construction of the high-speed rail we fear these birds will be even further negatively impacted. We spent the last 40 years working and living in Houston's noisy and polluted environment so that we could finally enjoy our retirement in a peaceful setting. Now that is being threatened by this unnecessary project. There are many families that purposely moved from Houston to this rural area in order to escape the kind of environment that the HSR is trying to bring to Texas rural areas. We see no advantages for the property owners in having the HSR cross through Our The negative impact on the human residents in Grime County is easily vocalized but who speaks for the ground dwelling wildlife which will be cut Off from their natural habitats and movements by the construction of the HSR?	see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .

John Parten	2/14/2018	Website	I have been a long time resident of Madison County since my birth in 1949 until I moved to the next county (Houston)some years back. I remain a landowner, oil producer and officer in Holy Innocents Episcopal Church Madisonville. As tax payers, my family has been among the largest, if not the largest, since my grandfather moved there as a seven-year-old boy in 1865. Our town and our county desperately need new modern business to provide the tax base to provide the jobs and the taxes that the county and our school districts need to be competitive in the 21st century. For years we have begged and bribed small industry to locate in our county with only mediocre results. This rail project offers the best opportunity for our community to thrive from near time into the distant future. We desperately need this project. It is the only chance we will ever have to be truly home to the best in America. And with our other "high speed train" averaging 70.9 miles per hour, this will be the best.	Comment noted.
Dorothy Parungao	2/3/2018	Email	Impact on Socioeconomics and Community Facilities. Has anyone addressed the impact the proposed HSR will have on the insurability of properties in the vicinity of the proposed routes? An increase in insurance premiums, or worse yet, the inability to acquire insurance coverage, could potentially cause property owners extreme financial duress and possible loss of property or even livelihood.	Refer to SS-21. Although an assessment of insurance premiums is outside the scope of NEPA requirements, there is no reason to assume reduced

				insurability for properties adjacent to a project which meets FRA's safety criteria.
Dorothy Parungao	2/3/2018	Email	Impact on Cultural Resources: Historical Resources. A report revealed four archaeological sites and two prehistoric/historic sites that are being considered for inclusion in the National Register of Historical Places within an area included in the proposed HSR routes.	Refer to CR-9.
Dorothy Parungao	2/3/2018	Email	Impact on Flooding & Drainage. Local environmental impact includes the Spring Creek Watershed where five creeks will cross the track of the proposed HSR. The construction and operation of all Build Alternatives will result in increased sediment runoff due to the creation of impervious areas (DEIS 3.3-25). Increased runoff by itself would worsen the flood risk of areas along the proposed HSR routes. However, coupled with a severe water event (eg: Hurricane Harvey) the end result would be devastating and catastrophic.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. There are dozens of planned roads in Waller County, and likely more in other counties along the proposed HSR. However, these roads will not be able to be completed if the HSR cuts through their planned locations, thus stifling and impeding future economic development of these areas. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to SC-13.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. Several communities in northern Waller County (Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines, and the Kickapoo Preserve) will have the HC-4 route travel directly through them, resulting in the destruction of the economic viability of these developments as well as the decimation of the value of everyone's property. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to LU-3, SC-12 and VA-1.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Wildlife. "37 wildlife species and/or subspecies have the potential to occur in the Study Area." (DEIS 3.6-41) "All Build Alternatives would result in the direct loss of wildlife habitat, increase (in) habitat fragmentation, and contribute to impediments of the movement of wildlife across the landscape." (DEIS 3.6-60) Additionally, a loss of species diversity and abundance is expected to occur due to the increase in habitat fragmentation (DEIS 3.6-60) The proposed HSR will definitely add noise and vibration to the environment. However, the effects of the train noise and its associated vibration on wildlife is not clear since it has not been thoroughly studied. (DEIS 3.6-63) As well, "the Build Alternatives could result in the disturbance and potential mortality of wildlife, particularly during vegetation clearing and grading." (DEIS 3.6-63) The HSR appears to confer no benefit to, and, in fact, would seem to gravely harm, wildlife (and vegetation, as well). The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to NR-1 and NR-6.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Vegetation. 40 species of protected plant life have been identified as having the potential to occur in the Study Area. (DEIS 3.6-37) "All Build Alternatives will result in the direct loss of native vegetation." (DEIS 3.6-49) As well, "existing vegetation that may remain between parallel developed corridors, would be isolated from larger blocks, potentially resulting in habitat fragmentation." (DEIS 3.6-49) Additional negative impacts include permanent loss of habitat; disturbance to, and destruction of, rare plant populations; modification of habitat; and/or reduction of habitat value. As well, there is the potential for the introduction and spread of non-native and invasive plant species; the introduction of opportunistic species through a variety of dispersal methods; and the inhibition of the establishment of desired native species due to increased soil compaction. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Katy Prairie Conservancy. With more than 300 species of birds, 110 species of mammals, amphibians, and reptiles, along with over 600 species of grasses, windflowers, trees, vines, and shrubs, the Katy Prairie Conservancy is a biologically diverse powerhouse. A train barreling at 200 mph within one mile of this migratory bird sanctuary will result in bird collisions, accidents, and potential loss of life. This area is also where important wetlands exist. These wetlands will be negatively impacted by the proposed HSR corridor. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to NR-2, RF-4, WW-1 and WW-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Dorothy Parungao	2/3/2018	Email	To Whom It May Concern: I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. The proposed HSR will have a detrimental economic impact on the property	Refer to EJ-1 and VA-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			values and tax base of Waller County, a historical minority population county. This will occur because this project will create an obsolescence that will negatively impact property values in the county. The proposed route will result in devaluation of Waller County residents' property, thus leading to less tax revenue being collected. School districts, emergency services, and every public entity in the county will suffer a loss of income, thereby resulting in a loss of services provided to the tax-paying citizens of the county. This scenario will likely be repeated throughout all the counties along the proposed HSR routes.	
Dorothy Parungao	2/3/2018	Email	The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Comment noted.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities: Cypress-Fairbanks Independent School District. Cypress Falls High School (in Cypress-Fairbanks ISD, located in Harris County) would be approximately 150 feet from a temporary construction zone and large drainage area necessary for the HSR system (DEIS 3.14-37). Potential Impact to Children's Health and Safety include "localized air quality impacts due to the movement and operation of construction vehicles, potential exposure to toxic fumes used during the construction of the Build Alternatives, and increased traffic on Huffmeister Road." (DEIS 3.14-37) An additional concern is the safety of pedestrian traffic in and around the school. The health and safety of our children is of utmost importance and must be protected, not sacrificed. The No Build Alter	Refer to SC-8.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities: Waller Independent School District. The proposed alignment will pass through a large portion of Waller ISD's district, resulting in a potential negative impact on bus routes. This, in turn, may necessitate Waller ISD purchasing additional school buses to transport students and accommodate delays due to county and and private roads being impacted and/or closed by the proposed HSR project. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to SC-5.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Activities. Although Hewlett Packard Enterprise stated it is currently not in a position to approve or disapprove the proposed HSR route, they did say that "the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property." Yet another example of the negative community impact the HSR will have; this time it involves the Hewlett Packard Data Center. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to SC-11.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Activities. The HR-4 route passes through the city of Waller's extraterritorial jurisdiction and through the planned Waller Town Center. It also passes through the Delta Troy Interests, a 990 acre tract being held for housing and commercial development. The HC-4 route is also located within 4,000 feet of the Daikin/Goodman facility. The proposed HSR would have an obvious negative impact on the Waller community, as well as other communities along the proposed HSR routes. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to LU-4 and SC-19.
Dorothy Parungao	2/3/2018	Email	The NO Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Comment noted.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Improper Procedure. The HC-4 route through Waller County was changed from the original route that was released to the public. It is now approximately three miles west of the originally released route. The change was made without notifying those affected, thus depriving them of the opportunity for public input into this matter. What happened to transparency and open cooperation? The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to BA-3, BA-8 and PI-1.
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Improper Procedure. 			reasonable estimation of the economic feasibility & viability of this project. Overestimating ridership and underestimating costs can result in disastrous miscalculations of feasibility which can have far-reaching and long-lasting negative consequences. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	
Dorothy Parungao	2/3/2018	Email	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: The Need for this HSR has not been adequately justified. How did Texas Central Railroad (TCR) calculate their ridership projections and determine which travelers to Dallas (air, car, or bus) would switch to HSR? TCR asserts the HSR will relieve traffic congestion and thereby improve safety on roadways. The basis of this claim assumes 1) significant numbers of car travelers will ride HSR and 2) vehicular traffic would remain otherwise essentially unchanged. Where is the proof? The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to GN-2, NE-1 and PN-3.
Dorothy Parungao	2/3/2018	Website	Impact on Safety and Security. proposed HSR tracks would pass within about 580 feet (approximately 0.1 miles) of a natural gas pipeline compressor station. The potential for catastrophe in this situation is obvious, yet this hazard has not been addressed.	Refer to EU-2 and EU-6.
Dorothy Parungao	2/3/2018	Website	Impact on Water Quality. The proposed HSR route is within a few feet of the water tower in Waller County. Needless to say, no good can come from close proximity of a HSR and a community water tower.	Refer to GN-3 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Dorothy Parungao	2/3/2018	Website	Impact on Water Quality. "Impacts would occur to surface water quality, groundwater quality, and water supply during construction and operation of any of the Build Alternatives." (DEIS 3.3-21) However, the specific impact to resources has not been determined and won't be determined until a Tier II analysis is undertaken and completed prior to construction of any Build Alternative. (DEIS 3.3-20) Despite a lack of more detailed, specific effects the proposed HSR will have on the water quality in each county along the proposed routes, several negative impacts are possible, if not certain: 1) alteration (i.e., increase) in the concentration of one or more pollutants in the body of water (DEIS 3.3-21, Surface Water Quality); 2) potential significant negative impacts to groundwater (13 groundwater wells located in water quality Study Area), including but not limited to contamination of groundwater from runoff or spillage of hazardous materials (DEIS 3.3-21 & 23); 3) potential slowing of recharge of surface water to groundwater (DEIS 3.3-24); 4) increased water run off; 5) impaired stream segments; and 6) increased water demand (DEIS 3.3-25). Again, not a single positive effect but a multitude of negative ones.	Refer to HZ-5, WW-1, WW-2 and WW-6.
Dorothy Parungao	2/5/2018	Handwritten	I strongly oppose the Dallas to Houston HSR project for a variety of reasons. 1. Economic feasibility and viability-TCR has (most likely) overestimated ridership and underestimated costs to the point that this project will not only NOT make money, but will lose money. Additionally TCR plans to apply for RRIF loans which have very weak tax payer protections and could be given to entities without the resources to repay. Taxpayers could get stuck "footing the bill" for this allegedly "privately funded" project. UNACCEPTABLE! 2. The 2 endpoint cities (Houston & Dallas) do not have the characteristics of cities like Tokyo & Paris (endpoints for profitable HSR line). That is, Houston and Dallas, have low population density, no existing passenger rail service, limited transit service, low employment density (with 2 miles of downtown), high rates of car ownership and airports in close proximity to downtown. Even compared to NYC and Washington D.C., the 2 US cities considered to be the most conducive to HSR, Houston and Dallas fall far short of the qualities needed for a successful HSR operation ( and NYC and Washington D.C. fall far short of Tokyo and Paris too). 3. I have been to several meetings and have yet to hear any [sic] commenter or meet any attendee who is in favor of this project. NO BUILD is the only viable option!	Refer to GN-2, GN-4, NE-1 and PN-3.
Dorothy Parungao	2/5/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: The Need for this HSR has not been adequately justified. 			west of the originally released route. The change was made without notifying those affected, thus depriving them of the opportunity for public input into this matter. What happened to transparency and open cooperation? The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	
Dorothy Parungao	2/5/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Improper Procedure. The FRA did not coordinate with local Waller County government. The FRA is legally required to coordinate with sub-regional planning commissions. Why haven't they done so? The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you	Refer to PI-1.
Dorothy Parungao	2/5/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Emergency Services. TCR acknowledges there will be negative impact in the provision of emergency services across many, if not all, counties along the proposed HSR routes (DEIS Section 3.16-Safety and Security). Some of this negative impact (i.e., increased response times) will be permanent due to road closures, obstructions, etc. In light of a recently released report that shows already increased response times by the Houston Police Department, as well as the Houston Police Chief stating there is a shortage of officers serving the city, and the mayor of Houston saying there's no money in the budget for more officers, the last thing anyone in Houston, or any other affected area, needs is another barrier for their first-responders to have to overcome when responding to an emergency. TCR states they will work to avoid "appreciable negative impact" on emergency response times (DEIS 3.16-32) in the final design of the HSR. I would argue that ANY negative impact on emergency response times is appreciable. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to SS-23 and TR-8. Comment does not provide enough detail to address the source of the information regarding Houston Police Department resources.
Dorothy Parungao	2/5/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. 			Sincerely, Dorothy Parungao	
Dorothy Parungao	2/6/2018	Website	To Whom It May Concern: I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Flooding & Drainage. Local environmental impact includes the Spring Creek Watershed where five creeks will cross the track of the proposed HSR. The construction and operation of all Build Alternatives will result in increased runoff due to the creation of impervious areas (DEIS 3.3-25). Increased runoff by itself would worsen the flood risk of areas along the proposed HSR routes. However, coupled with a severe water event (eg: Hurricane Harvey) the end result would be be devastating and catastrophic. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you. Sincerely, Dorothy Parungao	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Dorothy Parungao	2/6/2018	Website	To Whom It May Concern: I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Cultural Resources: Historical Resources. A report revealed four archaeological sites and two prehistoric/historic sites that are being considered for inclusion in the National Register of Historical Places within an area included in the proposed HSR routes. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you. Sincerely, Dorothy Parungao	Refer to CR-9.
Dorothy Parungao	2/6/2018	Website	To Whom It May Concern: I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Safety and Security. The proposed HSR tracks would pass within about 580 feet (approximately 0.1 miles) of a natural gas pipeline compressor station. The potential for catastrophe in this situation is obvious, yet this hazard has not been addressed. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you. Sincerely, Dorothy Parungao	Refer to EU-2 and EU-7.
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. Has anyone addressed the impact the proposed HSR will have on the insurability of properties in the vicinity of the proposed routes? An increase in insurance premiums, or worse yet, the inability to acquire insurance coverage, could potentially cause property owners extreme financial duress and possible loss of property or even livelihood. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you. Sincerely, Dorothy Parungao	Refer to VA-1.
Dorothy Parungao	2/6/2018	Website	I am strongly apposed to the HSR Project Some of the reasons are as follows. 1. Preproposed route will put the train w/in 50 ft of the Atlas Pipeline. There has been no [sic] with entities that have control over pipeline safety. This must be addressed as it would pose a risk to the safety of the general public, especially those in close to the train pipeline 2. TCR tonts jobs gained (potentially) by the building of the train. Have they taken into account the jobs that will be lost because of the train 3. With regard to (over inflated) ridership estimates by TCR- with a [sic] continue increase in [sic] others will likely be a corresponding decrease in business related travel between [sic] Houston and Dallas, but many cities would [sic] this accounted for in the estimates used to determine projected [sic] ? If not, it needs to be, and [sic], how did RR amve [sid] at their ridership projections Overestimation ridership overestimation earnings representation of fanancial viability this pr	Refer to EU-1, EU-2, GN-2, NE-1, SC-21 and SS-18.

			congestion." (DEIS 3.14-37) Children as young as three years old attend this school. What a travesty it would be if we jeopardized and compromised the safety and well-being of some of the youngest and most vulnerable in our community, those least able to protect or advocate for themselves. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. The proposed HSR will have a detrimental economic impact on the property values and tax base of Waller County, a historical minority population county. This will occur because this project will create an obsolescence that will negatively impact property values in the county. The proposed route will result in devaluation of Waller County residents' property, thus leading to less tax revenue being collected. School districts, emergency services, and every public entity in the county will suffer a loss of income, thereby resulting in a loss of services provided to the tax-paying citizens of the county. This scenario will likely be repeated throughout all the counties along the proposed HSR routes. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement.	Refer to EJ-1, SC-19 and VA-1.
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Katy Prairie Conservancy. With more than 300 species of birds, 110 species of mammals, amphibians, and reptiles, along with over 600 species of grasses, windflowers, trees, vines, and shrubs, the Katy Prairie Conservancy is a biologically diverse powerhouse. A train barreling at 200 mph within one mile of this migratory bird sanctuary will result in bird collisions, accidents, and potential loss of life. This area is also where important wetlands exist. These wetlands will be negatively impacted by the proposed HSR corridor. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to NR-2, NR-3, RF-4, WW-1 and WW-2.
Dorothy Parungao	2/6/2018	Website	For information regarding vegetation please see Section 3.6.4.2, Vegetation and mitigation measures NR-MM#2 and NR-MM#4 in Section 3.6.6.2, Mitigation Measures.	For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Wildlife. "37 wildlife species and/or subspecies have the potential to occur in the Study Area." (DEIS 3.6-41) "All Build Alternatives would result in the direct loss of wildlife habitat, increase (in) habitat fragmentation, and contribute to impediments of the movement of wildlife across the landscape." (DEIS 3.6-60) Additionally, a loss of species diversity and abundance is expected to occur due to the increase in habitat fragmentation (DEIS 3.6-60) The proposed HSR will definitely add noise and vibration to the environment. However, the effects of the train noise and its associated vibration on wildlife is not clear since it has not been thoroughly studied. (DEIS 3.6-63) As well, "the Build Alternatives could result in the disturbance and potential mortality of wildlife, particularly during vegetation clearing and grading." (DEIS 3.6-63) The HSR appears to confer no benefit to, and, in fact, would seem to gravely harm, wildlife (and vegetation, as well). The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to NR-1, NR-5 and NR-6.
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Wildlife. The proposed HSR route will cut through the north end of one of the major wetlands in the region where duck hunting is vital to the community's economy. The proposed HSR will reduce, if not destroy, the population of water fowl, thereby negatively impacting the economy of the area since there will be fewer water fowl available to hunt. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to NR-1, NR-2, RF-2 and WW-2.
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. Several communities in northern Waller County (Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines, and the Kickapoo Preserve) will have the HC-4 route travel directly through them, resulting in the destruction of the economic viability of these developments as well as the decimation of the value of everyone's property. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to LU-3, LU-4, RF-1 and VA-1.
Dorothy Parungao	2/6/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. There are dozens of planned roads in Waller County, and likely more in other counties along the proposed HSR. However, these roads will not be able to be completed if the HSR cuts through their planned locations, thus stifling and impeding future economic development of these areas. The No Build Alternative is the only viable and justifiable option to be chosen in the final	Refer to LU-4, SC-13, SC-19, TR-1 and TR-8.

			Environmental Impact Statement. Thank you.	
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Improper Procedure. The FRA did not coordinate with local Waller County government. The FRA is legally required to coordinate with sub-regional planning commissions. Why haven't they done so? The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to PI-1.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Emergency Services. TCR acknowledges there will be negative impact in the provision of emergency services across many, if not all, counties along the proposed HSR routes (DEIS Section 3.16-Safety and Security). Some of this negative impact (i.e., increased response times) will be permanent due to road closures, obstructions, etc. In light of a recently released report that shows already increased response times by the Houston Police Department, as well as the Houston Police Chief stating there is a shortage of officers serving the city, and the mayor of Houston saying there's no money in the budget for more officers, the last thing anyone in Houston, or any other affected area, needs is another barrier for their first-responders to have to overcome when responding to an emergency. TCR states they will work to avoid "appreciable negative impact" on emergency response times (DEIS 3.16-32) in the final design of the HSR. I would argue that ANY negative impact on emergency response times is appreciable. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to SS-23 and TR-8.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Activities. Although Hewlett Packard Enterprise stated it is currently not in a position to approve or disapprove the proposed HSR route, they did say that "the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property." Yet another example of the negative community impact the HSR will have; this time it involves the Hewlett Packard Data Center. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to SC-11.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities: Waller Independent School District. The proposed alignment will pass through a large portion of Waller ISD's district, resulting in a potential negative impact on bus routes. This, in turn, may necessitate Waller ISD purchasing additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to SC-5.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities: Cypress-Fairbanks Independent School District. Cypress Falls High School (in Cypress-Fairbanks ISD, located in Harris County) would be approximately 150 feet from a temporary construction zone and large drainage area necessary for the HSR system (DEIS 3.14-37). Potential Impact to Children's Health and Safety include "localized air quality impacts due to the movement and operation of construction vehicles, potential exposure to toxic fumes used during the construction of the Build Alternatives, and increased traffic on Huffmeister Road." (DEIS 3.14-37) An additional concern is the safety of pedestrian traffic in and around the school. The health and safety of our children is of utmost importance and must be protected, not sacrificed. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to SC-8.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities: Awty International School in Harris County. The Awty International School would be located approximately 1,000 feet (about 0.19 miles) from the Northwest Transit Terminal Station option. Potential Impact to Children's Health and Safety during the construction of the station would include "localized air quality impacts, exposure to fumes from hazardous materials, and increased traffic congestion." (DEIS 3.14-37) Children as young as three years old attend this school. What a travesty it would be if we jeopardized and compromised the safety and well-being of some of the youngest and most vulnerable in our community, those least able to protect or advocate for themselves.	Refer to SC-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. The proposed HSR will have a detrimental economic impact on the property values and tax base of Waller County, a historical minority population county. This will occur because this project will create an obsolescence that will negatively impact property values in the county. The proposed route will result in devaluation of Waller County residents' property, thus leading to less tax revenue being collected. School districts, emergency services, and every public entity in the county will suffer a loss of income, thereby resulting in a loss of services provided to the tax-paying citizens of the county. This scenario will likely be repeated throughout all the counties along the proposed HSR routes. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to EJ-1, SC-19 and VA-1.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Katy Prairie Conservancy. With more than 300 species of birds, 110 species of mammals, amphibians, and reptiles, along with over 600 species of grasses, windflowers, trees, vines, and shrubs, the Katy Prairie Conservancy is a biologically diverse powerhouse. A train barreling at 200 mph within one mile of this migratory bird sanctuary will result in bird collisions, accidents, and potential loss of life. This area is also where important wetlands exist. These wetlands will be negatively impacted by the proposed HSR corridor. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to NR-2, NR-3, RF-4 and WW-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Vegetation. 40 species of protected plant life have been identified as having the potential to occur in the Study Area. (DEIS 3.6-37) "All Build Alternatives will result in the direct loss of native vegetation." (DEIS 3.6-49) As well, "existing vegetation that may remain between parallel developed corridors, would be isolated from larger blocks, potentially resulting in habitat fragmentation." (DEIS 3.6-49) Additional negative impacts include permanent loss of habitat; disturbance to, and destruction of, rare plant populations; modification of habitat; and/or reduction of habitat value. As well, there is the potential for the introduction and spread of non-native and invasive plant species; the introduction of opportunistic species through a variety of dispersal methods; and the inhibition of the establishment of desired native species due to increased soil compaction. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Natural Ecological Systems and Protected Species: Wildlife. "37 wildlife species and/or subspecies have the potential to occur in the Study Area." (DEIS 3.6-41) "All Build Alternatives would result in the direct loss of wildlife habitat, increase (in) habitat fragmentation, and contribute to impediments of the movement of wildlife across the landscape." (DEIS 3.6-60) Additionally, a loss of species diversity and abundance is expected to occur due to the increase in habitat fragmentation (DEIS 3.6-60) The proposed HSR will definitely add noise and vibration to the environment. However, the effects of the train noise and its associated vibration on wildlife is not clear since it has not been thoroughly studied. (DEIS 3.6-63) As well, "the Build Alternatives could result in the disturbance and potential mortality of wildlife, particularly during vegetation clearing and grading." (DEIS 3.6-63) The HSR appears to confer no benefit to, and, in fact, would seem to gravely harm, wildlife (and vegetation, as well). The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to NR-1, NR-5 and NR-6.

				<b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures.</b>
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. Several communities in northern Waller County (Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest, Six Pines, and the Kickapoo Preserve) will have the HC-4 route travel directly through them, resulting in the destruction of the economic viability of these developments as well as the decimation of the value of everyone's property. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to ED-2, LU-3 and SC-10.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Water Quality. "Impacts would occur to surface water quality, groundwater quality, and water supply during construction and operation of any of the Build Alternatives." (DEIS 3.3-21) However, the specific impact to resources has not been determined and won't be determined until a Tier II analysis is undertaken and completed prior to construction of any Build Alternative. (DEIS 3.3-20) Despite a lack of more detailed, specific effects the proposed HSR will have on the water quality in each county along the proposed routes, several negative impacts are possible, if not certain: 1) alteration (i.e., increase) in the concentration of one or more pollutants in the body of water (DEIS 3.3-21, Surface Water Quality); 2) potential significant negative impacts to groundwater (13 groundwater wells located in water quality Study Area), including but not limited to contamination of groundwater from runoff or spillage of hazardous materials (DEIS 3.3-21 & 23); 3) potential slowing of recharge of surface water to groundwater (DEIS 3.3-24); 4) increased water run off; 5) impaired stream segments; and 6) increased water demand (DEIS 3.3-25). Again, not a single positive effect but a multitude of negative ones. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to HZ-5, WW-1, WW-2 and WW-6.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Water Quality. The proposed HSR route is within a few feet of the water tower in Waller County. Needless to say, no good can come from close proximity of a HSR and a community water tower. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to GN-3, WW-1 and WW-6. The Project would not impact the water tower. The rail would be located approximately 320 feet from the water tower.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Flooding & Drainage. Local environmental impact includes the Spring Creek Watershed where five creeks will cross the track of the proposed HSR. The construction and operation of all Build Alternatives will result in increased runoff due to the creation of impervious areas (DEIS 3.3-25). Increased runoff by itself would worsen the flood risk of areas along the proposed HSR routes. However, coupled with a severe water event (eg: Hurricane Harvey) the end result would be be devastating and catastrophic. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Cultural Resources: Historical Resources. A report revealed four archaeological sites and two prehistoric/historic sites that are being considered for inclusion in the National Register of Historical Places within an area included in the proposed HSR routes. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to CR-9.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Safety and Security. The proposed HSR tracks would pass within about 580 feet (approximately 0.1 miles) of a natural gas pipeline compressor station. The potential for catastrophe in this situation is obvious, yet this hazard has not been addressed. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to EU-2, EU-6 and EU-7.
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. The HR-4 route passes through the city of Waller's extraterritorial jurisdiction and through the planned Waller Town Center. It also passes through the Delta Troy Interests, a 990 acre tract being held for housing and commercial development. The HC-4 route is also located within 4,000 feet of the Daikin/Goodman facility. The proposed HSR would have an obvious negative impact on the Waller community, as well as other communities along the proposed HSR routes. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to LU-4 and SC-19.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Dorothy Parungao	3/4/2018	Website	I am filing an objection to the proposed high speed rail (HSR) between Houston and Dallas for the following reason: Impact on Socioeconomics and Community Facilities. Has anyone addressed the impact the proposed HSR will have on the insurability of properties in the vicinity of the proposed routes? An increase in insurance premiums, or worse yet, the inability to acquire insurance coverage, could potentially cause property owners extreme financial duress and possible loss of property or even livelihood. The No Build Alternative is the only viable and justifiable option to be chosen in the final Environmental Impact Statement. Thank you.	Refer to SS-12. Although an assessment of insurance premiums is outside the scope of NEPA requirements, there is no reason to assume reduced insurability for properties adjacent to a project which meets FRA's safety criteria.
Dorothy Parungao	3/6/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) proposed between Houston and Dallas for the following reason: Discrepancy between DEIS and maps. The DEIS does not mention modifications to Beltway 8, a major thoroughfare that is heavily traveled in the Houston/Harris County area. However, maps made available for review at Open House meetings state that Beltway 8 is a "structure to be modified." Given the major role Beltway 8 plays in the movement of vehicular traffic in and around Houston and Harris County, the impact of any structural modification to this roadway must be considered in the final EIS. Failure to do so would be irresponsible and potentially detrimental to the safety and well being of the residents of Houston and Harris County. The No Build Alternative is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to TR-8. The Project would travel underneath the State Highway 8 through retention-cut (below-grade) designs. Design details, ownership, and maintenance responsibilities would be closely coordinated with the appropriate Project stakeholders during more advanced design during the design and construction phase.
Dorothy Parungao	3/6/2018	Website	Discrepancy between DEIS and maps. Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Exaggerated Benefit to Communities. TCP claims that, as a result of this proposed HSR, communities all along the corridor will reap great benefits. I challenge TCP to name one benefit to residents of communities through which the HSR passes through but does not stop. At a meeting held in Houston in 2015 at Lutheran High School North, Philip Simmons, who was president of Oak Forest HOA at the time, said, "There is not even a plan to put a stop in our area but rather to simply use us as a tool to get from one big city to the other. Progress has its place, but this can and does make us feel violated." I agree 100% with Mr. Simmons, and I am sure pretty much everyone in "pass through" communities feel exactly the same way. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to GN-7 and PN-3.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Exaggerated Benefit to Communities. TCP claims that, as a result of this proposed HSR, communities all along the corridor will reap great benefits. At a meeting held in Houston in 2015 at Lutheran High School North, Philip Simmons, who was president of Oak Forest HOA at the time, said, "There is not even a plan to put a stop in our area but rather to simply use us as a tool to get from one big city to the other. Progress has its place, but this can and does make us feel violated." I agree 100% with Mr. Simmons, and I am sure pretty much everyone in "pass through" communities feel exactly the same way. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to GN-7 and PN-3.
Dorothy Parungao	3/8/2018	Email	Concern for Texas Central Partners' Estimates of Costs and Ridership. TCP has given construction estimates of approximately \$41.7M per mile and a ridership estimate of 4.3 million passengers per year. While [there is no "magic formula" to predict the profitability of HSR, generally speaking, rail lines need low construction costs (generally \$20M per mile or less), low operating costs (generally less than \$0.20 per occupied seat mile), and high ridership (generally at least 5 million riders per corridor). [Reason Foundation High Speed Rail Report, p. 17 (Fiscal Evaluation of Worldwide High-Speed Rail Systems)] Neither TCP's construction estimates nor ridership estimates meet these criteria. Therefore, it is extremely unlikely that this project will be profitable or financially feasible. The impact of these things must be considered before the release of the final EIS.	Refer to GN-3, GN-4 and NE-1.
Dorothy Parungao	3/8/2018	Email	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Exaggerated Benefit to Communities. TCP claims that, as a result of this proposed HSR, communities all along the corridor will reap great benefits. Refer to PN-3 and SC-19.
Dorothy Parungao	3/8/2018	Email	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Infringement of Private Property Rights. While in attendance at several Open House meetings regarding this proposed HSR project, I heard countless accounts of bullying and	Refer to ED-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			mistreatment of private property owners by TCP and its representatives. No reputable company, indeed no company worthy of the trust of Texas and its citizens, acts this way.	
Dorothy Parungao	3/8/2018	Email	Questionable Claims to be Completely Privately Funded. Texas Central Partners has claimed that this HSR project will be completely privately funded. However, in a recent report by the Reason Foundation (Policy Brief 139), it states that Texas Central plans to apply for RRIF loans. These loans have weak taxpayer protections and could be given to entities without the resources to repay the loans. Given TCP's unverifiable ridership and economic impact projections, coupled with their underestimation of costs, there is no way to assess whether TCP would have the financial resources necessary to pay back any government loans. Should they default on the loans, taxpayers would be left holding the bag. This is completely unacceptable and unnecessary.	Refer to GN-3, GN-4, NE-1 and PN-3.
Dorothy Parungao	3/8/2018	Email	Claims to be Completely Privately Funded. Throughout this whole process, TCP has claimed that this project will be 100% privately funded. They tout it as a strength, and then' arc those in the uninformed public who believe this to be true. However, in an article (Anti-High-Speed Rail Provision Stripped from Final Budget) dated 5/22/15 and written by Anan Batheja with The Texas Tribune. It discusses a budget rider that would have halted TxDOT from spending any state funds towards subsidizing or assisting in the construction of high speed passenger rail. Though Texas Central has promised not to accept public operating subsidies for its proposed HSR project, company officials nonetheless stated that the rider would essentially kill the train since TxDOT, as the state agency in charge of transportation, would need to play a role in the project's construction. The acknowledged direct involvement of TxDOT (a state government agency) negates TCP's claims that this project will be completely privately funded. The salaries of TxDOT employees are paid out of the pockets of hardworking Texas taxpayers, not out of the bank accounts of TCP's foreign investors. Yet another misrepresentation of the truth by TCP. In the same article, it states one of the dissenting votes to remove this rider came from Texas Senator Charles Schwertner of Georgetown, Texas. He said this about the proposed HSR project: "This project is being sold to the people of Texas that it will never need state backing or subsidization or bailing out, and unfortunately I think that's a complete fallacy." I agree with Sen. Schwertner.	Refer to GN-4.
Dorothy Parungao	3/8/2018	Email	Outdated Maps. At the Open House meeting held in Harris County on March 5, 2018, one of the speakers shared a comment that the maps/images used in the DEIS are four years old. He stated that his house is not on any of the images or maps used. How many other homes, businesses, etc. were not included or even considered in the DEIS? Current maps and images must be utilized at all points in the process in order to reach an accurate representation of the proposed HSR's impact. How accurate can the current DEIS be if the conclusions are based on outdated maps, images, and information?	Refer to GN-1.
Dorothy Parungao	3/8/2018	Email	Overestimated Economic Impact. In the financial projections of the economic impact the proposed Houston to Dallas HSR will have, Texas Central Partners states that it could pay up to \$2.5 billion in taxes to the state, counties, hospitals, school districts, and other taxing entities along the corridor between now and 2040, adding that that amount will largely come from property taxes and state and local sales taxes. If that figure is accurate, and that's a huge assumption based on this company's track record of honesty and transparency, how does it compare to the loss of property value that is sure to follow in many of the communities through which the route will pass? With a decline in property values comes a decrease in the amount of property taxes paid to the taxing entities. Additionally, the amount of sales tax generated in these communities will likely decline as people will seek more desirable places to live/visit/shop etc. rather than have to endure the unwelcome and constant intrusion of the HSR train. Just as a company trying to sell you their product on those annoying infomercials will tell you how great their product is and makes no mention of its shortcomings, so TCP is doing with their product, the HSR train.	Refer to SC-19 and VA-1. Unexpected changes could be offset by the additional tax revenue generated by TCRR's property on the proposed right-of-way. The Project is unlikely to result in a loss of property tax income to the jurisdictions it operates in.
Dorothy Parungao	3/8/2018	Email	Unverifiable Ridership Economic Impact. TCR estimates annual ridership of the proposed HSR at 4 million plus. Claiming proprietary information, they continue to refuse to share with the public how they arrived at their projections. In a Reason Foundation HSR Report (Fiscal Evaluation of World Wide High Speed Rail Systems), it states that previous HSR studies have overestimated the number of travelers who will choose rail over highway or air by a factor of 10. Additionally, a quote from the same Reason Foundation report says, "To put that figure in context, Amtrak's current high-speed service, the Acela, which began operating in 2000 in the most densely populated corridor in the United States, only carries a total of 3.4 million passengers per year." One of the problems with overinflated ridership projections, if not the most significant problem, is that it leads to overinflated, inaccurate financial projections. Among TCR's pro-rail propaganda is the claim that the proposed HSR will be a financial boon for the state of Texas, citing estimates calculated using their proprietary ridership projections. They are using this claim, among others, to convince city and state officials to back this ill-fated project. If President Trump isn't exempt from being fact-checked, neither should TCR.	Refer to GN-2, GN-3, GN-4 and SC-19.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) proposed between Houston and Dallas for the following reason: Unverifiable Ridership Projections/Overestimated Economic Impact. TCR estimates annual ridership of the proposed HSR at 4 million plus. Claiming proprietary information, they continue to refuse to share with the public how they arrived at their projections. In a Reason Foundation HSR Report (Fiscal Evaluation of World Wide High Speed Rail Systems), it states that previous HSR studies have overestimated the number of travelers who will choose rail over highway or air by a factor of 10. Additionally, a quote from the same Reason Foundation report says, "To	Refer to BA-6, GN-2, GN-3 and GN-4.

			put that figure in context, Amtrak's current high-speed service, the Acela, which began operating in 2000 in the most densely populated corridor in the United States, only carries a total of 3.4 million passengers per year." One of the problems with overinflated ridership projections, if not the most significant problem, is that it leads to overinflated, inaccurate financial projections. Among TCR's pro-rail propaganda is the claim that the proposed HSR will be a financial boon for the state of Texas, citing estimates calculated using their proprietary ridership projections. They are using this claim, among others, to convince city and state officials to back this ill-fated project. If President Trump isn't exempt from being fact-checked, neither should TCR. The No Build Alternative is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) between Houston and Dallas for the following reason: Impact on Public Safety. At the Open House meeting held in Harris County on March 5, 2018, a resident shared her comments about the proposed HSR. She stated that she had spoken to engineers (?) working on this project and was told that the footing for the HSR track would be placed in the pipeline easement along US290. Has the impact this will have on public safety been studied and considered in the DEIS? If not, it must be thoroughly studied before finalizing the EIS. The No Build Alternative is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to EU-2.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) between Houston and Dallas for the following reason: Outdated Maps. At the Open House meeting held in Harris County on March 5, 2018, one of the speakers shared a comment that the maps/images used in the DEIS are four years old. He stated that his house is not on any of the images or maps used. How many other homes, businesses, etc. were not included or even considered in the DEIS? Current maps and images must be utilized at all points in the process in order to reach an accurate representation of the proposed HSR's impact. How accurate can the current DEIS be if the conclusions are based on outdated maps, images, and information? The No Build Alternative is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to GN-1.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) between Houston and Dallas for the following reason: Unverifiable Ridership Projections/Overestimated Economic Impact. Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) between Houston and Dallas for the following reason: Overestimated Economic Impact. In the financial projections of the economic impact the proposed Houston to Dallas HSR will have, Texas Central Partners states that it could pay up to \$2.5 billion in taxes to the state, counties, hospitals, school districts, and other taxing entities along the corridor between now and 2040, adding that that amount will largely come from property taxes and state and local sales taxes. IF that figure is accurate, and that's a huge assumption based on this company's track record of honesty and transparency, how does it compare to the loss of property value that is sure to follow in many of the communities through which the route will pass? With a decline in property values comes a decrease in the amount of property taxes paid to the taxing entities. Additionally, the amount of sales tax generated in these communities will likely decline as people will seek more desirable places to live/visit/shop etc. rather than have to endure the unwelcome and constant intrusion of the HSR train. Just as a company trying to sell you their product on those annoying infomercials will tell you how great their product is and make no mention of its shortcomings, so TCP is doing with their product, the HSR train. To hear them talk about the HSR, one might think it sounds too good to be true. And, you know what they say about things that sound too good to be true... The No Build Alternative is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to BA-6, SC-3, SC-16, SC-19 and VA-1.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed High Speed Rail (HSR) between Houston and Dallas for the following reason: Questionable Claims to be Completely Privately Funded. Throughout this whole process, TCP has claimed that this project will be 100% privately funded. They tout it as a strength, and there are those in the uninformed public who believe this to be true. However, in an article (Anti-High-Speed Rail Provision Stripped from Final Budget) dated 5/22/15 and written by Anan Batheja with The Texas Tribune, it discusses a budget rider that would have barred TxDOT from spending any state funds towards subsidizing or assisting in the construction of high speed passenger rail. Though Texas Central has promised not to accept public operating subsidies for its proposed HSR project, company officials nonetheless stated that the rider	Refer to BA-6 and GN-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			would essentially kill the train since TxDOT, as the state agency in charge of transportation, would need to play a role in the project's construction. The acknowledged direct involvement of TxDOT (a state government agency) negates TCP's claims that this project will be completely privately funded. The salaries of TxDOT employees are paid out of the pockets of hardworking Texas taxpayers, not out of the bank accounts of TCP's foreign investors. Yet another misrepresentation of the truth by TCP. In the same article, it states one of the dissenting votes to remove this rider came from Texas Senator Charles Schwertner of Georgetown, Texas. He said this about the proposed HSR project: "This project is being sold to the people of Texas that it will never need state backing or subsidization or bailing out, and unfortunately I think that's a complete fallacy." I agree with Sen. Schwertner. The No Build Alternative is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Questionable Claims to be Completely Privately Funded. Texas Central Partners has claimed that this HSR project will be completely privately funded. However, in a recent report by the Reason Foundation (Policy Brief 139), it states that Texas Central plans to apply for RRIF loans. These loans have weak taxpayer protections and could be given to entities without the resources to repay the loans. Given TCP's unverifiable ridership and economic impact projections, coupled with their underestimation of costs, there is no way to assess whether TCP would have the financial resources necessary to pay back any government loans. Should they default on the loans, taxpayers would be left holding the bag. This is completely unacceptable and unnecessary. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to BA-6, GN-2, GN-3 and GN-4.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Infringement of Private Property Rights. While in attendance at several Open House meetings regarding this proposed HSR project, I heard countless accounts of bullying and mistreatment of private property owners by TCP and its representatives. No reputable company, indeed no company worthy of the trust of Texas and its citizens, acts this way. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to BA-6 and ED-2.
Dorothy Parungao	3/8/2018	Website	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Concern for Texas Central Partners' Estimates of Costs and Ridership. TCP has given construction estimates of approximately \$41.7M per mile and a ridership estimate of 4.3 million passengers per year. While there is no "magic formula" to predict the profitability of HSR, generally speaking, rail lines need low construction costs (generally \$20M per mile or less), low operating costs (generally less than \$0.20 per occupied seat mile), and high ridership (generally at least 5 million riders per corridor). [Reason Foundation High Speed Rail Report, p. 17 (Fiscal Evaluation of Worldwide High-Speed Rail Systems)] Neither TCP's construction estimates nor ridership estimates meet these criteria. Therefore, it is extremely unlikely that this project will be profitable or financially feasible. The impact of these things must be considered before the release of the final EIS. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	Refer to BA-6, GN-2, GN-3 and NE-1.
Dorothy Parungao	3/8/2018	Website	Impact on Public Safety. At the Open House meeting held in Harris County on March 5, 2018, a resident shared her comments about the proposed HSR. Has the impact this will have on public safety been studied and considered in the DE'S? If not, it must be thoroughly studied before finalizing the EIS.	Refer to EU-2.
Dorothy Parungao	3/9/2018	Email	To Whom It May Concern: I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Economic Feasibility & Underestimation of Costs. A study of 258 transportation infrastructure projects around the world found that almost 90% of cases project costs were underestimated. that actual costs were on average about 28% higher than initial projections, and that rail project costs were the most severely underestimated, costing on average 45% more than estimated. [Reason Foundation Policy Study 41 8: High Speed Rail in Asia and Europe, p. 19, (May 2013)] Additionally, governments and consultants face significant pressure to underprice high speed rail lines. "If the accurate cost of the Los Angeles-San Francisco California line--\$98 million for mostly truly high-speed rail since reduced to \$65 million for a blended approach--had been divulged to taxpayers, the California bond referendum would have been much less likely to pass." [Reason Foundation Policy Study 418: High Speed Rail in Asia and Europe, p. 18 (May 2013)] Interestingly, in the article "California high-speed rail project facings delays, higher costs" published on the website sfgate.com and dated today. March 9, 2018, it states that the California HSR Authority released a revised business plan and that the cost estimate for building the Los Angeles to San Francisco bullet train will be at minimum \$63 billion and up to \$98 billion in a worst case scenario. The middle-of-the-road estimate is \$77 billion, per the draft report. This revised cost will next have to undergo public comment and legislative scrutiny. These revised cost estimates are well above the original \$32 billion price tag that was given to California voters when they authorized bond money for the pmject nearly ten years ago. The critical question of how California will pay for this has yet to be answered. California politicians are speaking out against this project and its skyrocketing costs: "This continues to be an irresponsible project and an ever-growing burden on California's taxpayers. Making it worse,	Refer to GN-3 and NE-1.

			Sacramento Democrats continue to support this very expensive project as it goes off the rails as they raise taxes and fees every year--making California more unaffordable to live and work." (Assemblyman Vince Fong, R-Bakersfield) "Please, Governor, put all of us taxpayers out of our misery. Let's cut our losses." [California State Senator Andy Vidak, R-Hanford (Kings County)] Texas must learn from the financial and economic disaster that is taking place with the California high speed rail project. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you. Sincerely, Dorothy Parungao Sent from my iPad	
Dorothy Parungao	3/9/2018	Email	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Lack of Inclusion of Economic Feasibility & Viability in DEIS. The Final EIS for the California and Florida high speed rail projects both contain sections dealing with economic feasibility and viability ("Costs and Operations" in the California Final EIS and "Ridership and Revenue Study" in the Florida Final EIS). Howcwr, in the DEIS for the proposed Houston to Dallas high speed rail pmject, economic feasibility and viability are not addressed whatsoever. This is a gross and irresponsible omission on the part of the FRA and those involved in creating this document. These issues must be researched, studied, and addressed (ideally by a neutral, objective third party) prior to the finalization of the EIS and before any record of decision is made.	Refer to GN-2, GN-3 and NE-1.

Dorothy Parungao	3/9/2018	Email	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Infringement of Private Property Rights. In January 2015, after a meeting held in Houston regarding this proposed HSR project where many spoke out in opposition of this project, then State Representative Sylvester Turner said, "As a state lawmaker, I will write a strong letter to TxDOT telling them I do not support this coming into our communities." At the time, he said while he is pro-rail, he is not pro-infringing on individuals' property rights. Fast-forward to present day, and he is now Mayor (of Houston) Sylvester Turner, who, according to his representative at the March 5, 2018 meeting held in Harris County and his website, not only looks forward to having this HSR come to Houston but also is eager to work with TCP to implement this project. I guess now that Mr. Turner is Mayor, he is pro-rail and also pro-infringing on individuals' property rights. Protection of private property rights is important, and a company who knowingly and willingly violates these rights has no business doing business in Texas or anywhere else in the United States. We should not compromise our standards and ethics just for the chance to be a part of what some tout as a first of its kind rail system (in the US). We should stop and take pause, lest we allow ourselves to be part of a first of its kind failure, the likes of which this country has yet to see. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement.	Refer to ED-1.
Dorothy Parungao	3/9/2018	Email	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Incompatibility of Japanese technology with other existing Texas railways. The Japanese technology that is being proposed for this HSR line is incompatible with other rail technologies, including existing rail lines in Texas. According to Rep. Byron Cook, Corsicana, (in an article for The Houston Chronicle, 2/7 /17), this would have two significant consequences. The first consequence would be the essential creation of a Japanese monopoly by which future generations of Texas rail riders would be held hostage. With no competitive suppliers to keep operational costs in check and passenger rates affordable, costs could climb and ticket prices increase disproportionately, potentially making this mode of transportation unaffordable and unrealistic for many Texans. Rep. Cook made this analogies-Would we build an airport with runways which could only handle planes made by Airbus for take off and landing? Would we build roadways which could only accommodate cars made by Volvo? The obvious answer, is of course not. The second consequence of incompatibility is that this HSR will not truly connect with the city centers of Houston or Dallas, and, thus not really take travelers to their final destinations, falling short of TCP's claims of time-savings. That portion will be left to the metropolitan authorities and other city officials (and rail riders themselves) to handle, the so called "last mile." The impact of these factors must be seriously considered and not downplayed or ignored. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement.	Refer to BA-4, GN-2, GN-6, TR-3, TR-4 and TR-12.
Dorothy Parungao	3/9/2018	Email	I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Conduct and Behavior of Texas Central Partners. As a concerned pmperty owner, I attended several public meetings about the proposed Houston to Dallas HSR. Every meeting I attended (until the final, hastily planned meeting in Hamis County on March 5, 2018) was nearly unanimously opposed to this project. The last meeting, quietly and hastily planned--for a night smack-dab in the middle of the wildly popular Houston Livestock Show and	Refer to PI-1.

			<p>Rodeo nonetheless--with negligible press coverage before or after, felt more like a TCP love-fest than an open forum for concerned and interested parties. I lost count of the public officials and/or their representatives who paraded to the microphone with statements so eerily similar to each other that it made sound like all they were doing was regurgitating TCP propaganda. I almost laughed when a representative for retiring Congressman Ted Poe spoke in favor of the project. He's retiring. I'd much rather hear what the candidates vying for his seat think about this project. Where were all of these TCP fans during the other planned meetings, even the one prior to the March 5th meeting, held on February 5, 2018, in Cypress, TX in Harris County? I was there, as were hundreds of others who are strongly opposed to the project. They were not. In the midst of the parade of supporters who one could reasonably suspect were contacted and asked to appear (none, or very few, actually stayed to listen to comments anyone else had to say), say their two cents and leave, I was left wondering if any of our elected officials who are on record as opposed to this HSR project were invited to speak. Texas Agriculture Commissioner Sid Miller, Sen. Lois Kolkhorst (Brenham), Sen. Charles Schwelner (Georgetown). Rep. Kevin Brady (8th District of Texas), just to name a few, are opposed to this project. It would have been nice to hear what they have to say as well. Not only I have I been disappointed by and disgusted with TCP throughout this process, I was disappointed and dismayed with the elected officials claiming to speak for me in favor of this project. In an election year, I exercised my right to not vote for those who chose the interests of a private, foreign-backed company over those of the constituents they are elected and paid to represent. They should all be ashamed.</p>	
Dorothy Parungao	3/9/2018	Email	<p>Objection to proposed Houston to Dallas High Speed Rail I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Conduct and Behavior of Texas Central Partners and Their Representatives. Throughout this process TCP has been reluctant to, and in many cases, has refused to, cooperate with local government agencies and the general public. Their attitude toward repeated requests to disclose how they reached their cost, ridership, and economic impact projections, was essentially that of "you're just going have to take our word for it." This company has done nothing to earn the trust of Texas or its citizens. When a company avoids collaborating with local governments and directly affected parties; when a company lacks transparency; when a company treats private citizens and their properties with disrespect, red flags should go up and alarms should go off. Any collaboration with such a company, especially on a project of this magnitude, seems ill-advised and ill-fated.</p>	Refer to PI-1.
Dorothy Parungao	3/9/2018	Website	<p>I am filing an objection to the proposed Houston to Dallas high speed rail project for the following reason: Addition of road within Durango Ranch subdivision (Plantersville, TX, Grimes County). According to Fabiola at the engineering table at the March 5, 2018 meeting in Harris County about the proposed HSR, it has not been decided who will have access to this planned new road (which will run through nearly half of the lots in the subdivision) and whether it will be private or public. Currently, subdivision access is extremely restricted (via a coded gate) to residents and authorized guests only. Privacy and seclusion are key attributes of this subdivision and are vitally important to residents who call this subdivision home. Having the added road, whether private (HSR authorized personnel only) or public, will strip away two of the subdivision's most attractive and important features, as well as pose a threat to the animals (both wild and domestic) who also call Durango Ranch home. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.</p>	Refer to TR-7.

			Authority released a revised business plan and that the cost estimate for building the Los Angeles to San Francisco bullet train will be at minimum \$63 billion and up to \$98 billion in a worst case scenario. The middle-of-the-road estimate is \$77 billion, per the draft report. This revised cost will next have to undergo public comment and legislative scrutiny. These revised cost estimates are well above the original \$32 billion price tag that was given to California voters when they authorized bond money for the project nearly ten years ago. The critical question of how California will pay for this has yet to be answered. California politicians are speaking out against this project and its skyrocketing costs: "This continues to be an irresponsible project and an ever-growing burden on California's taxpayers. Making it worse, Sacramento Democrats continue to support this very expensive project as it goes off the rails as they raise taxes and fees every year--making California more unaffordable to live and work." (Assemblyman Vince Fong, R-Bakersfield) "Please, Governor, put all of us taxpayers out of our misery. Let's cut our losses." [California State Senator Andy Vidak, R-Hanford (Kings County)] Texas must learn from the financial and economic disaster that is taking place with the California high speed rail project. The No Build Option is the only viable and justifiable option in the final Environmental Impact Statement. Thank you.	
Sandra Pasket	3/9/2018	Website	I feel the bullet train is going to destroy way more value and assets than it will bring to Texas. Farmers and hard working people who have owned land for generations will be robbed over a useless extravagant unsafe bullet train that will ruin Texas as we know it ... those Ribeye steaks and delicious beef you big shot city spoiled ignorant city people have no common sense to even know food is much more important than a train that will be too expensive than anyone supporting it will be able to afford	Refer to LU-2 and LU-11.
Joseph Pass	3/9/2018	Website	I believe this service is one that is necessary! Houston to Dallas at 205 MPH? Hell yes! The impact this project may have on the environment is far less than the impact the car currently making that drive currently have. The positive impact on local economies is probably way understated. Build it!	Comment noted.
Pratim Patel	2/6/2018	Website	Obviously it's a large document so it's difficult to review everything. My main concerns would be i.) regarding the "downstream" impact of flooding (i.e. if we have another Harvey, how would the train station in Houston impact flood levels in the immediately surrounding areas and the areas east towards Downtown such as the Greater Heights) ii.) what are the noise level impacts at the station site and surrounding areas (specifically inside the 610 loop) and iii.) if there were to be a terrorist attack (eg. similar to Madrid) what could be the potential impact in the surrounding areas? So in summary, I would like to understand (and did not see it addressed in the document), what is the before and after analysis of building the station in Houston with regards to flooding, noise, and terrorism. Thanks	Refer to FP-1, NV-1, SS-6, SS-7, SS-12, SS-16, SS-17, SS-18 and WW-1. Refer to <b>Section 3.4, Noise and Vibration</b> . This section describes the assessment of potential noise and vibration impacts from construction and operation of the Build Alternatives, as well as recommended mitigation measures to eliminate or reduce these impacts. Approximately 74 percent of the Build Alternatives in Harris County, including Houston, would be constructed on viaduct (bridge type structure) which allows for free movement of water and would avoid and/or minimize floodplain and waters impacts.
Mark Patrick	2/6/2018	Handwritten	The HSR will affect my tax dollars due to the constraints it will put on a Waller County where I reside. The county's will have to raise taxes to cover the cost to repair infrastructure or all areas this train will cross school district taxes will increase due to rerouting of school bus transportation, roads & school bus stops.	Refer to SC-5, SC-6, TR-7 and TR-8.
Mark Patrick	2/6/2018	Handwritten	My opposition to the HSR is due to the fact of community impact. The impact on my property along will create flooding in my area. My home flooded in 2017 during the tax day flood. The flood occurred with only 12-18 inches of rain in a matter of 10 hours. My home sits is on a creek that his train is due to cross with the added concrete and dirt to build these pylons will create additional water to be diverted into my home. The cost for my flood insurance has significantly increased due to the area flooding. The cost that the insurance did not cover was spent out of my pocket to repair my home. The train will only impact my current flood levels situation.	Refer to FP-1, WW-1 and WW-2.

			<p>excited about working on the Texas Bullet Train and urge the Federal Railroad Administration to move forward with its review and approval. Texas is the perfect place to plant the seed to grow this new high-tech industry in the United States. The new high-speed economy created by this project will be a game changer for workers, vendors, contractors and other companies and small businesses all along the route. The fact that it is fully investor-owned means it will provide a great benefit for not only passengers, but all taxpayers. The Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. For instance, it states that the Train will create more than 10,000 direct jobs per year during construction and about 1,500 jobs permanently when operational at least 25% of which will be in rural counties along the route It will contribute more than \$2.5 billion in taxes over its first 25 years to counties along the route and increase property assessment values within a half-mile of the proposed stations by between \$71.4 million and \$161.1 million. We want more travel options between Texas' two economic hubs and this project fills delivers and gives all travelers the freedom to choose a safer, more reliable and cleaner way to move across Texas. I welcome this new innovative industry and I urge the FRA to expedite its review and approval -- because it's good for business, good for the economy and good for Texas. For Texas, Deron Patterson 7619 Applecross Ln Dallas, TX 75248</p>	
Donna Patterson	3/8/2018	Email	<p>My name is Donna Patterson and I have property in Madison County that is directly effected by this project. Should this train be approved on the current proposed route, my property would be destroyed. Let me start by saying that my property is rectangle in shape. Currently, for the train itself they will need approximately 110 acres. This does not include the 2 mile access for dirt and water. My back door will be about 50 yards from the railway. My son and daughter-in-law will have the train in their front yard. It will be about 125 yards from their front door. Texas Central has proposed moving our county road so that access continues. They graciously moved it to my son's back yard - yes between his house and the pond that they walk their show animals to daily. With the move of the county road, they actually divide my property into fourths. I have not yet calculated the loss of property for the dirt road. We do make our money raising cattle. I have yet to figure the loss of income in that regard at this time. Two of the new sections of my property will no longer be able to run cattle because of the lack of water. The damage to wildlife and hunting will be significant as well. We have numerous deer and other animals that reside on my land because of the access to Caney Creek, their natural water source. In regard to eminent domain - I believe that eminent domain should be used when it is going to help the majority. This train is being built for 2 cities. Economically, I believe it will negatively affect many of the small towns along Interstate 45. My family is against the train.</p>	<p>Refer to ED-1, ED-2, LU-7, LU-11, LU-14, RF-2 and SC-15. As summarized in <b>Section 3.13.3.3 Land Use, Assessment</b> and discussed in detail in <b>Appendix E: Land Use Technical Memorandum</b>, a structural displacement would occur when an impact from the LOD, either directly or indirectly, necessitates the removal of a structure. A review of the impacted businesses was conducted if the structure met a set of factors, including the following: the proximity of the structure to the LOD (within the LOD or within 50 feet), the percentage of the structure's parcel that would be impacted by the LOD (if parcel was affected by over 30 percent), or if access was impeded to the structure. Caney Creek is noted in <b>Section 3.7.4.4, Waters of the U.S., Freestone County</b> and <b>Section 3.7.4.7, Waters of the U.S., Madison County</b>. The Project is being designed and constructed with consultation from USACE to avoid, minimize and mitigate potential impacts to wetlands and water resources, a full discussion of compliance and mitigation measures can be found in Section 3.7.6. Potential impacts to commercially or recreationally important wildlife are discussed in <b>Section 3.6.4.3.5, Natural Ecological Systems and Protected Species, Wildlife</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Build Alternatives</b>. Mitigation measures for wildlife can be found in <b>Section 3.6.6, Natural Ecological Systems and Protected Species, Avoidance, Minimization and Mitigation</b>.</p>

Patrick Patterson	1/29/2018	Oral	Well, I have to follow that. My name is Patrick Patterson. I'M going to talk about the estimated passenger issues. When you get down to it, this is really all about money. Will this train turn a profit, or will it turn into a taxpayer funded boondoggle. You're going to hear that word a lot of times tonight. I'll generously allow that this can actually be built for the \$15 or \$18 billion estimated. But how can it generate enough revenue to pay for itself? And at a cost of \$199 one way, which is about twice the price as much as a Southwest Airlines ticket, this is going to be a hard sell. Driving the same distance at a reverse rate of six to seven cents an hour -- a mile is still going to be cheaper, and you have the convenience when you get there you can take your car to wherever you need to go. And what does that \$199 price come from? What is the likelihood of it not rising significantly. Is it ever going to be competitive to the price of an airline ticket or driving? Where are the projected five million riders coming from. The railroad's figures say there are currently about 14 million people per year traveling between Dallas and Houston. Eleven percent of those are coming on trains -- planes and trains and buses. Okay? So that leaves 89 percent traveling by car. Now, how many of those people want to pay the price of a ticket? To get to five million people, they will have to capture 36 percent of that 14 million riders. Do you think that 36 percent of the people traveling are going to take the train? Whether traveling by train or air, many of the same costs and inconveniences apply. Both have to go to a terminal, wait in line, go through TSA inspection, baggage checks, all kinds of things. Therefore, it doesn't seem reasonable that they can take more than half of the traffic away from the airlines. So let's say they get five percent of that five million riders from the airplanes. That leaves 95 percent of it to come from drivers. Now, that's just not going to work. People that drive are not going to buy this. And talking about technology change, there's so much possible improvement in technology in cars. We can be driving propane cars or natural gas cars or even electric cars. Hmm. Electric cars versus electric trains. Hmm. What about that? They talk about peek oil, traffic congestion, lions and tigers and bears, oh my. We don't know what it's going to cost to drive in Texas in five or 10 or 20 years. So to try to say that it's going to be too expensive to drive and we'll have to take the train, it's a little hard to buy. I got more stuff I can read. I think that's close enough. Actually I do have a question. How credible are projected ridership numbers?	Refer to GN-2, NE-1, PN-3 and SC-3.
Tammy Patterson	3/8/2018	Email	I live with my husband on the property owned by his mom, Donna Patterson in Madison County. Should this train be approved on the current proposed route, our property would be destroyed. Let me start by saying that our property is rectangle in shape. Currently, for the train itself they will need approximately 110 acres. This does not include the 2 mile access for dirt and water. Cindy Paul	3/9/2018	Website	I live in White Oak Falls, Houston 77095. The rail will cut through the edge of my community. I'm within 700 feet of the proposed project. Although I'm not opposed to the high speed rail, I am opposed to the lack of respect Texas Central is showing our community. Many residents will live inconveniently close to the rail. Hundreds of homes will be impacted by noise and vibration. There's also the matter of real estate devaluation. My home is an investment and my property value is at risk. These are the issues I would like to see addressed. Thank you for your consideration.	Refer to LU-3, NV-1 and VA-1.
Myrtle M. Paulhill	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity. Adam Payne	2/21/2018	Website	My name is Adam Payne, I am a senior in High School about to go to college at Stephen F Austin State University. I am really excited about this project. This would benefit so many people in so many ways. I am blind in my left eye and not allowed, by law, to drive; so this project would benefit me by providing a choice if I need to get from Dallas to Houston or vis versa. I would definitely choose a train over a plane any day.	Comment noted.
Jeff Payne	2/16/2018	Website	This is such an exciting project for TX! I'm a Project Manager in Dallas and I have seen several employment opportunities in the Houston area. A High-Speed train opens up the possibility for commuting to Houston on a weekly basis. Removes cars from our freeway system and reduces air pollution. This is great for TX!	Comment noted.
Walter Paynter	2/18/2018	Website	In my opinion the location of the Houston terminal is wrong and would destine the project for failure. Always connect the airports and city centers with train service. Also, as a matter of interest with regard to "Texas Culture" and appeal, make train service available for passenger cars and Pick-ups. If one can get to Dallas from Houston in their own car without wear and tear and not having to rent one in Dallas, that's appealing. Less traffic on the roads as well. Thank you.	Refer to GN-6, GN-7 and TR-4.
Roger Pearce	2/7/2018	Website	Here are my reasons against a high speed rail project in Texas. 1. Construction costs are under reported. The project would go over budget by a factor of 10. 2. Ridership is under estimated. Texans like their cars. A million people won't ride it.	Refer to GN-2, GN-4 and NE-1.
Terry Peck	2/27/2018	Letter	This is to inform you of Native American artifacts that I had the experience of finding in Madison County, Texas. During the years between 2004-2008 I had access to approximately 300 acres off of Strawther Lane off of highway 21 west of Madisonville, Tx. I often would explore this property due to it's beauty and my interest in nature. I first noticed a small creek of running water below a large hill with little trees. Due to the sandy soil I dug around the lower part of the hill and discovered obvious artifacts including arrowheads, scrapers and tools. Finging that this creek was part of Kickapoo Creek I studied the culture of Native American Indians in this area which was inhabited with several Indian tribes. It would be a horrible shame and disrespect to our ancestors and history to destroy this beautiful area in our State of Texas. Should you need any further information please feel free to contact me. I am enclosing a few pictures that are items that I found.	Refer to CR-5.

			6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	
Pediatric Dentistry of North Texas	2/24/2018	Website	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy multiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch ( held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks multiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	Refer to LU-5.

Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	I have concerns about the high speed rail in Navarro Country travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	**I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.**	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures	Refer to LU-5.

			and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	
Pediatric Dentistry of North Texas	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.

Pediatric Dentistry of North Texas	2/27/2018	Website	**I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.**	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this	Refer to LU-5.

Pediatric Dentistry of North Texas	2/21/2018	Website	I have concerns about the high speed rail in Navarro Country travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/24/2018	Website	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch ( held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property.	Refer to LU-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.

Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/26/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/26/2018	Website	I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to	Refer to LU-5.

			north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	
Pediatric Dentistry of North Texas	2/26/2018	Website	**I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.**	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy multiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch ( held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks multiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	Refer to LU-5.

Pediatric Dentistry of North Texas	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easment would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about historic impact.	Refer to LU-5.

Furthermore, I am concerned about the bald eagle habitat.	
Pediatric Dentistry of North Texas	2/27/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable, and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/21/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the country I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the U.S. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables, the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire, and police personnel. If proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and its charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property (all at no cost!). Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	Our office staff of over 150 employees and family members has benefited immensely from the opportunity to visit and enjoy at no charge this incredible facility. It has provided a needed respite from the rigors of working in a complex healthcare field with tremendous levels of stress providing care for the most difficult patients suffering from complex medical issues. We wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy mutiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch ( held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks mutiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high power lines following the power line as most of the remaining route does should have less affect on access or growth along than the proposed route.	Refer to LU-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Pediatric Dentistry of North Texas	2/27/2018	Website	**I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.**	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	Dallas to Houston High-Speed Rail Environmental Impact Statement I have concerns about access for homeowners in Navarro County located on 3194 because the proposed route closely parallels 3194 blocking access to their property and will potentially cause serious water shed issues. I would recommend the path cross northeast and remain parallel to the exiting power lines already located in an easement. I have grave concerns about the high speed rail in Navarro County traveling through the Morgan Legacy Farm located near FM 709 and 3194. The proposed route will devalue and disassemble its ability to be a charitable ranch. The route will require the removal of all the main structures and infrastructure. Vacations at the ranch have been auctioned off to raise money for schools. It has served as a retreat for many businesses and organizations. The Daughters of the Republic and Medical Residents from Children's Medical Center to name a few. A move to north of the already existing high power lines would have less impact on benefits of the ranch and prove less damaging to the county in the long term.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. The preferred route travels in one of the highest elevations which will create in my opinion significant watershed issues causing a loss of migratory waters of the US. Further by separating access from the lodge to the stables, rodeo arena, guest houses and other amenities the proposed route will destroy the primary charitable, historical and emotional support provided to literally thousands of individuals including first responders, nurses, physicians, students and others. A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about the bald eagle habitat.	Refer to LU-5.
Pediatric Dentistry of North Texas	2/27/2018	Website	I have concerns about the high speed rail in Navarro Country travelling through the intersections of 709 and 1394 cleaving Morgan Legacy Farm. Lonnie R. Pelton	1/31/2018	Letter	What are determination(s) for Direct Land purchase(s) verses "Right of Ways" purchase(s)? Will property owners have the same payment options on land going north and south, and east and west? By payment options, I mean will the rate of pay be the same for everyone? Can a property owner Lease land after "ROW" is established or land is sold? How is land value determined, and is all land valued equally across the board? What settlement options are availability regarding personal property; houses, buildings, etc if destroyed? Will the former site of the Asia P.B. Church and the Asia Cemetery be affected?	Refer to CR-5, ED-2, GN-7, LU-14 and TR-10. The Asia Cemetery will be avoided and steps will be taken so that no unmarked burials are impacted. The Asia Cemetery and the former location of the Asia Church do not fall within the current Limits of Disturbance; so they will not be physically impacted.

David Penque	1/29/2018	Oral	<p>Hi. Name is David Penque. We haven't been here for 150 years. We are not ranchers. My wife and I are retired English teachers. Yeah, that breed. And we moved here to Corsicana in 1981. We got our seven acres of land--I know it's not a thousand or something like that--seven acres of land about five miles outside of town past Wal-Mart down Highway 31. And we thought this would be a great place to raise our five daughters and, indeed, it was. We also thought it would be a terrific place to have our quiet retirement. That doesn't seem to be the case right now. I found out tonight that according to the preferred route, that we are one half mile away from the train. This isn't going to be great. Did you notice, folks, on that first slide that was up there it said the Dallas-Houston high speed rail. I didn't see Dallas-Navarro County high speed rail. But just think of how great this could be. You could drive up to Dallas, if you've got to go to Houston, it will take an hour to get up there, and then you take your \$199 ticket, you can get all the way to Houston. But don't forget then you got to repeat the process going back. Okay? But that's not really what I want to speak about. This is 53-year-old technology. I kind of want to approach this a little bit differently. This is 53-year-old technology. I'm 70 years old. I was 17 when this technology began. Now, think about that for a minute. If this is going to take four, five, six years to build, there is a technology called the Hyperloop, which is a high speed mode of transportation that goes through a tube, and they're just starting to work on this now. Okay? It's just getting off the ground, just barely, still in experimental stages. But it would take, to go from Dallas to Austin in this Hyperloop, 19 minutes; Austin to San Antonio, eight minutes; San Antonio to Houston, 21 minutes. You could go from Dallas all the way to Houston in 48 minutes. What I'm trying to say is that this is old technology, and it could be replaced quite quickly. By the time it's done, maybe this Hyperloop will be ready to take off. And they're already talking about a Texas triangle of that exact route that I mentioned. And I encourage you to take a look at this hyperloop-one.com to find out more about this. And is this what we really want? Thanks very much.</p>	Refer to BA-4 and TC-2.
David Penque	2/16/2018	Website	<p>My wife, Ruth, and I are totally against the construction of the HSR. We live a half mile from the proposed route. We bought seven acres in 1981 because it was a wholesome place to raise our five daughters, and because it offers such peace and quiet. We saw it as a wonderful quiet location to retire. With a 200 mph train running frequently nearby, the peace and quiet we now enjoy will evaporate quickly. Moreover, our property value will plummet due to the proximity of this train. Residents of Dallas and Houston expect and are used to high traffic volume, noise, bustle, etc. We in the rural areas between these two cities are not. We intentionally purchased this property to avoid the noise and commotion of big cities. For example, along the county road we live on, frequently a full half hour will pass between the passage of one vehicle to the next. It's peaceful, and that's what we want. It is not fair that a transportation system we'll never use is being thrust upon us. To use this train, we first have to Drive to Dallas (roughly 60 miles), leave our car, and virtually pass right by our house on the train to Houston. Then, the return route would require us to repeat the process in reverse. That's two hours of driving to use the train. Additionally, the train isn't cheap. We understand tickets are \$199 per person one way. Few people in Navarro County could offer that type of expense. This is transportation that would only serve residents and business people in either of these two cities. It is unlike the railroads of the past, where a train would come to your town to pick up passengers and cargo and then stop at the next town, and the next. In fact, to call it a railroad defies the common description of the term. The high speed rail is fifty-three year old technology. If it is built, there is a good chance the entire system will be obsolete by the it is completed. While its development is just beginning, the hyperloop technology could transport passengers much cheaper and much faster. What would happen to all the HSR construction? Will the same company that built it remove it? We have learned that the construction of the HSR will interfere with emergency vehicle routes, school bus routes, and other rural roads. Why should the people of our county have to suffer additional time in carrying out our daily routines and dealing with emergencies so that residents of these two cities can save time? That doesn't make sense from our point of view. In the counties between Dallas and Houston, the bullet train offers virtually nothing to the residents, ranchers, farmers, and towns. Keep this monstrosity out of our counties! We don't want it!</p>	Refer to BA-4, NV-1, PN-3, SC-3, SC-6, SS-23, TC-2, TR-8 and VA-1.
David Penque	2/26/2018	Website	<p>The United States Department of Transportation's (DOT) Federal Railroad Administration (FRA) is preparing this Environmental Impact Statement (EIS) in compliance with the National Environmental Policy Act (NEPA) (42 U.S.C. Â§ 4231 et seq) to assess the potential beneficial and detrimental effects of implementing the proposed Dallas to Houston High-Speed Rail Project (Project). Questions: How much of the EIS is actually work of the FRA, and how much is the work of the TCR itself? Were there sections of the EIS which were merely lifted from TCR materials? Also, if there are errors in the EIS, should the FRA be blamed for them? Please explain.</p>	Refer to GN-1, GN-4, NE-1, NE-5 and NE-8.
David Penque	2/26/2018	Website	<p>The Project includes the deployment of an electric-powered HSR passenger rail system based on Central Japan Railway Company's N700 Tokaido Shinkansen. Questions: Why is the FRA interested in sponsoring 53 year-old technology? Have newer technologies like the Hyperloop</p>	Refer to BA-4, NE-1 and TC-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			(which is supposed to be three times faster while charging far less for tickets) been considered? If not, why not? Is it not possible that the completed bullet train could be obsolete by the time it is finished? If that happens, will the TCR be responsible for dismantling everything they have built? If so, what is the timeline for this dismantling?	
David Penque	2/26/2018	Website	To minimize risk and enhance passenger safety, the Project is proposed to be operated in a fully sealed corridor. Questions: Is the project in fact fully sealed? Does this mean that no rural roads will be disrupted at all? Does this mean that such vehicles as emergency vehicles and school busses will not have to be re-routed? Please explain.	Refer to SC-7, SS-23, TC-7 and TR-8.
David Penque	2/26/2018	Website	Power would be distributed to each train car via the catenary, which is the electrical wiring that runs above each track and conducts electricity from the Traction Power Substation (TPSS) to the train Questions: What will happen to the train during a power outage? Will the train's use of electricity cause power outages or possible brownouts for Navarro County residents?	Refer to EU-3 and EU-4.
David Penque	2/26/2018	Website	TCRR is proposing three stations as part of the Project: two terminal stations, including an approximately 90-acre terminal in Dallas, and a 60-acre terminal in Houston; and a 115-acre intermediate Brazos Valley Station in Grimes County, near the town of Roan's Prairie, Texas. Questions: Why is the train, which will cover a 240 mile path, only serving residents in three areas of the state? Why won't it have more stops to serve more people (as traditional railroads always have)? Why are many counties in between Dallas and Houston being asked to sacrifice much for a railroad which will not serve their travel needs at all? Would the railroad be favorable to the residents of Dallas or Houston if they had to travel one full hour to board, as the residents of Navarro County (a county which is being cut in two by the railroad) are being asked to do?	Refer to GN-7, NE-1 and TC-4.
David Penque	2/26/2018	Website	Hours of operation would be 5:30 AM to 11:30 PM. Six trains per hour during peak hours and four trains per hour during off peak. During AM and PM peak service hours, train service could occur as often as every 10 minutes between terminal stations in Dallas and Houston. Questions: My home of thirty-seven years is located one-half mile from the preferred route. My wife and I are retired teachers, so we don't have to get up early. Additionally, my wife has cancer, and sleep is a precious thing for her. One of the reasons we purchased our home was because it is in a rural area, and is quiet. (Note: we did not put our home investment into an urban area because of the lack of peace and quiet). What kind of noise will the train yield? In the mornings, will it be waking us up every 10, 20, or 30 minutes during rush hour? As a result of the construction of this train, is it realized by the FRA that our property value will plummet? Please explain.	Refer to NV-1 and VA-1. At a distance of one-half mile, the train noise will not be high enough to cause any noise impact, including sleep disturbance.
David Penque	2/26/2018	Website	2.4.1 Description of Corridor Alternatives In accordance with the Passenger Rail Investment and Improvement Act, TxDOT prepared an annual state rail plan in 2010 and completed subsequent updates. The Texas Rail Plan recognizes strategic planning efforts for high-speed rail development, as well as existing freight and passenger rail services and potential areas for investment and improvement. Using TxDOT's Texas Rail Plan as a framework, TCRR identified three general corridors (Figure 2-17) that could be considered for future development of HSR between Dallas and Houston, in order to minimize impacts to private property from the development of a new transportation corridor. Questions: Who determined which is the best of the possible routes? How much of a say in the deciding of the "preferred route" did the counties and the people within those counties have? Did the FRA have a voice in determining which was the preferred route? If so, what information led the FRA to draw its conclusions?	Refer to BA-5, BA-7, BA-8 and PI-1.
David Penque	2/26/2018	Website	Utility Corridor - The Utility Corridor would predominately follow the CenterPoint Energy and Oncor Electric Delivery high-voltage electrical transmission lines (345 to 500 kV). However, since the existing utility corridors do not extend into Dallas and Houston, railroad ROW would be needed to complete the corridor connectivity. Question: Does this foreign-based private company have the right of eminent domain to take land held by American citizens and use it for profit-based purposes? Please explain.	Refer to ED-1
David Penque	2/26/2018	Website	2.4.2 Description of Other Modes Considered Based on public comments received during the scoping period asking FRA to consider other forms of transportation, FRA also evaluated alternatives to HSR between Dallas and Houston, including other types of passenger rail service and other modes of transportation. These other potential transportation alternatives are described below. Higher-Speed and Conventional Service - HSR at the Project's proposed speeds requires a fully-sealed and grade-separated ROW and two separate new tracks for passenger rail service. Higher-speed (90 to 150 mph) and conventional speed (up to 90 mph) rail service can be implemented in existing railroad ROW and can operate through at-grade railroad crossings at passenger train speeds up to 125 mph.4 This alternative uses the BNSF Teague freight line or the UPRR Hempstead freight rail line to provide different travel speeds. Direct Bus Service - Direct bus service operated by Greyhound, MegaBus and Vonlane uses IH-45 to travel between the two metropolitan regions and the trip takes approximately four hours depending on traffic and road conditions. This alternative proposes construction of a new dedicated bus lane that would be required in order to maintain the existing automobile travel lane capacity. IH-45 Expansion - Congestion on IH-45 is increasing and is projected to further increase automobile travel times between Dallas and Houston. To offset congestion, TxDOT is in the process of widening IH-45 from four to six travel lanes along approximately 21.1 miles from Corsicana to south of Richland in Navarro County. TxDOT is also planning to widen IH-45 from four to six travel lanes for 6.25 miles from north Huntsville to south Huntsville and another 12.4 miles from south Huntsville to the Montgomery County Line. Question: Why wasn't the Hyperloop considered?	Refer to BA-4, NE-1 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
David Penque	2/26/2018	Website	<p>...these alternatives rely on vehicular travel as the primary means of transportation between the Dallas and Houston metropolitan regions and would not offer a longterm alternative to travel on IH45 and they would not offer a oneway trip in 90 minutes or less. Additionally, these other potential transportation alternatives would not provide passenger rail service, as per TCRR's objectives for the Project. Therefore, FRA eliminated these alternatives from further consideration based on failure under the Purpose and Need criterion.</p> <p>Questions: It sounds like the FRA had its mind made up ahead of time. Why do we need a 90 minute or less mode of transportation? (Of course, if that's a criteria, none of the existing modes of transportation can match that, but is it worth the grief it will give to citizens of the "in-between" counties?) . Has it been considered that passage on the railroad will not eliminate one's use of I-45? (For example, people will still use I-45 to get to the stations in Dallas or Houston. I myself would have to drive one hour on I-45 from Corsicana to get to the Dallas station, not to mention the one hour I'd have to drive to get back to Corsicana on the return trip). Please explain.</p>	Refer to BA-4, NE-1 and PN-3.
David Penque	2/26/2018	Website	<p>FRA eliminated the BNSF and UPRR corridors predominantly because BNSF and UPRR declined consent to share ROW for the majority of distance between Dallas and Houston, which made them operationally infeasible, and the immediate adjacency to the corridors would require a cost-prohibitive barrier wall along the 240-mile length of the corridor. Additionally, the physical characteristics of the BNSF and UPRR would not be suitable for high-speed operations because curvature of the existing freight rail line would not permit the HSR trainsets to safely operate through the curves at the speeds necessary to meet the travel time objectives. To address curvature constraints and the need for a barrier wall, these alternatives would need to be located farther from the existing freight rail infrastructure and would result in greater property impacts. FRA eliminated the IH-45 Corridor because sufficient sized ROW does not exist throughout the entirety of the interstate corridor and would result in greater direct impacts to residential and commercial properties. Also, the IH-45 corridor was the only corridor alternative that would directly impact the Sam Houston National Forest, resulting in impacts to recreation resources and managed habitat. Additionally, the physical characteristics of the highway ROW would not be suitable for HSR operations because of the existing curvature and eliminating the curves to safely permit the train operating speeds necessary to meet the travel time objectives would result in greater environmental constraints in the form of increased direct impacts to residential and commercial properties. Roadway interchanges would require extensive reconstruction above or below the HSR tracks and would result in increased direct impacts to residential and commercial properties. Questions: Why can the BNSF and UPRR deny right of way to the bullet train, but the ranchers, farmers, and other citizens along the preferred route cannot? In considering the infeasibility of the I-45 route, deference is given to the Sam Houston National Forest. Why isn't the same consideration offered to property owners along the preferred route? Comment: It certainly sounds like the FRA, judging from these paragraphs, already had made a decision to have this bullet train built no matter what.</p>	Refer to BA-5, BA-9 and BA-10.
David Penque	2/26/2018	Website	<p>The No Build Alternative would not provide congestion relief, improve safety on IH-45, meet current and future transportation needs between Dallas and Houston and would not offer an alternative transportation mode that would connect to existing modes. Questions: Again, the assumption here is that the transportation needs of Dallas and Houston trumps the desires of all those who live and own property in/near the preferred route. How is this bullet train going to make life better, easier, and more satisfactory for those living in the "in-between" counties? Do the travel preferences of the many trump the basic rights of the few?</p>	Refer to ED-2, PN-3 and SC-19.
David Penque	2/26/2018	Website	<p>Question: In plain English, please explain the air quality effect on my home (446 Southwest County Road 3040, Corsicana, Texas 75110, which is located 1/2 mile from the preferred route) both during the construction of the railroad, and during the years following its completion.</p>	<p>Construction-related emissions would be temporary and transient in nature occurring only in the immediate area of active construction areas. The potential short-term emissions increases within active construction areas would be reduced through Best Management Practice (BMP) mitigation measures as discussed in Section 3.2.6. Pollutant emissions would be expected to quickly disperse in the atmosphere due to wind and other local meteorological conditions. As a result, no air quality impacts would be expected at a distance of 1/2-mile from the HSR route. After completion, there would be no local emissions from the electric trains. These trains would draw power from existing power plants located some distance away from the given address, and these plants currently produce emissions, but are regulated to control pollution within Clean Air Act standards which are set to be protective of human health. Based on the operational emissions estimate, except for sulfur dioxide, operation of the train would tend to reduce more emissions than they produce by reducing travel by gas burning cars, planes an</p>

David Penque	2/26/2018	Website	Operational activities, such as fueling and maintenance, would require the use of substances that contain hazardous substances and petroleum products. Groundwater contamination could occur if hazardous substances or petroleum products are spilled and subsequently leach into the groundwater through the ground. Questions: In addition to possible groundwater contamination, what specific results will the bullet train have on the quality and quantity of the water supply for Navarro County? Will the existence of the train increase the possibilities of flooding during times of heavy rains in certain areas? During a similar summer to 2011, how will the possibility of drought affect the train's use of the water supply?	Refer to FP-1, HZ-5, WW-2 and WW-6.
David Penque	2/26/2018	Website	Question: I live 1/2 mile from the preferred route, in an extremely quiet rural area which we love. A noise level chart shows noise levels at 50 feet. How noisy is the bullet train going to be at 1/2 mile?	The noise level at 1/2 mile will be at least 25 dB lower than at 50 feet and will be well below the impact threshold. The assessment does not calculate noise levels at such large distances.
David Penque	2/26/2018	Website	Questions: A chart demonstrates vibration levels at fifty feet. Our home of the past 37 years is located 1/2 mile from the preferred route. What will the vibrations of the bullet train feel like at this distance? Will the constant passing of the trains, day by day, have an effect on the stability of our home? If so, how much? If so, is the company prepared to reimburse homeowners for damage to homes? Please explain.	Refer to NV-5.
David Penque	2/26/2018	Website	Noise measurements were conducted during January 2016 to characterize the existing conditions along the Build Alternatives. Question: In January, most residences would have their windows closed. Is any consideration given to the fact that noise levels would be greater in residences during warmer weather (such as Spring, Fall, etc.) when windows would tend to be open?	Existing noise measurements and projections of noise are all based on outdoor noise levels in accordance with FRA guidance.
David Penque	2/26/2018	Website	All of the Build Alternatives would involve excavation and construction activities that could have the potential to uncover or disturb existing hazardous materials. Question: What steps are being taken to prevent hazardous materials from being excavated 1/2 mile from my home ([...], Corsicana, TX 75110)?	The property at this property in Corsicana, TX, is located 0.45 miles east of Segment 3C. None of the high, moderate, or low-risk hazardous materials sites are within a mile from this property. This property will not be impacted by hazardous materials sites. Environmental consequences due to disturbing hazardous materials sites are discussed in <b>Section 3.5.5.2, Hazardous Materials and Solid Waste, Build Alternatives</b> . Mitigation measures are discussed in <b>Section 3.5.6.2, Hazardous Materials and Solid Waste, Mitigation Measures</b> .
David Penque	2/26/2018	Website	Dallas, Ellis, Navarro and Limestone counties do not have potential habitat mapped within the Study Area; therefore, their acreage of impacts to federally-listed species is zero. Question: My neighbors have seen bald eagles nesting on their properties as well as other federally protected wildlife. How can this statement be claimed as being true?	Refer to NR-3. Habitat was modeled for the federally endangered Houston Toad, Large-fruited Sand Verbena, and Navasota ladies'-tresses which are not listed for Dallas, Ellis, or Navarro County. Habitat was only modeled for federally listed species with the potential to occur within the Limits of Disturbance (LOD). Navasota Ladies'-tresses was modeled in Limestone County. For information regarding how species were evaluated please see <b>Section 3.6.3, Natural Ecological Systems and Protected Species, Methodology</b> .
David Penque	2/26/2018	Website	...the HSR track and supporting facilities (e.g., permanent roads, parking areas, access/maintenance areas, terminals and non-vegetated embankments) would result in a permanent impact to the floodplain throughout the operation of the HSR system. Questions: Looking at the considerable flooding in Navarro County over the past 2-3 years, is it possible, in this era of climate change, for the FRA to accurately predict the real impact of changes the railroad will make to our landscape? Please explain. If a greater (and indeed damaging) impact is seen than is predicted, will the railroad pay the county for the additional costs associated with that damage? Please explain.	Refer to FP-1, WW-1 and WW-2. This is outside of FRA's purview and would be handled between TCRR and the county.
David Penque	2/26/2018	Website	Questions: The railroad has indicated it has met with local county officials to discuss safety, emergencies, etc. According to the Navarro County Sheriff, no one has met with him or other emergency aid providers in Navarro County. Isn't safety a priority? What will happen if the bullet train has an accident? Who will provide necessary aid to the passengers and crew? Who will provide emergency containment and security? Will the bills associated with such an event be paid for by the railroad, or will the bills be passed on to Navarro County taxpayers?	Refer to PI-1, SS-18, SS-21, SS-23 and SS-26.
David Penque	2/26/2018	Website	Summation: After going through much of the EIS, it seems as if the residents of Navarro County are being asked to sacrifice a lot, and getting nothing in return. This HSR isn't being built for us or for our use. It's being built for the wealthy of Dallas and Houston. The sacrifice Navarro County residents have to make in changes to property, noise tolerance, school and emergency vehicle re-routing, providing security, etc. as well as effects to our natural environment are astounding in comparison to the nothing the County and its residents will gain from this train. The residents of Navarro County do not want this; our rights must be preserved and protected.	Refer to NV-1, SC-7, SC-19, SS-1, SS-6 and SS-23.
David Penque	1/29/2018	Website	This is 53-year-old technology. I kind of want to approach this a little bit differently. This is 53-year-old technology. I'm 70 years old. I was 17 when this technology began. Now, think about that for a minute. If this is going to take four, five, six years to build, there is a technology	Refer to TC-2.

			called the Hyperloop, which is a high speed mode of transportation that goes through a tube, and they're just starting to work on this now.· Okay?· It's just getting off the ground, just barely, still in experimental stages.· But it would take, to go from Dallas to Austin in this Hyperloop, 19 minutes; Austin to San Antonio, eight minutes; San Antonio to Houston, 21 minutes. You could go from Dallas all the way to Houston in 48 minutes. What I'm trying to say is that this is old technology, and it could be replaced quite quickly.· By the time it's done, maybe this Hyperloop will be ready to take off.· And they're already talking about a Texas triangle of that exact route that I mentioned.· And I encourage you to take a look at this hyperloop-one.com to find out more about this.· And is this what we really want?	
Caroline Perez	3/5/2018	Website	I am unable to attend the public session tonight. I live in Bayou Bend subdivision on Alabonson, and I strongly support building of the High Speed Rail from Houston to Dallas. I believe this type of public infrastructure is critical to reducing Texas dependency on never-ending highway expansion projects that cost the tax payers millions every year and never improve our transportation options. I believe the route proposed would mean construction impacting my immediate geographic area and I strongly support this. I have two masters degrees and an Oil & Gas executive with two young children. I've lived in Houston for 36 years and am in my early 40s in age.	Comment noted.
David Perez	1/11/2018	Email	I would like to share my experience with your team. I have worked on rail projects with Puesta en Marcha in various construction phases an with the operational side of the business to help with the success of the Commercial Operations. Please send me the project details. Consider the design of parking spaces for larger uses: employees, emergency services, etc. Ensure there is adequate circulation and an integrated transit network that is for public and private transit. I have more than 30 years of experience in Metro planning. Originally from Venezuela and since then have retired.	Refer to PI-10, TC-5, TR-2, TR-3 and TR-4.
Earnest L. Perry	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Jodi Perry	2/24/2018	Website	This is the greatest idea ever!!! Amtrak doesnt come here Houstonians either have to take the 4.5 -5 hour drive to Dallas or Fly at outrageous rates. I dont understand why you are asking for approval this should already have the go-ahead.	Comment noted.

			the HSR project since it is centrally located (between Freestone County and Limestone County along FM1365) in regards to the entire project. I have attached the Freestone County exhibit 2 map from Texas Central website for the approximate location. The property is 3.15 acres and has a 2,700+sf building with 3 restrooms, 2 heat/AC units, all utilities, wired for a security system, highway frontage with paved parking lot and storage building. This location could be utilized for power or fueling stations, maintenance facilities, staging area, offices, RV lots or whatever you deem the highest and best use to support HSR construction and operations. Thank you for your time and potential interest in our property. We would be glad to further discuss and send applicable information as necessary. Also, we would be glad to meet with HSR contractors that may be interested in this property as well as a potential job site. Have a blessed day.	
Karl Petry	2/6/2018	Handwritten	Devaluation of property values Already a successful means of transportation from Houston to Dallas. There is NO need to try and set up another one that is not going to be successful, nor be feasible for the public. Our state and private companies cannot keep up with the road traffic much less a train. We have been lied to about the entire process and cost. Also it will cost the taxpayers. No info on the safety, sound of this rail. this is a "NO BILL" if you want something you need think about the public, not a company that is overseas....	Refer to GN-4, NE-1, PN-3, SC-22 and VA-1. Please refer to <b>Section 3.16, Safety and Security</b> of the Final EIS for detailed information regarding Safety and Security and <b>Section 3.4, Noise and Vibration</b> of the Final EIS for information regarding Noise and Vibration.
Deborah Petty	1/29/2018	Handwritten	I live within 300ft of the proposed rail line. I firmly believe there needs to be something in place to buy me out at fair price so I don't lose my investment on my home. Also I don't want to live that close to rail.	Refer to VA-1.
Jeffrey Petty	3/6/2018	Website	This area is beautiful and just loaded with wildlife. We are excited about recent efforts to increase the bat population in this area and we have been overwhelmed with the new cardinal population that has made this area home each winter. We now have approximately 30 Cardinals that winter on our property and it is really quite beautiful with plentiful deer, Bobcats and fox. I am concerned that the Texas Central rail will upset the balance in the environment if it goes in at the front of my home. As a practicing physician, I am always looking for new technology and consider myself very progressive This is not the type of "progress" that I condone.	Refer to NR-1, NR-2 and NR-6. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6 Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2 Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Jeffrey Pferd	2/26/2018	Website	Greetings, I am a world traveler and worry that America and Texas is not facing the new transportation technologies that are being implemented across the world. The fast train is an efficient comfortable and enjoyable means of moving between cities. This will encourage cross city collaboration and efficiently use our natural resources. I support this train project and will definitely use it.	Comment noted.
Judy Pharr	3/9/2018	Email	I am a resident of Ellis County and I am opposed to the HSR. How will the elevation of the HSR impact the residents who are living and working in Ellis County? Is the route all elevated, or will county roads be going over the HSR at certain points?	Refer to LU-11 and TR-8. In some cases, reroutes run alongside the Project. Private access roads also run alongside the Project and would be used for emergency access.
Judy Pharr	3/9/2018	Email	I am a resident of Ellis County Texas opposed to the HSR. My question is this: if a private company buys the land from Dallas to Houston who would control what else could the land be used for in addition to the HSR? Could a roadway be built adjacent to the HSR so vehicular traffic would also be running along the route?	Refer to LU-11 and TR-8. In some cases, reroutes run alongside the Project. Private access roads also run alongside the Project and would be used for emergency access.
Timothy Phelan	3/9/2018	Website	I object to the HSR project as there have not been enough studies showing the economic impact/damage that the area surrounding the project will suffer.	Refer to TR-8.
Timothy Phelan	3/9/2018	Website	I object to the HSR project as there have not been enough studies showing the economic impact/damage that the area surrounding the project will suffer.	Refer to TR-8.
Timothy Phelan	3/9/2018	Website	I object to the HSR project using any federal tax dollars to fund a private organizations project.	Refer to GN-4.
Timothy Phelan	3/9/2018	Website	I object to the HSR project using any tax dollars because this private project has not been properly vetted for it s financial feasibility.	Refer to GN-2, GN-4 and NE-1.
Timothy Phelan	3/9/2018	Website	I object to the HSR project because of the slower response time for police.	Refer to SS-23.
Timothy Phelan	3/9/2018	Website	I object to the HSR project as is will cause slower response time for fire & rescue	Refer to SS-23.
Timothy Phelan	3/9/2018	Website	I object to the HSR project as it will cause slower response time for ambulance services.	Refer to SS-23.

Timothy Phelan	3/9/2018	Website	I object to the HSR project as it will bring down property values.	Comment noted.
Timothy Phelan	3/9/2018	Website	I object to the HSR project because of the increased noise levels.	Refer to NV-1.
Timothy Phelan	3/9/2018	Website	I object to the HSR project because there have not been enough environmental studies showing the impact of this project on the wildlife in the area.	Comment noted.
Timothy Phelan	3/9/2018	Website	I object to the HSR project as there have not been enough studies showing the drainage/flooding impact to the area.	Comment noted.
Alyssa Phillips	1/29/2018	Website	I enthusiastically give my support for the creation of a high-speed train between Dallas and Houston. As a native Houstonian who now lives in Dallas, visiting Houston is something I do on a semi-regular basis. Being able to visit for a weekend while avoiding the 4 hour drive both ways would be a blessing. It would also help to keep more people off the roads - which are already dangerous and frustrating with the number of people who don't know the rules of the road or who just don't care about other people. I would much rather ride a train than drive a car.	Comment noted.
Amanda Phillips	2/16/2018	Website	I support the Bullet Train. Please come to Austin as well!	Comment noted.
Bill Phillips	2/5/2018	Oral	Bill Phillips My name is Bill Phillips_ Me and my wife bought 112 acres across 1452 West. And that was approximately three years ago. I had a place I had 30 years ago that I'm purchasing: 27 acres and I want to get a few more cows. So we started driving around and saw this place and went ahead and bought it about three years ago. Didn't know anything about this train: that one of these routes might be on this utility corridor. So any, way we continued at the church meeting here in Madisonville. Our property will not impact the train: if our neighbor's property that is directly impacted. We 600 feet from the corridor and our house is right at 1022 feet. I'm trying to figure out from them, if they put this thing in: is there going to be a noise barrier if the house is so many feet away. How are they going to be - - are they going to be friendly to the neighbor, homeowners: houses: etc.? I can't get that answer. And we would have liked to stan this house in October of last year but since this train situation has come up everything is getting out on hold and still can't get any answers. So that's my story. Bill Phillips. Thank you.	Refer to BA-5, BA-8, LU-11, NE-1, NV-1 and VA-1.
Craig Phillips	1/29/2018	Website	Build it now!	Comment noted.
Lucie Phillips	2/22/2018	Website	I am sharing my significant concerns of the negative impact that of the high speed rail in Navarro county traveling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. Relocating the rail route to north of the utility lines will lessen damage to the water shed as the current proposed route travels through one of he highest elevation and would cause loss of water. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.

The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. I am also concerned that the current route separates the property and accessing a portion of it will be impossible without using 709. Relocating the rail route to north of the utility lines will prevent this issue. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.
Lucie Phillips	2/25/2018	Website	I am very concerned of the negative impact that of the high speed rail in Navarro county traveling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. I am also concerned that the current route separates the property and accessing a portion of it will be impossible without using 709. Relocating the rail route to north of the utility lines will prevent this issue. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.
Lucie Phillips	2/25/2018	Website	I am sharing my significant concerns of the negative impact that of the high speed rail in Navarro county traveling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. Relocating the rail route to north of the utility lines will lessen damage to the water shed as the current proposed route travels through one of he highest elevation and would cause loss of water. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.

The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. Relocating the rail route to north of the utility lines will lessen damage to the water shed as the current proposed route travels through one of he highest elevation and would cause loss of water. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.
Lucie Phillips	3/1/2018	Email	I am sharing my significant concerns of the negative impact that of the high speed rail in Navarro county traveling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. Relocating the rail route to north of the utility lines will lessen damage to the water shed as the current proposed route travels through one of he highest elevation and would cause loss of water. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.

Lucie Phillips	3/2/2018	Email	I am very concerned of the negative impact that of the high speed rail in Navarro county traveling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. I am also concerned that the current route separates the property and accessing a portion of it will be impossible without using 709. Relocating the rail route to north of the utility lines will prevent this issue. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.

Lucie Phillips	3/6/2018	Website	I am sharing my significant concerns of the negative impact that of the high speed rail in Navarro county traveling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. Relocating the rail route to north of the utility lines will lessen damage to the water shed as the current proposed route travels through one of he highest elevation and would cause loss of water. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.

Lucie Phillips	3/7/2018	Website	I am very concerned of the negative impact that of the high speed rail in Navarro county traveling through the of 709 and 1394 cleaving Morgan Legacy Farm. The project will bisect an invaluable and unique property that provides necessary respite for families from Navarro and Dallas county. The currently proposed route separates access of the morgan legacy farm lodge from the guest houses, stables and rodeo arena. I am also concerned that the current route separates the property and accessing a portion of it will be impossible without using 709. Relocating the rail route to north of the utility lines will prevent this issue. I respectfully request that you take my concerns into consideration. Thank you.	Refer to LU-5.

Patrick S. Phillips	2/6/2018	Handwritten	Whoever thinks high speed rail should be built through the rural lands from Houston to Dallas are insane. This is crazy stupid. To destroy lives of the hard working people homes, property, livelihood, their environment. People environment, animal environment will be effected at the rail line and far from it. The land erosion, watersheds, trees, grass and air will be affected in NOT A GOOD WAY. The rail line should not be built through the countryside. I do not think rail for transporting people from Houston to Dallas is necessary nor do I think it would ever pay for its construction, operations and maintenance from ridership. Double deck I-45 for additional cars, or build this rail line on I-45 right of way, but tax payers should have to pay it.	Refer to BA-4, BA-9, GN-4, NE-1 and PN-3.
Stephen Phillips	2/24/2018	Website	I am opposed to the train running through a historical and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property. I believe a move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about migratory waters.	Refer to LU-5.

Stephen Phillips	3/8/2018	Website	My name is Stephen Phillips and I am the Chief Banking Officer (EVP) for a \$6.4Bn regional bank with operations in Texas. I am writing to express my concern over the proposed high-speed rail running through a ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe there would be substantial negative economic impact to the surrounding communities if a facility such as the Morgan Legacy Farm is lost by the rail bisecting the homes and amenities rendering the property useless for its intended purpose. As an experienced banker, I have an appreciation for the value to the community provided by Morgan Legacy Farm. For example, the property has undergone ~\$2MM in construction projects and improvements over the past 5 years benefiting not only property visitors but also local contractors. In addition, the Farm spends ~\$2,000/month at a local feed store and provides a substantial tax base for the local taxing authorities. Furthermore, various local businesses benefit from the over 400 visitors that spend time at the Farm each year. Finally, the Farm serves as a charitable hub for local and regional events benefiting causes that strive to serve the public good. In summary, I believe the proposed rail route through the Morgan Family Farm would do significant economic damage to the local communities and destroy a significant philanthropic venue that serves both local and regional charitable causes.	Refer to LU-5.
Victor D Phillips	1/29/2018	Letter	<p>My name is Victor D Phillips,III, grandson of deceased Victor D Phillips, a cotton farmer in Ellis County, Tx. Our long-standing, 50-acre family farm in continuous crop production is on a parcel between Waxahatchie and Ennis that lies within a corridor of the proposed High Speed Rail Project. With the recent deaths of my mother, Martha Grace Phillips (d.8 Sept. 2017) and father, Victor D Phillips Jr. (d.11 July 2015), the title to our family farm is in process of being transferred to me and my sister, Minta E Phillips.</p> <p>I am FOR the NO BUILD option.</p> <p>I am AGAINST the proposed HSR project as detailed in the DRAFT EIS for many reasons, including the following:</p> <p>1. The project would negatively impact my property specifically by:</p> <ul style="list-style-type: none"> <li>a) destroying prime agricultural land of rich, black vertisols that has been in production for over a century; HSR corridor would render farming operations null with loss of agricultural income and aesthetics;</li> <li>b) threatening safety of life and property through rail accidents and derailment contaminants;</li> <li>c) imposing noise and light pollution;</li> <li>d) annihilating family and cultural heritage of the land untranslatable into economic value in dollars but endowed in blood, sweat, and tears of ancestors and neighbors;</li> <li>e) invading and usurping my private property rights fundamental to US citizens.</li> </ul> <p>2. The project and DRAFT EIS are flawed, exemplified by:</p> <ul style="list-style-type: none"> <li>a) Dismissing and eliminating alternate transportation options including air, bus, expanded I-45, and low-speed train service with local stops service the greater public along existing I-45 corridor (with the DEIS prepared by a federal agency advocating rail, no wonder other transportation options were foreclosed);</li> <li>b) presenting unsubstantiated low cost estimates of land acquisitions, construction, maintenance and ongoing operating expenses and overinflated, speculative estimates of reidershp revenue;</li> <li>c) allowing a private U.S. company representing foreign investors from Japan to reap profits in a sell out of American rural citizen's</li> </ul>	<p>Refer to AS-1, BA-4, BA-9, ED-1, GN-2, GN-4, LU-2, LU-11, NE-1, NE-7, NV-1, PN-3, SS-12, SS-13, TR-8 and WW-9.</p> <p>The Project is a passenger rail system only and would not pose the risk of contamination typically associated with freight rail derailments. Light pollution impacts have been added to the analysis for the Final EIS. Please refer to <b>Section 3.10.5.2.2, Aesthetics and Scenic Resources, Operational Components</b>, for the impact assessment. Section 106 of the National Historic Preservation Act requires federal agencies to consider the effects of their actions on historic properties. One component of FRA's overall environmental analysis is dedicated to understanding how cultural resources may be affected. In accordance with Section 106 and pursuant to 36 C.F.R. Part 800.4(b)(2) and 5(a)(3), FRA, TCRR, Texas Historical Commission, and other Signatories are developing and will execute a Programmatic Agreement (PA) that allows for the phased identification, evaluation and assessment of effects to historic and archeological resources as access to private land holdings becomes available and after publication of the Final EIS. Historic and archaeological resources can include structures, buildings, sites, districts, and objects such as farmsteads and ranches. The PA outlines a comprehensive methodology to identify historic</p>

			landholdings; d) failing to demonstrate credible evidence that private funds exist (even from Japan) for the proposed project's initial establishment and operation, resulting in high probability and likelihood that U.S. and Texas taxpayers would be left holding the bag for debt servicing. Moreover, taxpayers whose land would be condemned along proposed HSR corridors will not only lose their land and livelehoods but be required against their will to pay taxes to fill the deep financial hole dug in the heart of Texas for this unnecessary, uneconomical, and unwanted boondoggle.	properties eligible for or listed in the National Register of Historic Places, and to consider avoidance and minimization measures to, as well as ways to resolve adverse effects for, those properties that may be affected. This process is discussed in <b>Section 3.19.6.2, Cultural Resources, Programmatic Agreement</b> , of the Final EIS.
Charles Pickett	1/31/2018	Oral	How are y'all? I'm Charles Pickett. I've been raised in Freestone County my wife and family. It's crazy I've listened to Texas Central crap for three or four years, I get three minutes to state my piece, I think that's nuts but I'm gonna state it. We own a small ranch compared to what most people here own and I've had notes on what I was thinking. It's -- the way they're doing our place they're running a dirt berm right through the middle of us. We built a house three years ago on this place, spent everything we had financially on fences --work, whatever. To make this place work for us and pay us back something. We got to a point where it's working and then they're gonna come right through the middle of my property. They offered me \$15,000, that's not enough to do anything with. Won't offer on our new home or anything else they got. They're land locking me exactly halfway from the back of my place. Which, in return, I have no water back there. My water's in the front of the tracks. So what's gonna happen now is we're selling half of our cattle if this comes through. That's the only way I can afford to do it. I can't -- I don't have grass 'cause I'm landlocked. They gave me the option of no easements through the dirt berm. I can go through the neighbor's place to go get me an easement, that's not gonna work. It'll hit fence, whatever else back there. Financially can't do. We sank everything we had into the place. My son loves to deer hunt, we deer hunt on this. Does anybody here deer hunt and pays for a deer lease you know \$1000 a gun would be a cheep deer lease somewhere. You figure that two times in ten years that's a lot of money. Can't afford to do that either. They -- if you haven't dealt with in central Texas, God bless you, it's been horrible. They're rude, they're inconsiderate and they just don't care at all about what's going on. They lied to us. We've been threatened to be sued. We've -- won't let them survey, won't let them on our property, yet the land man comes out and tells me, the track -- when we looked at the prints, this is all sky track here, when it gets to your property it's going through a 30-foot berm, whatever. I ask for easement under it, if that can happen for my cattle or maybe back and forth, no that's not gonna happen. Why is this going to dirt berm if it's sky track on this guy's property next door, then why is it all of a sudden changed? My soil sample. My soil sample, it's not gonna work for the track. It can't handle that so we have to build a dirt berm. How did you get the soil sample? Well somebody got it for us. Well you're not supposed to be out here anyway. So they've been trespassing. You know, I fought with surveyors, they've been rude, they've been short with us. It's just -- financially it's gonna hit us. Over the years of raising cattle, calves, every year through the years of my life, God bless me I live a long time, that's a lot of money, and anybody who ranches knows that if you're small ranches, you're not making much anyway. I make enough to keep going is all I do. To keep my place going. Tractor parts whatever it is. And anybody ranches knows that. So the bigger ranches seem to me like they're gonna get hit way more than the small people are. They got a lot more business than I have. But what I have is mine. What we have, we work for, we pay for, we sweat it, we're broke as hell and we keep on fighting the fight 'cause that's how I was raised. That's how I'm gonna keep going. That's how my kids are raised and these people don't understand that, they live on concrete. They don't know what it's like to have grass and cattle that have to be fed and work all day, your hands are cut 'cause I was building a fence all day yesterday. They don't know that. So I'm 100 percent against it, I'll fight it until they cut my fence, I'll be in front of them still fighting. I'm not giving it away for free and they're not paying me anything that's gonna get me anyway, so come on. Thank you.	Refer to ED-2, LU-11, SG-2, NE-8 and NR-6.
Charles Pickett	1/31/2018	Oral	Charles Pickett. I got one question I didn't have time to ask. I keep hearing that Central Texas can take or go as far up as two miles east and west of the actual line of the track. I want to know is that true? If our neighbors two miles away have to worry about their surface as far as dirt being taken off their place to build berms on the -- on the last line. That's a lot of dirt to be moved and what I'm being told is it's cheaper for them to remove the dirt from the landowners than it is to haul the dirt in by truck. That much track and hauling that much terminal around our county is gonna stop at every major road. It's gonna be crazy. They're gonna - they ain't got crap on what this is gonna do to our little county and I want to know if that's true. And they won't tell us. I can go ask them right now and they're gonna say well we're not sure we're still discussing that. That's their answer. We're still working out the kinks. Well I've been three years trying to figure out the kinks. What are me and my family gonna do? We're wanting to plan ahead too sometimes, but they won't tell us nothing. So I want to know whether it's going up two miles. 'Cause if it does there's a ton of people in these counties that have no idea this is fixing to hit them. They're fixing to get blindsided. At the last minute just like the rest of us had all the other information that slowly leaked. That we're still not 100 percent. So that's my question, is it gonna go two miles east and west of the line. Those people need to start planning and worrying about what their ranches are gonna go. Thank you.	Refer to ED-2 and LU-14.
Helen Pickett	1/31/2018	Oral	I, Helen Pickett, am adamantly opposed of the high speed rail through Freestone County. I live within two miles of proposed site. I would definitely object to any of the environmental impact and/or taking topsoil for the building of the rail, in addition to the sound and the obstruction of the surrounding property. I have family members and friends who live on the site, wrapped, who I am supporting also.	Comment noted.

Willis Pickett	3/9/2018	Website	I greatly protest the Dallas to Houston High Speed Rail Project. I am extremely concerned about the noise effect from the High Speed Rail project. My wife & I live a little less than two miles west of the proposed site. Our farm and son (& family) are on the east side of the site and we are on the west side.. We live in the country and are affiliated with Teague, which is on the west side of the site. In other words, if implemented, we would be driving on highway 84, (over or under) the train many times day. We would defiantly be affected on multiple levels, one of which is the noise we would be forced to endure if the train goes through. Our nephew & family, along with our close friends, live very near it and the project would go through their property. We visit them regularly also. My nephew, Charlie Pickett, puts on ropings at his home site, which is by the proposed rail. When we make a run to rope the steers, the noise from multiple trains would frighten the horses & steers. This would make it virtually impossible to continue the sport we love at his home. I consulted someone who has great expertise in noise assessment. He has high tec. equipment to measure the noise. He informed me of potential problems from the noise the High Speed Rail will produce. The brochure titled "On Tract" dated January 2018, page 2, right side column states that the regulatory action of performing an environmental impact statement (EIS) constitutes a major federal action that significantly affects the quality of the human environment. Of particular concern is the impact of noise generated by this HSR project since both humans and livestock are affected by noise. The stated noise exposure criterion limit of 100 dBA is totally inappropriate. The noise criteria must be defined by both the decibel level and frequency(cies) in cycles per second for each frequency from 25 cps to 20,000 cps. The frequencies from 25 cps to 500 cps are the low frequency range; whereas, 500 cps and up to 20,000 cps is considered the hearing range. The Environmental Protection Agency (EPA) developed criteria for protecting human hearing in 1974. Low Frequency Noise, (LFN), was not addressed. The EPA delegated noise authority to state and local governments in 1982. Only six states picked up that authority. The Low Frequency Noise (LFN) Range is of particular significance because each of the human body systems operate at a different low frequency within the body. When the low "frequency" of a human operating system is increased to a greater intensity (decibel) by outside the body sources than is normal, that body system is affected causing abnormal operation of that system. A human's health can be severely affected to even cause death. Some of the symptoms include: restless leg syndrome, severe itching, numbness in the legs and fingers. dementia, thickening of the heart pericardium causing a heart attack, sexual dysfunction, brain damage and constriction of blood vessels. The LFN causes a whole body pathology and is not just a hearing issue. Thus, the LFN must be considered, as well as the overall noise. This will be impossible to do with the HSR with its intermittent pounding of the human body on a constant basis. This LFN is found to travel five to eight miles. The LFN will be harmful to every living thing in its path. It is not just a hearing issue. Although the hearing can be severely affected also. The LFN damage has been named Vibro-Acoustic Disease by the Human Development Center in Lisbon, Portugal. They have studied this for the past 35 years. My wife has extremely sensitive hearing and I cannot stand certain pitches. Not only do we live relatively near the site, but we will be passing under, or over the site very often. We'll be exposed to the noise at our home and while traveling near it multiple times a day. We also visit our family & friends very often, who live closer than us. It would pose an extreme hardship on our well-being and quality of life. Thank you for considering my concerns. Willis Pickett	Refer to NR-1. The criterion of 100 dBA (SEL) is from a U.S. Air Force study of the response of domestic turkeys to low-altitude aircraft overflights, supported by a literature synthesis of aircraft noise effects on animals by the U.S. Fish and Wildlife Service. With regard to LFN, measurements of noise from TGV high-speed train operations in France indicate that LFN levels typically peak at a frequency of around 63 Hz, dropping off at frequencies below that. However, because the human ear is much less sensitive to noise in the low-frequency range, the LFN does not contribute significantly to the overall, A-weighted sound level, which is the noise metric prescribed by the FRA for noise impact assessment from high-speed train operations. Thus, during the brief periods of exposure during train passages, any annoyance effects will be predominantly due to higher frequency noise. Furthermore, the ear is the most sensitive organ in the human body for the perception of sound at low frequencies and, although vibration sensations can also occur in different parts of the body due to LFN, vibrotactile thresholds are well above the levels that people would be exposed to from high-speed train operations.
Aidyn Pierce	2/27/2018	Website	This high speed rail will affect my community negatively. My neighborhood's property values will plummet with a high speed rail line barreling through it. I moved to the county for peace and quiet in an acreage community and now this. This will benefit no one in the long run and is becoming a ridiculous plan that will not be able to be funded privately. This plan for high speed rail needs to be eliminated.	Refer to VA-1.
Carol Pierce	2/16/2018	Website	As I live in Fort Worth, I wish you would give equal credit to Fort Worth by placing the Rail Station half-way between Dallas and Fort Worth. Your constant need to give preferential treatment to Dallas while treating Fort Worth as a step-child who should be ignored is insulting. It takes almost 45 min to an hour to drive to Dallas due to the traffic. I drive to the Houston-Clear Lake area every few months to visit family and see the Oncologist. If it is going to take me almost an hour just to drive to your station and then spend 90 min plus on train, etc., I might as well drive. When I first heard about the high-speed rail, I was excited about the prospect of being able to get from Fort Worth to Houston without the stress of driving. The question is what are you going to do to show Fort Worth the respect it deserves?	Refer to BA-1 and GN-7.

Jennifer Jill Pigg	2/5/2018	Handwritten	I'm for the No Build Option. I do not want this train to be built in Texas, and especially not in Cypress.	Comment noted.
Joy Pike	1/29/2018	Website	I'm not sure how my comments will impact the project but felt compelled to comment. As a former New Yorker and supporter of public transformation I am completely for the high speed rail from Dallas to Houston. I'm proud to call Texas my home and I'm surprised by the group of citizens that is against this project. Texas is flourishing compared to many other states and continues to bring in people from other states. Texas is severely lacking when comes to public transportation. The gap is evident by the packed roads and highways. I think this railway will increase commerce and hopefully cut down on traffic related accidents. The project is not state or federally funded and will create jobs in both major metroplexes. Here's to hoping this project gets the green light.	Comment noted.
Suzy Pike	3/5/2018	Handwritten	I Suzy Pike want to go on record that I am against the High Speed train from Houston to Dallas. What will be done about my way of life, the train will be 500 feet from my front door. This is not the way I want to live. The noise and vibration will be unbearable. It has already affected the value of my property which can't be sold with the train coming. I have animals, grandkids, my kids which all will be affected. It is not safe to live next to a train that will be traveling 205 mph passed my house from 5am to 11pm. We will have no peace of mind. I do not see one good thing about this train. It will make my life's investment worthless and unlivable.	Refer to NV-1, SS-1, SS-12, SS-21 and VA-1.

Lisa Pineda	12/23/2017	Email	How does this train effect [...] [...] [...] The letter you sent doesn't tell me exactly how this high speed train will effect our properties. The website doesn't tell me either can you tell me exactly in words I can understand what all this means.	The addresses are located near stationing 747+00 on the engineering drawings. Page 24 of <b>Appendix G Volume 4.8</b> located here: <a href="https://www.fra.dot.gov/eLib/Details/L19253">https://www.fra.dot.gov/eLib/Details/L19253</a> displays the three address locations in relation to the project. The engineering drawings will show you the footprint and any information regarding how it will affect the three properties.
Gary Pinkerton	2/22/2018	Email	As a resident of Greater Houston and Spring Branch, I am writing to express my strong support for the proposed Northwest Mall passenger station location of the Texas Bullet Train and urge the Federal Railroad Administration to move forward with its timely review and approval. The station is in my part of town, and near what will be a newly reconstructed hub with easy access to Hwy 290 1-10, and Loop 610. The mall is an eyesore and replacing it with this tech marvel will be a huge boost for the west side. Texas needs new and innovative ways to help alleviate the growing strain on the state's existing infrastructure - and this project does exactly that. I fully support the entire project and the proposed Northwest Mall location, For these reasons and many more, I urge you to expedite the review process for the Texas Bullet Train	Comment noted.
Shandenia Piper	1/10/2018	Email	Can you share additional details about the upcoming meetings with our office?	Refer to PI-1.
Shandenia Piper	1/22/2018	Email	Hello Kevin, Council Member Edwards would like additional information about the upcoming meetings.	Refer to PI-1.
Shandenia Piper	1/22/2018	Email	Council Member Edwards would like additional information about the upcoming meetings.	Refer to PI-1.
Robert Pirtle	2/13/2018	Website	I cannot understand why there are so many negative comments about the high-speed rail! Hopefully, this option will be available a few years from now, and it will be used much more than people realize!	Comment noted.
Dr. David Pitre	2/20/2018	Website	For years Texas has desperately needed a high-speed passenger train service between Houston and Dallas. For years I have wanted such a forward-looking alternative to the dangerous drive between Houston and Dallas, and an economical (and convenient) alternative to the daily flights between the two cities. The proposed high-speed train service will provide Texas travelers (and visitors) the high-caliber rail service that already exists on the east and west coasts. It's long overdue for such a passenger-rail service that will benefit untold thousands of commuters and travelers. Let's get going!	Comment noted.
Dr. David Pitre	2/21/2018	Website	This project is years overdue! I've lived on the East Coast where high-speed trains run often between Washington, DC, and New York (and on to Boston). Many who live, for example, in the Baltimore-Washington area take the train on their trips to Philadelphia, New York, etc. It's more convenient, more economical, and frankly much more comfortable than flying. It also allows train-commuters to avoid the dreadful I-95 corridor. Similarly, a high-speed train between Houston and Dallas would function in the same way--especially avoiding the dangerous and	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			inconvenient I-45 route. A high-functioning train-line would also dramatically reduce the carbon emission levels of so many thousands of vehicles traveling on I-45. (Eventually, there should be a Houston-Dallas-Austin-San Antonio high-speed train network.) With funding provided and planned accordingly, it's time to get this project going and completed!	
Renee Pitre	2/9/2018	Website	This is very sad, I am not happy this rail will be going through such country land. I recently started building a home in Saddle Creek Forest neighborhood, now to find out the rail will run along the main road into the neighborhood. I am so mad.	Refer to LU-3.
Timothy Pittman	3/9/2018	Email	My name is Timothy G. Pittman and I am a resident of Grimes County. I request that my comments be included in the record regarding the proposed high-speed rail between Houston and Dallas being considered. I moved into Grimes County in 2010 to escape the noise, pollution, crime and clutter of the Houston area. My wife and I built our retirement home in a private, gated community; the location was selected for the abundance of wildlife, security and serenity of country living. Our community will be divided in half if the high-speed rail is constructed. Our property values and lifestyle will be tremendously impacted by the noise and the enormous damage to our county and private roads caused by the construction. There is only speculation that Dallas and Houston will benefit. This project amounts to nothing more than a land grab by a private entity. The cost of the project is significantly under-estimated, the ridership is hugely over-estimated and when it fails, Texas taxpayers will be made to bear the cost of the failure. It is clear that the proposed rout of the project was selected as that which would meet the least resistance from property owners. While that may be true in that the majority of those properties negatively impacted are rural, the damage caused by the rail along it's route will be unrecoverable and a great many of those properties will become unmarketable. This project will sacrifice individual property owners rights for the sake of Japanese investors and Houston and Dallas political opportunities. The "No Build Alternative" is the only responsible choice for the citizens of Texas.	Refer to BA-8, GN-2, ED-1, LU-3, NE-1, PI-7, SC-19, SC-22, TR-7 and VA-1.
Timothy G Pittman	3/9/2018	Email	My name is Timothy G. Pittman and I am writing on behalf of Saddle Creek Forest Property Owners Association. We are a gated, private, rural community, a portion of which is in Grimes County and a portion of which is in Waller County. I request that my comments be included in the record regarding the proposed highspeed rail between Houston and Dallas being considered. Our community will be divided in half if the high-speed rail is constructed. The economic impact to our community in terms of revenue lost due to expansion of the existing easement will be tremendous. The lost assessments will total well over \$1,000,000 over the several years due to confiscation of many properties. The DEIS has no significant mention of the security measures that must be put in place for normal operation of the trains. There is no evidence that the trains would be allowed to operate without security like that which is in-place currently at airports, yet the travel time between stops as well as the justification for train vs. plane vs. automobile has been stated premising no security related delays. This premise is totally unachievable and further illustrates the inaccuracies of the entire DEIS. The "No Build Alternative" is the only responsible choice for the citizens of Texas.	Refer to ED-2, LU-3, SC-10 and SS-9.
Saddle Creek Forest Property Owners Association	3/9/2018	Email	My name is Timothy G. Pittman and I am writing on behalf of Saddle Creek Forest Property Owners Association. Our community will be divided in half if the high-speed rail is constructed. The economic impact to our community in terms of revenue lost due to expansion of the existing easement will be tremendous. The lost assessments will total well over over the several years due to confiscation of many properties. "No Build Alternative". (Ref: DEIS Main Text I, Sect. FS.8, Pg. 8). The FRA is intentionally understating the significance of the damage to public and property. They are misleading the public with the premises of need for high-speed rail, the poorly developed and incomplete estimates of project costs and fundamentally flawed pmdictions of ridership. The only responsible analysis of the potential for high-speed rail success has been developed by the Reason Foundation. The DEIS totally ignores the comments made and the conclusions drawn hy this study. Other that the study done by the Reason Foundation, theJe have been no objective and unbiased evaluations as to the need for this or any other high-speed rail project. The FRA DEIS is intentionally deceiving the public by excluding the Reason Foundation study. The "No Build Alternative" is the only responsible choice ror the citizens of Texas.</p>	Refer to BA-6, GN-1, GN-2, GN-3, LU-3, NE-1, NE-9, PI-7, PN-3, SC-22 and VA-1.
Saddle Creek Forest Property Owners Association	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am writing on behalf of Saddle Creek Forest Property Owners Association. We are a gated, private, rural community, a portion of which is in Grimes County and a portion of which is in Waller County. I request that my comments be included in the record regarding the proposed highspeed rail between Houston and Dallas being considered.</p> <p>Our community will be divided in half if the high-speed rail is constructed. The economic impact to our community in terms of revenue lost due to expansion of the existing easement will be tremendous. The lost assessments will total well over \$1,000,000 over the several years due to confiscation of many properties.</p> <p>"No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The No Build analysis totally ignored the huge increase in impacted acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres. I believe this data point has intentionally been hidden by the FRA. TCRR's current plan will result in the closure, re-routing, modification of yet to be counted private and public roads. The current plan will required increases to the road rights of way during and after the construction. The stated increase is a clear indication that the current plan was improperly prepared. TCCR and the FRA must be accountable to the citizens of Texas for these huge and significant changes to the earlier claims made by TCCR.</p> <p>There are significant public safety considerations that the FRA has stated such as to minimize the impact. Proper and due consideration must be given to emergency response times, traffic congestion during and after construction, protection of the public near the construction laydown and staging areas and the impact that the necessary re-routes will have on the public.</p> <p>The FRA appears to be intentionally misleading the public and the DEIS does NOT provide adequate documentation for elimination of the No Build Alternative.</p> <p>The "No Build Alternative" is the only responsible choice for the citizens of Texas.</p>	Refer to BA-3, BA-6, ED-2, LU-3, LU-14, SC-10 and TR-8.
Saddle Creek Forest Property Owners Association	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am writing on behalf of Saddle Creek Forest Property Owners Association. Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>This project amounts to nothing more than a land grab by a private entity. The cost of the project is significantly under-estimated, the ridership is hugely over-estimated and when it fails, Texas taxpayers will be made to bear the cost of the failure.</p> <p>It is clear that the proposed rout of the project was selected as that which would meet the least resistance from property owners. While that may be true in that the majority of those properties negatively impacted are rural, the damage caused by the rail along it's route will be unrecoverable and a great many of those properties will become unmarketable.</p> <p>This project will sacrifice individual property owners rights for the sake of Japanese investors and Houston and Dallas political opportunities. The "No Build Alternative" is the only responsible choice for the citizens of Texas.</p>	
Timothy G Pittman	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am a resident Of Grimes County. The DEIS has no significant mention Of the security measures that must be put in place for normal operation Of the trains. There is no evidence that the trains would be allowed to operate without security like that which is in-place currently at airports, yet the travel time between stops as well as the justification for train vs. plane vs. automobile has been stated premising no security related delays. This premise is totally unachievable and further illustrates the inaccuracies Of the entire DEIS. The "NO Build Alternative" is the only responsible choice for the citizens Of Texas. Regards, Timothy G. Pittman, PMP</p>	Refer to SS-9.
Timothy G Pittman	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am a resident Of Grimes County. I request that my comments be included in the record regarding the proposed high-speed rail between Houston and Dallas being considered. "No Build Alternative". (Ref: DEIS Main Text I, sect. ES.8, Pg. 8). The FRA is intentionally understating the significance Of the damage to public and property. They are misleading the public with the premises of need for high-speed rail, the poorly developed and incomplete estimates Of project costs and fundamentally flawed predictions Of ridership. The only responsible analysis Of the potential for high-speed rail success has been developed by the Reason Foundation. The DEIS totally ignores the comments made and the conclusions drawn by this study. Other that the study done by the Reason Foundation, there have been no objective and unbiased evaluations as to the need for this or any other high-speed rail project. The FRA DEIS is intentionally deceiving the public by excluding the Reason Foundation study. The "No Build Alternative" is the only responsible choice for the citizens of Texas. Saddle Creek Forest Property Owners Association, Inc.	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am writing on behalf of Saddle Creek Forest Property Owners Association. We are a gated, private, rural community, a portion of which is in Grimes County and a portion of which is in Waller County. I request that my comments be included in the record regarding the proposed highspeed rail between Houston and Dallas being considered.</p> <p>Our community will be divided in half if the high-speed rail is constructed. The economic impact to our community in terms of revenue lost due to expansion of the existing easement will be tremendous. The lost assessments will total well over \$1,000,000 over the several years due to confiscation of many properties. "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The public need is not established in the DEIS but neither has the true economic impact been studied. I believe it has been intentionally ignored by the FRA.</p> <p>The claims by the FRA regarding I-45 transportation predictions, traffic congestion, safety and transportation alternatives are speculative at best, extremely flawed at worst and are not supported with facts or even independent, objective analysis.</p> <p>There will be no positive value realized by hundreds of individual property owners, homes, cemeteries, schools, historic areas, public and private roads and lost county revenues. The ability of a significant number of property owners along the route to maintain their livelihood will cause many to lose their homes and properties that have been in families for generations. This is clearly a land grab. Quantification of the costs of the project has been attempted by the DEIS (although incomplete and fundamentally flawed) but the economic impacts to those along the route had been inadequately analyzed or totally ignored. The DEIS inadequately addresses the impacts and overstates the value. The "No Build Alternative" is the only responsible choice for the citizens of Texas.</p>	<p>Refer to BA-6, CR-3, CR-6, ED-2, GN-2, LU-3, NE-1, PN-3, SC-6, SC-10, SC-19, SC-21, SC-22, SS-23 and TR-8.</p> <p>A traffic impact analysis is included in <b>Section 3.11.3.3, Transportation, Intersections and Traffic Circulation.</b></p>
Timothy G Pittman	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am a resident of Grimes County.</p> <p>A credible and comprehensive Risk Management Procedure has not been made a part of the DEIS. The current route has hundreds of road crossings, utility and pipeline crossings. The Health, Safety and Environmental impact of construction activities and ongoing operational activities has not been fully evaluated. A complete disaster plan developed by an independent third party must be completed before the proposed route can be selected. The "No Build Alternative" is the only responsible choice for the citizens of Texas.</p>	Refer to EU-2, SS-13, SS-18, SS-19 and TR-6.
Timothy G Pittman	3/9/2018	Email	<p>My name is Timothy G. Pittman and I am a resident of Grimes County. I request that my comments be included in the record regarding the proposed high-speed rail between Houston and Dallas being considered.</p> <p>"No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8).</p> <p>The FRA must provide the public with documentable and measurable facts as back up to the premises stated in the DEIS.</p> <p>The claims by the FRA regarding I-45 transportation predictions, traffic congestion, safety and transportation alternatives are speculative at best, extremely flawed at worst and are not supported with facts or even independent, objective analysis. It is irresponsible and self-serving of the FRA to make these claims with no independent study.</p> <p>Although construction along the I-45 corridor is a better solution than that which is being proposed, the "No Build Alternative" is the only responsible choice for the citizens of Texas.</p>	Refer to AQ-2, NE-1 and PN-3.

Timothy G Pittman	3/9/2018	Email	My name is Timothy G. Pittman and I am a resident of Grimes County. I request that my comments be included in the record regarding the proposed high-speed rail between Houston and Dallas being considered. "No Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, Pg. 8). The No Build analysis totally ignored the huge increase in impacted acreage from 3,000 acres as communicated in writing by TCRR to 8,000 acres. I believe this data point has intentionally been hidden by the FRA. TCRR's current plan will result in the closure, re-routing, modification of yet to be counted private and public roads. The current plan will required increases to the road rights of way during and after the construction. The stated increase is a clear indication that the current plan was improperly prepared. TCCR and the FRA must be accountable to the citizens of Texas for these huge and significant changes to the earlier claims made by TCCR. There are significant public safety considerations that the FRA has stated such as to minimize the impact. Proper and due consideration must be given to emergency response times, traffic congestion during and after construction, protection of the public near the construction laydown and staging areas and the impact that the necessary re-routes will have on the public. The FRA appears to be intentionally misleading the public and the DEIS does NOT provide adequate documentation for elimination of the No Build Alternative. The "No Build Alternative" is the only responsible choice for the citizens of Texas.	Refer to BA-3, BA-6, ED-1, EJ-1, LU-14, NE-1, PI-7, SS-23, TR-6, TR-7 and TR-8.
Timothy G Pittman	3/9/2018	Email	My name is Timothy G. Pittman and I am a resident Of Grimes County. "NO Build Alternative". (Ref: DEIS Main Text I, Sect. ES.8, pg. 8). Claims suggesting that this project will result in one or more solutions to current traffic situation are flawed and even contradicted by statements made by TCRR, particularly near the big cities. There will be a devastating impact on traffic in the rural areas. There have been no independent evaluations of future traffic along the 1-45 corridor that support statements about the benefit Of the high-speed rail project. Traffic volumes Of 145 are currently much lower than predictions made in previous government sponsored studies. Independent and objective analysis must be authorized and completed before the need for this project can be established. The "No Build Alternative" is the only responsible choice for the citizens of Texas. Regards, Timothy G. Pittman, PMP Manager ot Estimating, Scheduling and Risk.	Refer to GN-1, NE-1, PN-1, PN-3, TR-1 and TR-8.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. There is strong evidence to suggest that Texas Central Partners (TCP) and/or the Federal Railroad Administration (FRA) did not coordinate the DEIS effort with the local Grimes and Waller County governments, which is a violation of federal/state law and/or statute. As a result, the DEIS should be considered invalid, until and unless there is coordination with the local governments.	Refer to PI-1.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. The DEIS is supposed to be an objective review of 20+ points of "environmental/social impact." Yet, it our understanding that FRA used data from Texas Central Partners (TCP) that was obtained from il egal surveys. Illegal surveys taint the entire DEIS, and no conclusions should be drawn from illegal surveys. Furthermore, the DEIS merely affirms TCPs preferred route, rather than provide an objective review of other routes; ie: along the I-45 transportation corridor. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to BA-7, BA-9, GN-1 and NE-8.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Passenger rail is not a forward thinking method to reduce traffic. The traffic congestion is within the Houston area, not between Dallas and Houston. Furthermore, the population density does not support passenger rail. It would be completely illogical to base a multi-billion dollar transportation project on the belief that Texans, with the high number of vehicles per capita (because of insufficient population density), would give up our vehicles in droves, just to ride an expensive, inconvenient passenger rail. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to PN-3.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. The Need and Purpose for this HS Rail project has not been addressed or demonstrated. Objective financial reviews, such as by the Reason Foundation, conclude that the project is not economically viable; that ridership will not match the number of people who currently fly between Houston and Dallas; that the project would lose hundreds of millions of dollars PER YEAR; and that tax payer dollars would be required. Amtrac does not generate positive cash flow and there is no proof that this boondoggle would either. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to PN-3 and PN-4.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Plantation Lakes experienced flooding in April 2016, May 2016 and August 2017 (Hurricane Harvey). A construction project of this magnitude will harm Waller County's ability to adequately provide remediation and protection from floods and resultant destruction to roads and property. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to FP-1, SS-17, WW-1 and WW-2.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Waller County transportation and traffic problems will be worsened, whether the track is at grade or is elevated. There are already dangerous traffic incidents and tax payer inconvenience from existing traffic issues and road conditions. The HS Rail project will only make these situations worse, would further increase response times for emergency services, and would adversely impact school bus routes and travel	Refer to SC-6, SC-7, SS-23 and TR-8. Refer to <b>Table 3.11-5: Waller County Roadway Modifications</b> , for details about roadway modifications in Waller County.

			times for students: closure of FM 1774 between Plantersville and Anderson (Grimes County); FM 1488 (Waller); Riley Road (Waller and Grimes); and many more. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Plantation Lakes experienced flooding in April 2016, May 2016 and August 2017 (Hurricane Harvey). A construction project of this magnitude will harm Grimes County's ability to adequately provide remediation and protection from floods and the resultant destruction to roads and property. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to FP-1, SS-17, WW-1 and WW-2.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Our neighborhood's quality of life will be adversely impacted from the noise and vibration impacts to our people and our property. There have been no objective studies conducted or released to the public that determine/document the adverse impact of the train's vibration on our water well and septic systems or on the structural integrity of our Common structures. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to NV-5.
Linda Morris	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. Our neighborhood's quality of life will be adversely impacted from the in convenience of the disruption from the construction (road closures; Emergency response time) and from road deterioration that will result from the heavy equipment traveling on our roads. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option. Submitted on behalf of the Plantation Lakes Community Association Board of Directors,	Refer to SS-23 and TR-7. Design features were employed to avoid and minimize impacts to the natural, social, physical and cultural environment. In developing the Build Alternatives, TCRR identified colocation opportunities with transportation and utility corridors to minimize impacts to parcel and structure acquisition and land use conversion. In the Plantation Lakes area, the Project would travel adjacent to the existing high voltage utility line to minimize impacts.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. The Texas Central Partners (TCP) preferred route will adversely impact the ability for emergency services to get to us in a timely manner, as these vehicles must travel through Waller County to get to our neighborhood. A slower response time for EMS and law enforcement will put our neighborhood and property at risk. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to SS-23.
Plantation Lakes Community Association	3/8/2018	Email	Plantation Lakes objects to the proposed High Speed (HS) rail line between Houston and Dallas for the following reason. The Texas Central Partners (TCP) preferred route will adversely impact the ability for emergency services to get to us in a timely manner, as these vehicles must travel through Waller County to get to our neighborhood. A slower response time for EMS and law enforcement will put our neighborhood and property at risk. The only reasonable choice in the final Environmental Impact Statement is the NO BUILD option.	Refer to SS-23.
Brad Plantz	2/21/2018	Website	There is absolutely no need or requirement for project. Flights are already faster and cheaper and require no further infringement on the citizens of Texas and their property. Furthermore, anyone who believes this project will be completed or maintained without public funds is either naive or disingenuous.	Refer to BA-12, ED-2, GN-4, GN-5 and PN-3.
John Plemons	1/29/2018	Website	I am opposed to the proposed railway on of the basis environmental, safety, and eminent domain concerns. I am opposed to the Texas High Speed Rail Project, which I think is detrimental to Navarro County. The environmental impact has not been addressed to my satisfaction. Everything from bees to white tail deer will be affected, and the impact cannot truly be determined since such a project has never been done here. I'm concerned that first responders won't be able to respond appropriately to emergencies in the county because of blocked and rerouted roads. And finally, and most importantly, taking private properties from citizens against their will can only be justified by the highest and most important needs of the greater good. This project does NOT meet that standard. Therefore, the taking of said property equates to theft. I am opposed to the Texas High Speed Rail Project, which I think is detrimental to Navarro County.	Refer to ED-1, NE-1, NE-9, NR-5 and SS-23.
John Plemons	1/30/2018	Email	I am concerned about the rail affecting those who suffer form epilepsy. What effect will the long term exposure to the sights of sunlight flashing off the train, combined with the sounds of the train, have on epileptic patients? I am opposed to the project.	Refer to EH-1.
John Plemons	1/30/2018	Email	White tail deer have begun to proliferate in Navarro County along the proposed route, and are increasingly depended upon by socioeconomically disadvantaged peoples as well as minorities. What will be done for those people?	Refer to EJ-1 and RF-2.
John Plemons	1/30/2018	Email	white tail deer have begun to proliferate in Navarro County along the proposed route, and are increasing property values. They are also providing income for land leases for hunting. What effect does the train have on white tail deer hunting and the economic growth of the Navarro county hunting industry?	Refer to NR-1 and RF-2.

John Plemons	1/30/2018	Email	What effects will this project have on the socioeconomic well-being of rural African Americans in the project pathway ?	An assessment, discussion and mitigation for potential impacts to Environmental Justice (EJ) communities can be found in <b>Section 3.18, Environmental Justice</b> . The EJ analysis defines minority or ethnic communities in <b>Section 3.18.3, Environmental Justice, Methodology</b> . Potential impacts to rural African Americans are included in the definition of EJ communities.
John Plemons	1/30/2018	Email	What effects will this project have on freight rates of goods delivered to rural towns on either side of the rail? How will this affect socioeconomically disadvantaged rural citizens?	The Project does not include any at-grade crossings of road or freight rail, with the majority of crossings spanned by rail on viaduct. As a result of uninterrupted freight movement, no adverse impacts to freight shipping rates are expected to result from the Project.
John Plemons	1/30/2018	Email	What effects will the high speed rail have on minority customers of rural water systems?	No adverse impacts to water quality or public water supplies are anticipated as a result of the Build Alternatives; more information can be found in <b>Section 3.3, Water Quality</b> . The result is the same for Environmental Justice (EJ) and non-EJ populations.
John Plemons	1/30/2018	Website	What effects will the project have on buzzards and other vultures? Will they represent a danger to the train? Will it represent a danger to them? I am opposed to the project.	Refer to NR-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
John Plemons	1/30/2018	Website	What effects will the project have on groundwater? I am opposed to the project.	Refer to WW-6.
John Plemons	1/30/2018	Website	I am concerned about the rail affecting Canadian waterfowl species as the migrate annually. What research has been done and what has been learned? I am opposed to the project.	Refer to NR-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
John Plemons	1/30/2018	Website	What effect will the high speed rail project have on the migration of American-born waterfowl? I am opposed to the project.	Refer to NR-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
John Plemons	1/30/2018	Website	Can a wild hog, or a sounder of wild hogs, wreck the train if they breach the fence? What happens if hogs derail the train?	Refer to NR-6.
John Plemons	1/30/2018	Website	What happens to the needs of Texas citizens vs the needs of the rail system of electricity on peak use days? How many people that rely on home medical devices will die if the rail causes power outages?	Refer to EU-3 and EU-4.
John Plemons	1/30/2018	Website	What happens to the needs of Texas citizens vs the needs of the rail system of electricity on peak use days? How many people that rely on home medical devices will die if the rail causes power outages?	Refer to EU-3 and EU-4.
John Plemons	1/30/2018	Website	What effects will this project have on watersheds? Specifically the Trinity River watershed from west to east in Navarro county?	Refer to WW-1 and WW-2. Approximately 59 percent of the Build Alternatives in the Trinity

				River Basin in Navarro County will be constructed on viaduct (bridge type structure).
John Plemons	1/30/2018	Website	What effects will the project have on burrowing owls, which nest in the project pathway?	Refer to NR-2. Burrowing Owls do not usually nest in this part of Texas. They may migrate through or winter in this area, utilizing abandoned mammal burrows to roost.
John Plemons	1/30/2018	Website	What effects will this project have on egrets?	Refer to NR-2.
Lora Plemons	1/29/2018	Website	I am opposed to the construction of a high speed rail in Navarro County for multiple reasons. This is a largely rural county. This project will not benefit the people whose land is on the chopping block. Members of my family, for example, live on a 50-acre property directly in the path of the train. There is no monetary compensation that could possibly ever make up for having the equivalent of jet engine scream past their house 68 times a day. Nor for separating them from other family members, living on the other side of the property. Nor for ruining their carefully developed wildlife habitat, where bees and butterflies and deer and other local flora and fauna currently live. Navarro County residents will not benefit from the jobs that will exist in Dallas and Houston. They won't have the option of getting on the train. They can, however, look forward to having their roads blocked, their property devalued, and their peace destroyed. The taking of private property can only ever be justified by the highest and best of common public needs. This train does NOT meet that standard. It is solely to benefit a private company. Save the arguments about convenience...everyone sees them for what they are: illusions to justify theft. Eminent domain was never intended to be stretched to such a ridiculous and immoral extent. Lora Plemons	Refer to ED-1, ED-2, PN-3, TR-8 and VA-1. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Mary Plemons	1/30/2018	Email	What is being done to allow the movement of hogs, deer, and wild turkeys across the rail line? The berms and fences will prevent their nomadic movement. What about people who depend on them for food? Poverty level people in Navarro County rely on them, so how do you plan to help them? Will you pay replacement compensation?	Refer to EJ-1, NR-1, NR-5, NR-6 and RF-2. As no significant impacts would be anticipated to wild game per <b>Section 3.4.2, Noise and Vibration, Regulatory Context</b> and <b>Section 3.6, Natural Ecological Systems and Protected Species</b> , no disproportionately high or adverse impact would be anticipated for Environmental Justice populations who depend on subsistence hunting.
Mary Plemons	1/30/2018	Website	What impact will the construction and use of the HSR have on my water well? What about community water lines?	Refer to ED-1 and ED-3.
Mary Plemons	1/30/2018	Website	Along one of the proposed routes is a great blue heron rookery. What provision is being made for that?	Refer to NR-2. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Mary Plemons	1/30/2018	Website	How do you propose to allow the movement of wildlife across the rail line? The berms and fences will impede their natural movement. What about people who depend on them for food?	Refer to NR-6.
Mary Plemons	2/12/2018	Website	Water drains west to east across Navarro County and eventually ends up in Richland Chambers Reservoir. The train berm would act as a giant dam across the county. What provisions are planned to alleviate this problem? What will be done to prevent flooding? What will be done when watershed for private lakes and stock ponds is interrupted? Where are the studies published to address this potential problem?	Refer to FP-1, NE-8, WW-1 and WW-2.
Mary Plemons	2/12/2018	Website	What provisions are being made to replace, augment, or duplicate first responders who are separated from the people they serve by the train tracks? In the event of a fire, auto accident, sudden illness, criminal activity, or other emergency, it will require first responder units to possibly go far out of route in order to get around the train track-caused road closures. Since these services will have to be duplicated on both sides of the tracks, how will the HSR reimburse communities and counties for the entire costs incurred?	Refer to SS-18, SS-23, SS-26 and TR-8.
Mary Plemons	2/12/2018	Website	Since there is a four mile wide band of land required for this train and the construction materials required for it, how much of a tract of land will you purchase when it passes through it? What reconstruction of the land will be done when you take soil or gravel? How will you handle interrupted fence lines? What will be done about private lakes?	Refer to ED-2, LU-10 and LU-14. Interrupted fence lines and private lakes would be discussed on a case-by-case basis with TCRR prior to construction.

Mary Plemons	2/12/2018	Website	One of the proposed routes passes through our farm. How much of the land would be required? Will the requirement always be 4 miles wide? What provisions would be made for the fact that my husband and I are elderly and cannot replace our home? Since we are in poor health, what aid will you give us to move?	Refer to ED-2 and LU-14. As noted in <b>LU-MM#3: Acquisition and Relocation Mitigation Plan</b> , for elderly and handicapped persons with dwellings displaced or acquired, replacement housing shall meet or be functionally equivalent for specific accessibility needs to the displacement dwelling. Replacement dwellings should be free of any barriers which would preclude reasonable ingress, egress or use of the dwelling by that displaced person. If adequate dwellings that meets accessibility needs cannot be identified, TCRR shall provide funding for accessibility housing improvements of equal or better standard to those that were displaced.
Mary Plemons	2/12/2018	Website	I am concerned about the possible brown outs of our electricity. My husband uses oxygen, provided by an electric concentrator. We are elderly and cannot handle portable oxygen tanks. We have both been hospitalized for a total of four times in the past year. What do you propose to do about interrupting the electricity to our homes and hospital? With the many trips a day through our area, how do you plan to ensure an adequate supply of power? What will you do to ensure there is adequate electricity at a reasonable price?	Refer to EU-3 and EU-4.
Mary Plemons	2/12/2018	Website	Our property is a honeybee farm and also boasts many varieties of wild bees. It is all organic and has been allowed to regrow native plants and trees for the bees. Numerous kinds of wildlife have been seen, including burrowing owls, deer, bobcats, and other animals that have not been seen in this area. What protection are you prepared to offer for these living beings? We are on one of the proposed routes and near another. How do you plan to ensure the movement and safe environment of these animals and insects? What provisions will be made for the noise from the trains, which one of your representatives at an Ellis County meeting described as "like the sound of a low-flying jet"?	Refer to NR-6 and NV-1. Federal Railroad Administration (FRA) consulted with Texas Parks and Wildlife Department (TPWD) regarding environmental and land use constraints and other issues of interest to TPWD. TPWD made specific recommendations in regard to the Build Alternatives (Appendix C), which included mitigation measures to avoid and minimize impacts to vegetation, wildlife (both terrestrial and aquatic), Species of Greatest Conservation Need (SGCN) and protected species. These measures are consistent with TPWD recommendations, as well as applicable federal regulations. TCRR would implement measures to reduce adverse effects to natural ecological resources and protected species. Design features would be implemented to avoid and minimize impacts including aligning the Build Alternatives to maximize the use of disturbed lands and minimize habitat fragmentation by co-locating the Build Alternatives with existing transportation and utility corridors, where practicable. Any comparison of the noise from high-speed trains to the noise of a low-flying jet would be limited to locations within about 45 feet of the HSR tracks where there is the potential for increased annoyance due to the startle effect. However, because this distance is within the fenced ROW where access would not be permitted, increased noise annoyance due to startle would not occur.
Mary Plemons	2/12/2018	Website	Why is this company requesting federal loans? If their business is profitable, why would this be necessary? Since the plan has been proven by independent studies to be unprofitable, who get first claim on any repayment? The Japanese investors, or the federal government and state of Texas tax payers?	Refer to GN-4 and NE-1.
Mary Plemons	2/12/2018	Website	Since this company is owned 80% by Japanese investors and since the proposed equipment is all Japanese-made, as well as any future components, how does this fit with President Trump's America First/Buy American plan? The tracks are not compatible with American trains, so all equipment would be Japanese. Why would a foreign company be allowed to force themselves on us in Texas? They are not wanted, and eminent domain should never be granted to a foreign company at the expense of Americans.	Refer to ED-1 and TC-6.
F.K. Plous	2/7/2018	Website	The Texas Central project is essential because it will enable travel between Houston and Dallas that is faster, cheaper, safer and more environmentally responsible than the only two choices currently available, auto and air. The Interstate already is severely congested at both ends, making highway travel unreliable and dangerous, and adding more lanes can go forward only by a government taking of urban and suburban properties more valuable than the rural land needed by Texas Central. Historically, Texas has grown its economy by quickly adopting the most advanced travel technologies to promote mobility across its vast spaces. If Texans reject high-speed rail, they will sentence their	Comment noted.

			state's economy to decades of underperformance as other states more favorable to high-speed rail surge past Texas in economic growth. Residents in many rural parts of Texas permitted government takings of their land for the Interstates. They should do no less for the next big advance in mobility, high-speed trains.	
Cynthia Plue	2/20/2018	Website	Yes, it's much easier on those who have a physical disability. Be sure it is fully ADA accessible, including the public service announcement with the use of visual displays is of both American Sign Language and Printed English captions. Thank you.	Refer to EH-1. Any Public Service Announcements performed for the Dallas to Houston High-Speed Rail project will be compliant with the above ADA requirements.
Shawn Poe	3/1/2018	Website	I want to support this project and encourage the timely delivery of this project. This project is very vital and important to the economic growth and sustainability to the DFW and Houston region.	Comment noted.
Terry Poeh	NA	Website	I found Indian artifacts Strawther Rd Kickapoo Creek	Refer to CR-5.
Robert Pohl	2/27/2018	Website	This project is laced with secrets and little transparency. I believe this group to be not sincere in disclosure. Too many families and businesses are being impacted by this plan that very few people believe can be profitable. The spin about reducing traffic congestion is a total misrepresentation of facts. Last, our community, the Historic First Ward remains anxious about a future plan of bringing this train to downtown Houston. There are very few options and the impact would destroy the historic First Ward and surrounding communities. This is a bad plan.	Refer to GN-7, GN-9, PI-1 and TR-4.
gale pollard	2/16/2018	Website	Please Commit to building the bullet train . Do not allow Japan , California and others to become any further ahead of us in Transportation Technology. !	Comment noted.
Gale Pollard	3/9/2018	Website	Please approve this much needed project for Texas. Do not allow Japan, Europe, and California to remain light years ahead of us any longer.!! !	Comment noted.
William Pollard	3/8/2018	Website	I support high speed rail in Texas, and I travel to Dallas frequently by both air and Amtrak. It is important that the new HSR station in Dallas be easily accessible to Amtrak and DART passengers. The chosen location is very inaccessible; a better location is adjacent to the present Dallas Union Station where extensive parking area is available for station development. In that location, it could provide seamless connection with both DART and Amtrak. From Union Station, DART and Trinity Railway Express provide service to both Dallas Love Field and DFW Airports.	Refer to GN-7, GN-8 and TR-3.
Frank Poluda	2/6/2018	Oral	First of all, I'm so proud of Waller County and the way they came out today and the rest of the people from Harris County and around us. And I appreciate Cecil Bell, our judge, County Judge, and the rest. They -- everybody here spoke well. I think they hit every high point you could. I have a couple more. This train will not bring economic development anywhere across the State of Texas. A highway at least brings revenue to everybody along the road. This thing, like everybody else says, it won't pay for itself, and it will hurt economically all the way through. We hit on the EMS, the fire department. And we know money talks. This thing had routes going certain ways. So we know people in a country club has money. A golf ball has more authority than we do as people. They didn't want it to go across the country club where they play golf. Somebody in the State's helping, because it all of a sudden was going down the fire line and went all the way around. Tell me, engineering-wise, the cost of something like that. And how many more people will it affect? This thing is not affecting me so don't think I'm here -- I feel for the small person and the big person. But this thing did affect some of my area through my neighbors and everything where if this thing was feasible, it should have went down the fire line. All of a sudden, it went around. Was it because of the country club people have the money that owns the place? Or I hate to say it was our comptroller family land, didn't want it to go through there. Tell me. And I'd like them to tell us who influenced them to go a different direction. Let's fight this. And I'm proud of y'all, but there's -- everybody tonight really hit every high point. I love to see it. But I think if we put pressure on our State people, put pressure on the federal people not to give us any land - if they get control of the federal money, don't give it to these people. And I wish they'd go home. And give me a list of anybody in Texas that's investing in a Japanese company. And I think we're entitled to that, just like we're entitled to any representative that represents us in federal and State that's backing this thing, too. And I thank y'all again for coming out, and let's keep fighting.	Refer to BA-3, BA-8, SC-19, SS-26 and TR-8.
Sandra Pongvacharak	2/16/2018	Website	I believe that it's high time that we had a quick and less expensive mode of transportation between here and Dallas. San Antonio should also be included in this way of travel as soon as possible. It just makes sense to me!	Refer to BA-2.
OLPH Auction Committee	2/23/2018	Website	I oppose the high speed rail crossing the morgan legacy farm at 709 and 3294 as this farm is donated to first responders, Boy Scouts and many other charitable purposes. I think moving this portion north of the existing power line should be considered.	Refer to LU-5.

Submitted By	Date Submitted	Submission Type	Comment	Response
Alex Ponzio	2/23/2018	Website	I have concerns about the high speed rail in Navarro County travelling through the intersection of 709 and 1394 cleaving Morgan Legacy Farm. At this highest portion in the county I believe significant damage will occur to the environment and water shed adversely impacting the migratory waters of the US. Further by separating access of the Morgan Legacy Farm Lodge from the Rodeo Arena and Guest Houses and Stables the train will destroy one of the primary purposes of the ranch which is to provide emotional respite for hospital employees, nurses, fire and police personnel. If the proposed route is relocated to north of the utility lines the damage to the water shed will be lessened and this irreplaceable ranch and it's charitable mission could be spared. Our office staff has had over 100 employees and family members visit this ranch, ride horses, take hay rides and enjoy the unique experience not offered by any similar property....all at no cost. I would ask that this 5-7 mile portion scheduled to parallel 3194 be moved north of the existing power lines to lessen the environmental, economic, charitable and historic on the county that would occur if Morgan Legacy Farm is traversed.	Refer to LU-5.
Alex Ponzio	2/24/2018	Website	I recently became aware of the possible loss of a property due to the proposed route of the HSR. This property listed as Morgan Legacy Farm located near FM 709 and 3194 is irreplaceable. Other than the obvious ecological damage if this route is used the charitable, economic and cultural benefits of this property would be forever lost. It appears to me that if this 6-7 mile line is moved north of the existing power line easement less damage to the county would occur."	Refer to LU-5.
Alex Ponzio	2/24/2018	Website	I recently became aware of the possible loss of a property due to the proposed route of the HSR. Alex Ponzio	2/24/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north paralleling the existing power lines would be less detrimental to the environment and save a unique irreplaceable property.	Refer to LU-5.
Alex Ponzio	2/24/2018	Website	I am writing this comment to oppose the location of the High Speed Rail. Currently the route cuts through Morgan Legacy Farm located on FM 709 and 3194. This ranch serves as a retreat (free of charge) to many medical service providers. The location of the route goes directly in front of the main lodge separating the rodeo arena, cabins and pastures (that are used for cattle). There will be no way to access these areas with the needed equipment to provide care for the cattle. Also this takes away from the ones using the ranch for retreat purposes. If the route was moved north of the existing power lines it would be saving Morgan Legacy Farm so it can continue to serve the community.	Refer to LU-5.
Alex Ponzio	2/24/2018	Website	I would like to make comments regarding the proposed route for the High Speed Rail as proposed by the FRA. Although I'm sure there has been much research that went into this southernmost proposed route, the chosen route seems to defy logic. The route crosses several local roads and divides several properties. The work on the roads that would be needed to follow this route would obviously add considerable cost to the construction of the rail line. Dividing properties that have been in families for many years (or even generations) also seems to not make much sense. One such property is the Morgan Legacy Farm. The proposed route would require the destruction of the majority of the structures on this property, both residential and ranch related. Over the years, the Morgan Legacy Farm has hosted literally hundreds of groups of children and adults as an opportunity to experience Texas farm and ranch life. Not one of these groups has been asked to pay for anything! Running the train right through the middle of this property would literally make these events no longer possible. Alternatively, there is a nearby high-tension power line that seems to be a logical route for the rail to follow. It seems much more appropriate to run the train next to a high voltage power grid already existing. The environmental impact issues seem to make this a more logical route.	Refer to LU-5.
Alex Ponzio	2/26/2018	Website	I am opposed to the train destroying a culturally, economically, historically, and charitable ranch referred to as Morgan Legacy Farm located near FM 709 and 3194. I believe a move north of the power lines paralleling the existing lines in an established easement would be less detrimental to the environment and save a unique irreplaceable property.A move to north of the already existing high power lines would have less impact on the environment and prove less damaging to the county in the long term. Furthermore, I am concerned about how the bald eagle habitat would be impacted.	Refer to LU-5 and NR-3.

David Poole	2/7/2018	Website	I gladly support this project as an example of a private rail initiative that will be a taxpayer and not a tax drain. As other new rail projects, it will stimulate adjacent investment and broaden the tax base for all. It is a broadening of transport CHOICE and an example of expanded mobility for senior citizens such as myself. On a self contained fenced right of way, it will be safe and free of grade crossings. It will be more energy efficient than cars or flying and emit less carbon. It is an example for all America and has a chance to be a game changer in transportation initiatives.	Refer to GN-4.
Kit Poon	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

			<p>fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</p> <p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
Suzanne Pope	1/22/2018	Email	I say no to this train. Please stand for us, the people who wish to keep Ellis County out of this plan. Suzanne Pope	Comment noted.
Amanda Porter	3/2/2018	Website	<p>Dear Mr. Wright, As a direct representative for the Federal Railroad Administration, I am reaching out to you for help. I became a resident of the White Oak Falls community as of December 2016. I bought a house in the community to begin my life with my husband and start a family. Now, all my plans to start my family have been completely set-aside while I closely watch the progress of this proposed High Speed Rail. I am always inclined to support any project that could positively affect the economy, but after careful review of all published material relating to the High Speed Rail, I do not feel as though the FRA is being completely transparent about all the facts. If this High Speed Rail project now, or at any point in the future, uses any of the following to start, build or complete this project: 1. Taxpayer monies 2. Taxpayer funded loans 3. Public right of ways without Texas Central legally purchasing the desired land at auction 4. Eminent domain to seize private land Then, Texas Central Rail should be placed in a no build status. Other than these issues that are a huge concern, I ask that you carefully read every opinion related to this project. You have a huge job on your hands, and please consider the life altering affect this High Speed rail will have on the following: 1. The families who will have to relocate their entire life due to the seizure of their land 2. The construction and impacts on traffic already terribly present in Houston 3. Your conscience. Can you really stand by something that will cause so many people distress? The future implications of this project weigh solely on you, as a main representative of the project. I would challenge you to take a close look at the proposed alignment, review the position of every home-owner you will be affecting, and ask yourself how you would feel if something similar happened to you. Thank you for taking the time to read my comment. Sincerely, Amanda Porter</p>	Refer to ED-1, GN-4, PI-7, TR-5 and TR-8.
Desi Burns Porter	2/19/2018	Email	<p>I have some questions regarding the sales tax information listed within the Dallas Houston HSR DEIS!m hopeful that you can answer these questions because they are likely to inform more questions that I would also include in a public comment. 1) Sales tax revenue is mentioned in the Executive Summary and then more specifically on 3.14-3 stating, "The study time period associated with the Economic Analysis is from 2016 (the start of project capital expenditures) through 2040." And on 3.14-4 that "Impacts associated with service provision (sales tax associated with ticket sales and the employment, earnings, and induced sales tax associated with increased permanent employment) would start in 2024 and recur once a year for 17 years during the study time period." But then on 3.14-29, it states that "Additional sales tax revenue would result from the sale of tickets for travel on the new HSR system on an annual basis while it is in operation." Question: For the table found under the explanation on 3.14-29 (Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives), what does "while it is in operation" mean? The numbers are incredibly high, so I want to better understand the timeframe for raising the \$15-39 billion in sales tax revenue. 2) In section 3.14.3.2.2 on page 3.14-5 it states "Airfare and HSR fares were based on the average Dallas to Houston ticket airfare of \$199. Potential gains in sales tax revenue from HSR ticket sales would be offset by the potential loss of sales tax revenue for ticketed air or bus travel and gas taxes generated through auto travel, based on TCRR's estimated mode share (see Appendix F, TCRR Conceptual Engineering Design Report)." Question: While gas does have a sales tax associated with it, airline tickets and bus tickets do not have a state sales tax charged to the purchaser. Where does the potential loss of sales tax revenue come from in regard to the anticipated decrease in air and bus tickets? 3) Regarding Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives, on page 3.14-29 it states, "As shown in Table 3.14-22, HSR ticket sales could generate between \$15 billion and \$39 billion in sales tax for the state plus \$5 billion to \$12 billion in local tax revenue. Local sales tax is assumed to be collected at the point of sale, roughly split between Dallas and Houston jurisdictions. Tax revenue for ticket sales would be identical for all Build Alternatives." Question: What are the assumptions associated with the \$15-39 billion dollars? A 6.25% state sales tax and a 2% local tax on a \$199 ticket at 5 million and 7.2 million tickets annually? 4) Regarding 3.14.4.2.2 Tax Revenues, "The State of Texas does not collect a personal income tax, so the bulk of funding for local jurisdictions comes from a combination of sales and property taxes. The state collects a 6.25 percent state sales and use tax on all retail sales, leases and rentals of most goods, as well as taxable services. Local taxing jurisdictions (i.e., cities, counties, special purpose districts and transit authorities) can also impose up to 2 percent sales tax for a maximum combined rate of 8.25 percent. Within the Study Area, only Navarro, Leon, Madison, and Grimes Counties collect a county sales tax." Question: Under what Texas tax code are train tickets eligible for sales tax? As I'm sure you are aware, the public comment period will end March 9, so I'm hoping I can get these answers quickly so I can review the rest of the document with a better understanding of the projected sales tax revenue. Many thanks!</p>	<p>Refer to SC-3 and SC-17.</p> <p>As described in <b>Section 3.14.3, Socioeconomics and Community Facilities, Methodology</b>, the time frame used to calculate net tax benefits was dependent on the nature of the revenue source. Revenue generated from service operations was included for 17 years through 2040.</p>

Desi Burns Porter	2/27/2018	Email	<p>I'm quite disappointed in this reply as I was promised answers to my questions and had an AECOM employee with this information been available at one of the public hearings, I would have been able to ask my questions and get my answers. Should I assume that one of my questions creates a conflict with the information within the DEIS? Namely, we've been unable to find any place in the tax code that makes train tickets eligible for sales tax, which in turn would make everything Texas Central has been selling about sales tax revenue benefits to Dallas and Houston completely false. OR, it was intended to be a different type of tax that was just labeled sales tax and won't yield the same return when profits are dismal. Or perhaps there is simply no current way to tax the tickets at this time so Texas Central will have to ask the legislature to create a tax to make good on their promise of benefits? That's not going to go over well in the Legislature. I guess none of that is really the concern of the FRA since economic feasibility has been removed from the purpose and need. Kevin, I appreciated your candor and report we had at the previous public meetings. You know very well that Texas Central is doing everything they can to paint this project in a very different light than reality (ie- preempting the FRA recommendation on station location). We aren't crazy train haters...we are regular families with all our worldly treasure wrapped up in land that is more than just dirt and buildings to us. In many cases it's sole income, inheritance and home wrapped up in one. Obviously, we don't want this project to proceed but, at the very least, if it does and homes are taken and land and livelihoods destroyed, we deserve to know the facts. And if Texas Central is promoting a \$15-39 BILLION dollar sales tax benefit to our state that doesn't exist and in the same breath saying that the \$199 ticket price is just something FRA made up and it's not true, which numbers are we supposed to believe? Please, at least, help me understand this. Truly for Texas, I have some questions regarding the sales tax information listed within the Dallas Houston HSR DEIS. I'm hopeful that you can answer these questions because they are likely to inform more questions that I would also include in a public comment. 1) Sales tax revenue is mentioned in the Executive Summary and then more specifically on 3.14-3 stating, "The study time period associated with the Economic Analysis is from 2016 (the start of project capital expenditures) through 2040." George Porter	2/18/2018	Website	<p>As it stands, not only has Texas Central been denied approval to construct, it has not yet established itself as a "railroad" with eminent domain authority in Texas. Amazingly, recent sworn testimony from a Texas Central representative revealed that Texas Central does not even have the money to buy the land it needs for the project, or even buy one train. Texas Central also admitted that it does not have sufficient financing in place for construction. Despite these undisputed facts, Texas Central continues to bully and has filed lawsuits against landowners across Texas in an attempt to enter private property, knowing full well it does not have that legal right. All the while, no Texas court has ruled in Texas Central's favor, nor has any court ordered an injunction against a landowner to allow Texas Central access to private property. For a company that preaches fairness to landowners and respect for private property rights, Texas Central's actions certainly speak louder than its words.</p>	Refer to ED-1.

Jack Nusan Porter	2/7/2018	Website	Rail is important. Do you want to sit in auto gridlock for hours? It is really simple. we need rail. Thank you. Dr. Jack Porter	Comment noted.
Randy Potter	2/27/2018	Website	I am writing to express my concern that this train project, will not become a tax burden on the taxpayer, although I would like to see this project come to fruition. I would like this project and its leaders to be held accountable for the organization's actions, and that the general public would not pay for anything other than patronage to the transport. Thanks for your consideration	Refer to GN-2, GN-4 and NE-1.
BJ Pouncey	3/8/2018	Email	<p>Dear FRA,</p> <p>this rail is a joke for the following reasons:</p> <p>1) the rail will never turn a profit-this project has been designed to fail from the very beginning. it has nothing to do with alleviating the traffic problems from dallas to houston. several non-biased third party companies that specialize in high speed rails have all stated what a catastrophic failure this rail will be in Texas</p> <p>2) the DEIS is extremely flawed and thrown together. did you guys even discuss pipeline and what does the FRA know about pipelines. were pipeline experts even consulted?</p> <p>3) this is not a time saver. by the time you drive to a station on 290, which is in one of the most heavily congested parts of town, go through security, get off the rail, and catch a ride it would be about the same time if you just drove.</p> <p>4) cost of a ticket is ridiculous. no one i know will pay \$200 one way to go to dallas. it will only serve a very small class of people. not the masses like TCR claims</p> <p>5) this will do nothing to alleviate houston traffic or our mass exodus issues. TCR even admitted personally this train will do nothing to alleviate mass exodus problems. in fact they probably won't even run the train with an impending hurricane coming. the rail only goes to 290, which is outside the inner city limits so people will still have to take a vehicle to get into the city, which is where our main traffic issues are. not in the rural areas. it makes absolutely no sense</p> <p>6) this will destroy Texans way off life and not conducive to texans way off life. Texas is a spread out state. houston alone is bigger than several states. spending billions to put in this concrete monstrosity makes no sense. we're way to spread out for this to be beneficial. if this was in new york it would make more sense where the cities are closer together. even japan is smaller than california. thousands of people will be rehomed from places they have lived for years and once beautiful hunting grounds will be ruined with concrete monster.</p> <p>7) TCR is full of lies and threats and has no transparency at all. the only safety measures they have put in place was because of TAHSR. they even went as far as handing out toy trains in an attempt to get positive reviews. who is going to pay for the extra EMS and fire dept workers that will be needed. what security measures will they take? this is a terrorist attack waiting to happen!! not only that they have threatened the elderly for right to survey property and obtained several surveys illegally. the numbers of passengers have been over inflated and they have lied about the amount of property obtained. they false advertise about it not costing the tax payers and the FRA(You) have been spreading the same lie. this just shows you the caliber of people running this company. they don't give shit about public safety and they definitely don't give a shit about Texans.</p> <p>i literally could write 20 more reasons. this is just the tip of the iceberg of how disgusting this project is and FRAs involvement is even more repulsive. this project is to make a few people rich and steal land from the people. there is absolutely no benefit to the people who will eventually end up paying for it if TCR has its way.</p> <p>tax payer and registered voter</p>	Refer to EU-1, ED-2, GN-2, NE-1, PI-4, PN-3, SC-3, SS-1, SS-7 and SS-23.
BJ Pouncey	3/8/2018	Email	<p>3) this is not a time saver. by the time you drive to a station on 290, which is in one of the most heavily congested parts of town, go through security, get off the rail, and catch a ride it would be about the same time if you just drove. 5) this will do nothing to alleviate houston traffic or our mass exodus issues. Andy Powell	2/7/2018	Website	Consider this comment as vote against the train. The current proposed route will go within .5 miles of the Katy Prairie Conservancy which my family frequents multiple times per year. There are few places located so close to a population where you can find untouched prairie and excellent bird watching. The noise pollution is another large concern. To have the train going right behind our house every hour is crazy. People move to Cypress to raise a family and have peace and quiet. This train will do anything but bring peace and quiet. Please do not build this train.	Refer to NV-1 and RF-4.

Carolyn Powers	2/9/2018	Website	I'm wondering if so many people are objecting to the train if you will go ahead and do it anyway and make us pay for something we don't want, and aren't using, of course after taking our land.	Refer to ED-1, GN-4 and PI-1.
Jeremy Powers	12/19/2017	Email	I was looking at the planned route for this train it is going to be right next to my father's 50 acres near he and my mom build there dream house in the country 20 years ago. This would devastate them and devalues their home and property. No one in the county wants the sounds of a train rolling by their house at 100+MPH. Plus we can't even get on the damn train in our town. Please scrap this terrible idea. I'm available for any question from your end. When are the public hearings? All of them?	Refer to PI-1 and VA-1.
Scott Powers	1/29/2018	Oral	My name is Scott Powers. I am an instructor at Navarro College. I didn't realize there was just going on in that campus, so I've learned a lot. I would also like to say and address Mr. Penque's comments about the high speed rail being a new technology. It's actually an old technology. One of the things I've heard almost my whole life is that hydrogen is the fuel of the future and it always will be. I think high speed rail is the hope of the future and it will never be a financial reality. I teach economics at Navarro College, and so the things that I looked at really had a lot to do with economics. But I did notice something in reading the initial statement you-all handed out, and that is that at the bottom of the second page it says or continued on page 2, the bottom of the first page, it says, "It reviewed alternatives, the FRA, Federal Railroad Administration, evaluated four potential high speed rail corridors that were presented to the public and agency during scoping and reviewing alternative transportation modes, high speed, and conventional speed rail services, direct bus service, and expansion of interstate highway." You know, it's just amazing that with the proliferation of air flight that it was never considered. The Federal Railroad Commission is a railroad-only viewpoint. If you look at the if you are a hammer and you look at the rest of the world, it all appears to be a nail to you, so your only solution to fix it is to build more railroads. Your only solution if you're just a hammer is just to beat it into the ground, and I think this is exactly what we're going to do. It was already mentioned sometime tonight about California. It is now \$130 million per mile built. They're estimating this one is going to be 50. I agree the financial information is really tough to get out of it. \$50 million for a 250-mile track. They estimate, I heard tonight, \$199 for a ticket. California original estimate for their ticket was \$50 from San Francisco to Los Angeles. It is now estimated to be \$86. They are ten years away from completion. It probably will be double that. If you go to the East Coast and travel on train, it is often a subsidized 50 cents a mile, and every one of those trains is losing money. If we do the same thing with high speed rail, it's not going to be \$189 or \$199. That is expensive. The problem with the East Coast railroad, even at 50 cents a mile, is they cannot compete against air travel. The problem that California is going to have at a dollar a mile for their travel is not going to be able to compete against air travel. You know, as we look back, air travel is still the preferred route. I have just one statement that I would like to read. Tiffany, I can't keep track of time like you are. And why do we fly? It is safer, cheaper, faster, and more comfortable than a train will ever be. Thank you.	Refer to BA-12, NE-1, PN-3, SC-3 and TC-2.
George Prat	3/9/2018	Website	The corridor route should be moved back to I45. Leave the landowners alone when it comes to eminent domain. I would love to see the train and further extensions of the program, but not at the cost of the land owners. George Prat	Refer to BA-9.
Richard Prater	3/9/2018	Website	Having family in the Ft Worth area, being able to zip up or down would be fantastic!	Comment noted.
Vicky Prater	1/29/2018	Oral	First I'd like to thank you-all because I got to meet both of you-all before I spoke to you tonight, and I did find you to be very caring and attentive people. And I don't think you have an opinion one way or the other as far as this project goes, and I think you're -- you know, I appreciate the part that you play in it, and I want you to understand that. But it's very important that you understand that there's a great difference between people who live in cities and people who live in the rural areas. We put great value on our space, our land, our crops, our cattle, our neighbors living far enough away from us. We put a lot of value in that kind of thing. We put a lot of value in the fact, too, that we don't want to have a lot of traffic to deal with everyday. It's not our fault that the people in the Metroplex are happy with a lot of traffic, a lot of concrete, and the fact that they can pass a cup of coffee to their neighbors house by house from their kitchen window. They don't care about the space. And we don't need to pay for them to have a free ride through our country because we have a culture here and our culture is important to us. So we have had to put up with a lot of damaging industries in our rural counties over the decades, but in exchange for that we got jobs out of the deal. So that was what we call in Texas a good trade, a fair trade, we'll take that trade. But this is not a good trade for us. We have rights. We can ask and expect answers from these people, and we should be able to expect to get an honest answer. I'm about to give you an example of something that happened to me tonight with Texas Central in this building. It changed everything that I was going to say up here tonight, and I'm just going to repeat it. I was having a nice conversation with a young man. He was telling me all the great benefits of this railroad coming to Texas and what a great thing it was going to be for us. I said, Are you going to pay a fair market value for the property? He said, Oh, we're going to pay more than that. I said, Ten percent more? He said, Oh, no; more than that. I said, Well, what if somebody doesn't want to sell you that property for more than that? He goes, Well, we haven't had to use our right to eminent domain yet. And I said, Oh, do you have the right to eminent domain in Texas? And he goes, All railroads have the right to eminent domain in Texas. I walked him right over to my county judge, and I said, does this Texas Central have the right to eminent domain? And of course the judge explained it to me quite plainly that no, they did not. I turned right around and looked at the young man, and I said, That's why we don't want your ass here, because you're not transparent, we don't believe you, and we don't trust you. Thank you.	Refer to ED-1 and SC-4.

Vicky Prater	1/31/2018	Email	<p>I am not an unreasonable rural Texan citizen and not against progress in Texas, unless that progress becomes to personal and will have a major impact on our rural culture and way of life here. Rural Texans have lived with damaging and dirty industries for decades, in order to survive here. The only decent jobs we have ever been offered in rural Texas are companies who needed to get an air permit from the EPA to operate. Their only chances to get those air permits meant moving into our rural part of Texas. We allowed those damaging industries to set up shop here, in exchange for the work. As sad as it is, we considered it a fair trade and a good deal for us. The Texas Central Bullet train is not meeting that good job &amp; fair deal trade, but that is not the reasons us in rural Texans do not want this train. We are totally against anyone violating our property rights in rural Texas, as property owners. There is a great difference between rural Texans and Texans who live in the big cities in Texas. Rural Texans respect space, land, crops, cattle &amp; livestock that feeds the USA. We love our neighbors even better, if they live a few acres away or a mile or two down the road. We love the personal service we get when we deal with each other and we hate any</p>	Refer to GN-1, GN-4 and NE-1.

			kind of traffic jam on our county roads. It would be very wrong to not consider rural Texas cultures into this factor. City people in Dallas and Houston also have their own cultures. They are well adapted to their concrete jungles, traffic jams and the crime they must deal with everyday. Their homes are so close together, they can pass a cup of coffee out their kitchen windows into the house next door to them. They have no idea what this mega train will do to their rural neighbors between Dallas & Houston, because this bullet train is just a novelty RR to them. Every RR in the USA to this date can not make a profit and is now supported by our USA federal tax dollars. Please do not allow this Texas Central RR company to set up shop in Texas and borrow billions of dollars from our banking systems in America. They will not have a damn thing to lose when they walk away from those loans, (with the majority of that loaned money going back to Japan in the process to build & ship the trains back to us here to set up for them), and I greatly fear Texans will get raped twice in this deal. Once when our lands are raped 1st to build this RR and the 2nd time when us Texans have to pick up their defaulted loans. Closing statement here FRC: rural Texans can smell a skunk in our hen houses and this train deal smells just like a skunk to us. We shot skunks in Texas FRC	
Surabhi Presse	2/5/2018	Handwritten	More important to the city of Houston would be infra-city trains taking you from hubs like the Woodlands, Katy, Sugar Land, Humble into the city. It would boost Houston economy for the theatre/restaurants/business. It would also enable Houstonians to work in jobs that previously were too far. Why exactly are we worried about Dallas? I get helping College Station students but are they our first priority or the adults within Houston?	Refer to GN-7, BA-8 and PN-3.
Michela Prestigiovanni	1/29/2018	Email	The bullet train will be great for the tourism in Texas Austin Houston San Antonio Galveston and Corpus Christi should be part of the train route. Tourists will flock from every where.	Refer to BA-1 and BA-2.
Liz Prestridge	2/5/2018	Website	As a born and raised Texan, I am strongly opposed to the Texas bullet train. I live in the rural area and do not want to see the beautiful countryside destroyed with a high speed train running through it with forests and farms plagued by its presence. The natural habitat for all the multiple species of animals and birds that inhabit this beautiful countryside would be ran out of their homes with their lives destroyed. We live out in the country for a good reason: to avoid the elements of the city, such as this bullet train, and to be able to enjoy the environment and land in its quiet and natural beauty. None of my household, neighbors, friends or even acquaintances want this train cutting through our Texas countryside. The city-dwellers may be interested in having it but we, as tax paying citizens who are the actual Texans who chose to live in the countryside to avoid horrific scenery-killing elements like this high speed train do not want this cutting through our countryside peaceful view. Our voice should be the deciding factor since we are the one's who would be sacrificing everything we moved to the country to be away from the city structures and elements for. The deer, raccoons, squirrels, opossum, woodpeckers, cardinals, blue jays, bluebirds, chickadees, nut hatches, wrens, tit mouse, hummingbirds, etc would have their natural habitat encroached upon and destroyed, along with all of our human lives who live in the country. Besides all of these extremely important reasons there should not be a high speed train built from Houston to Dallas, there is the huge problem of us Texas taxpayers having to possibly pick up a part of the bill. Whether it is because the train doesn't end up making enough to sustain itself financially once it's built or no matter what the reason is, I refuse to fund any part of this train with my tax dollars because there is no dire need that it's going to fix. There is no impending emergency situation that this train is going to correct. On the contrary. It is essentially being built for the convenience of those already living in the city who choose to live in the midst of all this type of structural nuisances just so they can cut their travel time down, leaving those of us who choose to enjoy the quiet, peaceful country life and scenery to suffer the horrific bullet train being right in our faces just for them. It is not right and I am dead set against it. We, as citizens, should at the least be able to vote on whether it is going to be built or not and not have it forced upon us.	Refer to AS-1, GN-4, NE-1, NE-9, NR-1, NR-2, NR-6, NV-1, PI-1, PN-3 and NR-6. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
J. R. Price	2/6/2018	Website	If not now, when? When is the United States going to start catching up with the rest of the industrialized world with cleaner, faster transportation alternatives. This country needs more passenger trains between cities to move people. Dallas and Houston are ideal cities for creating a high-speed rail system that will work. Once it is built, and people through out the U.S. see how well it works, other natural city-pairs will want to have the same thing. This country cannot build its way out of the traffic congestion with more lanes of highways.	Comment noted.
Crystal Prices	3/9/2018	Website	The rail will impact many homeowners requiring them to find new properties to build homes. These families will be placed under stress of relocation while homes are built if they can find a replacement equivalent to properly and homes taken from them and possible not receive proper and justice compensation. The impact will also cause possible loss of employment and children losing their schools and friends. Would you want to lose your property, home, livelihood, friends, school to a high speed rail when the proposed route/ towns can now be easily accessible by air or vehicle? I have family facing the prospect of losing their home. Other property/homeowners will lose property that has been in their families for 100 years. Please do not allow this high speed rail in our state.	Refer to ED-2 and PN-3.
Deborrah Prince	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

			<p>3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</p> <p>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</p> <p>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</p> <p>6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.</p>	
Linda Pringle	2/26/2018	Website	The proposed high speed train will provide significant benefits to the state as well local communities upon its completion. As Texas grow, our infrastructure is being continually stressed. The train will be beneficial to all TexansT	Comment noted.
Andy Prior	1/29/2018	Oral	My name is Andy Prior, and I'm coming here not as a resident who's being personally affected, but as someone who is looking at the political landscape across Texas and seeing people, the property owners of Texas, are not being properly protected in this situation. I lived in Arlington, Texas, and two years ago we had a massive battle in our city that involved city leaders telling us one thing and doing something entirely different, spending billions of taxpayer dollars on something we did not need and didn't want. And what I see here with this high-speed rail is something very similar, only difference is this time it's coming from a private group who claims that they won't be using public taxpayers funds. Who claims that they won't need eminent domain.&#183; Who claims they are benefitting all the people with new high-speed rail. The gentlemen, several of them, have mentioned that high-speed rail is the future. Unfortunately, I think they're still living in the 18th century. We've got new technology coming, they're gonna make transportation in the United States the true marvel of the world and we do not need another fixed-rail system that will not be adaptable and changeable down the road. Now, we have a number of politicians in the State of Texas who've been sitting on the sideline and not doing anything so I'm very pleased to see the County Commissioner here from Ellis County standing up for his residents and speaking out on this matter. Because I'm so disappointed in the statewide elected officials in the State of Texas and their inaction and their lack of response on this issue -- excuse me -- I'm actually running for public office for the first time in my life this year as well. I'm running for Texas Land Commissioner, which means I will be fighting for Texans when it comes to eminent domain and private property rights, unlike the last couple of Texas Land Commissioners who've been in office for the last 16 years. We've had Texas Land Commissioners who have lost court battles on the definition of private property versus public property, multiple court battles. It's time for that to end in Texas. It's time for Texans to stand up for each other, for our property rights, and protect ourselves from people who do not care and want to spend money that they don't have.	Refer to BA-4, ED-1, GN-4, NE-1, PN-3 and SC-19.
George Procter-Smith	1/29/2018	Oral	My name is George Procter-Smith, and I'm speaking for myself and my wife Marjorie. We oppose in general the routing of this rail through Navarro County due to the loss or disruption of natural resources, rural farm land, destruction of wildlife habitat, and valued rural lifestyle of our county with absolutely no benefit to the county, to us, or to our neighbors. Beyond those concerns, however, we must object on personal grounds. We live at [...], which is directly on the route proposed for the East Navarro Section, Section 3-B. If the rail were to be built on this route, we would lose our retirement house and farm. We have both worked hard all our lives and saved for many years to be able to buy our 44 acres of land, encompassing prairie, woods, and ponds. We built our retirement home in 2005, and we enjoy our quiet life with horses, a barn full of rabbits, a small flock of hens, two big vegetable gardens, and plenty of local wildlife. We've worked hard on a prairie restoration process with our back acreage, and we've been pleased to see a return of some of the major grasses and forest. We work hard, we're careful stewards of our land, and we love it. To lose this property, which would be the result of this rail line, would destroy us. It would be a catastrophic financial, personal, and environmental loss. We are too old to start over, and we cannot make up the financial losses this would cause us.	Refer to LU-11, NE-9, NR-5 and SC-19. This property is impacted by Segment 3B. The Preferred Alternative, as outlined in the Final EIS Executive Summary, is Alternative A, which does not include Segment 3B. The Preferred Alternative is approximately 2 miles west of this location. Therefore, no impacts are anticipated at this property as a result of the Preferred Alternative.

Submitted By	Date Submitted	Submission Type	Comment	Response
Marjorie and George Procter-Smith (Serenade Farm)	1/4/2018	Letter	We are writing in regard to the Draft EIS for the Dallas-to-Houston High-Speed Rail Project, in opposition. We oppose in general the routing of this rail through Navarro County due to the loss or disruption of natural resources, rural farm land. destruction of wildlife habitat, and valued rural lifestyle of our county, with absolutely no benefit to the county, to us, or to our neighbors. Beyond those concerns, however, we must object on personal grounds. We live at [...]. which is directly on the route proposed for the East Navarro section (section 3B). If the rail were to be built on this route, we would lose our retirement house and farm. We both worked hard all our lives and saved for many years to be able to buy our 44 acres of land, encompassing prairie, woods, and ponds. We built our retirement home in 2005, and we enjoy our quiet life, with horses, a barnful of rabbits, a small flock of hens, two big vegetable gardens, and plenty of local wildlife. We have worked hard on a prairie restoration project with our back acreage, and have been pleased to see a return of some native grasses and forbs. We work hard, we are careful stewards of our land, and we love it To lose this property, which would be result ofthis rail line, would destroy us. It would be a catastrophic financial, personal. and environmental loss. We are too old to start over, and we cannot make up the financial losses this would cause us.	Refer to ED-2, LU-7 and NE-9.
Deanne Prusak	1/30/2018	Letter	The DEIS does not include a comprehensive risk management system. There was no mention of specific risk assessments to identify disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce or eliminate the risk. This must be done for the utility corridor crossing and any other potentially dangerous crossings for a credible understanding of the safety risks.	Refer to SS-19.
Deanne Prusak	1/30/2018	Letter	TCR is required to obtain a county permit for construction. Those permits require proof of Eminent Domain powers. TCR has been unwilling or unable to prove it has eminent domain. No further work should be done towards the DEIS until this is proven.	Refer to ED-1, ED-3, NE-1 and NE-8.
Deanne Prusak	1/30/2018	Handwritten	Amtrak's proposal from 8/2016 includes a map on page 9 showing projected road congestion in 2035. The Houston to Dallas route is not shown as critical. In fact, it is the Houston to San Antonio and San Antonio to Dallas that is critical. The TCR project is not meeting that need.	Refer to BA-2, GN-3, NE-1, PN-2 and PN-3.
Deanne Prusak	1/30/2018	Handwritten	In the Record of Decision (10/2012) for the Texas Oklahoma rail project, it states in the purpose and need that the requirements for the project are that be a cost-effective investment where the projected train service meets or exceeds a certain percentage of operations and maintenance. For high speed rail that standard is 100%. I have concerns this project with TCR will not meet that. A lot of costs have not been considered or included in the DEIS such as moving pipelines, maintaining roads and cleaning up hazardous waste.	Refer to EU-1, HZ-5, NE-1, SC-22 and TR-7.
Deanne Prusak	1/30/2018	Handwritten	TCR has not adequately shown a "need and purpose" for high speed rail between Dallas and Houston. There has been no regulatory body that has established a credible public need. The rail does not provide a more convenient transport than driving or plane, considering the lack of stations to access it. From my home in Waller, it would take an hour to get to the terminal in Houston, allow time to park and check in (30 min), then 1.5 hours on the train to a terminal where would have to rent a car and drive to final destination. This does not offer any time saving versus flying or driving. In fact with driving, it only takes me 3.5 hours to get to Dallas and then I have the advantage of my own car. In addition the HSR has a high ticket price that results in no savings to the customer over alternative transportation.	Refer to PN-3, SC-3 and SS-5.
Deanne Prusak	1/30/2018	Handwritten	The technology of the proposed high speed rail track accommodates only one type of outdated Japanese coach and will be obsolete before the project is finished, if it isn't already obsolete.	Refer to BA-4 and TC-2.
Deanne Prusak	1/30/2018	Handwritten	The construction of the rail will take an enormous amount of aggregate. The DEIS is too general and does not appropriately address the full impact to the supply chain and how it impacts other current construction such as delays or cancellations due to lack of aggregate.	Refer to SG-4.
Deanne Prusak	1/30/2018	Handwritten	The DEIS does not address the environmental impact when fill material is removed from private property for the use of construction by TCR. It does not state in what environmentally sound condition TCR is required to leave the site.	Refer to LU-10 and LU-14.
Deanne Prusak	1/30/2018	Handwritten	The DEIS is too general when addressing impact of the rail on flooding and drainage. In my area the train will pass through the Spring Creek watershed where 5 creeks cross the track. We have experienced major flooding of these creeks historically.	Refer to FP-1, NE-8, WW-2 and WW-8.
Deanne Prusak	1/30/2018	Handwritten	The DEIS woefully covers the harm that noise, vibration and electrical current would have on people's health and integrity of buildings. I would like to see this section expanded, especially since my property is 1500' from the proposed location. On chart 3.4-8 LT-20 is the closest to my property and has a current noise level of 49-51, yet the DEIS states construction noise limits and train will be 90-100 which is twice the level of noise. Table 3.4-12 indicates that in Waller County the train noise would be over the mid and severe limits for FRA at locations up to 1000 feet away from the tracks. The DEIS only reports noise levels for one train passing although it is expected there will be two trains passing each other at frequent intervals. The DEIS should have more stringent and clear specifications. It should address under what parameters noise mitigation must be installed and include that in the detail design. For vibration, Table 3.4-14 indicates train vibration levels for Waller County at 54, but does not state what the level is now, which I assume is zero, so this is a huge increase over the norm.	Refer to NV-1. The vibration assessment is not based on existing vibration levels, only on the project vibration levels. Typical background vibration levels are in the range of 50-55 VdB, which is below the threshold of perception.
Deanne Prusak	1/30/2018	Handwritten	The DEIS includes evaluations about property values around the HSR stations but does not include an evaluation on properties several miles from the route. These properties must be evaluated to credibly and fully understand the effect of the rail on property value. The proposed rail will cause properties to lose value, thus leading to a severe loss of tax revenue.	Refer to VA-1.
Deanne Prusak	1/30/2018	Handwritten	The DEIS has not addressed environmental expectations or requirements regarding the return of any temporary construction sites to their original or better condition. Please add me to the project mailing list.	Refer to LU-10.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Deanne Prusak	1/30/2018	Handwritten	The DEIS does not include a risk assessment on the ability of emergency response vehicles to reach any remote area along the 240 mile route.	Refer to SS-19, SS-3, SS-18 and SS-23.
Deanne Prusak	1/30/2018	Handwritten	There is a potential that some of the land and environmental survey data used in the DEIS was obtained without approval of the landowner. The majority of landowners chose to not allow access to their property on the permission form from the surveying company. The FRA should request an affidavit from the Landowner that they did or did not allow data to be obtained on their property in order to validate use of this data in the report, otherwise it needs to be removed.	Refer to NE-8.
Deanne Prusak	1/30/2018	Handwritten	Amtrak's proposal from 8/2016 includes a map on page 9 showing projected road congestion in 2035. The Houston to Dallas route is not shown as critical. In fact, it is the Houston to San Antonio and San Antonio to Dallas that is critical. the TCR project is not meeting that need.	Refer to BA-2, GN-3, NE-1, PN-2 and PN-3.
Deanne Prusak	1/30/2018	Handwritten	The technology of the proposed high speed rail track accommodates only one type of outdated Japanese coach and will be obsolete before the project is finished, if it isn't already obsolete.	Refer to BA-4 and TC-2.

Refer to NE-8.
Deanne Prusak	1/30/2018	Handwritten	In the Record of Decision (10/2017) for the TX Oklahoma rail project, it states in the purpose and need that the requirements for the project are that it be a cost - effective investment whose the projected train service meets or exceeds a certain percentage of operations and maintenance. For high speed rail that standard is 100%. I have concerns this project with TCR will not meet that A lot of costs have not been considered or included in the DEIS such as moving pipelines, maintain roads and cleaning up hazardous waste.	Refer to GN-4 and PN-3.
Deanne Prusak	1/30/2018	Handwritten	TCR has not adequately shown a "need and purpose: for high speed rail between Dallas and Houston. There has been no regulatory body that ha established a credible public need. The rail does not provide a more convenient transport than driving or plane, considering the lack of stations to access it. from my home in Waller, it would take an hour to get to the terminal in Houston, allow time to park and check in (30 min), then 1.5 hours on the train to a terminal where I would have to rent a car and drive to final destination. this does not offer any time saving versus flying or driving. In fact with driving, it only takes me 3.5 hours to bet to Dallas and then I have the advantage of my own car. In addition the HSR has a high ticket price that results in no savings to the customer over alternative transportation.	Refer to PN-3, SC-3 and SS-5.
Deanne Prusak	1/30/2018	Handwritten	The original HC-4 route through Waller and western Harris Counties was moved 3 miles west with no public notice or ability for public comment. There were also other alternative routes originally evaluated. For example, the route along I45 was dismissed due to the need for a barrier for auto/train separation. This would be feasible but costly. Cost should not be the controlling parameter to eliminate a route alternative. The dismissal of the I45 route would likely be less harmful to the environment and should be reconsidered.	Refer to BA-9 and PI-1.
Deanne Prusak	1/30/2018	Email	There is a potential that some of the land and environmental survey data used in the DEIS was obtained without approval of the landowner. The majority of landowners chose to not allow access to their property on the permission form from the surveying company. The FRA should request an affidavit from the Landowner that they did or did not allow data to be obtained on their property in order to validate use of this data in the report, otherwise it needs to be removed. The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS.	Refer to NE-8.

Deanne Prusak	2/5/2018	Handwritten	The proposed route through my area will be located dangerously close to an active gas pipeline, yet curiously both FERC (Federal Regulatory Commission) and PHMSA (Pipeline and Hazardous Materials Safety Administration) were omitted in the DEIS. In the drawings, several active pipelines have been omitted. What is the effect of the vibration issues on these pipelines? The hazard was not addressed in the DEIS that the train will pass 580' of a natural gas compressor station.	Refer to EU-1, EU-2, EU-6, EU-7 and NV-5. The Project will be designed and constructed based on PHMSA requirements for where there are pipeline crossings and interactions with pipeline facilities.
Deanne Prusak	2/5/2018	Handwritten	The construction of the rail will have increased traffic flow disruptions. The DEIS is too general and does not adequately address increases in traffic, permit loads and First Responder impact times. Any delay in First Responder times are unacceptable to the public. More detailed expectations and performance parameters must be provided.	Refer to PI-1, SS-23 and TR-6.
Deanne Prusak	2/5/2018	Handwritten	The DEIS omitted quantifying the use of water for construction. There is no mention if TCR will be allowed to drill water wells for construction use or if they will be required to use surface water. If so, the sources of that water need to be identified. It is anticipates an enormous amount of water will be needed for concrete batch plants, construction sites, mitigating dust levels, watering erosional control plantings. The amount of water needs to be quantified.	Refer to HZ-5, WW-1 and WW-6.
Deanne Prusak	2/5/2018	Handwritten	The construction of the rail will cause damage to existing private, city, county, state and Federal road and highway infrastructures. The expectation of damage needs to be addressed based on increased traffic flow and transport weights versus normal traffic. It also needs to be addressed who will pay for the damage and what would be the wait period for repairs. If construction access requires the building of new roads, it needs to be clarified who will own those roads and be responsible for future maintenance.	Refer to TR-7.
Deanne Prusak	2/5/2018	Handwritten	The DEIS is using a large amount of regional non-specific data versus specific studies and field inspections. The DEIS is fatally flawed when not using project specific data such as identification of endangered species. The areas where the endangered Houston toad and Navasota Ladies Tresses reside were not inspected.	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in <b>Section 3.6, Natural Ecological Systems and Protected Species</b> of the EIS.
Deanne Prusak	2/5/2018	Handwritten	The DEIS failed to address the damage to many sources of water. Surface springs or spring fed creeks potentially would be destroyed by soil disturbance and the movement of fill material on top or excavation of fill material. These springs are essential to crops and livestock.	Refer to WW-2 and WW-9.
Deanne Prusak	2/5/2018	Handwritten	TCR is required to obtain a county permit for construction. Those permits require proof of Eminent Domain powers. TCR has been unwilling or unable to prove it has eminent domain. No further work should be done towards the DEIS until this is proven.	Refer to ED-1, ED-3, NE-1 and NE-8.
Deanne Prusak	2/5/2018	Website	The DEIS identifies 121 hazardous materials sites in Harris County alone that will be disturbed by the route. There is no mention in the DEIS what is the impact to the environment if these sites are disturbed. The route along 290 may not be viable due to the concentration of hazardous sites. Clean up would be cost prohibitive yet there is no mention of costs in the DEIS. The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS.	Refer to HZ-1.
Deanne Prusak	2/5/2018	Website	Amtrak proposal from 8/2016 includes a map on page 9 showing projected congestion to 2035. The Dallas to Houston route is not shown as critical. In fact, it is the Houston to San Antonio and San Antonio to Dallas that is critical. TCR's HSR project does not address this need. There is not a need for the route as they currently have it placed.	Refer to BA-2, GN-3, NE-1, PN-2 and PN-3.
Deanne Prusak	2/5/2018	Website	In the Record of Decision (10/2017) for the TX Oklahoma rail project, it states in the purpose and need that the requirements for the project are that it be a cost-effective investment where the projected train service revenue meets or exceeds a certain percentage of operations and maintenance. For High Speed Rail that is 100%. The DEIS leaves out a lot of costs, such as covering moving pipelines, maintaining roads and cleaning up hazardous waste sites. The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS.	Refer to BA-6, EU-2, EU-3, GN-4, HZ-5, NE-1 and TR-7.
Deanne Prusak	2/6/2018	Handwritten	The DEIS identifies 121 hazardous materials sites in Harris county alone that will be disturbed by the route. There is no mention in the DEIS, what is the impact to the environment if the sites are disturbed? The route along 290 may not be viable due to the concentration of hazardous materials sites. Clean up would be cost prohibitive yet there is no mention of costs in the DEIS.	Refer to HZ-1.
Deanne Prusak	2/6/2018	Handwritten	The proposed route through my area will be located dangerously close to an active gas pipeline, yet curiously both FERC (Federal Regulatory Commission) and PHMSA (Pipeline and Hazardous Materials Safety Administration) were omitted in the DEIS. In the drawings, several active pipelines have been omitted. What is the effect of the vibration issues on these pipelines? Deanne Prusak	2/6/2018	Handwritten	The construction of the rail will cause damage to existing private, city, county, state and Federal road and highway infrastructures. The expectation of damage needs to be addressed based on increased traffic flow and transport weights versus normal traffic. It also needs to be addressed who will pay for the damage and what would be the wait periods for repairs. If construction access requires the building of new roads, it needs to be clarified who will own those roads and be responsible for future maintenance.	Refer to TR-7.
Deanne Prusak	2/6/2018	Handwritten	The DEIS is too general when addressing impact of the rail flooding and drainage. In my area the train will pas through the Spring Creek watershed where 5 creeks cross the track. We have experienced major flooding of these creeks historically.	Refer to FP-1, WW-2 and WW-8.
Deanne Prusak	2/6/2018	Handwritten	The DEIS is using a large amount of regional non-specific data versus specific studies and field inspections. The DEIS is fatally flawed when not using project specific data such as identification of endangered species. The areas where the endangered Houston toad and Navasota Ladies Tresses reside were not inspected.	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in <b>Section 3.6, Natural Ecological Systems and Protected Species</b> of the EIS.
Deanne Prusak	2/6/2018	Handwritten	The DEIS failed to address the damage to many sources of water. Surface springs or spring fed creeks potentially would be destroyed by soil disturbance and movement of fill material on top or excavation of fill material. These springs are essential to crops and livestock.	Refer to WW-2 and WW-9.
Deanne Prusak	2/6/2018	Handwritten	The DEIS identifies 121 hazardous materials sites in Harris County alone that will be disturbed by the route. There is no mention in the DEIS what is the impact to the environment if these sites are disturbed. The route along 290 may not be viable due to the concentration of hazardous materials sites. Cleanup would be cost prohibitive yet there is no mention of cost in the DEIS.	Refer to HZ-1.
Deanne Prusak	2/6/2018	Oral	Good evening. My name is Deanne Prusak and I am opposed to this project. My topic that I want to discuss right now is my environmental concerns. The draft EIS identifies 121 hazardous material sites in Harris County alone that will be disturbed by the route. There is no mention in the draft EIS what is the impact to the environment if these sites are disturbed. The route along 290 may not be viable due to the concentration of hazardous sites. Clean-up would be cost prohibitive, yet there is no mention of these costs in the draft EIS. The draft EIS is using a large amount of regional non-specific data versus specific studies and field inspections. The draft EIS is fatally flawed when not using project-specific data, such as identification of endangered species. The areas where the endangered Houston toad and Navasota ladies-tresses reside were not inspected. It is required to have boots on the ground for inspection of wetlands. I know this was not done, as there are three wetlands behind my house on property that was not given permission to survey. There is a potential that some of the land and environmental survey data used in the draft EIS was obtained without approval of the landowner. The majority of landowners chose not to allow access to their property on the permission form from the surveying company. The FRA should request an affidavit from the landowner that they did or did not allow data to be obtained on their property in order to validate use of this data in the report; otherwise, it needs to be removed. The draft EIS failed to address the damage to many sources of water. Surface springs or spring-fed creeks potentially would be destroyed by soil disturbance and the movement of fill material on top or excavation of fill material. These springs are essential to crops and livestock. The draft EIS is too general when addressing impact of the rail on flooding and drainage. In my area, the train will pass through the Spring Creek Watershed where five creeks cross the track. We have experienced major flooding of these creeks historically. The draft EIS has not addressed environmental expectations or requirements regarding the return of any temporary construction sites to their original or better condition. The draft EIS does not address the environmental impact when fill material is removed from private property for the use of construction by TCR. It does not state in what environmentally sound condition TCR is required to leave the site.	Refer to FP-1, GN-1, NE-8, NR-4, HZ-1, LU-10, LU-14, WW-1, WW-2 and WW-8.
Deanne Prusak	2/6/2018	Oral	Good evening. My name is Deanne Prusak_ I am a landowner here in Waller: and I oppose this project. My topic is environmental concerns that are lacking in the Draft EIS_ The Draft EIS identifies 121 hazardous material sites in Harris County alone that will be disturbed by the route. There was no mention in the Draft EIS of what is the impact to the environment if these sites are disturbed? The route along 290 may not be viable due to the concentration of hazardous sites. Clean-up would be cost prohibitive, yet there is no mention of these costs in the Draft EIS_ The Draft EIS is using a large amount of regional nonspecific data versus specific studies and field inspections. The Draft EIS is fatally flawed when not using project-specific data, such as identification of endangered species. The area where the endangered species — the Houston Toad and Navasota Ladies' Tresses reside were not inspected. There is required to have boots on the ground for inspection of wetlands. I know this was not done as there are three wetlands behind my house on property that was not given permission to survey. There is a potential that some of the land and environmental survey data used in the Draft EIS was obtained without approval of the landowner. The majority of landowners chose not to allow access to their property on the permission form from the survey. The FRA should request an affidavit from the landowner that they did or did not allow data to be obtained on their property in order to validate use of this data in the report; otherwise, it needs to be removed The Draft EIS failed to address the damage to many sources of water: Surface springs or spring-fed creeks potentially would be destroyed by soil disturbance and the removal of fill material on top or excavation of fill material. These springs are essential to crops and livestock The Draft EIS is too general when addressing impact of the rail on flooding and drainage. In my area: the tram will pass through the Spring Creek watershed where five creeks cross the track We have experienced major flooding of these creeks historically _ The Draft EIS has not addressed environmental expectations or requirements regarding the return of any temporary construction	Refer to FP-1, GN-1, HZ-1, LU-10, NE-1, NE-8, NE-9, NR-4, SG-4, WW-1, WW-2 and WW-8. NEPA does not require 100 percent of the Project to have field surveys conducted.

			sites to their original or better condition. The Draft EIS does not address the environmental impact when fill material is removed from private property for the use of construction by TCR. It does not state in what environmentally sound condition TCR is required to leave the site. None of these costs are addressed in the Draft EIS. I support the no-build option. Thank you.	
Deanne Prusak	2/9/2018	Website	The DEIS omitted quantifying the use of water for construction. There is no mention if TCR will be allowed to drill water wells for construction use or if they will be required to use surface water. If so, the sources of that water need to be identified. It anticipates an enormous amount of water will be needed for concrete batch plants, construction sites, mitigating dust levels, watering erosional control plantings. The amount of water needs to be quantified. The FRA must cease any further work on the TCR HSR EIS until this issue is appropriately resolved. The NO BUILD option should be chosen as the only viable option in the final EIS.	Refer to HZ-5, WW-1 and WW-6.
Randy Pryde	3/9/2018	Website	In order for the state to move forward into the 21st century, provide safe fast alternative transportation between major Texas cities, construction of the high speed rail is imperative to our future. Every other developed country offers high speed efficient rail service. It should be available to us as well	Comment noted.
Jane Pryor	2/17/2018	Email	"Counting the Cost" is first and foremost in any business venture. A business that makes no sustainable profit will fail on it's own. The below reasons are why I believe the Dallas/Houston HSR project is not for Texas: 1. Ridership - to reach the estimated 5.9 million riders expected annually by the TCRR, an estimated 55% or higher car riders would have to make the switch. This is unrealistic when on average only 5% exists for most established railroads. Even at a prediction of 1.4 million riders (\$200/ticket) TCRR would never break even. The airlines would step up to these numbers and provide lower rates and faster times if this ever was built. 2. Dallas/Houston is not "densely" populated to sustain ridership on a daily basis. 3. Very low public transit system exists in Dallas/Houston. How will riders get around after they have leached their destination? 4. Private ownership - no railroad system exists to date that the government has not stepped in to financially 5. Railroad access - with only one stop in Grimes county (low population station) - not feasible for other riders to ride the TCRR if not already in Dallas/Houston. 6. Eminent Domain - There is none! 7. Utility corridor - the "A" route chosen is a utility corridor and not a "transportation" corridor... which is "mute" in comparison to building it. 8. Not an established railroad - TCRR in only what you see here. words on paper/computer white screen! There are no trains, tracks or stations anywhere!!! Just a foreign country wanting a piece of Texas the WRONG WAY! In addition, putting a HSR through homes that generations have built, cemeteries that are historical land marks and ranch/farm lands that will be lost for a "faster ride" to Dallas/Houston is not the Texas Way! Therefore, I am against the Dallas to Houston High-Speed Rail Project.	Refer to BA-12, BA-4, ED-1, GN-2, GN-4, GN-6, NE-1, PN-3, SC-3, TR-3 and TR-4.
Olga Pryor	2/22/2018	Website	I definitely support this project, that would be such a relief for commuters, and it will upscale Texas to advanced level overall. There is no developed train system in Texas, and not even in USA as to compare to Europe, not mentioning Japan. The only concern I have is, if my property is to be effected by this project, or falls within limit of disturbance mark, then, there should be decent compensation package to make mutual benefits for High Speed Train project and for property owners.	Refer to ED-2.
Schuyler Pulford	2/16/2018	Website	The Time is NOW! Our Railroads are decades behind Europe, China and Japan. WE now have an opportunity in my home state in my home Town of Houston to travel on a train to Dallas like the rest of the developed world. There so many ways this train system benefits Texas and the US. ENVIRONMENTALLY IT REDUCES CAR AND BUS POLLUTION. Its electric. Its fast. Its not costing Tax payers a dime. It will bring jobs short term and long term. It will bring Texas largest cities closer economically It will inspire other states and cities to do same. PLEASE APPROVE! Respectfully, Sky Pulford Houston, Texas 77077	Comment noted.
Christian Purnell	2/16/2018	Website	Please start building this as soon as possible.	Comment noted.
Robert Putney	3/9/2018	Website	The Texas high speed rail is an ill-advised plan to provide a means of travel between two Texas cities. These rails may work well in Europe and other smaller countries but there is just not the need or want for this line between Dallas and Houston. Does this project really think that people will abandon planes in mass numbers to take the train? Or forego the convenience of having their own vehicle when they travel? The answer is No. In addition, the privately funded project assumes many of the landowners will just be willing to sell their property, this is not the case as Texans are very strong willed about their rights and their property. The larger issue is once this train route comes towards Houston along the 290 corridor. Construction is being completed on the 290 expansion with no plans for the ROW this train would require. It would cause gridlock and hatred towards the project by having to reroute traffic, roads, and utilities. How much property and businesses does this project expect to be able to buy without a fight? This would be tied up in litigation for years with home and business owners. I live in the Stone Gate neighborhood and Central rail has provided no solutions or insight into how they may alleviate noise pollution, flooding	Refer to BA-12, ED-1, GN-2, NV-1, PN-3, SS-16 and VA-1. Analysis of aesthetics and scenic resources impacts and mitigation are included in <b>Section 3.10.6.2, Aesthetics and Scenic Resources, Mitigation Measures</b> and <b>Section 3.10.7, Aesthetics and Scenic Resources, Build Alternatives</b> Comparison of the Final EIS. As detailed in these sections, TCRR shall continue to incorporate stakeholder input into the Project's design from individual neighborhoods, including Stonegate, and may include context-

			<p>abatement, or visual tracks above our tree lines. My back door is 500ft from the potential location of the rail and it would not only ruin property value, it would ruin many peoples lives. Just because politicians and businessmen think a rail line is good idea, it does not mean the location they want to put it is, or will ever be. Houston could use a commuter rail along the main freeways to alleviate congestion in the city before they would ever need a rail line like this. This would be a huge failure reflecting on anyone who approves its construction.</p>	<p>sensitive solutions or vegetation planting to limit the views of the Project.</p>

<b>Q</b>				
Carrie Quinn	2/5/2018	Handwritten	<p>JBQ RANCH'S RESPONSE TO FEDERAL RAILROAD ADMINISTRATION(FRA) DRAFT ENVIRONMENTAL IMPACT STATEMENT (Draft EIS) FOR DALLAS TO HOUSTON HIGH-SPEED RAIL PROJECT (HSR) PROPOSED BY TEXAS CENTRAL RAILWAY (Texas Central)</p> <p>The undersigned submits this response on behalf of the heirs of Maggie Zula Dawkins James, who are collectively known as "JBQ Ranch". JBQ Ranch is comprised of three parcels but the Draft EIS identifies two parcels of land totaling 450 acres (-) that are within the corridor identified as the "Utility Corridor" in the Dran EIS for the HSR proposed to be built by Texas Central. ARGUMENT AGAINST "UTILITY CORRIDOR" JBQ Ranch reminds the FRA that the citizens of the State of Texas never envisioned that HSR would be constructed along the Utility Corridor alignment. From 2010 to 2014 the Texas Rail Plan prepared by TxDOT identified three general corridors for HSR. These corridors were: (a) BNSF Corridor (b) UPRR Corridor (near College Station) (c) 1-45 Greenfield Corridor Many landowners along the Utility Corridor were not prepared to offer alternatives to the Utility Corridor at the earlier public hearings on the HSR because we were sucker punched into believing comments publicly made in 2015, by the then CEO of Texas Central, Timothy B. Keith, who told the media that the HSR would include a stop in College Station, TX. Mr. Keith went on to say that Texas Central will try to stick to existing rail lines. Mr. Keith's comments lead us to believe that the HSR alignment would be adjacent to the Union Pacific Railroad (UPRR) alignment that runs through the College Station Bryan area. The Utility Corridor alignment proposed by Texas Central to the FRA is not about protecting the citizens of this State it's about buying the cheapest land available and building the cheapest infrastructure available. If building near existing rail lines is dangerous because of a possible catastrophic accident then why is Texas Central attempting to connect with existing regional and local rail facilities when the lines reach Dallas and Houston. If Texas Central is all about safety then why would it suggest the Utility Corridor for the HSR that is basically parallel to two petroleum pipelines in Madison and Leon Counties and crosses one natural gas pipeline on JBQ Ranch. We ask the FRA not to approve an alignment because it's the cheapest route for HSR. motivation of Texas Central is all about the cost — not about protecting property rights, safety or protecting the environment. In Texas Central's pleadings and affidavits filed with the Surface Transportation Board (STB) then CEO Keith was consumed with meeting deadlines and states in paragraph 4 of his verified statement that "Project delays add costs and will threaten the financial integrity of this project". Mr. Keith's attitude against using due diligence in proceeding with the first bullet train in Texas infected his attorneys as well since at page 10 of Texas Central's Petition to the STB it stated "Such delays would have a cascading effect on Texas Central s overall schedule, adding costs and potentially preatening the viability of this important project". These two statements confirm, to those who seek the best environmentally beneficial and safe route for the bullet train, that Texas Central was not about performing due diligence in the construction of the first bullet train in Texas but was all about shoring up a project that doesn't have sufficient funding. We would hope the FRA would not abandon the thought of putting the HSR as close to College Station and Texas A &amp; M University as possible rather than following the Utility Corridor alignment and placing the stop near the current town of Roan's Prairie, TX. An Micle in The Eagle on March 8, 2015 stated "The state demographer's latest predictions show 419,114 people in Brazos County by 2050 — twice the 2015 population of 203,056." With such population growth in the College Station — Bryan area shouldn't the HSR be as close to such area as possible? We understand that following the UPRR corridor alignment might be undesirable to the FRA because it would require the bullet train to cross the Navasota River. Recently, the Texas Parks and Wildlife Department (TPWD) recommended to the Public Utility Commission of Texas (PUC) a corridor for an Electric Transmission Line that was very close to the College Station/Bryan area that did not cross the Navasota River and was identified by the PUC as Route 18. Detailed information on this alignment can be obtained by accessing PUC Docket No. 44649 relating to the application of Cross Texas Transmission, LLC (Cross Texas) for a proposed 345 kV Transmission Line. Attached hereto as Exhibit A is a 4-pages map we downloaded off the website for Cross Texas that reflects Route 18. The Texas Central Utility Corridor alignment as it crosses through Madison and Leon Counties was called route "WW by Cross Texas. Both Route 18 (BEC 69kV and BEC 138kV) and "WW" (Centerpoint/Oncor 345kV) were parallel to existing electric transmission lines but the TPWD recommended Route 18 to the PUC in order to protect the large amount of upland forests (that form much needed habitats for wildlife) that would have to be removed for a 100 feet wide transmission line right-of-way if it went along route "WV. Also, only two property owners objected to the Route 18 alignment where over 30 property owners Objected to the transmission line going along route "WV. It is difficult for the owners of JBQ Ranch to understand how property we own should be protected from an electric transmission line but not from a bullet train when other alignments closer to the College Station/Bryan area (that have a lesser negative impact on wildlife) were never proposed by Texas Central for consideration by FRA. One would surmise that Texas Central's due diligence in providing the FRA alternative routes to consider for the health and safety of the public pales in comparison to the due diligence provided by Cross Texas to protect the public. ARGUMENTS AGAINST COMMENTS THAT HSR WILL IMPROVE THE ENVIRONMENT In a 2016 article in Metro Magazine (business oriented publication) an agent for Texas Central is quoted for saying: "The bullet train that will be deployed on the track is environmentally friendly — the electrified trains will have little impact on air and water quality along its route. With significantly lower emissions per passenger mile it will preserve clean air." 21 p Such statement is a canard. Texas Central takes comments that might be correct in one route in one area of the United States and applies it</p>	<p>Refer to BA-5, BA-7, BA-8, BA-9, BA-10, BA-11, ED-1, ED-2, EU-2, GN-3, LU-9, LU-11, NE-1, NR-1, SS-1, SS-23 and TR-8.</p> <p>In regards to the cited article by Chester and Horvath, the occupancy rate range of 90 percent and 10 percent were extremes used to frame uncertainty around emissions impact benefits of mass transit caused by occupancy variations, and the median of that range was 50 percent, and the median of another range in a companion study by one of the authors was 67 percent. The TCR ridership represent average occupancy of 44 percent and 62 percent for 2024 and 2040 respectively. The source of electricity used to power the HSR was considered in the emissions estimate as described in the Power Consumption in <b>Section 3.2.3, Air Quality, Methodology</b>, and is detailed in <b>Appendix E, Technical Memoranda</b>. This includes the mix of coal, natural gas, nuclear, wind, and other generation types in the ERCOT power region that the project would draw from. Because of the interconnectedness of the power grid in ERCOT, power demand for the train would not be solely from the nearest power plant. As explained in those sections, wind power has become a significant portion of the total ERCOT generation mix and continues to grow. These emissions produced by power consumption was compared to emissions reduced which is relevant to assessing the net impact of the project. It is not appropriate to only state that the project is environmentally detrimental solely because power consumption produces emissions. With regards to citing greenhouse gases increase of 15 percent due to concrete production used in HSR construction, this is solely citing that emissions associated with an HSR increases by that much, not a net impact when considering reduction of other more polluting modes of travel. This also does not account for the life cycle emissions of manufacturing an automobile, which the cited paper acknowledges exist. Besides concrete used in the plants to manufacture cars, there would be concrete and asphalt associated emissions associated with road construction and repair, not to mention materials mining, processing and manufacturing of both trains and cars. Accounting for a full life cycle analysis for trains and cars (and planes and buses that would also not be used) in the emissions estimate for this EIS would be beyond the intent and scope of NEPA decision making for FRA. There are many other factors that go into selecting the best alignments for the HSR with respect to the project proponent's purpose besides avoiding forest. There are considerations such as minimizing residential structure impacts, avoiding difficult-to-relocate infrastructure, minimizing road impacts, and proximity to power sources. The largest forested impact of HSR alternatives was 2,540 acres of woodland/shrubland habitat. Sequestration rates vary greatly according to tree species, climate, age etc. and trees provide more sequestration than shrubs. Given annual tree sequestration rates from forest extension service sources (U. of Minnesota, Southern Regional Extension Forestry) ranging from 0.7 to 9 tons/year per acre, the associated removal</p>

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>specifically to the corridors that FRA is evaluating in Texas. Many factors must be considered in determining if air quality will be better or worse by a project. In an article from Access Magazine (academic based publication) in 2010 Professors Mikhail Chester and Arpad Horvath opine: "For example, a light rail with 90% occupancy would compare favorably with just about any other mode if we consider only the energy expended and emissions created in operating the system. But building the infrastructure and producing the fuel essentially double the energy intensity of light rail. And if we change our assumptions further and assume the light rail system will be only 10 10% full, as opposed to 90%, then light rail starts to look much worse, and is less environmentally beneficial than a gasoline sedan with a solo driver." The authors say that the cleanliness of the electricity used by cars, trains, etc. is a key factor in determining if high speed rail will be environmentally beneficial. The article states "High Speed Rail proponents have recently acknowledged the need to augment any new train infrastructure with investments in wind and solar electricity generation in Order to reduce emissions." With coal and natural gas plants being in the vicinity of the HSR one would assume if these plants are the source of energy for the HSR then this source would have a negative environmental impact on the project. The article says that "Greenhouse gas emissions increase by about 15% in HSR projects primarily because of the concrete used in construction — half a kilogram of CO2 is emitted for every kilogram of cement produced". The depth of the hoax that Texas Central is performing on the public is even more noticeable when you consider that the Utility Corridor crosses more Texas Forest than the corridors referenced in the Texas Rail Plan at the beginning of this submittal. In sworn testimony before the STB then CEO for Texas Central Tim Keith stated building the HSR in the Utility Corridor will have a positive impact on the environment and reduce carbon emissions. To quote a March 10, 2012 article by Professors William Brock Most and Steven Weissman in Berkeley Law. "Global climate change is caused by high levels of carbon dioxide and other greenhouse gases in the atmosphere trapping heat from the sun. As trees grow, they absorb carbon dioxide (CO2) and release Oxygen (O2) . . . . By this process, the growth of trees in an urban forest can reduce atmospheric levels of carbon dioxide and slow the process of global heating". The best tool that nature has given Texas for eliminating CO2 and creating Oxygen is the mass amounts of Forestry in this state. It is difficult to understand how eliminating forested lands will benefit the environment when the other corridors considered by the Texas Rail Plan were mainly deforested. ARGUMENTS THAT HSR SHOULD PROVIDE VIADUCTS FOR PROPERTIES THAT ARE SPLIT BY THEIR TRAINS AND VIADUCTS FOR EVERY COUNTY ROAD CROSSED BY THE HSR Should the HSR be allowed to be constructed through the Utility Corridor, it crosses JBJQ Ranch properties we refer to as the Vaughn Place (-) [250 acres] and the Randall Place (-) [200 acres]. This alignment would allow the HSR to be constructed Over a tenant's manufactured home site as well as result in the removal of a like "new" adjoining barn on the Vaughn Place. [Attached as Exhibit B is a photograph taken in 2016 that shows the rear of the manufactured home site and attached as Exhibit C is a photograph that shows the like "new" barn and the side of the manufactured home site]. Texas Central's Original drawings appeared to reflect that the HSR would be an embankment as it crosses the Vaughn Place. If this has not changed it would result in probably 80 to 100 acres of land on the Vaughn Place east of the HSR being landlocked. Also attached as Exhibit D is a photograph of the tank/fishing pond on the Vaughn Place where cattle drink water while grazing on the Vaughn Place. If the HSR is built this tank will be on the landlocked portion of the Vaughn Place. There is no tank for cattle grazing on the 130 to 150 acres of land of the Vaughn Place on the west side of the HSR (that will continue to have access to CR 408 after the HSR is built) which will result in a loss of pasture lease revenue. However, the Environmental Impact Statement (EIS) (See "Project Footprint " Segment 4 — Sheet 389 of 536 and Parcel 9257) shows a partial "cut" but not a "viaduct " in this area and we don't know if a "cut" allows cattle and deer to travel to each side of the HSR. Texas Central's original drawings appeared to reflect that County Road 408 would be closed by an embankment near the Randall Place because of the HSR. The Environmental Impact Statement (EIS) maps appear to reflect that County Road 408 in Leon County in the vicinity of the Randall Place will have a "cut" adjacent to the Randall Place and not a "viaduct" (See "Project Footprint" Segment 4 — Sheet 388 of 536 and Parcel 9277). The original Texas Central drawing indicated that the one mile of frontage the Randall Place currently has adjacent to County Road 408 would reduce to approximately 200 yards [Attached as Exhibit E is County Road 408 east of the Randall Place]. Currently the cattle grazing lessee on the Randall Place drives about 2 miles east on FM 977 to get from his home to feed his cattle on the Randall Place. If a "cut" in CR 408 doesn't allow for vehicular traffic to cross under or over the HSR, the cattle grazing lessee will have to drive about 15 miles to get to the Randall Place. Closing County Roads will impair the ability of Police, Fire, and EMS personnel getting to our property when an emergency arises. We were originally lead to believe in newspaper accounts that no County Roads would be closed by the I-HSR. We would request that the final EIS require that no County Roads be closed by HSR building an embankment across such roads. We would also request that the final EIS provide that properties that are crossed by the HSR, leaving 50 or more acres on each side of the HSR be provided a Viaduct or opening that allows livestock, wildlife and farming equipment to move freely between such separated tracts. IDENTIFICATION OF UTILITIES THAT EXIST ON JBJQ RANCH There is an existing Oncor maintained Electric Transmission line west of the manufactured home referenced above on the Vaughn Place. Adjacent and east of the existing Transmission line are rights-of-way for one pipeline installed around 1975 and a new pipeline installed in 2014 (we believe these pipelines convey petroleum products). The photograph attached identified as Exhibit F shows the 2014 pipeline right-of-way and in the distance you can see one of the electric transmission line towers. County Road 408 runs east to west to the</p>	<p>would range from 2 percent to 32 percent of the net reduction of the HSR operation. This is without accounting for the lower rate that the shrubland portion would contribute, and without accounting for replanting that TCR would implement in the impact corridor. The net reduction of GHG from the HSR would still be significantly greater than sequestration eliminated by impacts to forested areas. The Project at this location is on embankment (non-elevated). TCRR would coordinate with landowners regarding those areas that would be temporarily and permanently disturbed regarding crop and/or livestock production. TCRR's negotiations could result in fragmented fields/pastures (i.e., remnant parcels) being absorbed by adjacent landowners. TCRR shall negotiate with the landowner to provide adequate crossings or compensation for land that is severed.</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>north of the Vaughn Place and there is an existing Atmos Natural Gas Pipeline that crosses under the existing electric transmission line and the two petroleum lines approximately 2553 feet south of such County Road 408. IDENTIFICATION OF OWNERSHIP INTERESTS IN JBJQ RANCH JBJQ Ranch ownership is as follows: Walter p. and Margaret Faye Jett, Michael A. and Johnnie Sue Bucek, Carrie Jett Quinn and James M. Bucek, own undivided interest equaling 100% in 250 acres of land in Leon County commonly known as " " and referred to by such individuals as the "Vaughn Place". Michael A. and Johnnie Sue Bucek, own 200 acres of land in Leon County commonly known as " " and referred to by such individuals as the "Randall Place". CONCLUSION More importantly, we ask you to remember who Texas Central says it is (as reflected in the Petition for Exemption it filed in its STB case): Petitioners TCRI and TCRR are wholly-owned subsidiaries of Texas Central Rail Holdings, LLC, which in turn is a subsidiary of Texas Central Partners. LLC ("TCP") a Delaware limited liability company (hereinafter TCP, TCRI, TCRR and other affiliates, including Texas Central High-Speed railway, LLC, are referred as "Texas Central"). Texas Central clearly isn't an entity like a municipality, county or state that has councilmembers, commissioners or legislators who are elected by the voters to look out for the public interest. If a landowner's adjoining property is damaged by a true public project administered by a governmental unit then a landowner has a claim for inverse condemnation to make them whole. The entities forming Texas Central are all about limiting their liability and based on Mr. Keith comments referenced above, if Texas Central goes bankrupt, landowners that have been damaged by them will probably be looking for recourse from an entity buying Texas Central's interests out from a bankruptcy court that will void unsecured claims. Our only protection is for the FRA to require due diligence of Texas Central in providing a viable route for the bullet train and that appropriate safeguards be placed in the final EIS that require Texas Central to protect our remainder properties. The FRA is the only real protection we landowners have against the laissez-faire attitude of Texas Central.</p>	
Dalton Quinn	2/6/2018	Oral	<p>My name is Dalton Quinn: and I oppose this bullet train First off I would like to share what it would cost for me: who will be in Tomball: Texas: to ride the bullet train from Houston to Dallas to see my aunt and uncle who live in Arlington: Texas right in between Dallas and Fort Worth First: in order for me to even get down to the station: I would have to get on the Beltway: which is a toll road: buy a ticket And then once I get there: I would have to rent a car to get to my aunt and uncle's house. All of that added up to together would roughly cost a little over \$300 if I were to ride the bullet train; whereas if I were to just drive my truck straight from my house to their house: it is 246 miles. And at 2.20 a gallon and 19 miles per gallon, it would cost me about \$30 to get there if I were to just drive. So a much better option. Secondly: if you look in their Frequently Asked Question packet, they have a question that is: How will this project impact hunters: slash: hunting? And the response is. This project is not expected to result in a change of hunting regulations within the ten-county study area. While: yes: they answered the question: they really didn't fully answer the question. Because if you know anything about hunting: you would know that deer really don't like loud noises or a lot of people around. So if they were to put this train on our property that we hunt on regularly, it would drive the deer totally off of the place: and we would not be able to hunt at all. Lastly: I would like to say that I by a freight train that reaches top speeds of 60 to 65 miles per hour all of my life. I always hear them and feel the vibrations within my house. So I find it hard to believe Texas Central Rail, when they say that severe vibration impacts would not extend beyond 275 feet from the track of a train that is going 205 miles per hour I oppose this bullet train no matter how quiet they think it may be. Thank you.</p>	Refer to NR-1, NV-1, NV-5, PN-3, RF-2 and SC-3.
Greg Quinn	2/6/2018	Oral	<p>Thank you. My name's Greg Quinn. That's my beautiful wife Right? I married way above my head. So I have a big long laundry list of items that I wanted to talk about tonight when I got here; and as I've listened to everybody speak: each of them have been crossed off my list Judge Duhon, Congressman Bell: I really appreciate you guys being here. The commissioners that have been here tonight: your support of this county is amazing. We're not Waller — we're not Waller County residents: we are Harris County residents who own land also in Leon County. I'm a former principal in Tomball Independent School District: and one of the things that has not been crossed off the list tonight: yes: schools were mentioned and the impact is how they may go by the schools. But one of the things that was not mentioned that I want to make sure that I touch on is transportation of those children to and from school. Waller ISD is one of the largest square-mileage school districts in our area: okay? Most definitely in Region IV _ And the time that these children spend on buses I know Dr. Merrill very well: right: and the time that they spend on buses to get to and from school is considerable, considering the size of the school district that they in. You put a train through the middle of the school district, and all of the things that been mentioned in regards to EMS and emergency services hopefully not having an increase or a significant increase in travel time: you're looking at the same thing as far as buses and transportation is concerned. So you have to make a choice. Do they spend more time on buses or do you add routes? Well: guess what? When you add routes: what do you have to add in order to add routes? You have to add buses. Buses cost in the neighborhood of \$250 to \$300,000 apiece. So where does that hit you? Texas Central Rail is not going to buy those buses for you. That's going to come from your school taxes: right? You're going to have to pass a bond: right? You have a beautiful stadium that sits right out here. Many of you that are residents that pay your Waller ISD taxes: that was a part of — you voted to pass the bond to add that to your community. You'd have to do the same thing So the thing that I would ask is that we take into consideration all those things that go outside of just the things that we've talked about. The economic viability of this project is a no-brainer. It doesn't work. And the last thing that I want to add is: As Texans, we like to drive. It's what we do. else would an organization</p>	Refer to NE-1, SC-5 and SC-7.

			and a company and a gas station chain like Buc-ee's, right, survive? Okay? In Texas: we do things big. Buc-ee's is the perfect example of this. And they continue to thrive: they continue to grow because of how we go about moving from one place in this great state to the other. The no-build is no doubt the alternative_ Thank you for your time.	
Carey Quinn	2/6/2018	Oral	Reason number three, one that we have touched on very little tonight: My family's future. One final blow to my family's forefathers mentioned previously, J.T. Bud Dawkins, my great-uncle who purchased part of the land that this train will be stealing, is actually buried in 10-Mile Cemetery at the historic Union Baptist Church in Normangee. As we learned at last night's meeting in Madisonville from Pastor Stroud, their church can no longer even be found on those maps in the back made available by TCR. And it is highly likely that all or parts of the cemetery will be moved. What does that mean for us as heirs of the Dawkins family?	Refer to <b>Appendix D, Community and Cultural Resources</b> Set 3 of 3 page 21 which displays the cemetery and church within relation to the LOD and the centerline on viaduct. <b>Table 3.19-4: Previously Recorded and/or Designated Historic Resources within the APE in Section 3.19.4.1, Cultural Resources, Cultural Resources Investigations</b> lists out the cemeteries and churches with distances in relation to the LOD.
Lester Quinney	2/21/2018	Website	I believe that the High Speed Rail project should be approved as soon as possible . This type of transportation is needed . It is more Efficient than air travel and private auto travel This is a railroad and should be given the legal means to acquire right of way and construct. The land owners who oppose this are all too happy that due to their proximity to Houston their lands value is inflated many times over. I live in the approach path for Bush airport If I listen carefully I can be annoyed by the sound of the jet engines. Also I live on Highway 30 Lots of trucks. Build the damn Train	Comment noted.
Marco Quintanilla	2/6/2018	Oral	I'll make this kind of quick because a lot of people have already covered a lot of things that I wanted to say. But there's something else that caught my attention here with this big 5,000 sheet of paper they say they want. That reminds me of something like with Pelosi and that insurance company or something like that where we really didn't know what we had until it was already passed. That didn't fill out too well. And another thing: Because the railroad itself won't viably sustain itself -- and I'm sure there's a lot of people know that's true. We've got three ways to get to Dallas: We got airplane, we got bus, and we got car. Why do we need a bullet train? Because somebody up at the top is going to make a fortune while we pay for it.	Refer to BA-4, NE-1 and PN-3.

Sarah R	2/26/2018	Website	As a Dallas resident but a Houston native, I feel the bullet train is a necessary addition to the transportation options between Houston and Dallas. The Texas Bullet Train is a safe and quick alternative to flying, with proven technology and structure from Japan's Shinkansen. I currently go to Houston dozens of times a year, and if the bullet train were in operation, I would opt to use it over flying as the stations will be closer to my destination than the Houston airports and would choose use it over driving as it should be safer.	Comment noted.
Richard Rabe	2/26/2018	Website	The sooner this project is complete the better I will like it. I wish we had one from Huntsville connecting with Conroe, the woodlands, and spring. I wish there was one from the Richmond-Rosenberg area connecting with Sugarland. I WISH WE HAD ONE COMING IN FROM BAYTOWN. I wish we had one coming in from Porter, New Caney, Kingwood and Humble. I wish we had one coming in from Hempstead, or Brenham and picking up at Prairie view, Waller and Hockley. Something has to be done to get all these vehicles off the freeways.	Comment noted.
Mike Rader	3/7/2018	Letter	Dear Mr. Wright: 255 PRL LP ("PRL") is writing to provide comments to the December 2017 Draft Environmental Impact Statement ("DEIS") for the Dallas to Houston High-Speed Rail project (the "Project"). 255 PRL LP owns 255 acres located on Pleasant Run Road in the City of Lancaster. Mike Rader is principal in 255 PRI- LP and also developer of Prime Pointe, an adjacent 3,000 acre rail served industrial park. PRL purchased the 255 acres to be developed for large distributions centers of 300,000 sfto over 1 million square feet. Attached development layout and marketing brochure Of 255 PRL property. We are presently in discussion with national building developers for sites Of 1 million square feet and larger. Mike Rader has been involved in development of the South Dallas County area for 20 years and in the last few years aware of the high speed rail project and has discussed the project with Texas Central Railroad (TCR). While we want TCR to be successful, 255 PRL LP objects to the Service Center plan to be located on PRL property and the grade crossings of Greene Road on Our south boundary and Pleasant Run Road on our north boundary. TCR plans have a detrimental affect on development of PRL property. We are agreeable to work with TCR on elevated track across our property within minimum right of way and elevated tracks across the roads on the north and south sides of our property. Road crossing elevations should also be discussed with local governments. We appreciate the efforts of TCR to accommodate PRL and 100k forward to continuing to work with TCR regarding the Project. Please advise if you have any questions or require additional information.	Refer to ED-2, LU-3, LU-12 and TR-8.
Mike Rader	3/8/2018	Email	Dear Mr. Wright: 255 PRL LP ("PR L") is writing to provide comments to the December 201 7 Draft Environmental Impact Statement ("DEIS") for the Dallas to Houston High-Speed Rail project (the "Project"). 255 PRI- LP owns 255 acres located on Pleasant Run Road in the City of Lancaster. Ethel Radovich	3/9/2018	Website	My sister lives in Houston and being able to get there by train would be wonderful and as a senior citizen I wouldn't have to fight the highways and for the cattle call airline impositions. Rail is a much more civilized way to travel and a plus is being able to see the countryside refreshing. Dallas station is not near DART despite comments that it will connect - it just does not make any sense to not use the vacant land owned by the city (put it back on the tax rolls to help us out) that is next to Union Depot built so travelers could connect. We need a different transportation center like we need a new outlet mall. Please make it convenient for Dallas citizens and our visitors coming to town. If they want suburban stop like our trains did decades ago fine but put the terminal in the city center.	Refer to GN-7 and TR-3.
John Radovich	1/30/2018	Email	I support the privately funded HSR project and look forward to other cities being connected. I do think the Dallas station is not positioned properly - it would be best suited adjacent to Dallas Union Station served by Amtrak/DART now. The adjoining property is vacant, owned by the city of Dallas and has substantial parking structure in place left unused since the demolition of Reunion Arena. The proposed station 1 mile away will negate many transit options and cause much more congestion as is not easily accessed. It is owned by a TCRR investor who should	Refer to GN-7, GN-8 and TR-3.

			work out a land swap w/city to put the North terminus in the city center where anyone intelligent (and honestly concerned w/connectivity) would want it to be. I do wish this form had a way to send a copy back to me thank you.	
Justin Raine	2/16/2018	Website	I strongly support the Dallas to Houston High-Speed Rail project by Texas Central. This project would be an immeasurably valuable asset to Texas' infrastructure, improve transportation opportunities for millions of residents in the two cities and communities in-between, and provide an environmentally sustainable mode of transportation for inter-city travel. The Texas Central project is an incredibly important step in proving that the concept of true high-speed, elevated rail is feasible in the United States, and that it doesn't have to be organized by the government. Houston and Dallas are two of the fastest-growing, most economically powerful regions in the United States. As Texas continues to flourish, it is important that we take advantage of cutting-edge infrastructure solutions where they are appropriate. Few corridors are more appropriate for high-speed rail than Interstate 45.	Comment noted.
Debbie Raines	1/31/2018	Email	I am a resident of Navarro County and I highly appose this Bullet Train coming through our County! There are MANY Farmers and Ranchers in Navarro County and this Rail would destroy Farms and Farm and Ranch land. WE DO NOT WANT IT! Debra Raines	Refer to LU-2 and LU-11.
Kyle Rains	1/29/2018	Website	100% in favor of this project which will give millions of people a choice other than driving on a dangerous high traffic highway or going to the time, hassle, and expense of air travel. It's time Texas caught of (sic) the Europe and Japan.	Comment noted.
Kyle Rains	2/22/2018	Website	This project will greatly benefit almost 14 million living in the Dallas and Houston areas. We will have an alternative to a dangerous, polluted and congested highway and expensive and time consuming air travel. The train will link up with the longest light rail system in the US, DART, and be a boon for the depressed southern sector of Dallas, along with students going to A&M and the past its prime NW Houston area. I eagerly look forward to riding frequently, as I cannot drive.	Comment noted.
Joel Ramirez	3/9/2018	Website	I am for the High-Speed Rail. I only ask that you do your diligence. Think how the above rails in New York City have impacted its neighborhoods. We need to work together, collaborate to figure out not only the negative environmental impact, but how with S.T.E.M. fundamentals in our world today; we can adjust to the impact.	Comment noted.
Rosymar Ramirez	1/30/2018	Email	My son's family's property is seriously affected. They're losing their home, therefore; we are against the Speed Rail if it means for people to be put out of their property. This is devastating for so many families and our home's in Palmer, TX.	Refer to ED-2.
Manuel Ramos	2/26/2018	Website	The completion of this project will have a great economic impact on the region and will deliver fast and efficient transportation so riders can save time, energy, and money. It is time that this technology (HSR) is implemented in the US and the Dallas to Houston High Speed Rail could become the reference for the rest of the Country. Thank you. Manuel Ramos	Comment noted.
Harold Ramsey	NA	Website	I support the comments listed below and offer as evidence o supporting the No Build Alternative 1 I support the No Build Alternative on the Texas Central Railway High Speed Rail Project from Dallas To Houston. 2. I support the No Build Alternative and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the No Build Alternative and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the No Build Alternative because there is no mitigation for loss of agricultural land or evaluation of such impact 5. I support the No Build Alternative because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the No Build Alternative because the current DEIS does not offer any consideration that the building and operation of HSR results in land take. noise and air pollution, visual disruption and a high consumption of electricity.	Refer to BA-6, ED-1, NE-1 and NE-9.

Tom Ramsey	3/5/2018	Oral	My name's Tom Ramsey. I currently am the mayor of Spring Valley Village. You say where is that? It's five miles from here on the Katy Freeway. I'm also president of the Harris County Mayor Council Association, that's 33 cities in Harris County not named Houston. We'll let Houston speak to that in a minute. Okay. Our association, a number of months ago, has gone on record in support of the project so let me just say that from the outset, that we support the project for economic reasons that Mr. Brown referred to earlier, also, for transportation reasons. If you travel in any of the cities in Harris County, you have traffic issues. When you travel from here to Dallas to Fort Worth, pick a freeway, pick the time of the day, there are transportation issues. We think it's critically important that we provide options for folks to get from Houston to Dallas. There's a lot of business. There's a lot of -- of reasons why people in the Houston area want to go to the Dallas-Fort Worth area. We think this gives them good options. That's another thing. And then I want to end it on a personal note. I grew up in a small county north of here. Worst drought ever to hit Texas was in the '50s, '52 to '59. My grandparents voted to tax themselves so that we would build 26 reservoirs in the state of Texas; and because they sacrificed -- yes, some of my relatives sacrificed their property, some of my relatives sacrificed their tax money -- but because they made sacrifices, my grandchildren have water to drink in 2018. I think major infrastructure projects, when you put it in this kind of category, you've got to look further than 30 days down the -- you got to look 30 years down the path. So Harris County Mayors Council Association, we're in support of the project.	Comment noted.
Morgan Creek Ranch	2/24/2018	Website	I wish to oppose a small portion of the proposed high speed rail that cleaves Morgan Legacy Farms. The proposed route will destroy multiple guest homes and the use of a fully operational Rodeo Arena. The route blocks the lodge from access to homes the arena and renders the stables and colt barn worthless. The train if located here would also block one of the most pristine views in all of Navarro County. Economically this ranch infuses millions of dollars into the local economy. Loss of this ranch ( held in a long term trust) would cause the loss of hundreds of millions of dollars in revenue generated by the visitors to the property who spend money in the county. In addition the ranch itself spends millions of dollars that contribute to the local economy. There is a more appropriate route that parallels existing power lines north of the proposed location on fm 709 and 3194. Moving the train off of the ranch would preserve this economic boon to the residents of Navarro and the State. Further given the topography of the ranch many acres of wetland will be lost affecting migratory birds and loss of hunting waters used by the bald eagles sighted on the property. There is also historical value to the property as Indian artifacts have been found on the proposed route. I would ask the FRA to relocate this small portion of the route to the north of existing high voltage power lines in an already existing more topographic appropriate location. This would eliminate much of the ecological, cosmetic, historical and economic damage that would be cause if the rail crosses fm 709 south of 3194. Paralleling just south of 3194 as proposed also blocks multiple homeowner access to their land and will limit economic expansion along 3194. Moving the route to the north of the existing high piers lines will little affect on access or growth along the route.	Refer to LU-5.

Morgan Creek Ranch	3/3/2018	Website	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.

Morgan Creek Ranch	3/3/2018	Website	I am opposed to the train crossing the property referred to as Morgan Legacy Farm as there is a long term history of Indian artifacts being located on the exact site of the proposed route on the ranch. Located on one of the highest points along the proposed route is a hill where according to locals was home for multiple Native American Indians. Arrowheads have been routinely found on the side of this hill. One of the previous owners of the ranch Dale Foster logged the area where most of the artifacts have been found. If the train is built in this proposed route significant excavation will be required in this high topography. There is an already excavated power line easement located just north east of the proposed route in a more appropriate topographic area with no history of artifacts. Please see Dale Foster attachment	Refer to LU-5.

Brett Ranger	1/25/2018	Website	Traffic on 1-45 between Dallas and Houston is terrible on a good day. There needs to be additional alternatives than just adding more highway lanes and cement. Rail offers a convenient and efficient way to travel between the two cities. I feel that this would also be very popular with the business community as well as leisure travelers. Texas needs this rail option. Thank you!	Comment noted.
Jerry Ratliff	2/7/2018	Website	I am delighted that you have a private firm leading your high speed rail project in our country. I am jealous as it will be a tax payer and lead to more jobs in your state. It will allow me to quickly move from Dallas airport/downtown area to Houston- faster than a car or plane with less down time. I can read, relax, or have a business meeting on the train unlike a car or plane. Thank you for being a leader in our country. Jerry Ratliff Veteran	Comment noted.
Troy Ratterree	1/29/2018	Oral	Hello, everybody. My name is Troy Ratterree, and I am one of the candidates for Congress right here in your county. And I want to tell you something, folks. I have fought this fight. The whole reason I'm here, I was a small business owner going about my business, just like you farmers do everyday, just like the small business owners do, when somebody weaponized one of our regulatory agencies in Washington, D.C. against my business. And I'll tell you one thing, that I fought and fought and fought and I won. I'll tell you how you win. You have got to read that 6,000 page document. You have to. And you have to comment on everything you don't like about it. If you fail to comment on it, they assume you like it. Do not let them assume you like it. Folks, if you sit here listening to us all talk today and do nothing with that and don't make those comments, they will go right through the neighborhood with the high speed train, and they will sit there and claim, Well, nobody complained about this or brought it to our attention. Read that document. These guys know. That's what they want you to do. You can hold them accountable, and she knows it. And it's the only way you hold your federal government accountable. I did it, I fought, and fought. It was a two-year battle, people. And I want to be your congressman because I have had it. When they put my 37-year-old third generation business out and I began to fight, I learned one thing, that something's wrong with America. You need better people representing you and I'm that kind of guy. I will go up there, I will fight for you, I will do everything I can as a congressman to stop this thing. It's wrong, it's overreached, and we can't allow it. Thank you.	Comment noted.
Jerry Ray	3/9/2018	Website	The Federal Railroad Administration (FRA) is preparing an Environmental Impact Statement (EIS) for the proposed Dallas to Houston High-Speed Rail Project, The project would connect Dallas and Houston with a dedicated High-Speed Rail (HSR) system proposed by a private company, Texas Central Railway (TCR)_ The FRA in furtherance of this EIS is soliciting comments on the project. SNCF, the French National Railway, is one of the largest operators of high-speed, as well as traditional passenger rail services, in the world. With 270,000 employees, it transports approximately 14 million passengers on an average day. SNCF, through its various subsidiaries, carries almost twice the number of daily passengers in the U.S. as Amtrak does. Subsidiaries of SNCF currently employ approximately 15,000 people in the US. producing more than \$2.2 billion in annual revenues. SNCF America, Inc. offers the following comments to the Dallas to Houston High-Speed Rail Draft Environmental Impact Statement (Draft EIS): A Modern Texas Passenger Rail System Must Be Planned as a Network Modern passenger rail services can only be successful if they are conceived and planned as networks. For this to be a credible EIS, it is necessary to determine what is the best transportation system for the people of Texas who live on the Texas triangle defined as the Dallas'Fort Worth (DFW) Metroplex to the north, San Antonio to the southwest and Houston to the southeast. Further, the primaty and secondary environmental impacts on this same geographical area must be considered as well Given the enormous costs involved in building rail infrastructure, it is crucial, before making a decision, to analyze and disclose the financial/economic parameters and environmental and societal implications of the proposal for the entire Texas triangle area. The Draft EIS Starts Off on the wrong foot by adopting an artificially constrained framing Of the project's "purpose and need" — one that assumes a need for high-speed rail connection between Dallas and Houston, rather than examining that corridor in the	Refer to BA-4, GN-2, GN-9, NE-1, PN-3 and TC-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>context of the rail transportation needs of the Texas triangle as a whole. See, e.g., Draft EIS 24.3 (Corridor Screening Methodology) (concluding that higher speed and conventional speed passenger rail service will not meet the project's purpose merely because they "would not be able to employ the Tokaido Shinkansen HSR system as proposed" by TCRR). Furthermore, by viewing the Dallas- Houston corridor in isolation, rather than as one link Of a larger interconnected network, the Draft EIS's "purpose and need" section arbitrarily narrows the range of alternatives to be studied, contrary to NEPA's directives TO ensure as high a return as possible on the infrastructure investment to both the citizens Of Texas as well as private investors and owners, the customers traveling between the DFW Metroplex and the southeastern and southwestern corners of the triangle should use the same rail infrastrmcture between the DEW' Metroplex, through Waco to Temple. From Temple, a southeastern track should go to College Station continuing to Houston. A southwestern track should go from Temple to Austin and then San Antonio at conventional speeds. With this indirect routing, the additional traveling time required between the DFW Metroplex area and Houston would be slightly less than 30 minutes at high speeds. However, the advantages of this "T-Bone" network configuration are numerous: All major cities on the Texas Triangle (Houston — College Station — Dallas — Fort Worth — Waco — Temple — Georgetown — Austin — San Marcos — San Antonio) would be connected with 480 miles of tracks instead of 763 miles of tracks if the entire Texas triangle were to be built. At \$45 million a mile, the savings are <math>(763 - 480) \times 45 = \\$12.7</math> billion By having a common "backbone" for travel from the DFW Metroplex to the southeast and the southwest, the Federal Government 1-35 project becomes financially more viable, Without the southeastern traffic, the 1-35 corridor most likely cannot financially stand on its own and cities located on the 1-35 corridor will not be connected by rail to Houston and the DEW Metroplex. Utilizing the Texas Triangle would provide high-speed rail access to 2.6 million more Texas residents than the Dallas-Houston route It would also provide for future linkage to points further south. For example, the NEPA guidance issued by the Depafiment of Transportation, Federal Highway Administration, explains that the purpose and need section Of an EIS "should clearly demonstrate" — and not just assume — "that a 'need' exists and should define the •need' in terms understandable to the general public. This discussion should clearly describe the problems which the proposed action is to correct." In particular, in demonstrating and articulating the need for the project, the agency should take into account issues such as Capacity ("Is the capacity of the present facility inadequate for the present traffic? Projected traffic? What capacity is needed?"); Transponation Demand (including relationship to any statewide plan); System Linkage (how does the proposed project "fit in the transportation system"); and Modal Interrelationships (how will the facility interface with and complement Other transportation services). FHWA TECHNICAL ADVISORY T 6640.8A, VD (October 30, 1987), available at' <a href="https://www.environment.thwa.dot.gov/legislation/nepa/guidance_preparation/pn2">https , envi ronment_ thwa.dot, gov/legi slation/nepa/gui dance_ prepari x//pn 2</a></p> <p>The cities of College Station, Fort Worth, Waco, Temple, Georgetown, Austin, San Marcos, San Antonio and even points south, would be severely disadvantaged with the proposed TCR point- to-point system, The Draft EIS ignores reality by not considering any comprehensive network-based alternatives, notwithstanding the obvious environmental advantages and economic efficiencies of a more compact rail footprint for the Texas triangle area as a whole. The Draft EIS omits consideration Of network-based alternatives because it unreasonably limits the purpose and need for the project based on an assumed need for high-speed rail on this one segment. This unduly narrow perspective renders the Draft EIS fundamentally flawed. See Cilizens Againsl Burling/on, Inc. v. Busey, 938 F.2d 190, 196 (DC. Cir. 1990) ("an agency may not define the objectives of its action in terms so unreasonably narrow that only one alternative from among the environmentally benign ones in the agency's power would accomplish the goals of the agency's action, and the EIS would become a foreordained formality"). FRA should correct this problem by broadening the purpose and need to facilitate analysis and consideration Of reasonable network-based alternatives. Speed High-speed passenger rail trains operate from 125 to 210 miles per hour. Higher-speed train Systems operate at speeds no higher than 125 miles per hour. These are very different technologies. In the United States, any discussion about new passenger rail infrastructure most always defaults to the more expensive high-speed technology In some cases, due to passenger ridership, the distances between stations, and other factors, high-speed technology serves no logical purpose, cannot be justified by the potential market and may be impractical, if not impossible. The Draft EIS is flawed because it fails adequately to address the comparative advantages and disadvantages of high-speed versus high-speed technologies for the Dallas-Houston corridor, whether considered in isolation or as part of a larger Texas triangle rail network. Indeed, the Draft EIS fails to consider the relative environmental, economic and social impacts Of any alternatives that involve rail technology other than high-speed. As with the Draft EIS's failure to consider any network-based alternatives (discussed above), the omission Of any non-high-speed alternatives is grounded in the myopic definition of the project's "purpose and need," which assumes the need for high-speed rail from Dallas to Houston and hence arbitrarily excludes other technologies from its array Of alternatives. Eminent domain is always a difficult issue when building a new high-speed infrastructure. High speeds can't be accommodated on tight curves and steep slopes. However, higher speeds (max 125 mph) can take tighter turns and can use much more of the existing rights of ways, thus reducing the need to use eminent domain. The Draft EIS fails adequately to consider the potential for higher-speed technologies to reduce eminent domain impacts, because it omits consideration Of any higher-speed alternatives. 3 When the terrain along a route is flat and stable, it is relatively "cheap" to build new rail infrastructure. But cheap means \$23 million per mile for two conventional electrified tracks, compared</p>	

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>to \$45 million per mile for two high-speed tracks. A higher-speed train would take three hours to go from Dallas downtown to Houston downtown through Temple. The present driving time from DFW to downtown Houston is four hours, Before doubling the infrastructure costs and using abundant eminent domain, there should be a hard look at whether high-speed is possible, needed or expected for each segment of a proposed route. FRA should correct this flaw in the Draft EIS by broadening the purpose and need to facilitate analysis and consideration of reasonable alternatives based on higher-speed technologies. This Draft EIS Ignores Previous Texas Passenger Rail Policy The Texas Central Partners, LLC (TCP)/Japanese project would only connect the outskirts of Dallas to the suburbs of Houston roughly along the route of Interstate 45. In 2008 and again in 2016, the USDOT and the FRA issued at the request of the U.S. Congress a Request for Expressions Of Interest and a Request for Proposals (2016)<sup>3</sup> for high-speed rail systems within I I corridors in the United States. In these requests responders were asked to study a new rail infrastructure along the Interstate-35 (1-35) corridor. The first phase of the Texas Oklahoma Passenger Rail Study was completed in November Of 2017. Sponsored by the Texas Department of Transportation (TXDOT), the study determined that upgraded passenger rail service between Oklahoma City and South Texas using the 1-35 corridor was feasible. This \$7 million Texas-Oklahoma Passenger Rail Study sponsored by Texas Department of Transportation covers an 850-mile conidor broken into three segments going from Oklahoma City to Dallas-Fort Worth; Dallas-Fort Worth to San Antonio; and San Antonio to South Texas. Before building a direct link between the outskirts of Dallas and the outskirts of Houston, the Federal Government's Interstate-35 Corridor and the full Texas T-Bone passenger rail network must be an alternative that is seriously considered Moreover, the draft EIS is flawed because it does not adequately analyze the various interrelationships between the proposed high speed rail project between Dallas and Houston and the 1-35 rail conidor alternatives analyzed in the Texas-Oklahoma Passenger Rail Study, Combined Service-Level Final EIS and ROD (2017). NEPA prohibits a decision-making agency from viewing proposed projects in isolation; rather, the agency must take a hard look at both the 2 vol. 73, No. 242, 76443-76448 on December 16, 2008, by the U.S. Department of Transportation (USDOT) and the Federal Railway Administration (FRA). 3 vol 81, No. 51 / Wednesday, March 16, 2016 ("RFP") by the U.S Department of Transportation (USDOT) and the Federal Railway Administration (FRA). 4 "indirect effects" and the "cumulative effects" of the proposal, 4 Yet the Draft EIS fails to consider, for example, how moving forward with the Dallas-Houston high speed rail project could alter, modify or foreclose options for the 1-35 rail corridor; how a network-based approach that combines certain aspects Of both projects could produce more economically efficient and environmentally beneficial outcomes (see discussion of network-based alternatives above); or the cumulative environmental, economic and social impacts of proceeding with the Dallas-Houston high-speed corridor and the 1-35 rall corridor as separate and independent projects. The FRA should correct this flaw by expanding its analysis to take a hard look at the cumulative impacts, indirect effects and interrelationships of these projects in the context of Texas Passenger Rail policy as a whole. To our Knowledge, the Draft EIS is Not Supported by a Published Investment-Grade Ridership Study Given the enormous costs involved in building rail infrastructure, it is crucial, before making a decision, to fully analyze and disclose the financial/economic parameters of all alternatives. Such measurement can be achieved by performing investment-grade ridership studies where the total market can be assessed and reasonable market share estimated. TO our knowledge, these investment-grade ridership studies have not been done and/or made public. Investment-grade ridership studies for each possible alternative must be made a part of this EIS public process. This Project Fails the Crucial Interoperability Test Interoperability is a broad array of passenger-rail infrastructure standards that allow conventional, higher-speed and high-speed rail operations over common rail networks within urban areas. The Draft EIS fails adequately to address these issues. The Amtrak Acela Express operating in the Northeast Rail Corridor is a perfect example Of an interoperable network. It is highly successful because it serves the hearts of Boston, New York City, and Washington, DC Going to city centers allows a rail system to be time-competitive with air travel that operates from the outskirts of cities. Ifthe trains also depart from the outskirts Of the cities, they can't compete with air travel, which also departs from the city outskirts. A new passenger rail system must be able to use existing tracks into the city center. Obviously, at high speeds, the rolling stock must be operated in a fully sealed rail corridor, but this is not true CEQ regulations define "indirect effects" as effects " _ which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and Other natural systems, including ecosystems." 40 1508.8, Cumulative impacts are defined as "the impact on the environment which results from the incremental impact Of the action when added to Other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions." 40 C.F.R. 1508.7. Of the "last miles" when penetrating into densely populated areas, The Acela express shares the same tracks as commuter trains when penetrating in the three densely populated urban areas cited above. The Acela Express is an interoperable system. If such tracks do not exist, they must be built at substantial costs. Construction costs close to and within city centers are financially extravagant, and it is doubtful that any private funding can be found Ifthe taxpayers provide the funding, then these urban infrastructures must be made available to the highest number of people aggressively managed for the highest efficiency possible</p>	

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>If high-speed intercity trains are the only trains using the new infrastructure penetrating in the city center because of monopoly technology, the new infrastructure system will only serve a selected few but will have been paid for by a vast majority New and Old infrastructure must be able to accommodate commuter trains as well as long- distance high-speed trains on the "final miles" located within urban areas, Interoperability Failure Multiplies Consequences and Risks The Draft EIS fails to take a hard look at the full array of environmental, economic, and social impacts that could result if the proposed project fails to account for these critical interoperability issues. While the Japanese N70() Series Shinkansen technology is safe, reliable and comfortable, the interoperability standards currently used in the United States, the United Kingdom, and in the European Union are not compatible with this Japanese technology. Should the U S, abandon these pending interoperability FRA Tier III standards for this project in Texas, there will be consequences and risks There are operational consequences. New train sets won't be able to use existing tracks and rights-of-way to penetrate the urban-core or commuter trains will not be able to use newly built urban rail infrastructure, There are significant economic consequences. Accepting an incompatible proprietary technology creates a monopoly, Local populations will face an element Of monopoly pricing since only the proprietaw technology used can be operated on the newly built track infrastructure There are taxpayer risks, If a privately funded system with incompatible infrastructure and rolling stock, financed with government loans or loan guarantees, becomes financially troubled, the taxpayers are left with no choice but to pay for the monopoly technology The probability of financial weaknesses is significant considering that, unless we are mistaken, and to our limited knowledge, worldwide there are only two high-speed systems that cover infrastructure amortization with the revenues they generate, These two systems (Tokyo-to-Osaka and Paris-to-Lyon) have low infrastructure amortization costs because they were built approximately a half-century ago. There are national security risks. It could be dangerous to allow incompatible infrastructure and rolling stock engineered and manufactured by foreign entities to be used for critical transportation, Ifthe entities supplying the monopoly technology decide to stop providing the technology or block the systems with software changes, passenger traffic between major Texan cities could be severely disrupted, and the remedy would be extremely costly and time-consuming (measured in years, rather than months). 6 The EIS Must Consider the Characteristics of Interoperability On April 5, 2017, at a hearing in the Texas State Senate, Senator Lois Kolkhorst asked Tim Keith, president of Texas Central Partners (TCP), the company developing the Dallas to Houston high-speed rail project, "These tracks are compatible with multiple types of trains, correct?" Keith responded."Correct. Would also. Standard gauge of 4 feet and 8.5 inches." For tracks to accommodate different train technologies, track gauge, or more precisely, the width between the two rails Of a track, is only one Of many technical parameters that must be met. While Mr. Keith's response was factually correct, it was not complete and perhaps purposefully left the impression that track gauge is the only important factor. Other parameters must be taken into consideration for a rail technology to be interoperable</p> <ul style="list-style-type: none"> <li>• Spacing between two sets Of tracks</li> <li>• Width of rolling stock</li> <li>• Space between the tracks and station platforms</li> <li>• Electromagnetic compatibility</li> <li>• Crashworthiness specifications</li> <li>• Signaling systems</li> <li>• Safety systems such as Positive Train Control (PTC)</li> <li>• Communications sy stems</li> <li>• Door mechanisms (an issue in conventional train stations with the Japanese technology)</li> <li>• Power supply specifications</li> </ul> <p>This Project Does Not Serve City Centers Neither higher-speed rail Systems (maximum 125 mph) nor high-speed rail systems (above 125 mph) should be expected to be successful and profitable if they do not serve city centers of their primary destinations or connect to established commuter train networks serving city centers To address these issues, SNCF America makes the following recommendations: Ensure that high-speed trains are compatible with the pending FRA Tier III standards. Ensure that urban infrastructure to be built can be used by long-distance trains as well as commuter trains Ensure that downtown residents who wish to travel long distance by rail can avoid city tramc by using higher- and high-speed trains from downtown locations. At a minimum, the FRA must consider, analyze, and disclose the potential environmental, economic, and social impacts Of the project's failure to serve city centers. A Realistic Funding Plan Must be Considered in this EIS On its website, TCP is very straightforward by declaring that: As for federal loans, the project will explore all forms of capital available to private companies to finance debt for the project, including federal loan programs like RRIF and TIFIA," While TCP may be 100 percent privately funded as long as the loans are being repaid to the lenders, should future revenues not allow for the lenders to see their loans (principal plus interest) being repaid in compliance with the initial plans, Federal taxpayers could end up being liable if the loans were contracted under RRIF and/or TIFIA as cited in I. 1.2.2 of the Draft EIS, This would result in taxpayer funding of equipment and infrastructure not obtained through competitive methods, that would have been required if federal funding had been initially used, even though there could be a funding activity which "constitutes a major federal action As previously stated, revenues from high-speed rail operations are seldom sufficient to pay back infrastructure costs. Under such circumstances, claiming that the project is not backed by public funds seems daring. As with the Other issues discussed above, the FRA at a minimum must supplement its Draft EIS to consider, analyze and disclose the risks and potential impacts of an inadequate private funding plan.</p>	
Gary Rayl	2/7/2018	Website	<p>100% privately funded infrastructure unlocks more local investment Creates 10,000 construction jobs each year and 1,000 permanent jobs Texas Central will be a tax-payer, not a tax-taker, paying \$2.5 Billion in taxes in 25 years Estimates injecting \$36 Billion over next 25 years into</p>	Comment noted.

			the Texas economy Re-enforces importance of investment in a balanced transportation system Creates vital piece of a 21st century transportation system Living in one of the US centers for railroads I have learned the value of fast passenger rail service. Quality passenger service is used and economy benefits the cities where stations receive and board passengers. The following is true and valuable to us all: N700 Bullet Train emits 1/12th the CO2 as a jet would between Houston and Dallas The current 4-hour, 240 mile mile trek up I-45 is expected to increase to 6.5 hours by 2035 I-45 is the nation's 2nd deadliest interstate in the U.S.; rail keeps more cars off roads and saves lives With a 90-minute travel time, be at your destination before you could board a flight after arriving at an airport	
Benjamin Read	1/30/2018	Email	No land for the project should be acquired through eminent domain. Let the developers buy out the landowners' fair and square, but the developers should not have the authority of the state to steal private real property.	Refer to ED-1 and ED-2.
John Reasons	1/30/2018	Website	I am opposed to the high speed rail. It does not provide enough unique benefit to justify placing another visual scar on the land. Has the psychological cost of further allowing technology to intrude on open countryside been studied? What is it? Why do we continue to choose to benefit the urban over the rural?	The psychological impact of transportation infrastructure is not germane to the NEPA process; however, in <b>Section 3.14.1.1, Socioeconomics and Community Facilities, Socioeconomics</b> , new infrastructure in the project area was evaluated to determine the impact on community cohesion.
Carolyn Rebbert	2/17/2018	Website	I support the Dallas to Houston High-Speed Rail. By taking cars off the interstate, it will reduce carbon emissions, traffic accidents and run-off of highway pollutants. It also makes use of existing infrastructure to reduce impact. I also supported the Eugene to Portland light passenger rail line, and am sorry that it is not currently under consideration.	Comment noted.
Jeff Rebenschied	2/5/2018	Oral	Last name is R-E-B-E-N-S-C-H-I-E-D. First name is Jeff. I want to know what they're planning on doing about sound mitigation for the high speed rail when these trains go 200 miles an hour. And sound DBA is greater than 100 DBA, which could travel -- sound can travel up to several miles at that high level. What are they going to do about that to mitigate it.	Refer to NV-1.
Gordon Reed	2/24/2018	Website	I totally support The High Speed Rail. I feel the more cars that can be removed fro I45, the better. People that have never been on a trail need to. I have grown around trains, both big ones and models. I had one grandfather that worked for Union Pacific and the other grandfather worked for Southern Pacific.	Comment noted.
John Reed	1/30/2018	Oral	How are ya'll doing? I am one of the crazy people down on (?) Road. I'm here to talk to these people. They don't care about you. Politicians don't care about you. They care about money. If I was you I would contact every single one and let them know they will be voted out of the next election. Get out and do it. The next thing is animals. There's a lot of bald eagles flying around and one of the nests down in the deep neck area. I don't know about you but that is our symbol and if you don't stand for that you're not ready to fight for this and if that is true you need to get up and leave this room now. Okay? You have to express this. We all care about it and we have to get more people to care about it like we do. Once we do that if we got one, two, three people that don't know about this situation they care about it like we do because of the eagles. Because of the taxes, we will have to pay for the roads. Taxes that will be lost for education. When we get others involved they start calling Congress people and Senators. They are going to lie to you. I am not talking about county people, okay. I am talking about the state people and the federal people. They tell you one thing. I don't want to get real political. I voted for Donald Trump and the best thing he has done for us is to allow people to see who is for our country and who is against our country. Who are true Republicans and who are true Democrats. Okay? If I were you contact five people tonight and five people tomorrow and tell these people they will be looking for a different route besides Texas.	Refer to NR-3 and TR-7.
Lynn Reed	2/20/2018	Letter	Mr. Wright, Concerning the High Speed Rail Project in Texas; Please consider building a tunnel or using the giant excavations from the closed local lignite mines to dig a trench and cover the train where needed. Please consider this. A property owner and taxpayer in Madison County.	Refer to GN-7.
Reagan Reed	1/31/2018	Oral	Good evening, my name is Reagan Reed and I work for Empower Texas, which is a conservative advocacy organization of the state. I'm also Republican Precinct Chair in Montgomery County, and I drove up here all the way from Montgomery County tonight because I was so passionate about opposing this rail and making sure this boondoggle dies. There's serious concerns about this project, whether this project is gonna be profitable or the state might have to bail it out. Which is why Empower Texas strongly advocated for Senate bill 977 which prohibits state funding from going to private rail. But tonight I want to get to the heart of the matter and that is that it is fundamentally immoral for private land to be taken from landowners, when it's often been in their family for generations, and given to some big company to benefit these corporations and cities and to benefit these foreign Japanese investors. It's fundamentally immoral. Our country was founded upon the principle that all men are created equal and that they are endowed by their Creator with certain unalienable and among others the life, liberty and pursuit of happiness, which basically means property, and this rail is a direct violation of property rights. But not only is it against our founding documents, the principle of private property rights is enshrined in the holy scriptures. If we turn to the book of First Kings, Chapter 21, we read a story of the wicked King Ahab, who basically coveted a man's vineyard, Naboth's vineyard, and essentially performed eminent domain in order to stake this man's family land because he wouldn't sell. King Ahab was judged by God, not just because he stole Naboth's, but because scripture explicitly says he took his lands without commission. I don't see Texas Central as being very different at all from King	Refer to ED-1, GN-3, GN-4 and NE-1.

			Ahab. This was a study done by the -foundation, 65 pages I read all of it. They said that this rail boondoggle is gonna run an over \$21 billion deficit in the next 40 years. That's something that's gonna have to be paid for by my generation and so my generation has more at stake in this than anyone else, because this is gonna have to come from tax dollars. Look what's happening in California. There's only two of these rails in the entire country that are profitable. Paris to Leon and Tokyo to Osaka. Last time I checked Texas has a few differences from France and Japan, thank goodness. It's not gonna work here. We don't want it here. I'm here to fully oppose this rail because it threatens to destroy my heritage and also threaten my generation's future. Thank you.	
Sandra Reese	2/6/2018	Website	<p>I am against the construction of the high speed rail. I am a land owner in Waller County and this high speed rail will devalue the worth of my property. It will also impact the traffic and routes in and around my home and the immediate area. Additionally, I am in fear of my safety and terroristic threats that could evolve.</p> <p>There is a conflict of interest for a private company that will financially benefit from the construction of the high speed rail that produces its own economic and environmental study justifying its construction.</p> <p>The rail design only allows use of one manufacturer excluding use of other high speed rail trains which operate on a universal platform. This is anti-competitive and increases tax payers cost.</p> <p>Many citizens voiced, engaged, and wrote their concerns to FRA, speaking in the 2-6-18 hearing and yet have not received nor heard any solutions or a viable plan to their concerns. We speak to deaf ears. Communication is one way. This treatment of citizens serves as another data point in the corrupt handling in the justification of the construction of the high speed rail.</p> <p>This project is an atrocity.</p>	<p>Refer to GN-4, NE-1, SS-6, TR-6 and VA-1.</p> <p>No public roads in Waller County would be closed as a result of the Project. Refer to <b>Table 3.11-51: Waller County Roadway Modifications</b> for more information about impacts to roadways.</p>
James D. Reeves	2/25/2018	Website	<p>Dear Sirs:</p> <p>I am a property owner very near the proposed THSR location in Grimes County. I am against the project and it should not be approved. The proposed path location through Waller, Grimes, MADISON, and Leon goes through some of the more prolific oil and gas areas in our state. I have attached an oil and gas base map showing the number of wells drilled along the proposed path. Attached is a google map showing the path in relationship to our property. The THSR path would cross County Road number 176 that I need to utilize to access our property. Also attached is an excel spreadsheet showing the number of oil and gas wells permitted in several effected counties. In Texas Railroad District 3, 10.6% o the wells permitted since January 2012 are in Madison County alone. That's 674 wells permitted. The economic impact alone that the oil and gas industry creates is extremely substantial to the area. Lease money, road building, welders, fence builders, restaurants, hotel rentals, road construction, water wells drilled, ROYALTY INCOME GENERATED TO THE STATE AND INDIVIDUALS and TAXES far outway the revenue generated from a train that will have little use. It is easier for me to drive to Dallas than than drive into Houston from Katy, Texas, then go through security have a stop in Roans Prairie and still have no car in Dallas. Won't happen. Very seldom do I even fly for a 4 hour drive. Please no approval, no tax payer funding for th THSR Thanks James D Reeves</p>	Refer to GN-4, PN-3 and TC-4.
Tim Regalado	2/6/2018	Handwritten	<p>I support the comments listed below and offer them as evidence supporting the "No Build Alternative"</p> <ol style="list-style-type: none"> <li>1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas.</li> <li>2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas.</li> <li>3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</li> <li>4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact.</li> <li>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites.</li> <li>6. 				avoid and/or minimize impacts to all waters (streams, ponds, and special aquatic sites such as wetlands and springs) crossed by the route. In the areas along the route that will be on embankment, culverts will be constructed to allow for movement of water.
Tina Regier	3/7/2018	Website	EIS says no displaced businesses, why is farming not considered a business? How is this statement correct? How can this be guaranteed?	See <b>Section 3.13.7, Land Use, Build Alternatives Comparison</b> for a review of the displaced and acquired businesses for each proposed Alternative. All alternatives would displace or acquire businesses. The Preferred Alternative would displace 42 primary commercial structures and would potentially acquire 12 commercial primary and secondary commercial structures. Displaced structures would be removed because they are directly within the Project footprint. See <b>Section 3.13.3.2, Land Use, Data Collection</b> for more information about the 13 distinct land use categories that were used for the structural analysis. Both agriculture and commercial/business are pre-defined land use code types. Agriculture uses are defined as active farmed cropland and specialty crop production. Agriculture structures include barns, sheds, livestock facilities, etc. Commercial/business uses are more retail in nature. Both agriculture and commercial uses can be private income-generators but have different environments and income generation methods so the land uses were reviewed separately and were not combined into one general "business" code.
Tina Regier	3/7/2018	Website	Define "rerouted" when referring to roads. Does this mean closed/dead end/no longer a through street?	Refer to TR-7, TR-8 and TR-10. Private road closures are proposed where private properties served by the private road would be purchased to construct the Project, or where new access to private properties adjacent to the HSR ROW is proposed. Driveways and private roads were not usually provided grade separations and alternative access was proposed.

Tina Regier	3/7/2018	Website	Who will profit from this project? Who is accountable when the project fails?	Refer to NE-1, NE-9 and SS-5.
Tina Regier	3/7/2018	Website	If HSR project is estimated to close over 30 state, county, and rural roads in Ellis County alone, how can HSR project not be liable to construct overpasses to ensure roads remain through streets? Can overpasses be built for these roads and who is responsible to pay for these overpasses?	Refer to TR-7, TR-8 and TR-10. Private road closures are proposed where private properties served by the private road would be purchased to construct the Project, or where new access to private properties adjacent to the HSR ROW is proposed. Driveways and private roads were not usually provided grade separations and alternative access was proposed.
Scout Register	2/16/2018	Website	Especially with the Trump administration talking about infrastructure, yet gutting Amtrak, we need to show the government and the rest of the country that we stand behind great new infrastructure projects in America, regardless of who is in office. Jobs, economic growth, and fast safe and affordable transportation. That's what this project brings to the great state of Texas, and that's what this state needs to show that we are a leader, and a place where people want to be.	Comment noted.
James Reid	2/7/2018	Website	High speed rail is long overdue in our state. It is very forward looking and may be the tipping point that changes the future of transportation in Texas. Now lets also work on rebuilding some of the other routes in Texas. I am getting older and like driving less and less. Don't stop now. There are always strong objections to progress. Thanks for listening.	Comment noted.
James Reid	2/16/2018	Website	We need to join the 21st century transportation and high speed trains are one way to get it accomplished. We can only build so many highways and trains take up less space and are less polluting. Please approve Dallas-Houston high speed train. Thank you.	Comment noted.
Laura Reid	3/5/2018	Website	This project is very expensive waste of time and money that will eventually fall on the shoulders of tax payers. It will do nothing to ease the traffic on the highway between Dallas an Houston because you are going to have to get on highway to board train in Dallas or Houston. Texans live their cars and are not going to quit driving, especially at the price of these tickets. The route goes through less than 1/2 mile from our front door and it not something we want to see or hear while relaxing on our front porch. Have yet to see anything positive with this project.	Refer to AS-1, GN-4, GN-6, PN-3, SC-19, TR-3, TR-4 and NV-1.
Patricia Reiff	2/27/2018	Website	I have ridden many high speed trains around the world and they do NOT bother the cattle nearby! Texas needs to lead the way to bring US passenger rail into the 21st century. The only thing missing is an "auto-rail" car - if a Texan can drive his car aboard, hitch a ride and save 3.5 hours of driving AND HAVE HIS CAR ON THE OTHER SIDE, He/she is MUCH more likely to take advantage of this opportunity. Otherwise, it only competes with flying. If there are auto/rail cars, it will also compete with DRIVING. (AND TEXANS LOVE THEIR CARS). I was in favor of it even when it appeared it would go through our ranch (in Waller county). I still am!!	Comment noted.
Chris Reinhardt	2/5/2018	Oral	Hi. My name is Chris Reinhardt. I live in Copperfield. Even though you see a lot of paper, I didn't prepare anything. I just have some random thoughts. The first random thought is back in August we had a little rain event. A lot of people got a little water up in their property. Right? Well, who allowed people to build there? Politicians and developers. So what's running this? Politicians and developers. Okay? So what are they not telling us? And if you look at all the paperwork and other stuff -- and let's start with some of their exhibits down there. One of the industrial -- the industrial site that's determined to be the one of the stops, the endpoint for Houston, is some property that I have a little connection to--not that I own it, but I wish I did--but if you look at that, on that outline there's one square of property that's not being taken. It's surrounded by property being taken. Who owns that property? I don't know. Who's getting the big money out of that? Who's holding onto that for bucks? Probably somebody who's connected. Right? I'm a safety guy, so I look at things from a safety aspect. If you look back at that center panel right next to the one to the left of the door, they show a pretty little graphic of Hempstead Highway, and next to Hempstead Highway is that rail line going down with all the pilings. And what's missing there? Protective barriers. How did Princess Diana die? She smacked into a piling at a bridge. So it's all pretty and nice and fluffy and looks really great, but what's it going to be like in the end? Who knows. To my paperwork. I got to put glasses on for this. I'm not getting old. TxDOT in December 2013 published a state-wide ridership analysis report that said this line would cost -- up-front capital cost \$16.8 billion. Back in December they were telling us \$12 billion. Now they've upped it between December and now to anywhere between \$15 billion to \$18 billion. Right? So who's not giving us the whole story? Where is the rest of it? If you look at California, California's way over. Okay? The Reason study, if you get a chance to look it up on the internet and read it, it talks it could be up to \$21 billion. It debunks everything. But TCR likes to come back and try to debunk the study, but if you read it you'll see that the guy that wrote the report says, well, he would have used their data, but he had to sign a confidentially agreement or non-disclosure agreement so he wouldn't be able to write about it. So read the article from the Reason report. It's a pretty good article that basically casts a little doubt in there. And what else do I have? Now, the main thing is I don't think it covers everything. TCR's not been up-front with us. Why will they not tell us how much it's going to cost? Why will they not tell us anything accurately that can be verified? It's all fluff and big Texas stuff. Right? I'm a multi-generational Texan, but I don't buy into that BS That's really about all I have to say, and I'm running out of time, but I will save my seven seconds for somebody else. Thank you.	Refer to FP-4, GN-2, GN-3, GN-7, GN-9, SS-1 and SC-22.

Submitted By	Date Submitted	Submission Type	Comment	Response
Christopher Reinhardt	2/7/2018	Website	This project makes no economic sense, so there is no reason to allow it and its impact on the environment to eight of the ten counties through which it would pass. In 2003, a new runway was added to Houston's George Bush airport at a cost of \$300 million. In 2015, Southwest Airline opened an new 5 gate terminal at Hobby airport at a cost of \$156 million. Using those two examples and rounding up to be conservative, a dedicated runway and terminal could be added at each of the cities airports (DFW, DAL, HOU, and IAH) for \$2 billion. The newest Boeing 737 MAX10 lists for \$129 million (although the prices are discounted up to 50% fr large orders). Twenty of those, at list price would cost \$2.58 Billion. The 737 MAX10 carries 230 passengers. Flights leaving every 15 minutes out of the four airports (fyi, generally Southwest operates on a 30 minute basis between Houston and Dallas) could transport 3,680 passengers/hour. All of the above could be done for less than \$5 billion. Projections for the cost of the rail system are anywhere from \$15 billion to \$21 billion. This rail project makes no economic sense to spend \$21 billion when a comparable result could be achieved for \$5 billion, and have no environmental impact on the eight counties in the project that don't contain the four airports? It makes no environmental sense to do this when there is a better alternative.	Refer to BA-4, BA-12, GN-4, NE-1, PN-3 and SC-19.
REM3 Enterprise	2/27/2018	Website	I have strong opposition about the high-speed rail in Navarro County traveling through the intersection of 709 and 1394 destroying Morgan Legacy Farm along with the water habitats of several rare waterfowl species. With so many other potential sites with less impact on water and landowners I can't support the current path through this important land	Refer to LU-5.

Lydia Reyes	3/6/2018	Email	1.- Concern about Texas Counties, Dallas, Ellis, Navarro, Freestone, Leon, Madison, Grimes, Harris and wheeler endangered species- Bald Eagles, Monarch Butterfly, Wood Pecker, Passenger Pigeons, Red Wolf, Gray Wolf, Migratory Game Birds, Wood Stork, Texas Horn Lizard, Brazos Water Snake, Houston Toad, White Face Ibis, Interior Least Turn, Cagle's Map Turtle, Ouachita, Rock-Pocket Mussel, Including Wildflowers of large fruited sand verbena, Navasota Indie tresses. 2. Concerns about watershed impact of flow and drainage of water in flood event. 3. Concerns about soil erosion 4. Concerns about livestock reproduction due to vibration and noise 5. Noise Pollution 6. Rerouting roads and closing roads that are easier access for emergency situation 7.- Electro- Magnetic Currents that "High Speed Rail" Radiates.	Refer to NR-1, NR-2, NR-3, NR-4, NR-5, PI-1, SG-1, SS-23, SS-24, TR-6, TR-8, WW-1 and WW-2. Passenger Pigeons are extinct. The Red Wolf and Gray Wolf are extirpated from Texas. The Monarch Butterfly is currently "Under Review" for listing by FWS and is not currently a protected species. Other species mentioned were assessed in <b>Table 3.6-8: LFSV Habitat by Segment</b> except for those not listed by TPWD or FWS such as the Brazos water snake, Cagle's Map Turtle, Ouachita, and Rock-Pocket Mussel. There is no evidence to suggest that ground-borne vibration would affect livestock reproduction. The Project does not radiate electromagnetic currents. Rather, the electric current used to power the Project does generate electromagnetic fields (EMFs), as discussed in <b>Section 3.14.1, Socioeconomics and Community</b>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

				<b>Facilities, Introduction.</b> As discussed in <b>Section 3.15.4, Electromagnetic Fields, Methodology:</b> "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."
Paul Reyes	1/30/2018	Email	I vote against it because it affects my family friends hometown.	Comment noted.
Andrew Reynolds	2/27/2018	Website	FRA et al; I want to voice my show of support for the high speed rail line in Texas and for it to quickly pass the environmental impact portion of approvals. These bullet trains are standard in Japan where I have ridden them and they provide some of the safest, quickest, consistent, and quietest transportation methods around. Similar systems in Europe make for extremely easy transportation across Europe. While I am sure there will be some local negative impact, the net positive of displacing the emissions of vehicles on the road, reduction in their noise pollution, reduction in their oil and other emissions, and the potential to use the line for light freight operations should far outweigh the local effects of the line. As well, Texas is slowly using more wind and solar energy assets for its grid, producing even better displacement of carbon emissions over time. While it would be new for the US to have a high speed rail line of this type, there is no better place but Texas and Dallas/Houston to be the first movers on this type of transportation in the US. Thank you for your time! Andrew D. Reynolds, MBA	Comment noted.
Mary Reynolds	3/9/2018	Website	I support privately funded HRS project. I do think the Dallas station is not positioned properly. A better site is adjacent to the Dallas Union Station served by Amtrak/DART. The adjacent property is vacant and owned by the City of Dallas, and has substantial parking. The proposed site is one mile away with no connectivity to any other transit options. Additionally the proposed site is difficult to access causing increase in traffic congestion.	Refer to GN-7, GN-8 and TR-3.
Rick Reynolds	3/9/2018	Website	I support privately funded HSR. I do not support the proposed location of the Dallas rail site. The location is one mile from Union Station served by Amtrak/DART. The proposed location provides no connectivity, and will create additional traffic congestion. The Dallas Station should be adjacent to Union Station. The City of Dallas already owns the land, and there is ample room for parking.	Refer to GN-7, GN-8 and TR-3.
Alireza Rezaee	2/19/2018	Website	I support the train. I live in Dallas and I would love to have an easy, reliable and fast means to travel to Houston. This train will help me to travel to Houston more frequently.	Comment noted.
Joshua Rhodes	2/27/2018	Website	I am writing to express my strong support for the Texas Bullet Train project and urge the Federal Railroad Administration to move forward with the timely review and approval of the project.	Comment noted.
Sandra Ricca	3/5/2018	Website	I think it is short-sighted to reject this proposal. There is a definite need to travel between Dallas & Houston other than via vehicles and airplanes. In fact, I hope to see the train connect Dallas, Houston, Austin & San Antonio someday. More and more people come to Texas every day. The major cities have a high amount of traffic congestion. If the train is not built, the highways will become more congested and will require eventual expansion anyway. Widening the roads for more cars does not increase safety & efficiency or reduce pollution. After weighing all the pros and cons, I think the pros outweigh the cons and I sincerely hope the train is built.	Comment noted.
David Rice	1/30/2018	Email	It is a national disgrace that the United States does not have a high-speed Rail network spanning the country from East to West at a minimum. Air Travel is unreliable due to all the security measures and has become a real drudge. I spent most of my working career when Air Travel was reliable, relatively inexpensive and a real pleasure. Hurrah for Texas.	Comment noted.
Robert Rice	2/17/2018	Website	The Bullet Train should be a Texas high priority. It is a must for our economy, environment, and convenience.	Comment noted.

			<p>cookie cutter prisons. 3. Enjoy our hobbies of gardening, raising a few chickens, fishing, hunting and a small orchard. 4. In the past few years my husband has had some health issues which lead our daughter and her family to become our care giver. They are now in the process of building a home next to ours. In February of 2015 we heard that the High Speed Rail's primary route is being considered to run along the Utility Corridor from Dallas to Houston. I want it to be noted that coming down the Utility Corridor will have a huge impact on my family.</p> <p>1. No more peace and quiet, we will be back in the rat race for which if I had wanted that quality of life I would have stayed in Houston, continued to work and pay taxes for a train I will never use. Southwest is cheaper, I would continue to fly.</p> <p>2. Our grandchildren will never get out of their prisons to run, climb trees, eat fresh vegetables from the garden, fish, hunt, ride a horse or pick eggs.</p> <p>3. Our care giver will have to move as well, leaving them with starting over again and upside down on their home. 4. Grandchildren will have to leave their forever home, which do to their dad's jobs has had to move 7 times over the last 12 years. This is to be their last move till they go to college. When people choose to live in a big city, they know the pros &amp; cons and that is their decision. I made the decision to retire with nature and family after a long time in the city. I don't feel anyone has to make exception for me. They made their decision they need to get over it and suck up the inconvenience. Where are my rights, last time I checked this is American. I ask the question, how does TRC thinks that using the utility corridor (which will cut mine and many other landowners tract in half, with no access to the back half) will reduce the congestion of Dallas and Houston? If TxDot is going to increase Hwy 45 to 8 lanes would it not be better to save the tax payers a little money, create jobs, cut down on the traffic and free advertisement for the train to put it down 45. But you still have not solved the problem of getting from the station thru the congestion in the cities. So the train will be a 90 min ride and still take 2 - 3 hr. trying to get to you destinations. I can fly cheaper than the train and still take the same amount of time getting to my destination. A Very Concerned Retired Landowner Delores Richards</p> <p>I ask the question, how does TRC thinks that using the utility corridor (which will cut mine and many other landowners tract in half, with no access to the back half) will reduce the congestion of Dallas and Houston? Delores Richards	2/5/2018	Handwritten	In the past 4 years no one has given me an answer about the pipelines. Where in the DEIS Report can this information be found?	Refer to EU-2.
Delores Richards	2/5/2018	Handwritten	Why are the maps incorrect?? They do not show the two homes, cabins, Well & Well house roads, horse pens, chicken house, goat pen, rabbit hatches, crossing fencing or the trees that have been cleared.	Refer to GN-1.
Delores Richards	2/5/2018	Oral	My name is Delores Richards. I'm a landowner in Madison County, and I'm a landowner in Madison County, and I'm here to oppose this rail. I am highly against it. It is not only cutting our property in half so that we can't do anything with it -- And we are not a Texas -- I mean, we're born Texas, but we're just now coming to Madison County. But back in December of 2015 I was told they had -- that TCR had imminent domain, and they have done nothing but harass us. And I have called and I have left messages and I have yet to get an answer from any of them. My brother -- my son-in-law has found out that they do not have imminent domain. So, therefore, I am against it, and I cannot stand anybody that cannot be truthful to me, and lie and look me in the face and tell me they have imminent domain and they did not. And I do not appreciate this environment study that the railroad is doing. You have not addressed -- I have emailed you. I have not been -- no one has addressed how the health safety issues are going to be on my family. Nobody has addressed the pipeline. Nobody has addressed the erosion around my property that they're wanting to put those pylons on. And I know darn good and well that these rigs out here stand a lot more pressure than this damn train's going to. Excuse my language. UNIDENTIFIED MALE: Go for it, Baby. MS. DELORES RICHARDS: I am highly against it, and I do not appreciate people that do not return or get back to me or lie to my face, and TCR has done that on numerous occasions. Thank you.	Refer to ED-1, ED-2, EU-2, NE-1, NE-8 and SG-2. Human health effects are discussed in <b>Section 3.16, Safety and Security</b> of the Final EIS. <b>Section 3.16.2, Safety and Security, Regulatory Context</b> of the Final EIS provides a summary of regulatory plans/requirements which would be generated prior to construction commencing and those plans would give landowners more details regarding risk assessments and mitigation strategies regarding potential impacts.
Delores Richards	2/5/2018	Oral	Okay. My name is Delores Richard and I am a landowner and a grandmother and I am highly against this rail. My husband and I have spent years looking for a place before we retired and we chose Madisonville. And the reason I am really so touched with this town is the minute that little girl, Morgan Whitesides, turned to this town and I showed her three tracts that we were ready to purchase because we were going to retire in five years. That baby got out of that truck, jumped up on the gate and said, Oh, God, this is my forever home when Daddy retires. So Madisonville means a lot to us. And for you. We're retired, we have no internet service. We do not have high-tech phones. So we will continue to go down to the library or to the tax office reading a report that's 5000 pages long. That is very disrespectful in my eyes. I've been in the medical field for 20 plus years. If I wrote a paper, a research, a medical paper and handed it to you, you would spend more time looking up names, words, abbreviations, and it would take you a lot longer. Me? I could probably do in 15, 20 minutes. Same with this report. You guys know exactly what you're talking about, you've got it, it's down black and white. But don't give it to us where we can tend to it properly. Seventy fives day is not enough, no way. And again, I am highly against this train and I am highly against FRA because I want to know paid your salaries to do this. I am sure it was tax-paying money. If I was willing to pay for this train, I'd have stayed in Houston. I would have paid the taxes just like I do when they told us that the rail -- that the tow away would be free and be paid for. It's not. My taxes are paying for it and still pay \$1.75 every time I go through one of those darn gates. I am highly, highly against this.	Refer to GN-4, NE-5 and PI-3.
Delores Richards	2/5/2018	Oral	Okay. My name is Delores Richards, and I'm highly against this train. I vote, no build, no train. I am here to tell you firsthand how TCRR works with the landowner. In February of 2015, Robert Eckels looked my daughter right in the eye and told her, just go ahead and build there because we will pay you three or more times what it's worth, all of your descendants would get free ridership and he could give her stock in the company. They have plenty of money from his investors. This was coming from a man that this project started 20 million in the red. He's also the man that told -- sold Harris County the toll road that the taxpayers are paying for, along with paying while they're using it. This will -- I don't know whatever happened to this will be paid for and it will be free. He's also tried to sell the bullet train to Houston -- from Houston to San Antonio, 2010; and he didn't have a success. Randy Redwine, who interviewed with the Madison Mentor, stated: TCRR has been working with the landowners. Incorrect, they have not. I spoke with Redwine myself back on 12/11/15 at one of these meetings. He told me he would personally come out and take care of my family, my son-in-law, his family, who had just retired from the military. I sent several e-mails after that meeting and no Redwine. Same article. He states that he would help with -- this train would help with the infrastructure. Well, I've lived and worked in Houston for over 40 years and it does not relieve the mess that's here in this town. You need to fix the infrastructure between - in Dallas and in Houston before you even think about connecting them. At the same meeting, Charlie told me that they had eminent domain. Well, of course, we panicked. Redwine said he thought they did, but he wasn't quite sure, so he checked with Tim Keithley. Per Keithley, they did not have it at that time, expected to have it, so they were using a scare tactic. To date, they still do not have eminent domain. Also, at that meeting, I was told then just put me back where I -- I told them just to put me back at the point in my life where I am. Just buy me another piece of property and build my house. No problem. We've got plenty of money. And since I've been here tonight, I know, we are paying for it. So I'm going to -- not on my retirement, but everything else is, everybody. These millennials that were up here tonight have no idea that they are going to be paying for this and their great grandkids. Since that meeting, my husband has run them off on separate occasions -- on three separate occasions surveyors that came on our property without being -- without notice of any type. And I also resent the fact that TCRR gets	Refer to BA-6, ED-1, ED-2, GN-4, NE-8 and PN-3.

			on TV and refers to the people as rural and low income. There are a lot of retired educated professionals along this route that have poked so many holes in this DEIS, it looks like a sieve. God does not like ugly.	
Delores Richards	2/5/2018	Website	TCR told landowners not to worry they will take care of us. No one has contacted us. Then the DEIS Report states permanent disruption. What are we to believe? NO BILL OPTION	Refer to ED-2.
Delores Richards	2/6/2018	Website	Per DEIS there will be road closure. This (per TCR map) will close. all access to my land.	Refer to TR-8 and TR-10.
Delores Richards	2/6/2018	Handwritten	I support 100% this No Build Alternative.	Comment noted.
Delores Richards	2/6/2018	Handwritten	Explain How an Elderly Couple (Who only Have their Land and Home) Can Start over? NO BILL OPTION	Refer to ED-2 and LU-14.
Delores Richards	2/6/2018	Handwritten	Why can we as landowners get a straight answer from TCR,FRA, Tx Dot?? Why is tx Dot with TCR when they have already approved I-45 to be increased to 8 lanes? NO BILL OPTION	Refer to BA-4 and BA-6.
Delores Richards	2/6/2018	Handwritten	What will be done for the erosion?? What will be done for poor Quality of water?? Scene view will look like an ugly distict out of the Hungery Games. NO BILL OPTION	Refer to AS-1, SG-1, WW-1 and WW-2.
Delores Richards	2/6/2018	Handwritten	Why would FRA take our land since they have all ready approved another route from Dallas to San Antonio to Corpus Christi?? Before long Texas will look like the ugly district in Hunger Games.	Refer to AS-1, BA-2 and ED-1. FRA has not approved any other high-speed rails within Texas.
Delores Richards	2/6/2018	Handwritten	What kind of Research has DEIS done on the Electimgnet field the land owners within 5 miles be effected?	You have raised 4 questions, which are individually discussed below. 1. There is no five-mile electromagnetic field (EMF). EMFs follow the inverse-square law, as stated in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> : "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels." 2. EMFs from the Project are expected to diminish to ambient levels within 500 feet of the alignment. This is combined with the conclusions of reputable authorities on EMF, more specifically the International Commission on Non-Ionizing Radiation Protection (ICNIRP), that there is no compelling evidence that EMFs are causally related to adverse health effects (please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> ). There is no expected adverse effect on health to landowners in the vicinity of the alignment. 3. EMFs from the Project are only present when the train is present. There are no EMFs present at a given location when the train is not physically present at that location. Even when the train is present, the EMFs generated are not expected to be above the limits set forth by the ICNIRP. Therefore, the EMFs are not expected to adversely affect people driving under bridges or passing the area on a daily basis. 4. A significant amount of research has been done on long-term effects of EMF exposure, as reported in Section 3.15. Please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> : "Reputable authorities on the subject of EMFs include the World Health Organization and the ICNIRP. The ICNIRP determined that humans can perceive EMFs in some situations and that perception

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas. "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects. " Please also note that the principle of the ICNIRP has been to build in "safety factors" to their published guidelines. For example, once the ICNIRP determined the level of EMF strength necessary to observe an effect, the ICNIRP then applied a reduction factor of 5 as a means of arriving at a precautionary value for occupational exposure. The value was reduced by an additional factor of 5 for public exposure, arriving at the extremely cautious values for EMF restriction discussed in the Draft EIS. Thus, the ICNIRP values have built-in precautionary levels. Please also see <b>Section 3.15.4.2, Electromagnetic Fields, Literature Review</b>: "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..."</p>
Delores Richards	3/5/2018	Website	Did or did not FRA choose the Utility Route because TCR wanted a step in Roan's Prairie to satisfy their investor? Who owns land in Roan's Prairie.	Refer to BA-5 and GN-7
Delores Richards	3/5/2018	Website	Why Did Harris County get another meeting and persons being effective only got less than 24 Hr notice? They were Not on Your mailing list. I notice only government official were noticed.	Refer to P1-11.
Delores Richards	3/5/2018	Website	Why are we taken up more land for a rail when we have Amtrack with passenger cars that goes 180 mph? This should be even faster since this was started 10 or more years ago.	Refer to PN-2.
Delores Richards	3/5/2018	Website	Why is the FRA involved if TCR is not a train? If they are a train They can use the existing Tracks.	Refer to NE-1 and TC-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Delores Richards	3/5/2018	Handwritten	From the DES the number of roads crossed [sic] from 212-226 50% of crossing will be located beneath the HRS Viaduct{sic}. of these crossing approximately 69 percent would require road modifications Road modifications could include Road under railway, road over railway, relocation reroute, closure or acquiation. The number of seals modifies is from 144 up to 242 [sic]	Refer to TR-8.
Delores Richards	3/5/2018	Handwritten	If 978 is closed per (TCR Maps) how will I access my land	Refer to TR-10. FM 978 would not be closed for any Alternative. FM 978 would be under the Project for both Segment 3C and 4. Approximately 4,600 feet of FM 978 would be rerouted and reconstructed for Segment 4 (Build Alternatives A, B, D and E). For Segment 3C (Alternatives C and F) FM 978 would not be rerouted and would be crossed by the Project. The Preferred Alternative is Build Alternative A.
Delores Richards	3/9/2018	Website	How can TCR tell the news media 42,000 people voted for the train When Kevin Wright told us on 3/5/18 (Houston Meeting) That he has stacks of envelopes and that none of the comments will be opened until after the comment period(midnight on 3/9/18) is closed.	Refer to NE-1 and PI-1.
Delores Richards	3/9/2018	Website	How can TCR tell the news media 42,000 people voted for the train When Kevin Wright told us on 3/5/18 (Houston Meeting) That he has stacks of envelopes and that none of the comments will be opened until after the comment period(midnight on 3/9/18) is closed.	Refer to NE-1 and PI-1.
Delores Richards	3/9/2018	Website	Did or did not FRA choose the utility route because TCR wanted a stop in Roan's Prairie to satisfy their investor, who owns the land?	Refer to BA-5 and GN-7.
Delores Richards	3/9/2018	Website	TCR does not have eminent domain then why did the FRA start the process of DEIS?	Refer to ED-1 and NE-1.
Delores Richards	3/9/2018	Website	The numbers of acres required by each corridor is shown in the DEIS report as 8,000. What happened to only needing 3000? TCR has had plenty of time to get their ducks in a row or did they do a rush job?	Refer to BA-3, LU-9 and LU-14.
Delores Richards	3/9/2018	Website	Progress is great BUT we have rights and there is 45 or existing tracks. Why does the DEIS not speak of these options?	Refer to BA-9 and BA-10.
Delores Richards	NA	Website	TCR is supposedly privately financed, requiring no taxpayer subsidies. Construction of a privately funded HSR is an intriguing ides. Because Texas Central's project would be the first HSR in the US, and the first privately constructed HSR in the world a careful examination is vital. The FRA needs to examine, feasibility of constructing TCR proposed HSR. The Cost, Ridership trends, Dallas is well served by aviation and bus industries., Travel trends, city density, car ownership. Even though TCR has said they will require no taxpayer subsidies they are planning to apply for Railroad Rehabilitation and Investment Financing (RRIF) loans (taxpayer dollars) just another lie. If this project fails these loans have very weak taxpayer protections. These loans could be awarded to entities that do not have the resources to repay them. TCR has not released a business plan, no data to support its ridership projections or cost estimates. Original cost projections 10-12 billion now up to 18-20 billion Just like calif. rail it is doomed to fail. There many questions and concerns regarding TCR project. Only tow HSR lines make money---Tokyo to Osaka Paris to Lyon and one breaks even Hakata to Osaka.	Refer to GN-2 and GN-4.
Delores Richards	NA	Website	DEIS does not address TCR plans to condemn natural resources, such as soil & water within 2 mile of either side of the proposed rail	Refer to LU-14.
Delores Richards	NA	Website	TCR has stated the I 45 is congested. NOT TRUE We travel to Houston weekly and the only congestion is inside 610 loop. The same congestion the train clients will run into. 90-120 min from Dallas to Houston and another 120 min to get to your destination. Where in the DEIS report is this matter addressed?	Refer to PN-3. Each major road was inventoried for daily traffic volumes, existing travel patterns and geometric conditions. For each crossing, surrounding development and transportation plans, environmental and engineering constraints and the availability of alternative routing was considered in order to propose revised configurations of the existing infrastructure relative to the Build Alternatives included in the Final EIS. Data related to traffic volumes can be found in <b>Section 3.11.3 Transportation, Methodology</b> and <b>Section 3.11.4, Transportation, Affected Environment</b> of the Final EIS.
Delores Richards	NA	Website	Where in the DEIS do i find about building a train on or over a pipeline? Seaway told us that it could not be done?	Refer to EU-2.
Delores Richards	NA	Website	The DEIS does not address the safety level when the train is near schools?	Refer to SC-8, SS-12 and SS-13.
Delores Richards	NA	Website	The DEIS references " private property access re configurations," Per the DEIS all roads will be closed to my property.	Refer to TR-10.

Delores Richards	NA	Website	How was a survey accomplished without access to our land? The maps in the DEIS is 4 years old. Does not show the two houses, 2 cabins, well house or the pens for the animals.	Refer to GN-1 and NE-8.
Delores Richards	NA	Website	Tonight on the news TCR told the reporter that tonight was the last night for comments and they had 42,000 for the train. How can this be when you told us (Houston meeting 3/5/18)that you had not looked at them and would not until after the comment period had closed. Are they seeing them before you and only forwarding the ones in their favor????	Refer to PI-1, PI-4 and PI-7.
R Richards	1/24/2018	Email	Waiting on reply.	Comment noted.
R Richards	2/6/2018	Website	California's bullet train system will need a steady flow of riders--lots of riders--to pay off. But studies show that when transportation times between major hubs exceed three hours, many travelers opt for planes. To address this dilemma, California's high-speed-rail planners specify that trains must travel between San Francisco and Los Angeles in no more than two hours, 40 minutes, a feat that requires sustained intervals at 220 mph. The problem: Standard bullet trains don't go that fast -yet The state is gambling that technology will improve before it completes the planning process and starts laying track. Luckily, the tech doesn't need to improve much: France's new TGV already hits 200 mph, and Spain's Alta Velocidad Espanola carries passengers at around 217 mph. Of course, the deadline also puts planners in a bind: Every route change that adds miles means the train needs to go that much faster. So be it. The target is necessary to ensure a fast ride and plentiful ridership.	Comment noted.
R Richards	2/6/2018	Website	No HSR How does DEIS address the impact on wildlife. The EIS says they will be relocated. Really!!! There are hunting seasons for a reason, so that wildlife will have a chance to breed, the HSR will disrupt the breeding patten of wildlife and decrease the numbers. How are you going to tell a bald eagle they have to move. I guess just like what you are doing to land owners.	Refer to NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
R Richards	2/19/2018	Email	Please explain how an elderly couple who have lived on their land all their lives and TCR forces them off their land out of their home can start over? Can employees of TCR and FRA sleep at night knowing that by approving EIS will ruin peoples lives.	Refer to ED-1 and ED-2.
R Richards	2/19/2018	Email	How much square acreage of the proposed right of way have you surveyed? and of that amt how much was surveyed without permission? How was DEIS accomplished without accurate access to our land. If you did survey our land then the entire DEIS is invalid. Ronald Richards [...]	Refer to GN-1 and NE-8
R Richards	2/19/2018	Email	How much square acreage of the proposed right of way have you surveyed? and of that amt how much was surveyed without permission? How was DEIS accomplished without accurate access to our land. If you did survey our land then the entire DEIS is invalid.	Refer to GN-1 and NE-8.
R Richards	2/19/2018	Email	So far I have not found any reference to the health effects of EMF. Research by Electrical Engineering School, Southwest Javtong Univ. China and Dept. of Occupational Health, Shanxi Medical Univ. China have found that multiple unit high speed electric trains generate high frequency elect. fields, low frequency magnitic fields, and high frequency wide band EMF emissions when running, even though results of test were within permitted levels the possibility of long term health effects should be studied before the final EIS is released. Ronald Richards [...]	The literature and Internet contain myriad reports of adverse health effects of electromagnetic field (EMF) exposure. Anyone can find reports claiming that EMF exposure can cause anything from rashes to cancer, and everything in between. For the purposes of this work effort, the following guidelines were used when determining whether to include published materials in the Draft Environmental Impact Statement (Draft EIS). 1. Evaluate the source. Anyone can publish anything on the Internet. This makes Internet sources suspect, unless the source is a reputable authority on the subject, such as the World Health Organization (WHO) or the International Commission on Non-Ionizing Radiation Protection (ICNIRP). Likewise, not all scientific journals are of the same caliber. Some journals, such as the Journal of Physical Chemistry, have stringent requirements for publication as well as a rigorous peer-review system to ensure the validity and quality of the articles published. Other journals have different standards. 2. All research should be based on sound scientific principles, control for all variables, and have an experimental design that includes a study and control group.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>3. The research should be repeatable. If a study reports findings that cannot be verified by an independent group, the results and conclusions are suspect.</p> <p>4. The research should have a relatively large sample size. A large sample size helps to ensure the applicability of the results. In other words, a small sample size (20 people or less, for example) makes the results and conclusions of the study difficult to generalize to the entire human population. Similarly, anecdotal evidence from one person may be relevant to that one person only, and not to the entire human population. On the other hand, the larger the sample size (300 or more people, for example), the more applicable the results may be to a similar population. That said, the Draft EIS did discuss the research related to health and EMF from reputable sources, including studies that evaluated long-term exposure. Please see the following sections: 1. <b>Section 3.15.2, Electromagnetic Fields, Heath Effects of EMF:</b> "Reputable authorities on the subject of EMFs include the WHO and the ICNIRP. The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." 2. <b>Section 3.15.4.1.1, Electromagnetic Fields, National/International:</b> "The ICNIRP has adopted EMF exposure guidelines and standards in the extremely low frequency and radiofrequency bands of the EM spectrum. The ICNIRP standards address EMF exposure by the general public and workers in an occupational setting and are widely used within the U.S. and abroad. The ICNIRP recommendations are based on the epidemiological data available from verifiable research studies. Based on the ICNIRP's work, the European Union has adopted these same standards for EMF exposure." 3. <b>Section 3.15.4.2, Electromagnetic Fields, Literature Review:</b> "HSR is used in</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
				many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..." Also, as stated in the Draft EIS, <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> , EMFs fall off markedly with distance from the source. EMFs are expected to be at ambient levels within 500 feet of the alignment. "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."
R Richards	2/19/2018	Email	In order for the final EIS to be approved these points must be considered. HSR can not damage Madison county or any of its residents. It must not shut down any of its roads or facilities or prevent county residents from accessing their land, properties as they currently have. The HSR must not intercept police, fire, EMS.	Refer to NE-1, SS-23, TR-8 and TR-10.
R Richards	2/19/2018	Website	The EIS states that HSR will need more elect. than the transmission lines can provide and more poles and lines will be needed. Who will pay for this added cost? Will this extra cost raise my elect bill?	Refer to EU-4 and EU-5.
R Richards	2/21/2018	Email	The DEIS states that there will be an increase in flooding, poor water quality, erosion, pollution, air quality, closed roads, and HSR will ruin the beauty of the country side. Why would FRA allow this?	Refer to BA-7, NE-1, NE-2 and NE-9.
R Richards	2/21/2018	Email	There are too many inconsistencies in the DEIS for it to be valid. illegal access to land and these inconsistencies are not acceptable.	The Draft EIS followed all requirements of the National Environmental Policy Act (NEPA) for conducting a Draft EIS. Furthermore, FRA did not survey any land where access was not granted.
R Richards	2/21/2018	Email	What research has the DEIS done on the effects of 5 mile Electromagnetic Field ? How will this effect the health of land owners?	You have raised 4 questions, which are individually discussed below. 1. There is no five mile electromagnetic field (EMF). EMFs follow the inverse-square law, as stated in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> : "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels." 2. EMFs from the Project are expected to diminish to ambient levels within 500 feet of the alignment. This is combined with the conclusions of reputable authorities on EMF, more specifically the International Commission on Non-Ionizing Radiation Protection (ICNIRP), that there is no compelling evidence that EMFs are causally related to adverse health effects (please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> ). There is no expected adverse effect on health to land-owners in the vicinity of the alignment. 3. EMFs from the Project are only present when the train is present. There are no EMFs present at a given location when the train is not

The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects. "</p> <p><b>2. Section 3.15.4.1.1, Electromagnetic Fields, National/International:</b> "The ICNIRP recommendations are based on the epidemiological data available from verifiable research studies. ... While the guidelines are voluntary, the levels are designed to prevent potential health risks associated with EMF exposure."</p> <p><b>3. Section 3.15.4.1, Electromagnetic Fields, EMF Guidance Documents Review:</b> "Both the Institute of Electrical and Electronics</p>

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Submitted By	Date Submitted	Submission Type	Comment	Response
				Engineers (IEEE) C95.6 and C95.1 standards specify safety levels for occupational and general public exposure. ...The general public safety levels are intended to protect all members of the public (including pregnant women, infants, the unborn and the infirm) from short-term and long-term exposure to EMFs. The safety levels are set at 10 to 50 times below the levels at which scientific research has shown harmful effects may occur, thus incorporating a large safety factor." <b>4. Section 3.15.4.2, Electromagnetic Fields, Literature Review:</b> "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..."
R Richards	2/28/2018	Email	FEMA flooding maps Most of the information in the DEIS is grossly under represented and even omitted to get a favorable decision from FRA.	Refer to FP-1.
R Richards	2/28/2018	Email	There is no way anyone person can read and digest the information in the DEIS in the amount of time the FRA allowed to make comments We need more time.	Refer to PI-3.
R Richards	2/28/2018	Email	Sid Miller The Texas Commissioner of Agriculture is opposed to the bullet train for the reason it would harm the future of agriculture.	Refer to LU-2 and LU-11.
R Richards	2/28/2018	Email	Why are the ridership numbers in the DEIS 7.2 million different from the numbers quoted by Tx Dot .7 to 2.7 million and an Independent Expert 1.4 million so far off? Is FRA drinking the Kool Aid that TCR,TCP passing around? DEIS is a joke.	Refer to AQ-7, GN-2 and NE-1.
R Richards	3/7/2018	Email	TCR is starting a business 20 million dollars in debt (before they make one red cent) This is not good business. The experts say it will fail. When that happens one of two things will take place the tax payers will have to ball out or Japan will step in and get it all to cover their loan leaving land owners high and dry.	Refer to GN-4, NE-1 and NE-2.
R Richards	3/7/2018	Email	I know for a fact that some of the information obtained for this DEIS was obtained illegally I caught Corps Of Eng, and other reps of TCR on my property without permission, because of this this report should be null and void.	Refer to NE-8.
R Richards	3/7/2018	Email	Interstate 45 was an option until TCR said that it was not cost effective for them. FRA in the beginning leaned towards 45 until TCR decided it was the best route for them. They should have no say in the DEIS, we all know that have and will continue. This is bad for land owners and bad for Texas.	Refer to BA-9 and NE-1.
R Richards	3/7/2018	Email	TCR touts itself as a Texas company yet of the invested money comes from the Japan Bank of International Cooperation. How do you explain that?	Refer to NE-1.
R Richards	3/7/2018	Email	TCR's option agreement (which we did not sign) offered 25% of the payment with the remainder to follow in 3 years. Under the typical option contract, could TCR still chose to condemn our property instead Of exercising it option? We are told by several lawyers that if the proposed rail goes in to bankruptcy(as many economist think) we might well get pennies on the dollar according to the bankruptcy laws. How can you guarantee this would not happen?	Refer to ED-2, NE-1 and NE-2.
R Richards	3/7/2018	Email	If TCR has its way the species most threatened to become extinct is Texas land owners. Do you have a comment on that?	Comment noted.
R Richards	3/7/2018	Email	Just wondering why TCR has blocked me from their facebook page. I guess they don't like the questions I have been asking them for the last 4 years with no answers.	Refer to ED-1 and NE-1.
R Richards	3/7/2018	Email	How much square acreage of the proposed right of way have you surveyed? How was the environmental survey accomplished without access to our land?? Better yet, how can you conduct an accurate environmental impact analysis without having surveyed or had access to a large chunk of the lineal mileage of the proposed right away?	Refer to GN-1 and NE-8.
R Richards	3/7/2018	Email	For those landowners whose land is not taken but is close by this proposed project will greatlym the value of their property. How does TCR propose to compensate them, if at all?	Refer to VA-1.
R Richards	3/7/2018	Email	For citizens who make a living from the land how will you compensate them for the loss of income? If you don't plan to compensate then why would you not?	Refer to ED-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
R Richards	3/7/2018	Email	Will they condemn both surface and mineral rights and if so why do they do why would they need mineral rights. Sounds like a land grab.	Refer to ED-4.
R Richards	3/7/2018	Email	In order to condemn natural resources, such as soil, with in a two mile swath, do they have to have the power of eminent domain to do that? What types of resources will TCR take.?	Refer to ED-1, LU-14.
R Richards	3/7/2018	Email	We have heard TCR plans to condemn natural resources, such a soil eithin a two mile swath either side of the proposed rail. Is this true?	Refer to ED-1 and LU-14.
R Richards	3/7/2018	Email	Other than a piece of paper claiming such, how is TCR a Railroad Company?	Refer to ED-1.
R Richards	3/7/2018	Email	How does TCR have eminent domain? Can you point me to an authoritative document that establishes TCR has been determined to have the right to eminent domain?	Refer to ED-1.
R Richards	3/7/2018	Email	How can TCR continue to pursue this project when it has not established the right to eminent domain?	Refer to ED-1.
R Richards	3/7/2018	Website	TCR has stated that Interstate 45 is congested. Those of us who travel it knows this is simply not true. How do you explain this? We have a study that says the opposite from the Reason Foundation an article by Baruch Feigenbaum Titled "Texas High Speed Rail" Caution Ahead. "	Refer to GN-3.
R Richards	3/8/2018	Email	The DEIS clearly states that no matter what measures TCR takes to minimize the impact it will damage the environment.	Refer to NE-9.
R Richards	3/8/2018	Email	What is FRA's solution to the 100\500 year flood plain issue. This construction will increase the chance of floods. The DEIS states that vact (sic). As we all know Texas floods, will HSR cause another Harvey type flood and will FRA and TCR be responsible for the cost of any of the damage?	Refer to FP-1, SS-17, WW-1 and WW-2.
R Richards	3/8/2018	Email	Why is the 145 or BNSF route not being considered. If it is cost then that is TCR problem. Routes would still need a ROW but would have less impact on the farm and ranch land.	Refer to BA-9 and BA-10.
R Richards	3/8/2018	Email	TCR frequently cites the need of only 100 ft. which Robert Eckles original statement was 80 ft. the DEIS ranges 70 to 300 ft. with an average of 275. Why such a big difference?	Refer to LU-12.
R Richards	3/8/2018	Email	Why have the number of acres required more than doubled from what we were originally told. Why has it gone from 3000 to more than 8000?	Refer to BA-3, LU-9 and LU-14.
R Richards	3/8/2018	Email	In order for the final DEIS to be approved these points should be considered. Better yet they must not damage, any county, can not harm any county residents, It must not shut down any roads or facilities or prevent county residents from accessing their land properties as they currently have.	Refer to SS-23, TR-7 and TR-8.
R Richards	3/8/2018	Email	How can you conduct an accurate environmental impact analysis without having surveyed or had access to a large chunk Of the lineal mileage Of the proposed ROW?	Refer to GN-1 and NE-8.
R Richards	3/8/2018	Email	How does FRA andTCR safety concerns propose to make HSR safe from hogs?	Refer to SS-2 and SS-12.
R Richards	3/8/2018	Email	In the last four years we ( the land owners affected by this project) have yet to get a straight answer from TCR,TCP, TxDOT, FRA. The only answer is I don't know Why don't you know? Is this why the DEIS is flaued.	Refer to ED-1 and PI-1.
R Richards	3/8/2018	Email	What are the benefits for the 8 counties out of the 10? Seems to me that the 8 will have no benefits except increased floods, poor water quality, erosion and pollution, poor air quality, closed roadways and HSR will ruin the scenic resources.	Refer to AQ-1, AS-1, FP-1, SC-19, SS-16, TR-8, WW-1, WW-6. <b>Section 3.2, Air Quality and Section 3.21, Greenhouse Gas Emissions</b> contain detailed analysis of potential air quality impacts associated with construction and operation of the Build Alternatives. Both sections determined there would not be significant, long term adverse impacts to air quality, and a net reduction in both major pollutants and greenhouse gases. Temporary adverse air quality impacts associated with construction were discussed, and mitigation measures outline at the end of <b>Section 3.2, Air Quality</b> .
R Richards	3/8/2018	Email	Explain how an elderly couple who has been kicked off their land and out of their home can start over. Or does FRA and TCR care?	Refer to ED-2.
R Richards	3/8/2018	Email	If TSA is not going to be involved in screening passengers what steps will be taken to insure that the riders will be safe?	Refer to SS-9.
R Richards	3/8/2018	Email	TCR does not have eminent domain and never will.	Refer to ED-1.
R Richards	3/8/2018	Email	Another Hagy lie we have purchased 30% of parcels across the route, a parcel is a false measurement. NO more than 20% is under contract and the rest Of Of us won't even let TCR on our property to survey. We will never sell, NEVER.	In this analysis, a parcel represented individual pieces of taxable property. The parcel data was collected from the ten county appraisal districts
R Richards	3/8/2018	Email	TCR says there would be very minimal impact to EMS response time. The DEIS did only a qualitative analysis based on road changes with no understanding of the increased traffic load during Construction, but concludes there will be ER time impacts of high, medium, low by emergency service areas. It says times will increase and modeling would occur before construction with a mitigation step turned over to local jurisdiction to resolve any impacts. So TCR delivers to the public increases in emergency response times and we have to fix it. So when someone dies because of the increase in response times TCR and FRA will be charged with murder.	Refer to SS-23.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
R Richards	3/8/2018	Email	David Hagy says we have never had a reported case of surveyors trespassing without permission. Their Office was contacted three times when they were caught on my property.	Refer to NE-8.
R Richards	3/8/2018	Email	David Hagy (TCR) says we are grade separated, we do not cross a road, and we are always over the road. DEIS states different, 212 to 226.	Refer to TR-8.
R Richards	3/8/2018	Website	Where will the electricity come from to power the proposed trains (HSR) The DEIS states that there will be a need for more power than now available. Where will this electricity come from, since two power plants in our area have been recently shut down, and will this increase in need cause prices to go up?	Refer to EU-4 and SS-7.
R Richards	3/8/2018	Website	Please tell me where you plan to detour along my property and around my property are stating permanent disruptions. Where do you plan on detouring this traffic to my land and home?	Refer to TR-6, TR-7, TR-8 and TR-10. No address was attached to this comment. Responder is unable to ascertain exact property location.
R Richards	3/9/2018	Email	TCR does not have eminent domain then why did the FRA start the process Of DEIS?	Refer to ED-1 and NE-1.
R Richards	3/9/2018	Email	Have heard that TCR will take natural resources. What type of resources will TCR take?	Refer to NE-9.
R Richards	3/9/2018	Email	How can TCR tell the news media 42,000 people voted for the train When yKevin Wright told us on 3/5/18 (Houston Meeting) That he has stacks of envelopes and that none Of the comments will be opened until after the comment period(midnight on 3/9/18) is closed.	Refer to PI-1, PI-4.
R Richards	3/9/2018	Email	DEIS does not address TCR plans to condemn natural resources, such as soil & water within 2 mile Of either side Of the proposed rail 152	Refer to LU-14.
R Richards	3/9/2018	Email	IF TCR has its way the Texas landowners will be the most threatened species. I guess they don't like to eat.	Refer to LU-2.
R Richards	3/9/2018	Email	TCR has stated the 145 is congested. NOT TRUE We travel to Houston weekly and the only congestion is inside 610 loop. The same congestion the train clients will run into. 90-120 min from Dallas to Houston and another 120 min to get to your destination. Where in the DEIS report is this matter addressed?	Refer to PN-3. Each major road was inventoried for daily traffic volumes, existing travel patterns and geometric conditions. For each crossing, surrounding development and transportation plans, environmental and engineering constraints and the availability of alternative routing was considered in order to propose revised configurations of the existing infrastructure relative to the Build Alternatives included in the Final EIS. Data related to traffic volumes can be found in <b>Section 3.11.3 Transportation, Methodology</b> and <b>Section 3.11.4, Transportation, Affected Environment</b> of the Final EIS.
R Richards	3/9/2018	Email	The DEIS does not address the safety level when the train is near schools?	Refer to SC-8, SS-12 and SS-13.
R Richards	3/9/2018	Email	The number of acres needed by each corridor is shown in the DEIS as 8,000. What happened to only needing 3,000? TCR has had plenty of time to get there ducks in a row.	Refer to LU-9 and LU-14.
R Richards	3/9/2018	Email	Did the tax payers pay for this DEIS report???	Refer to NE-5.
R Richards	3/9/2018	Email	How was a survey accomplished without access to our land? The maps in the DEIS is 4 years old.	Refer to GN-1 and NE-8.
R Richards	3/9/2018	Email	How will TCR compensate the lost of income from land owners and business? The DEIS doe not cover this matter?	Refer to ED-2, SC-21, TR-6 and VA-1.
R Richards	3/9/2018	Email	What effect will this have on the students who attend the schools 00 yards or less from this train? The DEIS does not cover this matter?	Refer to SC-8.
R Richards	3/9/2018	Email	Why is the FRA involved if TCR is not a train?	Refer to NE-1.
R Richards	3/9/2018	Email	Why did Harris County get another meeting and persons being effective only got less than 24 hr notice?	Refer to PI-10.
R Richards	3/9/2018	Email	Why are we taken up more land for a rail when we have Amtrak with passanger cars that goes 180 MPH?	Refer to NE-1 and PN-3. Amtrak does not operate direct service between Dallas and Houston.
R Richards	3/9/2018	Email	Did or did not FRA choose the utility route because TCR wanted a stop in Roan's prairie to satisfy their investor, who owns the land?	Refer to BA-5 and GN-7.
R Richards	3/9/2018	Email	How can TCR tell the news media 42,000 people voted for the train When Kevin Wright told us On 3/5/18 (Houston Meeting) That he has stacks of envelopes and that none Of the comments will be opened until after the comment period(midnight on 3/9/18) is closed.	Refer to PI-1, PI-4.
R Richards	3/9/2018	Email	HSR will not connect ideas and commerce in a productive and reliable way for Madison county. Our rural county is two hours from being able to get on the train, and holds zero economic value for our hotels, restaurants, and gas stations.	Refer to SC-15, SC-19 and VA-1.
R Richards	3/9/2018	Email	This land is mine and no one is going to take it from me and my family. Does not matter what you decide the fact still remains that the DEIS is null and void.	Refer to NE-1.
R Richards	3/9/2018	Email	Charles Pickett was offered \$15,000 for his portion of the land. He and his family just built the house they live in and are trying to run a small ranch, he said, "TCR is rude, inconsiderate, and just don't care." HIS land would be land locked and he will not be able to get to his cattle.	Refer to ED-2, LU-11 and NE-1.
R Richards	3/9/2018	Email	No HSR William Shelton opposes the HSR for personal reason. His family came here in 1846 and the family home sits directly in the path Of this rail. He said, I stand to lose the ancestral home that was built in 1847" "No monetary value you can compensate me for my personal and financial investment I've made into this home" NO HSR Just say no to HSR.	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
R Richards	3/9/2018	Email	Native Texan Linda Timmerman and 17 year resident of Freestone County spoke of her great grandparent's ranch in Dallas that was taken by eminent domain and now has a gas station sitting on the land. She said, "Personally, I lived the financial struggle, the heartbreak, the panic, and the sense of violation that comes with losing a part of our heritage."	Refer to ED-2.
R Richards	3/9/2018	Email	This project must not go forward. No HSR.	Comment noted.
R Richards	3/9/2018	Email	How can a family of four be expected to pay 1600 dollars to RT on the train when they can drive for less than one hundred dollars.	Refer to GN-2 and SC-3.
R Richards	3/9/2018	Email	It took the FRA more than 3 years to complete the DEIS then why did the land owners only get 75 days to digest the content of the almost 6000 pages. ?	Refer to PI-3.
R Richards	3/9/2018	Email	Mounting evidence continues to build throughout the integrated health and medical communities regarding the harmful effects of EMF exposure. Constant and layered exposure to the compounding set of MP radiation that surrounds us may seriously be compromising our health and living in a safe environment. High speed multiple unit electric generate high frequency electric fields, low frequency magnetic fields, and high frequency wide band EMF when running. Even though results of test were within permitted levels the possibility of long term health effects should be studied.	<p>The literature and Internet contain myriad reports of adverse health effects of electromagnetic field (EMF) exposure. Anyone can find reports claiming that EMF exposure can cause anything from rashes to cancer, and everything in between. For the purposes of this work effort, the following guidelines were used when determining whether to include published materials in the Draft Environmental Impact Statement (Draft EIS).</p> <ol style="list-style-type: none"> <li>1. Evaluate the source. Anyone can publish anything on the Internet. This makes Internet sources suspect, unless the source is a reputable authority on the subject, such as the World Health Organization (WHO) or the International Commission on Non-Ionizing Radiation Protection (ICNIRP). Likewise, not all scientific journals are of the same caliber. Some journals, such as the Journal of Physical Chemistry, have stringent requirements for publication as well as a rigorous peer-review system to ensure the validity and quality of the articles published. Other journals have different standards.</li> <li>2. All research should be based on sound scientific principles, control for all variables, and have an experimental design that includes a study and control group.</li> <li>3. The research should be repeatable. If a study reports findings that cannot be verified by an independent group, the results and conclusions are suspect.</li> <li>4. The research should have a relatively large sample size. A large sample size helps to ensure the applicability of the results. In other words, a small sample size (20 people or less, for example) makes the results and conclusions of the study difficult to generalize to the entire human population. Similarly, anecdotal evidence from one person may be relevant to that one person only, and not to the entire human population. On the other hand, the larger the sample size (300 or more people, for example), the more applicable the results may be to a similar population. That said, the Draft EIS did discuss the research related to health and EMF from reputable sources, including studies that evaluated long-term exposure. Please see the following sections: 1. <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF:</b> "Reputable authorities on the subject of EMFs include the WHO and the ICNIRP. The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-</li> </ol>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." 2. <b>Section 3.15.4.1.1, Electromagnetic Fields, National/International:</b> "The ICNIRP has adopted EMF exposure guidelines and standards in the extremely low frequency and radiofrequency bands of the EM spectrum. The ICNIRP standards address EMF exposure by the general public and workers in an occupational setting and are widely used within the U.S. and abroad. The ICNIRP recommendations are based on the epidemiological data available from verifiable research studies. Based on the ICNIRP's work, the European Union has adopted these same standards for EMF exposure." 3. <b>Section 3.15.4.2, Electromagnetic Fields, Literature Review:</b> "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..." Also, as stated in the Draft EIS, <b>Section 3.15.4, Electromagnetic Fields, Methodology</b>, EMFs fall off markedly with distance from the source. EMFs are expected to be at ambient levels within 500 feet of the alignment. "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."</p>
R Richards	3/9/2018	Email	Car ownership is 25%-50% higher in Dallas and Houston.	Comment noted.
R Richards	3/9/2018	Email	Airports are with 7 miles of downtown in successful HSR and there is transportation service from train station to air ports.	Refer to BA-4, BA-12.
R Richards	3/9/2018	Email	2\3 of HSR passengers come from existing transit service share will have to come from car and air service. I just don't see Texans giving up their cars.	Refer to GN-2.
R Richards	3/9/2018	Email	Cost vs. Ridership (successful HSR in countries where land is cheaper and easy to acquire costs cheaper.	Refer to GN-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
R Richards	3/9/2018	Email	The FRA needs to examine, feasibility of constructing TCR proposed HSR. The Cost, Ridership trends, Dallas is well served by aviation and bus industries. Travel trends, city density, car ownership. Even though TCR has said they will require no taxpayer subsidies they are planning to apply for Railroad Rehabilitation and Investment Financing (RRIF) loans (taxpayer dollars) just another lie.	Refer to GN-2, NE-1, GN-4, SC-22, BA-4 and PN-3.
R Richards	3/9/2018	Email	He said countries successful high speed rail projects had higher populations densities, higher gas prices, higher rates of public transportation use and lower rates Of car ownership. 'so it would not make any sense to have a high speed rail train in most areas of the US" The geography is different and other factors are just two different. The only dream a appropriate to this whole Ill - conceived project is that it will never be completed yet alone become financially viable.	Comment noted.
R Richards	3/9/2018	Email	FRA your DEIS study tell us one thing HSR will hurt the environment, disrupt peoples lives and do nothing for 8 Of the 10 counties it transverses.	Refer to NE-9 and SC-19.
R Richards	3/9/2018	Email	I understand the benefits for Dallas and Houston, why would TCR, FRA, punish the rest for the benefit of Dallas and Houston? This project would lower property values for these 8 counties and raise taxes in order pay for road upkeep and increased cost Of EMS and Fire, Police.	Refer to SC-19, SS-26, TR-7 and VA-1.
R Richards	3/9/2018	Email	TCR has never been able to justify their ridership numbers. I understand 89% of travel between Dallas and Houston is by car. Does FRA and TCR really think or done the research if those that drive can afford to fly or ride the rail? Experts and TxDOT both say the numbers are way out Of line.	Refer to GN-2.
R Richards	3/9/2018	Email	ridership numbers are in question as to correct	Refer to GN-2.
R Richards	3/9/2018	Email	God made us stewards of our land why would we want to destroy it. ? No matter what measures FRA,TCR, take this train will effect 100\500 year flood plain, scenic resources, water quality, erosion, pollutants, air quality, why would FRA allow this?	Refer to NE-1 and NE-9.
R Richards	3/9/2018	Email	Why would we want a 50+ technology train in Texas. Why would FRA even consider approving this train. This train will not be built in the USA only assembled.	Refer to BA-4 and TC-2.
R Richards	3/9/2018	Email	What kind of research has DEIS done on the 5(five) mile electromagnet field? How will this effect the health Of land owners living within the 5 Mile radius? Also will it effect the health Of people driving under the bridges or driving by the area daily? Even though the effects may be within the limits what are the long term health effect. NO research has been done.	<p>You have raised 4 questions, which are individually discussed below.</p> <ol style="list-style-type: none"> <li>1. There is no five mile electromagnetic field (EMF). EMFs follow the inverse-square law, as stated in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b>: "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."</li> <li>2. EMFs from the Project are expected to diminish to ambient levels within 500 feet of the alignment. This is combined with the conclusions of reputable authorities on EMF, more specifically the International Commission on Non-Ionizing Radiation Protection (ICNIRP), that there is no compelling evidence that EMFs are causally related to adverse health effects (please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b>). There is no expected adverse effect on health to land owners in the vicinity of the alignment.</li> <li>3. EMFs from the Project are only present when the train is present. There are no EMFs present at a given location when the train is not physically present at that location. Even when the train is present, the EMFs generated are not expected to be above the limits set forth by the ICNIRP. Therefore, the EMFs are not expected to adversely affect people driving under bridges or passing the area on a daily basis.</li> <li>4. A significant amount of research has been done on long-term effects of EMF exposure, as reported in <b>Section 3.15, Electromagnetic Fields</b>. Please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b>: "Reputable authorities on the subject of EMFs include the World Health Organization and the ICNIRP. The</li> </ol>

The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure."</p> <p>Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas. "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects. " Please also note that the principle of the ICNIRP has been to build in "safety factors" to their published guidelines. For example, once the ICNIRP determined the level of EMF strength necessary to observe an effect, the ICNIRP then applied a reduction factor of 5 as a means of arriving at a precautionary value for occupational exposure. The value was reduced by an additional factor of 5 for public exposure, arriving at the extremely cautious values for EMF restriction discussed in the Draft EIS. Thus, the ICNIRP values have built-in precautionary levels. Please also see <b>Section 3.15.4.2, Electromagnetic Fields, Literature Review:</b> "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..."</p>
R Richards	3/9/2018	Email	<p>How was a survey accomplished without access to our land?                      The maps in the DEIS is 4 years old. Does not show the two homes, 2 cabins, well house or the pens for the animals.                      TCR does not work with the land owners, I have sent e-mails also made phone calls and to date no reply.                      If they lie about this what else are they keeping from the public while lining their pockets..</p>	Refer to GN-1 and NE-8.
R Richards	3/9/2018	Website	Where in the DEIS do i find about building a train on or over a pipeline? not be done? Seaway told us that it could	Refer to EU-2.
R Richards	3/9/2018	Website	The DEIS references " private property access re. configurations," Per the DEIS all roads will be closed to my property.	Refer to TR-10.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
R Richards	3/9/2018	Website	I see nothing in the DEIS that states TCR can build on or over pipelines. Pipelines criss cross the whole state Of TEXAS and 2 of those are on my land.	Refer to EU-2.
R Richards	3/9/2018	Website	I see nothing in the DEIS that addresses the congestion in Dallas and especially Houston. I think this needs to be in place before they start connecting the cities.	Refer to PN-3.
R Richards	3/9/2018	Website	Progress is great BUT we have rights and there is 45 or existing tracks. Why does the DEIS not speak of these options?	Refer to BA-9 and BA-10.
R Richards	3/9/2018	Website	Per DEIS there will be permanent road closure. Per the map in the DEIS over 200 roads will be closed permanently. This will cause my land to be land locked.	Refer to TR-8 and TR-10.
R Richards	3/9/2018	Website	No HSR How will the construction of HSR and the effects, effect the aquifers that it will transverse? There is going to be an increase in erosion, pollution, and flooding. This no doubt will effect the surface water and ground water. None of this should be allowed to continue. Stop HSR in its tracks.	Refer to FP-1, WW-1 and WW-2.
Ron Richards	2/6/2018	Oral	Well, that was a hard act to follow. That was my wife. My name is Ron Richards, and I am more than a hundred percent against high-speed rail. And all I ask you-all is don't drink the Kool-Aid. We've been dealing with Texas Central Railroad since early in January of 2015 and, like she says, it's nothing but lies. Fra, TCR, and the DEIS has omitted critical information about the health and safety of the people of Texas. According to the DEIS, the pipeline along 290 will need to be moved. To accomplish this, TCR must apply to the FERC, the emergency government regulation commission, and the PHMSA must also be involved, and a new DEIS will have to be conducted using more tax dollars. Why were the FERC and PHMSA were not consulted in the current DEIS. This is just another example of poor business plan and poor planning for FRA's part. FEMA flooding maps. Most of the information in the report is grossly underrepresented, and even admitted to get a favorable decision from FRA. We need to unite, stand up, as one to keep our land and our families safe. Facts about HSR. Electromagnetic field interference. No studies have been done in this report. And those living within a five-mile radius of the tracks, what about those living in this five miles? Also driving under the bridges or driving by on a regular basis, what are the health dangers? The noise pollution. What are the health dangers related to the train passing every 15 to 20 minutes day after day. What are the health dangers to our children? Trains passing our schools and day after day, and hospitals. Decreased land values. This will increase your taxes. Is this what we want? This is bad for the environment. And I'm running out of time, but it's going to affect the water, the scenic resources, shut down roadways, and from what I understand it will impede the EMS, fire, and police. It will also -- the county will be responsible for re-routing any roads that are closed down and maintaining those. Can your budget stand that increase? With decrease in tax -- in land values, it's going to increase your taxes. Thank you. And please don't drink the Kool-Aid. If you -- make TCR explain everything, because you're going to get a different answer every time, from what we've seen from our town meetings.	Refer to EU-1, EU-2, FP-1, NV-1, TR-6, TR-7, TR-8 and VA-1. You have raised 4 questions, which are individually discussed below. 1. There is no five-mile electromagnetic field (EMF). EMFs follow the inverse-square law, as stated in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> : "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels." 2. EMFs from the Project are expected to diminish to ambient levels within 500 feet of the alignment. This is combined with the conclusions of reputable authorities on EMF, more specifically the International Commission on Non-Ionizing Radiation Protection (ICNIRP), that there is no compelling evidence that EMFs are causally related to adverse health effects (please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> ). There is no expected adverse effect on health to land owners in the vicinity of the alignment. 3. EMFs from the Project are only present when the train is present. There are no EMFs present at a given location when the train is not physically present at that location. Even when the train is present, the EMFs generated are not expected to be above the limits set forth by the ICNIRP. Therefore, the EMFs are not expected to adversely affect people driving under bridges or passing the area on a daily basis. 4. A significant amount of research has been done on long-term effects of EMF exposure, as reported in Section 3.15. Please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> : "Reputable authorities on the subject of EMFs include the World Health Organization and the ICNIRP. The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions"

				<p>(i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas. "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." Please also note that the principle of the ICNIRP has been to build in "safety factors" to their published guidelines. For example, once the ICNIRP determined the level of EMF strength necessary to observe an effect, the ICNIRP then applied a reduction factor of 5 as a means of arriving at a precautionary value for occupational exposure. The value was reduced by an additional factor of 5 for public exposure, arriving at the extremely cautious values for EMF restriction discussed in the Draft EIS. Thus, the ICNIRP values have built-in precautionary levels. Please also see <b>Section 3.15.4.2, Electromagnetic Fields, Literature Review</b>: "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. Ronald Richards	1/29/2018	Handwritten	Why have the Number of Acres required have more that doubled from what we were originally told Why has it gone from 3000 to 8000?	Refer to BA-3, LU-9 and LU-14.
Ronald Richards	1/29/2018	Handwritten	Robert Eckels originally told us in 2014 that they would not have the security that the Airlines have. (No TSA) Hard to see how that will not Be the case and if it will Be Secure, What steps will Be taken to make sure all safety regulations will Be completed. NO Build Op	Refer to SS-9.
Ronald Richards	1/30/2018	Handwritten	FAQ's: #21 No one contacted myself OR so many of my other land owners of the scoping meetings in 2014. TCR has been less than honest during the process.	Refer to NE-1 and PI-1.
Ronald Richards	1/30/2018	Handwritten	Will the project require abandonment or closure of any oil or gas wells? Relocation or closed who will bear the cost of oving gas/oil? How will this effect the cost of gas at the pump? And will FRA (using our tax dollars) and TCR kick in to keep the pump prices down?	Refer to PI-1, SS-18 and SS-23.
Ronald Richards	1/30/2018	Handwritten	Question #3 on the FAQ's: The boondoggle answer you gave is mumbo jumbo bs. They came on my land without permission, I caught them at least three times. Next time I will hold them for law enforcement.	Refer to NE-8.
Ronald Richards	1/30/2018	Handwritten	Why is I-45 Route not the prime route? I know cost. This is TCR problem, should be no concern to FRA DEIS.	Refer to BA-9.
Ronald Richards	1/30/2018	Handwritten	What is FRA's solution to the 100/500 year flood plain issue? As stated in the DEIS that the flood plain (in plain words-not the boondoggle words EIS uses) will be an issue. When high speed rail TCR builds the rail it will cause more flooding. Will HSR cause another Harvey type flood? When this occurs will FRA & TCR be responsible for the cost of any damage?	Refer to FP-1, SS-17, WW-1 and WW-2.
Ronald Richards	1/30/2018	Handwritten	HOGS? There are more than 2.6 million feral hogs in the state of Texas (Texas Parks and Wildlife). Has FRA included this in their DEIS? Hogs are unstoppable. Farmers and ranchers have been trying to keep them off their land for years. How does FRA safety concerns propose to make HSR safe from hogs?	Refer to SS-2 and SS-12.
Ronald Richards	1/30/2018	Handwritten	Property Rights: Why would FRA approve a project that would take away our rights as landowners?	Refer to ED-1 and NE-1.
Ronald Richards	1/30/2018	Handwritten	FRA Your DEIS study tells us one fact: HSR will hurt the environment beyond repair and FRA and TCR do not give a care. Stop HSR in it's tracks.	Refer to NE-1 and NE-9.
Ronald Richards	1/30/2018	Handwritten	How will HSR effect the aquifers that it will surely transverse. There will be increased pollution, will this not effect our drinking water? And will TCR and FRA be held responsible?	Refer to WW-1 and WW-2.
Ronald Richards	1/30/2018	Handwritten	How does DEIS address the impact on wildlife? There are hunting seasons for a reason. The HSR will (notice I said will as per Texas Park and Wildlife) the breeding habits of all wildlife. (Bald eagle, derr just to name two). How will DEIS address this? And please don't insult me by saying you will mitigate around.	Refer to NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures</b> and <b>Permitting and Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Ronald Richards	1/30/2018	Handwritten	What kind of research has FRA DEIS on the 5 mile electromagnetic field? How will this affect the health of people living within the 5 mile radius? Also, will it affect the health of people driving under the bridges or driving by the area daily? Can FRA answer these questions or do they really care?	You have raised 4 questions, which are individually discussed below. 1. There is no five mile electromagnetic field (EMF). EMFs follow the inverse-square law, as stated in <b>Section 3.15.4, Electromagnetic Fields, Methodology</b> : "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels." 2. EMFs from the Project are expected to diminish to ambient levels within 500 feet of the alignment. This is combined with the conclusions of reputable authorities on EMF, more specifically the International Commission on Non-Ionizing Radiation Protection (ICNIRP), that there is no compelling evidence that EMFs are causally related to adverse health effects (please see <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> ). There is no expected

Ronald Richards	1/30/2018	Oral	<p>My name is Ronald Richards. That was my daughter a minute ago. I am going to try not to be emotional. I have a whole list and I only maybe 1/1000th into this report and I was going to go over some of the things but TCR, I know where I can put it and the sun don't shine there. Me and my wife brought property in Madison County and we drove here and we drove to Corsicana last night. We came up here tonight to support you all. We are inviting you to Madison County. They changed our venue from a 600 seat to a 300 seat in the Kimbrough Center. I want to fill that street behind the courthouse with people and show TCR and FRA just where we stand and where we stand is no high-speed rail. Let's hear it.Let's hear it. We bought property six years ago. My daughter's husband retired from the military. I served in the military. I grew up without a dad because he gave it all in World War II just so we have property rights. We have rights as citizens. Even my step-dad landed on Omaha beach on D-Day plus three was wounded and went the rest of his life couldn't raise his arm any higher than this. Fighting for what? Our rights. No way in Hades I am going to be giving up my property. Not anybody is going to take it. I don't want to say what I'm thinking. People, we need support. We need tell TCR where to put their train. That 50 plus-year-old technology. I don't see how anybody could approve it and it's not going to be built in the United States. It is going to be assembled here but the Japanese in 1938 we give scrap</p>	<p>Refer to BA-4, PI-11, TC-2 and TC-6.</p>

			metal to the Japanese and what did they do it? On December 9, 1941, they brought it back to us is bombs. I would drop the mike but it might break it.	
Ronald Richards	1/31/2018	Handwritten	In the Dallas to Houston HSR FAQ's: Question #2 Why is the Houston Historic District/ HHealthWorks Hosp/ Houston TCR Archaeology site more important that the families that will have to be mitigated? I just guess you don't care about all the lives this will disrupt/ruin.	Refer to CR-13. The socioeconomic impacts of the proposed project are considered separately in <b>Section 3.14, Socioeconomics and Community Facilities</b> of the Final EIS.
Ronald Richards	1/31/2018	Handwritten	In the last 4 years We (the land owners Affected By this Project) have yet to get a straight Answers From TCR, TCP, Tx Dot, FRA. The only answee is Always?? "I don't know." Why don't you know?	Refer to NE-1 and PI-4.
Ronald Richards	1/31/2018	Handwritten	Why has the Electromagnetic Interference been studied? To access the harm it may do to the health of our children and adults?	Electromagnetic Interference (EMI) was part of <b>Section 3.15, Electromagnetic Fields</b> . EMI is the interference that can be generated between two electronically-operated pieces of equipment, which can adversely affect how one or both pieces of equipment operates. For this study, the focus was on whether the high speed rail (HSR) could adversely impact sensitive electronic equipment used at commercial, industrial, scientific and medical facilities that may occur along the planned alignment, as discussed in <b>Section 3.15.1, Electromagnetic Fields, Introduction</b> , which states the purpose of assessing EMI. Please note that <b>Section 3.15.2, Electromagnetic Fields, Health Effects of EMF</b> does address research concerning electromagnetic fields (EMF) and health. The section includes the following passage: "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences with studying and making recommendations on EMF and human health. The National Institute of Environmental Health Sciences published reports outlining their interpretations and recommendations. The National Institute of Environmental Health Sciences concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects. "
Ronald Richards	1/31/2018	Handwritten	Why is most of the information in the DEIS grossly under-represented and even omitted to get a favorable decision from FRA?	Refer to GN-1.
Ronald Richards	1/31/2018	Handwritten	Why was FERC and PHMSA not consulted in the DEIS. This DEIS is invalid. FRA, TCR did not include PHMSA and FERC. It will take another 3-4 years for another EIS conducted by FERC and PHMSA to be completed. If they are going to move pipelines.	Refer to EU-1 and EU-2.
Ronald Richards	2/5/2018	Handwritten	FAQ's: In Question #8 #9 Do you really think that deer will cross under a tunnel? The bald eagle will leave and never return. How do you plan to mitigate that?	Refer to NR-3 and NR-6.
Ronald Richards	2/5/2018	Handwritten	If I make a living from the land how will FRA and TCR compensate my family for the loss of income? For those land owners whose land is not taken but is close by the HSR will greatly diminish the value of their property. How does FRA and TCR propose to compensate them, if not at all? And yes, if FRA approves this project we will hold them responsible for and losses we incur.	Refer to ED-1.
Ronald Richards	2/5/2018	Handwritten	What kind of interest will TCR condemn from landowners if they build the train? Will they condemn both surface and mineral rights? If so, why would they need the mineral rights in order to build a railroad?	Refer to ED-4.
Ronald Richards	2/5/2018	Handwritten	We have heard that TCR plans to condemn natural resources such as soil, water, within a two-mile swath either side of proposed rail? Is this true? Do they have o have the power of eminent domain to do that? What types of resources will TCR take?	Refer to ED-1 and LU-14.
Ronald Richards	2/5/2018	Handwritten	How does TCR have eminent domain? Can FRA point me to an authoritative document that establishes TCR has been determined to have the right to eminent domain? If hey do not then why?? Did the FRA start the process of DEIS?	Refer to ED-1, NE-1 and PI-1.
Ronald Richards	2/5/2018	Oral	That's going to be a hard one to follow, folks. I am Ronald Richards. I wanted to say I'm 100 percent against this project, but I am 10 to 20 billion percenter against Texas Central Railroad and their. TCR has assured the public that they would not use tax dollars. I want to know who paid for this. No one knows or will say. And I know for a tact that this project whould be null and void because I caught the U.S. Corps of Engineers on my property without my permission and numerous surveyors on my property without permission rant them off. Ran them off. The facts about hight speed rails, electromagnetic interference; what kind of health concern is that when you drive by every day or you going to be neutrafield, electrified? Noise pollution, decreased land value. You want the dang values to go down? Bad for the environment. No	Refer to AS-1, ED-1, FP-1, GN-4, NE-1, NE-8, NE-9, NV-1, SS-23, TR-7, TR-8, VA-1 and WW-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			matter what TCRA says or does to negate the fact that they're going to infect the environment. Pollution; water pollution. Scenic beauty. It just goes on and on. High speed rail is bad for Madison County. They're going to close roads according to the EIS report and then the county will be with lower tax values instead of being responsible for building new roads, they go around the ones they close. And upkeep on those. Hmmm. That's great for the budget. Starting a business, 20 million dollars in debt is not good business. How many of y'all remember ENRON? TCRA, ENRON made over to a T.It's not a good business plan. You can make anybody's numbers look good on paper, but when it comes down to reckoning day, numbers are only numbers. You've got to make a profit. And what about the elderly? When they come through and get eminent domain and they force you to sell your land, where are you going to go? What are you going to do? Go live with the kids? I don't want to live with mine, they probably wouldn't have me. But anyway, as far as the environment goes, it is going to increase the flood plains, scenic resources, water quality will be eroded and polluted, air quality, and the response time you have for a medical emergency, fire emergency and police emergency. Is this what Madison County wants? Can I hear everybody say, We are against high speed rail? I can't hear you. Thank you.	
Ronald Richards	2/6/2018	Website	Why is the I-45 / or BNSF Route not being considered. Cost?? These routes would still need a Right of way. But would have less impact on Farm and Ranch land. Why would you not consider this option.	Refer to BA-9 and BA-10.
Ronald Richards	2/6/2018	Letter	<ol style="list-style-type: none"> <li>1. I support the "No Build Alternative' on the Texas Central Railway High Speed Rail Project from Dallas To Houston.</li> <li>2. I support the Build Alternative" and recommend that the Federal Railroad Administration. Department of Transportation revisit their vision for the need of High Speed Rail in Texas.</li> <li>3. I support the No Build Alternative' and recommend that the Federal Railroad Commission study the use of existing infrastructure to its fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas.</li> <li>4. I support the No Build Alternative' because there is no mitigation for loss of agricultural land or evaluation of such impact.</li> <li>5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries. farms and buildings that may qualify as historical sites.</li> <li>6. I support the "NO Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption Of electricity. I 100% support the "no build alternative".</li> </ol>	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Ronald Richards	2/6/2018	Handwritten	How Can TCR Continue to Pursue this Project when it has not Established the right to Power of Eminent domain?? Did or did not FRA Choose the Utility Route Because TCR wanted to stop in Roans Pierie [sic] to satisfy their investor who owns Land in the Route where the Station will Be Built. Even though the Cost is More.?	Refer to BA-5, BA-8, ED-1 and NE-1.
Ronald Richards	2/6/2018	Handwritten	How much Square Acreage of the Proposed Right of way have you surveyed? And of that - How much was surveyed without Permission? How was an DEIS Accomplished without Accurate Access To our land? Better yet how can FRA Conduct An Accurate Environmental Impact Study without having surveyed or had access to a large amount of the lineal mileage of the proposed Right of way?	Refer to GN-1 and NE-8.
Ronald Richards	2/6/2018	Handwritten	TCR frequently cites the need of only 100ft (which Robert Eckels original statement was 80ft) Now the DEIS ranges 70-300 feet, with an average of 275. Why such a Big difference? Why do the ticket price Continue to rise? Prices in the DEIS State one way \$199.00 1398.00 RT. Ridership will not support this Price? Southwest have Fun fares As low As \$100.00 RT. Why would Anyone Pay \$298.00 more on the train	Refer to BA-3, LU-14 and SC-3.
Ronald Richards	2/26/2018	Handwritten	So far I have not found Any Reference to the Health Effects of EMF. Research By Electrical Engineering School Southwest J.avtong Univ (China) and Dept. of Occupational Health Shanxi Medical Univ China have found that Multiple unit High - speed Electric trains generate high frequency Elect fields, low Frequency magnetic fields, and high frequency wideband EMF Emissions when running. Even though results of test were within permitted levels the possibility of long term health effects should Be Studied Before the final EIS is Released.	<p>The literature and Internet contain myriad reports of adverse health effects of electromagnetic field (EMF) exposure. Anyone can find reports claiming that EMF exposure can cause anything from rashes to cancer, and everything in between. For the purposes of this work effort, the following guidelines were used when determining whether to include published materials in the Draft Environmental Impact Statement (Draft EIS).</p> <ol style="list-style-type: none"> <li>1. Evaluate the source. Anyone can publish anything on the Internet. This makes Internet sources suspect, unless the source is a reputable authority on the subject, such as the World Health Organization (WHO) or the International Commission on Non-Ionizing Radiation Protection (ICNIRP). Likewise, not all scientific journals are of the same caliber. Some journals, such as the Journal of Physical Chemistry, have stringent requirements for publication as well as a rigorous peer-review system to ensure the validity and quality of the articles published. Other journals have different standards.</li> </ol>

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>2. All research should be based on sound scientific principles, control for all variables, and have an experimental design that includes a study and control group.</p> <p>3. The research should be repeatable. If a study reports findings that cannot be verified by an independent group, the results and conclusions are suspect.</p> <p>4. The research should have a relatively large sample size. A large sample size helps to ensure the applicability of the results. In other words, a small sample size (20 people or less, for example) makes the results and conclusions of the study difficult to generalize to the entire human population. Similarly, anecdotal evidence from one person may be relevant to that one person only, and not to the entire human population. On the other hand, the larger the sample size (300 or more people, for example), the more applicable the results may be to a similar population. That said, the Draft EIS did discuss the research related to health and EMF from reputable sources, including studies that evaluated long-term exposure. Please see the following sections: 1. <b>Section 3.15.2, Electromagnetic Fields, Heath Effects of EMF:</b> "Reputable authorities on the subject of EMFs include the WHO and the ICNIRP. The ICNIRP determined that humans can perceive EMFs in some situations and that perception can be annoying, although not physically harmful. To prevent those acute health effects and annoyance, the ICNIRP developed guidelines for human exposure to low-frequency EMF. The ICNIRP states that "adherence to these restrictions protects workers and members of the public from adverse health effects from exposure to low-frequency EMF." As part of this effort, the ICNIRP also reviewed "epidemiological and biological data concerning chronic conditions" (i.e., effects on the neuroendocrine system, neurodegenerative disorders, cardiovascular effects, reproduction and development effects and cancer) and "concluded that there is no compelling evidence that they are causally related to low-frequency EMF exposure." Additionally, the ICNIRP concluded that insufficient reliable research exists to determine if a link is possible between the adverse health effects and long-term, elevated EMF exposure. The ICNIRP stated that more research is necessary in these areas." "The U.S. National Institutes of Health tasked the National Institute of Environmental Health Sciences (NIEHS) with studying and making recommendations on EMF and human health. The NIEHS published reports outlining their interpretations and recommendations. The NIEHS concluded that for most health outcomes, no evidence is present that EMF exposure has adverse health effects." 2. <b>Section 3.15.4.1.1, Electromagnetic Fields, National/International:</b> "The ICNIRP has adopted EMF exposure guidelines and standards in the extremely low frequency and radiofrequency bands of the EM spectrum. The ICNIRP standards address EMF exposure by the general public and workers in an occupational setting and are widely used within the U.S. and abroad. The ICNIRP recommendations are based on the epidemiological data available from verifiable research</p>

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
				<p>studies. Based on the ICNIRP's work, the European Union has adopted these same standards for EMF exposure." 3. <b>Section 3.15.4.2, Electromagnetic Fields, Literature Review:</b> "HSR is used in many other countries, where studies have been performed on the amount of EMFs that human beings are subjected to. For example, in Australia, Halgamuge et al. conducted a study to determine the long-term effects of EMF exposure from HSR systems on the passengers and workers. The study also summarizes other research on EMF exposure due to high speed trains from around the world, including the United Kingdom, China, Japan, Switzerland, Germany and Russia. The study concluded that all values measured as a part of the study were "far lower" than the ICNIRP recommended levels..." Also, as stated in the Draft EIS, <b>Section 3.15.4, Electromagnetic Fields, Methodology,</b> EMFs fall off markedly with distance from the source. EMFs are expected to be at ambient levels within 500 feet of the alignment. "The inverse square law applies to EMF. The inverse-square law means that EMF levels would substantially decrease with increased distance from the source. Therefore, for the purposes of this analysis, the EMF Study Area is defined as 500 feet from the centerline of the HSR track. Beyond this distance, the EMF would be below background levels."</p>
Ronald Richards	3/5/2018	Oral	<p>Good evening. My name is Ronald Richards, and I see that, since I got up here, everybody has evacuated. I guarantee you that I am not a politician, I am not a controller, I am not president of any HOAs and I see they all did their little speech and left. So personally, I think they should have been here. And, oh, by the way, I have not been paid by TCRR to make any statements, which I know happened tonight. Anyway, my son-in-law, Gene Whitesides, you heard him; you heard my daughter, Michelle; my two grandchildren and that was my wife that just spoke and all I basically have to say is that we have spent our entire life saving in order to have a quiet, peaceful life without a train coming by. We lived in Houston. We just sold our house last July and got out of this mess. You chose, if you're for it, which I respect you, your opinion, if you want to be for it, but you chose to live in Houston. I chose to live here for 40-something years in the metro area and then I chose to get out because of the crime, the congestion, the confusion, paid politicians, it's just pitiful. Pitiful. Pitiful. I really resent the fact that all of these politicians got up here and spoke and then evacuated. I've got 1 minute. Anyway, I'm going -- that's just it. I am dead 100 percent against Texas Central, Texas Central partners and high-speed rail. It will not work. It's -- the population density is not like Japan and if you want to ride the train, I suggest, for the millennials, to pack up and move to Japan. Move to a socialistic country and see how you like living as a socialist. Goodnight. Thank you.</p>	Refer to GN-2 and NE-1.
Ronald Richards	3/9/2018	Website	<p>HSR will not connect ideas and commerce in a productive and reliable way for Madison county. Our rural county is two hours from being able to get on the train, and holds zero economic value for our hotels, restaurants, and gas stations.</p>	Refer to SC-19.
Ronald Richards	3/9/2018	Website	<p>What is FRA's solution to the 100\500 year flood plain issue. This construction will increase the chance of floods. The DEIS states that vact. As we all know Texas floods, will HSR cause another Harvey type flood and will FRA and TCR be responsible for the cost of any damage?</p>	Refer to FP-1, SS-17, WW-1 and WW-2.
Ronald Richards	3/9/2018	Website	<p>Will they condemn both surface and mineral rights and if so why do they do why would they need mineral rights. Sounds like a land grab.</p>	Refer to ED-4.
Ronald Richards	3/9/2018	Website	<p>How much square acreage of the proposed right of way have you surveyed? How was the environmental survey accomplished without access to our land?? Better yet, how can you conduct an accurate environmental impact analysis without having surveyed or had access to a large chunk of the lineal mileage of the proposed right away?</p>	Refer to NE-8.
Ronald Richards	NA	Website	<p>TCR is supposedly privately financed, requiring no taxpayer subsidies. Construction of a privately funded HSR is an intriguing idea. Because Texas Central's project would be the first HSR in the US, and the first privately constructed HSR in the world a careful examination is vital. The FRA needs to examine, feasibility of constructing TCR proposed HSR. The Cost, Ridership trends, Dallas is well served by aviation and bus industries., Travel trends, city density, car ownership. Even though TCR has said they will require no taxpayer subsidies they are planning to apply for Railroad Rehabilitation and Investment Financing (RRIF) loans (taxpayer dollars) just another lie. If this project fails these loans have very weak taxpayer protections. These loans could be awarded to entities that do not have the resources to repay them. TCR has not released a business plan, no data to support its ridership projections or cost estimates. Original cost projections 10-12 billion now up to 18-20 billion</p>	Refer to GN-4.

			Just like Calif. rail it is doomed to fail. There many questions and concerns regarding TCR project. Only tow HSR lines make money---Tokyo to Osaka Paris to Lyon and one breaks even Hakata to Osata.	
Ronald Richards	NA	Website	Charles Pickett was offered \$15,000 for his portion of the land. He and his family just built the house they live in and are trying to run a small ranch, he said, "TCR is rude, inconsiderate, and just don't care." His land would be land locked and he will not be able to get to his cattle.	Refer to ED-2 and LU-11.
Ronald Richards	NA	Website	The DEIS clearly states that no matter what measures TCR takes to minimize the impact it will damage the environment.	Refer to NE-9.
Ronald Richards	NA	Website	This seems to be some of the same problems that Texas Central is having. Go ahead and build even though it may not be safe and damage the land, ridership numbers are in question as to correct, they want to build and fix the problems later. And when it fails the taxpayers will have to foot the bill. Japan will own the land and land owners will be out. Just say no to High Speed Rail.	Refer to BA-6, GN-2 and NE-1.
Ronald Richards	NA	Website	God made us stewards of our land why would we want to destroy it. ? No matter what measures FRA,TCR, take this train will effect 100\500 year flood plain, scenic resources, water quality, erosion, pollutants, air quality, why would FRA allow this. ?	Refer to NE-1 and NE-9.
Ronald Richards	NA	Website	Why would we want a 50 tect train in Texas. Why would FRA even consider approving this train. This train will not be built in the USA only assembled. WHY?	Refer to NE-1.
Ronald Richards	NA	Website	How are emergencies along this route going to be handled during construction and after? With the enclosed fences, closed roads, and limited access this will slow down response time for EMS,Fire, Police. The only solution for this would be the NO BUILD OP.	Refer to SS-23.
Ronald Richards	NA	Website	If I am correct and TCR for once is truthful they state that there will be no TSA security at the Train stations. If FRA is concerned with rail safety why would they allow this?	Refer to SS-9.
Ronald Richards	NA	Website	How is TCR a Railroad Company?	Refer to NE-1.
Ronald Richards	NA	Website	Just wondering why TCR has blocked me from their facebook page. I guess they don't like the questions I have been asking them for the last 4 years with no answers.	Comment noted.
Ronald Richards	NA	Website	I know for a fact that some of the information obtained for this DEIS was obtained illegally I caught Corps of Eng, and other reps. of TCR on my property without permission, because of this this report should be null and void. The DEIS took over three years to complete and then you only gave landowners only 75 days to respond. Some thing is rotten somewhere. And I plan to fight to the end to have extended time to study DEIS.	Refer to GN-1, NE-6, NE-8 and PI-3.
Ronald Richards	NA	Website	I know for a fact that some of the information obtained for this DEIS was obtained illegally I caught Corps of Eng, and other reps. of TCR on my property without permission, because of these facts this report should be null and void.	Refer to GN-1, NE-6 and NE-8.
Ronald Richards	NA	Website	TCR is starting a business 20 million dollars in debt (before they make one red cent) This is not good business. The experts say it will fail. When that happens one of two things will take place the tax payers will have to bail out or Japan banks will step in and get it all to cover their loan leaving land owners high and dry. This is private investors ??????? I say no build. No build.	Refer to GN-4 and NE-1.
Ronald Richards	2/6/2018	Handwritten	In order for the final EIS To Be Approved. These points should (must) Be Considered HSR can Not Damage 1. Madison County or any County 2. Can not Damage or Harm Any county Resident. 3. It must not shut down or Damage any roads or facilities or prevent county Residents from Accessing their land, properties as they currently have. 4. Do not interfere with Police, fire, EMS. This is a must Destroying 8 counties To Benefit Dallas and Houston. Why would you.	Refer to SS-23, TR-7, TR-8 and TR-10.
Ronald K. Richards	1/29/2018	Handwritten	TCR has assured the Public that they would not use tax dollars. Then why is FRA, TxDOT using OUR TAX dollars to study EIS and Transportation Study by TxDot I know for a fact that some of the info obtained for the EIS was obtained illegally. I caught corps of eng and serveyers on my property without permission How can you justify this?	Refer to GN-4, NE-1, NE-5, NE-6 and NE-8.
Shirley Richards	2/16/2018	Website	I don't see how spending this much money and taking peoples land that they worked so hard for or has been in their family for generations is worth it. I live in a rural county for a reason - for peace and quiet - not to have a high speed rail right outside my back door.	Comment noted.
Davion Richards	NA	Email	Please I stand by my state and I speak for my self and other when I say a bullet train rail road is not the right choice for our land environmental and our wildlife u take all this away from us Sent from my iPhone	Comment noted.
Angie Richardson	3/9/2018	Website	This train will come right by our family property. We have three generations on this property. This will ruin our beautiful land. I also have a special needs 11 year old that is very sensitive to loud noises. This will cause him much anxiety. We absolutely are against the high speed train and will continue to fight it for the sake of our family!!!!!!	Refer to NV-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Gloria Richardson	1/5/2018	Email	Everything is sounding and looking good...Can view this as a new, innovative, practical, and feasible solution to much of the Freeway congestion between Houston and Dallas. I can see this as a beginning to future destinations within our country that will benefit many in the coming years. Texas freeways are overcrowded today and this will help alleviate much of this congestion, and expand access to both metro areas for growth. As individuals that have an active contract for the sale of our land to give this project space to blossom and help many, we are excited and hope to live long enough to see the fruition of this awesome blessing for our State and our Country as well...	Comment noted.
Gloria Richardson	1/9/2018	Email	Here is why that Hi-Speed train is needed, today and the tomorrow's to come. Any technology that assists the traffic flow is needed for our future growth. It takes a long time to build a freeway, and by the time it is done, it is already outdated. <a href="http://news4sanantonio.com/news/local/texas\u002620population\u002620sees\u002620most\u002620growth\u002620in\u002620country\u002620in\u0026202017\u00262001-03\u0026202018">http://news4sanantonio.com/news/local/texas\u002620population\u002620sees\u002620most\u002620growth\u002620in\u002620country\u002620in\u0026202017\u00262001-03\u0026202018</a> I'm not attending any of the scheduled meetings, Texans Against the Hi-Speed train bombarding Facebook with pleas for negative feedback to come to ALL the meetings.Our land is under contract with Texas Central, and we are anxiously waiting for this progress to proceed. I was a dispatcher for Leon County for eight years, on 145, -and heard first-hand how badly something needed to be done...also saw and endured the hurricane so many Houstonians attempted to evacuate from. That train could have gotten many people safely out of harm's way.. 1-45 was rated one of the top 10 most dangerous highways a few years back. WE NEED PROGRESS!!!	Comment noted.
Gloria Richardson	3/1/2018	Email	As a land owner in Leon County (mid-point for the proposed Hi-Speed Rail), I am responding to the extending Of time for comments. My spouse and own land that is under contract to Texas Central for their project. We feel so blessed that Texas has been chosen for the implementation of this pilot venture. I foresee a future where this System will connect all over Our great nation. The stand against the project is merely a political stance where the "good-ole boys" don't want someone treading on their hunting grounds...not caring about the future for others, just thinking about hanging onto their place to go and hang Out with the boys to get away from the cities. It is my bet that most of the complainers don't even live on the property they are not wanting to allow to be sold. Texas Central approached us with some Of the nicest gentlemen to speak about the wanting Of Our property. We discussed it, they kindly shared the information, agreed to come back when we were ready to speak Of it with questions, etc. again...We contacted them and spoke, they came Out and after a third contact at our request, we signed up to allow the sale of our property for this worthwhile project. Now, we anxiously await the proceeding Of it. Each time one Of their representatives need to come on the property, they never fail to call and let us know and politely ask if that is convenient with us. It has been an extreme pleasure working with Texas Central. As a Leon County Sheriffs Office dispatcher for eight years, I retired with benefits from this county. I dispatched through the hurricane where all four of our 1-45 lanes of traffic were diverted northbound to attempt to move the flow of Houston traffic north to evacuate the storm. Traffic came to a stand-still even with all four lanes northbound...Some people further north that were stuck in traffic actually died when their van filled with elderly caught fire and they couldn't get them out quick enough. EMS couldn't get to people, fuel ran out and people fought at the gas pumps over what little fuel was left...It was horrible...For two days, people were blocked...our son and family couldn't get out of Houston due to traffic blocked all the way north... see where this Hi-Speed train could have gotten people out of the area, both in Houston and in Grimes County where a mid-point stop is planned...This county was listed as having one of the top ten most dangerous highways in the COUNTRY....Even last year, 1-45 was still listed in the top 10. TEXAS NEEDS THIS TRAIN!!! Our grandchild is a student in College Station...That mid-way point allowing those from that area to board the train could get these young ones Off the highways and to a flight in Dallas to travel northbound until a connecting train be also allowed to be constructed. One of our sons worked in South Korea for several years and had opportunity to travel via a hi-speed train and tells Of the wonders Of that travel...saying that once people tried it, they would know it's a fabulous way to get places in a hurry. Our other son from Katy tells us that it would save the school district funds by allowing those having meetings in Dallas could actually come home after the meeting instead of having to get lodging and meals overnight. Our daughter who lives in White Settlement outside Fort Worth could bring her children and we could pick them up in Grimes County and keep them safely Off the freeway when they wanted to visit...I foresee that if given the opportunity for people to get used to the beauty Of this mode Of travel that it will be a huge success!!! Not just that, but lives could be saved by this mode of travel lessening traffic on the freeways. I just responded to an online meeting group complaining about public safety issues...This is my comments: Gloria Richardson \u00262031 Safety issues...for real??? The hi\u002620speed rail is planned on being about 16' above ground...More about votes...with no thoughts ot future innovative, progressive modes of transportation with no roads being blocked, like TXDot_. It's a political issue with those that don't see this blessing bestowed upon hopes of future additional links to other states.._We each take a stand for future progress...I see this great State growing and needing more ways to move people...So, if you shut this project down because of people who flat don't want to have concerns for others on the roadways, sad for law enforcement to not approve of doing everything possible and supporting everything possible to lessen the congestion on the freeways, I never thought we would see this day... Manage \u002620Reply \u0026207h Regina Jamieson All this rail is not above ground, many roads will be closed off (rerouted an extended way), does nothing to alleviate congestion on the roadways where congestion is truly a problem. Had you attended some of the local meetings you might know some ot these things, like \$199 per person to ride it one way. This is not progress for the majority of Texans It's a land grab that will end up in	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			the taxpayer's pockets. You need to educate yourself better on this project before belittling those who are standing up for land owning Texans that will be greatly negatively impacted by this, Manage \u8226 Reply \u8226 5h Regina Jamieson Oh gee, see you are a Texas Bullet Train Advocate Member. That explains everything. Trampling on land owners rights by a private company so a few wealthy individuals can shave an hour off their commute is acceptable to you. Manage Reply - 5h Gloria Richardson Regina Jamieson The future needs are way more important than a temporary inconvenience of building it...and I assume you are a Texan Against the High-Speed Rail...We each make a stand...I look to the future...you look short-sighted...and the cost factor is not all that bad for a starter...flying is more risky than the hi-speed. This IS progress for the majority of Texans unless you are a negative non-progressive. How can it end up in taxpayer's pockets when Texas isn't going to fund it, rescue it, wants no financial binds to it...but in the future, they sure might be sorry when it is successful that they didn't want a part of it. They aren't trampling on landowner's rights...eminent domain is a federal law... They are paying VERY good monies for the land involved... This project can shave time, money, add convenience to many, save lives...for many reasons. This being a starter project for the whole nation, Texas is SO blessed to have been chosen to receive this pilot project. 1-45 has been one of the most dangerous freeways in the nation for several years...and our county was listed within that same time period one year as one of these top ten...l_eon County....as a past dispatcher for this county, now retired, I think it is a blessing to be honored with them coming to Texas...and most of the hi-speed is planned for above ground.. <a href="https://www.facebook.com/texascentral/photos/a.1533359536906787.107374182B.1415941991981876/2037056">https://www.facebook.com/texascentral/photos/a.1533359536906787.107374182B.1415941991981876/2037056</a> We stand for the construction of the Hi-Speed Rail....It is a blessing for Texas...Hoping we can see this awesome project come to into existence... Thank you for listening, hoping you will agree with this stand for progress.	
Sonny Richardson	1/6/2018	Website	There has been a lot of verbiage concerning what the project is supposed to be.Much of it has been a pure selfish approach to the real benefit of what is at stake for the people of Texas. These anti attitudes should be looked as those are against progress of all that could benefit from the venture. I say let's get it done....	Comment noted.
Albert J Richmond	2/10/2018	Letter	On behalf of our Board members and extended family we voice support for Texas Central's (TC) Houston B Dallas high-speed rail corridor project. As the Federal Railroad Administration prepares the Environmental Impact Statement (EIS) for this project, we hope that you will consider the benefits to the people of Texas. Americans at large, the future of the regional passenger rail network, and the US economy. Today, nearly 50,000 Texans travel between Dallas and Houston at least once a week. At present, the 240-mile trek along Interstate 45 takes four hours. With the population of Texas rapidly growing, that drive will increase to 6.5 hours by 2035. With the doubling of Texas population by 2050, this will create further travel difficulties. TC's service will connect Dallas and Houston with frequent 200mph service, cutting trip-time to 90 minutes.	Comment noted.
Barbara Richter	2/6/2018	Handwritten	Desruption of Education --- A speaker noted that the High Speed Rail Project will be so close to Leon ISD that it will disrupt the education of our children and of course Texas Football Games or Friday Night Lights. You will be taking on the institution of the Texas Coaches Association - the fight has just begun - Are you ready? Don't cross a coach and his football.	Leon ISD would be over 900 feet from the train centerline. A temporary construction area would be located roughly 500 feet from school buildings. The Leon ISD football field would be nearly half a mile away from the LOD. Temporary noise and vibration impacts could potentially be perceived during construction hours. Information regarding construction noise can be found in <b>Section 3.4.5.2.1, Noise and Vibration, Construction Noise and Vibration Impacts</b> . Additionally, mitigation measures for construction noise can be found in <b>Section 3.4.6.2, Noise and Vibration, Mitigation Measures, NV-MM#2</b> . No operational noise impacts were recorded at Leon ISD, further information can be found in <b>Section 3.4.5.2.4, Noise and Vibration HSR Operational Noise Impacts</b> . Additionally, a discussion and assessment of potential impacts related to school children located in proximity to the Project has been added to <b>Section 3.14.5.2.4, Socioeconomic and Community Facilities</b> .
Barbara Richter	2/6/2018	Handwritten	Ranch Land ---- As ranchers, why do we have to stress out cow/calf operation with noise, land vibration and blocking access to their grazing pastures. Ex-A cow is going to happily go through a dark tunnel. Opposite side of the issue - would the landowners in the Houston Heights tolerate these disturbances? Don't think so as they are eating fish instead of beef because production has gone down because of the demise of cow/calf operations.	Refer to LU-6, LU-11, NR-1 and NR-6.
Karl Richter	2/6/2018	Handwritten	Eminent Domain ---- To quote - "President George W. Bush issued Executive order 13406 which stated in section 1 that the federal government Must limit its uses of taking private property to "public use with just compensation for the purpose of benefiting the general public. The order limits this use by stating that it My Not be used for the purpose of advancing the economic interest of PRIVATE PARTIES to	Refer to ED-1 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			be given ownership or use of the property taken" End of quote - If privately funded then who wins- the private business & who loses the landowner. Even President Bush has sense to know the difference.	
Kenneth Richter	2/6/2018	Handwritten	Lies, Lies, Lies - If we landowners lied about our businesses we would be in jail! Maybe that's where you all need to be. Even Tarry Nassar's lies caught up with him - time to straighten out your act - NO BUILD	Comment noted.
Kenneth Richter	2/6/2018	Handwritten	Historic Distict ---- Is there no respect anymore for what our founding Fathers believed in and Fought hard to establish in the United States. What does this have to do with a high speed rail project? Our property encompasses Bethal Cemetery where Sarah Dodson is burried. Who is Sarah Dodson? She made the first Texas flag that was carried into the Battle at Gonzales. The courage that she and her husband showed by fighting for Texas freedom is documented by a historical marker at her grave in Bethal Cementery. Can she and her family not ever rest in peace - never again with the construction of this train. We say as those Brave Texans said - "come & Take It" because they they will be the new battle of Texas [sic]	The Final EIS specifically addresses the Bethel Cemetery (see <b>Section 3.19.4.2.8, Cultural Resources, Cultural Resources by County</b> ), which is designated as a Historic Texas Cemetery. However, the Bethel Cemetery is not located within the Limits of Disturbance and will not be physically impacted by the project. Historic cemeteries in Texas are protected under provisions of the Texas Health and Safety Code in Chapters 711-715, Title 13, Part 2, Chapter 22 of the Texas Administrative Code; and in Section 28.03(f) of the Penal Code of Texas which prohibits the use of cemetery property for non-cemetery purposes. Overall, the intent is to avoid cemeteries and impacting burials to the greatest extent possible. Additionally, it is the policy of the Texas Historical Commission to preserve the original location of historical markers whenever possible and they must be notified if a marker is ever to be relocated.
Clyde Ridge	1/31/2018	Oral	Thank you. Good evening. My name is Clyde Ridge I'm the County Commissioner for precinct four. And this -- I'm not here tonight to say that I'm opposed to this, I've been opposed to this for the last two or three years. I don't see any benefit for this to come to our county and it will directly affect precinct four. It will start on the north part of my precinct and go through the south part of it and I'm not sure and no one's been able to tell me what it will do to the road structure that I've spent the last 16 years getting those roads up as best I could and what is this gonna do to it. I have no idea. I'm telling you we need to get together, we need to oppose this and get all of our neighbors to the north -- counties to the north, counties to the south and let's get this thing shut down. Thank y'all.	Refer to SC-19, TR-6, TR-7 and TR-8.
Levy Ridgeway	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual diruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.

Rebecca Riley	2/16/2018	Website	This train is a huge mistake impacting property in a negative way and a big waste of money. DON'T BUILD IT	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Barbara Risinger	2/20/2018	Website	I am against this project. I don't believe enough people will use it. The majority of the people going north on I45 are not necessarily going to Dallas but to suburbs and small towns in between Houston and Dallas. They would need a car after they get to Dallas so will not be using train. The train will also take away land from private citizens. Some of the ranches destroyed will have been in families for generations. I believe the taxpayers will be stuck with supporting the project as it will not have enough ridership to pay for itself.	Refer to GN-2, GN-4, LU-11, NE-1 and PN-3.
David Risinger	1/18/2018	Email	I am concerned about the feasibility of this project. Texas Central claims it is privately funded, yet it will not progress or function without public funding. Taxpayers do not need to subsidize their failure.	Refer to GN-4 and NE-1.
David Risinger	1/19/2018	Email	I question the illegal survey of my property and of others. Texas Central was not given permission to enter and survey our property. Texas Central then brought a lawsuit against me and approximately 40 property owners to access for survey purposes. In the suit, Texas Central admitted they did not have eminent domain powers, but were asking the court to give them that right. Texas Central has never proceeded with the suit, and has now dropped each case. So then we can only assume that they do not have eminent domain powers to survey and construct this project.	Refer to ED-1, ED-2 and NE-8.
David Risinger	1/22/2018	Email	I question the accuracy of Texas Central's mapping. At the crossing of Interstate 20 on the north side their tracks show to be going through a large Amazon Distribution warehouse. The map does not even show that this large facility even exists. This leads to questions of other possible inaccuracies.	Refer to GN-1.
David Risinger	1/29/2018	Oral	Hi, I'm David Risinger. I'd just like to echo his sentiment that South Dallas does need the if it does go through. Believe it or not I am not opposed to high-speed rail, but I am opposed to the way thatnTexas Central has gone about this project. They know that in this state they would never go and get it passed if they come out and said that it was publicly funded. Over and over they keep saying give the impression that they are gonna pay you for every penny of it. Yet they do not employ train people.They employ people that are politically associated.They're camped out in Austin, they're camped out in Washington, D.C. every day asking for money for this project. Just come out and say it.Just be open with the people, if that's what you're gonna do.You have Greg McLane, Ron Kirk, Don Cheaper, people like that who are known for grand projects, private projects, that the public end up paying for, but everybody needs to know. Also the ridership estimates what they're saying about how many people.They're taking nearly 40 percent of the current traffic.There's no way they can come up with that number.It is not feasible.They are the Japanese put money into this, it's done the same thing in Taiwan.It has been an economic disaster.The country has had take it over. India has put together a the minister said the numbers do not add up. One of the things they say is it'll be faster because there will be no security on this train. You're talking about a terrorist target, 200 mile track. I question their mapping.As stated before, illegally surveyed our property and many, many other people's property. If you notice the Amazon distribution warehouse just north of I-20 right here, their train tracks go right through the middle of it.They do not even show that building on the map.I question the accuracy of their mapping, for 240 miles. It will, as he said before, originally they said 80 feet.It's gonna be many many acres. It's gonna take our house, our business, our crop land, our pasture, this is the way people for 240 miles make a living. They said it would be a viaduct. Instead they're gonna through our property that we can't even getto the other side. And they have not answered how they're gonna deal with roads or with the utilities, with the electric, water, sewer, power. Who has the right to cross the interstate nor have they ever shown us any papers.	Refer to GN-2, GN-4 and LU-7.

			deal with roads or with the utilities, with the electric, water, sewer, power. Who has the right to cross the interstate nor have they ever shown us any papers.	
David Risinger	3/7/2018	Website	Land Consultants used aerial Mapping dated 2014. Many structures, houses, and businesses have been built in the corridor 2A that the draft does not address.	Refer to GN-1.
David Risinger	3/7/2018	Website	The counties between Dallas and Houston are important areas in the revival of the soon to be endangered Monarch Butterfly population. How will this project affect their habitat ?	For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> . For information regarding impacts to wildlife please see Section 3.6 Natural Ecological Systems and Protected Species". The Monarch Butterfly is currently "Under Review" for listing by FWS.
David Risinger	3/7/2018	Website	Land Consultants once said the Corp of Engineers declined the project from crossing the Trinity River into the Dallas Sewage Treatment plant property. Has this changed ?	U.S. Army Corps of Engineers (USACE) is a Cooperating Agency on the Project. USACE federally authorized civil works projects (USACE Projects) subject to Section 408 approval located within Dallas County are described in <b>Section 3.7 Waters of the U.S.</b> The Project would not cross into the Central Wastewater Treatment Plan at 1010 Sargent Road, Dallas, TX but would run along the eastern edge of the facility.
David Risinger	3/7/2018	Website	The Draft states no businesses will be affected in route 2A. There are two businesses on Risinger Road and Wester Road alone that will be destroyed. How many other businesses are not being reported in the Draft ?	Refer to GN-1.
David Risinger	3/7/2018	Website	Th Project in Dallas and Harris counties rely heavily on TXDOT Right of Ways. Has the State of Texas allowed TXDOT to permit the use of their Right of Way ?	Refer to ED-3.
David Risinger	3/7/2018	Website	Is Texas Central reimbursing the State of Texas for the use of TXDOT Right of Way ? Both initially and annually ?	Refer to ED-2.
David Risinger	3/7/2018	Website	The sound decibels listed in the draft state that no houses, businesses will be affected. How can this be when houses and businesses are directly in route 2A, or directly beside it ? Has anyone surveyed the properties in person ?	Refer to GN-1.
David Risinger	3/7/2018	Website	There are no safety standards for trains of this speed. Will the Shinkansen N700 meet or exceed proposed standards, and what are the standards ?	Refer to SS-4.
David Risinger	3/7/2018	Website	Texas Central has repeatedly stated the time of travel will compete with airlines because they will not be subject to TSA screenings like airports. In a world of terrorism a 200 mph train is a likely target. Will transportation security be required to prevent threats, just as at airports ?	Refer to SS-9.
David Risinger	3/7/2018	Website	Who will pay for cleaning up and restore properties if project stalls, or fails, since Texas Central claims they are totally private ?	Refer to NE-1, NE-9, PN-3, SC-22 and SS-5.
David Risinger	3/8/2018	Website	Texas Central has yet to state where their electrical power source will come from, or how much power will be needed. The Draft simply says there is enough presumed to be available. We already have a shortage of electric power plants. Will the train have priority over millions of consumers when Brown Outs occur ?	Refer to EU-3 and EU-4.
David Risinger	3/8/2018	Website	Texas Central says they will provide safety and emergency assistance to local fire, police, and ambulance responses. Yet no one has ever seemed to be coordinated with, or briefed about future situations. Some places may be extremely remote. What is their emergency preparedness ?	Refer to PI-1, SS-3 and SS-18.
David Risinger	3/8/2018	Website	With all the State, County, and City roads, Water lines, Sewer Lines, Oil & Gas lines, Electrical Lines, Drainage, Rivers, Creeks, and other transportation, utilities, waterways etc. Who has the right over the other when you have public needs versus a private for profit company. Who can the public rely on to coordinate the crossing and violating of existing easements ?	Refer to ED-1 and ED-3.
David Risinger	3/8/2018	Website	Texas Central has used exaggerated rider ship figures that no one else examining the project has determined based on current, and projected traffic between Houston and Dallas. And TCR's numbers keep growing in order to sell their plan. Heavily travelled North East corridors do not produce these numbers with far larger populations. TCR has yet to say the ticket cost per rider, which is crucial to profitability. Why is there no Revenue Feasibility Study included in this Draft ? Why does TCR never disclose their cost estimates per rider, or how did they arrive at rider projections ?	Refer to GN-2 and NE-1.

Glenda Rison	2/5/2018	Oral	My name is Glenda Rison, I've lived in this town all my life. And we have family buried in Oxford Cemetery and this is going to totally affect Oxford Cemetery. The thought of our loved ones that are buried there of them having peace whenever they were buried, it's very sickening. It's just almost like the highway; it's taking property in this city and the county also. But anyway, for the Oxford Cemetery and all other little cemeteries surrounding that it's affecting, it is very, very disheartening. Thank you.	The Oxford Cemetery was identified in the Final EIS and is reported as resource MA.019 (see <b>Table 3.19-4: Previously Recorded and/or Designated Historic Resources within the APE</b> ). Based on the results of the Section 106 evaluation and in consultation with FRA and the Texas Historical Commission, Oxford Cemetery was determined eligible for listing in the National Register of Historic Places (see <b>Table 3.19-5: Historic Resources Interim Report Submittal and THC Response</b> and <b>Section 3.19.4.2.7, Cultural Resources by County</b> in the Final EIS). The Oxford Cemetery is not located within the current Limits of Disturbance and would not be physically impacted.
James Roach	2/5/2018	Oral	My name is James Roach. Is this coming across okay? I want to ask the audience, how many in here are for the no build? Wow! Every one of us has a vote. I'm one man. I got one vote. Every one of you has a vote, and that's my purpose of standing in here so we can all be heard with our votes. I never heard a proposition on the ballot box to approve or disapprove this high-speed rail. It's all been done kind of behind the scenes. So let's get back to your congressmen, your representatives, and let them know what your feelings are. We can't do it here tonight. These people are going to listen to us, they're going to put it in there, going to give us responses, but they're going to keep on trucking. Now, the reason I came in here tonight was that I have a house that's just down the street. My subdivision has 135 houses in that little section that backs right up to 290. You think -- I studied the EIS for hours. Nowhere could I find to tell me what the decibel rating was going to be 500 feet, a thousand feet, 10 feet from where the line is. The line is going to be on the papers is going to be elevated 45 feet up in the air. Now, aesthetically what do you think that's going to look like. They put nice pictures in there of the train, but they don't show all the power lines over the top of it. Then what was really interesting is I went to one of the exhibits, and they showed down here on the other end, if you just drive down Cypress North Houston the other direction, they show a nice pretty picture. Oh, by the way, that's what it looks like in California. I'll get to that in a second. Anyway, I'm going the stumble through this, but it was they conveniently left out of the after-pictures where they showed the high-speed rail, they left out all the high-powered transmission lines to make it look pretty. I think it's deceivous [sic] of whoever put the report together to have left that out that -- to try to look like a picture that's esthetically pleasing. So noise, aesthetically-looking, and we come to the dollars. And the Judge mentioned about the dollars. I just read where California raised their 119-mile section of high-speed rail \$2.6 billion to raise it up to \$89 million a mile. How many highways can we build parallel to 45 today at \$89 million a mile. Anyway, let's vote no. Let's let those folks know how we stand. Thank you.	Refer to NV-6. The simulations developed for the EIS include all of the overhead catenary lines that will be necessary to operate the system. No existing infrastructure was removed in any simulation unless the Project would replace or relocate the existing infrastructure. Please refer to <b>Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences</b> for all simulations, including the overhead catenary lines.
James Roach	2/5/2018	Website	How will sound be mitigated when the track is elevated 45' ? Ground level sound walls do nothing for elevated tracks. I did not find anything published in the voluminous EIS regarding anticipated sound levels of an operating high speed rail as it relates to distance from the tracks such as at the tracks edge or 100' away or 1,000 feet away. My research indicates sound decibels will be in excess of 73db. Will property owners be compensated when property values decrease because of the visibility of the rail lines and structures for our property and increased sound? Only properties that will gain financially will be those close to the stations and not those 18 miles for the closest station. As it relates to overall construction cost, California just increased their projected cost for the 1st 119 miles to \$10.6 billion or \$89 million /per mile. At this cost per mile the 240 mile would be \$21 billion. Is the project financially viable at this cost without tax payer subsidies?	Refer to GN-2, GN-4, NE-1, NV-1, NV-7 and TC-4.
James Roach	2/15/2018	Website	Cost projections for HSR are enormous. My calculations believe it to be \$89-90 million per mile base on budgets on current California HSR. (\$10.6 billion for 119 miles.) Recent bids on 12 mile tollway in South Texas The lowest bidder at \$202,548,591.57 was Johnson Bros Corp. This equates to \$16 million per mile. Why not build a tollway to parallel I45 and save \$\$	Refer to NE-1.
James Roach	3/6/2018	Website	Under the The NEPA Process or "Umbrella" covers additional Statutes and requirements, such as: Historic Preservation (Section 106) The proposed route is less than 250' from from Cypress Top Historic Park. Documentation is attached. The 290 corriodor is unacceptable due to the adverse effects under historic preservation requirments	Refer to CR-11.
Jim Roach	3/5/2018	Handwritten	Has There Been a Preciminary Design for Sound Barriars on Elevated Viaduct Section That are 45 Feet Above Grade If Not How is Sound Going To Be Mitigated since the Housing in my Neighborhood [sic] The R.O.W.	Refer to NV-1 and NV-7.
Jim Roach	3/5/2018	Oral	My name is Jim Roach. I live in Stone Gate, which is one of the subdivisions that backs right up to the railroad or to the high-speed rail or whatever you want to call it, but I want to talk to these gentlemen there because they hopefully will carry our message back to D.C. or wherever the decision is made. So all those that are still left in the audience, apologies for my back. When I got here, I wasn't planning on speaking this evening, but I was real disappointed when the first 15 guys got up here with the mayor's office, the county commissioner's office and they all started speaking about how great the system was for the City of Houston. And no doubt, I really believe them. I do. I think it will	Refer to ED-1, ED-2, GN-7, GN-9, LU-11, NV-1, NV-5, PI-6, PI-7 and VA-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			be great for the City of Houston. And having the terminal out at Northwest Mall, I remember when that was a vibrant mall. Foley's was there. I used to do shopping there. When I moved here 44 years ago, 290 stopped at Gessner and it was just Hempstead Highway on down. So I've seen a lot of progress being made over the period of time. Well, I'm not really in favor of the rail because I happen to live in this one section of Stone Gate that backs up to the new right-of-way. The problem is -- is that there is no indication in all the stuff that I've read about the noise impact. The vibration impacts are kind of nebulous. There's a lot of engineering technology in there. What really concerns me and it's going to affect all the farmers and ranchers in Leon County, Waller County, Grimes, what's going to affect their property value. What's going to affect my property value when you have to condemn about 15 house of the houses in my subdivision because they are too close to the rail and what's that going to do to my property value? So the economic impact of the City of Houston, probably the City of Dallas, it's going to affect everybody that's on that rail line and how is the rail going to compensate all those people? These poor people that have gotten up here today and talked about how it's gone through their -- Mr. House, how it went through the middle of his property, these other folks, how it's affected their -- there's been a lot of concern about all those little farmers. And in this United States, we have representation. We have the Senate. So we have votes. Every county gets a vote. So all these people in Houston shouldn't have more votes than the people that live in Grimes or Madison or Leon or Waller or Navarro. All these other counties should have equal say and their votes should be equal. So when the decision-makers make the decision in D.C. as to whether or not to approve the program, just remember, these guys out in the country have equal vote through representation. Thank you.	
Amanda Robbins	2/27/2018	Website	I am writing to express my support for the Texas Bullet Train project. I urge you, the Federal Railroad Administration, to move forward with a timely review and approval of the project. The USA is drastically lagging behind other industrialized countries in infrastructure support and transportation advancement, and I believe that left in the governments hands, both will continue to degrade. Obviously, we need to expand projects like this to the private sector for new and improved transportation advances. Texas is an expansive state, and this bullet train will connect the major economic hubs in a way that roads cannot. Lets start advancing this state! I welcome this transportation alternative - because it's good for Texas!	Comment noted.
Linda Robbins	2/16/2018	Website	I believe that people who live within a reasonable distance from the two ends of the Dallas to Houston High-Speed Rail System and any points in between, if possible, will benefit from the construction of the project.I can see where individual property owners whose land could be disrupted would possibly not view this as a positive venture, but I believe that the project's benefits for travelers between the two largest metroplex areas in Housont will see and be able to take advantage of the new high-speed train.	Comment noted.
Eric Roberson	2/5/2018	Handwritten	Please hurry! # Time to build.	Comment noted.
Eric Roberson	3/5/2018	Oral	My name is Eric Roberson. And I've been a Houstonian since 1995. This is supposed to be an environmental impact hearing. Let me say it is time to build this train. And when you get the line built between Houston and Dallas, please continue on to Austin and San Antonio. I'm thrilled that the FRA has heard that Houston is ready for this train tonight. We've also heard a commitment from Metro and our elected officials that they will partner with Texas Central to make sure this project is done right and that mobility needs will be met at the rail stations. One thing I haven't heard tonight is the connectivity with College Station, and I hope that as someone who plans to continue their education for Ph.D., that other people will realize how this rail line will connect our educational institutions between here and Dallas. I'm aboard and hope the FRA is aboard, too, and I support the Texas Bullet Train. Thank you.	Comment noted.
Dolores Roberto	2/3/2018	Website	regards economic impact, which is referenced in numerous paragraphs throughout this Draft Environmental Impact Statement: How much money has the FRA, which is a tax-payer funded agency, spent on this DEIS to date?	Refer to NE-1 and NE-5.
Dolores Roberto	2/4/2018	Website	We own 120 acres in Ellis county just south of FM879, and includes the utility corridor identified by the HSR's path. The HSR proposes to cut kitty corner across the whole of our property following existing power lines, identified as Segments 2A and 2B in the DEIS. Both 2A and 2B routes completely bisect our property. Reference DEIS published document "7 Dallas to Houston High Speed Rail DEIS Appendix D_Project_Footprint_Set_1of5.pdf" pages 42 (sheet40) and 74 (sheet72). Fig1 is provided to show the distance across our land: more than half a mile in length. Fig2 is provided to show the close proximity of the path to our house: ~1,000ft whether route 2A or 2B. Further, our immediate neighbor's house is even closer to either route, as indicated by the structure in the upper left had corner of Fig2. Both the Abstract and Executive Summary para ES.1 Introduction states "Current FRA regulations do not comprehensively address safety requirements for train operations above 150 miles per hour (mph), such as the Project's proposed operations. " Also para ES.4 States " FRA's mission, "to enable the safe, reliable, and efficient movement of people and goods for a strong America, now and in the future, ..." ". The fact that no safety regulations currently exist for speeds exceeding 150mph is indicated several other times throughout the DEIS. This lack of safety regulations is particularly disconcerting to us at our location, because the train cars would be at their peak speed of some 200mph as it crosses our property. How can any assessment of the viability of safety measures be rendered at this time? When, prior to operations for the public, would these safety requirements be defined so that they can be assessed?	Refer to SS-4.

Dolores Roberto	2/5/2018	Website	Both ES.1 and Chapter 1.0 INTRODUCTION, state " Additionally, one or more companies affiliated with TCR may apply to DOT for credit assistance through the Railroad Rehabilitation and Improvement Financing (RRIF) (45 U.S.C. Â§ 821 et seq.) or Transportation Infrastructure Finance and Improvement Act (TIFIA) (23 U.S.C. Parts 601-609) programs to finance a portion of the Project. Should DOT provide credit or other financial assistance, this activity would also constitute a major federal action. " Further paragraph 1.1.2.2 DOT Credit or Financial Assistance, states " In addition to its credit programs, DOT has authority to allocate private activity bonds for qualified surface transportation projects. " Has TCR, TCRR or any of its affiliates applied for credit assistance? If so, which of these type(s)? Wouldn't these monies, by definition, be from tax-payer revenues ??	Refer to GN-4.
Dolores Roberto	2/5/2018	Website	Regards inclement weather and safe operations: what weather conditions are considered inclement to a HSR operating at speeds near 200mph? Intense rain? Flooding? High wind speeds? Crossing winds? Other? How are operations slowed, stopped, or otherwise impaired?	Refer to SS-15.
Dolores Roberto	2/6/2018	Website	The Abstract, Sections ES.1, and 1.0 state that " Current FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Per Section 1.1.2.1, last paragraph, " As of this writing, FRA has not issued a Notice of Proposed Rulemaking for TCRR's proposed Rule of Particular Applicability. Because the proposed Rule of Particular Applicability constitutes a major federal action and triggers the environmental review under NEPA, FRA cannot publish a Final Rule prior to the issuance of the agency's Record of Decision, which is the final step in the NEPA environmental review process. Further, TCRR cannot operate the Project without FRA's Final Rule or other FRA regulatory action.1" What is the expected time lapse between issuance of Record of Decision and Final Rule? Which document will contain the requirements or conditions necessary to operate at above 150 mph safely? When will these new requirements and conditions (to operate above 150 mph) be reviewed for compliancy?	Refer to NE-2.
Dolores Roberto	2/7/2018	Website	Background necessary for comments on design considerations to avoid and minimize impacts: We own 120 acres in Ellis county just south of FM879, and includes the utility corridor identified by the HSR's path. The HSR proposes to cut kitty corner across the whole of our property following existing power lines, identified as Segments 2A and 2B in the DEIS. Both 2A and 2B routes completely bisect our property. Reference DEIS published document "7 Dallas to Houston High Speed Rail DEIS Appendix D_Project_Footprint_Set_1of5.pdf" pages 42 (sheet40) and 74 (sheet72). Our property is indicated with number 1778 in both the project footprint sheets. Fig1 is provided to show the approximate distance across our land: more than half a mile in length. Fig2 is provided to show the close proximity of the paths to our house: <1,000ft for route 2B; <1,400ft for 2A (using your footprint sheets). Further, our immediate neighbor's house is even closer to either route, as indicated by the structure in the top center of Fig1 and in the upper left hand corner of Fig2. We have spent >20yrs establishing and maintaining a healthy and balanced wildlife environment on our property. Extensive efforts and resources are expended year round to keeping it so. Surrounding acreage, all 4 sides, is either crop or livestock thus allowing us to be the wildlife sanctuary in the midst. We currently enjoy un-inhibited access to all of our acreage for fishing, hunting, hiking, as we propagate the native prairie grasses and wildlife. The southern end of our property includes Mustang Creek, which is a feeder into Bardwell Reservoir, which is managed by the U.S. Army Corps of Engineers (USACE). We purchased this land for our enjoyment and the aesthetic beauty. We spent 3 years searching for this land, another 20 years being responsible stewards, so we can enjoy the results of our efforts to create a natural and healthy environment for the native wildlife and flora. Many of these native grasses have not been seen wild for decades. TCRR states under section ES.4 Purpose of and Need for the Project as well as section 1.2.1.2 TCRR Objectives " Environmental: minimal impacts to the natural and built environments by maximizing adjacency to existing infrastructure ROW ". Re ES.7 Design Considerations to Avoid and Minimize Impacts: "Additionally, TCRR designed 52 percent of the Build Alternatives adjacent to existing infrastructure, which typically includes areas that have previously been disturbed by development. This design approach minimized impacts to more environmentally sensitive areas and potentially reduces the fragmentation of existing habitat." We would submit there are at least three reasons why the current impact assessment is incorrect. The following is rationale for the first of these three reasons: On our property, implementation of the current infrastructure took <10 weeks to build, vice the ~3.5 Years indicated by schedule in Appendix F to the DEIS "32 Dallas to Houston High Speed Rail DEIS Appendix F_TCRR CONSTRUCTABILITY v4 REPORT.pdf". The ground that was disturbed recovered in less than 2 seasons, the permanent ground footprint was negligible, and neither human nor any type of wildlife experienced hindrances to its daily lifestyle. No access to our property was permanently impaired. Temporarily disturbed wildlife returned quickly. None of that will happen with such an extended construction period, a viaduct-based HSR passing in both directions, which passes through dozens of times every day. This severely negative and systemic impact by constructing a HSR is true not just for our property, but for any and all acreage in similar circumstances along the propose 240mi project. Submit the DEIS assessment as 'minimal impact' is wrong on this subject and FRA should revisit and modify their assessment to 'severe impact' as a result.	Refer to ED-2 and LU-11.
Dolores Roberto	2/7/2018	Website	Background necessary for comments on design considerations to avoid and minimize impacts: We own 120 acres in Ellis county just south of FM879, and includes the utility coffidor identified by the HSR's path. The HSR proposes to cut	Refer to NR-6 and NV-1. The sound barrier style will be selected with input from the public

This design approach minimized impacts to more environmentally sensitive areas and potentially reduces the fragmentation of existing habitat." We would submit there are at least three reasons why the current impact assessment is incorrect.</p> <p>The following is rationale for the second of these three reasons: Given the extremely close proximity to personal residences, it is expected that both visual and noise abatement will be necessary. Which style(s) as identified in DEIS document "31 Dallas to Houston High Speed Rail DEIS Appendix F_TCRR FDCE v7 REPORT.pdf" will be used? All of these sound barriers are solid walls of differing materials but all solid walls. Habitat will not only be fragmented, it will effectively be permanently segregated/separated. Wildlife requiring continuous areas of habitat could not exist in the numbers and types that they currently flourish in. Further, habitat that is displaced for more than 3 years is not likely to return. How can any of this be assessed a 'minimal' per DEIS? Submit this is wrong. Suggest FRA revisit this assessment and modify to 'severe impact.'</p>	<p>and local jurisdictions to reduce the visual effect of barriers on adjacent lands uses. For example, sound barriers could be opaque or transparent, with various colors, materials and surface treatments. However, all types of sound barriers need to be solid walls to provide effective noise abatement.</p>
Dolores Roberto	2/7/2018	Website	<p>Background necessary for comments on design considerations to avoid and minimize impacts:</p> <p>We own 120 acres in Ellis county just south of FM879, and includes the utility corridor identified by the HSR's path. Submitted By	Date Submitted	Submission Type	Comment	Response
			aforementioned reasons (duration of construction, lengthy displacement time, and separation of the property). This is not a 'minimal' impact. For all property owner's along this 240mi path. Submit this is wrong and FRA assessment is modified as such.	
Dolores Roberto	2/9/2018	Website	Regards Public Safety and Security: the report refers to "locations of 'safe harbors' along the ROW that the train can reach quickly to address any system issues or onboard emergencies." Where are these "safe harbors" located?? Will they be contained within the LOD? Or require more land?	Refer to SS-3.
Dolores Roberto	2/9/2018	Website	Regards Utilities and Energy: The DEIS states that "ERCOT is 'expecting' additions to the system to be developed through the year 2029". There is reference to daily need of HSR being a fraction of the reserve. Who is already planning a 'call' on this reserve capacity mentioned? Who is ensuring this new burden on the grid of 1,279.80 million watts per hour per day the HSR expects to need is provided? Should additional infrastructure be required to run this new demand, outside of already planned for additions, who pays for it? Taxpayers? Suggest more scrutiny is required here to ensure accuracy.	Refer to EU-4.
Dolores Roberto	2/11/2018	Website	Comments on how the proposed HSR will negatively affect several water-related categories is provided. The categories that will be negatively impacted are: Surface Water Quality, Groundwater Quality, Surface Water Supply, Groundwater Water Supply, Impaired Water Bodies, Water Runoff and Natural Water Flow. For reference: Property id's 1778 and 1784 in Ellis county south of FM879 are used as citations. FigA, which has notations added to Appendix D's project footprint sheet 40, is provided as visual reference. The LOD for proposed Segment 2A as it crosses id#1778, will pass within ~400ft of the 'West' stock pond. HSR proposed Seg2A would also pass with ~115ft of a stock pond that USACE helped build on id#1784. Seg2A is proposing to build within ~915ft of >7acre pond currently under construction (id#1778). Both Seg2A and Seg2B cross Mustang Creek: a feeder into Bardwell Reservoir. During construction: There will be negative impact to the land's natural Water Supply because normal runoff patterns across the land will be impaired. Water Quality: Pollutants in the surface water will increase. Erosion will be accelerated and the amount of sedimentation deposited will rise - all are negatives affects on surface and ground water. Also, this will negatively impact wildlife and health of the land in general. On a permanent basis after construction: Water resources that normally rely upon the natural paths of runoff will be impacted by the drainage swells associated with a viaduct design. The stock ponds that normally (aka currently) get their water from the natural runoff of land's topography will not do so after construction. Natural water flow paths will be 're-routed' by the HSR structure and the drainage swells. All of this will negatively impact water source, water quality, wildlife, and health of the land on a permanent basis. While these comments are for two properties as examples, numerous rural properties along the entire route proposed by the HSR share similar issues. Request your assessment of a 'marginal' impact to any segment along the route be re-assessed as 'negative' and 'severe' for the water-related categories. In particular, we've shown the level of severely negative impacts to Segments 2A and 2B.	Refer to FP-1, NR-5, WW-1 and WW-2.
Dolores Roberto	2/13/2018	Website	Comments on Noise: During construction wildlife will be driven off. During operation there are frequencies not heard by human ears that are very sensitive and damaging to wildlife. We're not speaking of the terminal areas, we're alluding to our land as the train passes across it. For reference our property is identified as #1778 per project footprint AppendixD sheet 40 of 536 (Seg2A) and sheet 72 of 536 (Seg2B). The proposed HSR will pass very close to our house: <1,400ft for 2A and <1,000ft for route 2B. Any human in proximity during construction will be greatly disturbed. We are home all day, as are many rural homeowners, and we will be subjected to these noise levels throughout the construction period. As for operations, your own charts and descriptions in chapter 3.4 Noise and Vibration indicate that this proposed HSR will be operating at a noise levels above 70 dBA. Currently the only sounds we hear on a regular basis are those of various types of wildlife. Thus our current noise exposure is well below the lowest end of your scale in your Figure 3.4-3. A HSR that is passing thru at >70 dBA indexes to "Severe Impact" per your own methodology. Per your own statements, is it estimated there will be 68 to 80 train trips per day for the initial and future service levels respectively. That is a lot of "Severe Impact" incidences per day for areas that are currently quiet and peaceful. Every single rural property owner in proximity to the 240mi route is in the same situation: a normally near-negligible noise exposure index would change to a severe level with a HSR. Submit your assessment of minimal impact across our property and ANY and ALL rural homeowners along the route is wrong. Suggest you revisit and change assessment to 'severe'.	Refer to NR-1 and NV-1.
Dolores Roberto	2/17/2018	Website	FRA: the accuracy of environmental impact assessment and recommendations (DEIS) are intimately tied to the fiscal plans of the TCR/TCRR: if the company cannot execute to their proposed build-plan due to fiscal shortfalls, then your assessments are by definition flawed. For your DIES assessment and recommendations to be relevant and accurate the following is suggested: Suggest you demand TCR/TCRR provide public and detailed information on their entire business plan, ridership study, and how they plan to never be a tax burden at the state nor federal level. Included in the information packages must be how the TCR/TCRR plans to fund procurement of required property, construct the HSR in its entirety, maintain, and operate from the time it commences initial activities to time it migrates its ledger from the red to black status: i.e. transitions from a losing business venture to one making a profit. Suggest this information is included, in its entirety, as a separate appendix to the DEIS. Suggest your formal assessments and recommendations are not rendered until this done. Until this information is provided,	Refer to BA-6, GN-2 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			suggest every single assessment in all areas within the current DEIS are ranked at the lowest scores available and impacts are the mostly negatively severe. Further submit that your final recommendation on this DEIS is a NO BUILD decision	
Dolores Roberto	2/21/2018	Website	Regards impact to Natural Ecological Systems and Protected Species: the HSR proposes to bisect our property, either Segments 2A or 2B. Reference DEIS Appendix D (project footprint) sheets 40 and 72. Our property is indicated with number 1778 in both the project footprint sheets. This property is under a Wildlife Management Plan for the purpose of wildlife habitat enhancement. Surrounding acreage, all 4 sides, is either crop or livestock thus allowing us to be the wildlife sanctuary in the midst. Our entire 120acres is at risk and negatively impacted for the following reasons: it not just the 100' width of the "LOD" that should be considered, it is everything around that swath that a HSR would affect. While the proposed path attempted to minimize impacts to the natural environments by capitalizing on existing infrastructure, the assumption that this was acceptable because an area was previously disturbed and minimal wildlife fragmentation would occur is completely wrong. The total build time and recovery for the current infrastructure was ~ 2 seasons. The build time expected for the HSR is over 3 years. Wildlife will be displaced and not likely to return with a build period so prolonged. Ex: Segment 2A and its LOD proposes to pass within ~400ft of a stock pond that seasonal migratory birds take sanctuary in every year. They are unlikely to do so if the HSR is built. The wildlife will be permanently separated and fragmented by the rail system. Where they currently have uninhibited access to traverse the land, a HSR bisecting the land would make this impossible. Protection of indigenous species and their permanent displacement needs to be considered: everything from owls to deer to hawks to eagles to rabbits to bats to pheasant, etc. All of which currently thrive on this property, but are unlikely to do so if this rail is built. Many properties along the proposed routes are in a similar situation, whether they are under a wildlife management plan or not. Suggest your assessment needs to be broadened and render an impact decision of severely negative and the preferred alternative is the "no build" option.	Refer to NR-2 and NR-6. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Dolores Roberto	2/21/2018	Website	Comments on the impact to Aesthetics and Scenic Resources: From any location on the entirety of our 120 acres we would see the whole path of this proposed HRS because it would cuts across the middle of our land. Because the of terrain elevation changes north and south of our property and railroad that transport double-decker conex boxes, this proposed HSR will not only be viaducted but >30-40 ft in height AGL. With the screens/barriers/noise abatement features it will be even more eye-offending than the trains and rail infrastructure themselves. What type of screens will be used on our land if this rail is constructed? Lighting is mentioned as an option for screens/barriers/noise abatement: Do not add lighting for heaven's sake!! All the options in Appendix F's Appendix M Noise and Vibration Mitigation Options will create one long and huge eye sore across our land. Further, the impact to aesthetics and scenery is adverse to not only our land but throughout the whole of Ellis county and AND EVERY OTHER COUNTY it proposes to pass through. People live in these rural areas for the specific purpose of peaceful environment with open land views. Your methodology in Chapter 3.10 defined the study area for the six rural counties between Ellis and Waller to be within 1/2 mile of the LOD. Every household within 1/2 mile of the LOD in Ellis through Waller counties should be considered a KVP and an individual viewshed and assessed as such. The simple fact is that those homeowners on the east side of the tracks will have every sunset forever ruined for them. As for the mirror image: those on the west side will never see a sunrise again without this HSR ruining it. Submit this is wrong and FRA should modify, at minimum, its assessment for most of landscape unit 4 and all of units 5 through 9.	FRA identified 13 Landscape Units and more than 40 Key View Points as representative viewsheds throughout the study area to inform the visual impacts along the 240 miles of the Project. The KVPs are meant to replicate typical view. Further detail on KVPs can be found in <b>Section 3.10.3, Aesthetics and Scenic Resources, Methodology</b> and <b>Section 3.10.4, Aesthetics and Scenic Resources, Affected Environment</b> . System lighting will be directed towards the rail and will be designed to limit its projections outward to the community. Please see <b>Section 3.10.5, Aesthetics and Scenic Resources, Environmental Consequences</b> for lighting impacts. Location-specific mitigation has not yet been identified but may include planting trees or vegetation to screen views. Examples of potential mitigation measures can be found in <b>Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation</b> . For the Final EIS a mitigation measure has been added which, where possible, will minimize viaduct heights to the tops of existing trees to limit aesthetic and visual impacts. Mitigation measures are located in <b>Section 3.10.6, Aesthetics and Scenic Resources, Avoidance, Minimization and Mitigation</b> .
Dolores Roberto	2/22/2018	Website	Comments on Socioeconomics: Where are the secured investment monies of \$15-\$18B needed for capital? If the investment monies do exist, where is the evidence that they are secured by a means NOT related to tax-payer dollars? Do not see where purchase of land is accounted for in TCR/TCRR budget? Property values for land-owners that this proposed HSR crosses will be decreased. In the future it will be virtually impossible to sell land on either side of the HSR for the following: insurance policies will not be issued for properties that HSR crosses due to liability issues; mortgage companies will not offer loans if property is un-insurable; therefore in the future, a person could not secure a loan to purchase property on either side. While the DEIS did identify various emergency service agencies that touch the proposed routes, that is not the whole picture. In the event of an emergency, the high speeds and electrical infrastructure will require specialized training for all first responders: firemen, law enforcement, EMT/Ambulance, emergency rooms, electric company's field repair crews, and trauma centers. This is true for every municipality along the 240miles of track. Do not see where this is called out in TCR/TCRR's budget: Who will pay for the specialized training that will be required for thousands of first responders?? Not sure of your math in 'Table 3.14-22: Annual Ticket Revenue Impacts for all Build Alternatives' which is used to calculate projected sales tax revenue from ticket sales. Using the higher end ridership assumption of 7.2M per year, \$89.55M per annum from Table 3.14-22, and your statement "\$39 billion in sales tax for the state" which	Refer to GN-4, LU-2, LU-11, PI-1, SC-3, SS-18, SS-21 and VA-1. TCRR will bear financial responsibility for the development of all required safety plans as well as safety program documentation and resources. Local agencies would remain autonomous in their ability to determine the number of personnel in attendance at coordination and training events.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			appears just above the table; mathematically comes out to >435 YEARS to realize the \$39B. [39e9 /89.55e6] Further, the first paying rider of this HSR is currently planned for 2024, so the \$39B will not be attained until the year 2459?? [2024 435] Think someone's math is off. In the instance of persons whose land is in a Wildlife Exemption, taxes would go up if the HSR precludes the land-owner from executing their required duties to maintain this status. These are just a few examples and all of the aforementioned are severe negative economic impacts. Please change your assessments to reflect this.	
Dolores Roberto	3/3/2018	Website	<p>dolores roberto</p> <p>FRA: regards your preferred alternative, assessment, recommendation, and way forward: It should be quite apparent given the comments from Texas land Owners and tax payers that the logic-based assessment and recommendation for Dallas to Houston proposed HSR is a "No Build" decision. TCR/TCRR at minimum critical information from you to allow sound technical, objective: professional: and accurate assessments. It is also apparent that they (TCR/TCRR) misled you on several topics and in some instances flat-out lied. There are numerous shortfalls in TCR/TCRR's assertions and most are unsubstantiated. Here are just a few:</p> <ul style="list-style-type: none"> <li>• No evidence of fiscal viability to operate as a for-profit entity that will never be a tax payer burden;</li> <li>• No defensible ridership study;</li> <li>• no schedule for when safety regulations for speeds beyond 150mph will be published;</li> <li>• no ability to adhere to these non-existent safety regulations;</li> <li>• minimal impact to the environment: Incorrect;</li> <li>• minimal economic impact to property owners: incorrect;</li> <li>• non-existent business plans,</li> <li>• suspect revenue estimates;</li> <li>• no budget identified for property purchase and specialized training of first responders;</li> </ul> <p>After review of the comments and facts provided by the public and after careful re-consideration of DEIS' current content, please change the assessments and recommend the NO BUILD alternative. Thank you for your attention.</p>	Refer to BA-6, GN-1, GN-2, NE-1, NE-2, NE-9 and VA-1.
Craig Roberts	3/9/2018	Website	I strongly support this bold plan to move the region forward. Traffic is becoming disastrous and this will be of great benefit.	Comment noted.
Dan Roberts	1/26/2018	Email	No we don't want this don't take people's land	Comment noted.
Marisa Roberts	3/9/2018	Website	I support the High Speed Rail Project because I believe it will bring revenue to both Houston and Dallas for both business and pleasure. As they say, heads in beds and boosting revenue to hotels, restaurant owners, shopping as well as sporting events. Go Cowboys!!!	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Mervyn Roberts	1/25/2018	Website	I highly support the high speed train between Dallas and Houston. I would absolutely use it as my primary means to travel between the two cities.	Comment noted.
Mervyn Roberts	2/21/2018	Website	I fully support the vision of constructing a high speed rail system between Dallas and Houston based on proven technology. I believe this system will set Texas apart from the rest of the nation and lead the way in alternative transportation solutions. While the highway and air lines will be the primary systems, having all the transport eggs in one basket is foolish. Allowing a private company to take the risk, is to my mind, a no brainer on filling this need.	Comment noted.
Carl Robertson	2/14/2018	Website	I am writing on behalf of Playa Mar Properties III, LLC ("PMIII") pursuant to Michael Johnsen's letter dated December 19, 2017 inviting comment on and response to the Federal Railroad Administration's Draft Environmental Impact Statement ("DEIS") for the proposed Dallas to Houston High-Speed Rail Project (the "Project"). PMIII is an impacted landowner along the Project's proposed alignment and, therefore, is a stakeholder in FRA's decision regarding the Project. For the reasons discussed below, PMIII opposes the Project's proposed alignment due to the substantial detrimental effects the Project poses to PMIII's property and many other properties along this transportation corridor that rely on Hempstead Road as their primary means of access. PMIII is the owner of the West by Northwest Business Park, which fronts on Hempstead Road, with a physical address of 6001 West by Northwest Blvd. in Houston, Texas. PMIII's property is improved with a 149,299-square-foot distribution facility. Access to Hempstead Road, including by large semi-trucks, is essential to the viability and value of PMIII's property, as well as to the business interests of the several tenants of this property. PMIII's situation is not unique as there are literally hundreds of other properties and businesses that depend on the continued safe and efficient access being provided by Hempstead Road. Hempstead Road is a four-lane major thoroughfare, as designated on the City of Houston's Major Thoroughfare and Freeway Plan, and currently carries in excess of 17,000 vehicles per day. The importance of maintaining access on, off, and along this important roadway must be emphasized, and the value of Hempstead Road should not be discounted in the analysis of the Project. Because of the importance of Hempstead Road, PMIII has reviewed with great interest the information, announcements, and publications related to Texas Central's proposed high-speed passenger train and its proposed alignment. The DEIS now makes clear that the only alignment being considered for the Project's entrance into Houston is the Hempstead Road corridor. However, to this point PMIII has not been provided with any information or details as to the impact that this project will have on existing access to Hempstead Road. The current alignment maps depict only a broad yellow line suggesting that the Project will be constructed directly on top of existing Hempstead Road. Such a general illustration as to the Project's footprint leaves PMIII and other property owners completely uninformed as to how they will be impacted by the Project's construction. Consideration must be given to the interests of property owners and businesses currently located on Hempstead Road. Again, Hempstead Road is the primary means of access to and from PMIII's property, as it is for many other properties. Without the benefit of specific information detailing the planned Project and how access will be preserved on Hempstead, PMIII must object to the DEIS as being incomplete, and to the Project itself because of the severe negative impact that it will have on the use and function of PMIII's property, the businesses that operate on the property, and the property's market value. PMIII requests that the Project's proposed alignment on Hempstead Road be reconsidered to avoid significantly damaging properties and businesses that have long relied upon safe and efficient access on and along Hempstead Road. Thank you for your consideration in these matters.	The proposed limits of disturbance (LOD) for the Project will be located within the existing ROW. The Project will also be on viaduct (rail above road) along Hempstead Road, which would maintain all lanes of this primary arterial. As noted in <b>Section 3.13.3, Land Use, Methodology</b> , primary businesses along Hempstead Road in Harris County were not deemed an acquisition in this analysis due to the fact that the LOD would be located within existing right-of-way.

Thank you for your consideration in these matters.	
Christine Robicheaux	2/16/2018	Website	We need to keep up with our future growth. Having been to Japan and riding their high transit rail system it was amazing how their transportation system works! I am excited for us to continue taking this step forward into the future.	Comment noted.
Howard Robinon	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. A number of endangered species of plants and animals were identified by the draft study as being in the direct path of the proposed route and would be adversely effected by it. As landowners along the route denied permission for the survey to take place on their land, the study is therefore incomplete and fatally flawed. Further studies need to be undertaken along the entire route to properly assess the impact on wild life. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in <b>Section 3.6, Natural Ecological Systems and Protected Species</b> of the EIS.
Charlotte Robinson	2/5/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DEIS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming? Question: For forested areas, will TCRR be required to replant trees? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-13.
Charlotte Robinson	2/6/2018	Letter	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. No Discussion in the DEIS on the true Significant Negative Impacts of Tax Revenues due to lower Private Property Values except around the stations. The DEIS includes evaluations about the Property Values around the HSR stations, but totally omits the Negative side of the evaluation, that is the LOSS of Tax Revenue all across the state as a result of the presence of the HSR. The FRA does NOT prove that simply The HSR footprint will offset the tax revenue losses of huge amounts of lower property values. Property Values out several miles from the route must be evaluated to credibly and fully understand the Loss of Tax Revenue. Only then can a credible Cost/Benefit analysis be done regarding Tax analyses. FRA Must Correct this Miscalculation. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to NE-1, VA-1 and VA-3.
Charlotte Robinson	2/6/2018	Letter	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. The FRA MUST stop ALL further work on this Project and wait TCR has proven its false claim of having Eminent Domain and Condemnation rights. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER Or in COURT THEY HOLD EMINENT DOMAIN POWERS. TCR has run away from lawsuits that would have resolved this issue. Also, TCR is required to obtain a County Permit from many Rural Counties & those Permits require Proof from TCRR of Eminent Domain Powers. Cost is not a parameter to dismiss a Route Alt. for a Private Project. The 145 Route would likely be less harmful to the Environment & Landowners and Must be Reconsidered.	Refer to BA-9, ED-1, ED-3, NE-1 and NE-8.
Charlotte Robinson	2/6/2018	Letter	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the future; Question; Will the "New Roads ROW" be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. Question: How much of the increase of Impacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR?	Refer to BA-3, ED-1, ED-3, LU-9, LU-14, TR-6, TR-7 and TR-8.
Charlotte Robinson	2/6/2018	Letter	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters	Refer to LU-10, LU-14 and SG-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal process; Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore?	
Charlotte Robinson	2/6/2018	Letter	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need of Necessity? The true 1-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view.	Refer to EJ-1, GN-2, GN-3, NE-1 and PN-3.
Charlotte Robinson	2/6/2018	Letter	The Negative Impact of Increased Public Travel traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, and Negative Impact to the General Flow of Business has not been Quantified by the FRA. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters must be provided to TCRR.	Refer to NE-1, PN-3, TR-6, TR-7 and TR-8.
Charlotte Robinson	2/6/2018	Letter	What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials.	Refer to SG-4.
Charlotte Robinson	2/6/2018	Letter	The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case, TCR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit.	Refer to ED-1.
Charlotte Robinson	2/6/2018	Letter	Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a Permit in order to construct a HSR. The Permit also requires that TCRR Prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. Question: Has TCRR proved to the FRA that they possess legally Eminent Domain? Question: if so, the FRA MUST share that rationale with the Public who are going to be hurt the Worst by the HSR. Question: If TRR has not proven ED to the FRA, then Why is the FRA working with TCRR on this Project as if they have no ED, and they certainly are not an Operating RR, and without ED, this project will Never be built?	Refer to ED-1, ED-3 and NE-1.
Charlotte Robinson	2/6/2018	Letter	Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. The proposed route will greatly effect the value of properties resulting in a loss of tax revenue for Waller County and its residents. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to LU-4.
Charlotte Robinson	2/6/2018	Letter	Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property.	Refer to LU-3 and VA-1.
Charlotte Robinson	2/6/2018	Letter	In the 1830's, a stage coach inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve, was built by a Benaiah Jones. Jones and his descendants are buried in a cemetery on the land. The proposed route will run directly over both the site of the inn and the cemetery, destroying them forever.	Refer to CR-2.
Charlotte Robinson	2/6/2018	Letter	When Kickapoo Preserve in Waller County was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-9.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Charlotte Robinson	2/6/2018	Letter	The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population.	Refer to VA-1. A discussion of potential impacts to Environmental Justice communities in Waller County has been added to <b>Section 3.18, Environmental Justice.</b>
Charlotte Robinson	2/6/2018	Letter	The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. The FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document	Refer to GN-2, GN-4, GN-5 and NE-1.
Charlotte Robinson	2/6/2018	Letter	The FRA DEIS does not Quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre- Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision.	Refer to TR-6.
Charlotte Robinson	2/6/2018	Letter	The Negative Impact of Increased Public Travel traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, and Negative Impact to the General Flow of Business has not been Quantified by the FRA. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters must be provided to TCRR.	Refer to TR-6, TR-7 and TR-8.
Charlotte Robinson	2/6/2018	Letter	What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials	Refer to SG-4.
Charlotte Robinson	2/6/2018	Letter	FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more.	Refer to SG-4.
Charlotte Robinson	2/6/2018	Letter	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case, TCR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit. Now, the FRA preferred Route does in fact still go through Mr. Miles Property, therefore, the FRA is now part of TCRR Deception and False Statement to Mr. Miles and to the Public who are ALL FULL aware of the status of this case. TCRR does clearly NOT possess ED Powers, is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRAMIJUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE TCRR HSR. and STOP wasting Taxpayer money on this Uneconomic project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1, ED-3, NE-1, NE-8 and PN-3.
Charlotte Robinson	2/6/2018	Letter	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. Charlotte Robinson	2/6/2018	Letter	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason In the Lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed	Refer to ED-1, ED-3, NE-1, NE-8 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			to survey the property. This court judgement also sets a precedent against TCR's claim of possessing ED Powers. They subsequently dropped all cases against landowners and were unable to survey thousands of acres. Question: Why is the FRA working on this Project being executed by a company that Can't or Wont Prove they have ED AND is not an Operating Railroad AND does not have the authority to survey property without Landowner Permission? The FRA Must Cease work on this project IMMEDIATELY and stop wasting any Taxpayer money and time being used to support an Uneconomic Project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Letter	Question: If TRR has not proven ED to the FRA, then Why is the FRA working with TCRR on this Project as if they have no ED, and they certainly are not an Operating RR, and without ED, this project will Never be built? Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a Permit in order to construct a HSR. The Permit also requires that TCRR Prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. Refer to ED-1, ED-2 and NE-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Dallas to Houston FRA DEIS after showing High, Medium, and Low Risk levels of increased Emergency Response times only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant" The FRA then states that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed Emergency Response times! The FRA MUST not allow TCR's HSR Project to move forward with ANY INCREASES IN ER TIMES?? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Comment noted.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads can be done without that Permit. The FRA is Silent on this issue and it must be recognized by FRA because it is the LAW. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, ED-3, NE-1, NE-8 and TR-6.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEB, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-8.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEB, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-8.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has published a very Sloppy, Inaccurate, and Incomplete One Sided DEIS that JEOPARDIZES PUBLIC SAFETY BY NOT PLACING TRUE LIMITATIONS, PARAMETERS, AND CLEAR CONCRETE EXPECTATIONS WITH TEETH on TCRR and its Execution Plan. Since the FRA is not responsible for execution of anything OUTSIDE of "RR Safety" this DEIS is full of simply Guidelines" to TCRR without the ability for the FRA to hold TCRR Accountable. So who will protect the Public? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and SS-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I see nothing that clearly proves or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and certainly TCRR does not	Refer to ED-1, NE-1, NE-8 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads can be done without that Permit. The FRA is Silent on this issue and it must be recognized by FRA because it is the LAW. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, ED-3, NE-1, NE-8 and TR-6.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. As described in the DEIS Abstract, the FRA has jurisdiction over all areas of "RR Safety". However, the FRA is not accountable for the entire execution of this project nor how TCRR interacts with the Public in addressing issues and negative impacts on the public during the Construction Phase. The FRA Must suspend any further work on this HSR Project until the Texas Legislators can determine what State Regulatory Body would be responsible and accountable to provide Oversight on all aspects of this project, except what is being overseen by the FRA, "RR Safety". This would also require that a State Regulatory Body is ensuing the new State requirements on HSR Safety & Security are being appropriately planned, designed, and applied. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and NE-2.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has published a very Sloppy, Inaccurate, and Incomplete One Sided DEIS that JEOPARDIZES PUBLIC SAFETY BY NOT PLACING TRUE LIMITATIONS, PARAMETERS, AND CLEAR CONCRETE EXPECTATIONS WITH TEETH on TCRR and its Execution Plan. Since the FRA is not responsible for execution of anything OUTSIDE of "RR Safety" this DEIS is full of simply Guidelines" to TCRR without the ability for the FRA to hold TCRR Accountable. So who will protect the Public? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and SS-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I see nothing that clearly proves or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and certainly TCRR does not possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, NE-1, NE-8 and PN-3.
Charlotte Robinson	2/6/2018	Handwritten	It was announced at a public meeting yesterday that the objection/comment period on the DEIS for the proposed Houston to Dallas has been extended until 9th March, 2018. This study has been some years in the making and utilities facts and figures provided by "experts" on behalf of Texas Central Partners. The comment period is much to short for the "little people" of Texas who are directly effected by the proposed scheme, to digest such a lengthy document, research the figures provided and prepare comments for consideration. In order that time is given for constructive comments to be made on the report, I ask that the deadline for comments be extended for at least ninety days.	Refer to PI-3.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is the issue of High Elevation Rescues from the top of the raised tracks in case of an Emergency or Breakdown that is Omitted by the FRA DEIS. There must be a Risk Assessment performed on the ability for Emergency Vehicles to reach any remote area along the 240 mile route. There is no mention of this in the DEIS. In any wet or winter months, it will be next to impossible to reach the track in the middle of a very remote pasture along the route. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-3, SS-18 and SS-19. Locations where emergency vehicles can access the operational corridor, either on public roads or underneath sections of viaduct will be identified and communicated with emergency responders through coordinated development of the Emergency Preparedness Plan as well as the plan's communication and training programs.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA is responsible for RR Safety & Security. But yet, the FRA was silent on any Comprehensive Risk Management System applied to Assess the Risk of Crossing Large Live Pipelines (2) and a Transmission Line in the Utility Corridor within Leon County. A Comprehensive Risk Management System must be applied including Specific Risk Assessments that identify disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce, eliminate or manage the risk. This must be done for the Utility Conidor and any other potentially dangerous systems for a credible understanding of the Public Safety risks associated with the HSR. The FRA will be held accountable if this risk work is not performed. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to EU-2, SS-18 and SS-19. In Leon County, Segment 3C is proposed along the 1-45 corridor and would not affect transmission lines any more than the existing infrastructure. Where Segment 4 crosses transmission lines south of Concord, TX, engineering refinements will be conducted in consultation with the utility provider to address any hazard controls identified through TCRR's Hazard Analysis (See <b>Section 3.16.6, Safety and Security, Avoidance, Minimization and Mitigation, SS-CM#4</b> ).

Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a large amount of Regional non-specific data in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without confirming the data from other sources by a comprehensive inspection program, the FRA DEIS data Not Project Specific and is suspect of being Out of Data. Your Route Maps are clearly Out of Date. The DEIS is Fatally Flawed for endangered species, historical property, cemeteries, or other environmental topics. Considering the large areas in the Environmental Maps that show Navasota Ladies Tresses (vs. your only 657 acres of inspection) and the Houston Toad, these areas were not recently inspected as there is no way TCR had the permission to survey ALL those properties. So, the FRA must restore the Credibility of this Data with Boots on the Ground surveys and until this done the study is incomplete.. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-1, NE-8 and NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Railway has continuously communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The rerouting of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-8 and TR-10.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side of the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10, LU-14 and SG-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to HZ-5, WW-1 and WW-6.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DEIS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming? Question: For forested areas, will TCRR be required to replant trees? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10 and LU-13.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-2, GN-4 and NE-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety	Refer to SS-19, SS-21, SS-23 and TR-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Systems and how it applies to the Safety of the Public during Construction. Question: Is the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction Safety while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and required to be Implemented by TCRR and its Contractors. Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA DEIS does not quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre- Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-6 and TR-7.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-5 and NV-10.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-5 and NV-10.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-5 and NV-10.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. This Omission must be Corrected. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to WW-2.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Based on the size of Raw Materials and Structural components being moved on existing roads, there will be significant Damage to Existing Private, City, County, State and Federal Road/Highway Infrastructures. The Government entities and the Public deserve to understand How much damage to roads and infrastructure and where it can be expected. Question: Who will pay for this damage repairs? Question: Will the	Refer to TR-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Public have to wait 5+ years to see the damage repaired? Question: Who will pay for damages to the public vehicles as a result of having to use unsatisfactory roads for 5+ years? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of-way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1, NE-1, NE-2 and PN-3.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Federal Railroad Administration (FRA) does not have the authority to grant ED, only the STB or the state. "Ihe FRA clearly states they CANNOT give an entity ED powers. Question: So, if TCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's narrow scope of "RR Safety"? THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1, NE-1, NE-2 and PN-3.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph? Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA, Correct? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-1 and NE-2.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Question: There exist NO Texas State Regulatory Body to OVERSEE EXECUTION OF THE TCRR HSR PROJECT. FRA's responsibility is limited to Design/Operating "RR Safety" , NOT Execution, leaving the Public without a body to refer too if commitments are not met by TCRR. Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To the State putting in place a State Regulatory Body over HSRs operating at speeds of 205 mph? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-1, NE-2 and SS-5.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR and the FRA have not worked with local County Emergency Response entities to understand the safety and security needs of TCR which will be paid for by the local Counties. In fact, it was discovered via a Lawsuit against TXDOT by the Waller County Regional Planning Committee, a True local County Government Body, the the FRA had instructed TXDOT to no longer meet or work with this local government body for any activities associated with the TCRR HSR. TXDOT/TCRR LOST that Court case,	Refer to NE-1, PI-1, SS-18 and SS-23.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			<p>Appealed, and LOST again. Question: Is this not overstepping the FRA's Power over local Governments? Question: Is this not the reason that the FRA's detail of Emergency Response Impact was void of mitigation details in order that there was ZERO increase in ER Times?</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	
Charlotte Robinson	2/6/2018	Handwritten	<p>I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure 20% of the Distance in Miles of controlled Land to lay track down on? The FRA Must Cease ALL Work on TCRR's HSR EIS until TCRR has proven they can acquire the Land that TCRR MUST Own in order to build this Project. Without that, TCRR and the FRA are wasting time and money. But in the FRA's case, Taxpayer Money!</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to ED-1 and NE-1.
Charlotte Robinson	2/6/2018	Handwritten	<p>I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR's Economic Model includes Ridership numbers that would require them to take 100% of the air travel from SW airlines between Dallas-Houston and 100% of those who travel in cars between the two cities. The FRA does not really test any of TCRR's data on Ridership and Costs AND has not used external resources, such as the "Reason Foundation" (States this Project will Fail!), to determine whether all of this Wasted effort is necessary AT ALL. Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extremely unfair to the Public who the FRA is supposed to Protect.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to GN-2, GN-3, NE-1 and NE-2.
Charlotte Robinson	2/6/2018	Handwritten	<p>I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to SG-4.
Charlotte Robinson	2/6/2018	Handwritten	<p>I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of-way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to ED-1, NE-1, NE-2 and PN-3.
Charlotte Robinson	2/6/2018	Handwritten	<p>I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason In the Lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed to survey the property This court judgement also sets a precedent against TCR 's claim of possessing ED Powers. They subsequently dropped all cases against landowners and were unable to survey thousands of acres. Question: Why is the FRA working on this Project being executed by a company that Can't or Won't Prove they have ED AND is not an Operating Railroad AND does not have the authority to survey property without Landowner Permission? The FRA Must Cease work on this project IMMEDIATELY and stop wasting any Taxpayer money and time being used to support an Uneconomic Project.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to ED-1, NE-1, NE-2 and PN-3.
Charlotte Robinson	2/6/2018	Handwritten	<p>I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality Of life spent driving behind the wheel Of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million.</p> <p>I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement</p>	Refer to AS-1, NV-1, TR-6 and TR-8.

Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Katy Prairie Conservancy owns a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. The Preserve is home to a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to RF-4, NR-2 and NR-3. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Katy Prairie Conservancy is where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to RF-4 and WW-2.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to EU-2.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment will impact all future road and thoroughfares through the northern portion of Waller County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-8.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NR-1, NR-2, RF-2 and WW-2.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines -- all developments for nearly 500 homes, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to RF-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will create an obsolescence in property values in Waller Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to EJ-1, LU-3, LU-4, SC-3 and VA-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which	Refer to VA-1. A discussion of potential impacts to Environmental Justice communities in Waller County has been added to <b>Section 3.18, Environmental Justice</b> .

			has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will create an obsolescence in property values in Waller Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to EJ-1, LU-3, LU-4, SC-3 and VA-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-4 and VA-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The barrier created by the route between the Daiken Goodman facility and the rest of the County will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way. "... , we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options." I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to ED-2 and LU-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development. The impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: 'Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route.' This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SC-11.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SC-5.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The route passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning manufacturing company, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. There is concern that the HSR will create a barrier between Waller and the Goodman facility	Refer to ED-2 and LU-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			and cause the city to lose much needed tax revenue. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development in Waller County. The proposed route will adversely effect this development resulting in a loss of tax revenue to the County and its residents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. HC-4 slices through the entire planned Waller Town Center project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The HC-4 route passes through the proposed Waller Town Center development which is a 462-acre \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is very concerned with catastrophic accidents that may occur from an HSR accident. Waller County is very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1, SS-1, SS-13, SS-18 and SS-19.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center which is a joint venture being marketed by Cullinan Properties, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MNID) specifically for this development. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Grimes County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Grimes County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A company by the name of Magellan Pipeline Company is well advanced in their plans to lay a pipeline in, or adjacent, to the Utility Corridor which is the preferred HC-4 route for the proposed high speed rail line. The constant vibrations caused by the passing of trains in excess of	Refer to EU-2 and NV-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

			200mph in such close vicinity to a pipe line carrying volatile substances could have a devastating effect. The draft environmental impact study has failed to take into account this dangerous situation and this should be reviewed. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 145, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets. New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-18, SS-23 and SS-26.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identifying the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Waller Harris Emergency Services District No. 200 ("ESD") provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-23.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the event of an accident or other incident along the route the attendance of local police would be required. In order for them to deal effectively with any such incident, the personnel would require training and specialized equipment. The added expense of such training and the supply of equipment will be the responsibility of Counties along the route who will have to fund the additional expenditure by means of a tax increase. This is not acceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-18, SS-23 and SS-26.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the event of an accident or other incident along the route the attendance of local fire department would be required. In order for them to deal effectively with any such incident, the personnel would require training and specialized equipment. The added expense of such training and the supply of equipment will be the responsibility of Counties along the route who will have to fund the additional expenditure by means of a tax increase. This is not acceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-18, SS-23 and SS-26.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. By dividing Counties with a barrier in the form of the proposed rail line, and the closure of roads associated with it, considerable disruption to	Refer to SC-6 and SC-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			school busses taking children to and from their schools will result. This will mean children being picked up even earlier prior to the start of the school day and being returned home later after school closure. No doubt, because of the logistics involved, extra busses will have to be provided resulting in either reducing school expenditure or imposing an increase in the local taxes. This is completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the event of an accident or other incident along the route the attendance of local ambulance service would be required. In order for them to deal effectively with any such incident, the personal would require training and specialized equipment. The added expense of such training and the supply of equipment will be the responsibility of Counties along the route who will have to fund the additional expenditure by means of a tax increase. This is not acceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-18, SS-23 and SS-26.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path. This will increase the response time of the local ambulance departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-23.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. It is proposed that a two lane service road will be constructed to run adjacent with the proposed ram] line. This road will be constructed at the expense of Texas Central Partners, but once complete will be turned over to the local Counties to maintain. My County has problems funding maintenance of the existing roads without the added burden of even more roadways to maintain. This move is unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-7.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Partners have failed to show to a Court that they are in fact a railway and therefore have no right to condemn property by means of eminent domain which would be the only way they can obtain sufficient land for their project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A number of endangered species of plants and animals were identified by the draft study as being in the direct path of the proposed route and would be adversely effected by it. As landowners along the route denied permission for the survey to take place on their land, the study is therefore incomplete and fatally flawed. Further studies need to be undertaken along the entire route to properly assess the impact on wild life. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted. The amount surveyed can be found in <b>Section 3.6, Natural Ecological Systems and Protected Species</b> of the EIS.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path. This will increase the response time of the local fire departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-23.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path. This will increase the response time of the local police departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-23.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I live in Saddle Creek Forest which is a gated sub-division which will be directly effected by the proposed HC-4 route. By having the proposed rout running through the neighborhood will result in disruption to our way of life caused by noise and vibration to properties in the vicinity of the proposed line, many of which are occupied by elderly and ill residents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1.
Charlotte Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I live in Saddle Creek Forest which is a gated sub-division which will be directly effected by the proposed HC-4 route. A number of properties in the neighbor hood will be acquired for the route and this, together with the proposed route passing through will result not only in the disruption of the tranquil way of life which was one of the reasons why we purchased property in this area, but it will substantially reduce the value of our property and thus reduce the income from property tax payable to the I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-3 and VA-1.

Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Railway has continuously communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The rerouting of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, ED-2, LU-14, TR-6, TR-7, TR-8 and TR-10. Refer to <b>Section 3.11.7, Transportation, Build Alternatives Comparison</b> for a summary of the impacts on roadways, transit services, rail facilities, airports and on-road pedestrian/bicycle facilities. Specifically, <b>Table 3.11-61: Summary of Transportation Impacts by Build Alternative</b> provides summaries based on Build Alternative.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal process; Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-14 and SG-4.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side of the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCR I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-10, LU-14 and SG-4.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if So, from what sources in the area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need/Necessity"? The true 1-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EJ-1 and GN-3.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the	Refer to GN-2 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. The FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA DEIS does not Quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre- Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision.	Refer to TR-6 and TR-7.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1 and NV-10.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1 and NV-10.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason, Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. This Omission must be Corrected. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. The safety of a train passing in rural Texas where Hunting is at the highest level was never mentioned. Question: What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FRA was not specific on what type of monitoring system would be used. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use. A train hitting a Feral low center of gravity Hog would be devastating. More specifics specifications should be provided to TCRR for both fencing and monitoring systems. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-2, SS-6, SS-10 and SS-12.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Based on the size of Raw Materials and Structural components being moved on existing roads, there will be significant Damage to Existing Private, City, County, State and Federal Road/Highway Infrastructures. The Government entities and the Public deserve to understand How much damage to roads and infrastructure and where it can be expected. Question: Who will pay for this damage repairs? Question: Wih the Public have to wait 5+ years to see the damage repaired? Question: Who will pay for damages to the public vehicles as a result of having to use unsatisfactory roads for 5+ years? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Negative Impact of Increased Public Travel traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, and Negative Impact to the General Flow of Business has not been Quantified by the FRA. The FRA has the ability to take Lessons Learned from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters must be provided to TCRR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-6, TR-7 and TR-8.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of- way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRAMUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, ED-3, NE-1 and NE-8.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Federal Railroad Administration (FRA) does not have the authority to grant ED, only the STB or the state. "Ihe FRA clearly states they CANNOT give an entity ED powers. Question: So, ifTCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's narrow scope of "RR Safety"? THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, NE-1 and PN-3.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph? Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA, Correct? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and NE-2.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To developing, approving, and publishing the new regulations for speeds of up to 205 mph?. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, NE-2 and SS-5.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Railway has continuously communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The rerouting of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-8 and TR-10.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the filture; Question; Will the "New Roads ROW" be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. Question: How much of the increase of Impacted Acreage	Refer to BA-3, ED-2, LU-14, TR-6, TR-7 and TR-8.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal process; Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-10, LU-14 and SG-4.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side of the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCR I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-10 and LU-14.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to HZ-5, WW-1 and WW-6.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DEIS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming? Question: Forforested areas, will TCRR be required to replant trees? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19, SS-21, SS-23 and TR-6.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need/Necessity"? The true 1-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to GN-2, GN-3, NE-1 and PN-3.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how it applies to the Safety of the Public during Construction, Question: Is the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction Safety while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and required to be Implemented by TCRR and its Contractors. Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-19, SS-21, SS-23 and TR-6.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is	Refer to NV-1, NV-5 and NV-10.

Question: So, ifTCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's narrow scope of "RR Safety"? THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, NE-1, NE-2 and PN-3.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph? Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating	Refer to NE-1 and NE-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA, Correct? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To developing, approving, and publishing the new regulations for speeds of up to 205 mph?. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, NE-2 and SS-5.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: There exist NO Texas State Regulatory Body to OVERSEE EXECUTION OF THE TCRR HSR PROJECT. FRA's responsibility is limited to Design/Operating "RR Safety", NOT Execution, leaving the Public without a body to refer too if commitments are not met by TCRR.. Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To the State putting in place a State Regulatory Body over HSRs operating at speeds of 205 mph? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1 and NE-2.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure 20% of the Distance in Miles of controlled Land to lay track down on? The FRA Must Cease ALL Work on TCRR's HSR EIS until TCRR has proven they can acquire the Land that TCRR MUST Own in order to build this Project. Without that, TCRR and the FRA are wasting time and money. But in the FRA's case, Taxpayer Money! I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to PI-1 and SS-23.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure 20% of the Distance in Miles of controlled Land to lay track down on? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1 and NE-1.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR's Economic Model includes Ridership numbers that would require them to take 100% of the air travel from SW airlines between Dallas-Houston and 100% of those who travel in cars between the two cities. The FRA does not really test any of TCRR's data on Ridership and Costs AND has not used external resources, such as the "Reason Foundation" (States this Project will Fail!), to determine whether all of this Wasted effort is necessary AT ALL. Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extremely unfair to the Public who the FRA is supposed to Protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-2, GN-3, NE-1 and NE-2.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason The Federal Surface Transportation Board (STB) denied Texas Central Railway (TCR) Eminent Domain (ED) Powers and proclaimed they do not have oversight jurisdiction over TCR's Project. Despite TCR trying to bypass the State of Texas regarding regulatory guidance, the STB ruled that they must go back to Texas for regulation and oversight. TCRR has not proven with the State Legislature (2017 Session) or in Court suits that they possess ED or that they are an Operating RR. So, TCRR does not possess ED at either the Federal or State Level. TCRR is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER	Refer to ED-1, NE-1, NE-2 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality Of life spent driving behind the wheel Of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to AS-1, NV-1, NV-5, PI-1 and TR-8.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Katy Prairie Conservancy owns a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. The Preserve is home to a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-2, NR-3 and RF-4. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Katy Prairie Conservancy is where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to RF-4 and WW-2.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. The proposed route will greatly effect the value of properties resulting in a loss of tax revenue for Waller County and its residents. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-12 and VA-4.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hallow, Remington Forest and Six Pines — all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-2 and LU-3.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the dran EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment will impact all future road and thoroughfares through the northern portion of Waller County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to	Refer to SC-13.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to FP-1, SS-17, WW-1 and WW-8.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2, RF-2 and WW-2.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the proposed high speed rail between Houston and Dallas for the following reason. One more major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to SC-11.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. When Kickapoo Preserve in Waller County was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre-historic/historic sites considered for inclusion in the National Register of Historical Places. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to CR-9.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines — all developments for nearly 500 homes, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-2, LU-3 and RF-1.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, BA-8, LU-4 and PI-1.
Charlotte Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected rider ship. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on	Refer to GN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere.. I propose that the only viable alternative would be that the NO BUILD option be chosen In the final Environmental Impact Statement.	
Cherie Robinson	2/6/2018	Handwritten	I support the comments listed below and offer them as evidence supporting the "No Build Alternative" 1. I support the "No Build Alternative" on the Texas Central Railway High Speed Rail in Texas. 2. I support the "No Build Alternative" and recommend that the Federal Railroad Administration, US Department of Transportation revisit their vision for the need of High Speed Rail in Texas. 3. I support the "No Build Alternative" and recommend that the Federal Railroad Commission study the use of existing infrastructure to it's fullest extent before allowing any private company eminent domain authority for a project that due to cost will be prohibitive for use by all citizens of Texas. 4. I support the "No Build Alternative" because there is no mitigation for loss of agricultural land or evaluation of such impact. 5. I support the "No Build Alternative" because the current DEIS does not take into consideration sites that have significant historical or cultural significance, such as cemeteries, farms and buildings that may qualify as historical sites. 6. I support the "No Build Alternative" because the current DEIS does not offer any consideration that the building and operation of HSR results in land take, noise and air pollution, visual disruption and a high consumption of electricity.	Refer to AQ-1, AS-1, BA-4, BA-6, CR-3, CR-4, CR-6, CR-11, CR-13, ED-1, ED-2, EU-4, LU-2, LU-11, NE-1, NV-1 and PN-3.
Elizabeth Robinson	2/28/2018	Email	We also oppose HSR because of the impact it will have on: - surrounding land, wildlife, and business - current roads - travel time within our county - emergency response time We are highly suspect of: - projected ridership - length and cost of construction - inconsistencies and untruths from Texas Central - bullying of land owners by Texas Central	Refer to ED-2, GN-2, SC-19, SS-23, TC-6 and TR-8.
Elizabeth Robinson	2/28/2018	Email	I am writing in opposition of the Dallas Houston HSR. The current route selected, although it does not condemn our land, is close enough to devastate our quality of life and property value. We planned ahead, worked hard and saved, and have spent the last 10 years building a homestead that we had no intention of ever leaving. Our dream is to pass our land and all we put into it to the next generation of our family. Our life plan is now in jeopardy. The personal impact is immense, but not the only reason we oppose this rail. We oppose the rail for our neighbors, for our fellow citizens, for our fellow American dreamers. Land ownership and property rights are essential to this nation and the freedom of its citizens. Eminent domain should be a last resort for government entities in providing a necessary benefit for the public. HSR is NOT necessary and likely to fail. TCR is privately owned. Approving use of eminent domain for TCR is a terrifying precedent. Traveling between Dallas and Houston is a choice, a choice that can be carried out through multiple current options. We also oppose HSR because of the impact it will have on: - surrounding land, wildlife, and business - current roads - travel time within our county - emergency response time We are highly suspect of: - projected ridership - length and cost of construction - inconsistencies and untruths from Texas Central - bullying of land owners by Texas Central There is no amount of money sufficient to compensate a family that has put years, sometimes generations, of work into a piece of land. You cannot find another piece of land, much less a comparable piece of land, to the one you have worked so hard to suit your needs. There are clearings, plantings, fences, outbuildings, barns, watering holes and ponds, homes, burial sites. Land owners have addressed storage, drainage, electrical; the list goes on and on. We cannot pick up and move to an equivalent because an equivalent is not available in our area, and the purchase price would not be enough to replicate the existing land. The Declaration of Independence states the purpose of government, which is to protect our unalienable rights to life, liberty, and the pursuit of happiness. Accordingly, it is the duty of the FRA to protect the property rights (pursuit of happiness) of US citizens from the use of eminent domain whenever possible. HSR will destroy a way of life for so many, a way of life and use of land that feeds and clothes this nation and the world. Stand up and do what is right by stopping Dallas Houston HSR.	Refer to ED-1, GN-2, PN-3, SC-19, SS-14, TC-6, TR-8 and VA-1.
Howard Robinson	12/23/2017	Email	In relation to the public meetings concerning the proposed high speed rail line between Houston and Dallas I am very disappointed to see that the meetings have been arranged to coincide with each other. The impression of this arrangement is that this has been done to prevent large attendances at individual meetings which would enable Texas Central Partners to say that there is little opposition to their ill conceived	Refer to PI-1 and PI-11.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			scheme. This is a shameful example of the principle of divide and conquer and brings discredit on your organisation. Another concern about having duplicate meetings on the same dates is that your "first team" cannot be in two places at once so one of the meetings will not have the benefit of hearing from your experts. Please reconsider the dates are the meetings in order to avoid any conflicts.	
Howard Robinson	1/18/2018	Email	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Comment noted.
Howard Robinson	1/18/2018	Email	Should I wish to submit a written comment on the Draft Environmental Impact Statement at one of the forthcoming public hearings, will I need to use an "official " form or will a letter on plain paper be sufficient? If an "official" form is required, where can I obtain a copy prior to the meetings	Refer to PI-1.
Howard Robinson	1/20/2018	Email	A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected rider ship. The Report stated: "We truly hope that high-speed rail becomes a reality in the united States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws.	Refer to GN-3.
Howard Robinson	1/20/2018	Email	Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identify the WCSRPC as a "public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1.
Howard Robinson	1/20/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. By dividing Counties with a barrier in the form of the proposed rail line, and the closure of roads associated with it. considerable disruption to school busses taking children to and from their schools will result. This will mean children being picked up even earlier prior to the start of the school day and being returned home later after school closure. No doubt, because of the logistics involved, extra busses will have to be provided resulting in either reducing school expenditure or imposing an increase in the local taxes. This is completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, SC-6, TC-7 and TR-8.
Howard Robinson	1/20/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the event of an accident or other incident along the route the attendance of local ambulance service would be required. In order for them to deal effectively with any such incident, the personal would require training and specialized equipment. The added expense of such training and the supply of equipment will be the responsibility of Counties along the route who will have to fund the additional expenditure by means of a tax increase. This is not acceptable.	Refer to SS-18, SS-23 and SS-26.
Howard Robinson	1/20/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the event of an accident or other incident along the route the attendance of local fire department would be required. In order for them to deal effectively with any such incident, the personal would require training and specialized equipment. The added expense of such training and the supply of equipment will be the responsibility of Counties along the route who will have to fund the additional expenditure by means of a tax increase. This is not acceptable.	Refer to SS-18, SS-23 and SS-26.
Howard Robinson	1/20/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the event of an accident or other incident along the route the attendance of local police would be required. In order for them to deal effectively with any such incident, the personal would require training and specialized equipment. The added expense of such training and the supply of equipment will be the responsibility of Counties along the route who will have to fund the additional expenditure by means of a tax increase. This is not acceptable.	Refer to SS-18, SS-23 and SS-26.
Howard Robinson	1/20/2018	Email	The proposed route will in fact divide Counties and restrict freedom of movement along its path. This will increase the response time of the local police departments when attending life threatening incidents which will be completely unacceptable.	Refer to SS-23.
Howard Robinson	1/20/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Partners have failed to show to a Court that they are in fact a railway and therefore have no right to condemn property by means of eminent domain which would be the only way they can obtain sufficient land for their project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Howard Robinson	1/20/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I live in Saddle Creek Forest which is a gated sub-division which will be directly effected by the proposed HC-4 route. By having the proposed rout running through the neighborhood will result in disruption to our way of life caused by noise and vibration to properties in the vicinity of the proposed line, many of which are occupied by elderly and ill residents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1.
Howard Robinson	1/20/2018	Website	The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Grimes County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill fts responsibility to advance an alternative that resolves the conflicts the project creates in Grimes County. (40 C.F.R. S 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings and the FRA has failed to address these impacts in the draft EIS.	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Howard Robinson	1/20/2018	Website	The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Howard Robinson	1/20/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A company by the name of Magellan Pipeline Company is well advanced in their plans to lay a pipeline in, or adjacent, to the Utility Corridor which is the preferred HC4 route for the proposed high speed rail line. The constant vibrations caused by the passing of trains in excess of 200mph in such close vicinity to a pipe line carrying volatile substances could have a devastating effect. The draft environmental impact study has failed to take into account this dangerous situation and this should be reviewed. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2 and NV-5.
Howard Robinson	1/20/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. It is proposed that a two lane service road will be constructed to run adjacent with the proposed rail line. This road will be constructed at the expense of Texas Central Partners, but once complete will be turned over to the local Counties to maintain. My County has problems funding maintenance of the existing roads without the added burden of even more roadways to maintain. This move is unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3 and TR-7.
Howard Robinson	1/20/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path. This will increase the response time of the local ambulance departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to PI-1 and SS-23.
Howard Robinson	1/20/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to PI-1 and SS-23.
Howard Robinson	1/21/2018	Email	When Kickapoo Preserve in Waller County was established, they were required to perform an archeological survey, which produced the "Kickapoo Archeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archeological sites and two pre- historic/historic sites considered for inclusion in the National Register of Historical Places. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-9.

			this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	
Howard Robinson	1/21/2018	Email	Kickapoo Preserve is a high-end development for 500 new homes for Daikin/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. The proposed route will greatly effect the value of properties resulting in a loss of tax revenue for Waller County and its residents.	Refer to LU-4 and VA-1.
Howard Robinson	1/21/2018	Email	Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million.	Refer to TR-6 and TR-8.
Howard Robinson	1/21/2018	Email	The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. These issues were brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to VA-1. A discussion of potential impacts to Environmental Justice communities in Waller County has been added to <b>Section 3.18, Environmental Justice.</b>
Howard Robinson	1/21/2018	Email	The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. Th	Refer to SC-5.
Howard Robinson	1/21/2018	Email	A major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property.	Refer to SC-11.
Howard Robinson	1/21/2018	Email	A major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route...However...the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route.	Refer to SC-11.
Howard Robinson	1/21/2018	Email	Waller City Council has opposed the HSR project in Resolution 2015-5, passed on January 25, 2015. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development .	Refer to ED-2 and LU-4.
Howard Robinson	1/21/2018	Email	Waller County is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to ED-2 and LU-4.
Howard Robinson	1/21/2018	Email	The route passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning manufacturing company, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax revenue.	Refer to ED-2 and LU-4.
Howard Robinson	1/21/2018	Email	HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development in Waller County. The proposed route will adversely effect this development resulting in a loss of tax revenue to the County and its residents.	Refer to ED-2 and LU-4.
Howard Robinson	1/21/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. HC-4 slices through the entire planned Waller Town Center project impacting 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-4, SC-19 and VA-1.
Howard Robinson	1/21/2018	Email	The HC-4 route passes through the proposed Waller Town Center development which is a 462-acre \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This	Refer to ED-2 and LU-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			would allow the City to decrease its tax rate while improving City services. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	
Howard Robinson	1/21/2018	Email	The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Town Center which is a joint venture being marketed by Cullinan Properties, and Texas. The WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development.	Refer to ED-2 and LU-4.
Howard Robinson	1/21/2018	Email	The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city.	Refer to LU-4 and PI-1.
Howard Robinson	1/21/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is very concerned with catastrophic accidents that may occur from an HSR accident. Hundreds of ambulances, life flights, and emergency services will be needed and the District will not be able to handle this type of emergency. This will place an undue burden on the District. To date there has been no discussion with the FRA as to how they will resolve these conflicts. This issue was brought to the attention of the FRA by Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to PI-1, SS-12, SS-13 and SS-18.
Howard Robinson	1/21/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to SS-23, SS-26 and VA-1.
Howard Robinson	1/21/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Waller Harris Emergency Services District No. 200 ("ESD) provides emergency services throughout the impacted area of the proposed alignment of the High Speed Rail. These services could be negatively impacted by the HSR line, due to its potential impact on county and private roads, many of which are used for emergency vehicles that now service the District and provide an 8-minute response time. The HSR will disrupt this service and increase the response time to dangerous and unacceptable levels. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to SS-23.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-1, NR-2, RF-2 and WW-2.
Howard Robinson	1/21/2018	Website	Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered.	Refer to FP-1, SS-17, WW-1 and WW-8.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment will impact all future road and thoroughfares through the northern portion of Waller County. Dozens of roads are planned, but none will be able to be completed if the train cuts through stifling all future economic development in that area. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-1 and TR-8. No public roads in Waller County would be closed as a result of the Project. Refer to <b>Table 3.11-51: Waller County Roadway Modifications</b> for more information.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines — all developments for nearly 500 homes, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to RF-1.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines — all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-3, LU-4, RF-1 and VA-1.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Katy Prairie Conservancy is where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to RF-4 and WW-2.
Howard Robinson	1/21/2018	Website	Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to TR-6 and TR-8.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will create an obsolescence in property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-4, SC-19 and VA-1.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment of the HSR will run through a portion of Waller County that is currently experienced a high rate of commercial and residential development. As a result, the areas that could be impacted are areas that have and should continue to see high increases in property valuations due to positive development taking place in these areas, including high-end residential development. This project will create an obsolescence that will negatively impact the property values in Waller County. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to LU-4, SC-19 and VA-1.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SC-5.
Howard Robinson	1/21/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The barrier created by the route between the Daiken/Goodman facility and the rest of the County will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way: "... , we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support	Refer to ED-2 and LU-4.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			services such as housing and retail options." I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Howard Robinson	1/25/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. Those Permits also require TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads can be done without that Permit. The FRA is Silent on this issue and it must be recognized by FRA because it is the LAW.	Refer to NE-6 and ED-1.
Howard Robinson	1/25/2018	Email	As described in the DEIS Abstract, the FRA has jurisdiction over all areas of "RR Safetf'. However, the FRA is not accountable for the entire execution of this project nor how TCRR interacts with the Public in addressing issues and negative impacts on the public during the Construction Phase. The FRA Must suspend any further work on this HSR Project until the Texas Legislators can determine what State Regulatory Body would be responsible and accountable to provide Oversight on all aspects of this project, except what is being overseen by the FRA, "RR Safety". This would also require that a State Regulatory Body is ensuing the new State requirements on HSR Safety & Security are being appropriately planned, designed, and applied.	Refer to NE-1, NE-2 and SS-5.
Howard Robinson	1/25/2018	Email	There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DE'S? In order to restore the Credibility of FRA's DEIS, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility Federal Railroad Administration	Refer to GN-1, NE-1 and NE-8.
Howard Robinson	1/25/2018	Email	There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). So who will protect the Public? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-1, NE-2 and SS-5.
Howard Robinson	1/25/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. I see nothing that clearly or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and certainly TCRR does not possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today.	Refer to ED-1, NE-1, NE-2 and PN-3.
Howard Robinson	1/30/2018	Email	There is the issue of High Elevation Rescues from the top of the raised tracks in case of an Emergency or Breakdown that is Omitted by the FRA DEIS. There must be a Risk Assessment performed on the ability for Emergency Vehicles to reach any remote area along the 240 mile route. There is no mention of this in the DEIS. In any wet or winter months, it will be next to impossible to reach the track in the middle Of a very lemote pasture along the route. This work must be done by the FRA for the Safety of those riding the train.	Refer to SS-3, SS-18, SS-19 and SS-23. Locations where emergency vehicles can access the operational corridor, either on public roads or underneath sections of viaduct will be identified and communicated with emergency responders through coordinated development of the Emergency Preparedness Plan as well as the plan's communication and training programs.
Howard Robinson	1/30/2018	Email	No Discussion in the DEIS on the true Significant Negative Impacts of Tax Revenues due to lower Private Property Values except amund the stations. The DEIS includes evaluations about the Property Values around the HSR stations, but totally omits the Negative side of the evaluation, that is the LOSS of Tax Revenue all across the state as a result of the presence of the HSR. The FRA does NOT prove that simply The HSR footprint will offset the tax revenue losses of huge amounts of lower propeny values. Property Values out several miles from the route must be evaluated to credibly and fully understand the Loss of Tax Revenue. Only then can a credible Cost/Benefit analysis be done regarding Tax analyses. FRA Must Correct this Miscalculation. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to VA-1.
Howard Robinson	1/30/2018	Email	The FRA must communicate the results of the significantly Westward movement of the Cross Texas Transmission line a year or so ago away from the Leon County Utility Corridor due to Environmental Reasons and why that information did not influence the FRA on the selected Utility Corridor Route. The Utility Corridor was one of 64 shortlisted routes so why was this not included and how would this impact your route selection? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-5, BA-8, BA-11.
Howard Robinson	1/30/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a large amount of Regional non-specific data in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without confirming the data from other sources by a comprehensive inspection program, the FRA DEIS data Not Project Specific and is suspect of being Out of Data. Your Route Maps are clearly Out of Date.  The DEIS is Fatally Flawed for endangered species, historical property, cemeteries, or other environmental topics. Considering the large areas in the Environmental Maps that show Navasota Ladies Tresses (vs. your only 657 acres of inspection) and the Houston Toad, these areas were not recently inspected as there is no way TCR had the permission to survey ALL those properties. So, the FRA must restore the Credibility of this Data with Boots on the Ground surveys and until this done the study is incomplete ..  I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to GN-1, NE-8 and NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Howard Robinson	1/30/2018	Email	The FRA is responsible for RR Safety & Security. But yet, the FRA was silent on any Comprehensive Risk Management System applied to Assess the Risk of Crossing Large Live Pipelines (2) and a Transmission Line in the Utility Corridor within Leon County. A Comprehensive Risk Management System must be applied including Specific Risk Assessments that identify disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce, eliminate or manage the risk. This must be done for the Utility Corridor and any Other potentially dangerous systems for a credible understanding of the Public Safety risks associated with the HSR. The FRA will be held accountable if this risk work is not performed.	Refer to EU-2 and SS-19.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS

Howard Robinson	1/30/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Cost is not a parameter to dismiss a Route Alt. for a Private Project. The 145 Route would likely be less harmful to the Environment & Landowners and Must be Reconsidered. There is NO REGULATORY BODY TO HAVE ESTABLISHED A Credible PUBLIC NEED/NECESSITY as those who are hurt the worst will benefit ZERO The FRA MUST Stop ALL further work on this Project and wait until TCR has proven its false claim of having Eminent Domain and Condemnation rights. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER Or in COURT THEY HOLD EMINENT DOMAIN POWERS. TCR has run away from lawsuits that would have resolved this issue. Also, TCR is required to obtain a County Permit from many Rural Counties & those Permits require Proof from TCRR of Eminent Domain Powers. Therefore, No further work Must be done until the Public Need issues and County Permits related to Eminent Domain are resolved. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-9, ED-1, ED-3, NE-1 and NE-8.
Howard Robinson	1/30/2018	Email	It was announced at a public meeting yesterday that the objection/comment period on the DEIS for the proposed Houston to Dallas has been extended until 9th March, 2018. This study has been some in the making and utilises facts and figures provided by "experts" on behalf of Texas Central Partners. The comment period is much to short for the "little people" Of Texas who are directly effected by the proposed scheme, to digest such a lengthy document, research the figures provided and prepare comments for consideration. In older that time is given for constructive comments to be made on the report, I ask that the deadline for comments be extended for at least ninety days	Refer to PI-3.
Howard Robinson	1/30/2018	Email	It was announced at a public meeting yesterday that the objection/comment period on the DEIS for the proposed Houston to Dallas has been extended until 9th March, 2018. This study has been some years in the making and utilities facts and figures provided by "experts" on behalf of Texas Central Partners. The comment period is much to short for the "little people" of Texas who are directly effected by the proposed scheme, to digest such a lengthy document, research the figures provided and prepare comments for consideration. In order that time is given for constructive comments to be made on the report, I ask that the deadline for comments be extended for at least ninety days	Refer to PI-3.
Howard Robinson	1/30/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Railway has continuously communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed Out Of 463 crossings (DEIS Verbiage states NO public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The rerouting of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, ED-2, LU-14, TR-6, TR-7, TR-8 and TR-10. Refer to <b>Section 3.11.7, Transportation, Build Alternatives Comparison</b> for a summary of the impacts on roadways, transit services, rail facilities, airports and on-road pedestrian/bicycle facilities. Specifically, <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b> provides summaries based on Build Alternative.
Howard Robinson	2/4/2018	Email	There is nothing in FRA's repott that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal pmcess; Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-14 and SG-4.
Howard Robinson	2/4/2018	Email	There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding whele and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is It&#8226;quiled to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side or the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCR I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10 and LU-14.
Howard Robinson	2/4/2018	Email	The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DIELS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming? Question: For forested areas, will TCRR be required to replant trees? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10 and LU-13.
Howard Robinson	2/4/2018	Email	The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third pally view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would he	Refer to GN-2, GN-4 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. The FRA should also review the gmss economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/4/2018	Email	The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how it applies to the Safety of the Public during Construction. Question: Is the public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction Safety while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and required to be Implemented by TCRR and its Contractors. Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-2 and TR-6.
Howard Robinson	2/4/2018	Email	The FRA DEIS does not Quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre-Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-6.
Howard Robinson	2/4/2018	Email	The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also. there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-1 and NV-10.
Howard Robinson	2/4/2018	Email	The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides Of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-1 and NV-10.
Howard Robinson	2/4/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement or Fill material on top of them or the excavation for fill material. This Omission must be Collected. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NE-8, WW-1, WW-2 and WW-6.
Howard Robinson	2/4/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the future; Question; Will the "New Roads ROW" be taken under the normal Eminent Domain process? If so the Project would then lequire the use of More Private Propeny simply due to TCRR's method of executing this project. The Public deserves this level Of detail. Question: How much of the increase of Impacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-3, ED-2, LU-14, TR-7 and TR-8.
Howard Robinson	2/4/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Considering in Texas, a relatively dry State, all of the legulatory issues today reganling water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be requied to use Surface Water and if So, from what sources in the	Refer to WW-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Howard Robinson	2/4/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the future; Question; Will the "New Roads ROW" be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level Of detail. Question: How much of the increase Of Impacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-3, ED-2, LU-14, TR-7 and TR-8.
Howard Robinson	2/5/2018	Email	The Federal Railroad Administration (FRA) does not have the authority to grant ED, only the STB or the state. The FRA clearly states they CANNOT give an entity ED powers. Question: So, if TCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's narrow scope of "RR Safety"? THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, NE-1, NE-2 and PN-3.
Howard Robinson	2/5/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (R PA)), impose requirements Or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Does the FRA intend on issuing to TCRR a Record or Decision (ROD) Prior To developing, approving, and publishing the new regulations for speeds of up to 205 mph?.. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-2.
Howard Robinson	2/5/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph? Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA, Correct? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-1 and NE-2.
Howard Robinson	2/5/2018	Email	Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of-way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, ED-3, NE-1 and NE-8.
Howard Robinson	2/5/2018	Email	The Federal Surface Transportation Board (STB) denied Texas Central Railway (TCR) Eminent Domain (ED) Powers and proclaimed they do not have over TCR's Project. Despite TCR trying to bypass the State of Texas regarding regulatory guidance, the STB ruled that they must go back to Texas for regulation and oversight. TCRR has not proven with the State legislature (2017 Session) or in Court suits that they possess ED Or that they are an Operating RR. So, TCRR does not possess ED at either the Federal or State Level. TCRR is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, NE-1, NE-2 and PN-3.
Howard Robinson	2/5/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case. TCR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit. Now, the FRA prefers the d Route does in fact still go through Mr. Miles Property, therefore, the FRA is now part of TCRR Deception and False Statement to Mr. Miles	Refer to ED-1, ED-3, NE-1, NE-8 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			and to the Public who are ALL FULL aware of the status or this case. TCRR does clearly NOT possess ED Powers, is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Pmperty. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE TCRR HSR. and STOP wasting Taxpayer money on this Uneconomic project.	
Howard Robinson	2/5/2018	Email	Why is the FRA working on this Project being executed by a company that Can't Or Won't Prove they have ED AND is not an Operating Railroad AND does not have the authority to survey properly without Landowner Permission?	Refer to ED-1, NE-1, NE-8 and PN-3.
Howard Robinson	2/5/2018	Email	Has TCRR proved to the FRA that they possess legally Eminent Domain? Question: If so, the FRA MUST share that rationale with the Public who are going to be hurt the Worst by the HSR. Question: If TRR has not proven ED to the FRA, then Why is the FRA working with TCRR on this Pmject if they have no ED, and they certainly are not an Operating RR, and without ED, this project will Never be built?	Refer to ED-1, ED-3 and NE-1.
Howard Robinson	2/5/2018	Email	FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and panicularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more.	Refer to SG-4.
Howard Robinson	2/5/2018	Email	What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge pmject could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials.	Refer to SG-4 and TC-6.
Howard Robinson	2/5/2018	Email	Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extlemely unfair to the Public who the FRA is supposed to Protect..	Refer to NE-1 and NE-2.
Howard Robinson	2/5/2018	Email	The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (R PA)), impose requirements Or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: There exist NO Texas State Regulatory Body to OVERSEE EXECUTION OF THE TCRR HSR PROJECr. FRA's responsibility is limited to Design/Operating "RR Safety", NOT Execution, leaving the Public without a body to refer too if commitments are not met by TCRR. Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To the State putting in place a State Regulatory Body over HSRs operating at speeds of 205 mph?	Refer to NE-1, NE-2 and SS-5.
Howard Robinson	2/5/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Based on the size of Raw Materials and Structural components being moved on existing roads, there will be significant Damage to Existing Private, City, County, State and Federal Road/Highway Infrastructures. The Government entities and the public deserve to understand How much damage to roads and infrastructure and when' it can bc expected. Question: Who will pay for this damage repairs? Question: Will the Public have to wait 5+ years to see the damage repaired? Question: Who will pay for damages to the public vehicles as a result or having to use unsatisfactory roads ror 5+ years? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to TR-7.
Howard Robinson	2/6/2018	Letter	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement. Cost is not a parameter to dismiss a Route Alt. for a Private Project. The 145 Route would likely be less harmful to the Environment & Landowners and Must be Reconsidered. TCRR AS BEEN UNWILLING OR UNABLE TO PROVE TO A SINGLE LANDOWNER Or in COURT THEY HOLD EMINENT DOMAIN POWERS. TCR has run away from lawsuits that would have resolved this issue. Also, TCR is required to obtain a County Permit from many Rural Counties & those Permits require Proof from TCRR of Eminent Domain Powers. Therefore, No further work Must be done until the Public Need issues and County Permits related to Eminent Domain are resolved.	Refer to BA-9, ED-1, ED-3, NE-1, NE-8 and PN-3.
Howard Robinson	2/6/2018	Letter	TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. Those Permits also require TCRR PROOF OF EMINENT DOMAIN BEFORE A PERMIT CAN BE ISSUED. No work on any County Roads can be done without that Permit. The FRA is Silent on this issue and it must be recognized by FRA because it is the LAW.	Refer to ED-1, ED-3, NE-1 and NE-8.
Howard Robinson	2/6/2018	Letter	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. Submitted By	Date Submitted	Submission Type	Comment	Response
			TCRR has NOT applied for a required County Permit from several rural Counties being negatively impacted. No work on any County Roads can be done without that Permit.	
Howard Robinson	2/6/2018	Letter	Texas Central Partners have failed to show to a Court that they are in fact a railway and therefore have no right to condemn property by means of eminent domain which would be the only way they can obtain sufficient land for their project.	Refer to ED-1.
Howard Robinson	2/6/2018	Letter	I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement' The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes. This results in a disparate impact on Waller County, which has a majority minority population. The HSR will prevent the highest and best use of hundreds of properties throughout Waller and Harris Counties where the area is experiencing some of the fastest growth in the state. The proposed route will cause people to lose value in their property, and decreased valuation of property will cause lower tax revenue collected and school districts, cities, emergency services and all public entities will lose income reducing the services that are provided to the citizens who pay the taxes.	Refer to BA-6, EJ-1 and VA-1.
Howard Robinson	2/6/2018	Letter	When Kickapoo Preserve in Waller County was established, they were required to perform an archaeological survey, which produced the "Kickapoo Archaeological Survey Report of April, 2010." For this report, the developer was required to obtain an Army Corps of Engineers Section 4 Permit. This report revealed four archaeological sites and two pre-historic sites considered for inclusion in the National Register of Historical Places. These are all historical sites that should not be destroyed by the HSR. All of this information was provided. All of this information was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to CR-9.
Howard Robinson	2/6/2018	Letter	In the 1830's, a stage coach inn that became a famous stage coach route that is still visible today in the Kickapoo Preserve, was built by a Benaiah Jones. Jones and his descendants are buried in a cemetery on the land. The proposed route will run directly over both the site of the inn and the cemetery, destroying them forever.	Refer to CR-2.
Howard Robinson	2/6/2018	Letter	Local Environmental Impact include the Spring Creek Watershed where five creeks will cross the track of the HSR. This watershed will be directly impacted by the train and the track depending on how it's built. Tropical Storm Allison, the Tax Day Floods, the flooding event in May of 2016, and Hurricane Harvey have shown that if any impediments to water flow occur through the watershed, the area will experience major flooding and damage to property if the track is not properly studied and engineered. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS.	Refer to FP-1, SS-17, WW-1, WW-2 and WW-8.
Howard Robinson	2/6/2018	Letter	The Federal Railroad Administration (FRA) does not have the authority to grant ED, only the STB or the state. The FRA clearly states they CANNOT give an entity ED powers. Question: So, ifTCRR has NO ED powers and has not proven they are an Operating RR, how can the FRA issue a Record of Decision to such an Entity AND SUPPORT this Entity to execute this Project with ZERO Federal or State Regulatory Oversight, except the FRA's narrow scope of "RR Safety"? THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just Ilke Power and Pipeline companies can do with Landowners.	Refer to ED-1, NE-1 and PN-3.
Howard Robinson	2/6/2018	Letter	Lack of Land Survey Rights by TCRR, FRA DEIS Comments: Grimes County Judge Albert McCaig permanently enjoined Texas Central or its agents from conducting surveys that would alter or damage county rights-of- way due to the lack of proof of eminent domain. So, it has been proven in Court Cases that TCRR lacks ED power AND is not an Operating RR and has no Survey Rights. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, ED-3, NE-1 and NE-8.
Howard Robinson	2/6/2018	Letter	The Federal Surface Transportation Board (STB) denied Texas Central Railway (TCR) Eminent Domain (ED) Powers and proclaimed they do not have oversight jurisdiction over TCR's Project. Despite TCR trying to bypass the State of Texas regarding regulatory guidance, the STB ruled that they must go back to Texas for regulation and oversight. TCRR has not proven with the State Legislature (2017 Session) or in Court suits that they possess ED or that they are an Operating RR. So, TCRR does not possess ED at either the Federal or State Level. TCRR is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRA MUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON A EIS FOR THE HSR, that is until TCRR can prove they are an Operating RR and until they can prove to Landowners that they possess ED just like Power and Pipeline companies can do with Landowners.	Refer to ED-1, NE-1, NE-8 and PN-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case, TCR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit. Now, the FRA preferred	Refer to ED-1, ED-3, NE-1, NE-8 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Route does in fact still go through Mr. Miles Property, therefore, the FRA is now part of TCRR Deception and False Statement to Mr. Miles and to the Public who are ALL FULL aware of the status of this case. TCRR does clearly NOT possess ED Powers, is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRAMUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON AEIS FOR THE TCRR HSR. and STOP wasting Taxpayer money on this Uneconomic project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal process; Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10, LU-14 and SG-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side of the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-14.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to HZ-5, WW-1 and WW-6.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DEIS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Cattle Grazing, or Farming? Question: For forested areas, will TCRR be required to replant trees? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10 and LU-13.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need/Necessity" The true I-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to EJ-1, GN-3 and PN-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. FRA should also review the gross economic viability as a result of TCRR's	Refer to GN-2, GN-4 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Ridership and Cost estimates and include it in the next update of this document I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how it applies to the Safety of the Public during Construction. Question: Is the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction Safety while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and required to be Implemented by TCRR and its Contractors. Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-19, SS-21, SS-23 and TR-6.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA DEIS does not quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre- Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-6 and TR-7.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1 and NV-10.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-5 and NV-10.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. This Omission must be Corrected. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to WW-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. The safety of a train passing in rural Texas where Hunting is at the highest level was never mentioned. Question: What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FRA was not specific on what type of monitoring system would be used. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use. A train hitting a 300# Feral low center of gravity Hog would be devastating. More specifics specifications should be provided to	Refer to SS-2, SS-6, SS-10 and SS-12.

			TCRR for both fencing and monitoring I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR's Economic Model includes Ridership numbers that would require them to take 100% of the air travel from SW airlines between Dallas-Houston and 100% of those who travel in cars between the two cities. The FRA does not really test any of TCRR's data on Ridership and Costs AND has not used external resources, such as the "Reason Foundation" (States this Project will Fail!), to determine whether all of this Wasted effort is necessary AT ALL. Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extremely unfair to the Public who the FRA is supposed to Protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-2, GN-3, NE-1 and NE-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure 20% of the Distance in Miles of controlled Land to lay track down on? The FRA Must Cease ALL Work on TCRR's HSR EIS until TCRR has proven they can acquire the Land that TCRR MUST Own in order to build this Project. Without that, TCRR and the FRA are wasting time and money. But in the FRA's case, Taxpayer Money! I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1 and NE-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR and the FRA have not worked with local County Emergency Response entities to understand the safety and security needs of TCR which will be paid for by the local Counties. In fact, it was discovered via a Lawsuit against TXDOT by the Waller County Regional Planning Committee, a True local County Government Body, the the FRA had instructed TXDOT to no longer meet or work with this local government body for any activities associated with the TCRR HSR. TXDOT/TCRR LOST that Court case, Appealed, and LOST again. Question: Is this not overstepping the FRA's Power over local Governments? Question: Is this not the reason that the FRA's detail of Emergency Response Impact was void of mitigation details in order that there was ZERO increase in ER Times? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1, SS-23 and SS-26.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Question: There exist NO Texas State Regulatory Body to OVERSEE EXECUTION OF THE TCRR HSR PROJECT. FRA's responsibility is limited to Design/Operating "RR Safety" , NOT Execution, leaving the Public without a body to refer too if commitments are not met by TCRR. Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To the State putting in place a State Regulatory Body over HSRs operating at speeds of 205 mph? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-2 and SS-5.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the future; Question; Will the "New Roads ROW' be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. Question: How much of the increase of Impacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-3, ED-1, ED-3, LU-9, LU-14, TR-7 and TR-8.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason In the Lawsuit against the House Family in Harris County relating to Survey Access Rights, the courts ruled against TCR and they were never allowed to survey the property This court judgement also sets a precedent against TCR 's claim of possessing ED Powers. They subsequently dropped all cases against landowners and were unable to survey thousands of acres. Question: Why is the FRA working on this Project being executed by a company that Can't or Won't Prove they have ED AND is not an Operating Railroad AND does not have the authority to survey property without Landowner Permission? The FRA Must Cease work on this project IMMEDIATELY and stop wasting any Taxpayer money and	Refer to ED-1, ED-3, NE-1, NE-8 and PN-3.

Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS				
Submitted By	Date Submitted	Submission Type	Comment	Response
			time being used to support an Uneconomic Project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Grimes, Limestone, Waller, Madison, Freestone, Leon, and Montgomery County have passed a County Law requiring HSRs to obtain a Permit in order to construct a HSR. The Permit also requires that TCRR Prove the company does possess ED powers which they still have been unable to do in court or by passed legislation. Question: Has TCRR proved to the FRA that they possess legally Eminent Domain? Question: Yf so, the FRA MUST Share that rationale with the Public who are going to be hurt the Worst by the HSR. Question: IfTRR has not proven ED to the FRA, then Why is the FRA working with TCRR on this Project as if they have no ED, and they certainly are not an Operating RR, and without ED, this project will Never be built? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1, ED-3, NE-1 and PN-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Based on the size of Raw Materials and Structural components being moved on existing roads, there will be significant Damage to Existing Private, City, Counw, State and Federal Road'Highway Infrastructures. The Government entities and the Public deserve to understand How much damage to roads and infrastructure and where it can be expected. Question: Who will pay for this damage repairs? Question: Wih the Public have to wait 5+ years to see the damage repaired? Question: Who will pay for damages to the public vehicles as a result of having to use unsatisfactory roads for 5+ years? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-3 and TR-7.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The Negative Impact of Increased Public Travel traffic flow disruptions and congestion, generally more equipment and construction employees on the roads, More Permit Loads of huge Construction Components, and Negative Impact to the General Flow of Business has not been Quantified by the FRA. The FRA has the ability to take Lessons Leamed from another project, such as that in California, from the standpoint of negative impacts to the Public's Travel Needs. More Detailed Expectations and Boundary type performance parameters must be provided to TCRR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-3 and TR-6.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason FRA's report is too General and does not appropriately assess the full impact to the supply chain for aggregate required by the HSR Project and particularly how it impacts other Concurrent Construction Projects all along the route in multiple counties. The FRA glossed over this issue and needs to investigate it much more. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SG-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason What is the Market and Supply Chain Impact on the local Areas taking into account other local Construction Projects just now starting (249 Extension, Plantersville Interchange, Magnolia Interchange) due to the Huge HSR project PLUS ALL of the Road Construction work being caused by the Unacceptable way TCRR is executing the HSR causing many roads to be rebuilt over the HSR? The needs of this huge project could significantly and negatively impact, City, County, State and Federal Construction Projects to the extent of them being significantly being delayed or cancelled due to lack of available materials. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SG-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR's Economic Model includes Ridership numbers that would require them to take 100% of the air travel from SW airlines between Dallas-Houston and 100% of those who travel in cars between the two cities. The FRA does not really test any of TCRR's data on Ridership and Costs AND has not used external resources, such as the "Reason Foundation" (States this Project will Fail!), to determine whether all of this Wasted effort is necessary AT ALL. Question: Does the FRA plan on issuing a Record of Decision to TCRR for this HSR, considering the extremely Harmful results on the Public and their Property should this Project is allowed to be Executed, WITHOUT VERIFYING THE VIABILITY OF THIS PROJECT? From a Private Landowner and Taxpayer viewpoint, an action by the FRA such as that would be Reckless and Negligent to say the least, and extremely unfair to the Public who the FRA is supposed to Protect. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-2, GN-3, NE-1 and NE-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason TCRR currently only has in their contractual control approximately 15% of the total required 240 mile distance of land under track, leaving around 200 miles not under contract. Question: Why is the FRA spending Taxpayer money/time working with TCRR who has not proven ED Powers, who has not proven they are an Operating RR as Survey Rights have been denied in Court, AND has only acquired LESS than for sure	Refer to ED-1 and NE-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-1, NE-2 and SS-5.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Construction Access will require the construction of new roads requiring the taking of Much more Private Property for roads. Question: Who owns these newly constructed roads; Question: Who will be responsible for maintenance in the future; Question; Will the "New Roads ROW' be taken under the normal Eminent Domain process? If so the Project would then require the use of More Private Property simply due to TCRR's method of executing this project. The Public deserves this level of detail. Question: How much of the increase of Impacted Acreage from 3000 acres to 8000 acres is DUE to the Rerouting, Modification, Closing, or Rebuilding of Roads OVER the HSR? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-3, ED-2, LU-9, LU-14, TR-7 and TR-8.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There is nothing in FRA's report that addresses the Environmental Impact when Fill Material is removed from Private Property for use by TCRR for the HSR Construction. The FRA has not placed any Environmental Requirements, Expectations, Boundaries, or Established Parameters regarding the removal of Fill Material from Private Property on TCRR. The FRA has not required TCRR to make any area that fill is removed as a Surface Water Source. Questions: Where are adequate materials located; Will the hole be Sealed to hold water; Will it be built in a place that would result in a Surface Water Source; Will TCRR be required to use a Water Conservation Expert to design the Fill removal process; Will the Landowner be left with a huge useless hole on his property that serves NO purpose but to grow weeds and be an eyesore? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10, LU-14 and SG-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. There exists No Environmental Limitations or Expectations on TCRR by the FRA regarding where and how they might remove Fill Material from a Landowner's Property as well as in what Environmentally Sound Condition TCRR is required to leave the site. In the case where one day TCRR might be allowed in some way to have ED powers, the FRA should detail the entire process and environmental limitations or Expectations to the Public and TCRR, since TCRR can take material up to 2 miles on either side of the HSR Center line, including that there is added value by TCRR such as execution of Water Conservation Projects ensuring that where fill is removed, an eyesore useless hole in the ground is not left by TCR. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-10, LU-14 and SG-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Considering in Texas, a relatively dry State, all of the regulatory issues today regarding water conservation and use of well or surface water sources, the FRA omitted quantifying the use of water for Construction and applying restrictions on TCRR on its use if appropriate. Question: Will TCRR be allowed to drill water wells for Construction use or will they be required to use Surface Water and if so, from what sources in the	Refer to HZ-5, WW-1 and WW-6.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			area? The FRA simply Assumes adequate water sources will be available at construction sites. Lots of water will be required continuously not only for concrete batch plants, construction sites, for dust mitigation for Air Quality at Construction Sites, on all temporary dirt roads, but also for watering erosion control plantings along newly constructed embankments and road shoulders. The FRA must quantify the use of this water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Environmental repair and reclamation of Temporary Construction Sites such as Staging or Pre-Cast Construction Sites has not been discussed by the FRA DEIS. The FRA has included no Environmental expectations or requirements regarding the return of any Temporary Construction sites to their original or better condition/use. Question: Will the sites be returned to their original use for Hay Production, Came Grazing, or Farming? Question: For forested areas, will TCRR be required to replant trees? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NR-5.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. This Project HURTS THE MOST THOSE WHO WILL BENEFIT THE LEAST, ZERO from this Project. The FRA has a responsibility to ensure the Project economic parameters can be proven to be sound due to all of those sacrifices by Taxpayers and that a "Public Need/Necessity" is Validated by a Third Party. Question: Where is that third party Validation there is clearly a "Public Need/Necessity" The true 1-45 predictions do not substantiate that fact. Question: Why has the FRA not mentioned the Reason Foundation Analysis in the DEIS since it shows this Project WILL FAIL economically? The FRA must review this third party analysis and provide an unbiased view of it as opposed to simply TCRR's view. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-6, GN-2, GN-3, GN-4, NE-1, NE-9, PN-3 and SC-19.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has a responsibility to its Taxpayers to review the Gross Estimates of both Cost and Schedule by TCRR and provide to the Public in this document "Benchmarks" against other like size Projects either completed or under construction and an Unbiased third party view of the Project's Economics. Due to the Huge Sacrifice by Landowners AND County Governments as a result of this Project, the FRA would be NEGLIGENT IN NOT COMPLETING SUCH AN INDEPENDENT ANALYSIS. FRA should also review the gross economic viability as a result of TCRR's Ridership and Cost estimates and include it in the next update of this document I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-6, GN-2, GN-4 and NE-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The DEIS discusses Safety but says nothing about Expectations of TCR and their Contractors regarding Personal and Operational Safety Systems and how it applies to the Safety of the Public during Construction. Question: Is the Public Safety throughout Construction Not a Concern of the FRA in a DEIS? A set of Minimum Expectations to protect the Public and to manage Construction Safety while using a Comprehensive Personal and Operational Safety System should be provided by the FRA and required to be Implemented by TCRR and its Contractors. Lane Closures and new detours are dangerous. If the FRA is not responsible for this, who is to be held accountable for accidents and injuries or even deaths that would not have occurred had the FRA not issued a DEIS and potentially a ROD for this Project? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-19, SS-21, SS-23 and TR-6.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA DEIS does not Quantify the increase of Permit Loads on local and community roads as well as the resulting changes in Traffic Flow and Congestion vs. prior to HSR Construction. The Construction Staging and Pre- Cast sites will require the influx of Raw Materials, Workers, and the staging or export of completed construction components. The FRA should Quantify the number of Permit Loads on this project vs. that the Public normally sees prior to the HSR construction. Also, the Increase in Traffic around the newly built Construction sites should be Quantified and communicated to the Public as well as local governments so they might plan for the new Traffic flow and Congestion. It would be Negligent for the FRA not to know this information, give it to the public, prior to issuance of a Record of Decision. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-6.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA Omission of Important Noise Scenarios as well as the Scientifically proven additional "Slapping Noise" effect must be corrected. Also, there are no specific boundaries or conditions for Noise Mitigation placed on TCRR except to say it will be looked at after more detailed design is completed. The Sound level of Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets) was Omitted. TCRR has been asked this question for years and has not responded, only providing the Sound of One Train. Question: What is the sound level of two trains passing each other in opposite directions if one is 87 dBA? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-5 and NV-10.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA only shows noise levels (87 dBA) for one train passing one single point in space. They failed to show the Noise Level of Two Trains passing each other in opposite directions (this will happen frequently since both tracks are used 16-18 hours a day by 8 train sets). The FRA also did not mention at all the additional Scientifically proven "Slapping Sound" or popping noise as a result of the two air flows that lead each train colliding into each other and then bouncing between and along the two sides of the trains. Finally, Noise Mitigation will be extremely important to those who are making the largest sacrifice for this project, their land. TCRR should have much more stringent and clear specifications from the FRA and under what parameters Noise Mitigation Must be Installed and included in the detail design. The entire NOISE section requires more study and analysis. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NV-1, NV-5 and NV-10.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas is a relatively dry state much of the time. For sure in Leon County, there exists many surface springs and spring fed creeks (Surface Springs Not Listed in the FRA DEIS) that provide valuable water to wildlife and domestic animals throughout a normally hot and dry Texas Summer. The FRA failed to Identify the Existence of and failed to evaluate the Damage to many extremely valuable water sources particularly in Leon County (but may extend to other nearby counties). These Surface Springs and Unidentified Spring Fed Creeks potentially would be destroyed by any soils disturbance AND the movement of Fill material on top of them or the excavation for fill material. This Omission must be Corrected. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to WW-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA was not specific enough on Security Monitoring along the most rural parts of the route as well as ensuring the Identification of wild animals on the track. The safety of a train passing in rural Texas where Hunting is at the highest level was never mentioned. Question: What steps have been taken to ensure rifle bullets do not enter a train? Much of the rural route is infested with Feral Hogs. The FRA was not specific on what type of monitoring system would be used. This was covered lightly by the DEIS (16.2.5, pgs. 185-186). Normal chain link type Fencing is of no use. A train hitting a 300# Feral low center of gravity Hog would be devastating. More specifics specifications should be provided to TCRR for both fencing and monitoring. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to SS-2, SS-6, SS-10 and SS-12.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Texas Central Railway has continuously communicated to the Public that very few to no roads would be closed as the HSR would be elevated and crossing over existing roads. However, the truth is: 66 Private Rds. Closed out of 161 crossings. 43 Private Rds. Re-routed. 1 Public Rd. Closed out of 463 crossings (DEIS Verbiage states No public roads are closed which is Incorrect). 139 Public Rds. Re-routed. And some of the Private Road closures might be left up to the Landowner to remedy themselves. This plan is unacceptable and needs to have significant restrictions put on TCRR and a complete re-do of the plans for existing roads and traffic. The rerouting of roads will just add to the 4.5-5 years of traffic congestion like many have never seen and having the Public change their travel routes forever. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-8 and TR-10. Refer to <b>Section 3.11.7, Transportation, Build Alternatives Comparison</b> for a summary of the impacts on roadways, transit services, rail facilities, airports and on-road pedestrian/bicycle facilities. Specifically, <b>Table 3.11-62: Summary of Transportation Impacts by Build Alternative</b> provides summaries based on Build Alternative.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a large amount of Regional non-specific data in this DEIS vs. specific Studies/Inspections with "Boots on the Ground". Without confirming the data from other sources by a comprehensive inspection program, the FRA DEIS data Not Project Specific and is suspect of being Out of Data. Your Route Maps are clearly Out of Date. The DEIS is Fatally Flawed for endangered species, historical property, cemeteries, or other environmental topics. Considering the large areas in the Environmental Maps that show Navasota Ladies Tresses (vs. your only 657 acres of inspection) and the Houston Toad, these areas were not recently inspected as there is no way TCR had the permission to survey ALL those properties. So, the FRA must restore the Credibility of this Data with Boots on the Ground surveys and until this done the study is incomplete. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-1, NE-8 and NR-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. No Discussion in the DEIS on the true Significant Negative Impacts of Tax Revenues due to lower Private Property Values except around the stations. The DEIS includes evaluations about the Property Values around the HSR stations, but totally omits the Negative side of the evaluation, that is the LOSS of Tax Revenue all across the state as a result of the presence of the HSR. The FRA does NOT prove that simply The HSR footprint will offset the tax revenue losses of huge amounts of lower property values. Property Values out several miles from the route must be evaluated to credibly and fully understand the Loss of Tax Revenue. Only then can a credible Cost/Benefit analysis be done regarding	Refer to VA-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Tax analyses. FRA Must Correct this Miscalculation. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The Dallas to Houston FRA DEIS after showing High, Medium, and Low Risk levels of increased Emergency Response times only takes seriously the red highlighted HIGH items and then summarizes by saying the "impacts to ER times are not expected to be Significant". The FRA then states that Modeling would be performed prior to Construction in order to develop Mitigation Steps/Actions that would then make the impact "Not Significant". This project is NOT WORTH A SINGLE additional Loss of LIFE as a result of slowed Emergency Response times! The FRA MUST not allow TCR's HSR Project to move forward with ANY INCREASES IN ER TIMES?? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-23.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. This study has been some years in the making and utilities facts and figures provided by "experts" on behalf of Texas Central Partners. The comment period is much too short for the "little people" of Texas who are directly effected by the proposed scheme, to digest such a lengthy document, research the figures provided and prepare comments for consideration. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-1, NE-8 and PI-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof Of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEB, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-1, NE-1 and NE-8.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEIS, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-1, NE-1 and NE-8.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has published a very Sloppy, Inaccurate, and Incomplete One Sided DEIS that JEOPARDIZES PUBLIC SAFETY BY NOT PLACING TRUE LIMITATIONS, PARAMETERS, AND CLEAR CONCRETE EXPECTATIONS WITH TEETH on TCRR and its Execution Plan. Since the FRA is not responsible for execution of anything OUTSIDE of "RR Safety" this DEIS is full of simply Guidelines" to TCRR without the ability for the FRA to hold TCRR Accountable. So who will protect the Public? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-1, NE-2 and SS-5.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. I see nothing that clearly proves or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and certainly TCRR does not possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1, NE-1 and PN-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. As described in the DEIS Abstract, the FRA has jurisdiction over all areas of "RR Safety". However, the FRA is not accountable for the entire execution of this project nor how TCRR interacts with the Public in addressing issues and negative impacts on the public during the Construction Phase. The FRA Must suspend any further work on this HSR Project until the Texas Legislators can determine what State Regulatory Body would be responsible and accountable to provide Oversight on all aspects of this project, except what is being overseen by the FRA, "RR Safety". This would also require that a State Regulatory Body is ensuring the new State requirements on HSR Safety & Security are	Refer to NE-1, NE-2 and SS-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			being appropriately planned, designed, and applied. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. There is a potential that Land and/or Environmental survey data used in the DEIS by the FRA was obtained without approval of the Landowner per the process being followed by TCRR (Proof of examples provided to Washington). Surely a Federal Government Agency, the FRA, would not want to issue a report that contains Illegally Obtained data in the DEIS? In order to restore the Credibility of FRA's DEIS, the FRA Must cease any further work on the EIS and immediately request from the Landowners of any data used in the DEIS, for Land or Environmental Surveys, a newly Signed Affidavit stating that all of the Landowner's data being used in the DEIS was in fact obtained under the permission of a signed and executed Survey Permission Form by the Landowner. Your Survey Data is "FATALLY FLAWED" and Lacks Credibility. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-1, NE-1 and NE-8.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. I see nothing that clearly proves or even analyzes whether the TCRR HSR Project constitutes a True Public Need or Necessity. There is also Court Proof that TCRR is NOT an Operating RR in the State of Texas, does NOT have the right to survey Property, and certainly TCRR does not possess today the Eminent Domain Powers to acquire the required land for track since so many Landowners would not even allow TCRR to Survey their property, still true today. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-1, NE-1 and PN-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. I live in Saddle Creek Forest which is a gated sub-division which will be directly effected by the proposed HC-4 route. A number of properties in the neighbor hood will be acquired for the route and this, together with the proposed route passing through will result not only in the disruption of the tranquil way of life which was one of the reasons why we purchased property in this area, but it will substantially reduce the value of our property and thus reduce the income from property tax payable to the County. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-3 and VA-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. I live in Saddle Creek Forest which is a gated sub-division which will be directly effected by the proposed HC-4 route. By having the proposed rout running through the neighborhood will result in disruption to our way of life caused by noise and vibration to properties in the vicinity of the proposed line, many of which are occupied by elderly and ill residents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-3 and VA-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path This will increase the response time of the local police departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1 and SS-23.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path. This will increase the response time of the local fire departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1 and SS-23.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will in fact divide Counties and restrict freedom of movement along its path This will increase the response time of the local ambulance departments when attending life threatening incidents which will be completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1 and SS-23.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. It is proposed that a two lane service road will be constructed to run adjacent with the proposed rail line. This road will be constructed at the expense of Texas Central Partners, but once complete will be turned over to the local Counties to maintain. My County has problems funding maintenance Of the existing roads without the added burden of even more roadways to maintain. This move is unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to TR-7.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. By dividing Counties with a barrier in the form of the proposed rail line, and the closure of roads associated with it. considerable disruption to school busses taking children to and from their schools will result. This will mean children being picked up even earlier prior to the start of the school day and being returned home later after school closure. No doubt, because of the logistics involved, extra busses will have to be	Refer to SC-6 and SC-7.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			provided resulting in either reducing school expenditure or imposing an increase in the local taxes. This is completely unacceptable. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC4) through Waller County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Waller County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-5, BA-8, BA-9, BA-10 and NE-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. A company by the name of Magellan Pipeline Company is well advanced in their plans to lay a pipeline in, or adjacent, to the Utility Corridor which is the preferred HC-4 route for the proposed high speed rail line. The constant vibrations caused by the passing of trains in excess of 200mph in such close vicinity to a pipe line carrying volatile substances could have a devastating effect. The draft environmental impact study has failed to take into account this dangerous situation and this should be reviewed. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to EU-2 and NV-5.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The HC-4 Route passes through the City's extraterritorial jurisdiction and through the planned Waller Toym Center which is a joint venture being marketed by Cullinan Properties, and Texas. Ille WTC is an integral part of the City's development strategies to reach retailers. The Texas Legislature created a municipal management district (MMD) specifically for this development. The proposed route will place this long planned venture in jeopardy and I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment goes through the city of Waller's Extra-Territorial Jurisdiction and was chosen with no opportunity for public input or comment from city officials. The City of Waller has a population of approximately 2,400 people and is located in both Waller and Harris counties. The City is a general law city under the 5,000 threshold and is limited in growth strategies compared to home rule cities. This means it is important to maximize the development of the geographical area available to the city. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-4 and PI-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is funded with ad valorem taxation and any diminution of value due to the HSR will cause a tax increase to cover expenses and budgets New fire stations and emergency services will be needed should the HSR divide the District. However, currently the District cannot prepare for this and other needs because of the FRA's actions. Right now, the District has 10 fire departments and will need more if the HSR is built. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-18, SS-23 and SS-26.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. A recent study entitled, "Texas High Speed Rail: Caution Ahead" by Baruch Feigenbaum, the Assistant Director of Transportation Policy at the Reason Foundation, concludes that the proposed high speed rail project could lose over \$500 million a year, and that TCR has severely underestimated the costs to build the project and the overestimated the projected rider ship. The Report stated: "We truly hope that high-speed rail becomes a reality in the United States, and we would prefer that it be developed and implemented by the private sector," writes Feigenbaum. "However, based on our experience and analysis we are concerned that Texas Central's project will fail so spectacularly that privately financed U.S. high-speed rail lines may never be given a second chance." Given the irreversible impacts this project could have on our community, we should not building a project that does not meet feasibility requirements under NEPA and other federal laws. In effect, this project will either become a burden on taxpayers in terms of subsidies, or a bridge to nowhere. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Despite two written requests dated November 14, 2014 and July 6, 2015 from the Waller County Sub-Regional Planning Commission ("WCSRPC"), the FRA failed to coordinate with any local government in Waller County "prior to identifying the alternative alignments to be evaluated in the draft EIS" as the FRA stated it would do on Page 24 of the Scoping Report that was released by the FRA in April of 2015. The	Refer to PI-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			WCSRPC is a sub-regional planning commission formed for the purposes of planning future development of our community and is comprised of elected officials from several municipalities in Waller County, in addition to Waller County itself and two of its school districts. Without this coordination, there is no way to ensure that impacts to the local community are properly analyzed and conflicts with local plans are resolved. The FRA has also erred in identify the WCSRPC as a "Public stakeholder" and not a political subdivision of the state of Texas. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. HC-4 passes through the Delta Troy Interests, a 990-acre tract being held for housing and commercial development in Waller County. The proposed route will adversely effect this development resulting in a loss of tax revenue to the County and its residents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. 500 housing units delaying our residential growth and retail development creating extremely significant negative impacts on the economic development plans for the City of Waller. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-3.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The HC-4 route passes through the proposed Waller Town Center development which is a 462-acre \$280 million investment that will include a power center, lifestyle walkable retail, entertainment, hotel/conference centers, medical facilities, and housing. The city of Waller has a retail "leakage" of \$352 million in their primary trade area and \$584 million in our secondary trade area. The WTC is critical to the City's closing this leakage. This build out investment would double the City's property valuation and could potentially double the City's sales tax revenue. This would allow the City to decrease its tax rate while improving City services. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The barrier created by the route between the Daikin/Goodman facility and the rest of the County will cause suppliers to locate to the east of the HSR in the unincorporated area, causing a proliferation of onsite water and wastewater facilities rather than using city utilities, resulting in a much less efficient usage of land and resources. Goodman Manufacturing has stated their position on the HSR route HC-4 this way. , we would be concerned with any route that disrupts Waller plans to provide Goodman employees (residents and non-residents) with support services such as housing and retail options. ". I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller County is part of a Greater Houston Partnership task force to support Daikin/Goodman in their effort to bring their key suppliers to the Waller area. It is estimated that the suppliers will add another 2-4,000 employees. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax base from these suppliers. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The route passes within 4,000 feet of the Daikin/Goodman facility currently under construction, a heating and air conditioning manufacturing company, \$410 million facility that will be 4.2 million square feet in size, the largest industrial facility under one roof in the State of Texas, and employ 4,000 people in 2016 and 6,000 by 2018. There is concern that the HSR will create a barrier between Waller and the Goodman facility and cause the city to lose much needed tax revenue. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to ED-2 and LU-4.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Waller City Council has opposed the HSR project in Resolution 2016-6, passed on January 25, 2016. The Resolution addresses the fact that HC-4 was selected without public comment as the single route through Waller County, splitting the WTC creating significant detrimental impacts on the City's retail strategy and destroying the economic value of the City, and negatively impacting both property values and development The impacts on the city of Waller was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to PI-1.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed alignment will run through a large portion of Waller ISD's district, which could negatively impact bus routes, which may cause Waller ISD to purchase additional school buses to transport students and accommodate delays due to county and private roads being impacted and/or closed by the proposed HSR project. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SC-5.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. A major impact will be on the Hewlett Packard Data Center facility, which houses 1,500 servers that will be within 1,000 feet of the HC-4 route. When notified of the route, HP's management team and legal department stated: "Hewlett Packard Enterprise is currently not in a position to approve or disapprove the proposed route... However... the proposed route would appear to have very serious negative impacts on our property and our critical data center operations at the property. If we determine that is the case, then we would have no choice, but to vigorously oppose this proposed route." I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SC-11.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The proposed route will create an obsolescence in property values in Waller County. Bankers and appraisers heavily discount property values in situations like this, which destroys the market value of all properties. Because of this loss in value, ad valorem taxation will decrease causing WISD to lose \$3.6 million in annual revenue, \$1.8 million will be lost to the Municipal Management District, the City of Waller will lose \$1.3 million and property tax collected by the county appraiser will be reduced by between \$279,000 to \$1.6 million annually from developments that will be ruined by the train passing through or near them. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement'	Refer to EJ-1, LU-3, LU-4, SC-3 and VA-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines — all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to RF-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines - all developments for nearly 500 homes, 50 of which have already been built with four or five more in the works are all now cancelled because of the route. The HC-4 route travels right through the developments and destroys the economic viability of them and the value of everyone's property. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to LU-3 and ED-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. G & W Water is the supplier of potable water for northern Waller county and southern Grimes County. They recently obtained funding and built a new water tower and the proposed train route falls directly on top of it. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to EU-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Saddle Creek Forest, Plantation Forest, Oak Hollow, Remington Forest and Six Pines - all developments for nearly 500 homes, within these developments are four horse riding trails that the train will cross. This will destroy any viability of the equestrian facility and create dangerous situations for anyone riding in the area, especially children. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to RF-1.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Kickapoo Preserve is a high-end development for 500 new homes for Daiken/Goodman employees that is under construction development. The proposed alignment will be just west of homes that are currently occupied and others that are under construction and other that are for sale. The proposed route will greatly effect the value of properties resulting in a loss of tax revenue for Waller County and its residents. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SC-12.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Quality of Life issues include people living within noise and vibration distance, as well as, sight, particularly if the train track is elevated. Depending on location and height of track, there will be loss of disposable income for the increase in travel time because people will not want to live within five to ten miles of the train track causing them to spend more time driving longer distances. Mr. T. J. Johnson, President of the Waller County Advocacy Group, estimates quality of life spent driving behind the wheel of their vehicles will be reduced by 5,000 man-hours per year for residents in Waller County and cost an additional loss of disposable income up to \$3 million. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to AS-1, NV-1, NV-5, PI-1 and TR-8.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Katy Prairie Conservancy owns a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. The Preserve is home to a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 600 species of grasses, wildflowers, trees, vines and shrubs. A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NR-2, NR-3 and RF-4. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Katy Prairie Conservancy is where important wetlands exist that will be directly or indirectly affected by a HSR corridor. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to RF-4 and WW-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. Recreational and Sport duck hunting will be directly affected by any noise, vibration and possible 96 trains running through the area. The route cuts through the north end of one of the major wetlands in the region where duck hunting is vital to the economy and where water fowl and their hunting will be diminished, if not destroyed by a high speed train. This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NR-1, NR-2, RF-2 and WW-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely. " Question: Does the FRA intend on issuing to TCRR a Record of Decision (ROD) Prior To developing, approving, and publishing the new regulations for speeds of up to 205 mph? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The DEIS Abstracts States "FRA regulations do not comprehensively address safety requirements for train operations above 150 mph, such as the Project's proposed operations. Therefore, FRA may issue a Rule of Particular Applicability (regulations that apply to a specific railroad or a specific type of operation (RPA)), impose requirements or conditions by order(s) or waiver(s), or take other regulatory action(s) to ensure the Project is operated safely." Question: Has the FRA developed New Regulations To Date to Regulate TCRR's HSR for speeds exceeding currently regulated 150 mph, and up to speeds of 205 mph? Question: If these Regulations do not exist today, then Certainly TCRR is NOT an Operating RR for their Specified 205 mph today, since these regulations are not yet written, approved, AND Published by the FRA, Correct? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to NE-1 and NE-2.
Howard Robinson	2/6/2018	Handwritten	I am lodging an objection to the HCA route of the proposed high speed rail line between Houston and Dallas for the following reason. The Mr. Miles Lawsuit in Leon County was dropped by TCR in an attempt to avoid losing another battle in court regarding eminent domain. The attorney general of Texas stated the Miles case would provide precedence of whether or not TCR has eminent domain so instead of risking losing this case, TCR instead said we do not need to get on Mr. Miles property any longer so need for the lawsuit. Now, the FRA preferred Route does in fact still go through Mr. Miles Property, therefore, the FRA is now part of TCRR Deception and False Statement to Mr.	Refer to ED-1, ED-3, NE-1, NE-8 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Miles and to the Public who are ALL FULL aware of the status of this case. TCRR does clearly NOT possess ED Powers, is NOT an Operating RR or TCRR would have been allowed to survey Mr. Miles Property. THE FRAMUST CEASE IMMEDIATELY DOING ANY FURTHER WORK WITH TCRR ON AEIS FOR THE TCRR HSR. and STOP wasting Taxpayer money on this Uneconomic project. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/6/2018	Website	Katy Prairie Conservancy owns a 6400 acre preserve that provides essential habitat for migratory birds and is designated as a Global Important Bird Area. The Preserve is home to a vast collection of protected properties owned or managed by the nonprofit land trust Katy Prairie Conservancy (KPC). The prairie is a biologically diverse powerhouse with more than 300 species of birds, 110 species of mammals, amphibians and reptiles and more than 500 species of grasses, wildflowers, trees, vines and shrubs A 200 MPH train barreling within one mile of this migratory bird sanctuary is going to cause bird collisions and accidents.	Refer to NR-2, NR-3 and RF-4. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . For information regarding vegetation please see <b>Section 3.6.4.2, Natural Ecological Systems and Protected Species, Vegetation</b> and mitigation measures <b>NR-MM#2</b> and <b>NR-MM#4</b> in <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Howard Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A number of endangered species of plants and animals were identified by the draft study as being in the direct path of the proposed route and would be adversely effected by it. As landowners along the route denied permission for the survey to take place on their land, the study is therefore incomplete and fatally flawed. Further studies need to be undertaken along the entire route to properly assess the impact on wild life. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to NR-4. NEPA does not require 100 percent of the Project to have field surveys conducted.
Howard Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA is responsible for RR Safety & Security. But yet, the FRA was silent on any Comprehensive Risk Management System applied to Assess the Risk of Crossing Large Live Pipelines (2) and a Transmission Line in the Utility Corridor within Leon County. A Comprehensive Risk Management System must be applied including Specific Risk Assessments that identify' disaster scenarios, the likelihood of occurrences, as well as Mitigation Steps to be taken to reduce, eliminate or manage the risk. This must be done for the Utility Conidor and any other potentially dangerous systems for a credible understanding of the Public Safety risks associated with the HSR. The FRA will be held accountable if this risk work is not performed. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to EU-2, SS-18 and SS-19. In Leon County, Segment 3C is proposed along the 1-45 corridor and would not affect transmission lines any more than the existing infrastructure. Where Segment 4 crosses transmission lines south of Concord, TX, engineering refinements will be conducted in consultation with the utility provider to address any hazard controls identified through TCRR's Hazard Analysis (See <b>Section 3.16.6, Cultural Resources, Avoidance, Minimization and Mitigation, SS-CM#4</b> ).
Howard Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The FRA has published a very Sloppy, Inaccurate, and Incomplete One Sided DEIS that JEOPARDIZES PUBLIC SAFETY BY NOT PLACING TRUE LIMITATIONS, PARAMETERS, AND CLEAR CONCRETE EXPECTATIONS WITH TEETH on TCRR and its Execution Plan. Since the FRA is not responsible for execution of anything OUTSIDE of "RR Safety" this DEIS is full of simply Guidelines" to TCRR without the ability for the FRA to hold TCRR Accountable. So who will protect the Public? I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to ED-1, NE-1 and PN-3.
Howard Robinson	2/6/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. The Federal Rail Administration (FRA) has improperly selected one build alternative (Utility Corridor) and one alignment (HC-4) through Grimes County without conducting the necessary comparative analysis of alternatives pursuant to NEPA. Specifically, we are requesting that your agency call upon the FRA to step back and conduct a programmatic EIS for the four build corridors (BNSF, UPRR, 1-45, Utility) that met the "Purpose and Need" of the project identified in the Corridor Alternatives Analysis Technical Report (August 2015). Doing so is the only way that the FRA can fulfill its responsibility to advance an alternative that resolves the conflicts the project creates in Grimes County. (40 C.F.R. 1501.2(c)). This issue was brought to the attention of the FRA by the Texas Department of Transportation as a result of coordination meetings, and the FRA has failed to address these impacts in the draft EIS. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to BA-5, BA-7, BA-8, BA-9, BA-10, EJ-1, NE-1, NE-8, NE-9 and PI-1.
Howard Robinson	2/12/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason The proposed route would pass within half a mile of the northern boundary of the Katy Prairie Conservancy' s protected preserve properties, including the area where Warren Lake and the Matt Cook Wildlife Viewing Platform are located. A train thundering by every 30 minutes would be an intrusion on the natural setting, and would seriously diminish this community asset for both people and wildlife. The Wildlife Viewing Platform at Warren Lake is open to the public seven days a week, and is valued by birders and other visitors enjoying the natural setting of the lake, prairie and wildlife. It is a serene place where one can hear the calls of native birds and insects. The soundscape is a very important feature that Katy Prairie Conservancy is trying to preserve. Quiet places are few and far between these days, and keeping the Katy Prairie	Refer to NR-1 and RF-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			Preserve's soundscape quiet should have high importance when considering the project's impacts. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/12/2018	Email	Disturbance to Public Visitors to the Katy Prairie Preserve. Visitors to the Katy Prairie Preserve's Warren Lake and the Katy Prairie Conservancy's Matt Cook Wildlife Viewing Platform would be disturbed by the noise, vibration and visibility of an elevated train. The disturbance of wildlife at Warren Lake not only affects the birds and other animals that frequent the area, but also is a loss to the visitors that come to observe them from the public viewing platform.	Refer to NR-1, NR-2 and RF-5.
Howard Robinson	2/12/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Destruction of habitat along route. Many of the lands through which the high-speed railway will be constructed, on the prairie and throughout the rural counties, provide extraordinary habitat, which will be both destroyed and greatly altered. Rural lands are often seen as the path of least resistance because there are fewer landowners to object and fewer structures, when in fact we as humans are charged with protecting nature. Nature once lost is lost forever. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-8, NR-1, NR-2, and RF-4. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Howard Robinson	2/12/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason Land fragmentation along route. Many of the properties through which the bullet train is planned are large acre tracts. Land fragmentation impacts not only the landowners, but also the many plants and animals that live on the prairie and other lands in rural areas. Smaller degraded fragments do not support the diverse wildlife communities that flourish on larger undeveloped and undivided areas. Connections between habitat patches are extremely important to maintaining healthy populations, and the high-speed train corridor will disrupt those connections. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-8, NR-1, NR-2, and RF-4. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Howard Robinson	2/12/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Wildlife Disturbance on the Katy Prairie Preserve. Warren Lake teems with wildlife year-round, and many waterfowl gather at the north shore, which is the area closest to the proposed route. The Katy Prairie is in the Central Flyway, and the over 20,000 acres that the Katy Prairie Conservancy has protected have been designated a Global Important Bird Area by National Audubon. The proposed rail route is directly in the path of a birds' northern and northeastern flyway approach to the lake. Many birds of the prairie are sensitive to light, sound and vibration and may be driven away. In addition to the proposed rail location, there is a maintenance facility proposed to be located just northeast of the Katy Preserve property. This facility, which is planned to occupy a footprint of approximately 120 acres and will be operated at night, will likely produce light pollution which can affect bird migration routes. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-8, NR-1, NR-2, and RF-4. For information regarding impacts to wildlife and vegetation please see <b>Section 3.6, Natural Ecological Systems and Protected Species</b> and <b>Section 3.6.5.2.2, Natural Ecological Systems and Protected Species, Wildlife</b> . Impacts to wildlife and vegetation will be minimized due to compliance and mitigation measures listed in <b>Section 3.6.6.1, Natural Ecological Systems and Protected Species, Compliance Measures and Permitting</b> and <b>Section 3.6.6.2, Natural Ecological Systems and Protected Species, Mitigation Measures</b> .
Howard Robinson	2/14/2018	Email	In the draft environmental study insufficient attention was given to the transportation and treatment of mass casualties resulting from an accident to a train travelling in excess of 200mph. The majority of the proposed line is in rural areas where ambulance cover is severely limited resulting in delay in both the initial treatment of casualties at the scene and their subsequent transfer to a hospital which is staffed and equipped to deal with such an emergency. The financial burden of providing for such an accident for both the ambulance service and hospitals will fall upon the taxpayer which is a totally unacceptable situation.	Refer to SS-18, SS-23 and SS-26.
Howard Robinson	2/14/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the draft environmental study insufficient attention was given to the need for the ambulance service's response to an incident involving a high speed train The ambulance service will require specialised equipment to deal with such an incident as well as specialised training. This training will, by necessity, be an ongoing requirement. The extra cost involved in equipping and training the personnel will have to be met by either an increase in donations from the public or an increase in taxes, both of which are totally unacceptable	Refer to SS-18, SS-23 and SS-26.
Howard Robinson	2/14/2018	Email	In the draft environmental study insufficient attention was given to the need for the fire service's response to an incident involving a high speed train The fire service will require specialised equipment to deal with such an incident as well as specialised training. This training will, by necessity, be an ongoing requirement. The area is mostly covered by volunteer fire departments and the extra cost involved in equipping and training the personnel will have to be met by either an increase in donations from the public or an increase in taxes, both of which are totally unacceptable	Refer to SS-18, SS-23 and SS-26.

Howard Robinson	2/14/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the draft environmental study insufficient attention was given to the increased financial burden placed upon the law enforcement service. Grimes County will be virtually cut in half by the proposed rail line resulting in the need for law enforcement to provide additional stations, personal and equipment either side of the barrier formed by the proposed rail line in order to fulfill their peace and life saving obligations. The extra cost involved in providing adequate cover will have to be covered by either donations from the public or an increase in local taxes, both of which are totally unacceptable.	Refer to SS-23 and SS-26.
Howard Robinson	2/14/2018	Email	In the draft environmental study insufficient attention was given to the increased financial burden placed upon the ambulance service. The extra cost involved in providing adequate cover will have to be covered by either donations from the public or an increase in local taxes, both of which are totally unacceptable.	Refer to SS-23 and SS-26.
Howard Robinson	2/14/2018	Email	In the draft environmental study insufficient attention was given to the increased financial burden placed upon the fire service. Grimes County will be virtually cut in half by the proposed rail line resulting in the need for the fire service to provide additional fire stations, personal and equipment either side of the barrier formed by the proposed rail line in order to fulfill their fire fighting obligations. The area is served by Volunteer Fire Departments and the extra cost involved in providing fire cover will have to be covered by either donations from the public or an increase in local taxes, both of which are totally unacceptable.	Refer to SS-23 and SS-26.
Howard Robinson	2/14/2018	Email	In the draft environmental study insufficient attention was given to the increased response time for law enforcement personal. Grimes County will be virtually cut in half by the proposed rail line resulting in the police service having to make considerable detours in order to reach the scene of any incident. The extra time taken in reaching an incident could well result in the loss of life to citizens of Grimes County	Refer to SS-23.
Howard Robinson	2/14/2018	Email	In the draft environmental study insufficient attention was given to the increased response time for ambulance service personal. Grimes County will be virtually cut in half by the proposed rail line resulting in the ambulance service having to make considerable detours in order to reach the scene of any incident, and also in the transportation of casualties to a hospital. The extra time taken in reaching an incident and transportation to a hospital could well result in the loss of life to citizens of Grimes County .	Refer to SS-23.
Howard Robinson	2/14/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. In the draft environmental study insufficient attention was given to the increased response time for fire service personal. Grimes County will be virtually cut in half by the proposed rail line resulting in the fire service having to make considerable detours in order to reach the scene of any incident. The extra time taken in reaching an incident could well result in not only an increase in property damage but to loss of life to both citizens of Grimes County and the fire fighting personal attending. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to SS-23.
Howard Robinson	2/16/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. A new report estimates the Texas bullet train could cost taxpayers \$21.5 billion and concludes that privately funded high speed rail is not a feasible mode of transit outside of the Northeastern United States. The report from the Reason Foundation estimates that the proposed Texas Central Partners project between Dallas and Houston will run at a \$537 million annual operating deficit over the its first 40 years of operations. The Reason report examines ridership trends and projections in the Dallas to Houston corridor, the cost of building a line along the 240-mile proposed route, and other factors, its authors said. The study, Texas High Speed Rail: Caution Ahead, is by Baruch Feigenbaum, the assistant director of transportation policy at Reason Foundation. These factors indicate that "high-speed rail has no chance of succeeding in Texas, absent a dramatic change in land use and transit patterns, " the report concludes. It further finds that Texas Central Partners has exaggerated its ridership projections while underestimating costs, which will lead to revenue shortfalls, financial difficulties and ultimately, taxpayer subsidies "In short, if construction on the line is allowed to start, the project will inevitably have to be bailed out by the taxpayers of Texas, " the report says. All prior proposed passenger rail project considered in the Texas were public/private partnerships and as a result failed to go forward. Texas Central Rail is premised as completely private, but there is reason to believe that it too will need a public funding component. Texas Central plans to apply for Railroad Rehabilitation and Investment Financing loans -- a federally funded taxpayer subsidy, the report notes. Texas Central has not released a business plan, nor has it provided any verifiable, objective data to support its ridership projections or cost estimates. Successful high-speed rail lines operate in areas with extremely high residential and commercial densities, low rates of automobile ownership, widely accessible subway systems and without nearby airports with low-cost air service. Dallas and Houston have some of the highest rates of car ownership in the United States. The area has extremely limited passenger transit systems and percentage of transit usage, and very low population densities. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to GN-2, GN-3 and NE-1.

Howard Robinson	2/16/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Business Ethics, Public Trust, and TCRR Competence (Ref: Nothing In the DEIS on This Issue). Question: Has the FRA evaluated the answers provided to the Public in Open Forums by TCRR on a full host of questions as compared to what has been included now in this DEIS? Question: If not, is the FRA interested in any false or misleading statements made to the Public by TCRR vs. what the FRA has included in the DEIS? Question: Is it important to FRA's analysis of the TCRR's capability to Operate a RR or not if TCRR has misled the Public on a number of issues as compared to what the FRA has included in the DEIS?	Refer to NE-1.
Howard Robinson	2/16/2018	Email	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Business Ethics, Public Trust, and TCRR Competence (Ref: Nothing In the DEIS on This Issue). The Public has documented a number of misleading or false answers to questions or statements by TCRR about the HSR for almost three years. I suggest the FRA look seriously at all of the DEIS topics that the FRA has glossed over, leaving many of us the impression of minimizing any negative evaluation results of TCRR's Plan. Beware FRA, TCRR based on its track record for 3+ years, will likely not fulfill many of the commitments included in the DEIS and when they don't, the FRA will be held accountable. There are also questions about TCRR's Unethical Actions during the collection of Field Data and it looks like the FRA has NO Problem Implicating themselves in potentially Illegal activity against the very people they are being paid to Protect?	Refer to NE-1, NE-8 and NE-9.
Howard Robinson	2/16/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2. Pg. 63 of 199; Sect. 4.4, Pg. 64 of 199). Question: Why does the DEIS NOT mention any Risk Management System to be applied to the crossing or close proximity of the HSR with other hazardous facilities such as Facilities, Pipelines, or Transmission Lines? Question: Does the FRA NOT consider Pipelines being crossed by the HSR a Risk Management Issue considering Pipeline Explosions have occurred in Texas? Does the FRA Employ Risk Management Engineers for the purpose of implementing a Risk Management System or ARE the FRA's safety processes VOID OF A RISK MANAGEMENT SYSTEM?	Refer to EU-2, SS-18 and SS-19.
Howard Robinson	2/16/2018	Email	Topic: Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 44, Pg. 64 of 199). Question: Have Risk Event Scenarios been developed on any activity or the HSR Construction and Operation along with performing risk assessments by qualified Risk Engineers for those Events/Scenarios? Question: Has the FRA applied any Risk Management System to the highly congested traffic flows along with road and lane closures. modifications and rerouting of roads, as well as any Risk Management situations associated with construction of the HSR?	Refer to SS-19 and TR-6.
Howard Robinson	2/16/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 44, Pg. 64 of 199). Question: Has a Risk Management System been applied to the Security of the HSR during Construction and Operation? Question: Since the FRA is responsible for RR Safety, including that of the Public, and would be the Federal Agency to allow TCRR to Operate a RR in the Future with the FRA's Oversight, why is there no mention in the DEIS of Risk Management systems being applied to Public Safety or Security?	Refer to SS-19 and TR-6.
Howard Robinson	2/16/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 44, Pg. 64 of 199). Question: any Risk Management Systems applied to Emergency Response for the HSR if there is a shut down or emergency situation in the middle of nowhere? Question: What Risk Management System been applied or what Emergency Response Planning been has done to handle High Elevation Rescue of the Public in case of a shut- down or Incident in the middle of nowhere during operation? Question: The same question would apply to the Construction Phase also?	Refer to SS-3, SS-18 and SS-19.
Howard Robinson	2/16/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; sect 4.1, pg. 62 of 199; sect. 4.2, pg. 63 of 199; Sect. 44, Pg. 64 of 199). Comment: The HSR remote route with its crossings being muted very close to and Utility Facilities is "Screaming" for application of a Comprehensive and Competent Risk Management System, including identification of Risk Disaster Scenarios along with Qualitative and/or Quantitative Risk Assessments being performed by qualified Risk Engineers on those Scenarios followed by Mitigation Actions/Planning.	Refer to EU-2, SS-18 and SS-19.
Howard Robinson	2/16/2018	Email	Lack of a Credible Comprehensive Risk Management System by the FRA and TCRR AND Emergency Response Planning for Public Safety (Ref: DEIS Appendix F TCRR FDCE v7 REPORT: Sect. 3.12, Pg. 49 of 199; Sect 4.1, Pg. 62 of 199; Sect. 4.2, Pg. 63 of 199; Sect. 44, Pg. 64 of 199). Comment: If the FRA is responsible for "RR Safety", it is inconceivable that the FRA is consideling giving a Private Company to Construct and Operate an HSR a Green Light without the application of a Comprehensive Risk Management System, particularly since the Lives of the Public hinge on its Safe and Secure Construction and Operation. That sort of lack of cledible Oversight by the FRA, a Federal Government Agency lesponsihle for 'RR Safety", could easily bc considered "Negligent" to say the least.	Refer to SS-19 and TR-6.
Howard Robinson	2/16/2018	Email	"No Build Alternative". (Rer: DEIS Main Text 1, Sect. ES.8, Pg. 8).The FRA does NOT provide adequate documentation for elimination of the No Build Alternative. First, any claim regarding this Project being a Traffic solution or Congestion Relief has been Contradicted by TCRR many	Refer to AQ-2, BA-6 and PN-3.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			times and we have that documented. TCRR has stated this Project will NOT solve any perceived Traffic issues, particularly near the big cities. Second, the FRA must show more data regarding future estimates of traffic volume. Researching past predictions, today the traffic volumes of 1-45 have in no way even come close reaching those predictions, in fact, it has only reached roughly one half of those predictions. Third, the FRA simply makes the statement that No Build would provide No Alternative Transportation Needs. Where is the FRA Proof statistically the "NEED" exists as no data is shown by the FRA? I propose that the Only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	
Howard Robinson	2/16/2018	Email	"No Build Alternative". (Ref: DEIS Main Text 1, Sect. ES.8, Pg. 8). The Public is NOT going to accept from the FRA general statements that support the HSR without the FACTS to back it up. The appropriate level of Detail to support the FRA's claims about the No Build Alternative simply do not exist in the DEIS. Rationale is included in another Comments Page on this Subject. due to space limitations. The FRA also mentions there would be no improvement of Safety on 1-45 with the No Build Alternative. The FRA must Quantify that claim BEFORE it can be used to suppoll the FRA's conclusion that the No Build Alternative is Not an Option. Therefore, the FRA does NOT provide adequate documentation for elimination of the No Build Alternative. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-6.
Howard Robinson	2/16/2018	Email	"No Build Alternative". (Ref: DEIS Main Text 1, sect. ES.8, Pg. 8).Here are reasons the "No Build Alternative" MUST be reconsidered by the FRA. First, the Claims by the FRA on 1-45 Transportation Predictions, Traffic Congestion, Safety on 1-45, and Transportation Alternatives are Not Adequately supported with Detailed Facts. In fact the opposite cases have been made with much more Facts. Second, The "Public Need" has never been established in the DEIS by the FRA. Third, "Public Need" must clearly be established due to the huge negative Impact of Landowner's Property, Homes, Cemeteries, Livelihood.Existing Public Roads, and County Maintenance revenues that has not been adequately covered by the FRA DEIS nor has it been Quantified by the FRA like the other things that support the HSR have been Quantified for comparison purposes. The FRA's DEIS is simply a "Thumb on the Scale for TCRR's Benefit" without the Facts to back it up. I propose that the Only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement	Refer to BA-6, GN-2, NE-9 and PN-3.
Howard Robinson	2/16/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (kef: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Question: Will water be used almost constantly during dry times (Almost all the time in Texas) to water all of the temporary dirt roads along the HSR construction route and at road modifications? Question: What is the volume of water usage for this project, including during Construction and how does it fit into Texas' focus on water conservation programs?	Refer to WW-6.
Howard Robinson	2/16/2018	Website	I am lodging an objection to the HC-4 route of the proposed high speed rail line between Houston and Dallas for the following reason. Water Supply for Use at All Construction Sites and During Construction All Along the HSR Route (kef: DEIS Appendix F TCRR CONSTRUCTABILITY v4 REPORT: Sect. 7.1, Pgs. 32-33 of 34). Comment: The FRA Must Quantify the Water needs over 5 years of Construction and reconcile that with the Sate or County Water Conservation agencies to determine the need for permits or approvals for the use of Source Water. I propose that the only viable alternative would be that the NO BUILD option be chosen in the final Environmental Impact Statement.	Refer to WW-6.
J.D. Robinson	3/9/2018	Email	The Texas Bullet Train Will Help My Business Grow! As a business person who is in the industry, I am excited about working on the Texas Bullet Train and urge the Federal Railroad Administration to move forward with its review and approval. Texas is the perfect place to plant the seed to grow this new high-tech industry in the United States. The new high-speed economy created by this project will be a game changer for workers, vendors, contractors and other companies and small businesses all along the route. The fact that it is fully investor-owned means it will provide a great benefit for not only passengers, but all taxpayers. The Draft Environmental Impact Statement (DEIS) confirms this conclusion with detailed data and projections. For instance, it states that the Train will create more than 10,000 direct jobs per year during construction and about 1,500 jobs permanently when operational at least 25% of which will be in rural counties along the route It will contribute more than \$2.5 billion in taxes over its first 25 years to counties along the route and increase property assessment values within a half-mile of the proposed stations by between \$71.4 million and \$161.1 million. We want more travel options between Texas' two economic hubs and this project fills delivers and gives all travelers the freedom to choose a safer, more reliable and cleaner way to move across Texas. I welcome this new innovative industry and I urge the FRA to expedite its review and approval -- because it's good for business, good for the economy and good for Texas	Comment noted.
James Robinson	1/25/2018	Website	As a long time property owner in Madison County, Texas, I am perplexed by opposition here to construction of the Texas Central High Speed Rail Line. It is necessary for me to travel on an almost daily basis into Houston and often to Dallas. Completion of the rail line, with the proposed midpoint station relatively close by in Grimes County, would be of substantial benefit to me. As traffic conditions worsen on IH 45 which is already a crowded and often dangerous highway, the high speed train will become ever more important. The originally discussed eastern route would have come through my ranch and I don't think that would have been objectionable in the least. In my opinion, much of the opposition is simply people being fearful over something they don't understand. Build it!	Comment noted.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
James Robinson	3/9/2018	Website	I concur in the DEIS findings that the Dallas to Houston high speed rail line would be a viable project. In my judgement, it would help relieve continually increasing traffic congestion of IH-45 and, because of local traffic congestion leading to the Houston and Dallas airports and TSA delays at both, would provide a travel alternative that is highly competitive with air transportation between the two cities. The project does need to consider methods for connecting its proposed Houston terminal with major business centers including downtown and the Galleria areas, and should partner with Houston's Metropolitan Transit Authority in developing and building these supporting local transit structures. To this end, I concur in remark on the DEIS filed on March 8 by the Metropolitan Transit Authority of Harris County.	Refer to TR-3 and TR-4.
Michael Robinson	2/16/2018	Website	I totally support the high speed rail link between Dallas and Houston, This is the future and will bring genuine transportation options to our state. More freeways are not the answer / it's time to join other modern countries and build this line!	Comment noted.
Sara Robinson	2/27/2018	Website	I would love to be able to ride the train to visit my grandchildren in Houston! Please build it soon!	Comment noted.
Yvette Robinson	2/20/2018	Website	The Dallas Bullet Train to Houston will make a big difference in my life. I have an elder aunt in Houston that I love to visit. However, a 4.5 hour trip to Baytown and 4.5 trip back to Dallas can be daunting! The bullet train would make a big difference in my long boring drive to Houston. In addition, my business often takes me to other areas in Houston and a plane ride can be costly. We need the Bullet Train as soon as possible, for a safer easier commute! Let's go Bullet Train!!! I am excited for this project to begin and complete.	Comment noted.
Curtis Rock	2/19/2018	Website	I believe the Dallas to Houston high speed rail project will provide a net benefit to Texans. The private funding aspect of the project is the prevailing factor, in my opinion, that should allow this project to proceed to completion.	Refer to GN-4.
John Roddy	3/8/2018	Email	The Texas Bullet Train Will Help My Business Grow! As a voting citizen who is in the industry, I am excited about working on the Texas Bullet Train and urge the Federal Railroad Administration to move forward with its review and approval. Leisa Roden	2/18/2018	Website	I DO NOT support the building of the HST! It's unnecessary, poorly planned, expensive, and will displace rural landowners that have owned their land for generations.	Comment noted.
Ruth Roden	2/24/2018	Website	Proven by a Cornell University Study, In Children, persistent noise (such as that from a HSR train) causes impaired reading comprehension, and long term memory problems. No build option should be chosen.	Refer to LU-5.
Ruth Roden	2/25/2018	Website	Morgan Family Ranch is UNIQUE. If YOU were to need a place to go for the weekend to meet with busy influential people who can get things done to help their community, Morgan Creek Ranch would do their best to accommodate you TO HELP carry on why we were all really placed on this Earth to accomplish--to help others, especially those not as fortunate. Corsicana, TX is not TOO FAR even for a (903) community like Paris, TX. In the past Campbell's Soup Co. owned this ranch as a retreat, and Campbell's Soup largest facility in this region of southern states is Paris, TX. Morgan Creek Ranch does NOT rent these facilities, but provides them for free. They were helping first before you drew your route. The Morgan Creek Ranch needs to continue to exist in tact to continue on with its special mission. Please move your 5-7 mile route paralleling 3194 near its intersection with FM709 and move it north of the existing power lines to prevent their lodge from losing access to the stables, arena, and other guest cottages. Thank you, Ruth Roden	Refer to LU-5.
Ruth Roden	2/27/2018	Website	The Morgan Family Ranch, also known as the Morgan Legacy Farm, gives to the community of Texas because its has special facilities that house retreat visitors in its natural beauty. This charitable giving of providing a retreat for respite reaches not only communities in the DFW metroplex, but also the rural communities in the Northeast Texas and Northcentral Texas areas. My outlook on the world is basically people can be divided into two categories, Givers and Takers. Bob and Brenda Morgan are true Givers. They help all people. This may come from their family upbringing in and continuing family active participation in the Catholic faith which continues on to be important in their grown children's and grandchildren's lives. If I were to need to find a place for a group retreat to help a needy portion of the Paris community in some way, this ranch would be a viable option. It would be free and naturally beautiful. Corsicana, TX is not TOO FAR even for a (903) community like Paris, TX. The ranch's facilities such as the lodge and guest houses are located for accessibility among themselves as well as to the arena and stables. They were created when the ranch was owned by Campbell's Soup Co. as a retreat. Campbell's Soup's largest facility in this region of southern states is Paris, TX. Communities even along the Red River are not too far from the Morgan's charitable heart of sharing	Refer to LU-5.

**Table H-12: Response to Comments Received on the Dallas-Houston HSR Draft EIS**

Submitted By	Date Submitted	Submission Type	Comment	Response
			their ranch's special mission. Please move the route north just a little so it traverses along the existing power lines along 3194 to keep the ranch intact for access between its facilities and safety of its guests. Thank you, Ruth Roden	
Ruth Roden	3/1/2018	Website	Morgan Legacy Farm freely helps to save lives. It is not a typical ranch at all. Its special facilities house large groups of retreat visitors who can commune with Nature to unwind from their high stress jobs while focusing on how to do a better job at work. This venue is freely given by the Morgan family to first responders especially in the Northeast and Northcentral areas of Texas. In 2014, I truly understood for the first time how my daughter and son-in-law were first responders. Their professions are doctor and nurse at Children's hospital. My first grandson, their only child, was a baby in 2014. The Ebola outbreak in Dallas had spread to a hospital nurse. My grandson's parents were making plans for him to come live with us here in Lamar County which borders Oklahoma until the outbreak was over to keep him safe. They did not want to infect him at home, if they became infected at work and unknowingly brought it home. This is when I realized the unbelievable stress of their jobs, because I was able to empathize with them at that time. What if the outbreak wasn't contained? What if I lost my precious daughter and grandson's father and became a mother myself to my grandson? Their devotion to saving children's lives makes them true heroes. They are willing to sacrifice their lives, leaving their precious children orphaned, to continue participating on their hospital teams to try even against the odds to continue saving children's lives. In 2014, it wasn't only them, but all the doctors and nurses at hospitals in our country. They are not going to give up and quit. The Morgan Legacy Farm provides a free respite within easy driving distance for the communities of first responders from the Red River to the Gulf of Mexico who are dedicated to saving everyone's lives. Access between the ranch's facilities like the lodge from the stables, arena and guest houses will be severed by the train's trench. Morgan Legacy Farm's charitable heart of sharing the ranch, their special mission to help others in need of a respite and team building in professions that serve our communities by saving lives as their daily work, is FREE. Its purpose is so important, it has to be free. Please move the rail route north just a little, so instead it traverses along the existing power lines along 3194 to keep the ranch intact for access between its facilities and safety of its environment. Please preserve this sanctuary for rest and rejuvenation on a large scale for those who protect all our lives. Thank you.	Refer to LU-5.
Ruth Roden	3/3/2018	Website	Morgan Legacy Farm will lose access between important facilities from the train trench scheduled to cut through the farm. If the route was just slightly changed to move it up to the powerlines that run along 3194, these facilities that provide a free respite venue for seminars for first responder organizations in our northeast area Texas will be kept in tact. Please reconsider the present route. Thank you.	Refer to LU-5.
Ruth Roden	3/4/2018	Website	Morgan Legacy Farm needs FRA's help to keep its large group retreat, MLF provides for FREE to hospitals and police departments needing a venue for seminars, available in the future to these first responders. Please consider changing the scheduled route for the high-speed rail slightly north so it will run parallel to the existing power lines along 3194. Morgan Legacy Farm is located south of Corsicana near FM 709 and 3194. The schedule rail route cuts through the retreat buildings and will separate its heart, its lodge, from the guest houses, stables, and arena. Please reconsider your route, vary it slightly to save this unique area which helps refresh hospital workers and police officers as they learn in seminars to help them do a better job for their communities. Thank you.	Refer to LU-5.
Ruth Roden	3/5/2018	Website	I was shocked to find out the Morgan Legacy Farm may no longer have its retreat area. I am writing to beg you to save the Morgan Legacy Farm's special retreat. The Morgan Legacy Farm open-heartedly does so much for the community of Texas. Its charitable giving reaches not only into the DFW metroplex, but anywhere in the (903) area code. My outlook on the world is basically people can be divided into two categories, Givers and Takers. Bob and Brenda Morgan are Givers. They help all people. This giving spirit continues on to be important in their grown children's and grandchildren's lives. This retreat area inside of Morgan Legacy Farm is Free for first responders like police and hospitals that need to stage a retreat and/or seminar. This is important to us all, because first responders are who take care of us when we need lifesaving help. Corsicana, TX is not TOO FAR even for a (903) community like Paris, TX. In the past Campbell's Soup Co. owned this ranch as a retreat, and Campbell's Soup largest facility in Texas is Paris, TX. Please move the route up just a little to parallel the power lines along 3194 to keep the ranch intact for its facilities, wildlife, and watershed. Thank you.	Refer to LU-5. A review of the current alignment indicates that it would closely parallel the existing powerlines for the area in question.
Ruth Roden	3/6/2018	Website	Morgan Legacy Farm is located in Navarro County by the intersection of FM 709 and 3194. The rail for the train is going to be in a trench and this trench is going to cut through the retreat buildings separating the meeting/dining lodge from the guest houses, stables, and arena. This is a very special retreat area, not only because it will accommodate a large group. This retreat area is free to hospitals and police as a stage and respite for work related seminars. Please keep this retreat from being destroyed. Please help Morgan Legacy Farm by moving the scheduled rail route north to run parallel along 3194. Thank you.	Refer to LU-5.
Ruth Roden	3/8/2018	Website	Morgan Legacy Farm is located south of Corsicana near the intersection of FM 709 and 3194. Decades ago, Campbell's Soup built a special area within this ranch---a corporate retreat consisting of a meeting/dining lodge, guest cabins, stables and arena. Morgan Legacy Farm uses this area charitably giving the use of these facilities to hospital and police seeking a stage for a seminar. The use of these special buildings is FREE to first responder groups. Being updated in the latest techniques to help these first responders to do a better job at work in this natural setting is both refreshing and restful. This atmosphere helps people to focus better, since they are in a new environment. Participants can spend the night, helping the seminars to be able to last longer. This way the participants can learn everything at one time, instead of a long	Refer to LU-5.

			session having to be broken into more than one session with weeks in between. Access between the lodge and the stables, arena, guest houses will be severed by the train's rail trench. The lodge is the large group gathering place, the heart of the retreat. The rail route is cutting its most important building off from the retreat. If this retreat within Morgan Legacy Farm is destroyed, the losers will be our families---yours, mine, and our neighbors in all the communities within a three hour drive to Morgan Legacy Farm. First responders take care of all of us when we truly need them most. Please move the rail route north just a little, so the rail route instead traverses along the existing power lines along 3194 to keep the ranch intact for access between its retreat facilities. Thank you for your help.	
Ruth Ann Roden	2/28/2018	Website	Morgan Legacy Farm gives to the community of the state of Texas, not just the Corsicana area. Its special facilities house large groups of retreat visitors in Nature. This venue is freely given by the Morgan family by those needing a retreat for respite reaches not only communities in the DFW metroplex, but also the rural communities. Access between the ranch's facilities like the lodge from the stables, arena and guest houses will be severed by the train's trench. Morgan's charitable heart of sharing the ranch's special mission to help others in need of a respite and team building in professions that serve our communities by saving lives as their daily work. Please move the rail route north just a little, so instead it traverses along the existing power lines along 3194 to keep the ranch intact for access between its facilities and safety of its guests. Thank you for your consideration, Ruth Roden	Refer to LU-5.
Ruth Ann Roden	3/7/2018	Website	In Navarro County the scheduled high-speed rail route near the intersection of FM 709 and 3194 will be destroying access within Morgan Legacy Farm between its large group meeting lodge and the guest cabins, stables, and arena. These buildings make up a retreat that has been used for free for first responders to unwind in this beautiful natural environment while team building and learning new information that will help them do a better job at work. When I was a teacher in the Houston area, the most memorable seminar I have ever attended was titled "Capturing Kids Hearts". I truly believe I remember it so vividly, because the participants spent the night at Round Top, TX in a huge old house furnished with antiques for the seminar. I felt like I was living in a bygone era. Round Top wasn't a beautiful natural setting, but it was remote and without cell phone service at the time. Its relaxing escape from our daily normal made it possible for us to focus 100% on the new techniques we were learning to use in our classrooms. It is hard to change, to actually implement the new you have learned even though it has been proven to be better. You want to fall back into what you are use to doing, unless you learn the new 100%, master all the information. This is the importance of Morgan Legacy Farm's retreat. I do not know how much Round Top charged for the "Capturing Kids Hearts" presenters, but I doubt it was free. Morgan Legacy Farm is FREE to first responder organizations that need a venue for a team building/work-related workshop or function. It provides an escape so the participants can focus 100% on the new material and techniques they are learning. I am a hospital volunteer in the regional hospital here in the Red River valley. 2014 was a scary time with the Ebola crisis at Presbyterian Hospital. I will never forget the glimpses I saw of the emergency plans beginning to go into effect here in the rural countryside when the first nurse became infected with Ebola. Our hospital administrator was labeled the "regional czar". I heard this label and this incident through my friend who is a member of the church referred to, and her husband was there at the pastor's home when the hospital team arrived. The hospital administrator had to go with a team into their rural community and did a house call to check on this local community's pastor who had just returned from a mission trip to Africa, because the pastor had arrived home sick. Luckily, the pastor was simply sick and it wasn't Ebola. My point is, there is new, critical information as to procedures, etc. that first responders are always having to learn, no matter if they are hospital workers, police, etc. Information has to be LEARNED WELL, so it can be performed even under horrible conditions. Team Building isn't for fun and games, but to save lives even when their own lives are in jeopardy. Morgan Legacy Farm IS IMPORTANT TO US ALL. All of our communities around the Dallas area as well as the metroplex can benefit, now, twenty years from now, 40 years from now... The retreat located on Morgan Legacy Farm is Special. PLEASE change the fast-speed route slightly north, please move the route so it will run parallel to the existing power lines along 3194 to preserve the Morgan Legacy Farm retreat. Thank you.	Refer to LU-5.
Tracy Roden	2/24/2018	Website	Noises from Elevated trains lead to reading difficulties and negative academic performance. No build option should be chosen.	Refer to LU-5.
Tracy Roden	2/25/2018	Website	Please save the Morgan Creek Ranch also known as the Morgan Legacy Farm located where you plan to have the high speed rail travel through by the intersection of FM 709 and 3194 south of Corsicana. Please move your route for a stretch of 5-7 miles to run north by the existing power lines along 3194. Your existing route will cut through the ranch stopping access between the lodge and major out building such as the stables, arena, and guest houses. The ranch is used as a retreat for charitable functions, and provides its venue for free. Visitors will not be able to walk between these areas, negating the "retreat" into this beautiful natural setting. Please reconsider and move your route to the north along the existing power lines. This family has turned a corporate retreat into a wonderful charitable respite for all types of people and organizations needing a place to meet charge themselves up to make change for the better. Please reconsider this short section of your route. Thanks, Tracy Roden	Refer to LU-5.
Tracy Roden	2/27/2018	Website	The Morgan Family Ranch is a wonderful place for friends and family to visit and appreciate nature together. A high speed rail train would destroy this and that would be a terrible shame. If a different location could be chosen that would have a lesser impact upon this family it would be greatly appreciated.	Refer to LU-5.

Tracy Roden	3/3/2018	Website	Morgan Legacy Farm is located south of Corsicana, TX near the intersection of FM 709 and 3194. Please save Morgan Legacy Farm's ability to continue its charitable mission to give first responders a FREE place to stage seminars to update them on the best ways to do their jobs and to plan to better serve the public. The farm's beautiful natural environment provides a peaceful sanctuary in which to focus on change. The present route will cut through separating the arena and overnight guest buildings and meeting lodge where meals are served. Please move the scheduled fast-speed rail route slightly north so it will parallel the existing power lines along 3194. Thank you.	Refer to LU-5.
Tracy Roden	3/4/2018	Website	Morgan Legacy Farm needs your help. Please review the fast-speed route south of Corsicana, TX near the intersection of FM 709 and 3194. Please reconsider and move the scheduled route slightly north so it runs parallel to the existing power lines along 3194. The scheduled route will cut through the facilities built years ago when the property belonged to Campbell's Soup. Morgan Legacy Farm has NEVER commercially rented this large group retreat consisting of a lodge for meetings and meals, guest houses, stables, and arena. However, first responder groups such as hospital and police groups have been allowed to use this retreat for FREE as a venue for their seminars and functions to update teams on the newest practices to help do their jobs better which is saving all our lives in and around the Dallas Fort Worth area which has a population in the millions. This is a special retreat facility not only because it is of NO cost, but because it is so naturally beautiful, and restful because it is home to birds, waterfowl, and wildlife. The scheduled route's rail trench cuts right through this retreat, destroying the access between the lodge and the guest cabins, stables, and arena. I am begging the FRA, please reconsider and move the rail route slightly north so it would be along the existing power lines that run along 3194. This is no more than 5-7 miles long. Thank you so much.	Refer to LU-5.
Tracy Roden	3/5/2018	Website	Located in Navarro County near the intersection of FM 709 and 3194 is the beautiful Morgan Legacy Farm. Decades ago, Campbell's Soup built a special area here when it owned this ranch. They built a retreat consisting of a meeting/dining lodge, guest cabins, stables and arena for company functions and seminars. Morgan Legacy Farm charitably gives the use of these facilities to hospitals and police departments seeking a stage for a seminar or function. The use of these special buildings for seminars is FREE to first responder groups like hospitals and police departments. Being updated in the latest techniques to help these first responders to do a better job at work in this natural setting is refreshing and restful. Access between the lodge and the stables, arena, guest houses will be severed by the train's rail trench. Please move the rail route north just a little, so the rail route instead traverses along the existing power lines along 3194 to keep the ranch intact for access between the retreat facilities. Thank you for your help.	Refer to LU-5.
Tracy Roden	3/6/2018	Website	Morgan Legacy Farm in Navarro County is located near the intersection of FM 709 and 3194. Please help Morgan Legacy Farm by rerouting the scheduled fast-speed rail a little north so it is parallel to the power lines along 3194. This will save Morgan Legacy Farm's retreat area, so the trench for the train will not cut through this complex of buildings. Hospitals and police are allowed to use this meeting lodge, guest houses, stables, and area, for free for seminars in this beautiful natural setting. It helps all of us in the DFW metroplex and outlying communities to have hospital staff and police officers using the newest techniques and rested to face their high stress jobs. Please change the rail route to save this charitable retreat. Thank you.	Refer to LU-5.

Tommy Roden, III	3/3/2018	Website	Morgan Legacy Farm is located south of Corsicana, TX near the intersection of FM 709 and 3194. Morgan Legacy Farm needs FRA's help to keep its arena and overnight facilities and its lodge area for meetings and meals from being separated by the high-speed train's trench. It will destroy this area from being able to be continued to be used for groups attending seminars in the farm's beautiful natural environment. The only groups who have used it are first responders such as hospitals and police. Morgan Legacy Farm has always offered the use of this special gathering place for free. This is NOT a commercial venue, but a charitable gift for such groups in need who do service for others. Please move the rail route slightly north to run along the existing power lines along 3194. Please help to keep this special feature of Morgan Legacy Farm intact to help us all. Thanks.	Refer to LU-5.
Tommy Roden, III	3/4/2018	Website	Morgan Legacy Farm, located south of Corsicana near FM 709 and 3194, has a very special feature--a large group retreat which consists of many buildings. This retreat feature of Morgan Legacy Farm will be destroyed by scheduled route of the high-speed rail trench which will cut	Refer to LU-5.

			through these buildings. Please consider moving the scheduled route a little north so it will run parallel to the existing power lines along 3194 for this 5-7 mile stretch. This large group retreat area is NOT commercial. However, it is loaned out for FREE to hospitals and police departments needing a restful venue for seminars to help employees learn new practices to help protect and save lives in our northeast quadrant of Texas. Please reconsider your scheduled route through Morgan Legacy Farm. Thank you.	
Tommy Roden, III	3/6/2018	Website	Near FM 709 and 3194's intersection in Navarro County is located a wonderful retreat in the Morgan Legacy Farm. This retreat can house large groups in guest houses and a lodge for dining and meetings. Unfortunately, the high-speed train's trench will cut in between the lodge and the guest houses, stables, and arena. Please move the scheduled rail route a little north so it will run parallel along the existing power lines along 3194. Please save the peaceful natural beauty of this respite area used by our communities' first responders as well as the wildlife and migrating birds and waterfowl that stop to rest on their journeys. Thank you.	Refer to LU-5.
Tommy Roden, III	3/7/2018	Website	High-speed scheduled rail route in Navarro County near the intersection of FM 709 and 3194 will cut through a special area within the Morgan Legacy Farm destroying an important resource available for free to hospitals and police in the DFW and surrounding (903) areas including the Red River Valley. Morgan Legacy Farm has always provided a FREE gathering place for large groups of first responders to participate in hospital functions within its beautiful natural environment. For example, this time of year, flocks of migrating birds are beginning to fly up from across the Gulf of Mexico to return to Canada. They also refresh and rejuvenate at Morgan Legacy Farm using it as a respite before continuing on in their journey. The rail trench will destroy the watershed for their habitat just like the rail trench is cutting through the retreat area of Morgan Legacy Farm separating the meeting lodge from the guest cabins, stables and arena. Providing first responders a place for R&R while team building and learning better ways to be more effective in high stress jobs that protect and save lives helps the participants so they are better able to save all of our lives in the communities they serve. Morgan Legacy Farm is a FREE friendly site for the people who stand for us all in our communities. Please find a way to change the fast-speed rail route by moving it north to go along the existing electrical power lines along 3194, saving access within the ranch, so Morgan Legacy Farm will be able to continue its charitable mission for years to come. Thank you.	Refer to LU-5.
V.T. Roden, III	2/25/2018	Website	The train route is scheduled to go through the intersection of FM709 and 3194 and cut through the Morgan Creek Ranch also known as the Morgan Legacy Farm. Please move this 5-7 mile stretch north to run along the existing power lines along 3194. If this is done, the ranch will remain in tact, so it can continue to be a charitable respite retreat. Please preserve this valuable resource for Northeast Texas. Vaughn Thomas Roden, III	Refer to LU-5.
Vaughn Roden, III	2/24/2018	Website	The FRA knows TODAY where the HSR passes closely by homes, businesses, schools, through, in front of, and alongside of Subdivisions. So Why has the FRA DEIS NOT set out specific Abatement use requirements vs. leaving it up to TCRR After Design is done? This MUST beat a minimum In the Detailed Design. Preliminary Design with a Known Route, Known Residents & Schools, and Known Maximum Noise Level is all that is needed to determine the need for noise abatement and where. No build option should be chosen.	Refer to LU-5.
