DECEMBER 2020

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by WRY Tenant LLC to perform a Phase I Environmental Site Assessment (ESA) of the approximately 13-acre site consisting of the western portion of the Hudson Yards Rail Yard complex in Manhattan, referred to as the Western Rail Yard (WRY) (the Property), as shown on Figures 1 and 2. The Property is bounded by West 30th Street to the south, Twelfth Avenue to the west, West 33rd Street to the north, and Eleventh Avenue to the east, and is also identified as New York Tax Block 676, Lots 1 and 5. The Property contains an active rail yard for the Long Island Railroad (LIRR) with ancillary mechanical and office buildings and surface parking. Proposed additions to the Property include a rail tunnel extension in its southern portion on Lot 1 (aka the Tunnel Encasement or Terra Firma), and a platform over the rail yard in its northern portion on Lot 5 (aka the Platform or LIRR Train Yard); the Platform is anticipated to support new construction in the future.

The Property previously underwent environmental review under New York City Environmental Quality Review (CEQR) and the State Environmental Quality Review Act (SEQRA) as part of the Western Rail Yard Final Environmental Impact Statement (FEIS) published in October 2009. A Restrictive Declaration (RD) was developed incorporating commitments associated with redevelopment, including environmental controls during construction and procedures for addressing hazardous materials, air quality and noise that will be subject to Mayor's Office of Environmental Remediation (OER) approvals. The current development plans are being analyzed in an updated EIS (currently underway) pursuant to CEQR and SEQRA.

This Phase I ESA was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

This assessment revealed the following:

Recognized Environmental Conditions (RECs)

- Spill #1802063 was reported for the Property in May 2018 at a listed address of 645 West 30th Street (Lot 1) when petroleum contamination was identified during a subsurface investigation in a former bus fueling and washing area located on the southwestern portion of the lot (remnants of the former fueling station including an inactive pump island were observed in this area during the site reconnaissance). The spill file notes indicated that the Property was listed under the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) facility #2-601983 and was associated with a former NYC Department of Sanitation (DSNY) garage (portions of the lot appeared to have been historically used by DSNY for vehicle storage). Several closed-removed underground and aboveground petroleum storage tanks ranging in size from approximately 275 to 2,500 gallons of hydraulic oil, motor oil, biodiesel and diesel were identified; the tanks were reportedly removed between 2007 and 2014. According to the spill file, no evidence of widespread contamination was identified during subsequent soil boring investigations completed in the former bus fueling area in 2018, and it was noted that the proposed redevelopment would require petroleum-contaminated soil removal to the water table with associated waste characterization sampling for off-site disposal purposes. The file notes indicated that remedial activities would be managed under OER oversight during redevelopment to address contamination and the spill was closed in January 2019.

- Spill #0407411 was listed for the Property in October 2004 with an address of Twelfth Avenue and West 33rd Street (Lot 5) due to significant on- and off-site petroleum contamination discovered during subsurface investigations. The contamination was noted to be primarily on the northwestern portion of the Property and to the north across West 33rd Street. Remedial investigations conducted in 2009 indicated few exceedances of dissolved VOCs in groundwater, and the file notes indicated contamination consistent with manufactured gas plant (MGP) waste was limited to an area on the northwestern portion of the site in deeper soil (below the groundwater interface). It was noted that additional remedial investigation activities were proposed to delineate potential residual contamination, which would be addressed under the NYSDEC State Hazardous Waste Site (SHWS) program (ID #231083). The spill was subsequently closed in March 2013; however, residual contamination may be present. Online NYSDEC records identified the Property as a “P” site (i.e., a potential SHWS site, being evaluated for addition to the registry).
- Sanborn maps and aerial photographs indicated that the Property had a long history of railroad and freight uses, since at least circa 1890 that could have affected subsurface conditions. Additional uses on the site included a lumber yard (subsequently a department store warehouse), freight storage sheds and a freight terminal. The Property was shown as a rail yard with three ancillary structures (noted as constructed between 1983 and 1985) for the LIRR by 1992.
- The surrounding blocks were largely industrial and automotive in use according to Sanborn maps and the regulatory database information, including various warehouses, a varnish works, a beer distribution facility with fueling operations (subsequently a motor freight station) on the north-adjacent block and various uses including a soap factory, motor freight stations, various manufacturing uses, garages with gasoline tanks, a bus garage (subsequently a DSNY garage) and filling stations on the south-adjacent block. Such uses may have affected area environmental conditions.

On-site/Off-site Environmental Concerns (items outside the scope of ASTM E1527-13 such as ACM, LBP and/or PCBs in Building Materials or Fill/Debris)

- Building components and/or historic fill materials may contain LBP and/or ACM and/or PCBs (including electrical equipment, train ballasts and other rail components).
- The Property was formerly part of the Hudson River, which was filled to expand the Manhattan shoreline beginning approximately in the late 1800s. Based prior subsurface investigations, the Property Site is underlain by an approximately 10- to 45-foot layer of fill materials (including silty sand, gravel, bricks, cinders, concrete, roots, and rock fragments).

Potential for Vapor Encroachment

Based on the RECs identified above, this Phase I ESA identified a potential for vapor encroachment into current or future buildings at the Property. The Property is subject to a Restrictive Declaration; thus, construction of any future buildings is subject to OER oversight. Construction of the proposed platform would include installation of ventilation systems for the train yard beneath. Any future buildings constructed on the platform above a ventilated train yard are unlikely to be affected by vapor encroachment, as no complete soil vapor exposure pathway would exist. It is anticipated that OER will require any future buildings constructed directly on soil and/or bedrock to incorporate vapor control measures.

RECOMMENDATIONS

- As noted above, the Property is subject to a Restrictive Declaration for air quality, noise, and hazardous materials concerns. The Hazardous Materials pre-construction requirements of the RD require that the proposed construction be conducted in accordance with an OER-approved Remedial

Action Plan (RAP) and Construction Health and Safety Plan (CHASP). Following construction, submission and approval of a Remedial Closure Report (RCR) is required to obtain the Notice of Satisfaction (NOS) from the OER, which will be needed to obtain occupancy permits from DOB. The RCR is intended to document that environmental remediation activities at the Property were conducted in accordance with the RAP. Coordination of construction activities may be required with NYSDEC in conjunction with the SHWS program, and the USEPA prior to disturbance of potential PCB-containing materials. All intrusive work must be in accordance with MTA LIRR requirements.

- As noted above, information in the NY Spills database indicated that additional remedial activities would be required to address known or potential residual contamination on the southwestern portion of the Property related to Spill #1802063 and on the northwestern portion of the Property under the SHWS program (ID #231083). Remedial activities in these areas should continue to be conducted in coordination with NYSDEC and OER, as required.
- Any USTs encountered during Property redevelopment should be properly closed and removed, along with any contaminated soil, in accordance with federal, state, and local regulations, including NYSDEC for registration and, if applicable, spill reporting.
- During any future subsurface disturbance, excavated soil should be handled and disposed of properly in accordance with all applicable regulatory requirements. Any evidence of a petroleum spill must be reported to NYSDEC and addressed in accordance with applicable requirements. Transportation of material leaving the Property for off-site disposal should be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine if the project will disturb ACM. Any ACM in an area to be disturbed (and any other ACM subsequently identified) should be removed prior to the renovation or demolition.
- Unless there is labeling or test data indicating that suspect PCB-containing electrical equipment does not contain PCBs, and that caulking/glazing and fluorescent lighting fixtures, thermostats, etc. are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.
- Any activities with the potential to disturb lead-based paint should be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - Lead Exposure in Construction).
- Dewatering activities should be conducted in accordance with applicable discharge requirements, including NYCDEP protocol, with pre-treatment (if required).

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by WRY Tenant LLC to perform a Phase I Environmental Site Assessment (ESA) of the approximately 13-acre site consisting of the western portion of the Hudson Yards Rail Yard complex in Manhattan, referred to as the Western Rail Yard (WRY) (the Property), as shown on Figures 1 and 2. The Property is bounded by West 30th Street to the south, Twelfth Avenue to the west, West 33rd Street to the north, and Eleventh Avenue to the east, and is also identified as New York Tax Block 676, Lots 1 and 5. Proposed additions to the Property include a rail tunnel extension in its southern portion on Lot 1 (aka the Tunnel Encasement or Terra Firma), and a platform over the rail yard in its northern portion on Lot 5 (aka the Platform or the LIRR Train Yard); the Platform is anticipated to support new construction in the future.

The Property previously underwent environmental review under New York City Environmental Quality Review (CEQR) and the State Environmental Quality Review Act (SEQRA) as part of the Western Rail Yard Final Environmental Impact Statement (FEIS) published in October 2009. A Restrictive Declaration (RD) was developed incorporating commitments associated with redevelopment, including environmental controls during construction and procedures for addressing hazardous materials, air quality and noise that will be subject to Mayor's Office of Environmental Remediation (OER) approvals. The current development plans are being analyzed in an updated EIS (currently underway) pursuant to CEQR and SEQRA.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*). Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor and/or groundwater) within, from and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACM) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps for the Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Superfund Enterprise Management System (SEMS); Emergency Response Notification System (ERNS); and Toxic Release Inventory System (TRIS). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Disposal Site Draft Study; Hazardous Waste Treatment, Storage or Disposal Facilities; Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP); Registered Drycleaners; and City Environmental Quality Review (CEQR) E Designation Sites.
- Local agency reviews, including online Buildings and Finance Departments records, were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

On November 29, 2020, Neoma Chefalo of AKRF conducted a reconnaissance of the Property from public streets and rights-of-way (the interior of the WRY was not accessible for inspection). The weather was clear and approximately 50 °F, the visibility good, and the premises adequately illuminated. Photographs from the reconnaissance are included in Appendix A. Details of the Property are shown on Figure 2.

2.1 General Site Conditions

The Property consisted of the 13-acre Western Rail Yard (WRY) site within the larger Hudson Yards complex in Manhattan (Block 676, Lots 1 and 5).

Lot 5, located on the northern and central portions of the Property, was occupied by the LIRR rail yard, which contained numerous railroad tracks and train car storage areas, with several asphalt-paved access roads. The majority of the lot contained train tracks with a central platform area and some ancillary support structures, including a single story structure on the northwestern portion of the lot (aka Building 1) that houses cleaning supplies and mechanical equipment, according to an April 2019 *30 Percent Resubmission Design Criteria Report for WRY* (discussed in Section 7.0). An additional ancillary two-story building (Building 2) was located just south of Building 1 and was reported to contain the headquarters and locker rooms for the train car maintenance personnel. Building 3, located on the southwestern portion of Lot 5, also contained locker rooms and offices for LIRR personnel according to the Design Criteria Report.

Lot 1, located on the southern portion of the WRY, contained asphalt-paved areas and apparent storage areas associated with the train yard. Several metal trailers and parked vehicles were located throughout. The southeastern portion of Lot 1 contained Building 4, a single-story structure that, according to the April 2019 Design Criteria Report, contained emergency service equipment, including a fire water tank, fire booster pumps, and an emergency generator (with fuel oil storage) to supply the current fire protection system throughout the WRY. An apparent former filling station was observed in the southwestern portion of Lot 1 (including an apparent former pump island and metal trailer with several apparent gasoline or diesel vent pipes mounted to the exterior); signage in the area identified this area as the WRY Vehicle Processing Area. Several metal trailers (possibly containing remediation equipment) were noted (Spill #1802063 was reported in May 2018 for contamination identified for this area that was reportedly associated with former bus fueling and washing operations, as discussed in Section 5.2.2).

Apparent monitoring wells were observed within the sidewalk along Twelfth Avenue near the northwestern portion of the Property, and within asphalt pavement on the southeastern portion of

the Property in the vicinity of Building 4. The wells may have been associated with prior remedial investigations.

2.2 Topography and Hydrogeology

Based on U.S. Geological Survey mapping (Weehawken Quadrangle), both portions of the Property (the train yard and “terra firma”) are at an elevation of approximately 10 feet above the North American Vertical Datum of 1988 (NAVD 1988), an approximation of mean sea level. Due to variations in street grade, the Property is approximately 10 feet below street level on its eastern side, and at street level on its western side. Prior reports indicated that in the 1980s, the Property was redeveloped for use by the LIRR. The redevelopment included removal of historical train tracks, installation of a 12- to 18-inch concrete slab over the train yard, and installation of new tracks and structures over this slab. The Property was formerly part of the Hudson River, which was filled to expand the Manhattan shoreline beginning approximately in the late 1800s. Based on a 2004 Phase II Environmental Site Investigation (ESI) (see Section 7.0), the Property pavement is underlain by an approximately 10- to 35-foot layer of fill materials (including silty sand, gravel, bricks, cinders, concrete, roots, and rock fragments). An area in the center of the Property contains fill up to 45 feet deep, which is underlain by native sand, silt, clay, organic soil (riverine deposits), and glacial till. Depth to bedrock beneath the Property ranges from approximately 25 to 150 feet below ground surface (bgs), with bedrock sloping down toward the west.

The 2004 Phase II ESI first encountered groundwater approximately 5 to 7 feet below grade. Groundwater is anticipated to flow in a westerly or northwesterly direction toward the Hudson River (approximately 260 feet away), but is likely tidally influenced. The actual groundwater flow direction may also be affected by bedrock topography, subsurface openings or obstructions such as basements, and other factors beyond the scope of this assessment. Groundwater in Manhattan is not used as a source of potable water (the municipal water supply uses upstate reservoirs).

Additional subsurface investigations conducted in 2018 indicated a limited petroleum spill in the southwestern portion of the Property, in the area of a former bus filling station and washing facility (discussed further in Section 5.2.2)

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)/Aboveground Storage Tanks (ASTs)

Previous studies identified fuel oil and diesel storage at the Property (the LIRR may maintain tank records that are not publicly available) and information provided in the NY Spills database indicated that certain petroleum storage tanks at the Property appeared to have been listed under the DSNY M District 6 Garage NYSDEC PBS listing, as noted in the table below (DSNY appears to have historically occupied portions of the Property on Lot 1).

Property NYSDEC PBS Listing

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Property
DSNY M District 6 Garage 319 Eleventh Avenue PBS facility #: 2-601983	4 x 2,500 UST	Diesel	Closed-Removed	Property
	1,000 UST	Motor Oil		
	1,000 UST	Hydraulic Oil		
	275 AST	Motor Oil		
	275 AST	Hydraulic Oil		
	275 AST	Waste Oil		

Potential undocumented bulk storage tanks elsewhere in the WRY facility may have been removed or may remain beneath the Property.

Off-site USTs and ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the WRY buildings (constructed in the mid 1980's), fluorescent lighting fixtures, window caulking, and electrical equipment are not as likely to contain PCBs, however this could only be confirmed by testing. PCBs may be present within railroad track components including ballasts.

2.5 Lead-Based Paint

After 1977, the use of lead-based paint inside commercial structures was restricted and its use elsewhere became less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Based on the age of the WRY buildings (constructed in the mid 1980's), building surfaces are not as likely to contain lead-based paint, however this could only be confirmed through testing. Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction).

2.6 Utilities

The Property and surrounding area was supplied with natural gas and electricity by Consolidated Edison, and connected to the municipal water and sanitary sewer systems.

2.7 Waste Management and Chemical Handling

Portions of the Property were used for historical bus fueling and vehicle washing areas, which may have generated wastes (no pertinent information was provided in the regulatory database information and waste generation associated with LIRR activities may not be publicly available). Cleaning materials associated with train car cleaning operations were stored in several designated areas according to prior reports.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database, the average level of radon found in Manhattan is 2.07 picocuries/liter in basements and 2.68 picocuries per liter on ground floors, both below the USEPA recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Although less likely based on the age of the buildings (circa 1983 to 1985), the on-site buildings, rail components, and/or historic fill materials beneath the Property may contain ACM.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine if the project will disturb ACM. Any ACM in an area to be disturbed (and any other ACM subsequently identified) must be removed prior to the renovation or demolition.

4.0 ADJACENT LAND USE

The Property is bound by Eleventh Avenue (and the Eleventh Avenue Viaduct) to the east, Twelfth Avenue (aka the West Side Highway) to the west, the 33rd Street to the north, and 30th Street to the south. Current properties adjacent to the Western Rail Yard include the Jacob K. Javits Convention Center truck parking lot to the north; a parking lot, an apparent mixed use structure (currently under construction) and a former Greyhound Bus parking lot to the south; the Eastern Rail Yard and mixed use commercial and residential buildings to the east; and the West Side Highway to the west. The elevated Highline pedestrian walkway is located above the western and southern portions of the Property.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1890, 1899, 1911, 1930, 1950, 1976, 1982-1992, and 1995-2005 were reviewed.

1890

The Property contained railroad tracks with several freight sheds in the central portion associated with the N.Y. Central and Hudson River Railroad Co. and a portion of a lumber yard was depicted along its southern edge.

The Property was surrounded by additional railroad tracks to the north and east, with some commercial structures including stables and feed warehouses, and beer bottling and storage warehouses along West 34th Street to the north, and a locomotive house and a coal platform noted in the rail yard area to the east. Industrial uses, including a kindling factory, building materials sheds and lumber yards were noted to the south of the Property, beyond West 30th Street. Piers containing railroad freight terminals were noted to the west of the Property beyond Twelfth Avenue (current Route 9D/West Side Highway) along the Hudson River.

1899

The Property remained similar to the 1890 map, as a portion of the N.Y. Central and Hudson River Railroad Co. and associated freight sheds.

The surrounding area remained similar in nature to the 1890 map, with additional unlabeled structures and a soap factory depicted on the south-adjacent block in areas of former lumber and building materials storage yards.

1911

The central portion of the Property was labeled as N.Y. Central and Hudson River Railroad Co. and N.Y. Ontario and Western Railroad Co. 33rd Street Freight Station. A stable was shown on the southwestern portion of the Property

Additional industrial uses were depicted to the north along West 34th Street, including varnish works, vinegar work, wire warehouses and distilling warehouses.

1930

The Property remained similar in nature to the 1911 map, occupied by the rail yard and freight station. Additional railroad tracks were shown on the southern portion of the Property in place of the former lumber yard noted on earlier maps.

Some of the former industrial uses to the north depicted in 1911 (the varnish works and wire warehouse) were no longer labeled as such, and several were labeled as newspaper warehouses. The soap factory on the south-adjacent block beyond West 30th Street had expanded, including the addition of a business garage with buried gasoline tank along West 30th Street.

1950

The Property remained in use as a rail yard. Former freight sheds depicted on earlier maps had been razed and were replaced with railroad tracks.

Several warehouse structures were noted in the remaining rail yard areas to the east of the Property. Additional automotive and industrial uses were noted on the surrounding blocks including a beer distribution warehouse with an attached garage with gasoline tanks on the north-adjacent block along West 33rd Street and several filling stations, private garages, machine shops, motor freight station, and a bus repair facility on the south-adjacent block.

1976

A freight terminal building with an attached office was depicted on the northern portion of the Property, and a department store warehouse was located on the southern portion along West 30th Street. An elevated steel viaduct (current high line walkway) was shown above the western and southern portions of the Property.

A motor freight station was shown on the north-adjacent block, replacing beer distribution warehouse noted in 1951 (gasoline tanks remained depicted in the structure). The south-adjacent block remained largely automotive in nature with a DSNY garage replacing a former bus garage noted in 1951.

1982-1992

The former warehouse and freight terminal structures noted in 1976 on the Property had been razed by 1992, and the Property was largely covered with railroad tracks labeled “L.I.R.R. Storage Yard”, with two ancillary unspecified structures located on the western portion of the Property, and a third structure on the southeastern portion.

The western portion of the south-adjacent block was vacant by 1982, and the eastern portion retained its automotive and industrial uses, including the DSNY garage, motor freight stations a truck rental garage with gasoline tanks and a filling station. Former structures had been razed on the north-adjacent block by 1982, including the former motor freight station noted in 1976. A trailer parking area for the Jacob Javits Convention Center and unspecified structure were noted on this block.

1995-2005

A small warehouse building was shown on the southern portion of the Property. A NY Times truck parking garage and several unspecified warehouses were noted on the south-adjacent block. No further significant changes from the 1992 map were noted on the Property or in the surrounding area.

Sanborn maps indicated that the Property had a long history of railroad and freight uses, since at least circa 1890. Additional uses on the site included a lumber yard (subsequently a department store warehouse), freight storage sheds and a freight terminal. The Property was shown as a rail yard with three ancillary structures (noted as constructed between 1983 and 1985) for the LIRR by circa 1992 through 2005.

The surrounding blocks were largely industrial and automotive in use, including various warehouses, a varnish works, a beer distribution facility with fueling operations (subsequently a motor freight station) on the north-adjacent block, and various uses including a soap factory, motor freight stations, various manufacturing uses, garages with gasoline tanks, a bus garage (subsequently a DSNY garage) and filling stations on the south-adjacent block.

Copies of the historical Sanborn maps are included in Appendix B.

5.1.2 Historical Aerial Photographs

Historical aerial photographs dated between 1924 and 2017 were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property.

A review of aerial photographs indicated the Property was occupied by a rail yard with freight car storage areas since at least 1924, with the elevated viaduct (current High Line walkway) noted on the 1940 aerial photograph. Apparent warehouse structures were depicted on the northern and southern portions of the Property in the 1975 and 1980 aerial photographs that appeared to have been razed by the mid 1990’s and the 2006 through 2017 photographs depicted the Property as primarily a rail car storage yard with

some apparent ancillary structures, and parking and storage areas along the southern portion of the yard.

Copies of the historical aerial photographs are provided as Appendix C.

5.1.3 Property Tax Files and Zoning Records

Based on online New York City zoning maps, the Property was assigned commercial (C6-4) zoning, and was part of the Hudson Yards Special District. Both Lot 1 and Lot 5 were listed with two buildings, with no construction date specified, and were classified as “vacant lots – zoned Commercial or Manhattan Residential” (V1). Online New York City tax records indicated that the entire Property was historically assigned Lot 3, which was subdivided into Lots 1 and 5 in July 2014, based on a deed recorded in July 2012.

5.1.4 Recorded Land Title Records

No title records were provided. Title records for the Property were reviewed on the NYC ACRIS website (discussed in Section 5.2.3).

5.1.5 Local Street Directories

Since historical Sanborn maps and aerial photographs were available for the Property (and surrounding area) and these maps included information relating to land use, city directories would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, city directories were not reviewed.

5.2 Regulatory Review

Regulatory database information, as shown in Appendix D, was obtained from EDR. The Introduction of Appendix D includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); and Federal Institutional Control/Engineering Control Registries. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA’s compilation of some sites that probably remedial action under the Superfund Program. NPL sites can pose a significant risk of stigmatizing surrounding properties and thus impacting property values.

The Property was not identified in the NPL database. One NPL site, Hudson River PCBs, was identified within a one-mile radius of the Property. The listing was associated with PCB-contaminated sediment in the Hudson River, approximately 260 feet away at its closest approach. Based on the nature of the listing, distance, and anticipated groundwater flow direction, this listing is not anticipated to have affected subsurface conditions beneath the Property.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites, which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived threat, thus affecting property values).

The Property was not identified as a CERCLIS facility. One CERCLIS site was identified within a ½-mile radius of the Property. The Hudson River PCBs listing was associated with PCB-contaminated sediment in the Hudson River, approximately 260 feet away at its closest approach. Based on the nature of the listing, distance, and anticipated groundwater flow direction, this listing is not anticipated to have affected subsurface conditions beneath the Property.

SEMS-ARCHIVE (Superfund Enterprise Management System Archive)

This database tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the USEPA in 2015. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of USEPA's knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

The Property was not listed in the SEMS-Archive database. Two SEMS-Archive sites were identified within a ½-mile radius of the Property. Nassau Smelting & Refining Co., located at 603 West 29th Street, approximately 240 feet to the south, was listed as a historical lead smelter classified as a facility for batteries/scrap metals/secondary smelting/precious metals recovery (recycling). The listing indicated that based on a site assessment in 2015, this facility was assigned an "Archived" status. Based on its proximity, this facility may have affected subsurface conditions beneath the Property.

Based on distance (over 1,880 feet away) and the anticipated groundwater flow direction, the second SEMS-Archive listing is not anticipated to have affected the Property.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

Two ERNS listings were identified as potentially located on the Property in the database, as follows:

- In July 2018, a caller reported a derailment of two empty passenger train cars at the West Side Yard at 300 Twelfth Avenue (an alternative address for the Property). The incident was classified as "railroad non-release."
- In September 2019, a caller reported damage to a train car coupling at the West Side Yard at 300 Twelfth Avenue. The incident was classified as "railroad non-release."

Based on the listing details, the ERNS listings are not anticipated to have affected subsurface conditions beneath the Property.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

The Property was not identified in the TRIS database. No TRIS sites were identified within a 1/8-mile radius of the Property.

Federal Institutional Control/Engineering Control Registries

These registries are listings of sites with engineering and institutional controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site.

The Property was not listed in the Federal Institutional Control/Engineering Control (IC/EC) Registries database; however, remedial activities at the Property are subject to OER approval pursuant to the Restrictive Declaration (R-230) placed at the site in 2014. One Federal IC listing and one Federal EC listing were identified within a 1/2-mile radius of the Property. Both listings were for the Hudson River PCBs site, associated with PCB-contaminated sediment in the Hudson River, approximately 260 feet away at its closest approach. Based on the nature of the listings, distance, and anticipated groundwater flow direction, these listings are not anticipated to have affected subsurface conditions beneath the Property.

5.2.2 State

State databases included the listings of petroleum/hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP) Sites; and Registered Dry Cleaners and Historic Cleaners.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

The Property was listed on the NY Spills database. Pertinent spills that occurred on-site are listed as follows:

Spill #1802063 was reported in May 2018 at a listed address of 645 West 30th Street when petroleum contamination was identified during a subsurface investigation in a former bus fueling and washing area located on the southwestern portion of Lot 1. The spill file indicated that the area was formerly operated as a filling station and washing facility for a prior Greyhound bus lot located on the south-adjacent block. The file notes indicated that the site was listed under PBS facility #2-601983 associated with a DSNY Garage (portions of the lot appeared to have been historically used by DSNY for vehicle storage), with several closed-removed ASTs and USTs ranging in size from 275 to 2,500 gallons of hydraulic oil, motor oil, biodiesel and diesel located on the southwestern portion of the lot in the former bus fueling area and on the southeastern portion of the lot

in the vicinity of Building 4; the tanks were reportedly removed between 2007 and 2014. According to the spill file, no evidence of widespread contamination was identified during subsequent soil boring investigations completed in the former bus fueling area in 2018, and it was noted that the proposed redevelopment would require soil removal to the water table with associated waste characterization sampling for off-site disposal purposes. The file notes also indicated that remedial activities would be managed under OER oversight during redevelopment. The spill was subsequently closed in January 2019.

Spill #0407411 was listed for the Property in October 2004 with an address of Twelfth Avenue and West 33rd Street (Lot 5) for significant on- and off-site petroleum contamination discovered during subsurface investigations, noted to be mainly on the northwestern portion of the Property and to the north across West 33rd Street according to the file notes. Remedial investigations conducted in 2009 indicated few exceedances of dissolved VOCs in groundwater and the file notes indicated contamination consistent with manufactured gas plant (MGP) waste was limited to an area on the northwestern portion of the site in deeper soil (below the groundwater interface) in this area. Due to the presence of footings for the elevated Highline walkway and numerous utilities in the area, it was noted that excavation within this area did not appear to be possible. General site conditions were noted to consist of roughly 20 to 30 feet of urban fill beneath the site underlain by clays and silt. Groundwater was noted to be approximately 5 to 7 feet below grade with a general northwesterly flow. It was noted that additional remedial investigation activities were proposed to delineate potential residual contamination and would be addressed under the NYSDEC SHWS program (ID #231083); the spill was closed in March 2013.

Spill #0407107, was open in September 2004 when field evidence of contamination was noted during a soil boring investigation at a boring location near Track 14 within the rail yard, the spill was closed in April 2006 after NYSDEC noted that no evidence of widespread contamination was noted in samples collected from areas surrounding the boring location.

Spill #1007207 was reported in October 2010 due to a release of lubricant oil from a locomotive (“equipment failure”). It was noted that approximately 15 to 20 gallons of the lubricant oil was released to surrounding storm drains. Corrective actions were initiated including the cleanout of several storm drains and pumping oil/water mixture from the drain network by a licensed contractor. Upon review of the closure documentation the spill was closed by NYSDEC within the same month of issuance.

Additional DeMinimis spills, including minor releases of hydraulic fluids within transformers in the train yard and other closed status spills of incidental releases of small quantities of petroleum oils due to human error etc. were reported within the West Side Train Yard; however, given their regulatory status and nature of the releases would not be anticipated to have significantly affected the Property.

Based on listing details and/or location, other reported spills are unlikely to have affected subsurface conditions at the Property. Details from all reported spills are included in Appendix D.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity

(SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities that are subject to corrective action under RCRA.

No CORRACTS sites were listed within a one-mile radius of the Property. No TSD facilities were listed within a one-half mile radius of the Property. The Property was not listed as a hazardous waste generator (wastes associated with the LIRR operations may not be publicly available).

The following RCRA listing appeared to be listed for the eastern portion of the Hudson River Yards, on the east-adjacent block:

Hudson Yards Terra Firma (ID #NYR000214411) with a listed address of 553 West 30th Street was listed as having generated lead-containing wastes in 2014 and 2015 (likely associated with soil disposal activities during redevelopment). No further pertinent information was provided in the listing.

Based on listing details and/or anticipated groundwater flow direction, this listing and the remaining listed RCRA generators/transporters are not likely to have significantly affected the Property.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

The Property was not identified in the CBS database. No CBS facilities were listed within a 1/8-mile radius of the Property.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

The Property was not listed in the SWF database. Three Solid Waste Facilities were identified within a 1/2-mile radius of the Property. Based on listing details, distance (over 230 feet away), and the anticipated groundwater flow direction, these facilities are not anticipated to have affected subsurface conditions beneath the Property.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Previous studies indicated fuel oil and diesel storage at the Property (the LIRR may maintain tank records that are not publicly available) and information provided in the NY Spills database indicated certain petroleum storage tanks at the Property appeared to have been listed under the DSNY M District 6 Garage PBS listing (noted below). Twenty-six additional PBS listings were identified within a 1/8-mile radius of the Property. Details of facilities with some potential to affect the Property, based on listing details and/or location, are noted in Table 1.

Table 2
Property and Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Property
DSNY M District 6 Garage 319 Eleventh Avenue	4 x 2,500 UST 1,000 UST 1,000 UST 275 AST 275 AST 275 AST	Diesel Motor Oil Hydraulic Oil Motor Oil Hydraulic Oil Waste Oil	Closed-Removed	Property

MTA No. 7 Subline Extension 524 West 34 th Street (alternative address for 538 West 34 th Street)	550 UST 12,000 UST 550 UST 1,000 UST	Gasoline No. 2 Fuel Oil No. 2 Fuel Oil No. 2 Fuel Oil	Closed-Removed	420 feet east

Notes: UST - underground storage tank; AST - aboveground storage tank; *Type of closure not specified

Known spills, and potential undocumented releases, from the above facilities may have affected subsurface conditions beneath the Property. Based on listing details, distance, and/or the anticipated groundwater flow direction, other PBS listings are not anticipated

to have significantly affected the Property. Details of all PBS facilities are included in Appendix D.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

The Property was listed as New York SHWS Site No. 231083, identified as LIRR West Side Yard, located at the intersection of Twelfth Avenue and West 33rd Street. The listing indicated that the Property was used for railroad operations for over 100 years, but no bulk petroleum storage was located on its western side, and on-site maintenance activities did not include the use of petroleum products. According to the listing, a 2004 subsurface investigation (see Section 7.0) identified field evidence of coal tar, and elevated concentrations of semi-volatile organic compounds (SVOCs) in soil and groundwater, in the northwestern corner of the Property. As a result, Spill No. 0407411 was reported to NYSDEC. The listing indicated that the affected area was underlain by an approximately 20-foot layer of fill, and the contamination appeared to have been co-deposited with the fill during Property landfilling circa 1900. The coal tar was observed in four borings at depths of 15 to 40 feet bgs, within the water table. Groundwater was reportedly encountered approximately 5 to 7 feet bgs, and flowing in a northwesterly direction. Online NYSDEC records identified the Property as a “P” site (i.e., a potential SHWS site, being evaluated for addition to the registry)

Additionally, two New York SHWS listings and nine New Jersey SHWS listings were reported within a one-mile radius of the Property. Based on their distance (over ½ mile away), these listings are unlikely to have significantly affected environmental conditions at the Property.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

The Property was not identified in the SHSWDS database. No SHSWDS facilities were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

The Property was not listed in the MOSF database. No Major Oil Storage Facilities were reported within a ½-mile radius of the Property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed in the ERP database. No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program/Brownfield Cleanup Program

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known

contamination, whereas others have not had sufficient investigation to determine whether contamination is present. The Brownfield Cleanup Program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not identified in the VCP/BCP database. Fourteen VCP and BCP sites were identified within a ½-mile radius of the Property. Based on listing details, these facilities are not anticipated to have affected the Property subsurface.

Registered Drycleaners and Historic Cleaners

The Registered Drycleaners database lists dry cleaners registered with NYSDEC. The Historic Cleaners database is an inventory of facilities identified as potential dry cleaners based on historical City Directory listings.

The Property was not identified in the Registered Drycleaner or Historic Cleaners databases. No Registered Drycleaners were identified within a ¼-mile radius of the Property. No Historic Cleaners were listed within a ½-mile radius of the Property.

5.2.3 Local Agency File Review

Records available online from the New York City Buildings and Finance Departments were viewed for the Property. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendix E.

Buildings Department

Computerized Buildings Department records for the Property identified the following:

Block 676 Lot 1 (Tunnel Encasement)

- A permit issued in 2014 for the removal of two diesel and two motor oil USTs.
- A permit issued in 1994 for the installation of fuel oil storage tank and fire suppression system (no further pertinent details were included).

Block 676 Lot 5 (Platform)

No pertinent environmental information was provided in the electronic DOB records

Both Property lots were noted to have Environmental Restrictions for Hazardous Materials pursuant to a Restrictive Declaration (RD) issued for the site during prior rezoning actions in 2009 and 2014 (remedial actions at the Property are subject to approval by OER). As detailed further below, compliance with OER requirements must be documented prior to such new structures obtaining a Certificate of Occupancy (C of O) from the DOB.

Land Title Records and Tax Records

Electronic property transaction records for the Property were reviewed in the New York City Department of Finance Office of the City Register Automated City Register Information System (ACRIS). No deed records were identified for Property Lots 1 and 5. Deed information obtained from the ACRIS files for historical Property Lot 3 is summarized as follows:

Year	Grantor/Grantee Listed on Deed
1978	Grantor is Penn Central Transportation Co.; Grantee is Owasco River Railways Inc.
1978	Grantor is Penn Central Transportation Co.; Grantee is Consolidated Rail Corp.
1978	Grantor is Despatch Shops Inc.; Grantee is Consolidated Rail Corp.
1980	Grantor is Consolidated Rail Corp.; Grantee is Triborough Bridge & Tunnel Authority
1981	Grantor is Consolidated Rail Corp.; Grantee is Triborough Bridge & Tunnel Authority
2000	Grantor is Consolidated Rail Corp.; Grantee is New York Central Lines LLC.
2004	Grantor is Consolidated Rail Corp.; Grantee is New York Central Lines LLC. (correction deed)
2010	Grantor is the City of New York; Grantee is Triborough Bridge & Tunnel Authority
2010	Grantor is Triborough Bridge & Tunnel Authority; Grantee is Metropolitan Transportation Authority (MTA)
2012	Grantor is CSX Transportation, Inc.; Grantee is the City of New York

The historical ownership of the Property by rail/transportation companies is considered a REC. The ACRIS records also identified the following:

- A 2010 Restrictive Declaration (RD) associated with zoning restrictions.
- A 2014 RD and “Consent to Execution of Restrictive Declaration”. The Consent document noted that the Property was owned by the MTA, and was leased to WRY Tenant LLC. The RD included various commitments associated with the 2009 rezoning, including the following environmental commitments:
 - For any existing structures to be demolished, a pre-demolition survey for lead-based paint, ACM, and PCBs.
 - Preparation of a Construction Health and Safety Plan (CHASP) prior to the start of construction. The CHASP was required to list measures for reducing the potential for exposure to both subsurface contaminants, and hazardous building materials (i.e., ACM, PCBs and/or lead-based paint). The RD noted that the CHASP would be submitted to the New York City Department of Environmental Protection (DEP) for review and approval.
 - If required by DEP, soil vapor mitigation measures for any new buildings constructed in the terra firma portion of the Property.

Of note, although the RD specified that DEP would be the agency overseeing environmental remediation, the NYC Office of Environmental Remediation (OER) is the agency currently responsible for oversight of sites with RDs.

Department of City Planning

Online NYC Department of City Planning (DCP) records identified an RD associated with noise, hazardous materials, and air quality concerns for the Property. The RD, R-230, was assigned in 2014 in connection with the 2009 Western Rail Yard Rezoning [City Environmental Quality Review (CEQR) No. 09DCP007M]. Noise and air quality RDs require that new structures constructed on the Property incorporate noise reduction and air quality improvement measures to the satisfaction of the New York City Office of Environmental Remediation (OER). Recent email correspondence between AKRF and OER indicated that remedial activities at the Property will be managed by OER.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when,

in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

Online U.S. Department of Environmental Protection (USEPA) MyPropertyInfo files were searched for records pertaining to the Property. FOIL requests were submitted to the NYSDEC, New York State Department of Health (NYSDOH), New York City Department of Environmental Protection (NYCDEP), and the NYC Department of Health and Mental Hygiene (DOHMH). As of the writing of this report NYSDEC issued several FOIL responses including spill file reports for the associated closed spills at the Property (the information is consistent with records provided in the regulatory database review discussed in Section 5.2.2). If issues of potential concern are noted upon receipt of additional information, an addendum to this report will be created to discuss relevant findings.

In AKRF's judgment, no other additional local records meeting the ASTM criteria are pertinent for the Property.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the Client provide any pertinent information regarding the Property, specifically:

- Whether any *environmental liens* or *activity and land use limitations (AULs)* are in place or filed or recorded against the Property?
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site)?
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property?
- Whether they were aware of any obvious indicators of contamination at the Property?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

The Phase I ESA was conducted as part of due diligence prior to proposed improvements pursuant to CEQR and SEQRA including the tunnel encasement on Lot 1 and platform on Lot 5. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

Phase I ESA – Block 676, Lot 3; Block 704, Lot 1; and Block 702, Lots 1 and 50, Parsons Brinckerhoff and Louis Berger and Associates, P.C., July 2004

A Phase I ESA [Parsons Brinckerhoff (PB) and Louis Berger and Associates, P.C. (LBA), July 2004] was completed for the Property and two off-site parcels as part of the 2004 Hudson Yards rezoning. The following RECs were identified by the 2004 Phase I ESA:

- Historical uses of the Property as a lumber yard, freight yard, and train storage yard;
- Potential use of pesticides, herbicides, and creosote at on-site train tracks;
- Historical off-site uses, including a rail yard with coal storage, iron works, and a locomotive house on the east-adjacent block (the Eastern Rail Yard), a metals purchasing company, a lumber yard, a coal yard, garages, filling stations, a truck rental company, and a motor freight station; and
- Two off-site properties within 0.125 miles of the Property were identified in LTANKS and NY Spills databases with open/active petroleum spill listings.

Phase II Environmental Site Investigation – Caemmerer Yard West, Parsons Brinckerhoff, 2004

Based on the findings of the 2004 Phase I ESA, a Phase II Environmental Site Investigation (ESI) (PB, 2004) consisting of subsurface soil and groundwater sampling was conducted throughout the Property. The scope of the ESI included:

- Installation of 45 soil borings to a maximum depth of 45 feet bgs, with the collection and laboratory analysis of 175 soil samples;
- Screening of soil samples for volatile organic compounds (VOCs) and methane; and
- Collection and laboratory analysis of 11 groundwater samples.

Soil sampling results were compared to the Remedial Soil Cleanup Objectives (RSCOs) contained in NYSDEC TAGM #4046 (a set of guidance values used at the time of the ESI). The soil sampling results revealed no exceedances of the RSCOs for pesticides, herbicides, or PCBs. Nine soil samples containing levels of benzene ranging from 96 to 2,200 parts per billion (ppb) were detected above the RSCO of 60 ppb. Three of these nine samples also exhibited levels of ethylbenzene, ranging from 15,000 to 120,000 ppb, above the RSCO of 5,500 ppb. Sampling revealed the presence of several semi-volatile organic compounds (SVOCs) at concentrations exceeding their respective RSCOs. The compounds detected were part of the group of SVOCs known as polycyclic aromatic hydrocarbons (PAHs), formed during incomplete burning of coal, oil, gas, wood, garbage, or other organic substances, such as tobacco and charbroiled meat. PAHs are commonly present in urban fill materials. One of the detected PAHs, benzo(a)pyrene, a known carcinogen, ranged from not being detected to 30,000 ppb in the samples, many of which exceeded the RSCO of 61 ppb. Metals detected at levels above their respective RSCOs included arsenic, barium, beryllium, cadmium, chromium, copper, lead, magnesium, mercury, nickel, selenium, and zinc.

None of the soil samples analyzed exhibited toxicity levels above RCRA hazardous waste characteristics. No above-background levels of methane were detected during field screening activities.

Groundwater sampling results were compared to NYSDEC's "Class GA" Water Quality Standards or Guidance Values (drinking water standards). No pesticides, herbicides or PCBs were detected in the groundwater samples. VOCs (benzene, ethylbenzene, total xylenes, and toluene) and SVOCs (naphthalene, 2-methylphenol, 4-methylphenol, and several PAHs) were detected in two of the samples analyzed at concentration levels above "Class GA" standards or guidance values, which may reflect the presence of isolated petroleum contamination (VOCs) and creosote (SVOCs).

Metals exceeding the groundwater criteria included arsenic, barium, beryllium, chromium, copper, magnesium, manganese, lead, and mercury. However, the contaminant levels encountered were consistent with those typically found in urban groundwater—in particular, areas with historic fill. Additionally, during the sampling event, field screening identified high turbidity levels. The presence of elevated metals is likely attributable to metals in suspended particles within the groundwater samples rather than attributable to specific releases or spills.

In addition to the "Class GA" comparisons, the groundwater sampling results were compared to DEP's Effluent Discharge Limitations to sewers. Analytical results indicate that if dewatering for construction is necessary, groundwater would likely require treatment prior to its discharge to meet DEP groundwater discharge criteria.

Generally, the soil sampling results were consistent with the presence of historic urban fill, which was observed beneath the Property. However, in two instances (NYSDEC Spill No. 0407107 and 0407411), potential petroleum impacts were noted during field screening, and NYSDEC was notified. Laboratory analysis revealed no elevated levels of VOCs or SVOCs in the former case, and Spill No. 0407107 was closed on April 6, 2006.

Spill No. 0407411 associated with a boring in the sidewalk southeast of the intersection of Twelfth Avenue and West 33rd Street identified contamination consistent with petroleum as confirmed by laboratory analysis. This spill was subject to a December 2006 Consent Order between LIRR and NYCDEC requiring implementation of a Site Investigation Work Plan and subsequent implementation of an appropriate Remedial Action Plan (RAP), as necessary. Spill No. 0407411 was ultimately closed by NYSDEC in March 2013 after additional soil sampling and groundwater monitoring was conducted; however, based on evidence of coal tar observed in the spill area, the Property was enrolled in the NY SHWS database as Site No. 231083. A review of sampling results for the soil and groundwater in the segment of Route 9A along Twelfth Avenue immediately adjacent to the Property (as summarized in the

Route 9A Reconstruction Project FEIS), did not reveal any additional information with regard to the nature and extent of subsurface contaminants identified in this area.

Phase I ESA – John D. Caemmerer West Side Yard, Block 676, Lot 3, New York, NY, Louis Berger and Associates, P.C., January 2009

A Phase I ESA was prepared by LBA for the Property in January 2009. The findings of the 2009 Phase I ESA were generally similar to those of the 2004 Phase I ESA, with the following additional RECs identified:

- On-site Spill No. 0407411, which was reported based on contamination noted in the northwestern corner of the Property during the 2004 Phase II ESI, and had an active status at the time of the 2009 Phase I ESA.
- On-site Spill No. 0407107, for which closure was requested from NYSDEC at the time of the 2009 Phase I ESA. The report noted that no closure documentation was identified; thus, the spill was identified as a REC. However, based on online NYSDEC records, this spill listing was closed in April 2006.
- Nearby regulatory listings, including four spills which had an active status at the time of the 2009 Phase I ESA, one CERCLIS listing with a No Further Remedial Action Planned (NFRAP) status, and one State BCP site.

WRYHYW-PL-KPF-RPT-A-20190415 Design Report 30 Percent Resubmission Hudson Yards - WRY Platform and Associated Projects, KPF, April 2019

The KPF report outlined the proposed platform and tunnel encasement components of the project and provided specific information related to design and construction and associated schedules. Information pertaining to hazardous materials analysis indicated that a Remedial Investigation (with preapproval by OER) was performed by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) in 2018. It was noted that the results of the RI would be summarized in a Remedial Investigation Report (RIR) and used to prepare a Remedial Action Plan (RAP) for submission to OER, noting that the RAP will describe appropriate remediation measures to comply with the RD, and address soil, groundwater, and soil vapor management, mitigation and disposal procedures. The report noted that once approved by OER, the RAP and associated Construction Health and Safety Plan (CHASP) will govern hazardous materials remediation at the site during redevelopment.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The Site Reconnaissance was conducted from public right-of-ways and public streets; the interior of the WRY facility and associated structures was not accessed.
- Interviews and user provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn maps, DOB records, and interviews, and this data gap is not likely to alter the conclusions of this report.
- Agency File Reviews for the Property and adjacent properties consisted of a review of standard databases, electronic records maintained by pertinent departments and agencies (summarized in Section 5.2), and FOIL requests submitted to NYSDEC, NYSDOH, NYCDEP, and DOHMH. AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions (RECs) or other environmental concerns (ECs) at the Property, and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term “Recognized Environmental Condition” or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

This assessment revealed the following:

Recognized Environmental Conditions (RECs)

- Spill #1802063 was reported for the Property in May 2018 at a listed address of 645 West 30th Street (Lot 1) when petroleum contamination was identified during a subsurface investigation in a former bus fueling and washing area located on the southwestern portion of the lot (remnants of the former fueling station including an inactive pump island were observed in this area during the site reconnaissance). The spill file notes indicated that the Property was listed under the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) facility #2-601983 and was associated with a former NYC Department of Sanitation (DSNY) garage (portions of the lot appeared to have been historically used by DSNY for vehicle storage). Several closed-removed underground and aboveground petroleum storage tanks ranging in size from approximately 275 to 2,500 gallons of hydraulic oil, motor oil, biodiesel and diesel were identified; the tanks were reportedly removed between 2007 and 2014. According to the spill file, no evidence of widespread contamination was identified during subsequent soil boring investigations completed in the former bus fueling area in 2018, and it was noted that the proposed redevelopment would require petroleum-contaminated soil removal to the water table with associated waste characterization sampling for off-site disposal purposes. The file notes indicated that remedial activities would be managed under Mayor’s Office of Environmental Remediation (OER) oversight during redevelopment to address contamination and the spill was closed in January 2019.
- Spill #0407411 was listed for the Property in October 2004 with an address of Twelfth Avenue and West 33rd Street (Lot 5) due to significant on- and off-site petroleum contamination discovered during subsurface investigations. The contamination was noted to be primarily on the northwestern portion of the Property and to the north across West 33rd Street. Remedial investigations conducted in 2009 indicated few exceedances of dissolved VOCs in groundwater, and the file notes indicated contamination consistent with manufactured gas plant (MGP) waste was limited to an area on the northwestern portion of the site in deeper soil (below the groundwater interface). It was noted that additional remedial investigation activities were proposed to delineate potential residual contamination, which would be addressed under the NYSDEC State Hazardous Waste Site (SHWS) program (ID #231083). The spill was subsequently closed in March 2013; however, residual contamination may be present. Online NYSDEC records identified the Property as a “P” site (i.e., a potential SHWS site, being evaluated for addition to the registry).
- Sanborn maps and aerial photographs indicated that the Property had a long history of railroad and freight uses, since at least circa 1890 that could have affected subsurface conditions. Additional uses on the site included a lumber yard (subsequently a department store warehouse), freight storage sheds

and a freight terminal. The Property was shown as a rail yard with three ancillary structures (noted as constructed between 1983 and 1985) for the LIRR by 1992.

- The surrounding blocks were largely industrial and automotive in use according to Sanborn maps and the regulatory database information, including various warehouses, a varnish works, a beer distribution facility with fueling operations (subsequently a motor freight station) on the north-adjacent block and various uses including a soap factory, motor freight stations, various manufacturing uses, garages with gasoline tanks, a bus garage (subsequently a DSNY garage) and filling stations on the south-adjacent block. Such uses may have affected area environmental conditions.

On-site/Off-site Environmental Concerns (items outside the scope of ASTM E1527-13 such as ACM, LBP and/or PCBs in Building Materials or Fill/Debris)

- Building components and/or historic fill materials may contain LBP and/or ACM and/or PCBs (including electrical equipment, train ballasts and other rail components).
- The Property was formerly part of the Hudson River, which was filled to expand the Manhattan shoreline beginning approximately in the late 1800s. Based prior subsurface investigations, the Property Site is underlain by an approximately 10- to 45-foot layer of fill materials (including silty sand, gravel, bricks, cinders, concrete, roots, and rock fragments).

Potential for Vapor Encroachment

Based on the RECs identified above, this Phase I ESA identified a potential for vapor encroachment into current or future buildings at the Property. The Property is subject to a Restrictive Declaration; thus, construction of any future buildings is subject to OER oversight. Construction of the proposed platform would include installation of ventilation systems for the train yard beneath. Any future buildings constructed on the platform above a ventilated train yard are unlikely to be affected by vapor encroachment, as no complete soil vapor exposure pathway would exist. It is anticipated that OER will require any future buildings constructed directly on soil and/or bedrock to incorporate vapor control measures.

RECOMMENDATIONS

- As noted above, the Property is subject to a Restrictive Declaration for air quality, noise, and hazardous materials concerns. The Hazardous Materials pre-construction requirements of the RD require that the proposed construction be conducted in accordance with an OER-approved Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP). Following construction, submission and approval of a Remedial Closure Report (RCR) is required to obtain the Notice of Satisfaction (NOS) from the OER, which will be needed to obtain occupancy permits from DOB. The RCR is intended to document that environmental remediation activities at the Property were conducted in accordance with the RAP. Coordination of construction activities may be required with NYSDEC in conjunction with the SHWS program, and the USEPA prior to disturbance of potential PCB-containing materials. All intrusive work must be in accordance with MTA LIRR requirements.
- As noted above, information in the NY Spills database indicated that additional remedial activities would be required to address known or potential residual contamination on the southwestern portion of the Property related to Spill #1802063 and on the northwestern portion of the Property under the SHWS program (ID #231083). Remedial activities in these areas should continue to be conducted in coordination with NYSDEC and OER, as required.
- Any USTs encountered during Property redevelopment should be properly closed and removed, along with any contaminated soil, in accordance with federal, state, and local regulations, including NYSDEC for registration and, if applicable, spill reporting.

- During any future subsurface disturbance, excavated soil should be handled and disposed of properly in accordance with all applicable regulatory requirements. Any evidence of a petroleum spill must be reported to NYSDEC and addressed in accordance with applicable requirements. Transportation of material leaving the Property for off-site disposal should be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine if the project will disturb ACM. Any ACM in an area to be disturbed (and any other ACM subsequently identified) should be removed prior to the renovation or demolition.
- Unless there is labeling or test data indicating that suspect PCB-containing electrical equipment does not contain PCBs, and that caulking/glazing and fluorescent lighting fixtures, thermostats, etc. are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.
- Any activities with the potential to disturb lead-based paint should be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - Lead Exposure in Construction).
- Dewatering activities should be conducted in accordance with applicable discharge requirements, including NYCDEP protocol, with pre-treatment (if required).

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Axel Schwendt
Vice President

Neoma Chefalo
Technical Director

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Property, and to identify existing and/or potential environmental issues associated with the Property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than WRY Tenant LLC and its successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 12 RCRA-LQG sites within approximately 0.125 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 4 RCRA-SQG sites within approximately 0.125 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 02/13/2020 has revealed that

EXECUTIVE SUMMARY

there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 07/01/2020 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
RED BALL INTERIOR DE	625 WEST 29 STREET	SW 0 - 1/8 (0.045 mi.)	B75	254

CONSOLIDATED EDISON	281 11TH AVENUE	S 0 - 1/8 (0.079 mi.)	H148	511

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 95 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 57 NY VCP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 38 RCRA NonGen / NLR sites within approximately 0.125 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Patrick requested a conference call to discuss preliminary sample results. WRY Tenant LLC **site developer** Site contact: David Pereira (david.pereira@related.com - 917-924-0534) Legal contact: Amy Arentowicz (amy.arentowicz@related.com - 212-801-1102) Patrick Farnham Langan Engineering PH. (212) 479-5578 (646) 593-0849 (C) email: pfarnham@Langan.com summary of Phase I dated 06/16/2004: - subject property has been a rail yard from 1890 to 1984, owned and utilized by several railroad companies. over this period, site use and operations have been limited to railroad storage and freight transfer and found no evidence of engine maintenance or repair operations - in 1984, the old tracks were removed and new tracks constructed over a new concrete slab and a new storm water drainage system - LIRR 'South Access Road' enters the subject property at 11th Ave, continues to the west end and turns north, bordering the south and west sides of the LIRR Westside Yards - LIRR passenger train storage yard and buildings are located at the northern end of the site - LIRR maintenance work at the yard is limited to passenger train cleaning and light maintenance, and does not include any engine or other heavy maintenance operations - Greyhound bus fueling station and bus wash station is located on the southwest corner of the property at W 30th St and 12th Ave, immediately south of the freight yard - one diesel UST, one lube oil UST and one unknown UST were identified on-site - two pump islands, two manholes for diesel fuel and one for motor oil are located at the center of the fueling station, closer the West 30th St entrance - four vent pipes are located near a small trailer - ASTs of unknown content were also identified at the site - NYC Sanitation parking area is located along W 30th St, immediately south of the Greyhound bus parking area and east of Greyhound fueling station - two (2) 2,500 gal diesel USTs, one (1) 1,000 gal lube oil UST and one (1) 1,000 gal unknown product UST were identified in southeastern portion of the site. tanks were installed in 994 by NYC Sanitation - a one story Fire Pump Building is located on the south side of the 'South Access Road' and immediately west of the overpass for 11thAve - a pipe, flush to grade with grave and a vertical stand pipe on the south wall of the Fire Pump building were observed. this may be a UST vent pipe - between 1930 and 1973, an incinerator was located on the southwest portion of the property on 12th Ave - runoff from the operations of the train and storm runoff are collected from the interconnected drains, oriented north-south, and are collected in catch basins, and eventually discharged to the sewer under the 'South Access Road' - an abandoned Highline elevated rail road line runs along the west and south border of the site summary of Phase II dated Oct. 2004: - majority of the site is located to the west of the original shoreline of Manhattan and was filled more than 150 years

MAP FINDINGS

COMMERCIAL LOT - PHASE II (Continued)

S122478995

ago - 11th Ave coincides approx. with the original shoreline of the Hudson River - installed total of 56 soil borings to depths approx. ranging from 3 to 45 ft bg - collected 203 soil samples (including duplicate samples) - soils at the site consist of fill material (sand with varying amounts of cinders, gravel, bricks, wood, concrete, cobbles and boulders) overlying an organic silty clay deposits and finally bedrock - fill thickness varies from about 10 to 35 ft bg - silty clay deposits thicken dramatically from about 10 ft along 11th Ave to about 90 ft at 12th Ave - bedrock varying in depth from 30 ft along 11th Ave to 130 ft along 12th Ave - elevated PID and sheen on water noted in boring E-52 (spill # 0407107) - elevated PID readings and visual impacts were noted in boring E-61 (spill # 0407411) - installed twenty-five (25) 2-inch dia. monitoring wells with either 10 ft screen or 15 ft screen depending on the depth of groundwater - depth to groundwater ranges from 3 to 12 ft bg - collected 32 groundwater samples (including duplicate samples) - collected 18 soil-gas samples other spills reported at the site (entire block): - 9500217 - 100 gal kerosene discharged, case closed - 9501054 - 5 gal oil due to equipment failure, case closed - 9809330 - removal of asbestos containing material, case closed - 0407107 - high PID readings and floating product noted in boring E-52 at Track # 14 during subsurface investigation in Sep/Oct 2004. case closed based on results of soil and groundwater samples from surrounding borings and site's commercial use. - 0407411 - elevated PID readings and visual impacts were noted in boring E-61 during subsurface investigation in Sep/Oct 2004. during further investigation, MGP waste was noted in the area and impacted area is being managed in DEC MGP unit under case # 231083 both lots # 1 and 5 were included in Phase II investigation performed in Sep/Oct 2004. during Phase II investigation, contamination was noted in borings E-52 and E-61, which were located on existing lot # 5, which is not part of subject spill case. ----- summary of RIWP dated 05/15/2018: - the Hudson Yards - Western Rail Yards (WRY) project is divided into two sites: 1) West Rail Platform and LIRR Buildings (lot # 5), and 2) Terra Firma (lot # 1) - RIWP addresses the Terra Firma area - site is about 147,064 sq. ft. - currently, the site is used as a storage yard and truck security checkpoint for the Hudson Yards property - redevelopment of the site will include an about 420 ft residential tower (Site 5) straddling the High Line in the western portion of the site and two about 580 ft mixed residential/commercial/institutional towers sharing a common podium (Site 6) in the eastern portion of the site - site redevelopment will be completed in coordination with the planned Amtrak Gateway Tunnel - the Gateway Tunnel right-of-way passes through the eastern portion of the site and tunnel construction is not anticipated to begin until at least 2019 ----- - an additional LIRR support building currently known as Building C will be positioned at and below grade between Site 5 and Site 6, and will include a cellar extending to about 18 ft bg - sixteen (16) soil borings will be installed to a depth of about 20 ft bg - soil borings will be hand cleared to a depth of 8 ft bg - three soil samples will be collected from each soil boring: 1) shallow soil sample from 0-2 ft depth, 2) deep soil sample from about 18 ft bg in the future Building C footprint and from between 15 and 20 ft bg elsewhere, and 3) sample from most impacted material or groundwater interface ----- - upto eight soil borings will be converted to 1 or 2-in dia. groundwater monitoring wells with 10 ft of screen - eight subsurface

soil vapor samples will be collected to a depth of 4 ft above groundwater table 06/06/18-Hiralkumar Patel. 8:10 AM:- sent email to Patrick and asked him to submit scaled site map with sample locations/depths and sample results for review prior to a conference call. email copied to Jason, Joseph Good (jgood@Langan.com), Marc Gallagher (mgallagher@Langan.com) and Kimberly Nagotko (knagotko@langan.com). 06/07/18-Hiralkumar Patel. 9:36 AM:- sent email to Patrick and asked him to submit scaled site map for lot # 1 only including following details only: - High Line - future Gateway Tunnel - previous boring/well/soil-vapor location (no sampling data) - recent boring/well/soil-vapor location (no sampling data) - area of proposed buildings: Site 5, Site 6 and Building C asked him to remove all other details that are included in previously submitted site maps. also asked to provide details about basement/cellar and proposed foundation depth of future buildings. 06/13/18-Hiralkumar Patel. received email from Patrick (at 4:09 PM on 06/12/18) including a scaled site map with former/recent sampling locations and future buildings/structures. 06/19/18-Hiralkumar Patel. 9:14 AM:- spoke with Patrick and inquired him about result of recent sampling. he mentioned that they have received results of samples collected from central and western portion of the site. as expected, some low level of contamination is noted in samples from western section (historical spill in former NYC Sanitation facility) of the site. Patrick mentioned that the subject spill case was reported based on field observations during sampling in central portion of the site. results of samples from central portion shows presence of SVOCs which is result of backfill material. no VOC contamination is noted in samples from central portion of the site. asked Patrick to submit sampling data, once results of remaining samples are available. 08/27/18-Hiralkumar Patel. 10:34 AM:- sent email to Patrick inquiring about result of remaining samples. 12:38 PM:- received call from Joseph Good from Langan. he mentioned that they will be submitting RAR to NYCOER in next 4-6 weeks that will including result of investigation on entire project site. Joe confirmed that the subject spill was reported based on field observations during sampling in central portion of the site where only some SVOCs found which is result of backfill material. asked Joe to submit a spill closure report (or email) including summary of work performed (including scaled site map, boring logs, lab reports and any pics) in central portion only. 09/20/18-Hiralkumar Patel. 9:03 AM:- received email from Joseph including site map, boring logs and sample results. he mentioned that spill was reported when evidence of petroleum impacts (grey staining, elevated photoionization detector readings, odors and sheen) were observed in two soil borings (SB-19 and SB-20) in the central-western portion of the site. analytical results for soil samples collected from the two remedial investigation soil borings and subsequent delineation borings (DB-01 through DB-07) in the spill area did not indicate the presence of any petroleum-related VOCs or SVOCs at concentrations greater than the CP-51 soil cleanup levels (SCLs), and were consistent with concentrations identified in historic fill across the site. neither VOCs nor SVOCs were detected in groundwater samples collected within and down-gradient of the spill area at remedial investigation monitoring wells MW-05, MW-09, and MW-10. Joseph requested spill closure based on available information. as per boring logs and daily reports, 1) upto 15,000 ppm was recorded on PID from 2 to 4 ft bg in boring SB-19, 2) slight petroleum-like odor was noted from 11 to 14 ft bg in SB-20 (less than

5 ppm on PID), and 3) sheen was noted on purged water from well MW-09 installed at boring location SB-20. based on field observations in SB-19 and SB-20/MW-09, seven (7) delineation borings were installed around SB-19/20. groundwater was noted between 7 and 8 ft bg. less than 21 ppm was recorded on PID in delineation borings. no petroleum VOCs were noted in soil or groundwater samples. minor SVOCs were noted in all samples indicating presence of backfill material. 12:28 PM:- sent email to Joseph. informed him that the Department requires re-sampling of existing monitoring wells MW-05, MW-06, MW-09, MW-10 and MW-11 to confirm sampling data. email copied to Patrick. 01/03/19-Hiralkumar Patel. 12:16 PM:- sent email to Joseph inquiring update on resampling of existing wells. email copied to Patrick and OER Taylor. 01/04/19-Hiralkumar Patel. 9:50 AM:- received call from Joseph/Patrick. they mentioned that due to no detection of petroleum contamination in soil or groundwater samples during subsurface investigation, property owner is not planning to resample existing wells. Joe mentioned that waste characterization sampling will be conducted prior to site redevelopment and dewatering will be conducted during redevelopment. 01/07/18-Hiralkumar Patel. after discussing with DEC Austin, case closed based on available sampling results and proposed redevelopment which includes removal of all soil to groundwater and dewatering."

Remarks: "former fuel station/now empty lot/contamination based on background check"

Site Description: Location: The LIRR West Side Yard Site (site) is located at the southeast corner of 12th Ave and W 33rd St in midtown Manhattan. This is the northwest corner of the Long Island Railroad's West Side Yard (WSY), where commuter trains which have discharged at Penn Station are stored for their next outbound trip. The West Side Highway lies immediately to the west. The northern end of the High Line Park traverses part of the site. Site Features: The site is largely flat, and is almost completely filled with railroad tracks. Small maintenance buildings are present along the western ends of the storage tracks. Current Zoning and Land Use: The WSY is currently used for the storage of passenger trains. Periodic and routine cleaning and washing of the interior of the passenger train cars is performed. The site is zoned for commercial use. Past Use of the Site: The WSY has been utilized for railroad operations for over 100 years. Currently and historically, the LIRR has not stored any petroleum products in tanks or bulk containers in the western portion of the WSY, nor has maintenance activities involved the use of petroleum products. This site was previously reported to and investigated under the Spills program as spill no. 0407411, beginning late 2004. Contamination was discovered in a soil boring on the site during a Phase II Environmental Site Investigation of the WSY for the NY Jets organization, which was then reported to the DEC. Site Geology and Hydrogeology: The northwest corner of the WSY is immediately underlain by a layer of historic fill, approximately 20

to 30 feet thick. Site contamination appears to have been co-deposited with this fill, which was used to extend the Hudson River shoreline westward circa 1900. Below the historic fill exists a native low permeable silty clay to clay unit. Groundwater is present beneath the WSY within the urban fill at a depth of approximately 5 to 7 ft bgs, flowing in a northwesterly direction .

Env Problem: Nature and Extent of Contamination: Prior to Completion of Remediation Based upon investigations conducted to date, the primary contaminant of concern is coal tar. Soil- The most significant visual evidence of contamination, including staining, hydrocarbon and naphthalene-like odors and elevated PID readings, was observed within the fill deposits in soil borings SB-05 through SB-08, between 15 and 40 feet below grade, and starting at least 10 to 20 feet below the water table. Seventeen of the 20 subsurface soil samples exhibited detectable concentrations of PAHs, with total PAH concentrations ranging from 0.3 ppm in SB-03 (20.5 - 22.5 feet) to a maximum of 1,818 ppm in SB-05 (25 - 27 feet), adjacent to the West Side Yard along the east side of 12th Avenue in the vicinity of the historic observed area of contamination. This sample had visual evidence of contamination, which also exhibited the highest BTEX concentration, but were below the Industrial Use SCOs. Soil samples from SB-06 (21 - 23 feet) and SB-08 (30 - 33 feet) were sent for forensic fingerprint analysis. The analysis suggests that the sample contained pyrogenic material derived from coal and not petroleum, and the PAH distribution was very similar to tars formed from MGPs utilizing carbureted water gas processes. Groundwater- NAPL was not identified in any of the groundwater monitoring wells. However, six of the 17 groundwater samples identified BTEX and PAH compounds at concentrations above Class GA standards. These samples were collected at or in the vicinity of soil borings which exhibited soil contamination and were screened at a depth intercepting the zone of soil contamination observed at 15 to 40 feet below grade. Off-site wells demonstrate that this contamination is not migrated farther off-site. Soil Vapor and Indoor Air- Soil vapor and indoor air have not been evaluated.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

04/06/06. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell
07/18/2011 - The spill was reassigned from Joe O'Connell to Linda Ross
12/14/11 - DEC Hussein and Ross met with LIRR at spill site on 12/2/11, and observed construction above the impacted area (photos in edocs). DEC met with LIRR (Ms. Russo and Mr. Albano) on 12/8/11 at the DEC office and met again at the spill site on 12/9/11. LIRR will task its consultant with preparing a preliminary screening of remedial alternatives for the contaminated media for submission to DEC. (JOC) 3/12/12 - Raphael Ketani. The case was reassigned to me during February 2012. From the previous documentation, the general West Side Yard site is bounded by West 33rd Street to the north, by various commercial and industrial properties to the south, by 12th Avenue to the west and by 10th Avenue to the east. An elevated former rail line, the High Line, runs along the west side of the site and is present in the northwest corner of the site. The immediate spill site is in the northwest corner of the yard. The site is underlain by 20 to 30 feet of historical fill. Groundwater is at 5 to 7 feet bgs. Soil contamination was found at E-53, 61, 62, 71 and 72. The soil contamination consists of VOCs and SVOCs. Well TRC-MW-3 has contamination, but there is little to no contamination in the downgradient wells MW-12, 13, 69 and 72. The area to be remediated is E-53, 61, 62 and MW-2 to MW-4. I looked at the analytical summary tables in the June 2009 TRC Remedial Investigation Report. It appears that the most contaminated horizon is at about 20 to 25 feet below grade at TRC-MW-3. However, there were only a small number of SVOC hits in the soil analyticals. The VOCs were the major components of the contamination and there were very high exceedences in the parts per millions. The analytes were typical of gasoline contamination, not fuel oil or MGP waste. The groundwater analytical summary tables showed the highest hits as several hundred parts per billions at 20 feet or greater for gasoline analytes - again not fuel oil or MGP waste. The metals results were typical of seawater and rusting metal, with other low exceedences for items such as mercury. However, the site is underlain by anthropogenic fill. So mercury and other similar metals may have their origin in coal ash waste. 3/13/12 - Raphael Ketani. I began my review of the 2/1/12 Progress Report. According to the report, a soil boring was performed on 10/4/04 on the east side of 12th Avenue and a sample was recovered with elevated PID readings and an odor of petroleum. This was the location of boring E-61. An additional investigation was performed. On 4/6/06, the DEC reviewed the closure report and commented that more investigation was necessary. The LIRR's additional investigation work plan was approved on 1/19/09. The remedial investigation took place during May 2009. MGP waste was identified. However, the DEC unit in charge of MGP sites declined to be the project manager for the site as there was no history of an MGP site being located here. The DEC requested that the LIRR develop remediation strategies for the contamination. The LIRR staff found 9 wells on the site and 7 off site. The 9 on site wells were abandoned during September and October of 2007. Quarterly groundwater sampling and monthly monitoring have taken place since 2007. During October 2007, the MTA informed the LIRR that there were 14 wells on their property. On 10/24/07, these wells were abandoned by the LIRR. The final version of the work plan was sent to the DEC on 1/19/09. A remedial investigation took place during May 2009. A report was sent to the DEC on 7/23/09. A letter with potential remediation alternatives was sent to the DEC on 1/13/12. Groundwater data has been provided up to February 2012. The 2/1/12 Progress

Report also included an analytical report from Analytical Chemists dated 11/21/11. Groundwater samples were analyzed from MW-1, 2, 4, 5, 11, 13, 47, 53, 61, 69, 72 and 73. With the exception of a 65.9 ppb hit of benzene from MW-2, the great majority of the results were non-detect. There were also a small number of other hits, but they were very low and below the CP-51 standards. 3/14/12 - Raphael Ketani. I tried to contact Gloria Russo, Manager Environmental Planning and Compliance, System Safety Department. LIRR (347) 494-6034 regarding the 3/12/08 Technical Scope of Work - Remedial Investigation (TSOW), but I could only leave a voice message. 3/16/12 - Raphael Ketani. Ms. Russo and Al Albano (347) 494-6020 of the LIRR called me today in a conference call. Ms. Russo called regarding a previous phone call concerning the TSOW. She said that Mark Tibbe of DEC (the former case manager) had reviewed and approved the document some years ago. It was made into a work plan by the LIRR's consultant at the time, TRC, which was also approved. The work was done in 2009 and a report was generated the same year. Divirka & Bartilucci are the new LIRR consultants. A letter was sent to the DEC dated 1/13/12, but the LIRR never heard anything back regarding its review. I told Ms. Russo that I will take a look at the letter. Mr. Albano then took over the conversation. He stated that the MGP waste is there. However, it is under the interface between the capillary fringe in the soil and the water table. The top of the soil contamination is at about 10 to 12 feet below grade and extends down to 24 feet. The contaminated soil was found when the site was being investigated for possibly building the JETS football team stadium. The groundwater (at 6 feet bgs) does not have much in the way of dissolved analytes. So it is only the soil that needs to be addressed and only in the northwest corner. However, the Highline Park is right there and the clearance is about 15 feet. Mr. Albano added that for years the LIRR, its consultants and DEC have tried to figure out a solution to the soil contamination issue, but nothing has been resolved. Excavation does not appear to be possible due to the footings for the Highline and the many utilities that run through the northwest corner. Lastly, Ms. Russo added that the LIRR does not have any plans to develop the site. With that, the conversation ended. 4/23/12 - Raphael Ketani. Gloria Russo (347) 494-6034 of the LIRR sent my supervisor, Hasssan Hussein, an e-mail on 4/17/12. The e-mail concerned an alleged very high exceedence of the state soil concentration standards for chromium. Back some years ago, sample SB-H-06-LIRR-24-26 was analyzed. A table (Table 3-C) was submitted, along with other analytical data summary tables, indicating the results from the soil analyses. The Langan Engineering letter dated 10/27/04 had attached Table 3-C which showed the chromium concentration to be 29,100 ppm. Mr. Hussein was concerned about this high concentration. However, the raw data analyses were found for this sample and showed that the concentration actually was 26.1 ppm. The high analytical result was actually for iron, not chromium. So, Ms. Russo requested that the issue be put to rest. It appears that some of the numbers were transposed when they were copied to the data summary tables. 5/1/12 - Raphael Ketani. I reviewed the 5/1/12 Quarterly Progress Report. Groundwater was sampled from MW-1, 2, 4, 5, 11, 13, 47, 53, 61, 69, 72, and 73. All of the VOC and SVOC results were non-detect except for one hit of 32 ppb benzene from MW-2. 5/4/12 - Raphael Ketani. A site visit was set up with Ms. Russo and Mr. Albano for 5/8/12. 5/4/12 - Raphael Ketani. I reviewed the Dvirka and Bartilucci 1/13/12 letter describing various methods of addressing the contamination

LIRR WEST SIDE YARD (Continued)

S106720992

below the site. There is 20 to 30 feet of fill under the site. Native silty clay underlies the fill. Bedrock is about 96 feet below the northwest corner of the site. The fill is anthropogenic material: brick, wood, etc. Groundwater is 5 to 7 feet below grade and flows northwest. However, they state that the groundwater contamination is not flowing to the Hudson River. Langan Engineering found soil contamination in October 2004 at borings E-61, E-53, E-62, B-71, and B-72. The contamination consisted of VOCs, SVOCs, and PAHs. The contamination was at 6 feet down and at 26 feet down. A 2009 Remedial Investigation report defined the extent of the most significant soil contamination as being at borings E61, E62, E53, TRC-MW-2, TRC-MW-3 and at TRC-MW-4. The most significant contamination is at 15 to 25 feet down. This is the zone being considered for treatment. The available treatments include excavation, solidification, chemical oxidation, oxygen enhanced bioremediation, air sparging with SVE and monitored natural attenuation. Monitored natural attenuation was recommended as it disturbs the subsurface the least (it is also the cheapest method). The consultants suggested that this may be enhanced with focused oxygen enhanced bioremediation. They would use ORC around TRC-MW-3. The consultants don't believe it is feasible to achieve pre-spill conditions, but can reach unrestricted or restricted use SCOs. They included TABLE 1 - Identification of Potential Remedial Technologies. All of the methods were described as not feasible, except monitored natural attenuation. 5/7/12 - Raphael Ketani. I reviewed the TRC June 2009 Remedial Investigation Report. In the report, they mention that PID readings at TRC-MW-3 were 475 ppm at 18 to 35 feet, and 78.3 ppm at TRC-MW-4 at 15 to 20 feet. Coal tar was observed at TRC-MW-3 at 18 to 35 feet below grade. and at 15 to 20 feet down at TRC-MW-4. The fingerprint from the TRC-MW-3 sample at 18 to 20 feet suggested coal tar or an unknown fuel oil. TRC-MW-4 was sampled on 5/6/09 for soil at 23-25 feet and had benzo series analyte hits of from 2.6 ppm to 3.3 ppm, chrysene 3.1 ppm and dibenzo(a,h)anthracene at 0.51 ppm. TRC-MW-3 was sampled 5/1/09 for soil at 18-20 feet and had 56 ppm 1,2,4-trimethylbenzene, 34 ppm 1,3,5-trimethylbenzene, 1.3 ppm benzene, 58 ppm ethylbenzene, 12 ppm isopropylbenzene, 13 ppm n-butylbenzene, 26.5 ppm total xylenes, 66 ppm 2-methylnaphthalene, 77 ppm acenaphthene, 3.1 to 19 ppm benzo series analytes, 11 ppm chrysene, 300 ppm naphthalene, 140 ppm phenanthrene, 65 ppm pyrene. TRC-MW-3 groundwater at 25 feet contained 170 ppb 1,2,4-trimethylbenzene, 250 ppb benzene, 560 ppb ethylbenzene, 49 ppb isopropylbenzene, 280 ppb total xylenes, 97 ppb acenaphthene and 1400 ppb naphthalene. TRC-MW-2 groundwater at depth had: 97 ppb benzene at 15 feet; 110 ppb benzene at 25 feet; 100 ppb at 35 feet; 85 ppb at 45 feet. TRC-MW-2 to TRC-MW-5 groundwater samples had dissolved metals hits for various analytes (Fe, Na, Mg, Ca, K) in the tens of thousands of ppm that were typical of seawater. Mercury was 3.1 ppm at TRC-MW-5 at 15 to 16 feet down. Groundwater from MW-12 and MW-13 had typical seawater analyte hits up to 687 ppm. Given the information in the RIR, the bulk of the elevated soil contamination is at 15 to 35 feet. There are 2 classes of contaminants: gasoline range VOCs and coal tar. The soil and groundwater contamination is concentrated in the vicinity of TRC-MW-3. 5/8/12 - Raphael Ketani. The site visit took place as scheduled. Ms. Russo lead the group to the northwest corner of the site. The Highline was about 20 feet above our heads with lights hanging from the underside. The southern limit of the site was about 50 feet from the northern limit. We discussed the subsurface

LIRR WEST SIDE YARD (Continued)

S106720992

conditions and a little bit about what could be done to remediate the site. I told Ms. Russo that the Department did not agree with using monitored natural attenuation as the remediation method as, from our experience, it was not an effective means of removing the contamination. I added that there were gasoline constituent analytes in the soil and that these were much more amenable to treatment. So a chemical or biological method should work. I added that the consultants should also consider hot water or steam injection in order to mobilize the MGP waste and recover it. Lastly, I told Ms. Russo that I had seen a drawing that indicated there used to be a gas station across the street from the northwest corner of the site. Ms. Russo wasn't aware of the former gas station location, but she told me that the hot spot was TRC-MW-3. However, the LIRR was building a new large shed over the well. I wondered whether injection wells could be installed near TRC-MW-3 and how the remediation could be monitored. After this, we left the site. 5/10/12 - Raphael Ketani. I drafted a letter for the review of Mr. Hussein. In brief, the letter described that the Department had reviewed the Dvirka and Bartilucci 1/13/12 letter and the TRC June 2009 Remedial Investigation Report. From the review of the two documents and the site visit, it was stated that remediation should take place and that the LIRR must submit a pilot study work plan and a full scale design work plan. A pilot study report would be due 30 days after the successful completion of the test. The full scale design work plan would be due 30 days after the pilot study report. 5/17/12 - Raphael Ketani. Mr. Hussein approved the letter yesterday and it went out today. 8/10/12 - Raphael Ketani. A letter was received dated 8/3/12 from the LIRR which was in response to the DEC's 5/17/12 letter requesting that the LIRR investigate the possibility of using other remediation methods to treat the contamination. In the 8/3/12 letter, Ms. Russo stated that various factors limit the effectiveness of the other methods and made them cost prohibitive: the urban setting; extensive above and below ground utilities; depth of the contamination at 15' and 25' and below the water table; the train yard is highly congested and critical to the LIRR operations and can't be shut down. It was also stated that the LIRR is not responsible for the contamination as it is from the historical fill that was put in place before 1890 and after. So both the soil and groundwater contamination is historical. Also, continued monitoring has shown that the groundwater contamination is greatly reduced. Ms. Russo also stated that in their 1/13/12 letter, Dvirka & Bartilucci evaluated the other methods that were suggested. They found the methods more appropriate for sites with high concentrations of contaminants, not the low concentrations found under the West Side Yard. The concentrations under the West Side Yard were more like the goal concentrations for MGP sites. Also, delivery of the steam and hot water methods would be hard to control given the heterogeneous makeup of the fill and the results would not be satisfactory. It would be impossible to control the recovery and there would be unintended migration of the contamination. Surfactant based oxidation would encounter the same problems as the other methods and transporting the hazardous chemicals in a congested urban environment would be difficult. All of these methodologies are expensive and the low contaminant concentrations below the site would not provide a benefit. Ms. Russo recommended monitored natural attenuation with focused injections of ORC. According to her, Dvirka & Bartilucci identified at least 4 MGP sites in New York State where solidification was used successfully. The present contaminant

S106720992

concentrations are less than the cleanup objectives for many former MGP sites. The goal of reaching pre-spill conditions using CP-51 standards is not applicable given the unknown source of the contamination and that the contamination may be related to historical fill. All soil contamination data should be compared to the industrial SCO standards and GA groundwater standards should be used. Ms. Russo wrote that she would like a conference call with her, representatives of Dvirka & Bartilucci and DEC Albany staff who have experience in cleaning up MGP sites. Once an appropriate remedial method is determined, then the LIRR will submit a work plan. 8/14/12 - Raphael Ketani. The August 1, 2012 Progress Report was received and reviewed. Monthly groundwater monitoring and quarterly sampling is continuing. The sampling for this report took place on 5/21/12. Groundwater was encountered at most wells between 5 and 7 feet below grade. At MW-4, the groundwater was at 8 feet below grade. At MW-5 it was 11.8 feet below grade and at MW-73 it was 11.31 feet below grade. The VOC and SVOC analytical results for all of the samples were almost entirely non-detect with widely scattered very low VOC hits that were generally below or just above CP-51 standards. However, the sample from MW-3 had 135 ppb benzene, 130 ppb ethylbenzene and 246 naphthalene. I had no comments. 10/30/12 - Raphael Ketani. The November 1, 2012 Progress Report was received and reviewed. Monthly groundwater monitoring and quarterly sampling is continuing. The sampling for this report took place on 8/21/12. Groundwater was encountered on 8/21/12 at most wells between 5.27 and 11.64 feet below grade. The VOC and SVOC analytical results for all of the samples were almost entirely non-detect with widely scattered very low VOC hits that were generally below or just above CP-51 standards. However, the sample from MW-2 had 71.6 ppb of benzene, MW-3 had 271 ppb benzene, 138 ppb ethylbenzene and 29.6 ppb 1,2,4 trimethylbenzene, 56.6 ppb total xylene and 108 ppb naphthalene. I had no comments. 11/1/12 - Raphael Ketani. The conference call took place as scheduled. In attendance were Bill Ottaway - DEC Albany Tech Support, Gardiner Cross - DEC Albany MGP program, myself, Gloria Russo and Al Albano of the LIRR and their consultant from Dvirka & Bartilucci Tom Fox. The issues of the petroleum waste and, in particular, the deeper MGP waste were discussed. Mr. Ottaway stated that, due to the infrastructure, not much could be done about the deeper MGP waste. He also stated that the extent of the contamination needed to be better defined in order to transfer the site to the MGP program. Up until now, there has only been a site characterization. There needs to be a site management plan and institutional controls. Regarding the petroleum impacts, this may be treatable. He also stated that Mr. Fox should talk to Mr. Cross and put together a work plan. Mr. Ottaway said that Mike Ryan, the bureau director, had no problem with transferring the site to the MGP program. The site would be a P site. The spill case would be closed and an MGP case would be opened. Mr. Cross stated that there needed to be a Consent Order in place for the site. Ms. Russo said that she will send Mr. Cross and Mr. Ottaway copies of the Consent Order for the LIRR sites. The call ended with Ms. Russo stating that she will send me and Hassan Hussein copies of all correspondences and documents and that she will keep Region 2 updated. 1/25/2013 - Raphael Ketani. Mr. Fox of Dvirka & Bartilucci sent Mr. Ottaway and Mr. Cross of Albany NYS DEC and Ms. Russo of the LIRR a draft investigation scope of work. I began my review of the document. 1/29/13 - Raphael Ketani. I finished my review of the draft investigation scope of work. There are two

S106720992

objectives: determine whether MGP residuals are present within the area of concern and determine whether the residuals are the source of the BTEX and PAH contamination; determine whether there is a source of the contamination to the east and upgradient of the area of concern. Five soil boring will be completed. The borings will go to a total depth of 40 feet below grade. Soil sampling will take place at three locations within each boring. The boring will end shallower if bedrock is encountered before 40 feet or the boring will be extended deeper if contamination is found in order to vertically delineate the extent of the affected horizon. The soil samples would be examined for the presence of MGP or other contaminants. PID measurements will be taken. Odor, staining and color will be described. Rock and minerals components, historical fill components and clast characteristics will be noted. Stratification and the degree of saturation will also be reported. Lab analysis will be via methods 8060 (BTEX), 8270 (PAHS) and 9012 (cyanide). Dvirka and Bartilucci will submit an investigation report to the DEC and the LIRR. The analyses will be compared to restricted residential and commercial standards. Two borings will be done through the sidewalk on the north side of West 33rd Street. One boring will be done in the north end of the area of concern. One boring will be done next to the east side of the E.I.C. storage building. One boring will be done next to the east side of the Yard Operations Building. I found the draft investigation scope of work to be deficient. First, at a minimum, there should be one soil sample taken every five feet in order to characterize subsurface conditions. Next, there should be an expanded analysis for VOCs via method 8260. Lastly, As this is still an oil spill case, the analyses should still be compared to the unrestricted residential standards. 2/12/13 - Raphael Ketani. I reviewed the Fourth Quarter 2012 Progress Report dated 2/1/13. A draft investigation work plan was submitted on 1/25/13 to the MGP Group at the Albany DEC office. Water gauging took place from 10/25/12 to 1/16/13. Wells MW-1 to 5, 11, 13, 47, 53, 61 69, 72 and 73 were sampled on 11/28/12. MW-2 had 5 VOC hit to 55.8 ppb and 1 low SVOC hit. MW-3 had up to 270 ppb of ethybenzene with 10 VOC hits and 5 SVOC hits to 440 ppb of naphthalene. MW-4 had 3 very low VOC hits. All of the other groundwater samples were entirely non-detect. 2/14/13 - Raphael Ketani. The monthly remedial progress update meeting for 8 LIRR sites took place today. The DEC was informed by Ms. Russo that William Wu (518) 402-8782 of Albany DER will be the case manager from the MGP group and his supervisor is Gardner Cross. Later, I received an e-mail from Mr. Cross informing me that Remediation Case #231083, LIRR West Side Yard, had been opened for the site. 3/5/13 - Raphael Ketani. Mr. Wu called me today. He said that he consulted with his boss and found out that the MGP group will take the big picture approach regarding the site. This means that they will look at all of the contamination at all levels below grade. I asked Mr. Wu to send me an e-mail stating this. He said that he will. Mr. Wu sent the e-mail. Later, I forwarded Mr. Wu's e-mail to Mr. Hussein. I also discussed the case with Mr. Hussein. He granted permission to close the spill case effective today. Based upon the information in the case file, based upon the opening of the MGP remediation case for the same site and the same area within the site (#231083), and based upon the decision by the MGP group in Albany DER to address all of the contamination within the site, I am closing the spill case."

Remarks:

"At 18-20 feet deep, found elevated PID reading."

Spiller Address: 30TH ST AND 11TH AVE
Spiller Company: 999
Contact Name: BRANDON NATHE
DEC Memo: "9/15/15: J.Kann - contacted Brandon of Langan who indicated that a shallow trench was excavated and odors were noted in the soil. The excavation was 30'x2'x1' and were alongside a rail track. The soils were stockpiled on plastic and covered. Endpoints were collected and should be available in 5 days. A sample will also be collected from the stockpile for disposal analysis. No free product was present in the trench. The site is an OER site and the project manager is Shana Holberton. 10/01/15-Hiralkumar Patel. 2:59 PM:- left message for Brandon. 10/09/15-Hiralkumar Patel. 3:13 PM:- left message for Brandon. 10/13/15-Hiralkumar Patel. 1:10 PM:- spoke with Brandon. he mentioned that no contamination noted in endpoint samples. he will submit report once disposal manifests are available, which may take another 2-3 weeks. 12/11/15-Hiralkumar Patel. 12:26 PM:- left message for Brandon. 2:00 PM:- received call from Brandon. he mentioned that they are still waiting for disposal manifests from contractor. he mentioned that the property is owned by MTA and has been leased out. asked Brandon to submit report, except disposal manifest and contact information for the contractor/lease. 12/11/15-Hiralkumar Patel. 3:14 PM:- received email from Brandon including work summary. during excavation of an about 30 ft long, 2 ft wide and 1 ft deep utility trench, historic fill with apparent petroleum-like odors, staining and maximum PID reading of 237.6 ppm was observed. endpoint samples were collected and analyzed. no contamination noted in endpoint samples. Edgar Vidal Tutor Perini Corp. *contractor** PH. (646) 569-4211 email: EVidal@perini.com case closed based on available information."
Remarks: "found during excavation, field observations. C/u complete, samples pending"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 102306
Tank Id: 229521
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

L00 - Piping Leak Detection - None
A01 - Tank Internal Protection - Epoxy Liner
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
K01 - Spill Prevention - Catch Basin
J01 - Dispenser - Pressurized Dispenser
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
G00 - Tank Secondary Containment - None
C01 - Pipe Location - Aboveground

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/05/2009
Capacity Gallons: 275

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: "11/20/08 - Haggerty: Spill called in due to an Ethanol detection in 1 well of 700ppb. Crompco tested tank system. System tight. Spill closed managing the remediation of the property under Spill # 93-05598 1/31/17-Vought-Spill 9305598 previously closed by DEC Haggerty. Vought received email from OER Chawla that Closed Spill # 9305598, 0506979, 0807364 at 609 West 29th Street- Jeff and Randy: We have a developer coming for 609 West 29th Street property with three closed spills. Please let me know who is managing this. Thanks, . Vought replied to OER Chawla that Shaminder, Two of the three above spills were managed by Mike Haggerty, who is copied above. In a recent inquiry with respect to another closed spill of his we were told he is no longer managing Spills cases. When we close spills, it is due to no further concern with respect to soil, groundwater, and soil vapor. As future use has changed our only concerns would be with respect to a possible need for vapor mitigation. As such, I will be managing this and will track my work under Spill 0807364 which will remain closed for now. As groundwater is shallow in that area, hopefully the development will include excavation into the water table for total source removal, development into the water table to

avoid complications associated with SSDS approval, or parking garage or mechanical spaces on the lowest levels. Thanks and I look forward to receiving more information on the development plans. . Vought received reply from OER Chawla that Thanks Jeff: We met developer today. This is going to be gig \$500 million development that includes retail, parking and 950 apartments. Currently, they are in ULURP process. We are scoping investigation plan with them and will keep you in loop. They plan to enter State BCP in future. Vought replied with Thanks again for the info . DEC Possibly Requires: 1)Submission of OER development plans with possible need for vapor mitigation and possible spill reopening, if necessary. 2)No further concerns with respect to soil and groundwater, as of 1/31/17, due to spill closure by DEC Haggerty. 3)CC to OER Chawla and DEC Haggerty"

Remarks: "CALLER STATES THAT THEY GOT TEST RESULTS BACK TODAY SHOWING ETHANOL IN GROUND WATER. CLEAN UP IS PENDING FURTHER INVESTIGATION."

DEC Memo:

"2/10/2004: This spill case was reassigned from Sigona to Rommel for management. (Sigona) 10/7/2004: Project management transferred to D. Harrington in Central Office. (Rommel) 10/7/2004: Sent letter to Exxon Mobil approving the site characterization work plan. (Harrington) 6/6/2005: Sent Exxon Mobil a letter approving the SI report and the supplemental SI work plan. Additional monitoring wells will be installed along West 30th Street. Quarterly sampling will be conducted for 1 year, then a remedial plan will be developed if necessary. (Harrington) 9/8/2005: Spill no. 05-06979 was assigned due free product being observed in MW-1. Nature of the product was unknown at the time spill was called in. (Harrington) 10/4/2005: Sent e-mail to Exxon Mobil approving the revised supplemental SI work plan, which changed the location of the proposed monitoring wells along the south side of West 30th Street due to utility clearance issues. (Harrington) 2/1/2006: Approved the supplemental SI report. Station is currently scheduled for divestment in the first half of 2006. Exxon Mobil to submit documentation regarding decommissioning activities when they occur. RAP will be developed after receipt and review of decommission report and the analytical results of 4 additional rounds of quarterly groundwater sampling. (Harrington) 3/8/07 - DEC lead changed from Dave Harrington to Mike Haggerty 7/3/07 - Haggerty - approved Groundwater Characterization Work Plan dated 6/28/07. MW-1 along West 30th Street has had intermittent product over the past year. Kleinfelder didn't believe product to be petroleum based. Running parallel to the sidewalk are Oil-o-Static Electric lines. These underground lines are insulated by a di-electric. Kleinfelder believed PCB s could be the unknown product in the well. I was on-site July 26, 2007 when they sampled to see for myself. No free product. Analyticals proved no PCB s are present, only petroleum compounds detected. 7/26/07 - I was on-site while they sampled to see for myself. No free product. Analyticals eventually proved no PCB s are present, only petroleum compounds detected. 1/3/08 - Haggerty - spoke with Shan Zuidema from Kleinfelder concerning future remediation plans. EFR events were conducted monthly starting in September. Effectiveness will be determined after the January EFR event. Additional remedial strategies will be proposed. Also, groundwater isn't fully delineated. The placement of additional downgradient MWs is difficult due to the presence of underground utilities in the adjacent sidewalks. 6/2/08 - Haggerty - approved Remedial Investigation Work Plan dated May 20, 2008. Additional wells will be installed in the northern portion of the site to track down free product and get a sample for analysis. Kleinfelder proposed eliminating EFR events. Approved discontinuation of EFR events because BTEX dissolved concentrations low. EFRs originally intended to collect LPH but had limited success. Instead, LPH absorbent socks will be installed. 10/1/08 - Haggerty: Ethanol detected at 717ppb on groundwater. spill 08-07364 called in 11/20/08 - Haggerty: spill 08-07364 closed. Ethanol ND in groundwater. Not a new release. Due to the presence of sensitive utilities in the sidewalk of West 30th Street and the transit yard/depot across West 30th Street, the Department will not require further delineation at this time. The Department reserves the right to require further delineation on West 30th Street. 12/9/08 - Haggerty: Product found in 1 of the newly installed wells. PM re-initiated quarterly EFR events 4/1/09 - Haggerty: PM reduced reporting schedule to Bi-annual, still sampling quarterly 9/09 - Haggerty: 4 additional wells installed. 0.4ft of product encountered in 1 of the newly installed wells. PM

re-instated quarterly EFR events. April '10 Absorbent LPH Socks will be installed in MW-1 and MW-5. PM approved RegenOx injection pilot test in April May '10 Installation of injection points scheduled for the 2nd week of June June 2010 - Pilot test completed 6/6 and 6/10. Results will be reported in subsequent QMR's November 2010 - EM has handed the project over to Liberty Petroleum Realty LLC. See 11/18/10 letter from Liberty. February 2011 - Feasibility Report under reiew March 2011 - Waiting for new data to determine effectiveness of ChemOx injection April 2011: reviewed Quarterly Report. Gw conditions have returned to pre-injection conditions. RegenOx appears to have had little to no effect after 3 rounds of quarterly sampling. Spoke with Jerome Oertling from Arcadis (new consultant), they are developing a new remedial plan, possibly a stronger oxidant or excavation or both. I sent email requiring a RAP/CAP be submitted July July 2011: RAP/CAP submitted August 2011: Revised RAP/CAP under review per my comments on the original RAP/CAP Sept 2011 - approved Revised RAP/CAP November 2011 - Bolla has yet to sign the CO January 2012 - RAP/ CAP approved. Need CO to implement February 2012 - CO executed, injections can now proceed May 2012 - waiting on preliminary results August 2012 - Additional VTE events have been conducted to remove the product in MW-8 December 2012 - Arcadis still removing residual product using dual-phase extraction events. Injections will begin after the product has been removed May 2013 - 0.5ft of product in MW-8 remains after multiple attempts/ technologies to remove it, but heard the property is to be sold to someone purchasing much of the block. We have a Consent Order will the current owner, Liberty Petroleum (owned by Capital Petroleum) so OGC will need to be contacted if the property is sold. December 2013 - Arcadis overdrilled MW-8 hoping that larger diameter well will increase the product recovery November 26, 2014 - Spill closed does not meet standards based on the remedial action implemented to date and the fact that further remediation is not feasible. Contamination is limited to groundwater in one area (MW-8R) and does not appear to be migrating off-site. All reasonable remedial technologies have been attempted but due the geology, the only viable technology remaining is excavation. While excavation at MW-8R would remove the residual LPH in the pore space impacting groundwater, excavation is not feasible; depth is approximately 15fbg and is 10ft or less from (Con Edison and NYC sewer) utilities. Review the following Historical Remedial Activities: " Between January 16, 2006 and March 2010, twelve enhanced fluid recovery (EFR) events were conducted on monitoring wells MW-1, MW-5, MW-7 and MW-8, recovering approximately 2,442 gallons of groundwater/LPH mixture. " Between June 7, and June 10, 2010, a total of approximately 780 pounds of RegenOx was injected into wells IP-1 through IP-3 during a Feasibility Study completed by Kleinfelder. " On September 26, 2011, ARCADIS completed a vacuum enhanced recovery (VER) pilot test on MW-8. During the test, approximately 28 gallons of impacted groundwater were recovered and disposed of via vacuum truck. Additionally, 0.46 pounds (lbs) of vapor-phase volatile organic compounds (VOCs) were removed under vacuum and destroyed via an internal combustion engine (ICE) unit. " An EFR event was conducted on April 9, 2012. This event was in response to the LPH detection in wells MW-5 and MW-8 on April 4, 2012. Approximately 80 gallons of liquid was removed over 7.3 hours of operation. " LPH gauging and recovery events were conducted on April 4, April 12, May 8, June 20, July 16, and August 6, 2012. MW-5 and MW-8 were gauged with an interface probe for depth to LPH and

1000553497

depth to water. LPH was recovered with a polyethylene bailer and stored on site in a labeled Department of Transportation (DOT) 55-gallon drum for later disposal. " On August 6, 2012, MW-8 was redeveloped in an attempt to increase the yield from the formation. " On August 29, 2012, a High Vacuum Dual-Phase Extraction (HVDPE) event took place on monitoring well MW-8 to remove LPH and vapor-phase hydrocarbons from the well. Two 55-gallon granular activated carbon (GAC) drums were used to treat effluent vapor before exhausting to the atmosphere. Approximately 95 gallons of liquid was removed during this event. " On October 3, 2012, a High Vacuum Dual-Phase Extraction (HVDPE) event took place on monitoring well MW-8 to remove LPH and vapor-phase hydrocarbons from the well. Two 55-gallon granular activated carbon (GAC) drums were used to treat effluent vapor before exhausting to the atmosphere. Approximately 100 gallons of liquid was removed during this event. " On March 19, 2013, A Data Acquisition and Processing Laboratory (DAPL) unit was used for liquid removal and soil vapor extraction (SVE) at MW-8. The object of this event was essentially a push/pull event to address impacts observed in vadose and smear zone soils. Air was introduced into IP-2 to aid in circulation through both the vadose and saturated zones. A total of 1.235 lbs of VOCs were removed via the vapor stream at MW-8. Approximately 100 gallons of liquid was recovered from MW-8. " MW-8R was installed on December 18, 2013. The original MW-8 was over drilled via hollow stem auger drilling. All original well material, well screen sand, and grout were removed and drummed for proper disposal. This well replacement was an attempt to remove LPH impacted soil and gravel pack from around the well screen as well as to create increased yield from the well. MW-8R was developed on December 26, 2013. A total of 15 gallons of liquid was removed during development. " LNAPL gauging and recovery events, including product absorbing sock change outs, occurred monthly in 2014 from February through August. The highest recorded product thickness was 0.23 ft in February and decreased to non-detect in both June and July and only 0.07 ft in August. "

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 9/27/04 - AUSTIN - SPOKE WITH JOEL LANDES, LANGAN ENGINEERING (212-479-5404) WHO HAD CALLED THE RD'S OFFICE ON THIS MATTER TODAY. HE SAID THEY WERE DOING SOME PHASE 2 WORK WHEN THEY MADE THEIR DISCOVERY. WANTED TO KNOW WHO THE PROJECT MGR. WOULD BE FROM DEC. GAVE HIM TIM'S NUMBER - REPORTED BACK TO RD'S OFFICE ON RESULTS OF CALLBACK - END 9/28/04 TJD Received a call from Joel Landes from Langan Engineering regarding contamination identified during a Phase 2 investigation which is being performed at the site prior to the construction of a new sports arena over the existing rail yards. Contaminated soils and seperate phase petroleum were found in a boring adjacent to track 14. Langan/LIRR have requested a night meeting on site with DEC to perform a walk-thru. Tentatively scheduled for 9/30/04. Lew Wunderlick from LIRR was contacted in an effort to obtain additional information, he will be reviewing site plans in an effort to identify any possible sources of contamination. 3/23/05 - Austin - Transferred from DeMeo to Tibbe - end 04/06/06: Contamination discovered in a large void in a boring under tracks in the LIRR yard. Beucase of the fact that trains were using these tracks, the void could not be left unfilled. The void and boring were filled with grout. Soil and groundwater analysis from surrounding borings show minimal to nonexistant contamination. NFA signed by K. S. Tang. "

indicating that the soils were gasoline impacted. This historic spill occurred on a parking lot that is currently in the process of being rezoned and so it is potentially an E-designated site. The lot will be redeveloped into a mixed-use building that will be mostly residential. AKRF Kate Brunner is the project manager for the site. She informed that AKRF had met with DEC Jane O'Connell about the site possibly entering the BCP program. Upon receiving this complete soil data, AKRF will send it to DEC O'Connell for review and decision on acceptance to the BCP. 07/11/17 - Lakhani AKRF Kate Brunner sent email with lab data attached for the recently collected soil samples. The petroleum AKRF identified for the spill reporting was in boring SB-9. AKRF is putting together the supplemental remedial investigation work plan and BCP application. Soil sample results are as follow: 1,2,4-trimethylbenzene 51200 ppb(SB-9, 7'-9'bg), 1,3,5-trimethylbenzene 9390 ppb(SB-9, 7'-9'bg), benzene 298 ppb(SB-9, 7'-9'bg), ethylbenzene 4750 ppb(SB-9, 7'-9'bg), xylene 14200 ppb(SB-9, 7'-9'bg), 1,2,4-trimethylbenzene 7030 ppb(SB-9, 8'-10'bg), benzene 2010 ppb(SB-9, 8'-10'bg), ethylbenzene 1920 ppb(SB-9, 8'-10'bg), xylene 12000 ppb(SB-9, 8'-10'bg), naphthalene 18000 ppb(SB-8, 8'-9'bg), xylene 1390 ppb(MW-4, 10'-11'bg), 1,2,4-trimethylbenzene 5290 ppb(MW-3, 10'-11'bg), xylene 1720 ppb(MW-3, 10'-11'bg). 07/12/17 - Lakhani AKRF Kate responded informing that there was a previous spill (9305598) on Lot 36 that was extensively remediated and closed with the concentration noted above in the 07/11/17 entry. There is more excavation planned by AKRF's client as part of redevelopment but for now the site remains as an operating gas station. AKRF hasn't done any groundwater sampling but on the gas station site, they found depth to groundwater about 13'bg with flow direction to the north-northwest. AKRF is including more groundwater sampling as part of the RIWP they are submitting with the BCP Application. 09/01/17 - Lakhani AKRF Kate submitted a BCP application for the site to DEC Jane O'Connell. 09/29/17 - Lakhani The site is still under review for eligibility into the BCP. If the site is deemed eligible, the spill can be assigned to DEC Steven Walsh (Steven.Walsh@dec.ny.gov). 11/02/17 - Lakhani DEC Steve Walsh emailed informing that the BCP application has been determined complete. The public comment period ends on 11/24/17, once that is over (assuming no comments), the BCA will begin routing. 12/26/17 - Lakhani AKRF Kate informed that the site was accepted into the BCP. 05/03/18 - Lakhani Applicant signed the BCP Agreement and submitted it to the DEC on 03/26/18. Spill transferred to BCP project manager Steve Walsh. 08/09/2019 - Walsh Additional UST was found during excavation for development of building. Approx. 1000 UST within concrete vault. AKRF will segregate impacted soil. UST will be registered towards end of the BCP project. 09042019 - Walsh Additional USTs were found in the former gas station area. These will be removed, cleaned and disposed of, confirmation soil samples will be taken from the tank grave and a water sample from the bottom of the grave. "

BROWNFIELDS:

Name: WEST 29TH STREET
Address: 601 WEST 29TH STREET
City, State, Zip: NEW YORK, NY 10001
Program: BCP
Site Code: 558929
Acres: 1.42
HW Code: C231107
SWIS: 3101
Town: New York City
Record Added Date: 09/07/2017
Record Updated Date: 08/12/2019
Update By: JCGRATHW
Site Description: Location: The Site is located in an urban area at 601 West 29th Street, which includes the addresses 601-609 West 29th Street, 613-617 West 29th Street, 615-635 West 29th Street, and 309 11th Avenue, in the Chelsea section of Manhattan. The Site is bound to the north by an auto repair shop, a New York City Department of Sanitation (DSNY) garage, a private parking facility, and West 30th Street, followed by a construction site part of the Hudson Yards redevelopment district; to the east by 11th Avenue, followed by residential and commercial uses; to the south by West 29th Street,

followed by a Con Edison parking and office facility; and to the west by a private parking facility followed by 12th Avenue and the Hudson River Park. Site Features: The Site consists of one lot (lot 12); which resulted from a three-lot merger of the former lots 12, 29 and 36, comprising approximately 61,719-SF (1.42 acres). The Site is now vacant. The former Lot 12 consists of an asphalt-paved parking lot for the Port Authority of New York and New Jersey, a one-story office and locker room structure for the DSNY, a one-story and a four-story brick building occupied by artist studios and gallery space; former Lot 29 consists of a one-story brick and concrete building occupied by an artist studio; and former Lot 36 consisted of a demolished gasoline station with an auto repair garage. The responsible party remediated a petroleum spill at this former station (Spill project #9305598). Current Zoning and Land Use: The current zoning designation of the Site is M2-3 (manufacturing district). The surrounding area is largely developed with industrial and commercial uses with residential and commercial uses located to the east. Past Use of the Site: The Site was developed with a lumber yard and an auto house as early as 1890. Between approximately 1911 and 1930, former Lot 12 was additionally developed with a smelting and refining works. An asbestos distribution warehouse, freight/transportation businesses, and several gasoline tanks were on-site until the late 1970s. The current DSNY structure was constructed by 1994. Former Lot 29 was developed with an iron works between 1890 and 1899, and later replaced by a woodworking and scenery manufacturer in 1911. By 1950, the lot was occupied by Express Depot and contained gasoline tanks. Former Lot 29 remained relatively unchanged through the late 1980s when it included commercial uses; an art gallery was identified as early as 2002. Former Lot 36 was historically occupied by a lumber yard and wagon yard until approximately 1927, when a gasoline station was located on the lot. The addition of an auto repair shop was noted in the 1950s. Former Lot 36 remained relatively unchanged through the present-day. Site Geology and Hydrology: The Site lies at an elevation of approximately 10 to 15 feet above the National Geodetic Vertical Datum of 1988 and slopes slightly down toward the southwest. Groundwater is 10 to 17 feet below ground surface and is expected to flow in a westerly to northwesterly direction toward the Hudson River, located approximately 520 feet west of the Site. Historic fill material (comprised of sand and silt, with varying amounts of brick, plastic, wood, concrete, gravel, and asphalt) was observed in the soil borings between just below surface grade down to approximately 10 to 15 feet below grade. The fill material was underlain by sand and silt down to approximately 20 feet below grade.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern for the Site are metals and polycyclic aromatic hydrocarbons (PAHs) typical of historic fill. Soil-PAHs and/or metals were found at all depths sampled across the Site (0-15 feet bgs) with exceedances of restricted residential use soil cleanup objectives (RRSCOs) found at all depths. Several PAHs were identified exceeding RRSCOs, including, but not limited to: Benzo(a)anthracene was detected up to 32.9 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene up to 29.1 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 38.3 ppm (RRSCO is 1 ppm), and dibenzo(a,h)anthracene up to 4.41 ppm (RRSCO is 0.33 ppm). Metal exceedances include, but are not

1007880989

limited to: lead up to 839 ppm (RRSCO is 400 ppm). Total PCBs were detected up to 1.83 ppm exceeding the RRSCO of 1 ppm. There were no VOCs or pesticide exceedances of RRSCOs. The highest exceedances of SVOCs were in the central portion of former Lot 12. Data does not indicate any off-site impacts in soil related to this site.

Groundwater-Petroleum-related VOCs were detected above groundwater standards including, but not limited to, the following: benzene at 21 ppb (standard is 1 ppb), ethylbenzene at 21 ppb (standard is 5 ppb), toluene at 5.8 ppb (standard is 5 ppb) and isopropylbenzene at 8.7 ppb (standard is 5 ppb.) The highest detections were localized to the Northwest corner of former Lot 36. Soil Vapor-VOCs were detected in soil vapor on the Site at as follows: tetrachloroethylene (PCE) was detected at 140 micrograms per cubic meter (ug/m³), tetrachloroethene at 140 ug/m³, trichloroethene at 150 ug/m³, 1,1-dichloroethene at 340 ug/m³, cyclohexane at 1,700,000 ug/m³, butane at 710,000 ug/m³ and 2,2,4-trimethylpentane at 6,8000,000 ug/m³. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL APPENDIX B SITE NO. 78. 1/5/16 - based on meeting among Con Edison and DEC Region 2 management, Con Edison agreed it would revise the SIWP without getting specific comments but rather would use the general agreements reached for scoping such investigations; this was further discussed at meeting with Con Edison on 11/10/15; received email from Barry Cohen, Con Edison, on 11/24 requesting review of the spills included in the draft work plan and whether the Department believed there were any other open spills which should be included in the SIWP. The spills were reviewed along with review through the Department's records. Replied by email 12/2 that no additional spills were found to be included. (JOC) 10/26/2016 - V. Brevdo Due to Project Manager Joe O'Connell's promotion to the DMM, and per discussions between Chiefs of Spill Prevention and Response and Remediation Section B, this spill case is re-assigned to Remediation Section B. VB 04/04/2018 - V. Brevdo Con Edison Appendix B Site 78, W. 29th Street & 11th Avenue, Manhattan (Spill No. 9113336) On March 28, 2018, Con Edison submitted to the Department for review and approval the Site Investigation Work Plan (SIWP). SIWP addresses the

investigation of a dielectric fluid release from the feeder No. M54 located at the intersection of West 29th Street and 11th Avenue in Manhattan, New York City. Site 78 entailed the release of approximately 9,000 gallons of dielectric fluid associated with the feeder M54. The release occurred on August 16, 1991 when a contractor working for the postal service in the area hit the 5-inch oil-circulating return line associated with the feeder. Cleanup of the leaked fluid was completed the same day as the release. The scope of proposed investigation work includes excavation of test pits to expose feeder, confirm repair, and screen soil for evidence of contamination; advancement of up to six soil borings to evaluate vertical and horizontal extent of contamination; installation of up to three monitoring wells to assess groundwater quality and determine the presence of dielectric fluid free phase product at the water table surface. The Department completed review and approved the SIWP document on April 2, 2018. VB 06/29/2018 - V. Brevdo Con Edison Appendix B Site 78, W. 29th Street & 11th Avenue, Manhattan (Spill No. 9113336) On March 28, 2018, Con Edison submitted to the Department for review and approval the Site Investigation Work Plan (SIWP). SIWP addresses the investigation of a dielectric fluid release from the feeder No. M54 located at the intersection of West 29th Street and 11th Avenue in Manhattan, New York City. Site 78 entailed the release of approximately 9,000 gallons of dielectric fluid associated with the feeder M54. The release occurred on August 16, 1991 when a contractor working for the postal service in the area hit the 5-inch oil-circulating return line associated with the feeder. Cleanup of the leaked fluid was completed the same day as the release. The scope of proposed investigation work includes excavation of test pits to expose feeder, confirm repair, and screen soil for evidence of contamination; advancement of up to six soil borings to evaluate vertical and horizontal extent of contamination; installation of up to three monitoring wells to assess groundwater quality and determine the presence of dielectric fluid free phase product at the water table surface. The Department completed review and approved the SIWP document on April 2, 2018. On June 29, 2018, Con Edison provided the Department with the updated schedule for the implementation of the field work associated with an approved SIWP. Utility Mark-out & Site Meeting 7/23/18; Intrusive Field Work & Sampling 7/24-8/10/18; Contingency Field Work 8/13 9/7/18; Report to the Department 11/30/18. VB 08/13/2018 - V. Brevdo e-mail from Raphael Rosenbaum of Con Edison: Good Afternoon Mr. Brevdo, Due to network-wide restrictions on intrusive activities associated with the steam incident that occurred on 7/19/2018, and the emergency staffing assignments that resulted, Site 78 work was postponed. Also the DOT permit we ve received only allows for weekend work, which extends our schedule. As an update to the proposed schedule, we now anticipate the following: 8/18: Utility Mark-out & Site Meeting 8/19-8/23: Intrusive Field Work/Sampling 8/29-9/30: Contingency Field Work 12/14: Report to NYSDEC Please let me know if you have any questions or comments. Regards, Raphael Rosenbaum Scientist - EH&S, MGP Remediation Consolidated Edison Company of NY, Inc. 31-01 20th Avenue - Bldg 136, 2nd Flr Long Island City, NY 11105 Desk Phone: 718-204-4226 conEd.com September 26, 2018 - V. Brevdo Con Edison Appendix B Site 78, W. 29th Street & 11th Avenue, Manhattan (Spill No. 9113336) Spill incident at the Con Edison Appendix B Site 78 entailed the release of approximately 9,000 gallons of dielectric fluid associated with the feeder M54. 16, 1991 when a contractor working for the postal service in the area hit the 5-inch oil-circulating return line associated with the feeder. Cleanup of the leaked fluid was completed the same day as the release. On March 28, 2018, Con Edison submitted to the Department for review and approval the Site Investigation Work Plan (SIWP). SIWP addressed the investigation of a dielectric fluid release from the feeder No. M54 at the intersection of West 29th Street and 11th Avenue in Manhattan. The scope of proposed investigation work included excavation of test pits to expose feeder, confirm repair, and screen soil for evidence of contamination; advancement of up to six soil borings to evaluate vertical and horizontal extent of contamination; installation of up to three monitoring wells to assess groundwater quality and determine the presence of dielectric fluid free phase product at the water table surface. The Department completed review and approved the SIWP document on April 2, 2018. On September 26, 2018, Con Edison informed the Department that the investigative field work at Appendix B Site 78 was completed on September 16th, 2018. Con Edison anticipate submitting the Site Investigation Report to the Department by November 30, 2018. VB November 23, 2018 - V. Brevdo Con Edison Appendix B Site 78, W. 29th Street & 11th Avenue, Manhattan (Spill No. 9113336) Spill incident at the Con Edison Appendix B Site 78 entailed the release of approximately 9,000 gallons of dielectric fluid associated with the feeder M54. The release occurred on August 16, 1991 when a contractor working for the postal service in the area hit the 5-inch oil-circulating return line associated with the feeder. Cleanup of the leaked fluid was completed the same day as the release. On March 28, 2018, Con Edison submitted to the Department for review and approval the Site Investigation Work Plan (SIWP). The scope of proposed investigation work included excavation of test pits to expose feeder, confirm repair, and screen soil for evidence of contamination; advancement of up to six soil borings to evaluate vertical and horizontal extent of contamination; installation of up to three monitoring wells to assess groundwater quality and determine the presence of dielectric fluid free phase product at the water table surface. The Department completed review and approved the SIWP document on April 2, 2018. On September 26, 2018, Con Edison informed the Department that the investigative field work at Appendix B Site 78 was completed on September 16th, 2018. Con Edison submitted the Site Investigation Report, including Spill Case Closure Request on November 21, 2018. During the site investigation, no physical evidence or residual dielectric fluid (e.g. odors, NAPL, sheen, or staining) were detected in soil and groundwater at spill location. Consistent with the absence of physical evidence, the laboratory analytical results of the soil demonstrated either no contaminant detected or detections at levels below cleanup criteria for dielectric fluids. The site, being the street roadway, poses no threat to human health or the environmental for its current and intended use as roadway. The Department completed review of the Site Investigation Report, existing project information and data, remedial action completed following dielectric fluid release incident, and concluded that the closure of this spill case is appropriate. The Department closed spill case on November 23, 2018. VB "Reported by Con Ed as required under Consent Order."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

called. Per Henry, during exvacation for expansion of Javits Center to the north, a half cut UST was discovered. An vault was discovered near the tank. Soil and groundwater contaminations were found. Absorbant pads were put down and 350 gallons of contaminated water was extracted from the Vac truck yesterday. Vac truck is going to extract more today. Scheduled a site visit for 10:30am with Vought. Henry called again to inform us that they found a second tank next to the first tank. Per Henry, the first tank was cut in half and it looks like there was a hole cut above the second tank that was discovered. Mentioned that it was mostly on the sidewalk and roadway. 11/9/17-Lin-Lin and vought visited the site. Per consultants on site, there used to be industrial use on the site. The second tank go outside the property and go underneath West 40th st. Open spill across the street at the NYC transit bus depot. WCD group works for the General Contractor and Langan works for the owner that was hired to review WCD group's work. Tank removal might be infeasible. Approximately two (2) 25,000 tanks that might have stored #4 to #6 fuel. Will vac out the water in the second tank and do floatable fill. Will collect water sample. Picture of pit water shown to us did not look bad. Piping might be parallel to the road. 4/30/18-Recieved closure report on 4/27/18. According to the closure report, two 25,000 gallon fuel oil UST was discovered (UST-1 and UST-2). UST-1 was partially filled with soil and UST-2 was partially filled with soil and water displaying no visual or olfactory impacts. The content of UST-2 was vacuumed out. Both tanks were then properly abandoned by filling it with concrete slurry. A trench was dug to the south of the tanks to the top of water table. Minor free product was observed seeping into the trench. A total of 10,461 gallon of oily water were removed from the excavation. Trench was backfilled after free product was no longer observed in the trench. Four (4) soil samples were taken from the bottom of the side of the exposed tank. No VOCs were detect above the CP-51 cleanup standard. Several SVOC were detected above the CP-51 cleanup standard. Benzo[a]anthracene:3.5 mg/kg (SB-1, 7 bgs), 1.9 mg/kg (SB-2, 7 bgs), 1.5 mg/kg (SB-3, 7 bgs), 1.3 mg/kg (SB-4, 7 bgs). Benzo[a]pyrene: 2.9 mg/kg (SB-1, 7 bgs), 1.7 mg/kg (SB-2, 7 bgs), 1.3 mg/kg (SB-2, 7 bgs), 1.3 mg/kg (SB-3, 7 bgs), 1.3 mg/kg (SB-4, 7 bgs). Benzo[b]fluoranthene: 3.7 mg/kg (SB-1, 7 bgs), 2.2 mg/kg (SB-2, 7 bgs), 1.7 mg/kg (SB-3, 7 bgs), 1.6 mg/kg (SB-4, 7 bgs). Benzo[k]fluoranthene: 1.3 mg/kg (SB-1, 7 bgs), 0.81 mg/kg (SB-2, 7 bgs). Chrysene: 3.7 mg/kg (SB-1, 7 bgs), 1.9 mg/kg (SB-2, 7 bgs), 1.5 mg/kg (SB-3, 7 bgs), 1.3 mg/kg (SB-4, 7 bgs). Dibenzo[a,h]anthracene: 0.36 mg/kg (SB-4, 7 bgs). Indeno[1,2,3-cd]pyrene: 1.5 mg/kg (SB-1, 7 bgs), 0.99 mg/kg (SB-2, 7 bgs), 0.9 mg/kg (SB-3, 7 bgs), 0.91 mg/kg (SB-4, 7 bgs). 5/29/18-Recieved signed disposal manifest and specification for vapor barrier to be installed on site. 1.2 mm thick heavy duty grade membrane will be installed below slabs at the site. Spill close. "

Remarks: "They were doing some excavation and found an old tank and some soil contamination too.The cleanup is pending."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE

Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FINDS:

Registry ID: 110004423259

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001 FOT 1-2
Tank Id: 285468

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
L99 - Piping Leak Detection - Other
I02 - Overfill - High Level Alarm
G01 - Tank Secondary Containment - Diking (Aboveground)
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
E99 - Piping Secondary Containment - Other
H99 - Tank Leak Detection - Other

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/15/2020
Capacity Gallons: 17800

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 75604
DEC Memo: "According to the NYSDEC records, on August 5, 1998, the on-site 2,000 gallon UST failed a tank tightness test and was issued Spill #98-05607. After review of information received from the client, it has been determined that after the UST failed tank tightness testing, the UST was cleaned, sandblasted, and relined with an epoxy lining, and the associated piping was replaced in September 1998. On July 10, 2003, the 2,000 gallon UST failed a tank tightness test was issued Spill #03-03799. It appears that soil borings were performed to determine the extent of the UST leak/spill. Upon reviewing data received from the NYSDEC Spills Database, the NYSDEC notes section determined the soils were slightly above TAGM guidelines due to levels consistent with old coal ash fill materials and was granted closure status on September 2, 2003. The UST was emptied and taken out of service, and an 1,080 gallon steel registered AST was installed in a small cellar area near the north bay door area. On September 28, 2005, EnviroTrac contacted the NYSDEC regarding Spill #98-05607 to determine what is needed to close the Spill. It was determined that since Spill #98-05607 was prior to Spill #03-03799 which is closed, and was the same tank and area, it should be closed as well. "

Remarks: "TANK TO BE EVACUATED, CLEANED, AND LINES TO BE TESTED."

Spiller Name: JEROME KUNG
Spiller Company: VERIZON BUILDING
Spiller Address: 555 WEST 34TH STREET
Spiller Company: 001
Contact Name: JEROME KUNG
DEC Memo: "need to contact either jeff bohlen at envirotrack (631-471-1500) or Jerome Kung at verizon (212-338-6754) to determine what work is being done on the site. No letter has been sent yet. 06/21/05-SR// Spoke with jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC. 10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotrac. 3/20/06- DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline UST's were removed, and two 3K gasoline UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additionally, 8- 550 gal USTs are located in the basement of the property. These tanks were allegedly closed along w/ the two 4K gal USTs. SVOC's were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 were closed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8- 550 USTs. In June-August 2005, seven (7) MWs were installed on site. Lab analytical revealed VOC's , SVOC's, and metals above TAGM 4046. Note: the groundwater was determined to be slightly to moderately saline. From Jan 6- 11, 2006, Envirotrac removed the two 3K gasoline USTs that were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC's were detected above TAGM 4046. Additional excavation was performed in the area of the two- 4K UST remote fills and the two- 3K UST remote fills. Analytical results suggest that VOC's were not present above TAGM 4046, however SVOC's were. In addition to the sampling performed in reference to the UST's, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC's and SVOC's were detected above TAGM 4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil. As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. ~45 feet bgs. In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang 3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is ~200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed. - KST"
Remarks: "DURING SOIL BORINGS FOUND OIL IN GROUND."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

BROWNFIELDS:
 Name: WEST 34TH STREET DEVELOPMENT PROJECT
 Address: 555 WEST 34TH STREET
 City,State,Zip: MANHATTAN, NY 10001
 Program: BCP
 Site Code: 359020
 Acres: 1.02
 HW Code: C231049
 SWIS: 3101
 Town: New York City
 Record Added Date: 02/01/2006
 Record Updated Date: 12/20/2012
 Update By: JAQUINN
 Site Description: Location: The Site is located at 555 West 34th Street, also known as 400 Eleventh Avenue, between 10th and 11th Avenues in Manhattan, New York City, New York County. Site Features: The property is identified as Block 706, Lot 1 in New York City s tax records and consists of a 37,800 square-foot (1.020 acre) rectangular-shaped vacant parcel. The surrounding urban area consists primarily of retail and commercial business. The Amtrak Railroad tunnel (and easement) runs through the

northwest corner of the site. Current Zoning/uses: This site was designated as C6-3 on the NYC Zoning Map 8b which is a general central commercial district. This site is also an e-designation requiring NYCDEP approval. In January 2005, this site was rezoned as part of the City-led Hudson Yards District to allow for commercial and residential uses. The NYC MTA constructed a permanent entrance in the middle of this BCP site for the 34th Street Station of the No.7 Subway Extension. Historic Use: From 1890 to 1962, the site was used for commercial, residential, and manufacturing including a wagon house, black smith shop, electrical supplies and a warehouse. In 1973, the most recent business that covered the entire site was a 2-story commercial communications facility including numerous petroleum underground storage tanks (USTs). Six petroleum spills have occurred at this site between 1990 and 2007. Site Geology and Hydrogeology: The site is approximately 25 feet above mean sea level. Groundwater is 17 feet to 32 feet below ground surface. Surface water and groundwater flow is towards the Hudson River which is approximately 1,500 feet to the west of the site. The subsurface soil profile consists of urban fill overlying sand and silt deposits. Bedrock is located between 15 and 25 feet below grade. Between 2007 and 2012, all soil above bedrock was removed and replaced with clean fill. 12/19/12-DEC signed the Certificate of Completion for this site. Not reported

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was low level petroleum (diesel/gasoline) in soil and in shallow groundwater.

Health Problem: No site-related contaminants of concern were identified beyond the boundaries of the site, therefore no exposure pathways exist.

Contact Name:	Not reported
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL site address in UIS was entered as 281 WEST 28TH STREET; changed this to 281 11TH AVENUE; Con Edison's Westside Service Center is located west of 11th Avenue and north of West 28th Street. 3/16/95: Soil samples collected from boil boring B-1 adjacent to tank by MEG. Results reported by EcoTest Labs on 3/30/95 indicate concentrations of lead above standards. Also flashpoint at 37 deg C (99 deg F). Additional results reported 4/19 for high BTEX concentrations. 1/24/97: Con Ed submits site investigation report. Four groundwater monitoring wells were installed. No free product in wells, but high concentrations of BTEX in soil and groundwater (exceeding groundwater standards). Con Ed proposes to continue quarterly groundwater monitoring/sampling to develop baseline data. 9/16/97: Con Ed submits copy of work plan dated 6/17/96 prepared by CEH/Jacques Whitford for the previous site investigation. 9/30/97: TRANSFERRED FROM KATZ TO O'CONNELL. 11/10/98: Site visit to observe tank removal. Soil on walls of excavation appeared dark - there was petrol odor in vicinity but pulled tank had been placed upwind of excavation. There is gw in hole. Slight sheen on water. Sidewall samples to be collected, but no bottom samples since concrete pad is to remain for new tanks. If soil results come back high, may require additional excavation. (CAE) 10/2/00: Con Ed submits UST closure report, which consists of Pre-Closure Assessment conducted by in 1996, and post-excavation sampling results (circa 11/98). 1/11/01: Letter to Con Edison - review of quarterly gw sampling results for last 3 years indicates dissolved oxygen and redox potential measured in gw does not support natural attenuation, as suggested by Con Ed. Request expanded well network and tidal influence study, as well as remedial alternative study. (KMF) 3/19/01: Con Ed submits work plan for supplemental investigation. Comment letter sent same day to Con Ed - minor comments related to sampling and analytical methods, etc. (KMF) 3/27/01: Con Ed submits work plan for tidal influence study. 3/29/01: E-mail comments to Con Ed on tidal influence study work plan. (KMF) 4/12/02: Supplemental investigation report and tidal influence study submitted for review. Newly installed well MW-5 was destroyed following collection of initial gw sample. The sample indicated concentrations of MTBE which exceeds groundwater standard. No other VOCs were detected. 4/3/03: Letter to Con Ed requesting well MW-5 be replaced. Also, requested Remedial Action Plan be submitted 30 days following receipt of sampling results. (KMF) 4/29/03: Letter work plan from Con Ed to replace MW-5, and add 2 additional wells. 5/7/03: E-mail from Con Ed indicating that MW-5 had been found undamaged beneath a pile of construction materials. Awaiting approval

of work plan for other 2 wells. 5/28/03: Approval granted for installation of 2 additional monitoring wells. (KMF) 12/16/03: Meeting with Mariela Gonzalez. Additional wells have been installed and sampled - still high MTBE and benzene. JWC has submitted draft RAWP to Con Ed proposing ORC injection. She expects to get final to DEC by early January. (JHO) 8/27/12 - 2Q12 groundwater monitoring report saved to edocs 12/5/12 - 3Q12 groundwater monitoring report saved to edocs; did not have access to/could not sample MW-2; recommended continue to monitor (JOC) 1/31/13 - 4Q12 groundwater monitoring report recommends continued monitoring (JOC) 3/5/13 - followup from Con Edison project manager inquired about recommendations from consultant report for 1Q13 sampling - advised that DER has no objection to not performing 1Q13 groundwater monitoring event (JOC) 5/31/13 - received 1Q13 monitoring report; sampling conducted on March 18th for MW-1 and MW-2; VOCs are ND in MW-1, MTBE less than TOGS criteria in MW-2. Recommends continued monitoring of Mw-1 and Mw-2 (JOC) 7/8/13 - received 2Q13 monitoring report; sampling conducted on June 24th for MW-1 and MW-2; VOCs less than TOGS criteria in MW-1, 9.6 ppb isopropyl benzene in MW-2 and MTBE and n-propyl benzene less than TOGS; report recommends continued monitoring of MW-1 and MW-2 (JOC) 3/4/14 - received 4Q13 monitoring report; recommends continued monitoring of MW-1 and MW-2. Briefly discussed with Con Edison PM on 2/26. (JOC) 2/10/15 - received 4Q14 monitoring report; recommends discontinuing monitoring; report under review (JOC) 4/20/15 - file review/summary - Con Edison s Westside Service Center is a multi-purpose facility used to support the operation and maintenance of energy distribution systems throughout the area. Included is a vehicle fueling facility roughly in the middle of the property which historically had two 4,000 gallon gasoline and one 4,000 gallon diesel USTs. The tank area is roughly 600 feet to the east of the Hudson River. The area is zoned manufacturing according to publicly available NYC Department of City Planning information. In preparation for replacing the three motor fuel tanks to comply with 1998 regulatory changes, one soil boring was advanced in 1996 just to the east of the field to evaluate conditions, and impacted soil was identified. Based on the finding, a spill was reported and an investigation was subsequently completed with 8 Geoprobe soil borings around the tank field and the installation of 4 groundwater monitoring wells. Sample results for the two borings completed on the east side of the tank field had exceedances of the soil criteria, with the southern of these two borings showing the most impact including what was described as apparent free product in the soil samples. A well was installed at that location (MW-2). Soil criteria at the time were based on the Department s STARS Memorandum #1. As an additional note on the history, the three USTs in the tank field had successfully passed tightness testing in 1994/1995. The tanks were removed in 1998 along with 191 tons of petroleum impacted soil, and post-excavation sampling was completed. Three of four sidewall soil samples had exceedances of the criteria for VOCs (STARS Memo #1), again with most impacts evident on the east side of the tank field. Groundwater is relatively shallow at the location, and the tank excavation had standing water. Over the course of the site monitoring, ground water depth ranged roughly from 5 to 10 feet below ground surface, depending on the well. Approximately 21,000 gallons of water/groundwater was removed during the course of tank replacement. A light, spotty sheen was noted on the standing water surface at the

WESTSIDE SERVICE CTR (Continued)

S104496019

time of tank removal. The tanks were evaluated and found to be in good condition with no holes. A specific route for release of petroleum from the tank system was not identified. Groundwater at MW-2 was contaminated with petroleum VOCs, initially at 3 to 4 ppm total petroleum VOCs, but no LNAPL was identified. The other wells had minor exceedances, within an order of magnitude of the groundwater standards. In the first few rounds of sampling MTBE was not detected in any of the wells, but then without any specific explanation it was then detected, initially at 7 ppm in MW-2 and at much lower concentrations in the other wells, including the upgradient well. Additional wells were installed to better delineate the area of contamination and monitoring continued. The groundwater flow direction was determined to be predominantly toward the southwest. There were periods when groundwater was lowest that the direction varied toward the southeast. In three wells, hydraulic conductivity was estimated through slug testing to range from 0.4 to 40.9 feet per day, confirming the variability of the subsurface materials, which consists of fill, some sands and clays, and some peat at depth. Subsequent to the tank and soil removal, groundwater contaminant levels showed some reduction at MW-2 but it was felt additional remedial work was warranted. After additional study, 2,200 pounds of ORC was injected in the area of the groundwater plume through 24 injection points. This showed to have some effect, but still petroleum VOC concentrations near MW-2 persisted in excess of standards. Additional soil sampling around the tank field in 2006 found exceedances of TAGM 4046 criteria, the guidance in place at the time, in one boring to the east of the tank field, in the vicinity and upgradient of MW-2, with total petroleum VOCs of approximately 1700 ppm. Since this concentration at this one location seemed inconsistent with the other nearby historic soil data, which was approximately an order of magnitude less, along with the relatively higher concentrations of benzene in nearby well MW-2 suggested a more recent release. As such, the tank system was tested for tightness and passed. The spill bucket at the fill ports was additionally checked and found to be tight. Pilot testing for a soil vapor extraction/air sparge system was conducted while groundwater monitoring continued. Well MW-2 was re-developed to ensure groundwater samples were representative. Soil samples were collected during boring completion for installation of sparge and extraction points. One point was put in (P-5/AS-1) at the location of the previously identified elevated soil concentrations (GP-13), with more vertical delineation; four samples were collected between 9 feet and 16 feet below grade. Soil exceedances were identified in P-5 in the 9-11 foot interval for benzene (212 ug/kg) and total xylenes (800 ug/kg) and in the 12 foot depth sample for benzene (591 ug/kg) and total xylenes (1692 ug/kg), which is much different from the results collected at GP-13. No explanation for the gross difference between the soil results of these two soils borings, taken in very close proximity to one another, was given. At the time of the latter soil sampling, groundwater samples taken at the same time for immediately downgradient well MW-2 and at P-5 showed very similar results, with most of the petroleum VOCs on the order of 10s of ppb or less. The AS/SVE pilot testing showed some short-circuiting of the system due to the proximity of the tank field (with coarser backfill) when using impacted well MW-2 as the extraction point. Subsequent to the initial pilot test, groundwater results showed a decrease in contaminant concentrations. A separate SVE only pilot test was completed using an

S104496019

extraction point further to the east, which showed a more typical radius of influence. However, based on the more recent soil data results and the groundwater plume being limited in area, and the attenuating groundwater concentrations in the source area, continued monitoring of groundwater was proposed and accepted. In early 2009, 0.2 feet of LNAPL was identified in well MW-2. It was removed and an absorbent sock was placed in the well. At the same time, groundwater results, even within that well, remained consistent with prior results and relatively low in concentration. As such, monitoring continued. It is not clear what was actually observed in the well, or if it was LNAPL, the type of material was not identified. It was not observed again and concentrations continued to decrease. All of the monitoring wells have had 8 quarters of sampling with no exceedances of groundwater standards for petroleum VOCs. Con Edison has requested to stop further monitoring and for closure of the spill. Based on the documentation provided to date, the spill is closed. A letter stating such was sent to Con Edison today, including that monitoring wells should be closed in accordance with the Commissioner s Policy on decommissioning monitoring wells. (JOC) "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: "6/15/12-Vought-Daytime duty officer. Spill assigned to DEC Feroze as part of Con Edison minor spill portfolio review and possible closure. Initial EMIS #230053 added to Cross Reference Field, deleted from proxy and added to e-docs. As per EMIS, F. Walker #87547 reports that while moving cable, he discovered approximately 10 gallons of hydraulic fluid had leaked from the backhoe #f92134. 6 gallons leaked onto asphalt and 4 gallons were released into the catch basin. Cleanup is in progress and kitty litter and diapers are in place on the asphalt. G.Pertsas supv will inspect catch basin to verify whether there was a release to a sewer. Transportation, CIG and ERT were notified. Later remarks note, Corrective Action: On 6/15/12 @

18:36, Supv. G. Pertsas (11653) reports O.S. B. Bamonte (16614) on location with Clean Ventures to perform Hydraulic Fluid Clean-Up in the catch basin at the West 28th Street yard. Approximately 30 gallons including wash water were removed and taken by Clean Ventures. Structure was double washed using 5 gallons of Bio-Gen 760. After Clean-up the structure was inspected and no oil was found. Supv. Pertsas used kitty litter and diapers to clean the asphalt. He generated 2 50 gallon drums of debri. The drums will be classified as Non-Hazardous Hydraulic Oil and turned in to stores @ West 28th Street Yard to have Transportation pick the drums up and ship them to Astoria. 3/26/13 - Austin - Con Ed contained and cleaned up the 10 gal. hydraulic oil spill - See eDocs for further information - Spill closed - end "

Remarks: "spill to paved surface and catch basin/clean up pending"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 12/21/98: Oil/water separator overflow tank inside transportation garage store room. Excavation about 4' deep, no odor, no visible contamination in soil. Soil is very dry. Tank was 65 to 75 gal capacity. Told them to take endpoint samples. There will only be 2 sidewall samples since 2 walls are concrete. Both USTs for oil/water separator overflow are not being replaced. Pulled covers of oil/water separator - 2ndary containment full of oil. Can't tell how oil got there. Facility will block off all floor drains and remove product from o/w separator vault. See spill file for site sketch.
(CAE) ~~~~~ E2MIS 122078 12/21/98 14:15HRS -- HOLDING AREA FOR SEPARATER -- TRANSPORTATION -- 281 11AV M.HARTE 95970, CONST-MGMT REPORTS FOUND APPROX 550GALS UNKNOWN FLUID IN ADJACENT CONTAINMENT AREA FOR OIL & WATER SEPARATER. LOCATION IS INSIDE TRANSPORTATION GARAGE (TIRE ROOM). SPILL WAS FOUND DURING INSPECTION BY DEC C. ENGLEHARDT AND R. FITZPATRICK (CON ED). IN PROCESS OF INSPECTING PREVIOUS REMOVAL OF OVERFLOW TANK OF OIL AND WATER SEPARATER THIS VAULTED AREA WAS FOUND CONTAINING UNKNOWN FLUID. THIS VAULTED AREA ACTS AS A SECONDARY CONTAINMENT FOR OIL/WATER SEPARATER. M.HARTE REPORTS UNABLE TO VERIFY CRACKS, SUMP, OR SEWER CONNECTION. CHEM LAB TO TAKE SAMPLE From: Romanelli, Anthony Sent: Tuesday, December 22, 1998 8:13 AM To: Zoeller, Richard Subject: W 28th RICHARD RECEIVED TEST RESULTS FOR PCB ON LIQUID DISCOVERED IN SEPARATOR VAULT AND SEPARATOR. STILL AWAITING RESULTS FOR BENZENE AND HALOGENS. WILL KEEP YOU POSTED ON PENDING RESULTS. TEST RESULTS WILL BE FORWARDED TO YOU. INCIDENT NUMBER 122078. Update 10/17/05, at this time the type of oil cannot be determined, however; it was determined that the separator was the source of the leakage and has been repaired and operating correctly to date. The entire area is cleaned and working. "

Remarks: "DURING AN INSPECTION FROM DEC CHRIS ENGLEHART, UNDERGROUND SECONDARY CONTAINMENT AREA WAS FOUND TO HAVE THIS OIL/WATER MIX. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY e2mis no. 138097: 7/09/01 14:15 hrs. Mechanic from Corporate Transportation, reported at 14:00 hrs. that he found approx. 2 gallons of compressor oil had spilled along the sides of the compressor, the piping, other associated equipment and the asphalt. The compressor is part of the CNG (Compressed Natural Gas) Station which is located at 281 11th Ave (West 28th Street Yard). He was called to the CNG Station to investigate a ground fault indication when he discovered oil coming from the compressor vent. The compressor oil is 5W40 engine oil and non-PCB. The packing seal between the motor and compressor failed causing oil to be spilled outside the compressor. Cleanup was started at 14:00 hrs. using absorbent pads and degreaser (Infinity Chem. Group T.R. -1). Victor Cinquemani reported that the cleanup was completed at 17:39 hrs. using absorbent pads, degreaser and speedi-dry granules. One 55 gallon drum of solid non-hazardous debris was generated."
Remarks: "LEAK FROM VENT ON CNG COMPRESSOR. SPILLED ONTO ASPHALT. BEING CLEANED UP. COMPRESSOR TAKEN OUT OF SERVICE FOR REPAIRS. CON EDISON REFERENCE NUMBER 138097."

concrete & asphalt. The contractor is Filco they pick up the wood debris. E. Fermaint spoke to the supervisor of Filco at 22:00 and he told E. Fermaint that the would be at the location in a 1/2 an hr to do the cleanup. There was no sewers or waterways affected. No fire or smoke was involved. No private property was affected. No injuries were related to the spill. R. Bruns # 21106 "

Remarks: "leak from Filco truck - Filco will be cleaning up - ref 162146"

Contact Name: DON SCICUTELLA
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Tomasello to Rommel as per Rommel. 3/5/08 - Austin - Assigned to Ketani for further investigation - end 5/5/08 - Raphael Ketani. I re-opened the case. There is no paper file. The spill was the discovery of oil contaminated soil in the process of closing some tanks. The discovery took place on 3/14/90. I tried to contact Don Scicutella of Federal Express in Manhattan at (212) 465-4310, but found out that the phone number belonged to a different business. The PBS case #2-600488 lists 13 tanks numbered #1 to #12 and #OO5. Tanks #1 to #12 had diesel, gas, #2 oil, and #6 oil. Tanks #3 and #4 are each 275 gals. and were converted to non-regulatory use. They contain waste oil. Tank #OO5 is 500 gals. and contains waste oil. Tanks #1, #2, #5 to #12 were closed in place. There is a local contact person and phone number, but the number doesn't work anymore. The local Federal Express address is: 538 West 34 Street, NY, 10001. The main business address is: 3620 Hacks Cross Road, Bldg. B, 2nd Floor, Memphis, TN, 38125. I sent a CSL to the main business address for Federal Express. 6/2/08 - Raphael Ketani. I spoke to Tony Gulla (goo-la) (973) 565-2305 of FED EX. He said that he talked to a number of people and no one can recall the spill. He said that FED EX just vacated the site. I told him that DEC has no documentation that the spill was remediated. So a new investigation needs to take place. I told him that the tanks are registered to FED EX. He asked for a copy of the PBS registration. I sent it to him by FAX (973) 565-2363. 8/15/08 - Raphael Ketani. In preparation for case transfer, I am annotating the database as regards what needs to be done at the site to resolve the alleged or known environmental contamination. A followup phone call and maybe a letter need to be sent to find out if an investigation is taking place. A subsurface investigation is needed for the site. 09/03/08-HRAHMED-Charla Reinganum of FedEx (847 215 4115) called, she is the Project Manager for this case. She asked for any documentation that DEC might have. DEC Ahmed would look for any documentation that DEC might have and call her back. Ahmed found another spill case 9007639, that might be a duplicate of this case. 09/04/08-HRAHMED-Ahmed Called Charla to inform that no paper

1000474245

documentation was found. Ahmed suggested Charla to find any kind of documentation that support that remedial action was taken place. Charla will call back in a week with feedback. 9/15/09 - Raphael Ketani. Lou Wunderlick of the LIRR called today. He wanted to know whether FEDEX had or was going to initiate a remediation project at the site. He said that work was taking place at another part of the site and they are recovering a lot of oil. I told him that Mr. Ahmed is out of the office for a couple of weeks. He said that he will try and contact Ms. Reinganum to find out if FEDEX is going to do anything about the USTs under the site and the released oil.

10/25/10-HRAHMED-Received email from Lew Wunderlich of MTA. As per the email, The Hudson Yards Development Corporation (HYDC) contracted with the NYC Housing & Preservation Department (NYC HPD) to demolish the FEDEX building. NYC HPD completed the demolition in June 2010, removed the concrete fill tank, all contaminated soil and backfilled. The site has not been turned over to the MTA as of yet; however, this is anticipated by the end of September 2010. HYDC or NYCHPD would contact DEC in the future regarding this matter. Contact for MTA: Lew Wunderlich Env Construction Manager MTACC - Env & Sustainability Services lwunderlich@mtacc.info 646-252-3152 (O) 347-237-6249 (C) 2/8/11-Vought-See also open spill #1010766 at same location. 10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end 12/08/11-Hiralkumar Patel. after discussing with DEC Austin, case transferred from DEC Ketani to my name as working on other spill #: 1010766 at the subject site. alternate address: 528-556 W 34th Street, 527-551 W 33rd Street PBS #: 2-600488. other spills: 8910499, 9000078, 9007639, 9011459, 9300804 as per PBS # 2-600488, the site has/had following tanks: - one (1) 20,000 gal diesel UST closed-in-place in Aug. 1992 - one (1) 5,000 gal #2 oil AST (in contact with soil), installed in Dec. 1993 and closed-in-place in Mar. 1996 - four (4) 10,000 gal gasoline USTs closed-in-place - two (2) 10,000 gal diesel USTs closed-in-place - two (2) 10,000 gal #6 oil USTs closed-in-place in Aug. 1992 - one (1) 500 gal waste oil AST (in contact with soil), installed in Jan. 1989 and closed-in-place in Jun. 2008 - two (2) 275 gal waste oil ASTs (in contact with soil) were converted to non-regulated use spill #: 8910499 was reported on 02/02/1990 due to 20 gal #6 oil spilled on sidewalk due to overflow. case closed. spill #: 9000078 was reported on 04/04/1990 due to findings of contaminated soil during gasoline tanks abandonment. case is still open. spill #: 9007639 was reported on 12/12/1990 after finding low level of contamination in soil and groundwater samples. case closed. a notification for tanks abandonment on e-docs. spill #: 9011459 was reported on 01/31/1991 as suspected a leak from the 10,000 gal #2 oil tank. spill closed. spill #: 9300804 was reported on 04/16/1993 due to 5 gal #2 oil spill on sidewalk. case closed. during review, found a groundwater investigation report on e-docs under the spill #: 9011459. but based on following information, the investigation report is related to the spill #: 9000078 (duplicate spill #: 9007639) and not to the spill #: 9011459: - the investigation report dated 07/25/1990 and the spill #: 9011459 was reported on 01/31/1991 - the spill #: 9011459 was reported as leak suspected from the 10,000 gal UST, but the investigation report summarize work regarding monitoring well installation and groundwater sampling around the previously abandoned six USTs (possibly four gasoline and two diesel USTs) in building's basement - based on caller's remarks from spill #: 9007639, three monitoring wells were installed currently, the site is being used by MTA as part of # 7

line extension project. Rose-May Toussaint-Portes Environmental Manager Sustainability and Environmental Management NYCT Ph. (646) 252-3291 email: rose-may.toussaint-portes@nyct.com reviewed available documents

***** 1) 06/29/1989: International Technology Corporation (IT Corp.) sent letter to DEC including a PBS application. PBS application was submitted notifying abandonment of six USTs as it will not be used by FedEx. 2) Feb. 1990: Report on Tank Abandonment Activities: - abandoned six USTs - dispensing pumps for the tanks were disconnected - pipelines were backwashed and aboveground (suspended from the ceiling) lines were removed - soil was removed to expose the tanks - groundwater was encountered in the excavation at a depth of approx. 2 ft below the floor surface - petroleum odor was detected in the excavation - piping which ran below grade was cut, flush and filled with cement - tanks were filled with a cement grout - five soil samples were collected from staged soil pile for waste classification <----- - staged soil was classified as non-hazardous and was disposed of at a sanitary landfill <--- - sample of the groundwater encountered in excavation was collected - found only one VOC - chloroform (13,000 ppb) in groundwater 3) 04/06/1990: notification from FedEx regarding findings of soil contamination during tank abandonment. 4) 09/10/1990: Groundwater Investigation: - three (3) 2 inch monitoring wells (FX-MW1, FX-MW2 and FX-MW3) were installed on the basement level of the fedex building - well FX-MW1 was installed in the northeast corner of the basement - groundwater was not encountered in the soil above the bedrock - strong petroleum odors detected at 1-1.5 ft below floor surface in FX-MW1 - two soil samples were collected from boring FX-MW1 - boring FX-MW1 was terminated at 9 ft below floor surface and a well was installed - well FX-MW2 was installed southwest of the well FX-MW1 - strong petroleum odors detected at 1.5-1.75 ft below floor surface in FX-MW2 - bedrock cores collected from approx. 10 ft below floor surface in FX-MW2 were fractured and appeared to be wet - boring FX-MW2 was terminated at 16 ft below floor surface - well FX-MW3 was installed southeast of well FX-MW2 - petroleum odors detected at 1.5-2 ft below floor surface in FX-MW3 - bedrock cores from approx. 7 ft below floor surface in FX-MW3 were fractured and appeared to be wet - boring FX-MW3 was terminated at 15 ft below floor surface - bedrock was encountered at 4 ft below floor surface in FX-MW1 and FX-MW2 and at 3 ft below floor surface in FX-MW3 - free product was not detected in any of the wells - based on site map, groundwater flows to the southwest direction - found only minor benzene in soil sample (max: 3.85 ppb) - found minor VOC contamination in water samples from downgradient wells groundwater analyticals: -----WS2A-----WS3 (FX-MW2) (FX-MW3) Benzene-----9-----59 MTBE-----10-----14 5) 05/05/2008: DEC Ketani sent letter to FedEx requiring submission of an investigation report. 6) 10/28/2008: response from FedEx to DEC's letter dated 05/05/08: David Jensen from FedEx sent letter to DEC Hasan. he mentioned that FedEx leased the property in Oct. 1988 and retained IT Corp. in 1989 to abandon the tanks. as per Mr. Jensen, the property was under renovation during the time of tank abandonment and FedEx was not operating at the site.

Rose-May. she mentioned that all the buildings on site were demolished including the former fedex building. they have dug down to bedrock in most of the site, but not planning any excavation in former fedex building area and there will a building in future. she doesn't know the future use of the former fedex building area. she mentioned that the six tanks under the former fedex building basement were removed by HPD in 2010. she will send copy of tank removal report. 2:40 PM:- received email from Rose-May. she mentioned that HPD handled removal of six USTs below the basement slab and a storage tank sitting on the basement slab under the entrance ramp area. 12/13/11-Hiralkumar Patel. 10:15 AM:- spoke with Mr. Mathew at NYC HPD. asked him to submit documents about all tanks removed by HPD from the subject site. 10:18 AM:- sent email to Mr. Mathew requesting copies of all tank removal reports. email copied to Rose-May. Chacko Mathew NYC HPD Ph. (718) 636-3320 (718) 623-9911 (917) 578-4679 (C) Fax (718) 636-3325 email: mathewc@hpd.nyc.gov 2:06 PM:- received email from Mr. Mathew. including a letter with sample results. he mentioned that as tanks were legally closed in past, another tank removal report was not prepared. in letter, Mr. Mathew mentioned that HPD contractor removed total of six 5,000 gal (or two 10,000 gal) tanks. HPD collected endpoint samples and found some SVOC contamination. so area was further excavated. found clean endpoint samples after two rounds of excavations. VOC compounds were not found during any sampling events. 550 cubic yards of soils were removed. 2:25 PM:- spoke with Mr. Mathew. he mentioned that the tanks mentioned in the report were removed by the general contractor. after removing tanks, they noticed stained soil and called HPD. before HPD arrived to the site, tanks were gone. so Mr. Mathew doesn't know whether those were six 5,000 gal tanks or six 10,000 gal tanks (as recorded on PBS) or two 10,000 gal tanks. but these tanks were removed from the basement of the former FedEx building. as per reports from 1990, the former gasoline/diesel tanks were in the basement of the fedex building. as per Rose-May from MTA, all on-site buildings were demolished and most of the site has been excavated as part of redevelopment and they removed any tanks found during excavation. after discussing with DEC Austin, case closed based on historical sampling data and current condition of the site."

Remarks: "TANKS TO BE CLOSED IN PLACE, CONTAMINATED SOIL WAS DISCOVERED."

9011459 was reported on 01/31/1991 as suspected a leak from the 10,000 gal #2 oil tank. spill closed. spill #: 9300804 was reported on 04/16/1993 due to 5 gal #2 oil spill on sidewalk. case closed. based on following information, the investigation report (dated 07/25/1990) is related to the spill #: 9007639 and not to the spill #: 9011459: - the investigation report dated 07/25/1990 and the spill #: 9011459 was reported on 01/31/1991 - the spill #: 9011459 was reported as leak suspected from the 10,000 gal UST, but the investigation report summarize work regarding monitoring well installation and groundwater sampling around the previously abandoned six USTs (possibly four gasoline and two diesel USTs) in building's basement - based on caller's remarks from spill #: 9007639, three monitoring wells were installed also, as per report dated 07/25/1990, the six tanks were abandoned prior to the investigation. so, the only 10,000 gal tanks left on-site were the two #6 oil USTs. also, as per PBS record, the 5,000 gal #2 oil AST was installed in Dec. 1993. based on all these facts, the spill #: 9011459 must be associated with one of the two 10,000 gal #6 oil USTs and not #2 oil tank (unless one of the two 10,000 gal UST was containing #2 oil).
<----- the site is currently being used by NYC MTA for #7 line extension project. Rose-May Toussaint-Portes Environmental Manager Sustainability and Environmental Management NYCT Ph. (646) 252-3291 email: rose-may.toussaint-portes@nyct.com 1:23 PM:- spoke with Rose-May. she mentioned that all the buildings on site were demolished including former fedex building. and former tanks were removed by NYC HPD. 12/13/11-Hiralkumar Patel. 10:15 AM:- spoke with Mr. Mathew at NYC HPD. he mentioned that a general contractor for Hudson Yard Development Corp. demolished all on-site structures and removed all tanks from site. during removal of six tanks from the basement of the former fedex building, contractor noticed stained soil and they reported to NYC HPD. NYC HPD collected endpoint samples and found no contamination. Mr. Mathew mentioned that HPD handled environmental issues at the site and he believes that as HPD was not informed there must be no contamination found during removal of other tanks on-site. Chacko Mathew NYC HPD Ph. (718) 636-3320 (718) 623-9911 (917) 578-4679 (C) Fax (718) 636-3325 email: mathewc@hpd.nyc.gov as per Rose-May from MTA, all on-site buildings were demolished and most of the site has been excavated as part of redevelopment and they removed any tanks found during excavation. discussed with DEC Austin. based on available information, no action required. case stayed closed."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110011023640

Click Here:

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "1/20/11-Vought-Primary off hours responder. Vought inspected PBS and found no registration at or close to site address. Vought inspected Spills Database and noted open spill #9000078 managed by DEC Ahmed at same site. As per spill notes for that spill from 10/25/10, DEC Ahmed Received email from Lew Wunderlich of MTA. As per the email, The Hudson Yards Development Corporation (HYDC) contracted with the NYC Housing & Preservation Department (NYC HPD) to demolish the FEDEX building. NYC HPD completed the demolition in June 2010, removed the concrete fill tank, all contaminated soil and backfilled. The site has not been turned over to the MTA as of yet; however, this is anticipated by the end of September 2010. HYDC or NYCHPD would contact DEC in the future regarding this matter. Vought noted that no CSL letter sent recently reflecting development of site for either spill number. Vought called spill caller (Rosemary Toussaint-Portes MTA Captial Construction 646-252-3291) for more information and left message to return call. 1/24/11-Vought-Received call from Rosemary and she spoke with DEC Ahmed on both spills. 2/8/11-Vought-Spoke with DEC Urda and Ahmed and this spill transferred to DEC Ahmed who will perform site visit and sent letter to MTA Capital Construction with cc to current property owner. Letter to possibly include requirements of: 1)delineation of soil and groundwater contamination 2)collection of endpoint samples 3)inclusion of statement that RAP must be approved by DEC prior to developement 4)possible PBS registration requirements. Vought drafted CSL with below requirements: 1)PBS Registration 2)Collection of endpoint samples 3)delineation of soil contamination and Groundwater (if applicable) 4)installation of Vapor barrier/SSDS 5)inclusion of clause that RAP must be approved prior to development. 10/31/11-Hiralkumar Patel. case transferred from DEC Hasan to DEC Patel. 12/08/11-Hiralkumar Patel. alternate address: 528-556 W 34th Street, 527-551 W 33rd Street PBS #: 2-600488. other spills: 8910499, 9000078, 9007639, 9011459, 9300804 as per PBS # 2-600488, the site has/had following tanks: - one (1) 20,000 gal diesel UST closed-in-place in Aug. 1992 - one (1) 5,000 gal #2 oil AST (in contact with soil), installed in Dec. 1993 and closed-in-place in Mar. 1996 - four (4) 10,000 gal gasoline USTs closed-in-place - two (2) 10,000 gal diesel USTs closed-in-place - two (2) 10,000 gal #6 oil USTs closed-in-place in Aug. 1992 - one (1) 500 gal waste oil AST (in contact with soil), installed in Jan. 1989 and closed-in-place in Jun. 2008 - two (2) 275 gal waste oil ASTs (in contact with soil) were converted to non-regulated use spill #: 8910499 was reported on 02/02/1990 due to 20 gal #6 oil spilled on sidewalk due to overflow. case closed. spill #: 9000078 was reported on 04/04/1990 due to findings of contaminated soil during gasoline tanks abandonment. case is still open. spill #: 9007639 was reported on 12/12/1990 after finding low level of contamination in soil and

groundwater samples. case closed. a notification for tanks abandonment on e-docs. spill #: 9011459 was reported on 01/31/1991 as suspected a leak from the 10,000 gal #2 oil tank. spill closed. spill #: 9300804 was reported on 04/16/1993 due to 5 gal #2 oil spill on sidewalk. case closed. Rose-May Toussaint-Portes Environmental Manager Sustainability and Environmental Management NYCT Ph. (646) 252-3291 email: rose-may.toussaint-portes@nyct.com 12/12/11-Hiralkumar Patel. 11:32 AM:- spoke with Rose-May and asked to submit UST closure report. 12:38 PM:- received email from Rose-May including UST closure report. abstract: - site occupies three properties identified as lots 1, 5 and 54 - lot 1 was formerly occupied by half-story Copacabana nightclub. historic use included a machinery warehouse and a motor freight station located on the western portion of the site - lot 5 was formerly occupied by five-story Octagon nightclub. historic use of the lot included an iron foundry, machine shop and potentially other unknown types of manufacturing or commercial uses located on the western portion of the site - lot 54 was occupied by three-story fedex distribution center. historic use of the lot included a foundry, a rail freight station, and a UPS facility and fueling station located on the eastern portion of the site - six 10,000 gal USTs were reported to have been abandoned by fedex on 02/07/1990, before taking occupancy of the site as a tenant - following the demolition of the fedex facility in 2010, the six USTs were removed <----- - anticipated redevelopment of the site will include a pedestrian entrance and stairway leading to the proposed 34th street station of the No. 7 subway extension, and the construction of a subterranean system building - proposed developments of the site require extensive soil and bedrock excavation - total of four single walled steel USTs were removed: one 12,000 gal fuel oil UST (which could be registered 10,000 gal #6 oil UST), one 550 gal fuel oil UST, one 1,000 gal fuel oil UST and one 550 gal gasoline UST - the 12,000 gal fuel oil (tank T2) and the 550 gal fuel oil (tank T3) were found in southeastern portion of the site, identified as grid C11 - tank T2 was located within a partial concrete encasement observed at the base and at the north/northeast sidewall of the tank, and appeared to be associated with a fill pipe protruding near the edge of the sidewalk along the W 33rd street - tank T3 was not located within an encasement and appeared to be associated with an observed 3/4 inch copper supply/return line - upon removal of tank T3, perforations were evident at the base of the 550 gal UST - underlying soil conditions at both tanks T2 and T3 exhibited visible signs of petroleum contamination (PID readings ranged from 0.2 to 0.8 ppm) - the 550 gal gasoline (tank T1) and the 1,000 gal fuel oil (tank T4) were discovered on the northwestern portion of the site, identified as grid B32 - tank T1 was observed to be encapsulated in concrete and contained residual liquid product - based on field observations, tank T1 appeared intact, with no visible evidence of leakage or staining in the exposed soils surrounding the tank - tank T4 was also observed to be encased in concrete - upon removal, no perforations or cracks were observed - found visible staining and PID readings upto 80 ppm in soils underlying tank T4 - no fill ports, fuel piping, vent lines, dispensers, or other associated tank system components were encountered - some perched water and stormwater was observed pooled at the site surface - groundwater was not encountered during tank removal activities or during excavation efforts - petroleum contaminated soil was encountered at three areas of concerns: two

tank bed excavations of the USTs (tanks T1/T4 and T2/T3) and unknown historical contamination identified as Northeast Corner - overall excavation was not limited to the specific areas of concern, and was extended vertically from grade to underlying bedrock, and laterally to the perimeter boundaries of the site - no VOCs found in endpoint samples - some SVOCs found in samples - endpoint samples were collected from each excavation, but then excavations were extended as part of the redevelopment project - the four removed tanks were registered (PBS #: 2-611659) based on UST closure report, case closed."

Remarks: "CONTAMINATED SOIL FOUND DURING EXCAVATION RELATING TO BURIED TANKS HISTORIC SPILL #9000078."

DEC Memo: "5/18/12 : Obligado - See also Open Spill Number 0700587. DER Staff inspected this site after reviewing a Hydrogeologic and Forensic Report submitted by Fleming Lee Shue for Spill No. 0700587 282 11th Avenue. The report identifies a gasoline UST vent at 548 West 29th Street repair garage. The report concludes contamination in the soil and ground water on the north border of 282 11th Avenue is coming from off-site sources. Upon arriving at the site, I asked the mechanic there if they had any oil tanks. He showed me an oil tank in the back of the station. The 275 gallon waste oil tank had no table and had secondary containment had about an inch of oil stained sand.

MIDTOWN SERVICE CENTER (Continued)

S117851165

There was evidence of multiple spills on the concrete as well as a fresh spill from a transmission removal. I spoke to the mechanic, who says the waste oil company comes once a month to empty the waste oil tank. During that process they lift up the tank and clean the oil soaked sand from the secondary containment. I pointed out the poor housekeeping issues to the manager, Zoar (718-869-4550, who showed up shortly after. They applied speedy dry sand to the spill areas. I also noticed an abandoned tank manhole. This tank coincides with the location of a 550 gallon gasoline UST from historical sanborn maps and the vent location on the roof. The manager did not know anything about the tank. Due to apparent PBS issues with waste oil tank and abandoned tank, I contacted Moses Ajuko to perform a PBS inspection of the facility. Moses issued PBS violations. Due to poor housekeeping, stained concrete indicating historical spills, and abandoned gasoline tank it is a possible source. Additional investigation will be necessary. The facility owner is: 548 HIGH LINE LLC ONE PENN PLAZA, SUITE 3406 NEW YORK, NY 10019 Contact: MR. RABA H. ABRAMOV 5/25/12 - Obligado - Sent letter to owner requiring closure or removal of abandoned gasoline UST and a site assessment within 30 days of receipt of letter. Cetrified mail receipt #7005 0390 0005 8448 2432 6/1/12 - Obligado - From USPS website: Track & ConfirmYou entered: 70050390000584482432 6/25/12 - Obligado - Item returned undelivered. 6/27/12 - Obligado - The owner of this site came to the DEC for a PBS settlement conference. Mr. Abramov provided photodocumentation of the manhole which was identified as a potential abandoned gasoline UST. He had opened it up and it was not a UST, but rather a manhole for a former piston lift. Since there is no gasoline UST this site is no longer considered a source for gasoline contamination in soil and groundwater behind the repair shop at 282 11th Ave, Spill Number 0700587. After discussion with DEC Hussein and Ketani, this spill is closed. "

Remarks:

"Petroleum contamination in soil and groundwater behind property. During DEC inspection, DEC Staff found an abandoned gasoline UST, poor housekeeping, and petroleum spills on the concrete in repair shop."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "05/20/18-Hiralkumar Patel. alternate address: none no PBS or other spills found. 'e' designation for hazmat/noise/air. -----
Kursh 29th Street Holdings LLC. **property owner** 540 West 29th Street New York, NY 10001 Attn.: Stephen Kursh Ph. (212) 268-7137
2:27 PM:- spoke with Emily at Langan. she mentioned that Langan's client is in process of purchasing two adjacent properties at 538 W 29th Street (spill #: 1805506) and 540 W 29th Street. as part of property transaction, Langan conducted environmental investigation. during subsurface investigation, they noted petroleum odors/staining/elevated PID readings and also observed sheen on purged groundwater on both properties. they received sample results earlier this month, but did not report spill as were unable to contact current property owner until recently. asked Emily to submit site map with sample locations, boring/well logs and lab reports. also asked her to provide contact details of potential buyer.
08/24/18-Hiralkumar Patel. received email from Emily (at 4:29 PM on 08/23/18) including soil/groundwater/soil-vapor sample results for both sites 538 and 540. as per site map, three soil borings (SB4, SB5 and SB6), two temporary wells (TW-5 at SB5, TW-6 at SB6) and two soil-vapor probes (SV-1 and SV-3) were installed at site 540 W 29th St. no contamination noted in soil samples. groundwater sample was collected from TW-5. no contamination noted in groundwater sample. no info about any groundwater sample from TW-6. minor contamination noted in soil-vapor samples (max. 112 ug/m3 Toluene in SV-1). 1:48 PM:- sent email to Emily requesting call back to discuss sampling results. 08/27/18-Hiralkumar Patel. 12:38 PM:- received call from Joseph Good from Langan. he mentioned that Langan's client is in process of purchasing three lots: 55 (538 W 29th St), 56 (540 W 29th

St) and 57 (542 W 29th St). property transaction will occur in next 2-3 months. the buyer is planning to redevelop all three lots with multi-story commercial/residential building with basement and planning to remove all soil within property line down to (or below) groundwater. Joe mentioned that once purchased, current on-site buildings will be demolished and Langan will conduct further soil/GW/soil-vapor investigation under NYCOER VCP or NYSDEC BCP. Langan will not generate any report for investigation completed to date as further investigation will be conducted upon demolition of on-site buildings. 01/07/19-Hiralkumar Patel. received email from Joe (at 4:29 PM on 01/04/09). he mentioned that developer is planning to remediate site under BCP. 02/06/19-Hiralkumar Patel. 2:23 PM:- sent email to Joe inquiring updates. 02/20/19-Hiralkumar Patel. received email from Joe (at 6:18 PM on 02/19/19). he spoke with the developer who are closing on the properties in March and working through final paperwork with the bank. Langan may be doing additional investigation/delineation in the next two weeks to help satisfy lending requirements, but the majority of the investigation will be conducted once the developer closes on the property and investigates/remediates the site through the Brownfield Cleanup Program. 05/02/19-Hiralkumar Patel. reviewed NYC ACRIS record and noted that the subject site has been transferred to W29 Owner LLC. on 03/20/19. 2:11 PM:- sent email to Joe inquiring updates, and property owner's contact information. 05/06/19-Hiralkumar Patel. received email from Joe (at 2:20 PM on 05/03/19). he mentioned that their client W 29 Owner LLC purchased the property (Tax Block 700, Lots 55, 56 and 57), and will submit NYS BCP application, Remedial Investigation Report, supplemental investigation work plan and Remedial Action Work Plan this month. W29 Owner LLC. **property owner** c/o Largo 148 Madison Avenue, Floor #16 New York, NY 10016 Attn.: Michael Zampetti Ph. (646) 330-5005 email: mzampetti@largonyc.com 06/25/19-Hiralkumar Patel. 11:06 AM:- received email from Joe stating that a BCP application has been submitted (BCP case #: C231136) for review/acceptance. 04/27/20-Hiralkumar Patel. reviewed remediation case # C231136 and noted that the subject site has been enrolled in BCP and the BCP agreement was accepted/signed on 12/09/2019. case assigned to DEC Mike, BCP project manager. 11:43 AM:- sent email to DEC Mike and informed him about case transfer. email copied to DEC Austin."

Remarks:

"Unknown quantity of unknown petroleum released from mixed commercial/residential building into soil and ground water. Discovered in July and investigation concluded 8/20/18. Clean up pending. Additional investigation pending."

Site Description:

Location The site is located in an urban area at 538-542 West 29th Street in the Chelsea neighborhood of Manhattan, New York, and is identified on the Manhattan Borough Tax Map as Block 700, Lots 55, 56, and 57. The proposed BCP site includes all three tax lots. The site is located on southern side of West 29th Street and is bound by West 29th Street to the north, mixed-use residential/commercial buildings followed by the elevated High Line and Tenth Avenue to the east, a multi-story residential apartment building followed by West 28th Street to the south, and a multi-story mixed-use residential and commercial building followed by Eleventh Avenue to the west. The No. 7 subway southern extension runs north-south below Eleventh Avenue, which is about 200 feet to the west of the proposed BCP site. Site Features The site occupies a footprint of about 9,900-sqaure-feet (0.227 acres) and is currently improved with one three-story commercial building (Lot 55), one three-story mixed-use commercial and residential building (Lot 56), and one two-story warehouse (Lot 57). The buildings are currently vacant. Current Zoning and Land Use According to the New York City Planning Commission (NYCPC) Zoning Map 8b, dated January 22, 2015, the site is located in a C6-3 commercial district. C6-3 includes a wide range of high bulk commercial uses. Buildings in this district are often corporate headquarters, large hotels, department stores, and entertainment facilities in high-rise mixed buildings. The existing zoning is consistent with the proposed commercial-use development. The surrounding area is primarily commercial and residential, but also includes manufacturing buildings, subway tunnels, public parks, churches, schools and day care centers. One sensitive receptor, Bright Horizons Day Care at Hudson Yards, is located within the immediate area (less than mile) of the site, about 100 feet to the north at 529 West 29th Street. The nearest ecological receptor is the Hudson River, located about 1,300 feet west of the site. As a result of the City Environmental Quality Review (CEQR) process, Block 700, Lots 55, 56, and 57 were assigned an E-Designation (E-142) on June 23, 2005 by the New York City Department of City Planning (NYCDCP) as part of the High Line/West Chelsea Rezoning (CEQR No. 03DCP069M). The E-Designation requires coordination with the New York City Office of Environmental Remediation (OER) to obtain a Notice to Proceed (NTP) or a Notice of No Objection (NNO) prior to obtaining building permits. The E-Designation addresses environmental requirements for hazardous materials (Hazmat), noise (window wall attenuation and alternative

means of ventilation), and air quality during development. Past Use of the Site The site and surrounding area have been developed since the early 1800 s. The site was developed prior to 1890 with two unspecified use buildings which were demolished between 1899 and 1922. Lot 57 was formerly used as a lumber storage yard (1909-1944) and various auto repair facilities over a span of about 50 years (1945-1994). In 1995, the Lot 57 was purchased by Gotham Seafood Corporation, a seafood wholesaler. Sanborn maps indicate that Lots 55 and 56 were improved with mixed use-residential and commercial developments from about 1890 to 2005. Certificates of Occupancy (CO) provided by the New York City Department of Buildings (NYCDOB) identified an auto repair shop within Lot 56 in 1924 and 2012. In addition, available CO s for Lot 55 dated 1970 and 1987 identified manufacturing and a heating plant with potential fuel storage. Currently, all of the lots are vacant. Adjoining properties were historically used for residential, commercial, industrial and manufacturing operations. Site Geology and Hydrogeology Historic fill material was encountered immediately beneath the building foundation slabs and extends to depths varying from about 7.5 to 10 feet below grade surface (bgs) at 540 West 29th Street (Lots 56), and from about 3 to 12 feet bgs at 542 West 29th Street (Lot 57). Historic fill material was encountered below the cellar slab at 538 West 29th Street (Lot 55) at depths ranging from 3 to 5 feet below cellar grade. The historic fill predominately consists of brown fine- to medium-grained sand with varying amounts of gravel, concrete, asphalt, charcoal, slag, ash, wood, brick, and glass. The layer of historic fill is typical for this area of New York City. The fill layer is underlain by native soils typically consisting of reddish-brown to olive, fine- to medium grained silty sand with varying amounts of gravel and silt. Petroleum impacts, evidenced by odors, staining, and/or photoionization detector (PID) readings above background levels, were apparent in two soil borings (SB03 and SB06) at depths ranging from about 0 to 10 feet bgs and 14 to 15 feet bgs, respectively. Groundwater was encountered at depths ranging from 3.2 feet below cellar grade at 538 West 29th Street (Lot 55), 9.2 to 11 feet bgs at 540 West 29th Street (Lot 56) and from 8 to 11.51 feet bgs at 542 West 29th Street (Lot 57). Based on the well gauging results, groundwater appears to flow west toward the Hudson River, which is relatively consistent with regional topography.

Env Problem:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

08/24/18-Hiralkumar Patel. received email from Emily (at 4:29 PM on 08/23/18) including soil/groundwater/soil-vapor sample results for both sites 538 and 540. as per site map, three soil borings (SB1, SB2 and SB3), one temporary well (TW-3 at SB3) and two soil-vapor probes (SV-2 and SV-4) were installed at site 538 W 29th St. no contamination noted in soil samples, except some exceedance in soil samples from boring SB3(1,060 ppb total BTEX at 0-1 ft bg; 534 ppb total BTEX at 3-4 ft bg and 135 ppb total BTEX at 7-8 ft bg). no contamination noted in groundwater sample from temporary well TW-3. minor contamination noted in SV-2 (max. 65 ug/m3 of Benzene, 38 ug/m3 of PCE). high contamination was noted in soil-vapor sample from SV-4. sample SV-4 was analyzed with higher detection limits. soil-vapor analyticals (in ug/m3): -----SV-4

Benzene-----20,100 Toluene-----8,740
Ethylbenzene-----2,530 Xylene-----2,870
MTBE-----9,090 Cyclohexane-----62,600
TCE-----1,170* PCE-----1,470* *

- higher limits 1:48 PM:- sent email to Emily requesting call back to discuss sampling results. 08/27/18-Hiralkumar Patel. 12:38 PM:- received call from Joseph Good from Langan. he mentioned that Langan's client is in process of purchasing three lots: 55 (538 W 29th St), 56 (540 W 29th St) and 57 (542 W 29th St). property transaction will occur in next 2-3 months. the buyer is planning to redevelop all three lots with multi-story commercial/residential building with basement and planning to remove all soil within property line down to (or below) groundwater. Joe mentioned that once purchased, current on-site buildings will be demolished and Langan will conduct further soil/GW/soil-vapor investigation under NYCOER VCP or NYSDEC BCP. Langan will not generate any report for investigation completed to date as further investigation will be conducted upon demolition of on-site buildings. 01/07/19-Hiralkumar Patel. received email from Joe (at 4:29 PM on 01/04/09). he mentioned that developer is planning to remediate site under BCP. 02/06/19-Hiralkumar Patel. 2:23 PM:- sent email to Joe inquiring updates. 02/20/19-Hiralkumar Patel. received email from Joe (at 6:18 PM on 02/19/19). he spoke with the developer who are closing on the properties in March and working through final paperwork with the bank. Langan may be doing additional investigation/delineation in the next two weeks to help satisfy lending requirements, but the majority of the investigation will be conducted once the developer closes on the property and investigates/remediates the site through the Brownfield Cleanup Program. 05/02/19-Hiralkumar Patel. reviewed NYC ACRIS record and noted that the subject site has been transferred to W29 Owner LLC. on 03/20/19. 2:11 PM:- sent email to Joe inquiring updates, and property owner's contact information. 05/06/19-Hiralkumar Patel. received email from Joe (at 2:20 PM on 05/03/19). he mentioned that their client W 29 Owner LLC purchased the property (Tax Block 700, Lots 55, 56 and 57), and will submit NYS BCP application, Remedial Investigation Report, supplemental investigation work plan and Remedial Action Work Plan this month. W29 Owner LLC. **property owner** c/o Largo 148 Madison Avenue, Floor #16 New York, NY 10016 Attn.: Michael Zampetti Ph. (646) 330-5005 email: mzampetti@largonyc.com 06/25/19-Hiralkumar Patel. 11:06 AM:- received email from Joe stating that a BCP application has been submitted (BCP case #: C231136) for review/acceptance. 04/27/20-Hiralkumar Patel. reviewed remediation case # C231136 and noted that the subject site has been enrolled in BCP and the BCP agreement was accepted/signed on

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT REFERRED TO SAM ARAKHAN OF HAZARDOUS MATERIALS UNIT. E-mail message from Lisa Lukshides, Con Ed ERT: The oil (approx 1 gal) came from an unknown source. Everything that was contaminated, flush truck and vault were all double washed. One of the ERTs visited the flush pit and it was determined that the oil remained in the pit and its holding tanks and no oil was discharged into the sewers. All material was disposed of as pcb contaminated. Clean up complete 2 Nov 97. CON ED E2MIS NOTES 10-26-97 21:25hrs. Approx. 1 gal of unknown oil and 100 gals.of water in MH #33860 The spill is contained, no waterways or sewers affected. Sample taken and tag installed #10071 11-01-97 19:35 Cleanup done as <1ppm. Astoria informed of possible contamination of foul oil truck. Astoria reported no liquid was picked up from this location but that cleanup was done by flush truck. This was confirmed and the flush truck reportedly quarantined in the W28th St Yard. Flush truck was dumped in Flush pit at approx. 09:00 on 10-3 -97 Control Center was directed to notify CIG of possible PCB spill into sewer. 11-02-97 19:48 Flush Pit closed off 11-02-97 20:25 ERT advises no need for chemist. All action should be based on lab results showing 75ppm 04:00 ERT was at Flush pit and has ruled oil is contained to Flush Pit "

Remarks: "ORIG SPILL OCT 26TH-CON ED CALLED IN 1 GAL OIL TO 100 GAL WATER SPILL. GOT TEST RESULT OF LESS THAN 1 PPM PCB. CON ED THEN DUMPED MIXTURE IN A FLUSH PIT AT ABOVE ADDRESS. GOT A SECOND TEST BACK SAYING IT HAD A 75 PPM PCB READING. "

Remarks: "UNCOVERED 55 GALLON DRUM DURING EXCAVATION, CONTAINS MOSTLY SLUDGE, SOIL IMPACT IN AREA. 3/19/13 - Obligado - DER Section C Staff met to discuss a closure of Spill No. 1203735. After the internal discussion, the request for spill closure was approved based on the following: - An abandoned drum was discovered and removed during a excavation for a building construction. - The endpoint sample from below the drum met CP-51 unrestricted soil clean-up levels. - Based on the endpoint sample, the drum does not appear to have leaked petroleum. This spill is closed. "

street, is used as an auto repair shop less than -----
- another one-story building, located between two parking lots with an
entrance on 28th street, is used for a combination of auto repair and
finishing, including painting and detailing less than -----
- site would be developed as residential less than -----
- based on topography and proximity to the Hudson river, anticipated
groundwater flow is to the west - groundwater was observed to vary
from 6 to 12.5 ft bg, with an average depth of approx. 10.25 ft bg -
site has 11 550-gal gasoline USTs, all are out-of-service - eight 550
gal gasoline tanks, which are located in northern portion of parking
lot, are registered (PBS #: 2-350281) less than -----
- three
550 gal gasoline tanks, which are located in southeastern portion of
parking lot, are not registerd less than -----
- soil samples
were collected from total of 14 borings (SB-11 through SB-24) -
groundwater samples were collected at 7 of 14 boring locations
(SB-11,12,14,18,19,20 & 24) - soil borings were installed to depths
ranging 12 to 16 ft bg - two soil samples were collected from each
borings: one at the surface between grade and 2 ft bg and one based
on field screening (highest PID or directly above groundwater
interface or directly above depth of refusal) - most of the soil at
the site is urban fill material, extending to depths ranging from 4
to 16 ft bg. fill consisted of mixtures of brick, concrete, ASH,
cinders, wood and gravel in matrix of silty sand less than

- found about four SVOC compounds in almost all soil
samples (may be due to ash in fill material) - found xylene
contamination (10,000 ppb) in soil sample from boring SB-16 at depth
of 9-11 ft bg less than -----
- found groundwater
contaminated

submit delineation report by Dec. 31, 2007. 12/05/07-Hiralkumar Patel. received call from Mr. Ahmed asking help getting access to site. also spoke with Roberta Gordos, attorney representing Avalon Bay. as per Ms. Gordos, Avalon Bay is now ground leasee and will do all required work. Ms. Gordos asked for help from the Department getting access to the site. Roberta Gordas **Avalon Bay's attorney** Ph. (212) 541-2076 discussed with DEC Urda. he spoke with Mr. Berstein. Mr. Berstein confirmed that Avalon Bay is ground leasee and now has right to enter. Urda will send letter to Mr. Yaghoubi. 12/14/07-Hiralkumar Patel. DEC Urda sent letter to Ali requiring access to the site. 12/18/07-Hiralkumar Patel. received message from Jessica Tofi, attorney representing Mr. Yaghoubi. spoke with Jessica with DEC Urda. they are currently negotiating with property owner. she asked what needs to be done at site. explained her that without reviewing groundwater delineation report (as required), the department can't comment on possible remediation at site. asked her to submit groundwater delineation report by Jan. 15, 2008. Jessica Tofi **current tenant's attorney** Law office of Borah Goldstein PH. (212) 965-2614 (O) (646) 436-5996 (C) email: jtofi@borahgoldstein.com 12/19/07-Hiralkumar Patel. sent email to Ms. Tofi with copy of Phase I, Phase II and remedial investigation report. left message for Collista Nazaire at NYC DEP. asked her to provide project manager's information in DEP who is handling this e designated site. Collista Nazaire Ph. (718) 595-4401 Fax (718) 595-4479 email: cnazaire@dep.nyc.gov received call from Ms. Nazaire. she mentioned that DEP hasn't received any application for redevelopment, so not working on-site. sent email to Gary Heath with all available reports and copy of all correspondance, for their record, with information of all involved parties. 01/17/08-Hiralkumar Patel. spoke with Mr. Ahmed. currently owner and tenant are in court fighting for access. once access agreement get signed, Mr. Ahmed will apply for sidewalk permit and will submit work schedule. 02/08/08-Hiralkumar Patel. left message for Mr. Ahmed. received call from Mr. Ahmed. owner and tenant just reached an agreement and will sign agreement by end of Feb. 2008. Mr. Ahmed will do well installation after that in Mar. 2008. 03/06/08-Hiralkumar Patel. received message from Mr. Ahmed. they installed six monitoring wells at site. will do monitoring for free product. sent email to Mr. Ahmed. asked him for groundwater samples also alongwith soil samples during well installation. also asked for product sample, if found free product in any well. received call from Mr. Ahmed. he mentioned that as per their proposed work plan, they had only planned to monitor wells for any free product and not planned to collect any water samples. will monitor wells untill site remediation begins during proposed site development. after reviewing work plan, spoke with Mr. Ahmed. asked him to take one groundwater sample from each of upgradient well in two sets (one set in corner of 11th ave & W 28th st and second set in corner of 11th ave & W 29th st). Mr. Ahmed mentioned that after defining groundwater flow direction, will take water samples from upgradient wells. 03/31/08-Hiralkumar Patel. received well installation and gauging report. abstract: - six monitoring wells installed - soil sample with highest PID or just above water table were collected during each well installation - wells were installed to depths of between 16 to 18 ft bgs and were constructed with ten ft of 2 inch dia. PVC screen - during well installation, 10 ppm PID were observed in soil samples collected at 7 to 9 ft bgs - petroleum odors observed in soil samples collected at 7 to 9 ft bg - no free- phase product observed on

S108636200

groundwater surface in any well - will continue to monitor wells monthly for the presence and possible volume of free-phase product - will do well survey to define groundwater flow direction and based on flow direction, will collect groundwater sample from most upgradient well 04/23/08-Hiralkumar Patel. sent email to Mr. Ahmed requiring submission of schedule for well survey and groundwater sampling from upgradient wells. 05/14/08-Hiralkumar Patel. received monitoring well gauging/sampling report. during well gauging, found groundwater flowing into west direction. based on groundwater flow direction, they collected sample from one upgradient well MW-1 and found MTBE contamination (187 ppb) in groundwater. no sample collected from well MW-6 which is upgradient from second set of wells located in corner of 11th ave and W 29th street. during previous study, highest contamination was found in boring SB-20 which is located near tank field in corner of 11th ave and W 28th street and recent upgradient groundwater sample from that end showed little contamination. will gauge wells for any free product. based on submitted report, the department will wait for complete remediation that will occur during site redevelopment. 06/11/08-Hiralkumar Patel. received monitoring well gauging report. wells MW-1 through MW-6 were gauged on 05/12/08. no product found in any wells. 06/20/08-Hiralkumar Patel. received monitoring well gauging report. wells MW-1 through MW-6 were gauged on 06/12/08. no product found in any wells. 07/30/08-Hiralkumar Patel. received well gauging report for July 08. no free product measured in any wells. 09/11/08-Hiralkumar Patel. received well gauging report for Aug 08. no free product measured in any wells. spoke with Mr. Bernstein, property owner. he mentioned that tenants has left the site. and Avalon Bay is in process of redevelopment. left message for Mr. Javits at Avalon Bay, new leasee. 09/12/08-Hiralkumar Patel. received message from Mr. Javits. spoke with Mr. Javits. Mr. Javits mentioned that all tenants have left the site and they have applied for permit for demolition of existing building. they are expecting to demolish all building in Jan./Feb. 2009 and from spring 2009 they will start excavation of the site. asked Mr. Javits to submit updates monthly. 11/20/08-Hiralkumar Patel. received remedial action work plan from Fleming lee shue. abstract: - petroleum contaminated soil will be excavated down to the depth of the proposed building foundation which, at approx. 12 to 15 ft bg, is below the groundwater table - post excavation soil samples will be collected - vapor barrier will be installed beneath the foundation and along the below-grade portion of the foundation walls - building sub-grade will be below the groundwater table, consequently, waterproofing will be necessary and a sub-slab depressurizing system is infeasible - petroleum-contaminated groundwater will be treated by using the ORC - will submit remedial action report and alongwith it will include a work plan to sample the groundwater monitoring wells; groundwater will be sampled quarterly for two years and analyzed for VOCs (no SVOCs) and for natural attenuation parameters spoke with Mr. Ahmed at Fleming lee-shue regarding ORC application and dewatering. Mr. Ahmed mentioned that during excavation for foundation, they will excavate below water table and will dewater the area. will collect contaminated water and treat on-site under dewatering permit from DEP (not received yet). once they reach to bottom of proposed excavation, then will apply ORC (dry or slurry) on soil and will install vapor barrier. asked Mr. Ahmed to submit dewatering plan. Dan Cole **DEP case manager for e-designation** NYC DEP Ph. (718) 595-4536 email: dcole@dep.nyc.gov

11/21/08-Hiralkumar Patel. received email from Fleming lee shue with copy of Nov. 2008 well monitoring well gauging report. no free product found in any wells. 12/22/08-Hiralkumar Patel. received monitoring well gauging report for Dec. 2008. no free product found in any wells during gauging on 12/19/08. 02/13/09-Hiralkumar Patel. received monitoring well gauging report for Feb. 2009. no free product found in any wells. 02/24/09-Hiralkumar Patel. spoke with Mr. Ahmed. he mentioned that due to financial problem, owner is planning to start project by end of 2009. Mr. Ahmed requested to decrease frequency of well gauging. based on earlier gauging reports, approved his request and asked him to gauge wells quarterly. spoke with Mr. Javits at Avalon Bay. informed him about quarterly monitoring. Mr. Javits asked to contact Ms. Loeb who is development manager at Avalon Bay. Rachael Loeb Development Manager AvalonBay Communities, Inc. 275 7th Avenue, 25th Floor New York, NY 10001 Ph. (212) 309-1612 email: rloeb@avb.com 10/14/09-Hiralkumar Patel. 11:23 AM:- received well gauging report for Aug. 2009. no free product found on water. 04/01/10-Hiralkumar Patel. 3:38 PM:- spoke with Mr. Harris (as Ms. Loeb is on leave until Jul. 2010). they are waiting for permit which was applied in Jun 2009. Mr. Harris will call once gets permit. Fred Harris Ph. (212) 309-2984 email: fharris@avb.com 08/24/10-Hiralkumar Patel. received message from Mr. Ahmed (at 2:38 PM on 08/23/10). 5:27 PM:- spoke with Mr. Ahmed. he inquire about approval/disapproval for work plan submitted in Nov. 2008. 08/25/10-Hiralkumar Patel. 11:39 AM:- spoke with Mr. Ahmed. informed him that the department approves soil excavation and collection of endpoint soil and groundwater samples only and doesn't approve application of ORC yet as may require additional investigation after reviewing results of endpoint samples. 08/30/10-Hiralkumar Patel. 2:59 PM:- left message for Ms. Loeb at AvalonBay. 3:24 PM:- sent letter, approving soil excavation and collection of endpoint soil and groundwater samples, to Ms. Loeb and Mr. Bernstein. informed them that the endpoint sample results must be submitted prior to application of ORC and installation of vapor barrier as may require additional investigation. letter emailed to Mr. Bernstein, Ms. Loeb and Mr. Ahmed. 03/23/11-Hiralkumar Patel. 11:13 AM:- left message for (and sent email to) Ms. Loeb requesting updates. email copied to Mr. Ahmed. 2:20 PM:- received call from Ms. Loeb. she mentioned that they are ready for project but waiting for demolition permit which may take couple of months for entire process. Ms. Loeb will call once permit is issued. 06/06/11-Hiralkumar Patel. received email from Alana Brannon (at 11:32 AM on 06/02/11) from Fleming Lee Shue including well gauging report (dated 11/15/2010). no product found in any well. Alana mentioned that based on the commencement of construction/remediation phase activities, as well as the fact that LNAPL has consistently not been detected, all gauging activities should be discontinued. 06/15/11-Hiralkumar Patel. 12:25 PM:- received message from Arnie Fleming (212-675-3225) from Fleming Lee Shue. he mentioned that construction will begin soon and tank and associated contamination will be removed as proposed in work plan (dated 11/20/08). 3:14 PM:- left message for Arnie Fleming. 08/05/11-Hiralkumar Patel. 4:05 PM:- left message for Arnie Fleming. 4:15 PM:- received call from Arnie. he mentioned that contractor has submitted sheeting and shoring plan to NYC DOB and expect to get permit by 08/19/11. Arnie will send update once gets permit. 08/30/11-Hiralkumar Patel. 4:58 PM:- received email from Jesse Mausner from Fleming Lee Shue. he mentioned that AvalonBay will be uncovering the USTs on 09/06/11. Fleming Lee Shue will perform air

S108636200

monitoring during all intrusive activities. Jesse mentioned that tanks will not be removed for several more days, as sheeting needs to be installed before further excavation. Jesse Mausner, P.G. Fleming-Lee Shue, Inc. Ph. (212) 675-3225 Ext. 310 (646) 841-3099 (C) Fax (212) 675-3324 email: jesse@flemingleeshue.com
09/13/11-Hiralkumar Patel. 10:06 AM:- left message for Jesse. 10:53 AM:- received call from Jesse. he mentioned that contractor is installing sheeting for safe removal of all tanks. he mentioned that tank removal work will probably begin from 09/19/11. asked him to schedule a site inspection once tanks removed from ground.
09/14/11-Hiralkumar Patel. 11:17 AM:- received email from Jesse. he mentioned that contractor has started tank removal today.
09/16/11-Hiralkumar Patel. 2:03 PM:- received call from Jesse. he mentioned that some tanks are already removed and some will be removed on 09/19/11. scheduled a site visit at 9:30 AM on 09/19/11. during conversation, Jesse inquired about endpoint sidewall samples as all soil within piling area will be removed. informed him that as piling were installed to secure surrounding structure and as it may not be installed outside of contaminated zone, the department requires soil samples outside the piles. 09/19/11-Hiralkumar Patel. 9:20 AM:- visited site. met Bill Maniquez from Fleming Lee Shue and Margie Nesbitt from AvalonBay. they were removing tanks from area along the W 28th Street. while reviewing map in Bill's document, found that there were more lots included in the subject site (on W 28th Street) and soil/groundwater investigation performed on these additional lots. but that information was not submitted to the Department. asked Bill to submit results of recent investigation(s). found strong odors in tank excavation area. asked Bill to monitor air quality downgradient from the work area. Bill mentioned that currently they are removing all the tanks from the ground for disposal, but they are not excavating any contaminated soil as still waiting for approval from disposal facility. Bill Maniquez Fleming Lee Shue Ph. (212) 675-3225 (O) (646) 584-2319 (C) email: bill@flemingleeshue.com during site visit, Ms. Nesbitt mentioned that Ms. Loeb is no longer with company and Jon Vogel is the person-in-charge. Jon Vogel AvalonBay Communities, Inc. 275 7th Avenue, 25th Floor New York, NY 10001 Ph. (212) 309-1610 email: jon_vogel@avalonbay.com
09/21/11-Hiralkumar Patel. 2:01 PM:- received call from Jesse. he will submit any investigation reports done after March 2008. he mentioned that total of 17 tanks removed from the entire site (all lots). they are still waiting for approval from disposal facility. once they get approval, they will remove contaminated soil into trucks and transport it off-site, instead of stockpiling on the site. they will remove soil to water table. asked Jesse to collect endpoint soil samples and water sample from excavation. suggested him to leave tank excavation area open, if safe, until reviews the endpoint sample results. also asked him to delineate any soil contamination outside the piles installed at the tank areas. asked him to screen soil from surface to water table in all borings and collect soil sample from highest contaminated area (PID/staining/odors). informed him that if no indication of contamination in entire boring length, then soil sample must be collected from right above the water table. asked Jesse to provide update by 09/23/11. 10/12/11-Hiralkumar Patel. received copy of email sent to DEC Austin from Jesse (on 09/28/11). Jesse requested a site visit prior to backfilling excavation in day or two.
10/19/11-Hiralkumar Patel. 1:55 PM:- sent email to Jesse inquiring

S108636200

updates. 2:01 PM:- received email from Jesse. they finished UST removals and now waiting for endpoint sample results.
11/02/11-Hiralkumar Patel. 11:56 AM:- received email from Jesse including only result of endpoint soil samples and a site map showing tank location. no VOC contamination found in any samples except some minor contamination found in sample C1-BS. some SVOC contamination found in samples. no other information included. no results of any water samples included. 11/14/11-Hiralkumar Patel. 4:09 PM:- sent email to Jesse and asked him to submit complete report for review. also asked him to submit reports regarding investigation on additional lots. 11/16/11-Hiralkumar Patel. 1:51 PM:- received call from Jesse. asked him about results of water samples. he mentioned that excavations were done to a depth right above the water table and they collected bottom soil samples from excavation. as they did not extend the excavations into water, no water samples were collected. asked Jesse to submit report for excavation work and any investigation reports after Mar. 2008. 11/17/11-Hiralkumar Patel. 10:30 AM:- received email from Jesse including sample result table and site map. he mentioned that samples were collected from test pits for soil disposal characterization done in 2009 and 2011. found very high VOC contamination in samples from testpits TP-19, TP-20, TP-21 and TP-26. as per site map, these soil samples were collected between 10 and 13 ft depth. soil analyticals:

	TP-19	TP-20	TP-21	TP-26
26 10 ft 11 ft 12 ft 13 ft				
Benzene	118	513		3,820
Toluene	2,110	3,890		5,110
Ethylbenzene	1,880	8,150	13,000	43,300
Xylene	14,200	52,300	35,300	285,000
MTBE			472	

11/25/11-Hiralkumar Patel. 3:47 PM:- sent email to Jesse and asked him to submit complete report regarding test pit sampling. asked him to submit report by 11/30/11. email copied to Arnold Fleming at Fleming Lee Shue. 11/29/11-Hiralkumar Patel. 5:03 PM:- received email from Jesse. he mentioned that test pit sampling was performed for waste disposal purposes only for use by contractors. one 8-point composite sample was collected for each 800 cu. yard in a grid across the site. the data was not collected for the purposes of site characterization, and no report was generated for this data.

12/19/11-Hiralkumar Patel. 1:58 PM:- received report from Jesse. abstract: - site is located on Block 700, Lots 1, 9 and 18 - lot 1 is located along the majority of 11th Ave, forming rectangle with W 28th street - lots 9 and 18 are located farther east along W 28th St - removed total of sixteen (16) 550 gal gasoline USTs - all tanks were approx. 4 ft in diameter by 6 ft in length - tanks were found in four separate areas: Area A, Area B, Area C1 and C2 and Area D - Area A located on the northern portion of lot 1 - eight (8) USTs were found encased in concrete in Area A - Area B located on the southern portion of lot 1 - three (3) USTs were found in Area B - Area C1 and C2 located on the southwest portion of lot 18 - three (3) USTs were found encased in concrete in Area C1 and C2 - Area D located on the south portion of lot 9 - two (2) USTs were found in Area D - prior to excavation, shoring and sheeting were installed to support the sidewalks along 11th Ave and 28th street - in Area A, excavation area

is approx. 48 ft by 36 ft and approx. 12 ft deep - in Area B, excavation area is approx. 30 ft by 35 ft and approx. 12 ft deep - in Area C1, excavation area is approx. 45 ft by 45 ft and approx. 12 ft deep - in Area C2, excavation area is approx. 20 ft by 15 ft and approx. 12 ft deep - in Area D, excavation area is approx. 10 ft by 10 ft and approx. 11 ft deep - total of 1,237.79 tons of petroleum contaminated soil was removed - excavation extended down to a depth of approx. 1 ft below the water table - water table was encountered between 10 and 12 ft bg in excavations - endpoint samples were collected from excavation sidewalls and bottoms - all samples found clean, except bottom sample from Area C1 where 514 ppb Xylene found less than ----- - recommends to sample existing monitoring wells along the 11th ave side of the site for four quarters groundwater samples were not collected from excavation. 12/20/11-Hiralkumar Patel. 3:45 PM:- spoke with Jesse about excavation of contaminated material found during test-pit investigation. he mentioned that there is a partial basement in the building and contaminated soil in the basement area will be removed. but there will be no excavation in other areas where contamination found. 3:55 PM:- spoke with Mr. Baranello at Avalonbay. Mr. Baranello is the construction manager at Avalonbay. informed him that based on results of test-pit investigation, the department requires further investigation/remediation at the site. he asked to send letter. Andrew Baranello **construction manager** AvalonBay Communities, Inc. 275 7th Avenue, 25th Floor New York, NY 10001 Ph. (212) 309-1611 email: andrew_baranello@avalonbay.com 12/21/11-Hiralkumar Patel. 1:27 PM:- left message for Jesse. 2:15 PM:- sent email to Jesse and asked him to submit following information/document: - whether shoring removed - # of previously installed wells still at the site - scaled map including existing monitoring wells on property, excavation area with endpoint sample locations (as included in USTs closure report), test-pit sample locations, area of proposed basement excavation and its depth and location of soil borings installed in sep. 2007 2:42 PM:- received email from Jesse. he mentioned that shoring was removed shortly after tanks were pulled. he believes that two monitoring wells remain in the sidewalk of 11th Ave and possibly one more on the northern end of the site along 29th street. he will send scaled site map soon. 12/30/11-Hiralkumar Patel. 1:24 PM:- received email from Jesse including a scaled site map. 01/03/12-Hiralkumar Patel. 2:03 PM:- sent letter to Mr. Bernstein and Mr. Baranello requiring soil/GW delineation at location where contamination found during test pit investigation and quarterly groundwater monitoring/sampling for minimum of one year. asked to submit investigation/first quarterly gw monitoring report by 02/29/12. letter emailed to Mr. Bernstein, Mr. Baranello and Jesse. 3:30 PM:- received email from Jesse requesting meeting to discuss the requirements. 3:35 PM:- spoke with Jesse. he mentioned that based on investigation done in 2007, soil delineation has been completed. informed him that in 2007, Fleming Lee Shue installed boring SB-11 to SB-24 and groundwater contamination was found in SB-24 which is in area between test pits TP-18 and TP-19, but there are no borings in area of TP-20 or TP-21. also, as composite soil samples were collected from a test pit, soil profile and exact location of contamination is not available. informed him that the Department is looking for vertical and horizontal profile of the contamination. informed him that an investigation will be required by upgradient properties, if contamination is coming from off-site. Jesse mentioned that a temporary well should be installed

AVALON WEST (Continued)

S108636200

as the wells will be destroyed during construction. informed him that the department may require additional rounds of groundwater sampling, so if they can install temporary wells with proper screen depth which allows survey and resampling, the department may agree with that. Jesse will talk to their client and call back. while reviewing the scaled site map with all boring/well locations, that Jesse sent on 12/30/11, found that soil borings/well points SB-1 through SB-10 were installed on lot 9 and 18 during 2007 investigation. 3:57 PM:- spoke with Jesse again and asked him to submit complete data for investigation done on lot 9 and 18. 4:22 PM:- sent email to Jesse and asked him to submit results of all environmental investigations done at the site (including all lots). email copied to Mr. Bernstein and Mr. Baranello. 4:24 PM:- received email from Jesse including copy of Remedial Investigation Report which includes details about borings SB-1 through SB-10. abstract: - the site will be developed with two connected buildings: building 1 will be a 27-story tower along 11th Ave and building 2 will be a 13-story building on the northern side of W 28th Street - it will be residential buildings with 678 apartment homes - rentable retail space will be available on the first floor - upto 400 below-grade parking spaces will be present in the cellar - total of twenty-four (24) soil borings (SB-1 through SB-24) were installed to depths ranging from 3 ft bg to 20 ft bg - with exception of boring SB-8, two soil samples were collected from each boring: one sample at the surface between grade and 2 ft bg and one sample based on field observations (at the high PID or directly above groundwater interface or at refusal) - refusal was encountered before groundwater in borings SB-2 (at 7 ft bg), SB-4 (at 8 ft bg) and SB-8 (within 1 ft bg) - groundwater samples were collected via installing a one-inch temporary wells at borings SB-3, SB-6, SB-7, SB-9, SB-10, SB-11, SB-12, SB-14, SB-18, SB-19, SB-20 and SB-24 - groundwater found between 6 and 14 ft bg - found strong petroleum odors and high PID readings found in borings SB-9 (155 ppm at 7 ft bg), SB-12 (250 ppm at 14 ft bg), SB-16 (from 5 to 8 ft bg) and SB-18 (from 4 to 8 ft bg) less than ----- - observed petroleum-contaminated soil and groundwater (slight to strong petroleum odors at water table; slight sheen on groundwater sample) associated with three 550 gal USTs that are located in the southeastern section of the parking lot fronting 11th ave - found only Xylene (465 ppb at 14-16 ft in SB-12 and 10,000 ppb at 9-11 ft in SB-16) and Ethylbenzene (3,440 ppb at 9-11 ft in SB-16) in soil samples less than ----- - found petroleum and chlorinated compounds in groundwater groundwater analyticals:

Chloride-----10 discussed with DEC Jane regarding
chlorinated compounds found in groundwater samples. DEC Jane will
send email to DEC Cozzy. discussed with DEC Austin. after reviewing
data, Austin asked for resampling of groundwater in the area where
petroleum and chlorinated solvent contamination found. 3:51 PM:-
spoke with Jesse and informed him that the department requires
groundwater investigation in Lot 18 also due to chlorinated solvent
contamination. Jesse mentioned that there will be an active SSDS and
vapor barrier at the site. he will talk to his supervisor and will
call back. 4:13 PM:- received call from Arnie Fleming and Jesse. Mr.
Fleming mentioned that chlorinated solvent contamination has been
found on other sites in neighbourhood, as they worked on multiple
projects in area. Mr. Fleming suspects Evan Auto Inc. (located at 319
10th Ave, Manhattan) as the source of chlorinated solvent
contamination. Mr. Fleming mentioned that construction at the site
will start in approximately two weeks so permanent wells are not
possible. Mr. Fleming proposed groundwater investigation via
geoprobes. discussed with DEC Austin. he agreed with the proposal of
groundwater sampling via geoprobes. 4:42 PM:- spoke with Jesse and
Mr. Fleming and informed them that temporary well points are fine for
required groundwater investigation along the northern and eastern
property line (and also inside the property, if needed) where
petroleum/chlorinated contamination was found. Jesse will send a site
map with proposed geoprobe locations. 01/05/12-Hiralkumar Patel. 1:31
PM:- due to findings of chlorinated solvent contamination, sent email
to DEC Jane with site history and a site map (including sampling
results). email copied to DEC Austin and DEC Vought. 3:30 PM:-
visited sites on Block 700. also reviewed available tax map, NYC DOB
records, DEC PBS and Spills databases and found following: - there
are total of 26 lots (1, 9, 18, 27, 29, 30, 31, 32, 34, 36, 38, 40,
42, 44, 45, 47, 48, 49, 53, 54, 55, 56, 57, 59, 60 and 61) on Block
700 - Lots 1, 9 and 18 will be developed by Avalon Bay - total of 15
lots (27, 42, 44, 45, 47, 48, 49, 53, 54, 55, 56, 57, 59, 60 and 61)
have common boundaries with the lots that will be developed by Avalon
Bay - total of seven open/close spill numbers found on Block 700:
9811167 for Lot 27, 0700172 for Lots 32/34, 0701228/0702824 for Lot
36 and 9008960/0307633/0408382 for Lots 48/49 - total of four PBS
records found on Block 700: 2-350281 for Lots 1/9/18 (sixteen 550 gal
USTs removed), 2-611326 for Lot 32 (three 275 gal waste oil ASTs
in-service), 2-089559 for Lots 48/49 (one 4,000 gal gasoline UST
removed in Oct. 2003, one 2,000 gal #2 oil UST closed-in-place in
Feb. 2001, one 500 gal gasoline UST removed in Oct. 2003) and
2-611575 for Lot 60 (270 gal waste oil AST in-service) during
subsurface investigation on Avalon Bay property in 2007, petroleum
contamination was found in soil (at the groundwater interface in
smear zone) and groundwater samples in the northeastern corner of Lot
1 and along northern line of western half of Lot 9. this
contamination is southwest of the possible source at 524 W 29th

Street (Lots 48/49) (spill #: 0307633, DEC Manager: Andre Obligado). Lots 48 and 49 are owned by same company. both lots are leased by Sean Kelly Gallary. spoke with Sean Kelly (212-239-1181) at Sean Kelly Gallary. he mentioned that after leasing both lots, they divided lot 49 in two sections and then sub-leased the eastern section of Lot 49 and entire lot 48 to Peter Blum Gallary. Mr. Kelly mentioned that the former gasoline tanks and associated excavation area was located under the eastern section of Lot 49. spoke with David Blum (212-244-6055) at Peter Blum Gallary. David mentioned that there are some monitoring wells installed on the property, but those wells are covered under the floor. there is an active remediation system on-site. during visit, found three monitoring wells on sidewalk, in front of Lots 48/49 (one to the west of entrance to Sean Kelly Gallary, one at the junction of two galleries and one at the eastern end of Peter Blum Gallary). Victor At West 29, LLC. **owner of Lots 48/49** c/o Victor Homes 3349 Highway 138, Building C Wall, NJ 07719 during subsurface investigation on Avalon Bay property in 2007, chlorinated solvent contamination was found in groundwater samples collected from Lot 9 (eastern half) and Lot 18. while searching for possible source, found an open spill number (0700172, DEC Manager: Ryan Piper) for Lot 32 which is occupied by Evan Auto Inc. the spill #: 0700172 was reported on 04/05/2007 as contaminated soil and groundwater was found on four lots (27, 32, 34 and 38) during subsurface investigation as part of proposed redevelopment. during this investigation, heavy PCE contamination (40,100 ppb) was found in soil from 0-2 ft bg. also, chlorinated solvent contamination found in groundwater samples. according to the site investigation report dated 12/27/2007: - Lot 27 (507-515 W 28th Street) is developed with a one-story (no basement) nightclub identified as Mystic - Lot 32 (319-321 10th Ave) is developed with a one-story (with basement) auto repair shop known as Evan Auto. basement used for storage - Lot 34 (323-325 10th Ave) is developed as a surface parking lot and is adjacent to the auto repair shop - Lot 38 (504-506 W 29th Street) is part of the auto repair shop and is located beneath the High Line (former elevated railroad tracks) Kadima Tenth Avenue SPE LLC. **owner of Lot 27** Maestro West Chelsea SPE LLC. **owner of Lots 32, 34 & 38** 319 10th Avenue New York, NY 10001 Attn.: Abraham Heby Ph. (212) 265-3088 (917) 597-5371 01/06/12-Hiralkumar Patel. 2:20 PM:- received email from Jesse including a map with location of three proposed temporary well points: one in the northeastern corner of Lot 18, one in southeastern corner of Lot 9 and one in northwestern corner of Lot 9. Jesse mentioned that they will screen soils from these locations and sample groundwater from six temporary well points and three permanent wells on-site. samples will be analysed for VOCs only. based on historical data, need another five temporary well points: one in the area of SB-12/TP-26, one in the area of SB-24, one closer to TP-21 along norther property line (right under the Lot 49), one in the area of TP-23 and one in the area of SB-7. also need to move one well point in the area of TP-20. 2:30 PM:- spoke with Jesse. informed him that based on findings of petroleum and chlorinated solvent contamination in 2007, the Department requires additional temporary wells. 2:36 PM:- sent email to Jesse including a map with changes in proposed temporary well point locations. 3:14 PM:- received call from Jesse. as the area around SB-12/TP-26 will be excavated down to 12-13 ft bg as part of basement, Jesse asked to eliminate well point in that area. informed Jesse that if the Department receives written confirmation (email)

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

AVALON WEST (Continued)

S108636200

from developer that basement area will be excavated down to 13 ft bg, then no need for well point in the area of SB-12/TP-26. Jesse also asked to remove one well point along the norther property line. informed him that the five well points along northern line is necessary to confirm the previous petroleum/chlorinated solvent data. also asked him to sample soil with high PID/odors/staining. he will talk to developer and will call back. informed him that all samples must be analyzed via 8260 full list. 3:42 PM:- sent email to DEC Jane including a site map with results of soil and groundwater samples from Evan Auto Inc. site. email copied to DEC Austin, DEC Vought and DEC Piper. 01/10/12-Hiralkumar Patel. 3:12 PM:- received email from Jesse including a work plan with proposed well locations. he proposed to install seven temporary well points on lot 9 and 18. groundwater samples from temporary well points and permemanent wells on 11th ave sidewalk will be analyzed for target compound list. well points will be installed tomorrow. 01/11/12-Hiralkumar Patel. 10:41 AM:- sent email to Jesse. informed him that analysis must include chlorinated compounds. also informed him that soil must be analyzed if shows any PID/odors/stains etc. email copied to Mr. Baranello, Jon Vogel (jon_vogel@AvalonBay.Com) and Marjorie Nesbitt (menesbitt@eightpointsam.com). 01/13/12-Hiralkumar Patel. 10:55 AM:- received email from Jesse. they installed temorary well points. they also sampled two wells MW-2 and MW-6. well MW-5 could not be located and may have been destroyed. contaminated soils were identified in two borings on north side of lot 9 at depth of 10-11 ft (most likely part of smear zone) and soil samples was collected from both borings. 01/26/12-Hiralkumar Patel. DEC Austin informed that DEC Mike MacCabe in Albany is handling a plume trackdown in area and will work on chlorinated solvent issue. 01/27/12-Hiralkumar Patel. 2:54 PM:- sent email to Jesse inquiring upates. 3:14 PM:- received email from Jesse. he received data this afternoon and will submit report soon. 02/13/12-Hiralkumar Patel. 2:08 PM:- spoke with Jesse. he will submit report in this week. 02/17/12-Hiralkumar Patel. received email from Jesse (at 12:00 PM on 02/16/12) including report. abstract: - installed seven 1-inch temporary monitoring wells on lots 9 an 18, with 10 ft of screen - soils were screened for evidence of impacts using visual or olfactory means and a PID - two borings/temporary well locations tMW-1 and tMW-3, exhibited evidence of petroleum impacts in soils from approx. 10 ft bg extending below the soil-water interface at approx. 12 ft bg - soil sample was collected from between 10 to 11 ft in both borings - groundwater samples were collected from all temporary wells and both existing permanent wells (MW-2 and MW-6) - samples were analyzed for VOCs only soil analyticals: -----tMW-1-----tMW-3

02/22/12-Hiralkumar Patel. 3:24 PM:- received email from Jesse. they found another 550 gal UST. tank was filled with liquid and was encased in concrete. will collect endpoint samples after removing tank. 3:25 PM:- sent email to Jesse and asked to send site map with tank location. 3:43 PM:- received email from Jesse with site map. tank was found along southern property line on lot 9.
02/28/12-Hiralkumar Patel. discussed with DEC Austin. based on available information, he approved case transfer to remediation. informed him that DEC MacCabe is handling chlorinated solvent issue in area. 11:33 AM:- spoke with DEC MacCabe and informed him about the current sampling data. he has added this site into plume trackdown (# 231078). he asked to send lab data. 11:40 AM:- sent email to DEC MacCabe including site maps for the subject site and Evan Auto. 12:41 PM:- sent email to DEC Austin requesting case transfer.
03/13/12-Hiralkumar Patel. 3:57 PM:- received email from DEC Austin approving case transfer. 03/16/12-Hiralkumar Patel. case assigned to DEC Hussein. *-** e designation at site** 4/2/12 - Obligado - Spill transferred to Obligado from Patel. 4/3/12 - Obligado - I reviewed the ground water investigation report. According to the report, petroleum contamination on north portion of Block 9 and solventcontamination on Lot 18 is coming from off-site. However, no ground water contour map showing ground water flow direction was provided. I sent a letter disapproving of report and requiring a hydrogeologic investigation to confirm ground water flow direction and a geophysical investigaiton to investigate source of contamination on north side of lot 9. I also required a new RAWP to address new contamination found on Lot 9 and Lot 18. (previous RAWP only covered Lot 1) I sent a Stipulation Agreement and CAP to the following to be signed and returned by April 24, 2012: Property owner: East Side 11th and 8th LLC, c/o Marjorie E. Nesbitt 445 Park Avenue 10th Floor New York, New York 10022 and developer: Mr. Marty Piazzola Avalon West Chelsea 275 Seventh Avenue, 25th Floor New York, NY 10001 Stips sent via certified mail, certified receipt #s7010 0290 0000 9758 2612 and 7010 0290 0000 9758 2585 4/16/12 - Obligado - DEC met with Avalon Bay, FLS, and AKRF. 4/17/12 - Obligado - Sent a meeting summary email to all parties: This email summarizes our discussions in yesterday's meeting: Participants: DEC: Andre Obligado, Hassan Hussein Avalon Bay - Steven Spiro, Jon Vogel Fleming Lee Shue - Arnie Fleming, Jesse Mausner AKRF - Mark Gockel - Avalon Bay is holding a 99 year lease on the property. AKRF is the on-site consultant responsible for field oversight. Fleming Lee Shue provides general environmental consulting. - The Development plans were discussed. Development is progressing quite rapidly. Steel sheeting is being installed to depth of 15 to 20 ft to excavate for a basement on the south portion of the site. Depth of the basement floor will be

S108636200

about 12 feet. Contamination found in vicinity of test pit 26 will be removed during basement excavation. Excavation will require some dewatering and groundwater treatment. A water proofing barrier will be installed under basement. All other areas will have an SSDS system and vapor barrier. - DEC McCabe in Albany is the manager of the up-gradient chlorinated p-site. In my discussions with Mr. McCabe, the source has not been confirmed yet. - The Department is in receipt of the geophysical survey, so this item from the April 4th letter is no longer required by the Department. - Since there were multiple potential on-site sources (17 USTs removed), no off-site source has been positively identified, and ground water flow direction has not been confirmed, the Department at the present time considers Avalon to be responsible for the clean-up of north side of Lot 9. - A hydrogeologic investigation will be performed to confirm the groundwater flow direction. FLS/AKRF will gauge and survey one of the existing off-site monitoring wells along 29th ave and add it to the existing 2 wells to determine groundwater flow direction. FLS/AKRF may install one monitoring well on-site to aid in the hydrogeologic investigation. FLS/AKRF will proceed quickly due to the installation of the hydraulic sheeting which may influence the groundwater flow determination. FLS will inspect adjacent properties to north to try to identify evidence of potential sources such as vent pipes. - Potential remedies for contamination of the gasoline impacted soil and groundwater along the north side of Lot 9 were discussed. Due to structural concerns in this area, and short time frame before slab construction, chemical oxidation was determined to be the most promising remedy. FLS suggested pulsed injection to aid in oxidant dispersion due to tight river sediments. - Avalon is considering proceeding remediation of north side of Lot 9 regardless of source determination. If it is determined the source is off-site, Avalon would seek reimbursement from the Spill Fund. If source is determined to be off-site and Avalon chooses not to remediate this area, than the Department will consider a state-funded cleanup in this portion of the site. - The Department will hold off on the requirement to sign the Stipulation Agreement while the hydrogeologic investigation proceeds. - DEC will schedule a site visit in near future. 4/24/12 - obligado - I emailed Jesse Mausner to inquire about the gw investigation. Response from Jesse Hi Andre - We have a letter report prepared that is being reviewed by the client. We hope to send it over within the next day or two. 5/8/12 - Obligado - Emailed Jesse Mausner to inquire about gw flow investigation. Still has not been submitted. 5/11/12 - Obligado - I received Hydrogeologic and forensic report. 5/14/12 - Obligado - The report includes a ground water contour map showing flow to the west/northwest. The report claims 282 11th avenue is not the source of contamination on the north side of Lot 9. They provided a forensic analysis using BTEX ratios and comparing the BTEX compounds in the source areas to those found on Lot 9. The report points to auto repair operations on 29th street as possible sources as well as the former remediation site at 524 w. 29th st. The report claims the Site didn't have historic auto repair operations. 5/14/12 - Obligado - I emailed Steve Panter and requested historical sanborn maps of the block, which he provided. 5/15/12 - Obligado - I called Steve Panter of FLS and pointed out to him that the site did in fact have multiple auto repair operations. He revised the report and resubmitted it. Obligado - I emailed Steve requesting boring logs for TMW1, TMW3, TMW4, SB24 and SB9 in Lot 9 to see if there was any impact identified above the water table which could

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

AVALON WEST (Continued)

S108636200

indicate an on-site source in the north side of Lot 9/18. I also asked for a revised contour map because the elevations in the table included in the map did not correspond with the elevations in the contour map. Jesse Mausner emailed me a new contour map. He explained the actual contour map was correct but the elevations in the table were not correct. The revised table had the correct elevations. I 5/18/12 - Obligado - I went to the site to look for potential off-site sources. I went to 548 W. 29th Street and asked the mechanic there if they had any oil tanks. He showed me an oil tank in the back of the station. The 275 gallon waste oil tank had no label and had secondary containment had about an inch of oil stained sand. There was evidence of multiple spills on the concrete as well as a fresh spill from a transmission removal. I spoke to the mechanic, who says the waste oil company comes once a month to empty the waste oil tank. During that process they lift up the tank and clean the oil soaked sand from the secondary containment. I pointed out the poor housekeeping issues to the manager, Zoar (718-869-4550, who showed up shortly after. They applied speedy dry sand to the spill areas. I also noticed manhole which may be an abandoned tank. This manhole coincides with the location of a 550 gallon gasoline UST from historical sanborn maps. The manhole also is in the vicinity of the vent pipe on the roof. The manager did not know anything about the manhole. Due to apparent PBS issues with waste oil tank and possible abandoned tank, I contacted Moses Ajuko to perform a PBS inspection of the facility. PBS #2-611575, owner: Raba H. Abramov (212) 596 3673. Moses issued PBS violations. It is not clear whether this site is a source for contamination on 282 11th ave. Due to poor housekeeping, stained concrete indicating historical spills, and abandoned gasoline tank it is a possible source. Additional investigation will be necessary. While waiting for Moses to arrive, I spoke to the owner of 542 west 29th Street, which is also listed as an auto repair facility on 1994 sanborn. The site is now a fish packing warehouse. According to the property owner, John McGuire (212)-268-9169, they purchased the site in 1995. They don't have any oil storage since 1995 and he states there are no tanks on the site. He said prior to the purchase a site assessment was performed. I asked if I could get a copy of that assessment and he said the bank probably has it. I will follow up. He provided his contact information (212)-268-9169. I then when to visit the 282 11th avenue construction site. At the site I met Jeff of AKRF who is the on-site environmental consultant. We performed a site walk through. Development is in progress. Steel sheeting has been installed around the basement area of the future building. Concrete pile caps have been installed on east side of site. Jeff mentioned that a test pit was performed on 2/24/12 north of the sheeting and south of 542 West 29th street building. According to Jeff, contaminated soil with strong odors encountered at approximately 4 ft bgs. They continued excavating until 8 feet and very strong odors forced them to stop test pitting due to lack of air respirators and backfill. Jeff said odors were noticeable from approximately 100 feet away. I asked him if they reached the water table during the test pit. He replied that they did not. I asked if they could open a shallow test pit in that area for me. He checked with site foreman. There was equipment in the vicinity of the test pit location that would need to be moved. We agreed to post pone until MOnday. 5/21/12 - Obligado - I received a call from FLS. Due to thunderstorms, test pitting postponed. 5/24/12 - Obligado - I went to the site for test pit. 2 test pits were dug

AVALON WEST (Continued)

S108636200

behind the 548 west 29th street garage. In both test pits, no PID readings or visual evidence of petroleum contamination in the vadose zone. Strong gasoline odors were present in the saturated zone. This supports FLS assertion that contamination in the north portion of the site is from an off-site source and migrated to the site via ground water. I reviewed the ground water monitoring data for the 282 11th avenue site. No quarterly sampling was performed, only gauging. MW5 was installed but never sampled. I sent an email to Jesse Please perform another round of ground water sampling and collect a ground water sample from all existing monitoring wells including any newly installed wells for the hydrogeologic investigation and submit the results within 30 days. He responded back that they sampled MW6 and MW2 in January and they were ND for all compounds. He requested only to sample existing MW5 and newly installed MW7. I concurred. 6/26/12 - Obligado - I received an email from Jimit Shah at DEP OER. : As discussed earlier today, spill-like conditions were encountered at the above referenced site (staining, elevated PID hits, petroleum-like odor, etc) on March 2nd and March 13th 2012 within the south-central portion of the site (within the TP-21 and TP-36 regions: see the attached site map). These conditions are attributed by one of the project's two environmental consultant (Fleming-Lee Shue- FLS) to a 550 gallon UST encountered within the vicinity on February 22, 2012, and removed from the site on February 28, 2012. When clarification was requested from FLS as to whether or not a spill number was called in after the UST and surrounding petroleum-impacted soils were discovered, OER was informed that DEC was made aware of the situation, and that a new number was not called in as this finding is linked to current spill number(s) on-site (06-03351 and 07-00587). I responded that I was not aware of the spill like conditions associated with this tank. I requested the daily reports from OER. Jimit provided the daily reports. I sent an email to Jesse Mausner of FLS inquiring if they collected endpoint samples from the 2/28/12 tank removal and inquired as to the tank contents. Jesse responded they did collect endpoint samples and provided the analytical reports, which showed exceedences of CP51 soil clean-up levels in 3 of 5 soil samples. The UST bottom sample 7ft was the most contaminated with 7 exceednces of CP-51 in ug/kg: ethylbenzene: 19200 isopropybenzene : 4680 n-propylbenzene: 13100 1,2,4-trimethylbenzene: 87,100 1,3,5 trimethylbenzene: 21,300 m,p - xylene: 50,100 o-xylene: 6890 He also provided a tank removal affidavit which said the tank was filled with water and gas. I requested a site map with UST and sample locations, the AKRF field notes, and photographs as soon as possible. Jesse provided the site map and said they would provide additional information shortly. 6/28/12 - I sent a letter to Avalon Chelsea West cc to Fleming Lee Shue which can be summarized as follows 1) The presence of contaminated soil under UST #17 on Lot 9 signified a discharge from that tank and should have been reported to the DEC within 2 hours as per NYCRR Part 613.8. 2) This data should have been included and considered in the forensic analysis submitted 5/15/12 which investigate potential sources of the contamination found on north side of that lot. The Department rejects the Forensic Report as it was based on incomplete data. 3) The leaking UST on Lot 9 is the probable source for the contamination on north side of Lot 9. A RAWP for the remediation of this area must be submitted prior to foundation slab construction. 4) A Stipulation Agreement is attached to the letter which must be signed by 7/6/12 or case would be

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

AVALON WEST (Continued)

S108636200

referred for enforcement. 5) The Stip includes a CAP which requires submission of a RAWP within 30 days to remediate the entire site. Letter sent via email. 7/12/12 - Obligado - DER Staff met with the developer and consultants. The developer agreed to do a soil boring investigation to confirm whether on-site tanks are source of the petroleum contamination on the north side of the property. Fleming Lee Shue plans to submit a RAWP for chemical oxidation injection system beneath building on the north side of the property. The developer submitted geotechnical reports which they say support their claim that excavation is not feasible. DER Staff forwarded the reports to technical support staff in Central Office. DER stated no objection to continued construction on condition that contaminated area north of the sheeting is accessible for additional investigation and remediation. 7/17/12, - Obligado - DER Staff was involved in a conference call between OER, Fleming Lee Shue (FLS), and AKRF. FLS and AKRF will provide daily reports to the DEC and OER on site activities. DEC informed FLS that the Department is only to be notified of spill in case of discovery of new source such as a tank, leaking drum, etc. In the call, AKRF notified DEC that a crushed drum was discovered during excavation which contained about 5 gallons of oil. DEC requested identification of product. 7/27/12 - Obligado - Excavation for the building basement is on-going at the site. Slab construction on the east and north portions of the site is on-going. Central Office Technical staff reviewed a Geotechnical Report submitted by Muesler Rutledge regarding feasibility of excavation north of the sheeting adjacent to buildings. CO technical staff agreed with the conclusions in the report, that excavation north of the sheeting was not recommended. A letter report documenting soil sampling north of the basement sheeting was submitted by FLS to the Department. 8/22/12 - Obligado - DER Staff reviewed the results of soil and ground water investigation along the sheeting line outside the proposed area of excavation which revealed benzene concentrations in ground water in excess of 6000 ug/L down gradient of the former USTs. The investigation confirms the on-site USTs are a source of the petroleum contamination in ground water. DER sent another Stipulation Agreement to the RP for signature within 15 days with the requirement to submit a Remedial Action Plan to remediate the entire site. 9/17/12 - Obligado - DER Staff received a fully executed Stipulation Agreement. According to the Corrective Action Plan, the due date for an amended RAP is 9/24/12. 10/5/12 - Obligado - DER Staff completed its review of a Revised Remedial Action Work Plan. DER staff disapproved of the plan and sent a comment letter to Avalon Bay with the requirement to submit a revised plan within 15 days 10/15/12 - Obligado - DER Staff met with the RP and their consultants to discuss the Department concerns. Based on the discussions, Avalon will submit a revised RAWP. 11/5/12 - Obligado - DER approved a RAP for chemical oxidation. 1/30/13 - Obligado - DER Staff met contractors and consultants on-site to inspect the progress of remediation. The foundation slab on the south portion of the site is nearly complete. The midrise building is under construction and at the 4th story. We did a walk through of the remediation area. The consultants showed me the injection and monitoring wells that were installed. They are having difficulties due to congestion with all the construction. They need to reinstall wells that were destroyed and install one more well in a location that was not accessible. They anticipate injection in February. 9/12/13 - Obligado - Update from Steve Panter - As you know, we completed the chemical treatment on May 16 and were

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

AVALON WEST (Continued)

S108636200

waiting until the oxidant fully reacted. Recent monitoring (no sampling, groundwater parameters only) has shown that the oxidation reaction is complete. Consequently, we plan to complete the post-treatment soil and groundwater sampling in the next one to three weeks. MW-7 and MW-3 were destroyed due to construction. We plan to sample groundwater and use one of the injection wells (IW-3 or IW-5) in lieu of MW-3. MW-7 and MW-3 will be re-installed (MW-3 if possible) and sampled during quarterly groundwater sampling. Please contact me if you have any questions or comments. 10/11/13 - Obligado

- Update from Steve Panter: We are planning to collect the post-treatment groundwater samples next Tuesday and Wednesday of next week. On Thursday and Friday, we plan to re-install the two monitoring wells damaged during construction, MW-3 and MW-7. We will also collect the post-treatment soil samples at that time (in the two soil ports) and seal the three injection wells with leaders that extend to the bike room. We plan to re-install both wells with flush-mount casings. Re-installation of MW-7 requires a smaller rig that can fit between the corridor walls that now frame that location. This limits the drill rig's power, and means we may have difficulty getting to the desired depth. We will attempt a 1-inch-diameter well in this location with a 10-ft pre-pack well screen to increase the chance of getting to depth. If not successful, we may have to install a 1-inch-diameter well with no sand pack. The attached photo shows the location of MW-7 as it appears now. MW-7 will go near the cart in the back of the photo. Bear in mind the schedule is subject to change due to ongoing fireproofing. 1/16/14 - Obligado - I reviewed the Remedial Action Report, submitted by Steve Panter. The report documents the in situ chemical oxidation. Treatment began on May 9, 2013 and complete on May 16. In total 35,432 gallons of oxidant mixture as injected through 5 injection wells. The oxidant mixture consisted of 72,732 lbs of sodium persulfate and 33,652 lbs of 100% sodium hydroxide solution to activate the persulfate. Following treatment, soil samples were collected from pre-installed sample ports. All soil samples met CP51 soil cleanup objectives. Following treatment, groundwater impacts above TOGs still remain. Maximum BTEX is 1185 ug/L in MW4. The report requests spill closure. I called Steve Panter and requested continued groundwater monitoring for at least 2 additional quarters. 4/7/14 - Obligado - I reviewed the Quarterly monitoring report. BTEX concentrations continue to decrease as a result of remedial actions. According to the report, benzene concentration decreased more than 96 percent reduction within the treatment area. Groundwater conditions remain favorable for continued microbial degradation given the available sulfate, favorable ORP, pH, and increasing dissolved oxygen levels. The number of wells where concentrations reached non-detect levels increased by three in the current period. According to Steve Panter, the next sampling event is May 5. 6/18/20 - Obligado - I reviewed the May 29 2014 quarterly sampling report. The report documents post remedial groundwater conditions 12 months after oxidant injections. Significant BTEX reductions have occurred. Reductions in total BTEX in ug/L are as follows: MW4: Pre-treatment 3976, Post treatment - 371, MW3: Pre-treatment 12,244, Post treatment 565 MW10: Pre-treatment 236, Post treatment 65 MW1: Pre-treatment 4794, Post treatment 46.3 According to the report, MNA monitoring parameters document dissolved oxygen levels have increased 7 fold in the treatment area. According to the report, the weight-of-evidence for geochemical parameters suggests a shift in favor of increasing aerobic degradation. This

spill is closed based on: 1) Significant reductions in groundwater contamination 2) Following treatment, soil samples were collected from pre-installed sample ports. All soil samples met CP51 soil cleanup objectives. 3) Removal of 17 USTs 4) REmoval of 1,779.8 tons petroleum-contaminated soils. 5) Installation of a vapor barrier and SSDS as per NYC OER requirements. 6) MNA monitoring demonstrate conditions are favorable to continued attenuation, and decreasing trends are expected to continue 7) Spill has been remediated to the extent feasible 8) No apparent off-site migration"
 Remarks: "CONTAMINATION FOUND WHILE BORING; BELIEVE A TANK IS IN THE AREA; NOT YET CLEANED;"

DEC Memo: "7/14/06 - Raphael Ketani. The contaminated soil was found on 6/27. I tried calling Jeff Bohlen of Envirotract (631) 471-1500, but could only leave a message. 7/18/06 - Raphael Ketani. I could only leave a voice message. 7/19/06 - Raphael Ketani. Jeff of Envirotrak called to say that they are preparing the phase I and II report for DEC. There is a tank field with 8 USTs and another with 3 USTs. There is soil and groundwater contamination. They are negotiating with the owner to remove the tanks. However, one set of tanks can't be removed and will be abandoned in place as it is under the lift that brings the cars to the upper floors of the garage. 8/7/06 - Raphael Ketani. Today, I received the July 21, 2006 Phase II Environmental Site Assessment Report from Envirotrac (631) 471-1500. Soil samples with exceedences of the TAGM are GP-1 (SVOCs only), and GP-2 (total xylenes). Groundwater samples with TAGM exceedences are GP-4 (many VOCs), GP-5 (many VOCs), and GW-1 (only MTBE). They recommend removing the 8 USTs, the soil, and the groundwater. The report didn't have a site map showing where the borings were done. They, also, don't mention whether they checked the areas of the remote fills or the pump islands for contamination. They need to do borings and sampling in these areas. They need to revise their PBS record if they remove or abandon in place the tanks. As the phase II investigation found gasoline contamination of groundwater, I am transferring the case to Koon Tang. 8/21/06 - Mr. Jeff Bohlen from Envirotra, 613-471-1500. They will tell the RP that DEC requires full delineation of contaminated soil and GW. The source of the spill has not been characterized. He mentioned that teh tanks are still in the ground, abandoned with water/oil mixture in them. Don't know if there is contaminated soil around the tank or pipings acting as a source to contaminate the GW. Told Envirotra to send in a RI report so I can prioritize the spill. - KST 10/18/06 - (KST) reviewed the Phase 2 and

S108057815

provided the following comments to ENvirotrac. Comments on the Phase 2 Report: 1) The write-up should provide more detailed discussion on the results. Need to know the depth of each soil samples, depth to groundwater, some discussion of the site geology. Are the USTs actively used? If not, what happened to the dispensers and fill port? 2) Data gap at the fuel dispensers and along the fill port and fill lines of the USTs. Should have taken soil and groundwater samples along these possible release points. 3) Detection limits (DL) should have been reported on the data summary table. Without the DL, DEC can not tell if the non-detected (ND) is below the regulatory guidance numbers or the lab instrument was masked to see the contamination. Looks like many of the soil samples could have VOCs over the TAGM numbers based on the lab reported DL. 4) Need boring logs describing the lithology as well as visible/olfactory observation. Based on the data in the report, the level of contamination is low and your recommendation of USTs removal and end-point samples is an acceptable means to ascertain if further remedial work is needed. Pls revise the report to address all the comments above and proceed with the tanks removal. 09/11/07-Hiralkumar Patel. another spill reported at site. case closed. will be investigated under new spill number. refer spill #: 0700587."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 2/7/2012 - changed Lead DEC from Joe O'Connell to JFeng. Toni Watts is the NYCT case manager. Her phone is (646) 252-5939. Her e-mail is Toni.Watts@nyct.com. 2/28/13 - Raphael Ketani. The February 2013 NYCT monthly progress meeting took place today. As part of this meeting, Ms. Watts discussed the 28th Street and 11th Avenue spill. She stated that she tried to research this spill in the NYCT records, but could not find any documentation. So it is unclear where the contamination was found that generated the spill reporting. Later, I searched the UIS database and the paper files in storage downstairs, but I could not find any records. I tried to contact the person who had called in the spill back in 2003, Richard Wetherbee, but the phone number was not in service. 3/27/13 - Raphael Ketani. I investigated whether there had been any spills near the site in the past. I discovered that a Con Ed storage yard at 281 11th Avenue had over 24 spills. These were mostly hydraulic fluid spills. All of the cases had been closed. There is also another spill site, Avalon West Chelsea LLC at 282 11th Avenue. This was some type of taxi or other vehicle service station. It is still an active case and the site is being developed. The responsible parties are remediating the site. The spill that caused the contaminated soil could have come from either of these two sites. However, the exact location of the soil boring is still unknown. As such, I am closing this spill case as there is active environmental monitoring taking place at the Avalon site. So there is oversight coverage. The closure will be effective today. "
Remarks: "Soil contamination discovered during boaring at above location."

2-GALLONS OF TRANSFORMER OIL ONTO FLOOR OF FLATBED OF TRUCK. NO WATERWAYS OR SEWER EFFECTED. SAMPLE TAKEN AND CLEAN UP IS IN PROGRESS. 12/06/98 12:30hrs - Update to spill - In accordance with I&A OS, K. Schnorr #64555, no sample was taken today. Oil spill is from PALL unit and therefore, from last unit (after recycling) that the PALL was used for. Paged ERT - no answer. 12/06/98 13:05hrs - Contacted ERT (Wallace #84274)- need more information about spill - Did oil spill only on truck or also on pavement? 12/06/98 13:10hrs I&A Splicer, M. Reiter #27277 reports spill was on truck 40751 (approx 1/2 gallon) and on pavement at tail gate of truck (approx 1 1/2 gallons). Only historical data available is hard copy displaying 182PPM from before last transformer was recycled - which is V5147 at 56 Hudson St. However, PCB count after recycling should be less. New sample was taken on 11/28/98 after V5147 was recycled. The PCB count on the Nov 28 sample should be the same as for today's spill as it is the same oil. The Nov 28, 1998 sample is waiting for results to be posted. 12/06/98 13:20hrs I&A OS K. Schnorr reports spill was cleaned up 12/06/98 @ 08:15hrs. I&A Cleanup crew was M. Reiter #27277 and J. Jones #48534. Area on truck and pavement was double washed with slix. Original hard copy of 182 PPM was used with 1 barrel of assumed >49PPM waste stream generated and stored in PCB temporary storage area at W. 28 St. Update to waste stream and this E2MIS report pending sample results of Nov 28, 1998 (from V5147 @ 56 Hudson) 12/06/98 13:25hrs ERT phone busy 12/06/98 13:35hrs ERT (Wallace #84274) updated. Cannot take additional sample from PALL unit as requested by ERT. 12/06/98 13:45hrs Chem lab contacted and requested to upgrade status of 11/28/98 sample of vault 5147 56 Hudson St to Emergency sample. Chem lab supervisor, J. Hendrick will look into matter 12/06/98 13:50hrs ERT (Wallace #84274) updated 12/06/98 14:20hrs Astoria Chem Lab supervisor, J. Hendricks reports 11/28/98 sample for V5147 @ 56 Hudson St cannot be found. 12/06/98 15:05 CIG, E. Rowland #43784 updated....A. Johnon #81226 12/10/98 18:00PM No sample results can be found by district I&A or Astoria Lab. Told information to ERT (W. Wallace #84274). PCB count of 182PPM as found on original hard copy (prior to recycling) is acceptable limits to close out job. Cleanup on 12/6/98 was in accordance with 182 PPM even though count is probably lower. Job can be closed out. E2MIS 121761 THIS INCIDENT REPLACES INCIDENT #121751 WHICH WAS ENTERED INTO THE WRONG SITE (MEDS) 12/06/98 08:00 HRS KENNETH SCHNORR #64555 REPORTS PALL UNIT ON BACK OF TRUCK#40751 LEAKED 2-GALLONS OF TRANSFORMER OIL ONTO FLOOR OF FLATBED. Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Address: 4 IRVING PLACE
Spiller Company: 001
Contact Name: KEVIN MCARDLE
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #146784: 1/17/2003 @ 11:40 At 11:15 Reiter # 27277 of I&A reported to me that while doing switch repairs he discovered in V-853 approx 5 gallons of dielectric fluid in the structure as the result of a Bottom Leak. He was working on Feeder 13M53. The location is at 628 W.28 st & 11 Av. No fire/smoke was involved, no injuries, weather did not contribute, No private property was affected. No substantial cracks observed, no sump verified, no sewer connection as per Conduit plate # 22-C-3. There is Dielectric filled equipment in the structure. The source of the spil is the Tranformer and the cause is a Bottom leak. Environmental tag # 18352 was hung. Two samples for PCB and ID will be taken and courier called for pickup. Chain of Custody # BB 04312 will be used for this incident. Baloneys and absorbent pads placed around the Transformer and contained the spill. The Feeder is being requested taken out of service OOE / 2 to schedule cleanup. Equipment is a Westinghouse year 1961 with Serial # 2200389 with a capacity of 290 gallons and 13 PPM as per Cindy . It is a Class v-4 and 500 KVa. 1/17/2003 @ 12:27 hrs I spoke to Shift Manager M Barry in the Manhattan Control Center and he informed me that as of now due to contingencies on this network, this Feeder 13M53 can not be scheduled at this time to be taken out of service. Analysis indicates the presence of a substance similar to a dielectric fluid. UPDATE 1/17/03 Lab Sequence Number: 03-00483-001 Date Approved: 1/17/2003 E2 Incident Number: 146784 Date Received: 1/17/2003 Chain of Custody ID: BB04312 Date Sampled: 1/17/2003 MATRIX: OIL GRAB LOCATION: 628-58 W.28 ST STRUCTURE: VAULT 853 FEEDER ID: 13M53 EQUIPMENT: TRANSFORMER SERIAL #: QC ID: 06-200301162217 TEST DESCRIPTION RESULT UNIT METHOD Aroclor 1242 < 1.0 ppm EPA 608/8082 Aroclor 1254 < 1.0 ppm EPA 608/8082 Aroclor 1248 < 1.0 ppm EPA 608/8082 Aroclor 1260 11.3 ppm EPA 608/8082 TOTAL PCB 11 ppm Transformer removed and replaced on 4/18/03 Zoeller, 11940 4/17/03 21:20 V. Mirance # 58484 cable/cleanup supervisor called to report that the cleanup was completed at 21:15. All debris & liquid was removed by the flush truck. The structure was double washed with slix & rinsed down with the flush truck. The spill tag # 18352 was removed. The cleanup crew was: J. Bauer # 03431, R. Laroza # 12108, M. Pelusio # 87327, R. Barger # 14903."

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept. 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS 151323 On 12/1/03 at 17:25 W. Zuk # 85848 of W. 28 st transportation reports a spill of gasoline. He states that at 17:15 1 qt. of gasoline spilled from the back of a contractors vehicle (Transclean) onto the ground. This was near a 3' square drain that previously had a baricaides (a board with rubber seal that was provided by Transclean) around it. However about 8 oz has leaked past & into the drain. Additional diapers were put down around the drain. The spill has stopped at this time. He also says that in this 3' drain there is about 60 gallons of water. Wilson Renalds of Clean Harbors will have a truck & crew to drain & clean the liquid that is still in the drain. They should be on location at 8 pm. There was no fire or smoke involved. No private property was affected. No injuries were related to the spill. Weather conditions do not contribute to the hazard of the spill. Update 12/12/03 Cleanup completed by Clean Harbors on 12/01/03 @ 2230."

Remarks: "8 oz of gasoline leaked from a box truck into the sewer but it is now contained and no more is leaking out."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: KEVIN MCGRATH
DEC Memo: "09/23/13-Hiralkumar Patel. alternate address: 526-532 W 28th Street, 525-531 W 27th Street no PBS or other spills found. 10:50 AM:- spoke with Kevin. the site going to be redeveloped with at least 7 story mixed use building with full basement. Kevin mentioned that the existing structure will be demolished and the entire site will be excavated to a depth of 15 ft bg. during Phase I, they noted a 20,000 gal #4 oil tank which was abandoned in-place in late 1940s. during site inspection, they noted covered corner in basement and the tank might be in there. last week, during phase II investigation, they noted contaminated soil in area near the suspected tank location. Kevin mentioned that groundwater underneath the site fluctuates between 9 and 14 ft bg. bedrock found at 21 ft bt. NYC OER is also overseeing the investigation, under e designation. asked Kevin to submit previous environmental reports and property owner/developer's contact information. Kevin mentioned that Phase II report will be submitted by the end of 10/18/13. Kevin McGrath Chazen Companies Ph. (518) 266-7370 email: kmcgrath@chazencompanies.com 12:15 PM:- received email from Kevin including propert owner's contact information. WC 28 Realty LLC. c/o Centaur Properties LLC. 580 5th Avenue, 32nd Floor New York, NY 10036 Attn.: Larry Greenberg Ph. (212) 308-4443 (O) (917) 656-9321 (C) Fax (212) 308-8630 email: larry@centaurproperties.com Kevin mentinoed that based on visual observations, there appears to be a very old petroleum spill along the west side of the property extending from 9-11 feet below grade at the north end to 9-14 feet below grade at the south end. the soils are stained grey, have a faint odor, and register 10-100 ppm on the PID (north to south). water table was at 11 feet below grade at beginning of the investigation and at about 9.5 feet below grade at the end (very heavy rains for two consecutive days). the Remedial Action, which has already been discussed with OER, will consist of the removal of all soils to at least 14 feet below grade to prepare the site for new construction. extensive dewatering of the excavation with pretreatment and disposal to the sewer will be required during construction and should mitigate any residual groundwater impacts. Kevin also submitted Phase I and work plan for Phase II. abstract of Phase I: - propety was constructed as two individual buildings in the late 1800s to 1916 - site was originally built and occupied by E.R. Merrill Spring Company, a manufacturer of automobile springs/parts and parts for Sherman Tanks - historical site uses included a truck

terminal garage, warehouse and foundary, warehouse for storage and construction of theatrical props and scenery and was reportedly used as a studio for filming - from 1998 to 2002 the building was used by the current owner as a warehouse for a packaging supply company - between 2002 and 2003, the owner renovated the structure for use as two night clubs 12/10/13-Hiralkumar Patel. 10:31 AM:- spoke with Kevin regarding Phase II report. he mentioned that a draft report has been submitted to NYC OER for review and comment. once finalized, he will submit copy to DEC also. asked Kevin to submit sample results and site map for review. 12:46 PM:- received email from Kevin including figures, boring logs and data tables. Kevin mentioned that the site has several ft of urban fill material, which is impacted with several heavy metals and PAHs. no evidence of significant petroleum release was detected in the soil, groundwater, or soil-vapor data. redevelopment plans include the excavation and removal of all soil within the property boundary to bedrock and dewatering. reviewed boring logs. found maximum PID of 101 ppm in boring B-8. but no contamination noted in soil samples. well MW-5 installed in boring B-8. no contamination noted in groundwater sample from MW-5 either. based on submitted sample result, no further investigation needed. case closed. 07/25/17-Hiralkumar Patel. 11:39 AM:- DEC Piper forwarded email from Kevin including a report. during site redevelopment, three previously unknown 550 gal USTs were found at the site. one of the former UST was found in poor condition with evidence of petroleum impact to subsurface soil. all soil, and approx. 3-6 ft of bedrock, within property footprint has been removed as part of site redevelopment. 08/09/17-Hiralkumar Patel. 10:56 AM:- received email from Kevin inquiring about PBS registration number. 12:24 PM:- spoke with Kevin. informed him that the Department has received report dated 07/25/17. asked him to submit PBS application, with original signature, to PBS unit for processing. 12:50 PM:- sent email to Kevin and asked him to submit PBS application to PBS unit for processing. email copied to OER Shaminder. **e designation**
"e designation on property - boring location had layer of 100ppm - cleanup pending"

Boring PE-19 is located in the sidewalk on the south side of 35th street, approximately 50 ft east of 11th avenue. A PID was used to screen the soil for VOCs. PID readings of 100 and 50 ppm were obtained from soil samples collected from 25-27 ft bg and 30-32 ft bg, respectively. Soils did not exhibit visible staining. Bedrock was encountered in the boring at 45 ft bg. 1/6/14 - Obligado - Additional research identified the location of the contaminated boring/monitoring well at Block 706 and Lot 1. The boring/well is located in the sidewalk adjacent to 400 West 11th Avenue aka 555 West 34th Street, which is a Brownfield Site #C231049, managed by John Durmin in Central Office. According to the 2007 RI, MW19 was sampled in 2005 and had 3093 ug/L total VOCs, including 1160 ug/L BTEX.</p>

1/7/14 - Obligado - As understood from correspondence with Central Office, as part of the BCP remediation area redevelopment the entire site has been excavated down to bedrock (as deep as 40 ft bgs) so the source of contamination has been removed. According to DEC Durnin, the well has been destroyed during excavation. This spill no longer appears to be a threat to human health or the environment. This spill is closed."

Remarks: "Soil borings done on behalf on NYC Transit authority reveal soil contamination. "

YK. 11/21/03 Rommel Met Brian McCabe, senior geologist, on site. Soil samples collected from 8 to 16 feet below grade were contaminated. Groundwater (15 to 18 feet) was also sampled during the investigation and were impacted by BTEX and MTBE. They will excavate what soil they can and install a minimum of three monitoring wells (one outside by remote fills). Spill 9008960 reported TTF of 4000 gallon gas UST 11/14/1990 STIPULATION SIGNED RD 2/18/04. 3/18/04-Vought-Spoke with Rob Ferguson (631-586-4900). Subsurface Investigation report sent to DEC on 2/3/2004. Ferguson will send small CAP upon receiving subsurface investigation report review. Ferguson requires review of subsurface investigation as per STIP. Vought requested that another copy of the Subsurface investigation be sent to DEC. 4/1/04-Vought-Spoke with Tom Melia (F&N) and he requested that he be point of contact. Spill transferred from Rommel to Vought. 4/6/04-Vought-File review by Vought: Contaminated soil letter sent form DEC Krimgold to High Ridge Enterprises. Site meeting minutes (Fenley & Nicol Brian McCabe)-11/25/03. Site meetin on 11/24/03. In attendance were DEC Rommel, F&N McCabe, F&N Melia and F&N Hole. The results of the sampling indicated that the contamination is located in the northern portion of the building. The effected area extended from the north end od the 4000 gallon tank excavation to the front of the building, approximately thirty five feet and from the center for the 550-gallon tank excavation west to the side of the building, approximately twenty feet. DEC recommended additional soil excavation without comprimising structural intergrity and required 1)installation of one well inside the building after backfilling completed 2)installation of two wells on sidewalk at the location of the former remote fills and twenty feet west of the bay door. Letter from Fenley & Nicol(Thomas Melia) to DEC(Rommel)-12/18/03. The new owner of the building indicated that his intended use for the building is as an art gallery . During building remodeling excavation was performed and tanks were discovered under floor. Two gasoline USTs (one 4000-gallon and one 550-gallon) were removed and were in separate lcoations fifteen to twenty feet apart. Upon removal of the bottom slab the

HIGH RIDGE ENTERPRISES (Continued)

S104275619

soil encountered was saturated with liquid phase hydrocarbon . Depth to water expected to be 18' below grade. F&N proposes delineation of soil and groundwater contamination, installation of wells and additional soil excavation. See also Spill #9008960 reported in 1990 for tank test failure and administratively closed on 3/4/03. Letter from DEC Rommel-12/4/03. Letter approving installation of wells on the sidewalk on the south side of West 29th Street between 10th and 11th Avenues and requesting expediting of sidewalk permits. Letter from F&N(Melia) to DEC Rommel-12/18/03. At this time we are continuing our efforts to delineate the extent of the contamination... . Three monitoring wells installed (one inside and two outside building). At this time the owener of ther property feels that it would be too far costly to excavate the contaminated soil without jeopardizing the structural integrity of the building, and would prefer that we install an air sparge/soil vapor extraction (As/SVE) system to remediate the hydrocarbon impact . Please indicate your approval below. No approval indicated by DEC Rommel. Stipulation Agreement-1/15/04. Stip with deadline of 2/13/04 sent to: Walter Seeling High Ridge Enterprises, Inc. P.O. Box 2542 York, Pa. 17405. Subsurface Investigation Report (F&N-Melia 631-586-4900x190) -3/19/04. Investigation consisted of six soil borings, six temporary groundwater monitoring points and three monitoring wells. The central and eastern units are currently vacant and undergoing renovations for use as an art gallery . Depth to groundwater is 8-9' and flows northwest. Soil analyticals show 35ppb benzene(SP-1 at 12'), 882ppb benzene(SP-2 at 12'), 14ppb (SP-3 at 12'), 4900ppb benzene(SP-4 at 12'), 817ppb benzene(SP-5 at 12'). Groundwater analyticals show 2.5 ppb benzene(TW-1), 1459ppb benzene(TW-2), 45ppb benzene(YW-3), 2109ppb benzene(TW-4), 254ppb benzene(TW-5), 11ppb benzene(TW-6), 1200ppb benzene(FN-1), 206ppb benzene(FN-2), 4.2ppb benzene(FN-3). Report recommends Air Sparge/Soil Vapor extraction system. NYSDEC requires: 1)signing of Stipulation before any further correspondence 2)presence or absence of free product and interim remedial recovery if present 3)surrounding area site plan including property usage 4)additional wells east of FN-2 and well north of FN-2 to calculate required radius of influence for system design. 4/6/04-Vought called F&N(Milea) to repeat Stipulation requirement and left message to return call to DEC. 4/7/04-Vought-Received faxed copy of STIP already implemented by DEC Kunkel on 2/18/04 (Copy of original not in file). 4/8/04-Vought-Sent letter to High Ridge requiring well installation north of FN2 and east of FN2, submission of monitoring well data and surrounding property sketch. 4/16/04-Vought-Wells will be installed next week (tentatively). Wells for pilot test will also installed. Mailing address is: High Ridge Enterprises P.O. Box 2542 York, Pa. 17405 4/18/04-Vought-Received message from David Oloke (F&N-631-586-4900x144) that he is new project manager for site. Vought called David and two additional well installed (one north of FN2 and one east of FN2). All onsite wells were sampled. No free product in new wells. Four vapor wells installed and air sparge well will be installed. DEC will receive pilot test report by 7/15/04. 6/23/04-Vought-Spoke with David and initial results faxed on 6/9/04. .5 of free product in well in 1 vapor well sent for fingerprinting. EFR not effective. DEC requires recovery of free product and submission of pilot test. 9/2/04-Vought-File review by Vought: Groundwater results (F&N)-6/23/04. Groundwater analyticals show 1.2ppb benzene(FN5), 1.8ppb benzene(FN4), 14ppb benzene(FN3), 26ppb xylene(FN3), 474ppb benzene(FN2), 621ppb MTBE(FN2), 8ppb

toluene(FN2), 2065ppb benzene(FN1), 47170ppb MTBE(FN1), 4106ppb toluene(FN1) and 2761ppb xylene(FN1). Addendum to the direction beneath the site was found to be toward the north. Property uSubsurface Investigation Report (F&N)-7/14/04. On 5/7/04 two additional monitoring wells were installed. On June 4, 2004 the AS/SVE pilot tests were conducted. One inch of floating product was detected in P2. The results of the AS pilot test indicated that the introduction of air pressure into the formation below the contaminant zone is a viable remediation technique. Report recommends commencement of an interim remedial measure to recover product from P-2 via weekly EFR. Report also recommends installation of another well to replace P2. Vought called David from F&N to approve of workplan. Well installation will be included with final remedial action plan. Vought sent letter approving of proposed workplan (installation of well at P2 and IRM) and included requirement of determination of groundwater flow direction and surrounding property sketch. 9/3/04-Vought-Received fax from Oloke (F&N). The groundwater flow sage of downgradient sites to the north are a parking garage and an art studio. Vought called Oloke and approved workplan as per 9/2/04 letter. Vought called Oloke and he will begin drafting RAP for submission to DEC. 9/29/04-Vought-Spoke to David F&N and he will be sending RAP in overnight. 10/1/04-Vought-Reviewed RAP received by DEC on 10/30/04. Site is currently occupied by a masonry block structure which is subdivided into three sections. An art gallery occupies the western unit. The central and eastern units are currently vacant and are undergoing renovations for use as an art gallery. RAP proposes weekly recovery of free product from FN2 via a peristaltic pump until well is converted to a 2 product recovery well designated at FN6. Two additional wells will be installed in the interior of the building. Monthly groundwater monitoring and quarterly sampling. Five air sparge and four SVE wells will be installed in the interior of the building. Remedial system will be installed on the roof of the building. Daily monitoring for the first week, weekly monitoring for the first month, monthly maintenance visits and effluent sampling, quarterly effluent sampling and groundwater sampling. Vought sent letter approving of RAP. 10/28/04-Vought-Spoke to David(F&N) and FN1 must be reinstalled due to it was a bent well. Wells will be installed during the next few days. 9/27/05 - SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO 11/9/05 - Obligado - Review System SStartup Report. AS/SVE system consists of 5 HP compressor and 3.5 hp blower and 5 air sparge wells and four soil vapor extraction wells. Effluent air stack results show 31.4 ug/m3 for benzene. Operation and maintenance schedule proposes monthly SVE effluent monitoring and Quarterly Status Reports. System started in May 2005. Due to noise generation, the system only runs from 9pm to 6am. Quarterly Status Report - Groundwater analyticals show 4.7 ppb benzene (FN3), 50.1 ppb MTBE (FN2), 78.3 ppb MTBE SVE5, 1.7 ppb MTBE SVE3. Benzene effluent show 46.74 ug/m3. 5/15/06 - Obligado - Called David Oloke. Asked that he send recent Quarterly Status Reports. 5/22/06 - Obligado - 2Q06 Quarterly Status Report, submitted by Fenley Nicol, Inc. Ground water analyticals show 9 ppb benzene 35 ppb MTBE in FN3 and and 3.7 ppb benzene in FN4. Benzene effluent below STIP limits. There is duplicated data on Table 2 Air Sampling Results, probably a cut and paste error, call Dave Oloke, he said he will look into it at send a new table with the electronic copy. Report recommends continuing system operation. 6/23/06 - Obligado - Called David Oloke. Asked for the corrected Table. He said he will email it to me. 10/23/06 -

Obligado - Called David Oloke. Left message requesting most recent quarterly status report. David Oloke call me back and said he would send the report shortly and he would correct the typo on Table 2.

1/30/07 - Obligado - Review 3Q06 monitoring report. Typo in 2Q06 table has been fixed in cumulative table. AS/SVE system online and working at 100% maximum capacity. Air samples collected monthly. Benzene in gw exceeds standard at 4 ppb. in 2 wells. All effluent below STIP guidance. Benzene detected in VES/AS effluent at 4.86 ug/m3 in 6/06. Recommends continued operation of the system. Review 4Q06 monitoring report - AS/SVE system operating at 100% capacity 9 hours per day. All effluent samples below STIP guidance. BTEX effluent at 361.71 ug/m3 during 10/27/06 Report recommends continued operation of system. GW results show minor exceedences of Benzene - max concentration at 8 ppb in FN3. However gw monitoring does not include FN1 where highest contamination was found. 9/13/07 - Obligado - Review 1Q07 monitoring report. According to the report, the AS/SVE system is running at 100% capacity. System is still pulling vapors, at a flow rate of 50 cfm and a concentration in March 07 of 111.30 ug/m3 BTEX. Benzene (12.8 ug/m3) was below the STIP limit. Recommends continued operation of AS/SVE system. 10/26/07 - Obligado - Review 2Q07/3Q07 monitoring report. Benzene detected during quarterly monitoring at MW3 and MW4 slightly above standards. Analytical results of air stream were below the max benzene STIP Limit. Recommends continued operation of the AS/SVE System. 9/3/08 - Obligado - Review 1Q08 monitoring report. AS/SVE running for 9 hours a day at 100% capacity. Effluent collected monthly. Benzene detected slightly above standards in MW2,3,4,and5. System effluent ND for BTEX. 6/3/09 - Obligado - Review 1Q09 monitoring report. Requests to shut down system for a 1 year post remedial monitoring period to determine if system was effective and monitor for rebound. Sent a letter to Seeling cc to David Oloke approving system shut down temporarily but requiring sampling of monitoring wells MW1, MW6, and MW7 beneath the building as required by approved RAWP. Required 90 days to submit an update report on system shutdown and additional sampling. 12/3/09 - Obligado - Met with David Oloke on site. The AS/SVE system was down as proposed. According to David they were unable to collect ground water samples from the three sampling points. According to David the water he collected was too silty. He recommended doing an exposure assessment to close the spill number or to install the well in an alternate location in the building entrance. I told him I would review the spill file to determine if that location was acceptable. 12/22/09 - Sent email to Mr. Oloke - The Department has determined that the proposed location is cross-gradient and outside the of the source area, and would not provide the necessary data to confirm the site remediation was successful. As such, the Department reiterates its requirement in the June 2, 2009 letter, to sample the 3 monitoring wells FN1, FN6, and FN7 (as originally proposed in the approved RAWP) and submit a Monitoring Report within 90 days of this notice. If sufficient ground water can not be obtained from these sampling points (after exhausting all available well sampling and well development techniques), then a Remedial Investigation Work Plan (RIWP) to install a new monitoring well in the gallery in between FN1, FN6, and FN7 must be submitted within 90 days of this notice. The RIWP should contain an implementation schedule. 10/9/10 - Obligado - Email from David Oloke I would like to inform you that we're scheduled to be onsite to install one groundwater monitoring well on the sidewalk

directionally towards the source area beneath the building in order to determine the current groundwater quality beneath the site. We scheduled for Monday 25 through Wednesday 27. 1/14/11 - Obligado - Email from David Oloke We are set to go back to High Ridge, 524 West 29th Street in Manhattan on Monday 1/17/11 to install the groundwater monitoring well for spill inactivation. The client is making plans to be onsite as well . 1/19/11 - Obligado Email from David Oloke We core drilled through the foundation wall and could not get the well rods to the desired depth due to refusal. So we back to square one. Our client spoke with the tenant again yesterday to see if he will allow us access into the building. 4/1/11 - Obligado - I sent email to David Oloke related to potential alternative methods for obtaining ground water samples at the site since the diagonal well method was not successful, such as snaking new tubing into the existing system wells, and high vacuum extraction to obtain ground water samples from the sparge wells. I asked Mr. Oloke to look into these options, as well as any other methods and report back the findings to the DEC. 3/12/12 - Obligado - I reviewed a Site Status Report. They collected samples from MW1, MW6, and MW7 under the gallery slab using the vacuum extraction technique. Samples were collected in June and November of 2011. During the most recent sampling event in November, the maximum VOCs was 117.3 ug/L in MW-7. MW1 had 63.42 ug/L total VOCs, and MW6 had 59.75 ug/L VOCs. Several compounds were slightly above standards. The greatest exceedence was 36 ug/L naphthalene in MW7, which is above the standard of 10 ug/L. In November they turned on the AS/SVE system and allowed it to run for four weeks. At the end of the four weeks , air samples were collected and all the targeted VOCs were ND. Based on the above, they requested closure. Ground water contamination has been greatly reduced. The AS/SVE system reached asymptotic recovery rates. Additional remediation is not warranted nor feasible. After discussion with DEC Hussein and Ketani, this spill is closed. A spill closure letter has been sent to Walter Seeling, cc to David Oloke."

Remarks:

"caller was hired to remove a few tanks from the site - x-ref spill # 9008960 - they encountered contaminated soil - they are stockpiling soil now"

remedial efforts. Thanks, Shaminder. Email contains string from GZA Clifford Bell that The findings of stained soils immediately surrounding and underlying the approximate 2,000 gallon tank on July 7 were reported to the NYS DEC. The Spill # is 1404620. I will keep you informed on the case manager and path forward. Thank you. Clifford Bell C.P.G. LEED AP GZA GeoEnvironmental of New York 104 West 29th Street, 10th Floor New York, New York 10001 Office: 212-594-8140 x 8931 Direct: 646-929-8931 Cell: 646-483-6250 Email: clifford.bell@gza.com Vought sent email to OER Chawla with cc to Bell, Ahmed and RSE that Shaminder, Still catching up on emails. The project manager for the spill is Hasan Ahmed (copied above) and you or Clifford Bell (also copied above) can also call him at 718-482-6405. Please keep in mind that Hasan will be managing the case only if it a short term excavation or remedy. If the case is long term (eg submission of work plans and reports) then the case will be transferred to another Project Manager in the Spills Unit. Can you or Cliff provide a brief one paragraph email with the scope of work and current status so Hasan can best decide the Project Manager? Thanks. 8/5/14-Vought-Received reply from GZA Bell that Jeffrey: We do not intend for the tank closure to be long term. The previously abandoned-in-place tank filled with concrete was removed on July 8 by the excavation team assisted by an FDNY Certified UST firm. Soils immediately adjacent to the tank and impacted soils as defined by visual staining, olfactory conditions, and photoionization detector responses were removed, segregated and transported to an approved petroleum handling facility. The tank was resting on a concrete slab. Plastic was placed on top of the resulting excavation. Our intention is to step out and excavate additional soils beyond and at the depth of the underlying concrete slab to confirm removal of impacted soils as indicated by field observations. The slab will be removed. Additional endpoint samples will be collected for confirmation. We plan to perform this work within the next 2 weeks. We will notify Hasan 2 days in advance of the excavation. Please do not hesitate to contact us as needed for further details. Thank you. Vought spoke with DEC Ahmed and he noted that he would reply to above 8/5/14 email from GZA Bell and that he will remain project manager. 8/6/14- Ahmed - Replied back to clifford today saying: Clifford As per conversation with you on 8/1/14 over the phone, you mentioned that as per the revised plan, the planned excavation depth for the foundation at the tank location is 15 ft and the depth of the concrete slab is 4 ft. You have the option to take end point samples at the final depth of excavation or at any depth you mentioned in the email. Please send me a site plan showing the location of the tank and planned excavation. What is the groundwater depth at this site? Thank you. "

Remarks:

"Tank removal with soil impact. Prior historical closed-intact tank but impactsed soil discovered during removal. Cleanup is pending."

DEC Memo: "1/18/06 - Performed site inspection. Difficulty finding the building as it is currently 261 11th Avenue (inclusive 271). Building sup't Ali provided access to the basement. He was employed by this building management and recalled the spill. He knows the spill amount is a gross overestimation. Noted 2 large aboveground petroleum storage tanks. No oil on floor or adjacent drain/sump. Former spill area clean and took photos. Spill closed. 6/15/05 - No file. DEC Lead changed to Grathwol. Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "3/6/17-Vought-Received email from OER Chawla with cc to OER Walsh and OER Wong on 3/3/17 that I am reviewing RIR for a site at above address. The Site is located at 517 West 29th Street in the Hudson Yards section in Manhattan, New York and is identified as Block 701 and Lot 24 on the New York City Tax Map. Is there any spill at this property? Soil boring descriptions are: " Soil boring SB-01 was advanced in the basement. A 2-inch layer of unknown tar material and olfactory evidence of petroleum contamination was encountered under the concrete surface at the 1 to 2-foot interval. " Soil boring SB-01 was advanced in the basement. A 2-inch layer of unknown tar material and olfactory evidence of petroleum contamination was encountered under the concrete surface at the 1 to 2-foot interval. " Soil boring SB-03 was advanced in the basement. PID readings elevated to 69.2 ppm. " Soil boring SB-05 was advanced in the basement. A 2-inch layer of layer of unknown tar material and olfactory evidence of petroleum contamination was encountered under the concrete surface at the 1 to 2-foot interval. " Soil boring SB-06 was advanced in the basement. PID readings elevated to 22.4 ppm. A 2-inch layer of layer of unknown tar material and olfactory evidence of petroleum contamination was encountered under the concrete surface at the 1 to 2-foot interval. New consultant don t know if spill was called in. Thanks Vought replied to OER on 3/3/17 with cc to all that Shaminder, There are no listed spills at the above address range. The closest spill, albeit closed, was down the block at 522-526 West 29th Street. I also checked PBS database and there is no record of any tank at the above address range as well. The boring logs you sent below noted that an unknown tar material was under the concrete floor in all four borings at a 1-2 foot interval. This material may possibly from a foundation sealer and the site may also be in part of an MGP site (which I know is also down in the 20 s along 10th and 11th Avenue. I would suggest a spill be called in and we can make further decisions upon reviewing

the soil sample data, assuming that soil samples were collected and analyzed, from the borings referenced in the email chain below. OER Chawla replied that Thanks Jeff: Not much detected in soils other than SVOCs. No VOCs detected. Here is more info: " Soil results showed no volatile organic compounds (VOCs) above Track 2 SCOs in any of the soil samples collected. Only xylenes (0.4 ppm) slightly exceeded Unrestricted Use SCOs. Several SVOCs were detected in the soil samples collected including 2-Methylnaphthalene (maximum 82.5 parts per million [ppm]), Benzo(a)anthracene (maximum 105 ppm), Benzo(a)pyrene (maximum 48.6 ppm), Benzo(b)fluoranthene (maximum 75.8 ppm), Benzo(k)fluoranthene (maximum 15.1 ppm), Chrysene (maximum 105 ppm), Dibenzo(a,h)anthracene (maximum 9.63 ppm), and indeno(1,2,3-cd)pyrene (maximum 61.1 ppm), detected above Restricted Residential Use SCOs. Several metals including chromium, iron and lead exceeded Unrestricted Use SCOs and only Iron (maximum 21,500 ppm) detected above Track 2 SCOs. No pesticides were detected above Track 2 SCOs in any of the soil samples collected. PCBs detections in the soil samples collected. Overall, soil chemistry is similar to sites with urban historic fill in New York City. " Soil vapor sampling detected PCE and TCE were not detected in soil vapor. Vinyl Chloride in several samples (maximum 970 mcg/m3). Highest concentrations were detected for Xylenes (9,800 mcg/m3). Petroleum related compounds (BETX) were detected at elevated concentrations to a maximum of (28,900 mcg/m3). Concentrations of Vinyl Chloride are above the mitigation levels established by the NYSDOH guidance matrices. (mcg/m3)SV-01SV-02SV-03SV-04SV-05IA-06OA-07 Benzene170024002200150022001.91.1 Ethyl Benzene420085003100230030009.62.9 o-Xylene41002700130013001400113.1 p- & m-Xylenes98007700360042004500297.3 Toluene61007600480037004100227.3 GW not sampled .We will ask consultant/developer to call in spill. 3/6/17-Vought-Received email from OER Chawla with cc to OER Walsh and RSE that Jeff: Per your instructions, Spill was called in. Spill #1610851 was assigned. Please let me know who is managing this spill. thanks Vought replied to OER Chawla and DEC Piper with cc to OER Walsh and RSE that Shaminder, That spill case is being managed by Ryan Piper as he was on duty after hours when the spill was received. He is copied above and you may also reach him at 718-482-4927. Ryan, Please see the data in the email below and respond to Shaminder accordingly. Thanks! " "now a self storage facility being renovated. samples came back; 2 inch layer of unknown tar and smell of petroleum."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ e2mis 149379 On 7/17 @ 04:29, Griffing # 14428 of FOD reported to me that he found approx 5 gallons of unknown oil in V-6145. The source and the cause of the spill is unknown. The spill was on the concrete structure floor. At that time he saw what might be oil in the sump but no indication at that time that there might be a release. After further investigation where the finder used his flashlight to see into the sump he noticed that the drain pipe was

coated with oil on the inside of the pipe, but not full of oil - there may possibly be a release to the environment. Two samples are being taken by the finder for PCB and ID. UPDATE 7/19 @ 05:26 Conduit Plate # 23-D-2 shows that the bank of vaults with ath above structure in it is connected to M-6088 which has a sewer connection. At this time a partial cleanup is in progress and the unit will be drained and disconnected as soon as the feeder is taken out of service. Capacity of unit is 380 gallon and oil reading is just above the below min line. Unit has been drained of 375 gallons and the Unit also has been disconnected. Lab Sequence Number: 03-05966-001 PCB 6 ppm 7/21/03 M. Prystupa # 02394 went to the location on this day at 10:00 & found that the transformer was diconnected & he found that there is no evidence of any oil in the trap just water. The transformer is ready to be removed. 9/5/03 clean up is complete as of this time as repoted by E.Hulser #39723 O.S Cable Dept. One barrel of rock & soil was filled, flush truck removed water & oil mix. Vault was washed twice with slix, and tag #34595 was removed. Supervisor Hulser confirmed the removal of the transformer. "

Remarks:

"VAULT 6145. 5 GALLONS UNKNOWN OIL FOUND IN THE VAULT. THERE IS A PIPE IN THE VAULT THAT LEADS TO A SEWER, AND THERE'S OILY RESIDUE ON THE PIPE. THEY ASSUME THAT OIL GOT INTO THE SEWER. SAMPLES TO BE TAKEN. CLEAN UP PENDING RESULTS. CON EDISON REFERENCE NUMBER NOT AVAILABLE AT THIS TIME."

cleanup action taken at this time. Pagano spoke to Pace of I&A and he informed me that when the trap was taken apart there was no sign of oil. There was just plain water. D Pace verified that there exists a bottom leak and the oil seems to have come from the unit, but the leaves and debris are keeping him from making a positive conclusion. Lab Sequence Number: 04-02036-001: TOTAL PCB 28 ppm Lab Sequence Number: 04-02040-001: Analysis indicates the presence of a substance similar to a dielectric fluid. A partial cleanup was done on 5/17/04 It was started at 15:00 & finished at 23:30. The tanker removed 380 gallons of water/oil from the floor of the vault and removed 250 gallons of oil out of the transformer. 5/18/04 07:10 V. Mirance # 58484 Cable/Cleanup supervisor called & spoke to M. Casalta # 12684 and stated that the final cleanup was completed at 07:00 on 5/18/04. The structure was double washed with slix & rinsed down. Spill tag # 41999 was removed. The source of the spill was the transformer and it was removed & replaced."

Remarks: "1/2 GAL OF UNKNOWN OIL FOUND IN A MANHOLE. NO CLEAN UP IN PROGRESS."

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Spiller Name: ERTSDESK
Spiller Company: APARTMENT BUILDING
Spiller Address: 527 WEST34TH STREET
Spiller Company: 999
Contact Name: CON ED ERTSDESK
DEC Memo: "205311. see eDocs. Apartment bldg at 527 West 34 Street referred to Spills Group. 4/23/07 - Raphael Ketani. The spill was originally reported by Con Ed (Tom Marcinek (212) 580-6763) as they found 4 gals. of fuel oil in their VS #3863. The ERTSDESK for Con Ed (212) 580-8383 was the contact. I spoke to Pat at the ERTSDESK and he said he didn't have any more information on the spill into the transformer vault than what was already given to the DEC. He claimed it was coming from the apartment building at 527 West 34 St., NY. The building is managed by Downing Management Corp., 12 E. 49 St., rm. 1204, NY, 10017-8283, (212) 750-4299. The block and lot are: 00706/0017. I contacted the receptionist at Downing and she said that the super would call me back. 4/24/07 - Raphael Ketani. I never got a response back. So I made a site visit. The fill port for the building is right above the Con Ed transformer vault grating. Stains were slightly visible on the edge of the grating and on the wall below the fill port. Based upon the small size of the spill, the fact that Con Ed already cleaned it up, the location of the fill port right above the grating and no evidence of any other reason for the spillage of oil into the vault, I am closing the spill case. "

Remarks: "LEAKED FROM A BUILDING FILLIN POINT: WILL BE CLEANED UP NO TO 5. 205311"
