DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 03/29/04 Transferred from James to Rommel 10/29/04 Reassigned from Rommel to Sun. 11/1/04 Sun sent a letter to Richard Saut, Environmental Manager of Penske, requiring by January 14, 2004 the following: 1) Delineation of soil and groundwater contamination. A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination to soil and groundwater both on-site and off-site must be performed. 2) A surrounding property sketch including layout and usage must be submitted to the Department, 3) The locations of former remote fills and dispenser island must be submitted to the Department, and 4) A PBS registration must be submitted immediately reflecting the former tanks and their subsequent decommissioning. 1/5/06: Called Richard Saut and left a message (610-775-6298) to ask for an update on what was required in 11/1/04 letter. 1/10/06: Spoke with Richard Saut and he said he would speak to his consultants and get back to me. 1/30/06: Left a message with Richard Saut to follow up. 3/15/06: Spoke with Matt of Groundwater Environmental Services (631-582-4187 x15, mschieferstein@gesonline.com). I sent him a copy of the additional delineation letter that was sent to Hertz. 5/19/06: Left voice message with Matt Schieferstein about overdue workplan. 6/21/06: Spoke to Matt Schieferstein of GES. Penske is doing research on this site and has not authorized GES to do any work. Spoke to Richard Saut of Penske. Richard Saut said that Hertz is responsible for this spill and forwarded DEC's letter to Virginia Carlson of Hertz. He forwarded me the correspondence between him and Virginia Carlson. 7/19/06: Sent Virginia Carlson an email to followup. 8/10/06: Owner according to propertyshark.com: 500 West 38 L.L.C. 290 Park Ave S New York NY 10010-5313 Sent delineation required letter to above address. Assessment required by 11/10/06. 8/16/06: Received phone call from Mindy Horowitz (212-675-3225) of Fleming Lee Shew, consultant for property owner. She will submit a workplan for remediation after a FOIL request is reviewed. 8/17/06: Received email from Mindy Horowitz: We will begin our remedial investigation upon

reviewing the previous investigations conducted at this site. We are simultaneously performing an investigation for the New York City Department of Environmental Protection, as this site has an e designation. Mindy Chassin Horowitz Project Manager Fleming-Lee Shue, Inc. 6 E32nd Street, 4th Floor New York, NY 10016 (212) 675-3225 (telephone) (212) 675-3224 (fax) mindy@flemingleeshue.com 11/6/06: Received and approved investigation workplan. Four soil borings will be performed surrounding the former UST location. A soil sample from directly below the floor and from the interval with the highest PID reading will be collected from each boring. The report noted the possible presence of a transformer and hydraulic lifts on the property. 11/14/06: Received call from Fleming Lee Shue. Soil borings installation is not possible because clearance in basement is too low. Borings will be installed following building demolition in early 2007. 12/4/06: Received letter indicating that delineation is not possible, will occur in early 2007 after building demolition. Assessment report submission due 3/30/07. 4/3/07: Emailed Mindy Horowitz to followup on site status. 4/12/07: Received email from Mindy Horowitz: We have contacted our client to ascertain when the building will be demolished, allowing us to install the proposed soil borings. I will let you know as soon as I've heard something. Please call me with any questions. 5/2/07: Received email from Matthew Carroll : The building at 493-497 Tenth Avenue is scheduled to be demolished next week, May 7 through May 11. The following week we will be conducting a site walkover to determine what type of drill rig we can use to collect the required samples around the tank. I will contact you when we have scheduled the sampling event. 5/24/07: Left phone message for Mindy Horowitz to followup on site status. 6/4/07: Spoke to Matthew Carroll (matthew@flemingleeshue.com, Fleming-Lee Shue, Inc. 158 West 29th Street, 9th Floor, New York, NY 10001, T: 212-675-3225, F: 212-675-3224). Building was demolished. The subbasement has not been cleared. He is waiting for the sub basement to be cleared to identify tank location, and sample. 7/30/07: Spoke to Matthew Carroll. Slab has not been removed yet. Site will be excavated to bedrock, and then 10-15 ft of bedrock will be removed. Endpoint samples will be collected, and the presence of bedrock fractures will be noted. 9/5/07: Emailed Matthew Carroll for an update on demolition and investigation. 9/11/07: Received email from Matthew Carroll, site is being excavated, soil samples will be collected. Sent letter requiring endpoint bottom samples for every 900 square ft, and sidewall samples for every 30 linear ft. 9/13/07: Spoke to Matt. Three endpoint samples will be collected on Monday. Ten to 15 ft of bedrock will be removed. Groundwater has not been encountered below portion of site where the bedrock has been removed already. 9/18/07: Site inspection by DEC Kann, Feng, and Chandra. 3/27/08: Left voice message for Matthew Carroll. The final report is overdue. 4/9/08: Spoke to Matthew Carroll. He will submit a letter report with an update on site status. 5/20/08 - Carlson: Left voice message for Matthew Carroll. 7/2/08 - Carlson: Approved Investigation Plan for installation of two off-site borings. Remedial Investigation Report due 9/2/08. 7/8/08 - Carlson: Received email from Matthew Carroll (matthew@flemingleeshue.com). Requirements of 7/2/08 letter will be met. 9/3/08 - Carlson: Received Remedial Action Report. No VOCs were detected in off-site borings in former tank location. Low level SVOCs were detected. Review file for case closure. 9/9/08 - Carlson: Case closed. NFA letter issued."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 5/15/03 - ROSSAN, DDO - Contaminated soil letter was prepared and sent to: Ms. Kay Zias NYC Economic Development Corporation 110 William Street New York, NY 10038 1/30/04 TJD Closure report submitted by Metcalf & Eddy Consulting Engineers. Three tanks were removed from property and approximately 81 tons of contaminated soils were excavated and disposed of under manifest. Site is a NYC Pier which extends over Hudson River. The tanks formerly were located in an area supported by piles on a concrete slab. The soils between the slab and tanks and the soils above tank to grade are those which were excavated and disposed in accordance with applicable regulations. Endpoint sampling was performed which revealed minor exceedances to TAGM likely due to the historic fill material on site. No further action is required. Spill closed."

DEC Memo: "e2mis no 154483 Valenzuela saw that there was 3 qts of an unknown brown substance mixed with 50 gallons of water. He states that this is in front of an Auto repair garage. He will take 4 samples 1-for pcb,1-for ID & 1-for flash point & for ethylene glycol (antifreeze). The cleanup will be pending lab results. Lab Sequence Number: 04-05780-001: Analysis indicates the presence of a substance similar to a lubricating oil. Lab Sequence Number: 04-05779-001: PCBs < 1 ppm Lab Sequence Number: 04-05792-001: Flash Point, PMCC > 140 deg F Lab Sequence Number: 04-05793-001: Ethylene Glycol 1080 ppm JULY 29, 2004 @08:48 Doug from Clean Harbors completed sb 33073. They had a concern about the service box. The service box sits in front of a taxi stand. When taxis pull up, they fill their vehicles up with anti-freeze and spills it onto the ground, in which, seeps back into the service box. Clean Harbors doesn't want us to think that they half cleaned the service box. Clean -up time 08:30."
Remarks: "SAMPLES HAVE BEEN TAKEN. REF #154483. POSSIBLE THIRD PARTY SPILL. Updated 7/23/04 by Kevin: Tests came back and is determined to be lubricating oil. "

 DEC Memo: "e2mis no. 154685: 5 gallons of possible antifreeze and 35 gallons of water in service box SB33073. The source and cause of this spill is possible third party since the service box is directly in front of a vehicle service garage. According to Mr. Chintalan cars from the garage are parked adjacent to the vented service box cover. There are burnouts in the structure, CO (carbon monoxide) is present, but there is no visible smoke. Cleanup is pending lab results. Lab Sequence Number: 04-06136-001 - Analysis indicates the presence of a substance similar to a lubricating oil. Lab Sequence Number: 04-06135-001 - PCBs < 1 ppm Lab Sequence Number: 04-06137-001 - Ethylene Glycol 2340 ppm Update: 8/25/04 @ 16:55 hrs. Manhattan Environmental Desk made arrangements with Clean Harbors to clean this service box on Friday 8/27/04 at 08:00 hrs. F.Romano reports that at 13:00 hrs that clean up has been complete by Clean Harbors Slix was used and was washed twice, spill tag remains E/V desk will make arrangements for removal of same. Update: Aug 27,2004 @ 17:59 hrs, P.Sinclair 12747,Flush dept was at this location to remove yellow spill tag and reports that at this time that tag # 01041 is not in this manhole at this time. Update: 9/01/04 The following is details of the cleanup taken from an

Remarks: e-mail dated 9/1/04 @ 09:49 hrs. from Doug Hoffman of Clean Harbors to R. Pellegrino: On Friday August 27, 2004h Clean Harbors Environmental Services Inc cleaned service box 33073, Incident #154685. 1. The clean up was completed at 22:15 on August 27, 2004. 2. No liquid was removed from the structure 3. 1 Cubic yard of antifreeze and oil debris (solid) was removed from the structure into a Cusco 4. The structure as double washed and rinsed and scrubbed clean using brushes 5. 5 gallons of Citra-clean was used in cleaning the structure 6. The site was cleaned up to a onsite Con Ed representative approval 7. The site was in front of a taxi garage and during the cleanup many taxis filled their coolant system spilling antifreeze on the ground causing it to run into the service box. "they beleive the spill may have come from a vehicle that was parked over the cover.they think the material spilled was antifreeze.no smoke,fire,sewers,or waterways affected.clean up is pending lab results"

DEC Memo:	"02/21/06-Hiralkumar Patel. From Property Shark, owner of the property: Filiberto Properties, Inc. 40-54 61st Street Queens NY 11377 From Reverse Phone Directory, name of property: CC Auto Diagnostic Center 198 11th Ave Manhattan, NY 10011 (212) 352-2211 Tried Mohamed's number, but no body is answering and there is no voicemail settings. Called at CC Auto diagnostic center, spoke with Mr. Mike, manager at property. as per him, there is no UST at location. 02/23/06-Hirakumar Patel. Spoke with Mohamed at Fleming Lee Shue. the number on report for Mohamed was wrong, correct number is 212-675-3225 and FAX is (212) 675-3224. as per Mohamed, they are doing soil investigation for E-Designated site. during investigation, they found 2 location on eastern side of property, which is up gradient, are contaminated. they checked on down side on west, but there is no contamination. Mohamed has taken out samples for lab analysis on 19th Feb. and waiting to get results. once he get results, he will send us Investigation Report with site plan, sampling locations etc. by 10th March 2006. As per Mohamed, this property doesn't have tank, but the property on east side of location has UST, whose fill port and vent pipe are 10-15 ft away from this property. he thinks that this contamination is from next door property. Next door property address is 552 West 24th Street. From Property Shark, owner of next door property: 552 West 24th. Associates Inc., B J Auto Master Incorporated 552 West 24th Street New York NY 10011 From the Photographs on Property Shark, phone number at property is (212) 929-0077. Spoke with Joe Nasair, property manager at next door property. this property has 150 gal gasoline tank. 4/4/06- DEC Piper spoke w/ mohamed at FL&S. As per him, he will send a report in a week or so. Afterwards, if it is determined that contamination is from neighboring prop. then a CSL letter will be issued. 4/21/06- DEC Piper spoke w/ Mohamed after reviewing RIP. As per report there are slight exceedances of Benzene and SVOCs in Soil as well as elevated levels of metals in both soil and gw. There are plans to construct a building though a basement has not been determined. If a basement is to be planned, the entire site will be excavated, if not select areas will be remediated. 6/29-06- DEC Pipereview RAWP. As per report, they will excavate to gw the NW area where soil contamination was present. The other area of the site will be excavated 2' bgs for new foundation, The excavation will be left open to ensure free phase product does not seep into excavaton, If not ORC will be placed on gw interface and a vapr barrieri will be installed. Afterwards 2 monitoirng wells downgradient on sidewalk will be installed and will be sampled/ monitored on a quaiarterly basis for water quality for two years. 9/11/06 - Site reassigned from

Piper to J.Kann - J.Kann 2/22/07 - J.Kann - contacted Mohamed Ahmed (212-675-3225) and requested update. He said that piles are being driven at the site now, and that ground work will commence in April (this is when contaminated soils will be removed and ORC applied. He will provide me at least one week's notice prior to remedial work commencing. 8/28/07 - J.Kann - recved Remedial Action Report from Fleming Lee Shue. Spoke with Mohamed Ahmed and told him that he was supposed to contact me when work was going to commence and that I did not receive notice. He said that it was his mistake. The report is under review. 3/17/08 - J.Kann - spoke with Mohamed in January 2008 and he informed me that monitoring wells will be installed on February 5, 2008. He emailed me in October 2007 with a revised figure indicating the location of monitoring wells. The locations were acceptable. The following email was sent today The Department has reviewed your Remedial Action Report (RAR) prepared for the referenced site and dated August 22, 2007. The Department was not informed when excavation work was being performed at the site and was therefore not able to observe such activities. When performing any investigative/remedial work the DEC Lead must be given a minimum of 72 hours notice. Results of the post-excavation sampling show minor VOC exceedances. It is the Department's understanding that the building was constructed prior to the submittal of the RAR to the DEC. The report states that the building was constructed with an active sub-slab depressurization system and a vapor barrier. However, documentation supporting the SSDS was not included in the report. Please clarify this statement and/or submit documents showing where the SSDS was installed, including as built plans. The locations of the proposed monitoring wells are acceptable. The Department was notified prior to their installation and it is our understanding that well installation was completed on February 5, 2008. Tables included in the RAR referenced the TAGM 4046 RSCOs. The numbers that should be referenced are Consolidated TAGM 4046 and STARS and can be found at <http://www.dec.ny.gov/regulations/2390.html> Please resubmit the tables. 5/14/09: J.Kann - Spill Closure request received on March 20, 2009 and under review. 8/21/09: J.Kann - Closure Report reviewed. Quarterly sampling show three rounds of minimal exceedence of benzene and MTBE in upgradient well only. Groundwater not used for drinking. NFA."

Remarks: "UNDER GROUND TANK LEAKED. UNKNOWN CAUSE."

to install two more wells for determination of groundwater flow direction after DEC review of submittals. 04/08/08-Vought-After review with DEC Ahmed possible DEC requirements include: 1)delineation of soil and groundwater contamination via installation of monitoring wells 2)locations and investigation of pump islands and remote fills 4)future use of property-SSDS and/or vapor barrier required 5)current contact information including fax of new owner 6)submission of surrounding area site plan with property usage and possible sensitive receptors 7)determination of groundwater flow direction 8)search spill database for other close/open spills at or near site. 4/14/08 - Austin - Spoke with Adam Sigerson of Applied Resources(845-626-4894), a consulting firm working for the owner of this site. He wanted to know the basics of what would be required for investigating/remediating this site - submittal needs, cleanup standards, review turnaround times, etc. I read the 4/8/08 outline from Vought to him, and then indicated that his client needed to address who would be doing the remedial investigation - themselves or the purchaser represented by AEI. I told him once that was clarified between the two parties, the proposal to meet the above described objectives should be sent to Ahmed. Mr. Sigerson said that he would follow up on these issues - end 04/16/08-Ahmed- Ahmed started reviewing reports and correspondance to date sent by Victor of AEI 1996: Letter from Murali Sagar of Tone Tank \$ Pump Inc to Michael Mickalofsky of Kinney System dated 11/18/1996 - Tone Tank performed soil borings at 429W36th on 11/13/96. Six samples were collected at soil/bedrock interface for EPA method 8021. The analytical results for soil sample B1, B2 and B3 collected from 2-550 gallon gasoline tanks indicate certain elevated values of volatiles from above guidance values. However soil sample B1, B2 and B3 collected from 1-550 gallon tank indicated no elevated values of volatiles. Tone Tank communicated with NYSDEC and recommended: 1) Since the soil samples collected from the 2-550 gallon tank location showed presence of volatile compounds and they are outside of the building in the parking lot area, Tone recommended removal of the USTs according to NYSDEC and NYFD requirements. 2) Since soil samples collected from 1-550 gallon tank didn't exhibit elevated values of volatiles and it is inside the building, Tone first recommended closure of the tank in-place. However after discussion with DEC Kerri-Ann O'Down, Tone felt that instead of drilling into the bedrock, removal of the tank would be more economical. Letter from Sagar of Tone Tank to DEC O'Dowd on 11/20/1996. UST Closure plan-1) Since collected soil samples showed presence of compounds of concern, Tone would remove the USTs and would register with DEC prior to closure activities. Tone would also collect soil samples as part of site assessment. 2) Since collected soil samples didn't show any compounds of concern and the tank passed the tightness test performed on 11/20/1996, Tone would perform closure in-place of the 1-550 gallon UST and the tank would be registered with DEC prior to closure activities. As per DEC O'Dowd, one sample would be collected from remote fill area after removal of the remote fill for EPA method 8021. Tone would prepare a site specific closure report and submit a copy to DEC. Proposal for soil sampling and contaminated soil removal from Robert Arearo of Tone Tank to Kinney System on 11/21/1996 1997: Invoice from Trinity Petroleum Systems to Kinney Systems on 9/5/97 - Removed all above ground equipments uncovered and exposed a portion of 1-550 gallon UST, Defumed and sealed tank with approved concrete slurry mix. Back filled, compacted and removed all debris from excavation. Resurface

in concrete. Removed and disposed of 430 gallons of non-hazardous contaminated water. Invoice from Trinity Petroleum Systems to Kinney Systems on 9/5/97 - Removed all above ground equipments uncovered and exposed a portion of 2-550 gallon USTs, Defumed and sealed tank with approved concrete slurry mix. Back filled, compacted and removed all debris from excavation. Resurface in concrete. Removed and disposed of 970 gallons of non-hazardous contaminated water. 04/18/08-Ahmed-Ahmed continued reviewing file Work Plan prepared by CA Rich Consultants to DEC on Dec 1997 - This work plan was based upon previous sampling and analysis, CA Rich's previous phase I site assessment and telephone discussions with DEC. The site consists of three lots and contains one four-story parking garage, one two-story parking garage and a paved parking lot. CA Rich conducted a Phase I assessment in Nov 1996, identified on-site presence of three unregistered 550-gallon gasoline UST. Two of the tanks were located outside the facility and the other one was inside the garage. Tone Pump & Tank conducted tightness test. The two adjacent exterior USTs reportedly failed and the interior tank passed the tightness test. Tone conducted subsurface sampling which revealed contamination in excess of DEC cleanup criteria in two of three borings around the two exterior tanks. Three boring around the interior tank was ok. Remedial action conducted to date has been limited to filling each of the tanks with cement. Scope of Work-CA Rich would install 4-6 borings around the two exterior tanks to confirm the presence and determine the extent of soil contamination. 2-3 additional shallow borings will be drilled along the extent of the remote fill pipe for single interior UST to determine whether any residual contamination associated with fill-line leakage exists. One boring in the exterior parking area would be completed through the unconsolidated soil/fill materials to penetrate the underline bedrock to a depth of 10 feet below the soil/bedrock interface. If possible, bedrock characterization will be accomplished via coring to determine the competency of the rock. Fax from DEC O'Dowd to Izzo of CA Rich on 1/16/98 - Conditional approval of the Work plan submitted on Dec 97, if CA Rich follow the additional sections needed to add in the work plan as discussed over telephone and also CA Rich would collect groundwater samples if any boring encounter groundwater. Report from CA Rich to DEC on March 1998- On Feb 11, 1998 CA Rich drilled ten new borings onsite using Geoprobe. Eight of them were drilled around two exterior tanks. The remaining two were drilled along the abandoned remote fill line which formerly serviced the interior UST. Two of the test boring (SS4 and SS6) encountered subsurface fluid at a relatively shallow depths of 10 ft and 11 ft, respectively. Water samples were collected from these two borings and designated WS4 and WS6. No evidence of floating product was observed at either location . On Feb 12, 1998 one additional test boring (MW1) was drilled in the exterior parking area, to a total depth of 21 ft, 8 ft below the soil/bedrock interface. No evidence of floating product was observed in the fractured bedrock at this location . Groundwater sample from within the fractured bedrock was collected. groundwater analyticals:

Naphthalene-----390
MTBE-----1,900 Letter from Richard of CA Rich to DEC O'Dowd on 6/8/98- According to Martinkat(DEC), because the property is divided into two separate facilities, each listed under a different address, and the bulk storage capacity at each address does not exceed 1100 gallons, neither facility requires UST registration or closure documentation . Letter from Richard of CA Rich to DEC O'Dowd on 7/20/98-Change in Owner. New owner contact: Central Parking System, Inc 2401 21st Ave South Suite 200 Nashville, TN 37212 Attn: Mr. Oaul krivacka Ph: 615 297 4255 Fax: 615 292 4082 Letter from DEC O'Dowd to Krivacka of Central Parking on 7/21/98-Upon review of soil and groundwater test reports DEC required the following work to be conducted: -pump island be excavated and endpoint samples to be taken and analyzed for EPA 8021 -Areceptor survey Letter from DEC George Heitzmen to Paul Krivacka of Central Parking on 6/15/05-DEC requested additional information to determine whether additional action was necessary or the spill could be closed. the current state of the spill. Phase II Subsurface Assessment Report-Prepared by Summit Environmental on Aug 2007- This property is listed on the NYS Leaking Tanks (LTANKS) database in association with a presence of a confirmed release identified at the property. Summit selected a total of 24 soil boring locations. Groundwater was not encountered in any of the borings. Boring-4:Strong odors were noted bet 8 and 14 feet, with PID readings of 25 ppm at 8ft, 250 ppm at 9 ft, 1275 ppm at 10 ft, 526 ppm at 12 ft. Auger refusal at 15ft. Boring-6:Strong odors were noted bet 8 and 12 feet, with PID readings of 45 ppm at 8ft, 712 ppm at 10 ft, 256 ppm at 12 ft. Auger refusal at 15ft. Boring-8:Strong odors were noted bet 6 and 13 feet, with PID readings of 40 ppm at 5ft, 282 ppm at 6 ft, 1267 ppm at 8 ft, 802 ppm at 10 ft, 1275 ppm at 12 ft. Summit recommended that the three USTs be removed from the site. Any soil contamination would be appropriately addressed during the removal process. 5/7/08-Ahmed- Adam Sigerson(845 626 4894) of Summit, consultant of Central Parking called(Ph:845 626 4894, 845 616 9844 cell) DEC Ahmed. He faxed a FOIL request for prior Work Plan and Investigation Report submitted by CA Rich. Ahmed emailed him the documents at als7@tellurian.net. After reviewing the entire project file Ahmed will discuss with Adams about DEC requirements. 5/15/08-Ahmed-Teleconference between DEC Vought, DEC Ahmed and Summit's Adam Sigerson. Discussed about the current status and DEC requirements to remediate the site. As per discussion:
1)Summit would update PBS records, if they plan to remove tanks
2)Soil and groundwater samples at boring location SS6 and B2
3)Install well near B8 and B6 or B4 in Summit map and possibly followed by excavation 4)Submit scaled site plan 5)vapor barrier or SSDS if they plan to change property use in future 6) Correspondence and/or Work Plan by July 15, 2008 3/31/10-Vought-Received call from and spoke with Adam Siegerson. Seigerson noted that one well was installed to bedrock and groundwater contamination noted up to 15,000ppb total VOCs. He repeatedly requested site meeting with Vought and Ahmed to discuss remedial options including multiphase extraction (VEFR). Siegerson noted that depth to water is approximately 27' bg (bedrock surface is 5-13'bg) and well has very poor recharge as it is in rock. Seigerson noted that Summit no longer involved with site and now Environmental Restoration is on-site. Seigerson also noted that owners of property were eventually looking to sell and site development may include a residential building. Site meeting scheduled with DEC Ahmed, Vought and Siegerson on 4/2/10. DEC

Action Report: - subject property comprises a 100 ft by 200 ft area
that includes a four-story garage, a connected two-story garage and
maintenance building and an adjacent open lot - building footprint is
approx. 50 ft by 200 ft and the open lot the same with the long axis
running north-south - removed tanks and associated contaminated soils
- during excavation of the interior tank, a second unknown tank was
encountered - the second interior tank was filled with water - no
petroleum odor was noted from the second interior tank or its
contents - two soil samples (NT1WE and NT3EE) were collected from the
base of the excavation sidewalls at either end of the second tank,

DEC Memo: "Sangesland left a voice mail message with Amit Garg of Yu & Associates. Requested additional information on the level of contamination and a copy of the analytical report from the Phase 2 soil boring/groundwater investigation. 09/11/06-Vought-Spill transferred from Vought to DEC Tang as per Tang due to groundwater contamination. 9/12/06-Kann-Consultant does not have analytical results yet, they are expected in one week. Free product was in one well in the suspected tank area. 9/27/06 - Kann - Letter went out to RP requesting investigative results. 10/6/06 - Kann - Spoke with A. Leung of Yu&Associates. The report will be submitted on Tuesday 10/10. No free product was found in the well. The consultant will be recommending additional investigative work. 11/28/06 - Kann - Phase II was submitted in October 2006 and recommendations for investigation were provided. The Department sent a letter on October 20, 2006 approving the proposed summarized plan for additional work, and required a Work Plan be submitted. The work plan was submitted on November 15 and was approved by the Department on 11/28. 3/22/07: J Kann - RAWP includes tank removal, soil excavation and ORC. The RAWP was approved provided the tank excavation remain open for at least a month, confirmatory sampling be performed, submitted to the Department and approved prior to backfilling. 6/26/07: J.Kann - granted a 90 day extension as requested by RP due to contractor delays. Report therefore due by September 26, 2007. 9/6/07: J.Kann - spoke with consultant (A. Leung of Yu Associates 201-791-0075). A Leung had a question about using shoring. INformed A. Leung that it is the consultants responsibility to ensure the structural stability of adjacent structures and that if gross contamination exists, shoring may need to be considered to remove contaminated soils. 03/06/08: J.Kann - met with A.Leung of Yu Associates. A. Leung will prepare letter outlining constraints regarding the excavation of the UST at the site. They will recommend decommissioning the UST in place to eliminate the risk of compromising the adjacent building. 04/22/08 - J.Kann - site visit. Excavation work was on-going around the potential location of the oil water seperator. Contaminated soils were encountered and odors were present. The soils were stockpiled and tarped. Clean fill will be brought to the site to fill the excavation. A request for modification of the RAWP was submitted on

S108130521

March 25. Verbal approval of the approach was provided. A letter will be prepared indicating that since complete source removal was not performed, an SSDS should be installed for the new building. 05/02/08- J.Kann - Approval of Modification to RAWP sent via email (can be found in edocs). 05/22/08 - J.Kann - reviewed letter indicating that the foundation was modified to not include a basement, that foundation work will commence in mid-June and will not effect remedial activities and that an SSDS will be installed for the site (letter in edocs). Sent email to YU Associates confirming review of letter. 06/06/08 - J.Kann - spoke with Anish of Yu Associates. Endpoints from an excavation in the southeastern portion of the building revealed some elevated SVOCs (PAHs). No VOCs were detected. Anish indicated that the highest level was 7.8 ppm of benzo(b)flouranthene. The site will be capped as a part of construction. 09/22/08 - J.Kann - reviewed Yu Assosociates letter of August 12. Discussed their findings and determined the following: an SSDS must be installed at the site. According to Yu, excavation on-site has been completed to the max amount allowable due to structural constraints. Shallow excavation will be completed as a part of construction. Additional endpoints of soil samples will not be needed for this phase of excavation (they will just need to perform necessary sampling for waste characterization and disposal). The building will be constructed with a vapor barrier and SSDS. REgen ox has been applied and some sampling performed (see edocs). A well will be installed in the sidewalk along 24th street immediately north of the tank location. 1/28/10: J.Kann - spoke to consultant A. Leung on 12/8/09. A. Leung indicated that no work had been done on the site recently to his knowledge. Will need to contact the owner to notify them that additional follow up work is needed. The owners information (provided by consultant) is Rev. Danny Mun Sang Suk Rev.New Millennium United Methodist Church 202-20 45th Avenue=0A Bayside, New York 11361 United States of America (718) 631-9191 (Work) (718) 224-3525 (Home) (917) 415-6760 (Cell) 02/02/2010 Project transferred from Section C to Section B for management. Needs project manager to be assigned. V. Brevdo 12/21/2011 - Brevdo - Langan submitted Groundwater Investigation Report which is post-remedial groundwater monitoring to ensure there is not substantial off-site contaminant migration. Report recommends spill closure. Summary of information supporting spill closure is in Section 5 of the report and is as follows: 5.0 CONCLUSIONS AND RECOMMENDATIONS Based on investigation observations, analytical data and previous investigation reports, we conclude and recommend the following: 1. VOC concentrations in groundwater have decreased and do not indicate significant offsite groundwater impact. 2. Over the intervening years since the last groundwater sampling event, the concentrations of VOCs in the groundwater have decreased due to previous remediation efforts to remove the spill source area and natural attenuation. The present residual benzene and isopropylbenzene concentrations will continue to degrade by natural attenuation. 3. Consistent with the requirements listed in the September 26, 2008 NYSDEC email, a vapor barrier and sub-slab depressurization (SSD) system (assuming the future building slab is above the groundwater table) will be installed for a building constructed at the Site. Soil that may be excavated as part of future development will be characterized, handled and disposed in accordance with a soil management specification that addresses local and state requirements. Groundwater contamination has significantly attenuated and will continue to degrade by natural attenuation. We recommend

 DEC Memo: "Sangesland spoke with Roux Assoc. Tank excavation with some spillage around tanks. (Tanks had been previously abandoned in place). Now tanks are being pulled. Sangesland asked for several end point soil samples taken from tank grave after removal. Test for VOC & SVOC. 3/16/2005 Sangesland reviewed a report from Roux Assoc. dated 3/9/05 On 2/18/05 Roux collected 6 post-ex samples. One per each side & 2 bottom VOC's - All samples contained low levels of VOC's, but they were ALL BELOW RSCO Stds. SVOC's - Some minor Hits on PAHs consistant with historical fill levels. Results show some contaminants exceed regulatory standards. Samples taken on removed (waste) soils showed much higher VOC & SVOC levels. Roux conclusion says that the contamination source has been removed and the site should be closed out. Based on the soil sampling work performed on the site and the report prepared by Roux Assoc., the NYSDEC agrees with the conclusion

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 142-331: On 4/17/02 at 13:42 R. Valenzuela # 92468 of the flush reported that at 13:30 he found 4 ounces of an unknown oil mixed with 200 gallons of water. This was in manhole-06705 and is located at the NWC W. 36 St. & Deyer Ave. He was there for a followup inspection of this structure. The fluid is from an unknown source & cause. This is the third time cleaning this structure within a 2 week period, the first 2 lab results came back as a light fuel oil, therefore we are requesting a flashpoint. We are making this incident type as a regular spill due to needing the flashpoint in order to clean it. A tag was hung # 37338 and samples

were requested for PCB, ID, & flashpoint. Chain of custody #BB-02774. 4/17/02 18:34 Received lab results lab sequence # 02-03283-001 Flash Point, PMCC >140 deg F 4/17/02 19:41 Received lab results, lab sequence # 02-03282-001 Analysis indicates the presence of a substance similar to a light fuel oil. 4/17/02 20:58 Received lab results, lab sequence # 02-03281-001 Aroclor 1260 < 1.0 ppm. Update 4-22-02 @ 04:55 M Melendez #11285 reports that the cleanup is complete as of 04:00 hrs. 2900 gallons of liquid removed and 1 bag ppe generated from the cleanup. Double washed with slix and flushed , remaining liquid removed by the tanker. Tag #37338 removed. 10/24/2002: Lou First spoke to Jane O'Connell of the DEC concerning her question about the source of the oil. It was explained that this particular manhole is directly in the middle of the intersection where the traffic enters and exits the Lincoln Tunnel. It is also at the bottom of a hill coming down from Tenth Avnue to Dyer Street. There has been atleast four recorded spill reports (142187, 142261, 142331, and 142544) at this location. The total volume of the four spill reports is less that two gallons. The sample results indicate a light fuel oil. There is no building within 30+ feet of this manhole. The next manhole up the hill towards tenth Avenue had no oil when it was checked. It seems apparent that the oil was runoff from the street and the very high vehicle traffic by this location. Jane concurred and agreed to close the incident when resubmitted."

Remarks: "4 OZ UNK OIL ON 200 GALS OF WATER CONFINED TO MANHOLE - SAMPLE TAKE CLEAN UP PENDING RESULTS - CON ED 142331"

DEC Memo: "03/01/09- Zhune spoke to jeff Bohlan from Envirotech 631-924-3001. He sent the following e-mail: EnviroTrac Ltd. is working on behalf of Verizon New York, Inc. for the construction of a FiOs Garage at the subject property. During construction activities, a total of 3 underground storage tanks (USTs) of unknown size were encountered along with petroleum-impacted soil. Verizon is leasing the property from Rockrose. Please send all correspondence to Rockrose Development Corp. 06/10/10-Zhune spoke to Jeff. He said DEC will get the final report by the end of next week. The Phase I ----- ESA completely in october 2005 identified the folowing recognized environmental condition(RECs): 1.- Prior uses of the site include the storage of coal and the operation of a truck washing station.Sulfuric acid was also stored on the western periphery of the site. 2.- Gasoline storage tanks were present on the site between 1930 and 1950 3.-Open leaking UST gasoline spill involved the release of petroleum products to groundwaterat sites in close proximity to (within 400feet)and potentially upgradient of the site. Open spill # 9709152 involved the release of 60.00 gallon of wasteoil/used oil at a site approximately 0.15 mile downgradient from the site. The Phase II ----- Twelve soil boring(SB-01 through SB-12) were advanced until shallow bedrock was encountered A total of eleven (11) subsurface soil samples were collected within the unsaturated zone at each soil boring location exception of S5B-01. Tha analytical soil results indicated that sample SB-08(4-5')showed VOC's (benzene 70 ug/kg, and total xylenes 4100 ug/kg)exceeding the RSCO. SVOC's (Phenol, Methylphenol, naphthalene, debenzofuran, phennthrene, fluoranthene, pyrene, benzo(a)anthracene, benzo(b)fluoranthene,benzo(k)fluoranthene, chrysene, benzo(a)pyrene, benzo(a,h)anthracene were detested in sample SB-05(3.5-4.5) and SV 10/07/10- Zhune. Envirotrac sent the Undeground Storage Tank Removal & Request for spill closure report dated july/12/2010. Underground Storage Tank Removal. ----- Six(6) 550-gallon gasoline USTs, (1) 550-gallon diesel UST, one(1)330-gallon gasoline UST, 20-gallon gasoline UST and one (1) 10-gallon gasoline

UST and all subsurface piping were removed from this site. Following removal of petroleum-impacted soil a total of eight(8) post-excavation soil samples were collected for the (6) 550-gallon gasoline at each sidewall and two bottom locations of the UST excavation. (4)soil samples were collected from the (4) varying sized UST at each sidewall. No bottom samples could be collected due to the presence of bedrock at the bottom of the varying-sized USTs. The analytical results indicated no VOCs detected above the NYSDEC (TAGM)#4046 RSCOs for samples collected from the excavation of the aix(6) 550-gallon gasoline UST. No VOCs were detected for the (4)samples collected from the excavation of the (4) mixed size UST excavation. SVOCs (Benzo(a) anthracene 3,400 ug/kg, Benzo(a)pyrene 3,200ug/kg, Benzo (b) fluoranthene 3,600ug/kg, Benzo (K) fluoranthene 1,300 ug/kg, Chrysene 3,000ug/kg, Dibenzo(a,h)anthracene 560 ug/kg) were detected at low concentrations slightly exceeding RSCOs in the soil sample collected from the sidewall #2 and SVOCs(Benzo(a)pyrene 310 ug/kg)were detected at low concentration slightly exceeding RSCOs from soil sample collectd from the sidewalk #3. Groundwater was not encountered during excavation activities. spill Closed. "

along w/ site plan, analytical conclusions and recommendations. 4/20/06- DEC Piper spoke w. John, they will be excavating cont. materials and collecting endpoint/sidewall samples. 4/28/06- DEC Piper spoke w/ ERic pf Emtek. They have taken over for Ambient Group. ERic will provide site plan and RAP for review and comment. 5/10/06- DEC Piper reviewed RAP and was contacted by Emteque to expedite approval. DEC approved following inclusion of 1- must include the collection of at least one groundwater sample to be analyzed for EPA Method 8260 and 8270. A contingency plan for the occurrence, sampling, treatment and/or disposal of contaminated groundwater will be added to the RAP. 2- Installation of a vapor barrier prior to pouring new slab. 3- DHL enter into a stipulation agreement with the State. Need to send STIP Agreement to EMTEQUE Corporation 505 Eighth Avenue, Suite 900 New York, NY 10018 Attn: Eric Telemaque BUT ADDRESS IT TO: DHL Express (USA), Inc. 145 Hunter Drive, Bldg. 1005-B Wilmington, OH 45177 Attn: Shari Hufford 6/5/06-DEC PIPER- DEC Piper spoke w/ Eric at Emteque, As per conversation limited end point sampling was performed on Saturday, more samples will be taken this afternoon and final samples will be collected Wednesday/Thursday. he has found additional tanks in the northeast corner of the 505 10th Avenue site twelve (12) 550s which were encased in poured concrete and do not appear to have leaked, however, endpoint sampling will be performed as a confirmation. The existing heat oil tank was also uncovered, found to be corroded on the top of the tank. This tank will be cleaned, removed and endpoint sampling also performed in this area. 6/8/06- DEC Piper recieved e-mail from Eric T. at Emteque. E- mail stated specifically that it appears that the house tank has been leaking no. 4 oil for years into the bedrock. Where weathered bedrock has been encountered they are removing the soil. In some area bedrock cannot be removed using conventional excavation. This condition occurs in the northwest corner of the site. As they moved towards the east side of the facility they have uncovered another 16, 550 gallon tanks in addition to the 13 - 16 they thought they knew about. they have encountered gasoline contamination to 10-12 feet and then they are into bedrock. Again the direction to the contractor has been to excavate to bedrock in these areas. 6/14/06- DEC Piper received e-mail from eric T requesting extension on STIP. Considering that the project is moving along and all associated parties are taking efforts I will grant you two (2) additional weeks on the signed STIP. The deadline is now Thurs. June 29, 2006. 6/29/06- DEC Piper received RAR from Emteque. The program included the removal of 29- 550 gallon UST's, 2- 3,500 gal gasoline UST's, and 1- 8,000 UST. Soils endpoints are acceptable though clean endpoints were not obtainable below the fuel oil tank. DEC requests bedrock wells outside building adjacent to fuel oil tank. See e-docs for full report. 1/10/07- DEC Piper reviewed groundwater analyticals. Groundwater contamination is evident. referred to remediation. 1/7/10 - Obligado - This spill has been transferred to Obligado from Brevdo. 2/22/10 - Obligado - After review of the file I contacted Eric Telemaque from Emteque. I let a message to call back the DEC. 2/23/10 - Obligado - I spoke with Mr. Telemaque. He was under the impression that the spill was closed. I told him it was still open. He said he thought he received a NFA letter. I asked him if they installed groundwater monitoring wells, and he said yes, there were three. I asked him to please submit documentation of the wells and sampling to the Department. He will review his files and archives and call me back tomorrow. 6/14/10 - Obligado - I sent a letter to DHL Express with an electronic cc to

S107658464

Eric Telemaque requiring the sampling of the 3 monitoring wells at the site and submission of a report to the Department within 60 days. 8/5/10 - Obligado - Steve Sohnly called from DHL 859-391-5204. He said he is going to track down the report of the ground water sampling and send it to me. 11/5/10 - Obligado - I received a voice mail from Eric Telemaque. They attempted to sample the wells and 2 of the 3 wells had free product. Thicknesses were 6 and 2'. He thinks its #4 heating oil because the #4 heating oil tank had holes in it. He will submit a letter report recommending monitoring and vacuum extraction. 6/7/11 - Obligado - I spoke with Eric Telemaque. He will submit a report documenting well gauging and VEFRing product. I requested a site plan showing well locations as well as to superimpose former source areas which were excavation areas and UST areas. He said I should expect a report next week. 7/27/11 - Obligado - I reviewed a letter report documenting gauging and product recovery. Only 0.005 ft product in one of three wells. I emailed letter to DHL and Emteque requiring monthly gauging and quarterly sampling. A quarterly monitoring report is due in 90 days. 10/6/11 - Obligado - Quarterly report submitted. The north well had free phase product with thickness of 0.05 ft, and was not sampled. The south well had total VoCs of 1690 including benzene concentration of 1300 ug/L. The east well had 931 ug/L. The south and east wells had low level SVOC exceedences as well. 10/11/12 - Obligado - I sent an email to Jay Hawkes requesting subsequent quarterly reports. 10/2/13 - Obligado - I sent an email to Jay Hawkes, Eric Telemaque, Hugh Danielson of DHL requiring submission of overdue reports. 10/3/13 - Obligado - I received a response from Mr. Danielson of DHL. He said he thought the matter was resolved. I told him the spill case is still open and there are 3 wells at the site, one with free product and 2 with groundwater contamination. 2/26/14 - Obligado - Sue to lack of cooperation and untimely report submissions, I sent an Stipulation Agreement to Mr. Danielson requiring signature within 30 days of receipt. 2/27/14 - Obligado - I spoke to Hugh Danielson. He said the DHL address has changed. New address is DHL Express (USA), Inc. 236 Wendel H. Ford Blvd Erlinger, KY 41018 Attn: Hugh Danielson 3/21/14 - Obligado - I had a conference call with DHL and consultant WCD. We discussed STIP and CAP requirements. According to WCD consultant Wes, he gauged all 3 wells recently and found product in all three wells with a max thickness of 0.3 ft. They will need to delineate and recover product to the extent feasible and demonstrate reduction in contaminant levels. After the call, I received an email from Hugh Danielson stating that he sent the signed STIP and that I would receive it Monday. 4/3/14 - Obligado - STIP executed by Lannon on 3/31/14 - Emailed copy to Hugh Danielson and Wes. 4/28/14 - Obligado - Phone call from Andreas Eisenburg. He gauged the site on the 16th. All three wells have product. Well # 3 had the most product with 0.3 ft. Samples were GC fingerprinted. He sent me a summary email and request an extension for the submission of report due to delay in surveying. I sent approval email for extension. 11/4/2015 - Obligado - Stephanie Hesselbarth GAC environmental submits a status update report. The report documents the recent gauging and sampling events at the site since April 2014. Generally, activities involved gauging, sampling, fingerprint analysis, EFR events to remove product, and use of absorbents in wells to recover product. Fingerprint analysis found that MW1 had no single pattern but resembled diesel fuel as well as heavier blends of fuel oil but also had a gasoline odor. MW2 also appeared to be a mixture but had a

Site

Database(s)

EDR ID Number
EPA ID Number

COMMERCIAL PROP-ERTY (Continued)

S107658464

pattern consistent with lube oil. MW3 also had no single pattern but was similar to mixture of diesel and No. 4 fuel oil. Overall, dissolved concentrations and free product levels have been decreasing. Free product levels have been reduced from 0.30 ft of product in April 2014, to a maximum of 0.03 ft of product in December 2014. VOC concentrations have been generally stable, with maximum concentration of 1421 total VOCs in MW2 in April 2014 to 1700 total VOCs in February 2015. During the last few months of gauging, measureable product has not been detected but the absorbent socks had been heavily saturated with oil. As such, the report recommended at least one additional EFR event to remove remaining product followed by Groundwater sampling. 12/16/15 - Obligado - I received a phone call from Marc and Stephanie. We discussed the recent findings since the report. Measurable product has been detected, however, only very small thicknesses of free product, in the order of 0.02 ft or less. The consultants inquired about the Department's position on surfactants, and I told him that I was not comfortable with their use due to the fractured bedrock in the area and the fact that the extent of free product has not been delineated. I told him that due to very low thicknesses of free product, the Department may be amenable to spill closure if the free product is sufficiently delineated and it can be shown that the product is minimal and very localized and product cannot be recovered. He will recommend adding a few step out delineation wells to show that the product is indeed localized and contained to that small area. 3/7/16 - Obligado - I received an email from Chris Martell of ESA. He has taken over as manager. They will be gauging the wells monthly for the next 6 months to check for product levels. 3/8/16 - Obligado - I responded that they should submit a report summary report documenting the work. If they are requesting closure they should demonstrate that the spill has been remediated to the extent feasible and no longer presents a threat to human health or the environment. HE said they will submit a report. 8/24/16 - Obligado - I received a closure request. 11/29/16 - Obligado - Mathew Stock submitted the closure report. 1/14/17 - Obligado - Spill Closure Report Review - Background IN May through June 2006 Emteque removed 29 550 gallon gasoline USTs, (2) 3,500 gallon gasoline USTs and one 8000 gallon No. 4 heating oil UST, and 1 100 gallon waste oil UST. Emteque removed soils and loose rock down to 10 to 14 ft to bedrock. Several endpoint samples had VOCs and SVOCs above CP51 clean up levels. As such DEC required 3 monitoring wells to be installed in 2006. The wells have been monitored since 2006. When initially sampled in 12/13/10, MW 1 had very high levels of groundwater contamination - with up to 32,000 ug/l Total VOCs and 3,400 ug/L SVOCs in groundwater. Vacuum enhanced recovery events to remove groundwater and free product were performed in December 2010, January 2011, February 2011, March 2011, April 2011, May 2011. In September 2011, the wells were sampled again, and levels have decreased significantly to 846 ug/L in MW1 and 1707 ug/L MW2. In April 2014, GAC sampled the product from the wells and found the wells contain a mixture of product types, with diesel, heavy oil resembling #4, lube oil. While gasoline odor was observed, gasoline was not evident in the GC Fingerprint results. In July 2014, the maximum concentration of VOCs was 1417 ug/L in MW2. Lower levels of VOCs were observed in MW1 and MW3. Additional EFR events were conducted in September 2014, October 2014, December 2014. In February 2015, the monitoring wells were sampled again. BTEX concentrations ranged from 247 ug/L BTEX in MW3, 1393 ug/L in MW2, and 1640 ug/L in

S107658464

MW1. Since February 2015, GAC has been gauging the wells for the presence of free product. Product has not been present in MW1 or MW3 for over 6 months. MW2 has only a slight sheen of product. The last 3 gauging events the maximum product thickness was 0.01 ft. 2/14/17 - Obligado - I met James of GAC environmental on site for a site inspection. I observed as he gauged the wells. MW1 and MW3 were free of free product. MW2 had a slight detection of product with a the interface probe although it was not of measurable thickness. I dropped a bailer in the well to see if floating product was evident. UPon pulling up the bailer there was no LNAPL layer was observed in the bailer. 2/24/17 - Obligado - I reviewed the case file including the soil removal report. There were some endpoint samples that remained above Soil Clean up levels, however, based on the report the excavation extended to the bedrock and the site structural limits. I requested Matt stock revise the spill closure report to reflect that not all contaminated soil was removed but rather that contaminated soil was removed to the extent feasible. 3/3/17- obligado - I received the revised spill closure request. The report recommends closure based on: 1) All Underground Storage Tanks have been removed from the premises 2) Contaminated soil has been removed from the premises down to the bedrock surface or to the structural limits 3) A vapor barrier has been installed and no exposures are to occur 4) Free phase product has been recovered to the extent feasible 5) Ground water concentrations are attenuating. Based on the above, this spill no longer appears to be a threat to human health or environment. This spill is closed."

Remarks: "DURING SOIL TESTING FOUND CONTAMINATED SOIL;"

S113818795

seeping into building through floor in electric room, which is located in northeastern corner of the basement. the impacted floor is about 2 sq. inch in size. seepage area is towards the neighbouring parking garage. Joseph's office is next to electric room so he inspects area everyday and never observed seepage before. building has two sumps: one in east side of basement and another in west side. Joseph mentioned that there is water seepage issue in the building. the eastern sump is about 15 ft from the seepage point and close to neighbouring gas station. some non-petroleum deposits noted in eastern sump. during conversation, informed Joseph about an open spill case reported on 11/13/12. he mentioned that the building received about 2-3 ft of water in entire basement during hurricane Sandy. they noted some smell after storm, but no more odors in building. based on this information, case # 1210261 is closed. based on following, source could be on-site: - parking garage entrance just north of the subject site - repair shop is along W 25th street which is away from the leak area - on-site historical 550 gal waste oil UST was probably close to the seepage area discussed with Joseph about historical tanks on-site. he mentioned that the current management took this building about seven months ago. he also started working at the site about seven months ago. so they don't have any information/documents about old tanks on site. he mentioned that the site still owns by developer. based on available information, asked Joseph: - to contact developer regarding tank closure reports - to cleanup minor seepage and observe area for any more seepage David Lipsic **property manager** Douglas Elliman Management Ph. (212) 350-2803 (212) 350-2899 email: david.lipsic@ellimanpm.com Joseph Santiago **building super** Ph. (917) 607-0167 email: joseph.santiago@ellimanpm.com 12:47 PM:- left message for Mr. Spitzen at Grasso Holdings. Grasso Holdings **property developer/owner** 30 South 15th Street Philadelphia, PA 19102 Attn.: Daniel Spitzen Ph. (215) 989-3600 / 701-3824 email: dspitzen@grassoholdings.com 4:00 PM:- visited site. met Joseph. observed impacted area in electric room which is located in northeast corner of the building, partially under the sidewalk. found yellow stain on wall indicating some liquid seeping in. found small puddle near the wall, containing spot of black liquid and greenish/silver sheen on water. no rainbow sheen observed on water. black stuff was on bottom of the puddle. no petroleum odors noted in area. the water puddle was about 6 sq. inch in size. Joseph showed a small pipe in floor along western wall of the electric room. found water stain around this pipe. Joseph mentioned that recently he noticed some water come out of this pipe. he mentioned that water seepage is not continuous. inspected eastern sump, located along southern foundation wall, about 30-40 ft from southeast corner of the basement. found some deposit in sump indicating possible sewer line leak in area. suggested Joseph to contact plumber and report possible sewer/water main leak to NYC DEP. inspected southern foundation wall of neighbouring parking garage's basement. no sign of oil spill noted in visible areas. 07/09/13-Hiralkumar Patel. 10:26 AM:- spoke with Mr. Spitzen. informed him about unregistered tanks that were removed between 2004 and 2006 and asked him to update PBS record and provide documents confirming proper closure of these tanks. reviewed e-docs on PBS file. found a PBS application signed by Daniel Spitzen on 01/27/2005 for removal of one 1,000 gal waste oil UST and one 550 gal gasoline UST. 11:13 AM:- sent email to Mr. Spitzen including letter from Roux Associates (dated 01/11/2005), PBS application submitted in 2006

DEC Memo: "7/13/11 - Raphael Ketani. The spill was called in yesterday as the discovery of oil and filters in a sewer. A contractor was hired to clean out the sewer. I tried to contact Michael Lopez (718) 707-5725 of the Chelsea Elliot Municipal Housing Project, 427 West 26th Street, NY, but I could only leave a message. Later, I spoke to Mr. Lopez. He said that Michael Tartaro (718) 707-7842 was the one who was overseeing the cleanup of the spill. I spoke to Mr. Tartaro. He said that CMI was present using their vacuum truck to routinely clean out the sewers in the housing complex when they came upon the oil and filters. The CMI driver sucked up the oil and filters and waited for Clean Venture to arrive with their vac truck. CMI disgorged everything onto a tarp and the Clean Venture driver sucked up everything into his truck. What couldn't be sucked up - bricks and other debris - was put into seven drums and hauled away. The sidewalk where the oil had spilled into the sewer was also cleaned. Mr. Tartaro then sent me manifests by e-mail. As the spill was confined to the sewer and was small and was cleaned up the same day as the discovery, I determined that the spill was not a threat to the environment or to the public. Therefore, I closed the spill case. "

DEC Memo: "12/14/05: This spill transferred from J.Kolleeny to S.Kraszewski.
9/22/06: Spill transferred from Kraszewski to Kann. 1/19/10: J.Kann -
revised work plan received 11/17/09. WP approved 1/19/10. 9/23/10:
J.kann - Quarterly Report recieved 9/01/10. 5/11/12: J.Kann -
quarterly report recieved on 5/9/12. 9/6/12: J.kann - quarterly
report received on 8/21/12. 1/16/13 : J.kann - 10/24/12 QR rcvd on
1/16/13. 5/21/14: J.Kann - email sent to NYCHA today stating: The
Department understands that a recovery system is operating, that
monthly VEFR is being performed and that quarterly monitoring is
currently being done at the following five sites: Amsterdam Houses
Elliott Houses Manhattanville Houses Melrose Houses Baruch Houses
Since wells at these five sites have consistently (based on quarterly
reports received over the past year) had no product, a sheen or less
than 0.08 inch of product in their wells, the Department would like
NYCHA to temporarily cease operation of the systems and VEFR at these
sites. For the next 4 months, the wells must be monitored to
determine if any significant recharge of product occurs. Accurate
readings of product thickness must be made, which may require using
the gauging method used at South Jamaica Houses on May 19, 2014. In
addition, during this 4 month time period, no absorbent socks should
be placed in the wells. Data from this monitoring, along with
recommendations, must be included in the 2014 3rd quarter monitoring
report for these sites, which is due to the Department by October 1,

2014. In the event that a significant recharge is noticed in any of the wells during these 4 months, the Department must be contacted immediately (within 72 hours of gauging). 1/24/17: J.Kann - based on review of Quarterly monitoring reports, The source of petroleum has been removed. The PRS was operated between 1998 and 2014 Free product has not been observed in the accessible monitoring wells since 2007. Since halting the PRS in 2014, free product has not been observed in the accessible monitoring wells and little free product (less than 0.25in) has been observed in the recovery wells. No petroleum related VOCs or SVOCs (listed in Table 3 of CP-51) were detected in groundwater samples collected in April 2015 from the accessible monitoring wells. As per Randy in a discussion of January 20, 2017 if less than 0.25 inches of No. 6 oil has been in on-site wells for 2+ years and contamination has been delineated all around the impacted area and there is nothing off-site and no dissolved phase in wells, spills can be closed. The Closure Letter should contain the contaminated soil clause. Spill closure email will be prepared with contaminated soil clause and sent to NYCHA "

DEC Memo: "9/6/05-Vought-Desk Duty Officer-Sent out groundwater contamination letter to owner on spill report. Upon reception of report determination will be made whether gasoline or fuel oil contamination so project manager can be assigned. 4/26/06 - Austin - AKRF submitted a supplemental Phase 2 (dated 1/18/06), a RAP, and a HASP (both dated 3/1/06) for this site. Documents and project transferred to Ketani for review and follow up - end 4/26/06 - Raphael Ketani. Today I received the 11/9/05 Phase II Environmental SIR, the 1/18/06 Supplemental Phase II Environmental SIR, the 3/1/06 Remedial Action Plan and Construction HASP for the site. 4/27/06 - Raphael Ketani. Today, I sent out a letter approving both SIRs and the RAP. In addition, the letter stated that 2 additional groundwater monitoring wells should be installed and monitored for 2 rounds of sampling. Then a report must be issued with the results. 7/5/06 - Raphael Ketani. I tried to reach Mark Godick of AKRF (914) 949-7336 regarding progress at the site, but could only leave a message. 7/10/06 - Raphael Ketani. Mr. Godick called to say that they are still doing source removal, but the wells will probably not be installed until September when excavation will take place and be completed. I told

Mr. Godick that would be fine. 8/17/06 - Raphael Ketani. I spoke to Mr. Godick at his NYC number (646) 388-9534. He said that they are not scheduled to remove the soil and excavate down to bedrock until some time in September. He said he will keep me posted. 9/7/06 - Raphael Ketani. I contacted Mr. Godick at his White Plains office. He said construction is delayed due to the need to get some NYC permits. However, he will let me know when they are ready to start. 11/13/06 - Raphael Ketani. I left a voice mail for Mr. Godick requesting information on progress made. Mr. Godick returned my call and said that everything is being held up by the lack of a construction contractor to do the digging and the rest of the work. There is a shortage of contractors. The new start date is now January or February 2007. 2/6/07 - Raphael Ketani. Mr. Godick called to say that construction will start sometime in the next 2 weeks at the site. The owners finally have a contractor for the work. 4/11/07 - Raphael Ketani. I reached Mr. Godick. He said that digging is still taking place at the site. They have removed almost all of the soil they need to in order to construct the foundation. Now they are removing the contaminated rock. However, the rock is very hard and so progress is very slow. He said that they are digging and cutting down to 25 feet below grade and once all of the soil and rock is removed, then the report will be submitted. 4/24/07 - Raphael Ketani. I visited the site after work hours. I could not get into the site, but took 3 pictures. Drilling and blasting is taking place at this time. Part of the site is very deep. Next to one building that is on West 39 Street they are drilling and blasting. The rock is granite and looks to be very hard. I did not see any signs of groundwater. 4/26/07 - Raphael Ketani. I tried to reach Mr. Godick to discuss the groundwater issue and the coming report, but could only leave a voice mail. Mr. Godick returned my call. We discussed the groundwater and report issues. I told him that the site doesn't seem to have any water and I asked whether he was using well points to keep it dry. Mr. Godick said that the site is completely dry naturally. He has not had any groundwater issues. He added that all of the soil and historical fill, and tanks were removed a while ago. He said he will send the site completion report, anyway, because he has to send it to DEP. I told him that would be good for our records. I told him DEC is closing its spill case today and that I will send DEP a letter just to keep them in the loop. He said to send the letter to Gary Heath, NYC DEP, 59-17 Junction Blvd., Flushing, NY 11373. I composed a draft closure letter and submitted it to Randall Austin, Chief Spills Unit Region 2, for approval. Based upon my site inspection on 4/24/07, the Phase II SIR, the Supplemental Phase II SIR, and my conversation with Mr. Godick today, I am closing the spill case. However, DEC is holding off sending the NFA letter until the closure report is received, as per Mr. Austin's instructions. 5/23/07 - Raphael Ketani. I tried to reach Mr. Godick to remind him to send the closure report, but I could only leave a voice mail. 6/25/07 - Raphael Ketani. I spoke to Mr. Godick and asked him where the closure report was. He said that they still haven't finished installing the vapor barrier. He added that once they're finished with this and the rest of the foundation work, then the closure report will be written and sent. 7/20/07 - Raphael Ketani. There has been no communication from Mr. Godick, nor the receipt for the closure report. So I am still holding off sending the NFA letter. "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT CALLED BERNIE LUDWIG AND LEFT A MESSAGE. SPOKE WITH BERNIE LUDWIG AND HE SAID THAT GASOLINE FUMES ARE COMING FROM A CON EDISON MANHOLE THROUGH A PIPE INTO AN OFFICE. THE CONTRACTOR WANTED TO SETUP A FAN TO CONTROL THE SITUATION. I TOLD THEM NOT TO CLEAN THE MANHOLE UNTIL CON EDISON KNOWS THE SITUATION. THERE IS A POSSIBILITY OF LIVE EQUIPMENT IN THE MANHOLE. THE MANHOLE SEEMS TO BE OF CONCRETE CONSTRUCTION. CALLED CON EDISON TO LET THEM KNOW OF THE SITUATION. THE GASOLINE IS IN THEIR VAULT. DAVE KINDBERGH FROM CON EDISON WILL GO TO THE SPILL LOCATION TO ASSESS THE SITUATION. HE ALSO WILL NOTIFY THE #9. ARS 10/30/03. Also see spill # 9830017. YK. 11/20/2003-Vought-See open spill #9707190 and closed spill 9830017 at same location. This spill closed by Vought."

Remarks: "CALLERS COMPANY HIRED TO INVESTIGATE A GASOLINE ODOR, THEY DISCOVERED FUMES COMING FROM AN ELECTRICAL MANHOLE FROM THE SIDE, THROUGH A WIRING HARNESS"

1,753ppb BTEX and no MTBE. W-5, 9,975ppb BTEX and less than 46.0ppb MTBE. W-6, 4,718ppb BTEX and 58ppb MTBE. W-7, 18,230ppb BTEX and 16,700ppb MTBE. 11/2/2005 - Feng - Quarterly Monitoring Report, 8/2005 - 10/2005. 7 monitoring wells onsite. groundwater flows to south at depth of 7.21' to 8.71' below grade. W-1, decreasing, 12ppb BTEX and 13ppb MTBE. W-2, decreasing, 7ppb BTEX and 45ppb MTBE. W-3, decreasing and fluctuating, 2,518ppb BTEX and 262ppb MTBE. W-4, decreasing, 1,418ppb BTEX and no MTBE. W-5, increasing, 11,608ppb BTEX and 74ppb MTBE. W-6, 4,336ppb BTEX and MTBE MDL. W-7, sharply decreased, 2,461ppb BTEX and 211ppb MTBE. 11/18/2005 - Feng - STIP sent to Getty Properties with request of 1) wells installation of one (1) downgradient of W-2 and W-7, one (1) east to W-5 and one (1) southeast to W-6. 2) surrounding properties sketch. CC to Tyree and Delta. STIP due 12/19/2005. 2/17/2006 - Feng - on 2/9/2006 Received signed STIP with modified CAP. (RJF) 2/27/2006 - Feng - Quarterly Monitoring Report, 11/2005 - 1/2006. The site is an active Lukoil gasoline station/convenience store. Groundwater flows to south at the depth of 7.06' to 8.87' below grade. 7 monitoring wells onsite. W-1, 254 ppb BTEX, 34 ppb MTBE. W-2, increased and 343 ppb BTEX, increased and 231 ppb MTBE. W-3, decreased and 1,644 ppb BTEX, decreased and 62 ppb MTBE. W-4, decreased and 1,140 ppb BTEX, MTBE ND. W-5, sharply decreased and 5,170 ppb BTEX, MTBE ND. W-6, decreased and 3,328 ppb BTEX, MTBE ND. W-7, decreased and 2,012 ppb BTEX, decreased and 127 ppb MTBE. (RJF) 4/6/2006 - Feng - Stip cancelled due to dropping in concentration. Wait for next quarter monitoring report. (RJF) 5/16/2006 - Feng - WorkPlan submitted by Tyree, dated 5/12/2006. Tyree proposed to install 3 offsite monitoring wells. One locate at sidewalk across West 24th Street (P-8), one at sidewalk across southeast corner (P-9), and one at the sidewalk across 10th Ave (P-10). The wells will be constructed of 2 schedule 40 flush joint PVC having 15' of 0.02 slotted screen and 5' of riser. Each wells will be installed 10' into groundwater. The WorkPlan is approved and approval email sent to Joe Rennie. (RJF) 6/20/2006 - Feng - Subsurface Investigation Report, dated 6/5/2006. Tyree installed 3 offsite monitoring wells, 20 feet 2-inch PVC. Groundwater encountered at approximately 8 feet below grade. Soil and Groundwater samples were collected (Chain of Custody indicated that), but only soil samples analyticals were presented. PID reading = 0 for depth from 0-20'. Slight VOCs and SVOCs detected in soil but below TAGM 4046. Emailed Joe Rennie for groundwater data. (RJF) 6/28/2006 - Feng - Quarterly Monitoring Report, 2/2006 - 4/2006. The site is active Lukoil gasoline station/convenience store. As of sampling and monitoring on 4/12/2006, groundwater flows to south at the depth of 7.92' to 9.41' bg. 7 monitoring wells onsite. W-1, 75 ppb BTEX, 28 ppb MTBE. W-2, 30 ppb BTEX, 291 ppb MTBE. W-3, increased and 8,520 ppb BTEX (1,280 ppb B, 4,280 ppb T, 770 ppb E, 2,190 ppb X), 57 ppb MTBE. W-4, 2,438 ppb BTEX (25 ppb B, 33 ppb T, 1,000 ppb E, 1,380 ppb X), MTBE ND. W-5, 7,969 ppb BTEX (2,320 ppb B, 119 ppb T, 2,190 ppb E, 3,340 ppb X), 102 ppb MTBE. W-6, 2,423 ppb BTEX (322 ppb B, 31 ppb T, 1,010 ppb E, 1,060 ppb X), 19 ppb MTBE. W-7, increased and 22,780 ppb BTEX (6,310 ppb B, 8,870 ppb T, 1,520 ppb E, 6,080 ppb X), increased and 8,350 ppb MTBE. Stipulation Agreement sent to Getty Properties and cc to Tyree and Delta. STIP due 7/24/2006. (RJF) 8/16/2006 - Feng - Stipulation Agreement executed on 8/10/2006. (RJF) 8/17/2006 - Feng - Quarterly Monitoring Report, 4/2006 - 7/2006, by Tyree. The site is active Lukoil gasoline station/convenience store. Groundwater flows to south at the depth of 7.38' to 8.87' bg. As of

sampling on 7/24/2006, 9 monitoring wells. W-1, 57 ppb BTEX, 8 ppb MTBE. W-2, 13 ppb BTEX, 35 ppb MTBE. W-3, 6,862 ppb BTEX (635 ppb B, 3,260 ppb T, 346 ppb E, 2,621 ppb X), 114 ppb MTBE. W-4, 2,047 ppb BTEX, ND MTBE. W-5, 10,968 ppb BTEX (1,440 ppb B, 128 ppb T, 1,940 ppb E, 7,460 ppb X), ND MTBE. W-6, 2,982 ppb BTEX, 23 ppb MTBE. W-7, 24,900 ppb BTEX (6,320 ppb B, 5,590 ppb T, 1,430 ppb E, 11,560 ppb X), 4,700 ppb MTBE. W-8, both ND. W-9, destroyed during sidewalk repair. W-10, both ND. Emailed Rob Szczepanski (Tyree) to approve the delineation of contamination, RAP due 11/17/2006 as per the Stipulation Agreement. (RJF) 10/26/2006 - Feng - The adjacent property will be developed, 245 10th Ave and 502 West 24th Street, E-142-Designation Site of NYCDEP. Called Amy Ma of NYCDEP to inform her about the existing spill in the Getty Station locate 239 10th Ave. (RJF) 11/15/2006 - Feng - Quarterly Monitoring Report, 8/2006 - 10/2006, 10/19/2006, by Tyree. Active Lukoil gasoline station/convenience store. Groundwater sampled and gauged 10/16/2006. 9 monitoring wells. DTW 8.31' to 9.83' bg. Flow direction south. No LNAPL. BTEX range ND to 30,410 ppb (MW-7). MTBE range ND to 3,330 ppb (MW-7). (RJF) 1/18/2007 - Feng - Getty Properties portfolio meeting with Tyree and Delta. DEC staff has informed Tyree and Delta about the site development at the adjacent property, and the dewatering process may affect the contamination plume. Tyree will contact DEP before the preparation of RAP. (RJF) 1/23/2007 - Feng - Email Rob S. (Tyree) the contact person info in DEP and the adjacent project info. (RJF) 6/6/2007 - Feng - Quarterly Monitoring Report, 11/2006 - 1/2007, 2/2007. Groundwater monitored 1/30/2007. 9 monitoring wells. Active gasoline station. DTW 7.94' to 9.47' bg. Flows southerly. LNAPL in W-7 (0.26'). W-1, 185 ppb BTEX, 163 ppb MTBE. W-2, 9 ppb BTEX, 24 ppb MTBE. W-3, 18,410 ppb BTEX, 102 ppb MTBE. W-4, not accessible. W-5, 10,606 ppb BTEX, 33 ppb MTBE. W-6m 1,953 ppb BTEX, 36 ppb MTBE. W-7, 0.26' of LNAPL. W-8, ND. W-9, destroyed. W-10, 3 ppb BTEX, MTBE ND. (RJF) 7/9/2007 - Feng - Quarterly Monitoring Report, 2/2007 - 4/2007, 5/2007. Groundwater sampled 4/30/2007. 9 monitoring wells. DTW 9.06' to 16.76' bg. Flows to south. No LNAPL. W-1, 1,255 ppb BTEX, 129 ppb MTBE. W-2, 1,572 ppb BTEX, 362 ppb MTBE. W-3, Dry. W-4, NA. W-5, dry. W-6, NA. W-7, NA. W-8, ND. W-10, ND. (RJF) 11/7/2007 - Feng - Quarterly Monitoring Report, 5/2007 - 7/2007, 8/2007. Groundwater sampled 7/30/2007. 9 monitoring wells were sampled. DTW 8.11' to 9.27' bg. Flows to south. No LNAPL. BTEX range ND to 5,980 ppb. MTBE range ND to 393 ppb. (RJF) 11/8/2007 - Feng - Portfolio meeting with Delta and Tyree. Tyree will sample for one more quarter to evaluate the site condition after the dewatering process at the adjacent site. Need to sample MW-4. RAP to be submitted by 2/2008. (RJF) 1/28/2008 - Feng - Quarterly Monitoring Report, 8/2007 - 10/2007, 11/2007. Active Lukoil gasoline station/convenience store. Groundwater gauged and sampled 10/23/2007. 9 monitoring wells. DTW 10.05' to 16.37' bg. Flows to south. No LNAPL. BTEX range ND to 5,131 ppb (W-6). MTBE range ND to 252 ppb (W-3). (RJF) 3/19/2008 - Feng - eDoc Quarterly Monitoring Report 1Q2008. (RJF) 3/20/2008 - Feng - Email to Tyree and Delta for RAP status. (RJF) 3/24/2008 - Feng - Quarterly Monitoring Report, 11/2007 - 1/2008, 2/2008. Active Lukoil gasoline station/convenience store. Groundwater was gauged and sampled 1/14/2008. 9 monitoring wells. No DTW available due to water probe broke onsite. Flows to south. No LNAPL. BTEX range ND to 4,203 ppb (W-1). MTBE range ND to 412 ppb (W-2). (RJF) 7/11/2008 - 2Q2008, 2/2008 - 4/2008, 5/2008. Active Lukoil gasoline station/convenience store. Groundwater was gauged and

sampled 4/25/2008. 9 monitoring wells. DTW 9.65' to 11.58' bg. Flows to south. No LNAPL. BTEX range ND to 10,765 ppb (W-3). MTBE range ND to 191 ppb (W-3). email Tyree for RAP status. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Delta and Tyree. The dewatering that started 4/2007 was stoped 2/2008. MW-4 was not sampled because storage box was on top of that. Wait to see the rebound before the delineation. Possible monitoring wells will be installed between the service building and the tank. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Delta and Tyree. Review 2Q2009 quarterly for possbile delineation. (RJF) 3/18/2009 - Quarterly Monitoring Report, 5/2008 - 7/2008, 8/2008, by Tyree. Active Lukoil gasoline station convenience store. Groundwater was gauged and sampled 7/22/2008. 9 monitoring wells. NO LNAPL. DTW 9.21' to 10.67' bg. Flows to south. BTEX range ND to 7,530 ppb (W-3). MTBE range ND to 165 ppb (W-3). (RJF) 5/6/2009 - Quarterly Monitoring Report, 8/2008 - 10/2008, 11/2008, by Tyree. Active Lukoil gasoline station convenience store. Groundwater was gauged and sampled 10/30/2008. 10 monitoring wells. NO LNAPL. DTW 8.11' to 9.66' bg. flows to south. BTEX range ND to 20,856 ppb (W-7). MTBE range ND to 192 ppb (W-7). (RJF) 11/6/2009 - 2Q2009, 4/2009-6/2009, 9/2009, pdf, by Tyree. Active Lukoil gasoline station convenience store. 12 monitoring wells. Groundwater was gauged 4/24/2009, 5/29/2009, 6/19/2009 and 7/9/2009. NO LNAPL. DTW 8.11' to 9.66' bg. Flows to south. Groundwater was sampled 6/19/2009. BTEX range ND to 11,198 ppb (W-7). MTBE range ND to 274 ppb (W-2). (RJF) 7/9/2010 - Reviewed Investigation Work Plan, dated 6/3/2010, by Tyree. Tyree proposes 2 wells W-11 and W-12 in west of W-7 and north of W-7. Work Plan is approved. Report due 10/2010. 2/8/2012 - Reviewed the Subsurface Investigation Work Plan, dated 5/17/2011, by Tyree. Tyree proposes to install 2 monitoring wells at the sidewalk along West 24th Street. Tyree mentioned that refusals were hit during the previous attempt to install wells as per the 7/2010 approved work plan. 2/10/2012 - Letter sent to Getty approving the work plan. Report due 4/2012. DEC provides comments, 1) sample groundwater and soil for CP-51 list VOCs; 2) conduct site history review to identify the reason why W-5, W-6 and W-7 with elevated BTEX concentration. Notified Getty that the case has been transferred to Central Office. All the future correspondences shall be directed to the new project manager, Kevin Hale. (J. Feng) 2/1/2012 Getty portfolio transferred to KGH. 3/14/2013 KGH meets with Tyree/Getty to discuss remedial progress on various sites including Getty #341. The site has been cleaned up nicely over the years and Getty is petitioning for closure. Site is a large volume, flagship station currently operated as a Lukoil. 3/21/2013 KGH reviews case-file for Getty Station #341. As part of the file review KGH does an internet search on the site. This station was the site of a photo op/press event involving the President of Russia Vladimir Putin celebrating the success of Lukoil in the USA. 6/6/2013 - Review of the file shows that this site was completely excavated to the extent feasible in 1998. There may be some low-level residual associated with utilities beneath the sidewalk but it is out of reach and of no consequence. The greenest & most sustainable approach is to let it attenuate naturally. 11/19/2013 4:36 PM from Craig Werle Kevin- I'm following up on our call today concerning closure of the one remaining open spill at the former Getty station at 239 10th Ave. As the environmental consultant that has been retained by VHS 239 LLC (new owners of the property) to assist with their Brownfields Cleanup Program (BCP) application for the site, I have attached the Tyree quarterly monitoring report

S104503705

for the third quarter of 2012. On page 6, Tyree, on behalf of Getty, requests closure of spill 97-07190 and issuance of a No Further Action letter. We hope that this direct request for will facilitate your expeditious review and closure of the spill so that it won't complicate the acceptance of the pending BCP application . Please contact me with any additional questions. Thanks for your help; Craig Craig A. Werle, P.G. - Principal Hydrogeologist - ROUX ASSOCIATES, INC. 12/2/2013 KGH to D'Ambrosio, 1:43 PM Subject: Re: Getty's request for closure of Spill - 239 10th Ave. CC: Conlon, Benjamin; Werle(cwerle@rouxinc.com), Craig: Cozzy, Robert; Farrar, Dennis Denise, Hope you had a nice Thanksgiving. I believe you had already joined Craig Werle and I on the phone when I advised him that as far as I could tell, Getty had not submitted a Petition for Closure of Spill # 97-07190 at the 10th Avenue site. He informed me to the contrary that they had indeed made a request and forwarded me a copy of their 3rd Quarter 2012 Monitoring Report which had been renamed Petition for Closure (attached). I've checked my files and can not find the original version. That is NOT surprising as it would likely have been sent to me sometime during the Fall of 2012 - at which time we were committed to the Hurricane Sandy Response. I requested during that time that Tyree pull back all electronically submitted reports (which had overloaded my Blackberry) and re-submit them on a CD when I was out of the field and back in the office. I expect that they did resubmit the 3rd Quarter 2012 Report but I cannot locate it. It does not appear on the list of reports resubmitted on CD. Regardless, I have reviewed the attached Quarterly Monitoring Report sent by Mr. Werle. As cited in his e-mail below, a request for closure is made on page 6. The response to this request is as follows: The Department has considered the request for no further action but must deny closure of Spill #97-07190 at this time. The Department acknowledges that considerable work has been completed and that excavation of contaminated soil has been completed to the extent feasible laterally. It is possible that residual soil contamination exists beneath the limits of previous excavation which would have to be properly managed if deeper redevelopment occurred in the near term. The Department agrees with the Tyree stated opinion that the residual GW contamination will attenuate naturally over time and sees no current exposure or potential impact to human health off-site from Spill # 97-07190. Unfortunately, the Department is also in receipt of an application to the BCP which claims that the site is in need of 4.8 million dollars worth of environmental clean-up work. In the face of these two seemingly conflicting scenarios, the Department will request Getty or current owner to submit an Exposure Assessment Report and Request for Closure clearly demonstrating that environmental issues have been addressed to the extent feasible and that closure is appropriate or what steps they will undertake to make it so. I look forward to working with you and sorting this out in a timely manner. Sincerely Kevin Hale NYSDEC- Albany From: Kevin Hale 3/6/2014 - received Exposure Assessment Report- Former Getty Station #341 Kevin- Attached please find a Qualitative Exposure Assessment Report for the former Getty station located at 239 10th Ave. The report evaluates the potential for exposures to residual hydrocarbon concentrations on the site and recommends the closure of spill #97-07190. Two hard copies of this report is also being sent to your office. Please contact me with any questions concerning the report. Craig 4/28/2014 The Department has reviewed the Qualitative Exposure Assessment Report submitted for the site. The data clearly

Remarks: demonstrates that any low-level residual will degrade in place and presents no on or off-site impacts. It is our understanding that the station has recently been shut-down to make room for construction of a condo complex and that the developers are working with NYCOER. As such, The Department concurs that No Further Action is required and Spill #9707190 has been closed in the Spills Database. NFA. KGH." "A LEAK IN THE REMOTE FILL. BROWNFIELDS:

Name: FORMER GETTY SERVICE STATION
Address: 239 10TH AVENUE
City,State,Zip: NEW YORK, NY 10001
Program: BCP
Site Code: 488150
Acres: 0.13
HW Code: C231086
SWIS: 3101
Town: New York City
Record Added Date: 10/21/2013
Record Updated Date: 01/13/2014
Update By: BXANDERS
Site Description:

Location: The site is located at the northwest corner of the intersection of West 24th Street and 10th Avenue. The site is approximately 0.13 acres in size. Site Features: The site currently is occupied by a non-operating gasoline service station, including a recently vacated 1-story commercial building last used as a convenience store. Current Zoning and Land Use: The subject property is zoned as M1-5, which allows for commercial and mixed-use buildings. The intended use of the site is for residential and commercial. The site is bounded directly adjacent by an 11-story residential building to the north, a car wash and mixed-use (residential and commercial) building to the south, and across 10th Avenue 4- and 6-story mixed-use buildings and a 20 story residential building. The site is approximately 100 feet away from the High Line Park, which overlooks the site to the east, separated by a one-story art gallery. Past Use of the Site: The site was operated as a small portion of a gas light fixture manufacturing facility that occupied the eastern third of the block in the 1890s. The site then operated as a gasoline filling station from at least 1930 until recent decommissioning in 2013. Since 1988 the site had 8 spill numbers assigned to it, out of which one spill number still remains open. In 1998 twelve 550-gallon gasoline USTs, three 4,000-gallon gasoline USTs, one 275-gallon fuel oil UST, and two fueling pump islands were removed and 1,853 tons of impacted soil was removed. Post excavation soil sampling results identified concentrations of volatile organic compounds (VOCs) exceeding NYSDEC Recommended Soil Cleanup Objectives (RSCOs). Petroleum impacted groundwater was also detected on-site which still remains. Site Geology and Hydrogeology: The geologic conditions at the site consists mainly of fine to medium grained sands mixed with gravels, boulders, construction debris and interbedded layers of silt down to 25 feet below grade (fbg). The Site s topography is generally flat and the surface elevation is approximately 43 feet above mean sea level. Groundwater occurs within the unconsolidated soils at depths ranging from approximately 7 to 10 fbg; based on historical gauging data, there appears to be an appreciable degree of seasonal variation in the direction of groundwater flow at the site, periodically fluctuating between south, southwest and west.

S106703285

conducted to date, the primary contaminants of concern for the site include petroleum hydrocarbon related volatile organic compounds (VOCs) compounds. Soil: Per 1998 lab results for the end point soil samples collected from 10 feet below grade (SW-7) the highest benzene concentration was detected as 44.5 ppm which exceeded the soil cleanup objective (SCO) for commercial use (to 44 ppm). Other SCO exceedances were ethylbenzene at 198 ppm (restricted residential SCO = 41 ppm), xylene at 1,990 ppm (industrial SCO=1000 ppm), toluene at 479 ppm (restricted residential SCO=100 ppm) and MTBE at 124 ppm (restricted residential SCO= 100 ppm). Groundwater: Since 2001 twelve (12) monitoring wells have been installed on and off-site (3 on site and 9 off-site) related to the current open spill. Per August 2012 (latest available) monitoring data the highest on-site concentrations detected were: benzene (32 ppb), ethylbenzene (139 ppb), xylene (80.5 ppb) and MTBE (18.3 ppb). Groundwater standards have been exceeded for all of the above analytes. Site related soil vapor and indoor air samples never been analyzed. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo: "09/10/09 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT NRC WAS CALLED BECAUSE OF PROXIMITY TO RIVER; BUT THERE WAS NO RELEASE TO WATER. 11/12/98 0815 hrs - Clean Harbors on location. Charles Carillo (S&TO) is supervisor. They were doing abatement of asbestos coal tar wrap, were bangin pipe to remove asbestos and may have caused leak on 1 valve. Clamp was put on valve (valve is for leak detection probe). Feeder is on reduced pressure. Sample taken for PCB, benzene. Immediate response was to tape plastic around pipe and direct oil into bucket. Plastic had already been laid on floor of manhole at beginning of abatement job. According to Jim Redrup (Clean Harbors supervisor) they had vac'ed up about 500 gallons as of 0830 hrs. Gerry Matterazzo of S&TO is to inspect MH to see if valve can be encased or if they need to break out the wall. Concrete sump in MH. (CAE)"
Remarks: "Hole in transmission feeder - crew on scene trying to clean up - spill is unk amount of dielectric fluid"

manufacturer data to see if they can make changes to the system. Wells haven't been sampled since AKRF lost the job. Will arrange to have wells sampled. 7/15/04 Received call from C. Schmidt, FLS. Wells will be sampled 7/19-7/20. FLS still looking into making changes to existing system. 9/21/04 Spoke with Mohammed Ahmed, Fleming Lee Shue (917-612-6018). He was previously with AKRF. Would like to present all data and propose NFA. He will need to FOIL the file to get AKRF data. 10/13/04 Received summary from FLS proposing closure of site. Background: Site is currently a luxury apartment building with art galleries on the ground floor. The site was historically used for freight transportation and warehouse facilities. The Hudson River is approx 0.25mi to the west. Site was mainly used as a truck rental, fueling and maintenance yard. Hertz formerly occupied the site and built a two-story garage in 1963. Hertz installed six 550gal gas USTs in the adjacent parking area located along 24th Street. Hertz also installed a gas distribution system with 4 dispensers. In 1965, Hertz installed four additional 550gal diesel USTs and a separate dispenser. One 7500gal heating oil tank was installed in the SW portion of the building. CMCR, LTD acquired the site from Hertz and also used the site as a truck rental/leasing facility. In 1985, the site was leased to Mendon Leasing Corp. Mendon reported four spills, 9511782(diesel), 9513588(gas), 9605688(gas), 9808740(#2FO). Costco Wholesale purchased the site in 1998 in anticipation of zoning that would allow a retail development at the site and closed the fuel and gas tanks in place. In July 2000, the Related Companies purchased the property and built the current apartment building that covers the site. Tank testing: In July 1990, Mendon was issued an NOV from the FDNY for failing to do the 10yr tightness testing on the six gas tanks. In March 1991, Mendon has all the gas and diesel tanks tested. The gas tanks passed but the diesel tank failed. The diesel tank was repaired and passed retest. In 1993, the heating oil tank was tested and passed. In 1995, the diesel tanks were tested again and failed. The contents were emptied in 5/96 and filled with polyurethane foam. In Feb 1997, the gas tanks were also emptied and filled with water. Previous Investigations: Several investigations were conducted between 1993 and 2001. ES Engineering did work on behalf of Greyhound Lines. ERM Northeast did work for DEC. AKRF did work for Costco and Related. Soil and GW has been implicated by on-site releases of petroleum and possibly also off-site sources. Areas within the parking lot on the north side of the former two-story garage building and inside the building, in the vicinity of the heating oil tank, contained free product in soils and GW. Free product in the former parking lot ranged from 0.08 to 1.63'. Free product found inside the former garage building was as thick as 4'. Dissolved-phase VOCs were also detected in GW as high as 5408ppb. No SVOCs were detected. Soil/GW interface is located at approx 8'bgs, flowing west toward Hudson. GW is not tidal. Bedrock approx 63'bgs, sloping S-SW. Remedial Actions: In Dec 1999, four 550gal diesel USTs and six 550gal gas USTs were removed from beneath the open parking lot. The heating oil tank was removed in Oct 2000. Approx 1000 tons of grossly contaminated soils were excavated and disposed of. The free product appeared on the groundwater surface and removed with absorbant pads. The excavations were left open to monitor for free product. No additional free product was observed and excavations were backfilled. No post-ex sampling was completed. The Department issued a letter on 2/12/01 with comments. A remedial workplan consisting of an in-situ remediation for soil and GW using SVE and bioremediation was

Map ID

MENDON LEASING (Continued)

S104275477

presented and approved by the Dept. In March-April 2001, six geoprobes were completed. NMW-1 showed total BTEX in GW at 275400ppb, NWM-2 at 156200ppb, and NMW-4 at 1330ppb. Insufficient GW was recovered from NMW-3 and NMW-5. NMW-6 was non-detect. In October 2000, an SVE pilot was performed. An underslab SVE system was designed and installed to remove residual VOCs and to add atmospheric oxygen to allow bioremediation to occur. Air extracted from below the slab was carbon treated before venting to the roof. A vapor barrier was installed beneath the slab. Operation of the system began August 2002 and operated thru August 2003 for 1615hrs. VOCs, carbon dioxide, oxygen and moisture levels were monitored before the input and at the output of the carbon canisters. System inspection and monitoring were conducted daily for the first two weeks and then weekly inspections were made. At startup, VOCs were measured at 20-50ppm. Concentrations dropped from the initiation in August 2002 thru November 2002 when the system was stopped for seven weeks due to equipment problems. Upon restarting the system in Jan 2003, a rebound was measured with VOCs rising to 60ppm. The system was operated for two weeks with a second 4 week idle period(1/7/03-2/25/03). After this rest period, the rebound did not occur. The system operated for a period of four weeks with a continual decrease of VOC concentration. Equipment failure again shut the system down for five weeks(3/27/03-5/1/03). A slight rebound to several ppm occurred when the system restarted. The system continued to operate thru June 2003 with day-long shutdown for maintenance with no rebounds observed. Levels of VOCs in the extracted air in June 2003 were zero. Between July 2003 and July 2004, the SVE system was out of service due to major damage in the main section of the blower. In August 2004, the SVE blower and motor were downsized to a 10HP regenerative blower capable of 200 scfm at 80 inches of water. VOCs were measured two days after startup which detected levels of VOCs in extracted air between 2 and 5ppm, indicating that no significant VOCs are being extracted from beneath the building. A total of 10 MWs exist on site. Four(MW-3, ERM-4, MW-14, MW-15) are currently located on the sidewalk. The other six(NMW-1 to NMW-6) are inside the Tate building. Max total BTEX detected in MW-14 at 1990ppb(7/16/02). Max MTBE detected in NMW-2 at 410ppb(8/8/03). By the concentrations of MTBE detected in upgradient wells, MW-14 and MW-15, there may be an off-site source. (There are two gas stations upgradient at 24th St and 10th Ave.) Concentrations of BTEX have been decreasing in source areas. It appears that removal of grossly contaminated soils and free product at the time of the UST removal in 2001 eliminated the primary source of GW contamination. Groundwater samples to be collected 10/16/04. 11/1/04 Spoke to Mohammed Ahmed, FLS (212-675-3225). Approx 3 of free product(gasoline) was detected in MW-14 (sidegradient of tank field) on 8/17/04. One week later, there was no product detected. Sampled again on 10/14/04, no product detected. He suspects that it is from an off-site source. There is a LukOil Station at 239 10th Avenue (open spills #9810383, 9707190). Oct 2004 monitoring report to be submitted this week. 11/16/04 Received status update (FLS, 11/11/04). GW sampling conducted 10/12-10/13/04. No samples were collected from MW-15 located on the sidewalk of 24th St and NMW-1 located inside the Buia Gallery on 23rd St. MW-15 was backfilled during construction of the Tate Bldg. NMW-1 was inaccessible due to an exhibit. BTEX ranged from ND to 1086ppb(MW-14). MTBE ranged from ND to 130ppb(NMW-2). Off-site sources of contamination may be contributing to site conditions. However, it is not clear that it is not from onsite

sources. 12/7/04 Issued letter requiring additional delineation around MW-14 and at former upgradient well location MW-15. Report to be submitted by 3/15/05. 12/20/04 Spoke to M. Ahmed, FLS. Will propose re-installation of upgradient MW-15, one well further upgradient (to confirm possible off-site impacts), and one west of MW-14(sidegradient). 12/29/04 Received proposal from FLS to install three additional MWs. 12/30/04 Issued letter approving workplan. 2/18/05 Received report for the installation of MW-14, 15A and 17. According to the report, there appears to be an off-site source on the northwest portion of property along W24th St. Concentrations of BTEX increased from 1086ppb to 2067ppb in MW-14. Report also states that the LukOil station may be contributing to the MTBE concentrations across the site. 3/15/05 Spoke to Mohammed Ahmed, FLS. Requested two Geoprobes across W 24th St to eliminate the Motor Freight Station and Auto Repair Shop as potential sources. 8/15/05 Spoke to M. Ahmed. A. Fleming spoke to NYSDOH at K. Tang's recommendation. NYSDOH requested subslab and indoor air samples. Results expected next week. FLS proposes to use this data to support closure. Explained that there is still dissolved which remains on the corner of the property. Agreed to wait for results to decide next steps. 11/29/05 Email to A. Fleming and M. Ahmed, FLS, provided comments on the October 17th request for spill closure. Regarding the indoor air and soil gas sampling which was performed, it is unclear if the concentrations detected within the building are due to any background interferences within the building. Directed FLS to conduct a full inventory as directed by the NYSDOH guidance for evaluating soil vapor intrusion. An additional round of indoor air samples must be taken at least 24hrs following the removal of any possible VOC sources. Results will be forwarded to NYSDOH. The Departments will determine further action for vapor mitigation, if required, following review. The groundwater data collected to date has been sporadic with five sampling rounds completed within the last three years. Quarterly groundwater sampling and monthly gauging must be completed and results submitted to the Department. Groundwater direction must be confirmed. The groundwater concentrations at MW-14 were as high as 4340ppb total VOCs in the last sampling round in January and have historically been fluctuating. MW-17, which was recently installed west of MW-14, also had readings of 2777ppb total VOCs. The Department requires additional wells be installed across W 24th street, north of MW-14 and MW-17, and west of MW-17. A proposal to remediate the contamination in this area will be required. It is expected that the additional delineation, groundwater and indoor air sampling results, with scaled site and contour maps, will be submitted by the beginning of February. 4/20/06 Requested update from M. Ahmed of FLS. 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 7/06/06 Requested update from A. Flemming of FLS. Mr. Flemming and I spoke about the history of the site. He still believes the impacts to groundwater at wells MW-14 and MW-17 are from off-site contamination (possibly Lukoil site on 10th Ave and 24th Street). These wells are supposedly up-gradient side of the site. I requested Arnie send me the latest data on the site including groundwater sampling and indoor air sampling data. - JAM 7/25/06 Spoke with A. Flemming a number of times. I do not believe a second round of indoor air sampling was conducted, however a vapor barrier is in place. They conducted site-wide groundwater sampling in May 06. Mr. Flemming believes the latest GW results show that off-site sources are contributing to the GW contamination along W24th Street.

He will submit a report of the wells that were sampled (not all were sampled because they were inaccessible). I requested that he state his justification for spill closure in the groundwater sampling report. 10/16/06 Received a call from Steve Panter of Fleming Lee Shue (212) 675-3225. He said the report is ready and will be submitted this week. - JAM 11/14/06 Received the report dated October 20, 2006 via email. The report summarizes all the groundwater analytical data since April 2003. FLS makes the argument that off-site sources are contaminating the sidewalk wells. A summary of all the off-site sources is included as well as a two part technical explanation for the difference between groundwater contamination in the sidewalk MWs and on-site MWs. The first part is a multivariate analysis, and the second is a comparison between Benzene and MTBE. The report is uploaded into edocs. - JAM 11/22/06 Received SVE System Data and Indoor Air Quality Data Summary Report from FLS. Report uploaded to eDocs. 01/22/07 Issued a letter to Greg Gushee The Related Companies, Inc. 60 Columbus Circle New York, NY 10022 with the NYSDEC's position on the FLS report. Chris Magee in Central Office reviewed the report and based on the material presented he does not concur with FLS' conclusion that off-site sources are contributing to the contamination found in the sidewalk wells. The letter states that The Related Companies, Inc. is responsible to monitor and remediate the site. Groundwater must be gauged and sampled quarterly and based on the results the NYSDEC will determine if a remedial strategy is necessary. The letter is uploaded into edocs. - JAM 8/21/07 Reviewed FLS letter submitted to the DEC on April 13, 2007 in response to DEC comments sent on 1/22/07. FLS believes that contamination found in off-site wells on West 24th Street stems from a different source. I sent the letter to Chris Magee in Central Office for review. - JAM 9/06/07 Sent email to Steve Panter at FLS. The email states that, the data are inconclusive and do not prove that an off-site source is affecting the groundwater in the monitoring wells in the sidewalk... The Department cannot approve spill closure at this time. A round of groundwater samples should be collected from all wells to obtain up-to-date groundwater quality data. Results should be submitted with appropriate recommendations for further monitoring and/or remedial activities if necessary. - JAM 1/18/08 Received an email from Jim Harrington in Central Office. Steve Panter from FLS contacted Mr. Harrington stating that they will do another round of sampling but he wants assurance that after the next round of GW sampling the spill case will be closed. Mr. Harrington said he will review the spill case and material forwarded by Mr. Panter. Afterwards, he will contact Region 2 staff for further discussion before responding to Mr. Panter. - JAM 9/22/08 Reviewed the Groundwater Sampling Report/Spill Closure Request submitted by Flemming Lee Shue dated May 12, 2008. All on- and off-site monitoring wells were sampled in February 2008. Groundwater monitoring results show no significant change in contaminant levels in any of the on-site or off-site wells. The sidewalk wells continue to show exceedences for VOCs in groundwater (i.e. 748ug/L total VOCs in well MW-14 and 829ug/L total VOCs in MW-16) however, the exposure risk from these contaminants is low. The groundwater monitoring report is uploaded to eDocs. Senior technical staff in Central Office supports closure of this spill without meeting recommended objectives because of the low risk of exposure. This spill case was closed and a NFA letter was issued. NFA uploaded to eDocs. - JAM"

Investigation Report dated March 2, 2012. Work performed under Remedial Action Plan 1. Conducted site inspection to identify AOCs and physical Obstructions (i.e., structures, buildings, etc.); 2. Installed six soil borings across the entire project site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality 3. Installed three groundwater monitoring wells throughout the site to estimate groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality. 4. Installed three soil vapor probes throughout the site and collected three samples for chemical analysis. 10/2/14-Langan Engineering & Environmental Services emailed the Remedial Action Report dated October 2014. The following Remedial Action were completed. " Soil/fill was excavated to a depth of approximately 19-feet b.g.s. (Depth to groundwater ranges from 7.5 to 10 feet at the Site.) A total of 8,806 tons of soil/fill was excavated and removed from the property. " Dewatering was performed. " Achieved Track 2 Restricted Residential SCOs over 100% of the site. " On 25 July 2012 an approximately 275-gallon UST located approximately one-foot below sidewalk grade was removed from the eastern side of the property by Boro Waste Oil, Inc. (Boro) of Staten Island, New York. On 25 July 2012, four end-point samples (PE-2 through PE-5) were collected from the sidewalls of the UST excavation on the eastern side of the site from 3.5- to 4-feet b.g.s. and one end-point sample (PE-1) was collected from the base of the UST excavation from 4- to 4.5-feet b.g.s. No exceedances of the Track 1 SCOs were reported in any of the samples collected. " On 23 October 2012 a 550-gallon UST located approximately three-feet below sidewalk grade was removed from the northeastern corner of the property by Boro. Due to the presence of groundwater in the UST excavation a spill was reported to the NYSDEC and Spill No. 1210222 was assigned. End point samples were collected following the tank removal. On 3 January 2013, four end-point samples (PE-7 through PE-10) were collected from the sidewalls of the UST excavation on the north-central portion of the site from 3.5- to 4-feet b.g.s. and one end-point sample (PE-6) was collected from the base of the UST excavation from 4- to 4.5-feet b.g.s. Exceedances of the Track 1 SCOs were detected for nickel in PE-6 (30.4 mg/kg) and PE 8 (41.5 mg/kg). No other exceedances were detected above Track 1 SCOs. " Soils were excavated to depths of 19 feet in tanks area also. " Removed two underground storage tanks and remediated petroleum contaminated soil/fill in compliance with applicable laws and regulations. " Collected and analyzed end-point samples. " "Tank removal with impacted soil. Cleanup is pending. Removal was prior to Storm."

 Spiller Company: 999
 Contact Name: HENRY GOLD
 DEC Memo: "4/5/2018 - Feng - Desk Duty. Spoke to Henry Gold of WCD Group (212-631-9000). They are doing excavation for construction. This is the expansion project of the exiting Jacob K. Javits Convention Center. They found 2 old tanks previously and Spill 17-07587 was opened. These two tanks could not be removed because they are extended under the sidewalk. So the tanks are closed-in-place. Today they found this tank, smaller than the two previously found. Size estimated 8' long and 3' in diameter. Mixture of water and #2 oil inside the tank. They moved the tank, and spilled out some of the content. Planned to have contractor out tomorrow morning to vacuum out the product mixture from the tank, then remove the tank, remove the impacted soil and collect endpoint samples. Discussed with DEC Rick Lin, who is the PM for Spill 17-07587, spill is assigned to him. He will have a site visit tomorrow. Recommend vapor mitigation measure such as vapor barrier, and since the site has been used for industrial uses, full list of VOCs/SVOCs shall be sampled for the soil/groundwater instead of sole petroleum related compounds. 8/26/19-Lin-Recieved closure report. Oil water mixture in the 550 UST fuel oil tank was pumped out. Tank was removed. End point samples collected from below the bottom of the tank and came back clean. According to WCD group the tank did not have any holes in it. Case closed. "
 Remarks: "found an old tank, less than 100gal. lost, clean up is ongoing"

 DEC Memo: "12/06/05: This spill transferred from J.Kolleeny to S.Kraszewski.
 02/06/06: This spill transferred from S.Kraszewski to Q.Abidi.
 03/17/06: SK Reviewed Site Assessment Report completed on Nov. 30, 2000 by State Environmental Services, Inc. One 30K tank, which stored #2 Fuel Oil was removed. Six post-excavation samples were taken from the pit and submitted for laboratory analysis. About 900 tons of soil was removed and disposed of. All soil samples were tested for VOCs and SVOCs. None of the samples detected any VOC contaminants. All samples recorded exceedances of the same SVOC compounds: Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(g,h,i)perylene, Chrysene, Dibenzo(a,h)anthracene. The concentrations ranged from 1950 ppb to 498 ppb, which are relatively low. Four of the six samples had SVOC exceedance concentrations of 1000 ppb or less. No samples were taken from the fill lines or fill port. Report lacks a site plan with area of excavation and sample locations. No lab analysis summary table provided either. SK spoke with Chris Sawyer from NYCHA Fuel Oil Remediation. I informed him that they would need to take soil samples from the former fill lines

and fill port area. Chris said that Harborview Houses would be included when performed additional soil borings. Sent Chris Email requesting additional soil borings along the fuel lines and next to the fill port. - SK 04/04/06: This spill Transferred from Q. Abidi to Koon Tang. 07/03/09: J.kann - spill transferred to J.Kann. Site assessment report submitted on 2/5/07. Investigative work plan submitted in March 2009. Additional wells to be installed to evaluate groundwater at the site, which is acceptable. One comment was sent on 7/3/09 to GF - A second round of groundwater sampling is proposed one month after the initial sampling is performed. What is the reasoning behind this? Typically two or more months is used. 09/15/09: J.kann - Sampling to be performed two months after initial sampling. Work Plan approved via email on 7/6/09. 2/4/11: J.kann - SAR received on 12/3/10 and edoced. 5/24/12: J.Kann - SAR under review. NYCHA requests closure. Will review entire file for Chelsea Houses. 6/13/12: J.kann - requested in an email of 5/30 that NYCHA gauge the wells at the site before I present to the closure panel. NYCHA sent well gauging data and photo on 6/12 indicating that a product sheen is present in MW5. A response email was sent to NYCHA on 6/13. 10/17/12: J.Kann - requested a follow-up from NYCHA regarding whether or not there is measurable product in MW-5 and/or if a absorbent sock is still present. 5/17/13: J.kann - followed up with NYCHA. They will go out and gauge MW-5 the week of May 20. 8/26/13: J.Kann - visited site on July 31st. Observed the removal of sock and gauging of on site wells. No product in all wells. Sock visibly clean (photo). NYCHA indicated that the sock has been clean for several months. Based on observations, the spill will be considered for closure. 8/27/13 J.Kann - completed review of file. Spill closed. Following summarizes site: -30,000 gallon UST removed in 8/2000. -890 tons of contaminated soils removed in 2000 -investigation done in 2006 along fill lines and by fill port (DEC request) -some PAHs detected in grab groundwater sample in 2006 -5 permanent wells installed in 2010 -All gw under TOGS with the exception of MW-5 (3 minor VOC compound exceedences) -Slight sheen subsequently detected in MW-5. Absorbant sock placed in well. -Minor impacts on sock in 2012. -No oil detect on absorbant sock in 2013. -Confirmed no product sheen in well during site visit of 7/31/13. NFA. Email sent to NYCHA on 8/27/13 requesting wells be decommissioned."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE transferred from sigona to tibbe on 9/26/02. see also 8605848 and 0306399. 3/19/04 (K Foley) Received 12/17/03 Spill Remediation Plan for spill #0306399 from Fleming Lee Shue. Report references tank no. 1, a 500gal #2 fuel oil tank, in the northeast corner of the site (and not related to spill #0306399). The soils beneath the tank were screened with a PID and no volatile were detected. Five post-ex

samples were collected for VOC/SVOC. No VOCs detected. Several PAHs detected in all five samples, so further excavation was conducted and five additional post-ex samples were collected and analyzed for TCLP PAHs using the STARs list of analytes. These soil samples had no detectable PAHs. This may indicate that the PAHs are due to asphalt and fill material rather than fuel oil. The final data from the post-ex sampling for this tank will be submitted along with the tank closure report for the other five USTs once the additional excavation can be conducted safely without damaging the adjacent building to the northwest. letter to be sent 3/23/06: Case reassigned to Andersen. The UST closure reports were not received. 4/3/06: Consolidated with 03-06399."

Remarks: "unknown amount of spill unknown reason from underground storage tanks"

DEC Memo:

"Sangesland sent contaminated soil letter Curt Schmidt said that Mark Tibbe knows about a major spill site just upgradient from this site. 2/5/03 - TRANSFERRED FROM SAWYER TO ROMMEL 3/1/04 Reassigned from Rommel to K Foley. Spill Remediation Plan received 12/22/03 for removal of four 260gal gas USTs, one 500gal gas UST, and one 500gal no. 2 fuel oil UST. Site under development but once contained three buildings. A former auto service and plastic manufacturing existed on site. Five USTs from NW corner were removed 9/29/03 (four 260gal gas USTs and one 500gal gas UST). Soil excavation was postponed due to safety concerns. Will excavate and direct load for disposal. A minimum of four post-ex samples will be collected at PID hot spots on each sidewall. DTW is 6'bgs and therefore a bottom sample will probably not be feasible. If there is potential for structural damage to the adjacent building, two soil samples will be collected from that sidewall. Two samples will be collected from sidewalls greater than 20' in length. Analysis by VOCs (8021) and SVOCs (8270). Spill #9704542 was previously reported for a fuel oil release from UST. Scaled site map with former tank locations/hot spots and Phase I and II reports. There have been site investigations and proposed remediation plans submitted for 543-547 West 23rd St (spill #8605848). There is documented fuel oil and gasoline contamination of groundwater associated with sites to the east that have encroached upon the site. Mendon Leasing, 527 W 23rd file(#9605688,9808740,9511782, 9513588). 3/22/06 Reassigned from Foley to Tang. (KMF) 4/3/06: Reassigned to Andersen. Three sources of contamination: Fuel oil leak from a UST in northeast corner. Gasoline leak from five USTs in northwest corner. Gasoline groundwater contamination from adjacent Mendon Leasing site. All six tanks were removed by Fleming Lee Shue (FLS). The tank closure report was not received. Spoke with FLS and they will resend a report that was sent to Albany. 4/7/06: Received and reviewed tank closure report. Soil was excavated from three areas of contamination. Residual SVOC contamination from urban fill and VOC contamination from the adjacent spill site is present. The site will be redeveloped with a vapor barrier. NFA letter sent. "

Remarks: "CALLERS COMPANY PERFORMING EXCAVATIONS ON SITE, AND SOIL SAMPLES ARE SHOWING GASOLINE CONTAMINATION OF THE SOIL AROUND SOME UNDERGROUND TANK SITES ON THE PROPERTY"

has been recently sampled and Lee will forward a summary status report to the dept. including analytical summaries within the next month. Case referred to Koon Tang. 06/08/06: This spill transferred to S.Kraszewski. - SK 08/14/06: Received a voicemail from Ira Whitman, concerning the status of the site. He gave no callback number. SK reviewed the Tank Closure Report from Fall 2001. It is evident that high levels of VOCs were detected around the fuel oil UST. Lower exceedances were also found around the gasoline USTs and the Oil/Water separator. No mention if GW was encountered; the site lies next to the Hudson River so GW is probably shallow. No MWs were installed during the investigation. Must know the GW condition above all else at this point. - SK 08/15/06: Called Ira Whitman (732-553-4333) after he left a voicemail. He is no longer the consultant involved with this site, in fact he believes that no firm is involved at all. He was involved on a site project adjacent from this one: Dynamic Delivery was the contractor involved with the clean-up. He said this site already received an NFA. I said, based on the report, the GW condition must be established. He said it might be worth-while to review the reports from the neighboring site, which is also downgradient from this one (closer to the Hudson.) He said to contact a John Houshmand, of Clark Construction, who discovered the tanks during renovation work on the property. - SK 08/18/06: Left a message for John Houshmand (917-553-4333). - SK 08/22/06: John Houshmand called back. He gave me the contact info for Mary Boone, owner of the gallery. Gallery: 212-753-2929, Cell: 917-861-2929. She is not the property owner of the site, she only rents the space. According to John, contractor for the building and several others nearby, after the abatement of the gasoline tanks, fuel oil tank and sump pit the entire area was covered in concrete and established as the Mary Boone Gallery. He also mentioned the adjacent site which supposedly has GW wells and may be useful in characterizing the GW condition for this site. I told John I would look into this other site and get back to him, since he regularly deals with the owner. - SK 08/29/06: I discussed the site situation with JK. The site needs a GW investigation, unfortunately there is no access to the interior so the MWs need to be placed on the sidewalk next to the former gasoline USTs and oil/water separator pit. Also, a soil boring next to the gasoline fill port will be needed. I called John Houshmand (917-553-4333) and explained what work would need to be done. I also asked him for the property owner's contact info since it is not on file. He will find out, plus he asked about other consultants to do the work since The Whitman company had a falling out with Mary Boone. I said to convince her that he seems like a reputable company based on the report. Letter was sent out asking for two MWs, a soil boring and sub-slab soil gas sampling. Property owner is a Samuel Weinberg. - SK 11/09/06: Reassigned from Stephen Kraszewski to Chanda. (Chanda) 01/02/07: Kartik Chnada of DEC sent a letter to Property Owner (Mr. Samuel Weinberg), requiring that an additional investigation of GW and additional monitoring wells at the site. A work plan is mandated by 03/02/07 for approval. 01/10/07: Chanda received an e-mail from John Houshmand, Clark Construction Corp. He said that the RP will be retained Long Island Analytical Laboratories (LIAL), Inc. to perform this work. 2/27/07: Chanda received a limited subsurface investigation work plan prepared by LIAL dated on 2/26/07. 2/28/07: Chnada reviewed the limited subsurface investigation work plan. On 2/28/07, the Department conditionally approves this work plan. On 2/28/07, Chanda sent a letter to RP (Samuel Weingberg) and his

S104782023

consultant (John Hushmand), Michael Veraldi (LIAL), requiring that an investigation summary report be submitted to DEC for review by April 16, 2007. 4/19/07: Chnada received a phone call from Michael Veraldi, LIAL concerning the status of the site. He explained to me the cause of the delay on the investigation work report. 4/23/07: Chanda received a letter from Michael veraldi, LIAL regarding an extension to complete the approved work plan at the site. 4/24/07: Chanda sent a time extension approval letter to the RP(Samuel Weingberg) and his consultant (John Hushmand), Michael Veraldi (LIAL). An Investigation Summary Report must be submitted to the Department by May 4, 2007. (Chanda) 5/24/07: Chanda called John Hushmand (Clark Construction Corp.)and Micheael Veraldi (LIAL) regarding the investigation Summary Report and present site status. Micheal told me all work has been done and he is wating for analytical results. The report will be submitted to DEC for review by 5/31/07. 6/6/07: On 6/5/07, Chanda received a Limited sub-surface site investigation report prepared by LIAL dated May 30, 2007. 6/8/07:Kartik Chanda of DEC reviewed the imited sub-surface site investigation report regarding this spill. The soil samples, grondwater samples and soil vapor samples showed that results is not exceed our NYSDEC and NYSDOH guideline. Chanda discussed with Joe Sun (NYSDEC) regarding the results of soil, groundwater, and soil vapor samples. Based on the information presented to the Department DEC closed this spill case. 6/11/07: Chanda sent a NFA letter to Samual Weinberg, Weinberg Properties and his consultants (John Houshmand, and Miclael Vrraldi) regarding closed this spill case. "

Contact Name: VINCE VINCENT
DEC Memo: "Sangesland spoke to Joe Ostrowski at Riteway Tank. He said this was a leaking fill line. Sidewalk was opened on 3/1/2011 and dig out was started. Dig out should be complete on 3/2/2011. End point samples will be taken, new line installed and a report forwarded to Hiralkumar Patel for review. 03/03/11-Hiralkumar Patel. 4:02 PM:- spoke with Joe. he mentioned that oil was found coming out from ground by fill port. so they opened sidewalk and found more contamination. fill line runs about 20 ft under sidewalk. they have started cleanup. alternate addresses: 527-541 West 23rd Street, 520-532 West 24th Street PBS #: 2-032220 and 2-608031 PBS #: 2-032220 is unregulated. as per PBS record, site had following tanks: - three 550 gal diesel USTs removed in Nov. 1999 - one 550 gal diesel UST closed-in-place in Nov. 1999 - six 550 gal gasoline USTs removed in Nov. 1999 as per PBS #: 2-608031, site has one 10,000 gal #6 oil AST on legs/saddles. tank installed in Sep. 2002. other spills: 8605564, 9511782, 9513588, 9605688, 9808740, 0208317 23rd Chelsea Associates, LLC. **property owner** c/o Related Management Corp. **management company** 535 West 23rd Street New York, NY 10011 Attn.: Vincent Butta **property manager** Ph. (212) 255-0769 (917) 349-4663 email: vbutta@related.com 03/08/11-Hiralkumar Patel. 12:21 PM:- received message from Joe from Riteway. 3:33 PM:- spoke with Joe. he mentioned that they dug 20 ft long along fill line under the sidewalk. they found leak in fill line close to building foundation wall and contamination in middle of excavation and towards the wall. they dug down to 2 ft depth and found clean soil. while digging more to accomodate new fill line with secondary containment, they found oil by the foundation wall at about 3 ft depth. Joe mentioned that it looks like #4 oil and building at 521 W 23rd street (second building on east of the subject site) has a #4 oil tank and tank system failed test in Jan. 2011. Joe suspect that oil found in excavation by building 535 is from building 521. Joe mentioned that building 521 has an underground tank in building and fill line for next door is more than 60 ft away from the fill line for building 535. as the fill line for building 521 is more than 60 ft away, any oil leaking from that fill line will move down under gravitational force and there is no possibilities (unless some unusual channeling) of that oil travelling perfectly horizontal for about 60 ft and impact building 535. so asked Joe to continue cleanup. 3:49 PM:- spoke with Vincent and explained him the above discussion with Joe. 03/09/11-Hiralkumar

SPILL NUMBER 0208317 (Continued)

S106009194

Patel. 3:00 PM:- visited site. met Vincent and his supervisor. inspected fill line excavation. found oil at the bottom of excavation along the building foundation wall. found oil stain on foundation from from the fill line location to the bottom of excavation. also found some oil seeping into excavation along curb line where fill box was located. fill line for building 521 is about 70 ft away from the fill line excavation at building 535. inspected building 521. met Fraser (917-921-8309), super for building 521. site has building on slab and a photo gallery is located on groundfloor of building 521. Fraser mentioned that the tank is located somewhere underneath the gallery floor. he mentioned that after the tank system failed the test, tank was drained using supply line connection in boiler room. boiler room is sub-grade and west of the tank location (between the tank and building 535). inspected boiler room wall adjoining the tank location and found no oil staining or seeping. based on distance between the two fill lines and observation in the boiler room at building 521, asked Vincent to continue cleanup. asked him to continue excavation until find the clean soil in the area along the building foundation wall as well as around former fill box area.

03/10/11-Hiralkumar Patel. 1:15 PM:- sent letter to Vincent requiring endpoint samples. letter emailed to Vincent and Anthony.

03/18/11-Hiralkumar Patel. 10:25 AM:- spoke with Anthony. he mentioned that they found clean soil by the curb line. he also mentioned that owner has hired an environmental consultant and they are planning for soil borings along the foundation wall. 12:34 PM:- spoke with Mr. Butta. he mentioned that Fleming-Lee Shue has been hired for soil delineation and they are on-site right now installing borings. 12:37 PM:- spoke with Matthew from Fleming-Lee Shue, who is at the site currently. they are installing boring for visual/olfactory delineation of contamination. they will not collect any soil samples from borings, as owner is planning for further excavation. Matthew will collect endpoint soil samples from fill line excavation which is clean now. Matthew Carroll Fleming-Lee Shue Ph. (212) 675-3225 (201) 344-8510 (646) 841-3100 (C) Fax (212) 675-3224 email: matthew@flemingleeshue.com

03/29/11-Hiralkumar Patel. 4:49 PM:- received email from FLS including delineation report. due to the proximity of the spill to the building's foundation wall, and the presence of large glass windows on the first floor, a geoprobe or drill rig could not be utilized for soil borings, so a handheld core/hammer drill fitted with 3-inch diameter hollow stem auger was used to obtain soil samples, which allowed the delineation of the spill from within the trench. three soil probes (V1 through V3) were advanced through the base of the trench in order to vertically delineate the contamination and four soil probes (H1, H2, H3-1 and H3-2) were advanced horizontally within the trench sidewalls to delineate the spill to the east and west. the delineation report is missing the site map.

04/06/11-Hiralkumar Patel. 1:22 PM:- left message for Matt at Fleming-Lee to submit missing map in the delineation report. 1:24 PM:- left message for Mr. Butta inquiring updates.

04/07/11-Hiralkumar Patel. 9:28 AM:- received message from Mr. Butta. 04/08/11-Hiralkumar Patel. 10:39 AM:- spoke with Mr. Butta. he mentioned that due to rainy days recently, they did not perform any cleanup but Riteway will resume cleanup on 04/11/11. asked Mr. Butta to call to schedule a site inspection once cleanup done and before any backfilling.

04/15/11-Hiralkumar Patel. 10:32 AM:- received message from Matt from FLS. he mentioned that excavation area towards the fill port is clean and property manager

S106009194

wants to backfill that area to restore the sidewalk. 4:11 PM:- left message for Matt. 04/19/11-Hiralkumar Patel. 9:24 AM:- received message from Matt requesting a site visit. 10:39 AM:- spoke with Matt and schedule a site visit today at 4 PM. 04/20/11-Hiralkumar Patel. 3:45 PM:- visited site. met with Matt and Mr. Butta. inspected excavation. found clean soil in excavation bottom and sidewalls towards east. deepest excavation was right underneath the previous line area. some rain water was accumulated in the deepest spot and no oil sheen observed on that water. the west side of excavation, along the building foundation wall, is still contaminated with free product. no further excavation possible as excavation bottom is at the bottom of foundation footing. as no further excavation possible, asked Matt to delineate the contamination horizontally and vertically. also asked him to collect groundwater sample via boring in the excavation. informed Mr. Butta that even with clean soil before reaching water table, the department requires collection of water sample to confirm no dissolved in it as there might be unknown amount of oil under the building as contamination in west most corner is below footings. informed Mr. Butta that if any contamination found in groundwater sample, then further investigation is required. during site visit, found an old well in middle of sidewalk. asked Matt to check this well to see if it is still working. asked Matt to collect endpoint samples from excavation along the wall and to analyze all soil and groundwater samples via 8260 and 8270. based on observations during the site visit and information provided till date, approved Mr. Butta's request to backfill the excavation except in area where contamination still exists. 06/27/11-Hiralkumar Patel. 1:41 PM:- received report from F&N. abstract: - free product observed to the northwest of the existing excavation below the foundation of the building - petroleum was delineated horizontally and vertically via installation of two soil probes (DB-1 and DB-2) - first observed 'non-impacted' areas, with the corresponding PID readings of 0 ppm, were encountered within the first five ft of the installed boring - total of six endpoint samples were collected from excavation, including the western sidewall of the trench and from the extent of the excavation along the building (bottom, east and south) - one 1-inch groundwater temporary well was installed to a depth of 16 ft bg - gauging of the well confirmed the depth to groundwater at 11 ft bg <----- - at the deepest vertical extent, the petroleum-impacts extended only to approx. 9 ft bg - while non-continuous sheen was observed on the groundwater, there was no petroleum odor <----- - existing monitoring well on sidewalk was investigated, it appears to have been permanently decommissioned - total of 11.85 tons of petroleum-impacted soil was removed - volume of the left-in-place soil is estimated as less than 0.6 cubic yard - as no further excavation was possible, excavation was backfilled - found minor SVOC contamination in sample SW-Middle only (max 1940 ppb) 06/29/11-Hiralkumar Patel. 4:28 PM:- sent email to Matt and asked to submit detailed boring logs for borings DB-1 and DB-2. also asked to submit information about what is inside building near the foundation wall where contamination exists under the foundation. 07/07/11-Hiralkumar Patel. 3:06 PM:- received revised report from Alana Barnnon from FLS. report included boring logs. as the building has a slab-on-grade foundation with no basement therefore soil cannot be removed without undermining the building foundation. 07/18/11-Hiralkumar Patel. 12:41 PM:- left message for Alana Brannon, a new project manager at Fleming Lee Shue (Matt no longer working in

cause is damaged equipment. There was a spill rate of less than 1 drop per minute but that has been stopped. The spill is in the concrete structure. No sewer/water was affected. The drain seems to be clogged as per the finder. There is no sump pump. Two samples for PCB and ID will be taken from the spill. Chain of Custody # DD 04418 will be used. Environmental tag # 38794 was hung. No cleanup action will be taken at this time. Will wait on the cleanup until Sample results are obtained. 5/11/05 00:42 Received lab results, Lab Sequence Number: 05-04341-001 EQUIPMENT: TRANSFORMER TOTAL PCB 27 ppm Lab Sequence Number: 05-04341-002 Date Approved: 5/11/2005 DESCRIPTION: FLOOR SAMPLE Total PCB < 1.0 ppm. Update: 05/11/05 @ 13:00 hrs. M. Amari 11090 has called to report that a partial clean up has been done in V5204. The tanker has removed 443 gallons of oil from unit and 600 gallons of water from the vault. Oil absorbant has been put down on floor, and yellow tag remains in vault. Final clean up will be pending removal unit. 6/19/05 13:07 E. Hulser # 39723 Cable supervisor called to report that at 13:00 the cleanup was completed. All debris & liquids was removed by flush truck. The structure was double washed with simple green. The spill tag # 38794 was removed. The cleanup was done by E. Weinstein # 12230. R. Bruns # 21106 Update: 6/30/05 @ 17:25 hrs. Above entry should also state that transformer with leaking bushing was also removed and replaced. A. Drumming # 84163. Closed. 8-11-05. George Breen "

Remarks: "One ounce of material spilled in the vault on 200 gal of water. Clean up pending resources (crews) No to the five questions. ConEd#158513 ***Unknown if material is PCB or Non PCB***** Rate of leak of one drop per minute*****"

under the sidewalk on the east side of 12th Avenue; the location is very close to work that is being performed at the Michael J. Quill Depot, under spill number 8904384. See also duplicate spill report for this spill under spill number 9213518. The work plan was reviewed and a comment letter was sent dated 07/27/12 (JOC) 7/21/15 - reviewed letter from Langan dated 8/5/14 in response to the 7/27/12 letter referenced above. Sent comment letter in response dated today. Additional records from Con Edison indicate that the leak was from feeder M54 and that the release volume was up to 4,000 gallons of dielectric fluid, that the leak was located and clamped on the same day as the release, and that the repairs were completed on 3/11/1993. The feeder leak was reportedly caused by a drilling contractor working for Greyhound Lines, Inc. for spill 8904384, in the attempted installation of MW-3 on the eastern sidewalk of 12th Avenue. As such, the location of the release is known fairly well. Based on various agreements between Con Edison and the Department regarding the investigation scope for the Appendix B spills, most of the Department's initial comments have been resolved. Specifically for this spill, the scope of the investigation needs to be modified to focus around the known area of the release. Because of the proximity to the building, investigation work inside the facility may be necessary. For the purposes of keeping track of electronic documents (e.g., .pdf files) for this spill case, refer to records for spill 9113335.(JOC) 3/21/16 - received response from Langan for Con Edison on 2/26/15 which included proposed revised sampling locations; sent email today with items to discuss and had telecom among Elana Seelman (Langan), Angel Chang and Matt Madsen (Con Edison). Agree that revised scope with include 3 soil borings to groundwater, one north of leak location, one south of leak location and one west of leak location, with the one west getting converted to monitoring well. Langan will prepare revised scope and figures. (JOC) 10/26/2016 - V. Brevdo Due to Project Manager Joe O'Connell's promotion to the DMM, and per discussions between Chiefs of Spill Prevention and Response and Remediation Section B, this spill case is re-assigned to Remediation Section B. VB "

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 01/13/95: SPILL REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 01/13/95. TRANSFEREWD FROM HALE TO TIBBE ON 12/28/00. INVESTIGATION ONGOING. Formerly Greyhound. see also 9112032. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross 2/27/12 - Raphael Ketani. The spill case was transferred to me during February 2012. Monthly progress meetings with the NYCT are taking place. 4/26/12 - Raphael Ketani. Groundwater monitoring and product collection are taking place by URS. 7/26/12 - Raphael Ketani. I was informed today by DER Region 2 staff that there may be comingled spills at the site. During 1983, there was a spill at the site from the USTs under a building. This was when the site was owned by Greyhound Lines Inc. Later, the NYCT bought the property. Then on March 8, 1993, the contractor Warren George was doing some work through the side walk for Con Ed and penetrated a feeder line. The line is right next to the the building with the USTs. The loss of dielectric was later determined to be 4,000 gal. The location of the feeder penetration was at MW-3.

MJ QUILL DEPOT -NYCT (Continued)

S101340929

I told staff that I would contact Gregory Mathelier of NYCT [(646) 252-3470/gregory.mathelier@nyct.com] and tell him to contact Mathew Madsen [(718) 267-3866/madsenm@coned.com] and Barry Cohen [(718) 204-4252/cohenb@coned.com] of Con Ed in order to coordinate the remediation of the spills. I sent an e-mail to Mr. Mathelier today with the above information and asked him to let me know whether he is successful in contacting Con Ed. I also attached the Con Ed feeder drawings and a few pages from the Greyhound report. 10/5/12 - Raphael Ketani. Today I received the Site Specific Remedial Plan and Design for Surfactant Flushing. I began my review. 10/22/12 - Raphael Ketani. I finished my review of the 10/5/12 SSRP/RD. Product was originally seen in wells URSMW-7 and URSMW-9 (southwest corner), which are in the diesel UST vault. Product has most consistently been seen in URS-3 (southwest corner). Product was seen as sheen 11 times at URSMW-11. Product has been present as a sheen to 0.01 feet at URSMW-12. In 2004, URS did 3 one well injections of BioSolve at URS-3 and recovered 33 gals. of product. Three more BioSolve injections into URS-3 during 2005 recovered 27 gals. of product. NYCT had 6 more monthly injections done at once a month from September 2005 to March 2006 and recovered 103 gals. of product. Groundwater sampling showed that there was no significant dissolving of the diesel fuel into the water due to the use of the surfactant. Also, the levels of the product at URS-3 were not significantly reduced. About 540 gals. of RegenOx were injected into URSMW-13 as 3 injection events on 10/14/08, 12/17/08 to 12/18/08, and from 2/17/09 to 2/18/09. However, product was still found at URS-3. To determine the feasibility of using excavation as a remedial measure, 4 borings were done. These were GP-16 to GP-19 in the southwestern corner sidewalk. All 4 borings were penetrated fill. Only GP-17 had odors and staining. The petroleum impacts are likely adjacent to the foundation. The foundation goes down 14 feet below grade and has likely kept the product from migrating. The petroleum is in the smear zone and possibly beneath the asphalt at 12th Avenue and 40th Street. The NYCT determined that excavation was not practical for various reasons and the DEC did not require it. The SSRP was designed so reduce the impacts at URSMW-7 and URS-3. URSMW-11 will likely be used for the flushing. Six wells will be used in the program. They will be 4 inch wells. URSMW-15 to 18 will be installed. URSMW-18 will be used as a monitoring well. The other wells and URS-3, URSMW-7 and URSMW-13 will be used for injecting, flushing and extraction. A 3% solution of BioSolve will be injected at 5 gpm. About 133 gals. will be injected per well. URS-3, URSMW-7, URSMW-13 will be used as extraction/hydraulic control wells. The minimum residence time for the solution will be 12 hours following injection. A truck will be used to remove twice the volume injected. Groundwater sampling will take place every two weeks during the flusing program. I found the SSRP/RD to acceptable and drafted a letter for the review of Hassan Hussein, EE III of Unit C in DER Region 2. 10/23/12 - Raphael Ketani. Mr. Hussein and I discussed the letter. He told me to send it out and I did. Later, Mr. Mathelier sent me an e-mail stating that the surfactant flushing could not take place this year due to contractual issues. He requested a postponement of the work until May 2013. I responded to his request by approving the postponement. 10/22/14 - Raphael Ketani. Mark Freed of the consulting firm Louis Berger ((973) 224-1214/mfreed@louisberger.com) called me and requested information regarding the spill at the bus depot. I extracted the pages from the August 2014 NYCT Monthly Status Report

MJ QUILL DEPOT -NYCT (Continued)

S101340929

which concerned the spill status and sent them to him by e-mail. 10/19/17 - Raphael Ketani, Cadecia Josephs, Geologist I [(718) 613-0296] and assistant to Mr. Mathelier, called regarding wells URSMW-4 and URSMW-14. She said that these two wells are across West 40th Street from the depot and that construction will take place such that the wells will, in all likelihood, be destroyed. She wanted to know whether the NYCT can abandon the wells. I asked her about the significance of the wells. She said that they were used as sentinel wells to see whether the plume is expanding. I asked whether product had ever been seen in the wells. She said No. She said that she will send me information about the wells. With that, the conversation ended. I reviewed the March 2017 and April 2017 Monthly Progress reports for the depot. The information for the M.J. Quill depot indicated that groundwater flow was affected by tidal inflow and outflow as the depot was on the east side of 12th Avenue, making it right on the edge of the Hudson River. This made the two wells sidegradient to the one well across the street from them that continued to have product (MJMW-16). Additionally, the data in the reports indicated that product had not been seen in the wells for many consecutive monitoring rounds. Thus, these wells appeared to not be significant for monitoring the product thickness at the site. Given this information, I sent an email to Ms. Josephs stating that the Department was granting the NYCT's request to permanently abandon the wells. May 1, 2018 - V. Brevdo Due to Project Manager Raphael Ketani's retirement on April 27, 2018, Vadim Brevdo became new project manager for this spill case effective April 30, 2018. VB November 6, 2018 - V. Brevdo Michael J. Quill Depot (Spill No. 8904384) / MTA NYCT/MTABC Underground Storage Tanks and Environmental Remediation Program The site is located at 525 11th Avenue in Manhattan, New York, and is operated by NYCT as a bus depot and maintenance facility. Spill case was assigned to the site as a result of free-phase petroleum identified in a diesel UST vault from a release attributed to a broken remote fill line located at the western portion of West 40th Street. Several investigative and remedial activities have been completed at the site including installation of groundwater monitoring and extraction wells, installation of petroleum recovery system, implementation of vacuum extraction, implementation of BioSolve injection/extraction and Regenox injection programs, monitoring well gauging and manual product recovery programs along with a semi-annual groundwater sampling program. Monitoring Natural Attenuation (MNA) coupled with vacuum extraction at monitoring well MJQMW-16 have been implemented over the past year. Through these remedial activities a total of 862 gallons of free product were recovered from the site. In the latest set of borings installed in 2016, VOCs were not detected in exceedance of the CP-51 SCOs in any soil samples. Over the most recent approximate 1-year period, free-phase petroleum was either not detected or was only sporadically detected at thicknesses of less than 0.05 ft in one well. During the most recent groundwater sampling events, VOCs and SVOCs were not detected at concentrations exceeding the Class GA Standards. On November 2, 2018, NYCT and D&B Consulting Engineers submitted investigation and remediation report for the site including spill closure petition. NYCT and D&B Engineers concluded that the recent monitoring results at the site show that site remediation (through the above-mentioned strategies) has been completed in a manner that is fully protective of all identified receptors. Groundwater at the site is not used for potable water or

any other purposes. The potential for human exposure to residual soil and groundwater impacts is not expected. Based on review of the investigation and remediation report, description of completed investigative and remedial activities, soil and groundwater quality data and project documentation and history, the Department determined that the site poses no further threat to human health or the environment for use as a bus depot and maintenance facility. The site poses no further environmental or human health threat to the surrounding properties and the community. The Department further determined that the closure of this spill case is appropriate at this time and closed spill case effective November 6, 2018. VB December 5, 2019 - V. Brevdo NYCT submitted monitoring well decommissioning report prepared by AECOM dated December 3, 2019. VB "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS 149593 Mr. Toto # 39043 upon inspection of Mobile Generator G.E. # 3981 at 11:30 Hrs. noticed storage tank for Amide's was empty { Cap. 150 gals. } product went into sewer located on 29 Strret and 9 Th. Ave. Manhattan. Reported no injuries, no fire or smoke MSDS form CAS # 57-13-6 was faxed to ERT Fax # 1-212-580-6915 (12:15). Product is non hazardous. Cause leaking filter housing. When water evaporates end residue is fertilizer. Toto # 39043 is sweeping up remainder of crystals and placing crystals into plastic bags. Reported by Mr. John Poje # 56778===JP After several attempts to uptain a valid E2IMS number since 11:30 finally system accepted. Official time contacted 12:57 C.I.G. Mr. Murphy # 76378 Update on 31-Jul-2003 Mr. Steve Covello, emp. # 76287, reported clean up complete. Update - 31-Jul-2003; OCCS desk made attempts to enter into E2MIS under numbers 149591 and 149595, in both cases there was a system error and E2MIS closed out without saving reports. Final entry is in 149593. Actual first time J. Poje notified CIG was 11:40 AM, at which time he was instructed to call the ERT direct. this was due to the E2MIS not properly functioning and CIG requires an E2MIS number to read the report while they make their decisions. "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE/SANGESLAND 12/10/2002 Sangesland reviewed a report prepared by David Winslow of ATC Associates Inc (212-353-8280). Report states that contamination was found around a buried 1000 gal tank under the floor of the building. The tank was cleaned out and excavated around. Because of foundation issues, the tank could not be removed and not all of the contaminated soil could be removed. Based on the soil conditions, Sangesland requested goundwater samples from the area. ATC took four groundwater samples in the area of this tank. GW is at approx 8 ft below the cement floor level. 3 of 4 samples are clean. One has some VOC hits just over 8020. Based on the location and the inability to excavate further, and that the surrounding water samples were clean, we can conclude that the contamination is localized and not spreading. Spill closed "

Remarks: "CALLER STATES UPON REMOVAL OF THE UNDERGROUND TANK - FOUND HOLES IN THE TANK AND CONTAMINATED SOIL"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND ACTIVE SITE. REFERRED FROM 90-00199 SEE FILE. 2/22/2002 - Dr. David Winslow with ATC Associates (212-353-8280) has been working on this site for the last couple of years. ATC submitted a Site Closure Letter (with support documents) on May 18, 2000. DEC held a meeting with Winslow/ATC in Oct 2001 and reviewed several U-Haul sites including this one. There had been excavation on the site and 3 perm. wells have come back clean. DEC requested six additional geoprobe/borings/water grabs which were done in May 2001. Five boring water samples came back with trace levels while GPW-6 had a couple of low level hits. GPW-6 at 12' depth had the following (all in ppb) sec-Butylbenzene = 444 tert-Butylbenzene = 483 Ethylbenzene = 147 1,2,4-Trimethylbenzene = 363 O-Xylene = 165 M&P-Xylenes = 249 BTEX = 585 All SVOC's were ND. After speaking with Peduto and Hale in DEC Albany, it was decided to provide a No Further Action letter. Closed This site file is included in DEC Long Island City U-Haul master file drawer/box."

S122479369

DEC Memo: "6/1/18 - Obligado - I spoke with Alana Carrol. She is the consultant for the BCP project 555 West 22nd St, C231101. They installed several wells, including a cross-gradient well in 2016. She said that during recent gauging, MW3 has 0.65 inches of unknown petroleum. The well never had product before, but it did have dissolved impacts. She said her BCP site does not have petroleum contamination on it. Nate Freeman is the BCP manager in Albany who advised her to call in the spill. She said next door to the east is a U-Haul Facility at 563 West 23rd which is a potential source. According to Alana, 555 West 22nd St and 563 West 23rd street used to be part of the same property owned by Uhaul, but the western portion was sold. The eastern portion (563 W. 23rd) is still a Uhaul. I did some research and the former U-haul facility was actually 562 West 23rd St, PBS #2-084069. (It also includes lots with the addresses 552 and 548. The site formerly had 5 tanks, including 3 gasoline tanks. The site had several closed spill #s, including 9000199, 9700188, 0205608, 9305627. All 5 USTs were on the BCP portion of the Site. The current UHAUL site to the east is had the addresses 536. Current Uhaul @ 536 W 23rd did not reveal any spills or PBS records. 6/4/18 - Obligado - I spoke with Nate. They will assess whether the contamination is associated with their site when they do the remedial excavation in that corner. Spill assigned to Nate Freeman."

From: Seth D. Friedland Sent: Tuesday, June 07, 2011 12:46 PM To: 'bkfalvey@gw.dec.state.ny.us' Cc: Seth D. Friedland Subject: 521 West 23rd Street, NYC -- DEC Spill No. 1010869 - PBS No. 2-304158 Brian: Thanks for taking the time to discuss the above matte this morning. As mentioned, I represent the Steven Kasher Gallery which is the ground level tenant at the condominium building which is the subject of the above PBS case. Our client operates a gallery at the location, and the tank is suspected of being buried under the gallery floor. To accommodate our client s business requirements and to avoid undue disruption of our client s operations, as discussed, I would like to coordinate the proposed tank closure work to be performed during the month of July on a date or dates to be selected. You indicated that you would be amenable to the work being done in July. I will coordinate with the building manager and its consultant in order to propose the schedule of work and let you know. Should you have any questions, of course, please let me know. Thanks again for your assistance. Regards, Seth D. Lovato of Advanced Site Restoration. Phone: (646)235-4800 and (212)809-1110. Contractor for gallery owner. Tank passed and lines failed ttt. I told him he needs to delineate contamination. He will send work plan. bf 8/14/12 PBS inspection today. Tank is still in use based on the petrometer which shows that there are approximately 1400 gallons of fuel in the tank. NOV issued and sent to William Harra at the above address. PBS settlement conference scheduled for 9/19/12. bf 9/19/12 Nopbody appeared for the PBS conference scheduled for today. bf 9/25/12 Today, received e-mail response from Riteway, contractor for the facility: Hi Brian, I sent this package back on Sept 27, 2011. I did not follow up with you and thought that you had closed it. I just received another violation from the client dated 8/14/2012 inspection #31107. Please let me know if you need anything else. From: David Chan [mailto:david@petroleumtek.com] Sent: Tuesday, September 27, 2011 3:34 PM To: 'Brian Falvey' Subject: spill 1010869 Hi Brian, Please find the closure report and supporting documentation for spill # 1010869. If you have any questions please do not hesitate to ask. Best regards, Dave Chan Riteway Tank Maintenance Corp. 700 Hicks Street Brooklyn, NY 11231 718-855-7272 phone 718-855-7244 fax david@petroleumtek.com -----end----- 10/1/12 On 9/25/12 received the following e-mail from David Chan of rite-way that also included attachments: site sketch, analytical sample results, closure requerst letter, and ttt tank only test report. -----start----- Hi Brian, I sent this package back on Sept 27, 2011. I did not follow up with you and thought that you had closed it. I just received another violation from the client dated 8/14/2012 inspection #31107. Please let me know if you need anything else. -----end----- On 9/28/12, received the following e-mail from David Chan which included the same attachments as the 9/25/12 e-mail: -----start----- Hi Brian.... -----end----- Tank failed because of hole in vent line. Submitted photos show the vent line with a corrosion hole and no visual contamination. Four samples were taken and were below DER- 10 allowances. A tank system test is required to close the spill case. today, responded to Mr. Chan's e-mail with the following: -----start----- David, The spill case can not be closed until the Department receives a passing tightness test for the whole system. The owner needs to correct the following registration information: 1. The product stored is #4 oil not #2 oil. 2. The tank overfill prevention is registered as a gauge. A gauge used for overfill prevention is only applicable to aboveground tanks. 3. The tank spill prevention is a catch basin. It is registered as none. 4. Pipe secondary containment is blank. The information correction application is attached. There is no fee for this application transaction and an original copy must be submitted (fax or e-mail copies will be returned unprocessed). Brian -----end----- bf 11/13/12 received the following e-mail from David Chan: Dear Brian, Please find the final tank and system test verifying the integrity of the system for the spill closure. I am following up with the owner with regards to their PBS. Please let me know if you need anything else for the closure. Thank you in advance. Best regards, David Chan Riteway Tank Maintenance Corp. 700 Hicks Street Brooklyn, NY 11231 718-855-7272 phone 718-855-7244 fax david@petroleumtek.com 11/27/12 Based on sampling results, case closed. bf"

DEC Memo: "02/17/09-Hiralkumar Patel. spoke with Ms. Umana (at 7:15 PM on 02/16/09). Petro service man went for routine service at the site and noticed stain on surface near foundation wall. no active leak observed. suspecting leak from fill line. 02/19/08-Hiralkumar Patel. visited site. met Nancy Weper (212-675-5862), tenant who occupies first floor and basement. tank is located in sub-basement. Ms. Weper complained about petroleum odors from sub-basement. inspected sub-basement. found no petroleum odors. found stain on foundation wall where fill line enters into sub-basement. no petroleum smell noted at stain during site visit. no leak from tank. Ms. Weper mentioned that Petro guy smelled petroleum at stain on foundation wall. 02/20/09-Hiralkumar Patel. spoke with Ms. Weper (at 2:40 PM). Ms. Weper mentioned that Petro is at the site doing line repair. spoke with Prem Ramchandani, building owner. he mentioned that leak was found in fill line near foundation wall area and Petro is correcting problem. Mr. Ramchandani doesn't know whether Petro replacing entire fill line or putting new fill line at different location. Mr. Ramchandani will ask Petro to call with answer. EPGR Realty **building owner** 511 6th Avenue, Suite 149 New York, NY 10011 Attn.: Prem Ramchandani Ph. (212) 620-0170 (O) (646) 734-4440 (C) email: pramch@earthlink.net Christian Bucal **building super** Ph. (718) 501-9888 02/23/09-Hiralkumar Patel. left message for Don Palumbo (718-628-3324) at Petro. 02/25/09-Hiralkumar Patel. spoke with Mr. Ramchandani (1:35 PM) regarding work done at the site. he will ask petro to call back with updates, by end of today. received call from Don (1:50 PM) from Petro. they cut fill line in basement and connected to new fill port. old fill pipe portion under sidewalk was not investigated. sent letter to Mr. Ramchandani requiring endpoint soil samples along old fill line. letter emailed to Mr. Ramchandani. 03/23/09-Hiralkumar Patel. left message for Mr. Ramchandani. 04/23/09-Hiralkumar Patel. left message for Mr. Ramchandani. 08/14/09-Hiralkumar Patel. 9:22 AM:- left message for Mr. Ramchandani. 12/17/09-Hiralkumar Patel. building owner's address from ACRIS: EPGR Realty, LLC. 620 Lumber Lane Bridgehampton, NY 11932 sent letter to EPGR Realty (via certified mail: 7008 1140 0002 8377 9803) at Bridgehampton address requiring endpoint samples from previous fill line area. 01/07/10-Hiralkumar Patel. 1:17 PM:- letter

property owner 449 West 24th Street New York, NY 10011 as per NYS Dept. of State, mailing address for Clara Frijs LLC. is: Clara Frijs LLC. c/o Pryro Cashman LLP. Attn. David Rose, Esq. 7 Times Square New York, NY 10036 Ph. (212) 326-0142 Fax (212) 798-6337 email: drose@pryorcashman.com 12:53 PM:- left message for Mr. Rose. 06/09/16-Hiralkumar Patel. received message from Mr. Rose (at 8:01 PM on 06/08/16). 3:39 PM:- left message for Mr. Rose. 06/13/16-Hiralkumar Patel. 11:42 AM:- received message from Mr. Rose. 12:08 PM:- spoke with Mr. Rose. he believes that his law firm was involved in property transaction, but doesn't own this property. he will look for property owner's contact information. 12:20 PM:- sent email to Mr. Rose requesting contact information for property owner. 11/25/16-Hiralkumar Patel. 2:00 PM:- visited site with DEC Lakhani. met Mr. & Ms. Meyer, current property owner. Ms. Meyer mentioned that they purchased property last year and have no knowledge of oil spill. inspected building sub-basement. noted a cut open pipe in foundation wall and an existing fill line next to it. the cut open pipe is possibly a former remote fill line. a hole was noted in foundation wall where these pipes are located. hole in foundation wall may have been created when a new fill line was installed in 2009. stained foundation noted under this cut open pipe, but no petroleum odors or oil seepage noted from the hole in the foundation wall. during an inspection, another petroleum discharge was noted at the site. Ms. Meyer mentioned that there was an oil spill about a week ago due to a leak in tank's bottom. noted petroleum stain on pavers on sub-basement floor. the petroleum stain noted to the other side of the tank room where a trench is located which ends into sump pit behind the boiler. found free phase product in the sump pit. a temporary patch has been placed on leak point in tank's bottom. liquid level in sump pit was steady and sump pump was not operating. based on field observations, asked Ms. Meyer to: - secure remote fill port to prevent any more delivery to the tank system - immediately remove petroleum product from the sump pit - repair or replace the leaking oil tank asked Ms. Meyer to report an oil spill to DEC Hotline. as she was unaware of spill reporting process, she requested if new spill case can be opened by DEC staff. 11/28/16-Hiralkumar Patel. after reviewing available information, the subject spill case is administratively closed based on following: - stain was noted on foundation wall during visit on 02/19/08, but no petroleum odors were detected - during discussion with Mr. Ramchandani (property owner at that time) on 02/20/09, he mentioned that leak was found in fill line near the foundation wall - during an inspection on 11/25/16, a hole was noted in foundation wall where a cut open pipe is located and no signs of oil seepage noted from this hole based on findings of petroleum discharge from the tank, a new spill report (# 1608286) was generated for the subject site."

Remarks:

"stain only, outside near foundation/no leak at this time...only seems to leak during fuel deliv."

DEC Memo: "11/28/16 - Lakhani On 11/25/16, DEC Patel and DEC Lakhani visited the property in regards to an older spill (# 0812516) on the property. Upon speaking to the current property owner, Claus Meyer, DEC Patel and DEC Lakhani were notified of a spill that occurred a week prior to the visit (11/19/16). The spill was investigated as it had occurred in the basement of the property where a 275 gallon #2 fuel oil tank and boilers are kept. The tank was found leaking a week prior to the visit. During the descent into the basement, petroleum odors were present. The tank was located on the west side of the basement. Staining was observed on the exterior of the tank. The tank was temporarily patched and the patch was covered with plastic which was held in place by rope. The brick floor of the basement was

RESIDENTIAL BUILDING (Continued)

S119028311

stained by oil and covered with absorbent material. A trench on the east side of the basement was stained by the oil as well. The trench led to the boiler room where it emptied into the sump pit behind the boiler. The sump pit was filled with an unknown amount of oil. The oil in the sump was required to be removed as per DEC Patel. Furthermore, the property owners were also required to pump the remaining oil out of the tank. The oil provider was called to determine the volume of oil in the tank. According to their records, 161 gallons of oil was delivered on 11/18/26 and 50 gallons of oil was delivered on 11/15/16. The provider was unaware of the spill. Claus Meyer called Mike from Milro to have the sump pit immediately pumped out. 11:52 AM:- DEC Patel and DEC Lakhani called Claus Meyer to determine whether the tank was repaired or replaced. He confirmed that it hasn't been scheduled to be repaired or replaced yet, however the sump pit had been pumped out on 11/25/16. 11:54 AM:- Mike confirmed with DEC Patel that the sump pit is now empty after removing 20 gallons of oil. Mike confirmed that the bottom of the sump pit was concrete. He also confirmed that the tank was neither pumped out nor removed or repaired. 11/29/16-Hiralkumar Patel. Clara Frijs LLC. **property owner** c/o Claus Meyer 449 W 24th Street New York, NY Ph. (908) 331-6012 / (908) 331-6233 email: claus@meyersusa.com 11/30/16-Hiralkumar Patel. 2:41 PM:- spoke with Mike and inquired him about cleanup of spill impacted materials in basement and repair/replacement of faulty tank. he mentioned that home owner has reported this incident to their insurance company and waiting for response. 2:50 PM:- left message for Ms. Reed at Chubb Insurance. Karen Reed Chubb Insurance Ph. (877) 252-4670 Ext. 4075 (757) 222-4075 Claim #: 047516053300 email: kreed@chubb.com 12/01/16-Hiralkumar Patel. 10:45 AM:- left message for Mike. discussed with DEC Austin. as the leaking tank has not been fixed, the department requires immediate removal of remaining oil from the faulty tank. 10:46 AM:- spoke with Ms. Meyer. informed her that the faulty tank must be emptied by the end of today. 10:51 AM:- left message for Ms. Reed. 11:48 AM:- received message from Ms. Reed. 11:52 AM:- spoke with Ms. Reed. she mentioned that insurance company is still reviewing the claim for coverage. informed her about requirements from the department. 12/02/16 - Lakhani 09:12 AM: Spoke to Ms. Meyer regarding the tank and she mentioned that the tank is scheduled to be pumped out and replaced today at 6:00 pm. A requirement letter addressed to Claus Meyer has been drafted and sent via US Mail. The requirement letter was also sent to Claus Meyer and Mike Vizzini (Milro Assoc.) via email. 12/05/16 - Lakhani 09:18 AM: Mike responded to the email informing that the homeowner contacted their oil company to have them pump out the oil and set up a possible temporary tank. Milro emailed an estimate to Mr. Meyer to perform a delineation, wash, and degrease the oil that impacted the concrete basement slab. 12/7/16 - Lakhani 11:56 AM: Called Ms. Meyer and she confirmed that the tank was pumped out and replaced. She is awaiting a quote from Mike for the delineating, washing, and degreasing of the impacted concrete basement slab. 12/13/16 - Lakhani Mike sent an email to DEC Kumar, forwarded to DEC Lakhani, saying that Milro will delineate the residence and degrease the oil impacted concrete on 12/20/16. Mike said that he will update with findings on 12/21/16. 12/20/16 - Lakhani 10:43 AM: Mike left a voicemail on DEC Patel's phone informing that a Milro crew is on site. A new tank was installed in a different location compared to the old tank. They have completed clean up with speedi dry. The site has a brick mortar

RESIDENTIAL BUILDING (Continued)

S119028311

floor. They will be completing delineation of the site. 10:58 AM: Called Mike and told him that we would like a sketch of the site which should include the old tank location, each sample's location and depth, and respective PID readings. Once we receive those readings, we will contact him regarding further action if needed. DEC Lakhani emailed Mike his contact information. 12/21/16 - Lakhani Mike sent their sketch with PID readings and site photos. Uploaded to D2. The email was as such: Milro Associates, Inc. was contacted to respond to a #2 fuel oil spill at the above-referenced location. The release was caused by a leaking 275 gallon above ground oil storage tank located in the basement of the residence. An unknown amount of #2 fuel oil was released into the unfinished basement of the residence. On November 25th, 2016 Milro was dispatched to remove #2 fuel oil from a sealed concrete floor sump. Milro manifested 20 gallons of oil within the sump. The existing slab was pitched back to the sump. Causing the oil to migrate from the old tank to the sump. As part of the cleanup, On December 20, 2016 Milro cleaned the impacted area and inspected the basement concrete slab for cracks and floor drains. Cracks were observed on the brick and mortar slab within the spill area and the underlying soil was investigated for oil contamination. Soil borings were advanced through the slab and soil samples were collected using a hand auger at 6 - 1 below grade. Soil samples were field screened using a Photoionization Detector (PID). The PID indicated a range of 12.8 parts per million (ppm) to 272.80 ppm. Milro removed 1 drum of oil contaminated debris including absorbents. The slab was washed and degreased to help with residual odors. Air equipment was utilized during the work process to help with residual odors and removed at days end. During the soil borings at 1 below grade water was observed and pooled back into the sump. It is unknown if the water observed was groundwater and or trapped water below. The brick was would make it hard to encapsulate the floor because it is not flush. Residual odor was observed at a mild level. Possible monitoring of the sump by the homeowner and NYSDEC could be needed and or soil removal near that sump to remove the oil contaminated soil. DEC Kumar and DEC Lakhani called Karen Reed (Chubb) and she informed that the property owner, Ms. Meyer, would need to file a separate and different claim for third party coverage. 12:11 PM: Called Ms. Meyer and informed her about Mike's findings. Let her know the best way proceed is to begin digging and removing the contaminated soil. Also let her know that her insurance company was contacted to determine whether third party coverage is part of her insurance because water was found in one of the holes. She requested that the findings be consolidated into a letter and emailed to her. Email to Ms. Meyer has been sent. 12/23/16 - Lakhani Called Mr. Meyer (9083316012) on 12/22/16 at 3:19 PM. He did not answer and his phone is full and not accepting messages. 9:25 AM: Called Mr. Meyer, he did not answer and his phone is still full and not accepting any messages. 9:29 AM: Spoke to Mike and he informed that water was found in SB-4. There was also recharge of oil to the sump. Milro cleaned it out with spill pads. Groundwater could be 12 to 18 below grade. DEC Lakhani informed Mike about the third party involvement because of impact to groundwater. Reviewed next steps with Mike as digging out contaminated soils and to check if there is any more product build up. Milro's crew did not observe any olfactory odors in the basement. 9:48 AM: Called Ms. Meyer and she informed DEC Kumar and DEC Lakhani that she had filed a claim. She was informed that immediate remediation has to be done on the property because

RESIDENTIAL BUILDING (Continued)

S119028311

there was groundwater impact. Furthermore, there is a concern that the oil may migrate to neighboring basements in which case a pin job would be opened if the property owners are not reachable since they will be on vacation from 12/25/16 to 1/1/17. Ms. Meyer was told about the possible violations, penalties, and bills that would result if oil was found in the neighboring basements and if state contractors were involved. She requested an email be sent to her regarding the above information. 9:54 AM: Called Mike to ask whether a crew can be dispatched to the property. He said he would let DEC Lakhani know whether a crew can go or not. Mike called and informed that there were Milro Associates on site today. He is asking them whether they observed any oil during their visit. He also reached out to Ms. Meyer and asked her whether she can take pictures. Mike also informed that there are two (2) floods recorded for the property. One of the floods occurred in January. Both floods were due to a boiler and so the encountered water is suspected to be trapped water as per Mike. There are six (6) other spills on 24th Street between 9th and 10th Avenue in addition to the two (2) spill cases at 449 West 24th St. Said spills occurred at 426 W 24th St (1107482), 440 W 24th St (9412378, 8808585), 450 W 24th St (9515779), and 470 W 24th St (0109374, 9008416). 12/27/16 - Lakhani 10:47 AM: Called Karen Reed of Chubb Insurance. She informed that the Meyers made a claim on 12/21/16 for a water leak related to a boiler (CLAIM #040516076836). She also informed that the Meyers have third party coverage as part of their policy and a claim has been made (CLAIM #040516077181). The claim is in the process of being assigned to an environmental addresser. Chubb is soon sending an investigator to investigate the property due to the water leak and oil tanks claims made. DEC Lakhani let her know that the Meyers are on vacation and not currently reachable. 11:13 AM: Mike called and informed that Ms. Meyer called to obtain an estimate for soil excavation. Mike is putting an estimate together for when Ms. Meyer returns on 1/2/17. Mike was also notified about the water leak in the basement on Tuesday, 12/21/16. It was due to a boiler and there was 1' of water in the basement. However, upon inspection in the evening of 12/21/16, the water was gone. The water most probably had seeped into the subsurface. Ms. Meyer has reported to Milro that the sump fills up with water. Mike sent pictures sent by Ms. Meyer on 12/23/16 of the sump to DEC Lakhani. The sump is recharged with water and there is no evidence of any oil in the sump pit. DEC Requirement letter addressed to Karen Reed (Chubb Insurance) and Claus Meyer was sent stating that during the soil sample collection, free product was observed at the water table. The presence of free product on the water table combined with shallow depths to water presents a potential for third party impact. Therefore it was required that they: 1) implement interim remedial measures, 2) confirm effective removal of contamination and 3) delineate soil and groundwater contamination via determining groundwater flow direction and installing down gradient monitoring wells. This letter that was sent supersedes the previous letter sent on 12/2/16. Letter was uploaded onto D2. 12/28/16 - Lakhani 9:11 AM: DEC Kumar receives a call from John from LBG, Inc. (9146945711) 9:47 AM: DEC Lakhani calls John to inform him about the spill and site. LBG, Inc. was retained by Chubb to assess the environmental impact of the site. John says they will send someone to the property to investigate on behalf of Chubb Insurance. 01/03/17 - Lakhani Called Karen Reed, but she was unavailable. Called John from LBG and he informed that he is waiting on Chubb to contact the Meyers so he can schedule an investigative

RESIDENTIAL BUILDING (Continued)

S119028311

site visit. He also informed that the environmental addresser from Chubb is Deborah Decillis (2014796343). Called Deborah, but she was unavailable so a message was left for her regarding claim #040516077181. 01/04/17 - Lakhani Deborah called back and informed that Chubb will be sending LBG on-site to evaluate the tank leak and third party impacts. In the case that third party impacts have been determined that occurred since the Meyers began owning the property in August 2015, Chubb will cover the costs for cleanup to the point where the spill can be closed. 11:29 AM: Called Ms. Meyer, but she did not respond. Message could not be left. 2:25 PM: Called Ms. Meyer. Spoke to her briefly about any updates. Will call tomorrow (1/5/17) between 9 and 9:30 AM as Ms. Meyer was at the hospital with her mother. 01/05/17 - Lakhani 09:15 AM: Called Ms. Meyer to receive an update on the spill case. She asked to postpone the call to 9:45 AM. She stated that she was irritated by the spill case and about the progress made thus far. DEC Lakhani assured her that he was doing as much as he can to help her cleanup the spill as quickly as possible. Ms. Meyer requested that the old spill documents be sent to her as proof of the DEC's involvement on the property. As per DEC Urda, all documents associated with spill #0812516 can be sent to the Meyers. 09:55 AM: Ms. Meyer calls and discusses the spill. Chubb Insurance has not reached out to them regarding scheduling a visit to determine impact and coverage. Email was sent to the Meyers including spill #0812516 documents, reminder of the Department requirement letter sent on 12/27/16, and reminder of an upcoming report due on 01/27/17. Deborah emailed informing that LBG will be onsite at the Meyer's home on the morning of 1/6/17 to evaluate the leak and perform a third party investigation. 01/06/17 - Lakhani 04:13 PM: Called John but he was unavailable. Message was left. 01/09/17 - Lakhani 10:27 PM: Spoke to John. He informed that during LBG's site visit, no holes were drilled. Borings by Milro were filled in and so were not inspected. Some filming/sheen was observed in the sump. Globules observed in the sump as well. A water sample was taken from the sump which recharged with product from the sump pit sidewall. Staining was observed on the brick. John will send email regarding site visit and findings to Chubb. 01/11/17 - Lakhani 01:04 PM: Called Deborah to speak about LBG's site visit. She was unavailable and so a message was left. 04:27 PM: Deborah called and informed that LBG was on the property on Friday 01/06/17. LBG confirmed the tank leak and the heavy sheen on the water in the sump pump. Confirmed that the leak occurred in October/November. LBG did not do any sampling. Deborah had reached out to Milro regarding cleanup. Milro will be sending a proposal to Chubb. Deborah also reached out to the Meyers that to inform that Chubb will be covering them for the cleanup. Deborah sent DEC Lakhani photos from LBG's site visit. There is sheen on the water in the sump indicating there is impact to groundwater. 01/26/17 - Lakhani On 01/23/17, Chubb DeCillis emailed the estimate that Milro provided Chubb for the remediation work plan to take place. She provided Milro with authorization to the start the project on 01/23/17. She would advise of a start date. Work plan is as follows: 1) Remove oil impacted bricks, mortar and soil by hand. Cover excavation with plastic and install air equipment for residual odor 2) Obtain DEC land samples 3) Vac out oil impacted groundwater 4) Vac out impacted groundwater 5) Backfill excavation and subbase, brick and mortar slab 6) Restore brick and mortar slab. Claim #040516077181 Milro Mike emailed notifying that Milro has been retained by Chubb to clean up the oil contaminated soil. He will update next week (01/30/17 -

S119028311

02/03/17) with a start date. 02/03/17 - Lakhani Emailed Milro Mike regarding a start date. Mike responded that Milro will be on site on Friday 02/10/17. 02/13/17 - Lakhani Milro Mike emailed and updated with a new start date for the work. Due to bad weather the work is scheduled to begin on 01/17/17. 02/16/17 - Lakhani Received email from Milro Mike informing that Milro had removed 2 yards of oil impacted soil. With an additional day, they can remove the impacted soil from the residence. Milro is scheduled to return to the site on 02/23/17. Once the groundwater is exposed, they will either clean the water or take samples. He asked to let him know if a site investigation will be performed mid-day on 02/23 (12 PM). 02/24/17 - Lakhani Sent the following email to Milro Mike: I hope you re doing well. I m sorry I could not schedule a visit for yesterday. I will most probably reach out to the property owner to do a quick inspection. Could you update me on the work that your crew completed at the site yesterday? Please send me any photos you have taken as well. Mike responded requesting another day for soil removal. He confirmed that groundwater was indeed impacted. Milro will schedule a final soil removal day and update DEC Lakhani on their findings. 03/01/17 - Lakhani Milro Mike informed that Milro will be returning to the site tomorrow (03/02/17) fro a last day of soil removal. They intend to take grab sidewall samples for analysis. The groundwater is impacted and they will be using pads and will bring in a vac truck to help clean. Milro will remove/replace spill pads in groundwater 1'bg. They will remove the oil contaminated soil by hand and collect endpoint samples. Site visit scheduled for 03/02/17 at 2:30 PM. DEC Patel and Lakhani will meet LBG, the consultant, at the site. 03/02/17 - Lakhani DEC Patel and Lakhani visited the site today along with Milro Andrew and LBG Dave. We descended into the basement and there were no olfactory odors observed. Milro has excavated a 7'x4' pit which had charged with groundwater. Oil was observed on the water by Milro and so absorbent pads were placed down. These pads were changed out three times over the day. A smaller excavation adjacent to the pit, in the location of the former tank was also charged with water. Pads were placed here too. Milro also dug two test pits north of the 7'x4' pit. One was 3' deep and displayed a black oil on top of the water. Pads were placed in the test pit and were soaked with oil. Adjacent to it, is another test pit dug down 1' which did not display any oil on the water. The sump pit was clean and no sheen was observed. Milro had uprooted three pipes that were reportedly connected to the tank. Given what was observed DEC Patel and Lakhani recommended that Milro: 1) Milro explore the three lines 2) test the lines for any leaks 3) pump water/oil out of the excavations and test pits into a drum 4) Extend the second test pit (1' deep) down to the depth of the first test pit (3' deep) 5) run a finger print analysis on the oil in the first test pit. DEC Patel and Lakhani will revisit the site on 03/06/17 after Milro completes work 03/03/17. Pictures from site visit uploaded onto D2. Sent email to Milro Mike scheduling a site visit for 2 PM on Monday, 3/6/17. Milro will be returning to the site on Monday as well. 03/06/17 - Lakhani DEC Patel and DEC Lakhani visited and met Milro Andrew onsite. Upon descending into the sub-basement, a very faint petroleum odor was observed. Most probably due to the excavation work the Milro crew had recently completed. There have been no odor complaints by the property owner. The water in the 7'x4' excavation was relatively cleaner than it was on 03/03/17. The pads were already removed upon arrival to the site, but Andrew said only the edges of the pads were soaked with oil. DEC

S119028311

requested that more pads be placed in the excavation as a precaution because a rain event was forecasted for tomorrow. The smaller excavation beside the 7'x4' pit was clean with just a streak of sheen along one of the sidewalls. Therefore, DEC proposed that the pit be backfilled to allowing for work space. The test pits were dug to the same depth and were connected, having excavated around the test pits as well. The first test pit showed dark brackish water while the water in the pits looked like groundwater with oil. Groundwater at the site is at fluctuating heights throughout the site. Another test pit was dug in the farther northeast corner of the sub-basement, along the trench, because it was thought that the contamination may be coming from the trench area. However, that the new, third test pit did not show heavy contamination. There were saturated soils that were observed on the northern sidewall, on the border of the test pit excavation and the 7'x4' pit. This prompted DEC to instruct Milro to remove more contaminated soil. Milro has not yet received authorization from the insurance company to continue work, as Chubb is waiting for cost estimate for the further needed remediation. Milro has not pumped out the water or tested the lines. DEC Patel and Lakhani instructed Andrew to skim the oil off the top of the water. 03/15/17 - Lakhani Emailed Milro seeking for an update. 03/17/16 - Lakhani Milro Mike responded informing that Milro will start additional soil removal next week (03/20 - 03/24). Mike attached groundwater sample analyticals to the email. #4 oil was observed in the groundwater sample. Spoke to York Laboratories and they fingerprint by comparing to reference libraries and carbon characteristics of the petroleum product. DEC Lakhani responded with the following email: I have contacted York Laboratory to obtain further analytics from the fingerprint analysis. The source of the contamination could be coming from off-site, however from my research this seems unlikely. I am currently exploring an older spill that occurred on the property in 2009. Therefore, this could be pre-existing contamination that was left at the site mixed with the spill that occurred in November 2016. I will keep you updated once I hear back from York Laboratory. 03/20/17 - Lakhani 418 W 25th Street changed their grade of fuel from #4 to #6 in 1996. The property had two (2) spills in 2001 and 2005. The property has a 7,500 gallon AST installed in 1965. 425 W 25th Street had three (3) spills in 1998. They were potentially using #4 fuel oil. Report for one of the spills suggests that the property is not a source because down gradient wells of the contaminated well did not show any product. 281 9 Ave used #6 fuel oil and had spills in 1996 and 1997. However, the property is distanced from the site. As per ACRIS, the Chelsea Recreation Center installed a new fuel storage tank in 2003. Spoke to Robert at the rec center and he informed that they are currently on gas. The rec center will confer with their engineer and confirm the absence of presence of a storage tank on the property. 03/21/17 - Lakhani York Labs sent chromatogram of the sample compared to a #4 and #2 fuel oil standard chromatogram. Confirmed that it is most probably #4 fuel oil. Uploaded to D2. Received phone call from the Chelsea Rec Center and was informed that there is back-up fuel tank in the basement for the generator which currently sits 3/4 full. Nevertheless, the site has had fuel storage history dating back to 1940, when it was most likely to have held a higher grade fuel oil. The tank is located in the cellar of the building. 03/29/17 - Lakhani Milro Andrew Dolan emailed to update that Milro is scheduled to continue with contaminated soil removal on 04/03/2016, and will

RESIDENTIAL BUILDING (Continued)

S119028311

continue to be on site for the rest of the week. Spoke to Chelsea Rec Center Manager Brian Sullivan and scheduled a site visit for Wednesday 4/5 at 1pm. Manager Robert will be on site to provide access to the tank room. 04/03/17 - Lakhani Milro Andrew called to inform that the groundwater at the site has significantly risen - the groundwater is just an inch below grade. LBG, the consultant, was on site today and took samples of the product. Milro has skimmed off oil from the water surface. However, they are postponing soil removal because of the rain event that is supposed to occur on 4/4 and 4/6. Therefore, Milro Andrew plans to visit the site on 4/10 to assess the feasibility of soil removal. Today, Milro is backfilling the excavation beneath the former tank area. He also informed that the sump had recharged with oil measuring up to 1/4 . Milro removed the oil from the pump. 04/05/17 - Lakhani Visited the Chelsea Recreation Center at 430 W 25th St with DEC Kumar. DEC Kumar and DEC Lakhani met with site manager Robert Markowick (Robert.Markowick@parks.nyc.gov) and engineer Anthony. The recreation center has an aboveground tank on the roof of the building. The center also has an aboveground day tank held in a subterranean room. No evidence of a leak or of oil penetrating a wall of the room was observed. There was no evidence of oil staining on the wall or on the floor. DEC asked to check the sump. The sump is sealed with a cover bolted down to the floor. Anthony said he could have the sump opened and checked by mid next week. Anthony will send photos of the sump. DEC also visited 418-420 W 25th St. The buildings are composed of apartments called Loft 25. DEC met Hussein, the superintendent (420w25@akamm.com), who led us to the storage area where a pipe in the wall was filled with concrete in Tenant Storage 4. The pipe leads to the sidewalk on 25th St. In the room housing the fire pump, a stain, most probably caused by oil, was observed. Hussein stated that he noticed the stain coming through the wall about less than a year ago. Hussein also informed DEC that bore holes were drilled into the sidewalk outside the building 5 years ago, but he is unsure whether he holds the report. 04/07/17 - Lakhani NYC Parks Dept Rajin Small called to confirm the type of information was required from the Chelsea Recreation Center. DEC Lakhani informed him that pictures of the inside of the sump pit were needed. 04/10/17 - Lakhani 418 W 25th Street: - Loft 25 apartments - Alternative addresses for the property include 420 - 426 West 25th Street - There are two (2) spills that have occurred on the property: Spill #0107340 occurred on 10/17/01. According to the spill report, five (5) gallons of #4 fuel oil was spilled by Mystic Oil. No other notes or documents exist for the spill. Spill is closed. Spill #0509359 occurred on 11/04/05. According to the spill report, contamination was found during site evaluation. The material was dug out. The site had an old print shop on the upper floors. There was a stain on the concrete floor in the basement which was used as a former hazardous chemical drum storage room . Floor was broken and volatiles were detected. Four (4) endpoint samples were collected which showed VOC/SVOC levels below standards. Closure report in D2. Spill is closed - According to the DOB, on 01/05/96 the boiler and oil burner were replaced and there was a change in the grade of fuel oil from 4 to 6 - There is one (1) 7,500 gallon #2 fuel oil in-service AST on the property 430 W 25th Street: - Chelsea Recreation Center (New York Parks and Recreation) - Alternative addresses for the property include 432 - 444 West 25th Street - No spills exist for the property - According to the DOB, a certificate of occupancy, dated 2004, indicates that there is an oil tank in the

Site

Database(s)

EDR ID Number
EPA ID Number

RESIDENTIAL BUILDING (Continued)

S119028311

cellar - The building has converted to gas and keeps the oil tank as a backup - No tanks are registered on PBS - In 2003, there was an installation of new boilers, generator, and fuel storage tank in conjunction with the new building. The existing fuel storage tank was removed from service. No information about grade of fuel used 425 W 25th Street: - NYCHA Chelsea Houses - Alternative addresses include for the property include 425- 431 West 25th Street and 428 - 442 West 26th Street - There are three (3) spills that have occurred on the property: Spill #9802923 occurred on 06/04/98. According to the spill report, 20 gallons of #2 fuel oil affected a sewer. No other documents available. Spill is closed. Spill #9812239 occurred on 01/04/99. According to the spill report, 100 gallons of #2 fuel oil were spilled in boiler room. Spill is closed. Spill #9806339 occurred on 08/21/98. According to the spill report, one (1) 30,000 gallon #2 fuel oil tank was removed in 08/2000. Soil was contaminated as all six (6) post-excavation samples were tested for VOCs and SVOCs. None of the samples detected any VOC contaminants. All samples recorded exceedances of PAHs. Five (5) permanent wells were installed in 2010. All groundwater samples were under TOGS with the exception of MW-5 - three (3) minor VOC compound exceedances. A slight sheen was subsequently detected in MW-5. Absorbent sock placed in well. Minor impacts on sock in 2012. No oil was detected on sock in 2013. Closure report can be found in D2. Spill is closed - Currently there is one (1) 25,000 gallon #2 fuel oil UST on the property installed on 09/01/2000. On 08/01/2000, a 30,000 gallon #2 fuel oil UST was removed from the property - According to DOB certificate of occupancy, the cellar was the location of the boiler room which dates back to 1964. In 2000, two (2) LP boilers were replaced with two (2) new boilers with combination oil-gas burner. In 1995, the fuel storage tank was replaced as per plans field herewith no change in use. In 1993, two (2) existing fuel oil burners were replaced 04/17/17 - Lakhani Parks Dept. Chelsea Rec Ctr. Robert Markowick sent pictures of the sump at the Chelsea Rec Center. There was no oil observed on the water in the sump. Pictures uploaded to D2. Milro Andrew (Cell: 5164043881) emailed to inform that he will have a crew at the Meyer Residence today until 1-2 pm. Spoke to Andrew and he informed that they are trying to have a vac truck brought to the site. However, the Milro crew may no be able to work at the site 04/18, 04/20, and 04/21. Oil is still observed flowing into the excavations. There was a minimal amount of oil observed in the sump pit (less than 1/4). Spill pads are constantly being placed down and replaced to recover the product. Andrew sent pictures of the excavation and the sump pit. Uploaded to D2. 04/18/17 - Lakhani Milro Andrew informed that the Milro crew left the Meyer site on 04/17/17. Two (2) yards of oil contaminated soil and materials/debris were removed. Unfortunately, they are still uncertain whether they will be returning to the site today. He also informed that they are on site today with a vac truck. They will continue with soil removal. They will be reaching foundation limits soon. Site visit scheduled for 1 pm on 04/24/17. 04/24/17 - Lakhani Called Milro Andrew and he informed that Milro is onsite and doing soil removal by hand. He reports that every time they dig out soil from underneath the water, dots of black oil surface on the water. The vac truck he has onsite broke and so Andrew is currently having the pump on the vac truck fixed so that Milro can remove the groundwater at the site. Andrew had not provided an update on progress at the site, indicating that all work was stalled due to the irreparable damage to the vac truck.

S119028311

05/03/17 - Lakhani Sent Milro Andrew an email requesting an update on the site. Spoke to LBG Dave and he informed that he had been on site when Milro was completing soil removal. He observed that there was not much product on the water. Milro has removed a majority of the contaminated soils and has passed the contaminated zones to encounter clean native soils. DEC Lakhani spoke to Milro Andrew. Andrew confirmed that clean, indigenous soil has been encountered a foot beneath the groundwater. The soil is a lighter siltier soil beneath the #2 fuel oil contaminated, debris ridden, asphalt affected soils. Andrew reported that asphalt had been used as historic fill material at the site. 05/05/17 - Lakhani DEC Lakhani and DEC Kumar visited the site and met LBG Dave and Milro Andrew at the Meyer residence. There is minimal oil observed on the groundwater that is being constantly absorbed by pads. The soil beneath the water was relatively clean. DEC authorized the backfill of the excavation. However, prior to the backfill a groundwater grab sample was required to address any dissolved contamination, if any. The sump has been clean as well. DEC asked Milro to vac out the water and backfill. Pictures uploaded to D2. 05/24/17 - Lakhani Milro Andrew sent groundwater analyticals, however, the sample was only tested for SVOCs. SVOCs were below standards. 06/02/17 - Lakhani Milro Andrew informed that VOCs were not tested for because the groundwater sample was not taken correctly. Therefore, only SVOCs could be analyzed. All SVOCs are below standards. Naphthalene concentration is 0.35 ug/L. The concentration is very low compared to the 10 ug/L standard for naphthalene. Given these results, the VOCs in the groundwater must be relatively low as well. DEC has authorized Milro to backfill the excavation. Email sent to Ms. Mayer authorizing backup and acknowledging that the cleanup is complete. 06/27/17 - Lakhani Spoke to Milro Andrew and was informed that the excavation has been backfilled to a couple of inches below grade. The Meyers are currently on vacation and will be returning in mid-July. Upon their return, Milro will schedule concrete and brick work to complete the project. Spill is closed. 10/10/17 - Lakhani Spill closure request uploaded to D2."

Remarks:

"During an investigation of previously reported discharge (spill #: 0812516) from a remote fill line, a petroleum release was noted from a 275 gallon tank at the site."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL E2mis no. 142-567: 4-30-02 @ 02:12 THERE WAS A DELAY IN THE INPUT OF THIS INCIDENT DUE TO THE SYSTEM BEING DOWN. J Deangelo #51543 reports that while doing maintenance work at M06699 @ f/o 443 w 36 st he discovered 1 pint of an unknown oil on top of 100 gallons of water on the concrete floor of the structure. Source and cause of spill are unknown. Environmental yellow tag#35991 was installed. No sewer connection as per conduit plate m24-e-2. 2 liquid samples were taken by J Deangelo #51543 from the spill, 1 for id and 1 for pcb. UPDATE: 4/30/02 At approx. 09:00 hrs. the Environmental Desk received a call from the Supervisor on location that a local customer was complaining that the Tanker and Vactor truck setup was blocking both loading bays or docks of his business preventing him from receiving or shipping his goods. A decision was made to postpone the cleanup until after 17:00 hrs. (5:00 p.m.) when he will close. Arrangements were made to re-schedule the tanker, vactor truck and underground crews for 17:00 hrs. Lab Sequence #02-03661-001 Date Approved: 4/30/02 @ 06:20 hrs. TOTAL PCB 25 ppm. CIG Rich Roach #03494 notified at 13:58 hrs. that this incident is being re-classified from a Spill - De Minimus (24 hour underground) to Spill - Oil (unknown type) since the cleanup would not be completed in 24 hours. UPDATE: 4/30/02 @ 13:20 hrs. Pete Murphy, clerical staff, W.28th Street reported at 12:50 hrs. that the only available crews to do the cleanup would be the crews coming in at 19:00 hrs. tonight. Since this incident started at 01:05 hrs. on 4/30/02 there would not be sufficient time to complete the cleanup within the 24 hour time frame. The Environmental Desk, therefore, made a decision at 13:00 hrs. to de-classify this from a Spill - De Minimus (24 hour underground) to Spill - Oil (unknown type) since the cleanup would not be completed in 24 hours. The cleanup is still being scheduled for 19:00 hrs. R. Pellegrino #38620 CIG Rich Roach #03494 notified at 13:58 hrs. that this incident is being re-classified from a Spill - De Minimus (24 hour underground) to Spill - Oil (unknown type) since the cleanup would not be completed in 24 hours. R. Pellegrino #38620 UPDATE 5/1/2002 @ 04:33 HRS Spoke to J Seleski # 20525, Operating UG Supervisor and he informed me that the cleanup was completed @ 04:00 HRS on 5/1/2002. 250 gallons of oil and water mix was removed by the tanker and one(1) drum of solid waste including PPE's, diapers and rags was removed. The structure was Double-washed with SLIX . The Environmental tag # 35991 was removed."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 03-11908: MJ Quill Depot. Spill date: 01/23/04. Reported as unknown product found in sump. Fact sheet submitted, dated 01/29/04. It reports that product was discovered in a drain and that the drainage system goes through an OWS. It states that DOB will investigate. Another fact sheet, dated 02/25/04, was submitted that reports that the drain that the product was discovered in is a groundwater drainage system. It also reports that there was no spill because the analysis only found a trace of oil apparently from a nearby kitchen. During our Monthly meeting on 03/05/04, a hand drawn map, the analytical results and an e-mail chain was submitted to try to clarify the situation. The analytical results are two samples of water (not product) that only identifies a petroleum Contaminant. The e-mail chain is between Karuppanan Subburamu, Jennie Mandelino, Roberto Espinoza and Timothy Slauson, with copies to Linda Fernandez. The subject of the e-mails is Michael J. Quill - Training Room Odor Concern. Mr. Subburamu gives a detailed description of the drainage system, what was discovered and how it was corrected in an e-mail, dated 02/06/04, to Timothy Slauson. It states that there is a sub-soil drainage system to control the groundwater level. This system consists of a grid of buried slotted pipes and 5 manholes. One of these manholes is located in the fuel pump and filter room, which discharges to the training room manhole. This manhole discharges to the other 3 manholes in the center of the Cellar Floor. From here, the water is conveyed to a sediment pit and eventually to a pump pit. If the pumps were operational, they would discharge to NYCDEP s sewer system. According to the e-mail, a contractor flushed the system on 01/28/04 and the sediment pit turned black. It also reported that the contractor hard piped the manhole in the fuel pump and filter room directly to the manhole in the center of the Cellar Floor to minimize the odors in the training room. The e-mail reports that the intensity of the odors moderated after the contractor flushed and hard piped the system and suggested that new pumps be installed to pump the groundwater to the sewer, which should eliminate the odors. The drain in that room should be closed and sealed to prevent spills, drips leaks, etc. from entering the drainage system as well as the groundwater. Also, there is a known plume at this facility which this drainage system might capture. At the very least, it should be discharge thru the OWS first, but DOB must consult with Eric Jones, CPM, before proceeding. Subsequent e-mails discussed the option of pumping the drainage system thru the facilities OWS but was stopped because this action might overload the OWS. Instead, it was suggested to pump the groundwater directly to the municipal sewer since the analytical results were below NYCDEP s discharge criteria and does not need treatment by an OWS. The analytical results indicate that the water may meet NYCDEP s criteria of 50 ppm of dissolved oil and

Remarks: grease (or TPH.) But the fact that there is separate phase product on top of the water should require separation under NYCDEP regulations. DOB will not pump directly sewer. A new OWS to be installed. Need to visit site to inspect manhole in filter room. Need to install spill prevention measure to protect sump or decommission sump. On 09-12-07, Tibbe visited the site and took photos of the spill prevention measures that were installed. See eDocs. "

DEC Memo: "11/19/14-Vought-Duty desk officer. Vought called Con Edison ERT (Ph:212-580-8383). Vought spoke to Tony Delgado and gas department was digging trench to install new gas pipe and they discovered black oil and they collected samples and will excavate as much as needed for the pipe. Vought provided email address and requested that sample analyticals be submitted to Vought. Note that as per google maps spill is located on 11th avenue and 41st Street in Manhattan. 12/4/14-Vought-Received analyses via email from Con Edison Skow. Vought added analyses to D2. Analyses noted excavation was on West 17th Street between 10th and 11th Avenues and samples collected on 11/20/14. With respect to oil identification, report noted that The sample does not match any current Con Ed standard and that the soil was not ignitable . Note as per EMIS spill is on West 17th Street. Vought searched Spills Database and found no open or closed spills on either side of 17th Street and area also noted to be at or adjacent

Spiller Company: 999
Contact Name: JOEL LANDES
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 2/6/2002 - Sangesland spoke to Joel Landes at Langan Engineering (201-398-4853) about this site. The site is quite large. The east side of 9th Ave from 36th to 37th St (about half the block towards 10th Ave). The site was a former gas station which apparently was closed down around 1980. (This fact needs to be confirmed). According to Langan Engineering, the site had approx 12 - 2,000 gal gasoline tanks inbedded in a large cement block on the site. They said the tanks were closed out prior to 1984 per NYFD guidelines and filled with sand or cement (this must be confirmed) During site excavation a buried tank (approx 2,000 gal) was found approx half filled with gasoline. The backhoe cut the top of this tank and spilled to the soil. Sangesland arrived at the site ~ 11 AM and spoke with Andrew Fuller (engineer with Langan). The found tank was removed and several tons of contaminated soil were excavated and placed in a covered dumpster pending proper removal. Considering that the entire site will be excavated down to approx 15-18 ft (down to bedrock) any residual contaminated soil which may continue to exist will soon be removed. Sangesland requested that Langan submit a report with the following information: 1) Write up of the found tank (where, how, when) 2) PBS submittal for this newly found tank. 3) Paragraph on 12-2,000 gal tanks which were closed out prior to 1984 and filled with sand/cement. 4) Manifest for contaminated soil removed from the site. 5) Photos showing the site after all excavation is complete. (Hopefully this will show the full city block excavated down to bedrock with no contaminated soil in the area.) 9/10/2002 Sangesland reviewed a Site Closure Report submitted by Langan Engineering and dated 7/31/2002. The report outlines all of the work done on the site. (i.e. tank removals, contaminated soil disposal/manifest, PBS registration, etc). All information previously requested by the DEC has been included in this report EXCEPT photographs were missing. 11/8/2002 Langan Engineering submitted an Addendum to the July 31 report which includes color photographs of the final excavation. These photos show the full city block site excavated approx 15 ft down to bedrock. This confirms that any contaminated soil which may have been on the site is now gone. Source removed. Based on this information, spill status is now changed from open to no further action . "

Remarks: "during construction a backhoe dug up a under ground tank that was unknwon to be there cleanup has started"

 DEC Memo: "11/4/05 - Raphael Ketani. I spoke to Mr. Al Gulun ((516) 221-7500) of Soil Mechanics. He said that the site had an old print shop on the upper floors. So they went downstairs and saw stains on the concrete floor. They broke open the floor and detected volatiles. So they dug out the soil and collected end point samples. Thirty drums of contaminated soil and concrete went out in drums. Mr. Gulun said that he will mail an investigation report to Spills. 01/30/06 Sharif//Rec'd closure report prepared by Soil Mechanics. The building is currently being renovated for residential use. During the underground utilities installation, contaminated soil was encountered beneath the former hazardous chemical storage room (app. 8'x14'). All accessible impacted soil was removed from a 16'x18' excavated area. Four end point samplea were taken which showed VOC/SVOC levels below TAGM. Waste disposal manifest and photographs of the site were provided. NFA required."
 Remarks: "FOUND CONTAMINATION DURING SITE INVALUATION: MATERIAL HAS BEEN DUG OUT"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL See spill # 0205294 e2mis no. 144-631: Fred Simms #66618, Field Operations Manager, reported at 10:28 hrs. that he found at 10:25 hrs. approx. 70 gallons of transformer oil in manhole M39730 located at 290 9th Avenue and West 27th Street. The Emergency crew was on location in response to a fire dept. (NYFD) request of a transformer explosion in vault VS4493 at the same location. Mr. Simms reported that due to the transformer explosion in vault VS4493 at the same location, oil from the transformer was going into the manhole. The crew was about to enter the manhole to cut the secondary due to the transformer problem when they discovered the spill. The source of the oil is possibly the transformer in vault VS4493 and the cause is a transformer failure. No agencies on location. The Account No. is F3445. Lino Rodriguez #32100 will take two liquid samples from the spill for PCB and Oil ID on a priority E basis. Chain of Custody #AA21261 will be issued for the samples. No initial cleanup action taken. The crew is waiting for the feeder to be grounded before going into the manhole. 8/20/02 Received lab results, lab sequence # 02-07762-001 TOTAL PCB 3 ppm 8/20/02 16:36 Received lab results, Lab sequence # 02-07763-001 Analysis indicates the presence of a substance similar to a dielectric fluid. 8/20/02 21:05 Received a call from A. Zappone # 85207 Underground (cleanup) supervisor that the cleanup was completed 100% at 21:00. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC responder notes: Transformer flash fire, rupture. An EMT was burned by spraying oil. Oil on sidewalk - crew already have completed double wash of sidewalk and re-opened it. PCB sample from 1992 is 10 ppm. New sample has been collected from vault and adjacent manhole and sent to Chem Lab. Clean up proceeding as 50-499 until confirmatory samples return. See file for photographs. (JHO)
~~~~~ e2mis no. 144-630: 8-20-02 @ 09:55 F  
Simms #66618 reports that while investigating a transformer explosion @ vs4493 290 9 ave, he discovered 1/2 gallon of transformer oil had spilled onto the concrete sidewalk, a mailbox and an ambulance. Upon arrival of F Simms there was no smoke or fire involved. An emt worker was burned on the leg and neck and transported to the hospital. Police and fire department were on location. Transformer is on feeder #13m59. Environmental yellow tag # 35966 was applied. 2 samples are to be taken from the spill as soon as it is safe to enter the structure, chain of custody # aa21260. Further investigation can take place when it is safe to enter the structure. Feeder is not grounded at this time. Cleanup pending safe access. Lou First, Manhattan E,H&S reported at 12:50 hrs. that the I&A was on location and they estimated that there was approx. 30 to 40 gallons of oil in the vault. He reported that Jane O'Connell from the NYSDEC arrived on location at approx. 11:45 hrs. He also reported that Chris Haas from the NYCDEP was on location at approx. 12:00 hrs. lab sequence # 02-07760-001 PCB 3 ppm 8/20/02 18:00 J. Gnall # 195 I&A supervisor reports that at this time a partial cleanup has been completed. A final cleanup will be done when the unit is removed. A tanker removed 200 gallons of oil from the transformer & 340 gallons of water/oil mixture from the vault. They also cleaned up the sidewalk & mailbox

| DEC Memo:                 | "e2mis no. 152976: approx 5 gal of Transformer oil mixed with dirt on the floor on the vault. The source of the spill was a damaged Transformer and the cause was corrosion on the unit on the terminal covers. The sump pump was found disconnected on arrival. The spill was on the concrete structure. The unit has been condemned. Two samples were taken from the spill for PCB and ID and one from the Transformer. A partial cleanup is in progress as of now. Final cleanup will be scheduled when Feeder is taken out of Service to drain and disconnect the Unit. A Partial cleanup was done, remove 1 ( one ) drum of debris and ppe / final cleanup will be done when transformer is removed, Put down oil absorbent and pads. Lab Sequence Number: 04-02965-002 TOTAL PCB 5 ppm Lab Sequence Number: 04-02965-001 TOTAL PCB 1 ppm Analysis indicates the presence of a substance similar to a dielectric fluid. Pearson # 50613 of I&A reoprted to me that the cleanup was completed as of 20:15 on 5/7. No solid waste was removed. Liquids were removed by the Vactor truck. The structure was double-washed with SLIX . the Environmental tag was removed. The source of the spill was the Transformer. It was removed and a new unit was installed." |

Site Description:

Location: The site is located in a mixed-use area of the West Chelsea section of the Borough of Manhattan. The site is comprised of five tax lots (approx. 33,671 SF) identified on New York City tax maps as Block 694, Lots 2, 5, 60, 61 and 65. The site is bounded to the north by West 23rd Street, to the east by 10th Avenue, to the south by West 22nd Street, and to the west by 11th Avenue. Lots 5, 60, 61, and 65 were accepted into the Brownfield Cleanup Program on August 4, 2016 (BCA #C231101). The BCA was amended on October 27, 2017 to also include Lot 2. Site Features: Currently a multi-tenant high-rise residential apartment building with ground floor commercial space is under construction. Current Zoning and Land Use: The site is currently zoned C6-3A, C6-3 and M (Commercial, Mixed Buildings and Manufacturing), which allows for residential use. Lots 5, 60, 61, and 65 are currently operating as an active U-Haul facility. Lot 2 is currently vacant. Adjacent properties include mixed use commercial/residential to the north, industrial/manufacturing and commercial/residential to the east, office space and commercial/residential to the south and the West Side Highway to the west. Past Use of the Site: Historic site uses included: lumber yard, iron works, garage, automotive repair services, and storage and dispensing of petroleum products. It is unknown whether U-Haul continued to dispense gasoline after taking title to the property in the late 1970s/early 1980s. Currently, no vehicle repair or fueling takes place onsite. Prior use of the site for petroleum storage and fueling appear to have historically impacted both soil and groundwater. Three historic spills were noted to be associated with the site, all historic spills have been closed out. A recent spill was reported adjacent to the site, (northeast) in a sidewalk area, this spill is currently open. Site Geology and Hydrogeology: The site incorporates approximately 0.77 acres of fairly level land situated in the City of New York, New York County, New York. The site is mapped on the Jersey City, NY-NJ Quadrant 7.5 Minute Topographic Map, published by the United States Geological Survey (USGS). Review of the topographic map indicates that the site is located approximately 7 feet above sea level (NAVD 88). The site subsurface consists of an approximate 8-9 foot thick layer of historic fill material, followed by sand and gravel deposits. Depth to water is approximately 8-9 feet below ground (ftbg). Based on the proximity to the Hudson River, groundwater is expected to flow to the west. The site is located in FEMA flood zone AE, also known as the 100-year floodplain.

Env Problem: Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

MAP FINDINGS

**HUDSON MEWS PROPERTY - MARTY FINE PARCEL (Continued)**

**S110487608**

Site Description:

Location: The site is located at 403 West 37th Street and 501-505 9th Avenue which is between 37th and 38th Streets in the Borough of Manhattan. Site Features: Currently, the site is vacant. An entrance roadway to the Lincoln Tunnel beyond the retaining wall shared with the site, is to the west. Current Zoning: The site is zoned C1-7A, a commercial district that is predominantly residential in character. Typical retail uses include grocery stores, drug stores, restaurants and local clothing stores that cater to the daily needs of the immediate neighborhood. Past Use of the Site: Historically the site use included residential, commercial, industrial and manufacturing. As early as 1911, the site was occupied with an iron works (southwest portion of the Site), a carpenter s shop, five 5-story, two 4-story and two 3-story residential dwellings with basements and commercial space on the lower levels. By 1968, the Lincoln Tunnel approach retaining wall was installed along the western border of the site, and the site had been redeveloped with four 5-story buildings, one 4-story building and a 1- or 2-story building which were all demolished by 2005. Site Geology and Hydrogeology: Groundwater beneath the Site ranges from approximately 11 to 15 ft below the current site grade based on gauging of four site wells during the investigation. Based on the regional topography, the anticipated groundwater flow direction beneath the Site is believed to be in a westerly direction towards the Hudson River, however, the presence of a retaining wall for the Lincoln Tunnel approach along the western Site boundary appears to disrupt that flow pattern. Groundwater elevation data collected during the investigation indicated that the groundwater flow at the Site is generally in a northwesterly direction, likely following the slope of bedrock. The generalized stratigraphy underlying the site is composed of a surficial layer of historic fill overlying natural sand, gravel and silt deposits followed by bedrock. In the southern portion of the site, the fill layer was found directly overlying bedrock. Bedrock was generally highest in the southern portion of the site and slopes to the north. Bedrock was found between approximately 8 and 24 feet below ground surface.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil: Investigations performed in 2006 and 2012 showed site soils contain elevated semi-volatile organic compounds (SVOCs) and metals indicative of historic fill. The depth of the historic fill varies across the site from three to 15 feet deep. SVOCs exceeding restricted residential soil cleanup objectives (RRSCOs) include benzo-a-anthracene, RRSCO of 1 part per million (ppm)(7 out of 16 samples)) with a maximum detection of 26 ppm, benzo-a-pyrene, RRSCO of 1 ppm (7 out of 16 samples)with a maximum detection of 22 ppm, benzo-b-fluoranthene, RRSCO of 1 ppm (7 out of 16 samples)with a maximum detection of 28 ppm, and indeno(1,2,3-cd)pyrene, RRSCO of 0.5 ppm (7 out of 16 samples)with a maximum detection of 15 ppm. Metals exceeding RRSCOs include lead, (9 out of 16 samples)with a maximum detection 9,050 parts per million (ppm) vs. RRSCO of 400 ppm and barium, (2 out of 16 samples) with a maximum detection of 5310 ppm vs. RRSCO of 400 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Groundwater sampling in 2006 showed one volatile organic compounds (VOC) in an on-site well near the upgradient property line; chlorobenzene was detected at 29 parts per billion (ppb) vs a standard of 5 ppb. More recent sampling in

2011 in the same area showed no chlorobenzene. Several metals were noted in groundwater samples (e.g., iron, manganese, magnesium and sodium). These metals appear to be naturally occurring and typical of groundwater in this area. Soil vapor: During the Remedial Investigation, four soil gas points were installed. Several VOCs, including benzene were detected in soil vapor. The compounds were found at low levels and are not of concern

Health Problem: People may come into contact with site-related contaminants in the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, the potential for soil vapor intrusion to occur on-site needs to be evaluated in the event that the site becomes occupied. Sampling indicates soil vapor intrusion as a result of this site is not a concern for off-site properties.

smoking transformer. The source and cause of the spill are unknown. Possible transformer leak. A sewer connection, concrete sump and any substantial cracks could not be verified. No sump running. An over 50 tanker has been ordered for 23:00 hrs along with an I&A crew to evaluate the spill. UPDATE 07/22/03 23:30 Lab Sequence Number: 03-06065-001, <1ppm PCB 7/23/03 Partial cleanup was completed at 05:15 hrs. The tanker removed 35 gallons of oil and water mixed. The flush truck removed all solid debris. Spill tag # 36372 was left in place. The final cleanup will be completed when the unit is drained and removed. 8/30/03 cleanup was complete @ 09:00 hrs. All debris and liquid was removed by the Vactor Truck. The structure was double washed with slix and all PPE will be disposed of properly. Supervisor V. Mirance confirmed that the transformer was removed at the time of the final cleanup."

Remarks: "spill is contained within the vault #tm3063 and is sitting on 100 gallons of water. Test samples have been taken for PCB and ID. Con Ed Ref # 149429. A Transformer was involved unknown if the leak is from the transformer"

DEC Memo: "10/2/18 - Sekhon 10/1/18 (4:56 pm) - feeder M-54 is leaking between E 13 Street substation and W 49th Street substation. Leaking at a rate of 15g/h with a total loss of 85 gallons. A PFT van will run the feeder. EMIS # 269599. Next conference is at 8 pm. 10/1/18 - updates from 10/1/18 conference call @ 8pm Leak rate is app. 19g/h with an estimated total loss of 160 gallons of dielectric fluid. The PFT van received indications at the substation locations with no significant hits. Van will continue to run the feeder on the overnight. Email received from EH&S - Desk On 10/2/18 at 0405hours, a clamp was installed on the 5 pipe of feeder M54 in MH61721, located at West 23rd street and 10 ave, in Manhattan. Site was visited by DEC Piper and DEC Sekhon. Leak was clamped and app 3800 gallons of oil+water mix pumped out from the concrete man hole. End point samples were taken and send to lab for analysis. 10/31/18 - Sekhon MH 61721 was double power washed with simple green by the environmental vender PSC industrial. 1,450 gallons of Non-Hazardous Oily Water Waste was disposed of by the vendor to Clean Earth of NJ under Non-Hazardous Waste Manifest 17057482. The permanent repairs are as follows: A clamp was installed over the leaking feeder. A permanent repair barrel was welded over the clamp. All valves and flanges were checked and tightened- no further leaking equipment was found in the structure. The leak was contained 100% to the structure. emis DECDOCs. Spill discussed with DEC Piper and closed. "

Remarks: "Underground leak of dielectric fluid. Currently popping manhole covers in search of leak. Clean up will commence once identified."

DEC Memo: "e2mis 148633 On 6/8 @ 03:20 HRS, N Russell # 16232 of Transmission Ops reported to me that while working on inspections on Feeder M54/55 he discovered approx 10 gal & 1000 gal of water in Transmission M-61721. No fire/smoke was involved, no sewer/waterway was involved, no injuries involved, weather did not contribute and NO private property was involved. The source and the cause are unknown at this time. There is no movement on the standing water, no substantial cracks observed. Finder says there probably is a sump, but could not verify at this time. Two samples will be taken for PCB and ID. Finder informed his supervisor and he will call Chem Lab to pick up sample and will supply Chain of Custody form. Environmental tag # 4967 was hung. Notified CIG, spoke to Didonato # 01669 # 03:30. Spoke to Daughtery of ERT and discussed the incident and he said he would probably visit the incident site. 6/8 @ 04:40 Spoke with M Daughtrey of ERT and he said he spoke with the Transmission Ops supervisor and Chem Lab will be out there tonight to take the samples and at approx 07:00 HRs on 6/8 CleanHarbors will be out there for the Clean-up. Incident No. 148633 Completing Checklist: F. ACOSTA, SUPERVISOR, 15856 Sample ID No.: 03-04775-001 PCB: YES <1 Amount discovered: 10

Contact Name: SEAN MCKEEVER  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY Con Ed e2mis #137262: 75gal dielectric fluid in vault 0264 at 331 W 33 St. Cause is damaged equipment. Transformer leaning, guage reads low. @14:40 hrs call transportation for a tanker over for clean up. Jerry Gnall, I&A Supervisor, reported at 18:30 hrs. on 5/24/01 that NYCDEP rep. Ellie St. Jean arrived on location at 16:30 hrs. and left at 17:05 hrs. Mike Kessler, ERT arrived at 17:20 hrs. and left at 17:25 hrs.. Feeder was taken out at 16:37 hrs. The over 50 Tanker arrived on location at 18:15. Partial cleanup in progress. Final cleanup is pending transformer removal. Mr. Gnall also reported that he discovered approx. 1 gallon of oil in the sump pit of the adjacent vault V5995. There was an Oil Minder in this sump and it worked. The Oil Minder shut down the pump when it sensed oil in the pit. They are presently checking the trap. Spill tag #18387 was installed in this vault V5995. According to Mr. Gnall previous PCB historical data for vault V0264 is 15 ppm. The cross street for this address (331 W 33 St.) is between 8th & 9th Ave. Update: At 22:15 Operatiing supv. reports that clean up is partially done at this time. He reports that tanker has taken on 60 gal. from the floor & 227 gal from the unit. total of 287 gal. completion of clean up is pending removal of transformer. And this he adds will be on 11-7 shift. Update: 22:39 hrs 05/24/01 Lab seq#01-05994-001, 17ppm PCB UPDATE: 8/29/01 Ed Higgins #18537, Supervisor Cable Dept., reported at 08:35 hrs. that the cleanup of vault V0264 has been completed. The transformer was removed and a flush truck cleanup was performed. The walls and floor were double washed with Slix and Bio-degreaser. Approx. two yards of soild debris were generated and picked up by the Flush truck. Spill tag #18386 was removed. Cleanup crew consisted of G. Rosario #11464 and J. Rotondi #11602. The cleanup was completed at 07:00 hrs. Update 12-05-02 @ 20:19 Lab Sequence Number: 02-11333-001, Analysis indicates the presence of a substance similar to a dielectric fluid. Update 12-05-02 @ 22:10 Lab Sequence Number: 02-11332-001, 39ppm PCB" Remarks: "spill in to vault due to transformer failure...sample taken clean up pending...ref # 137262."

Contact Name:  
DEC Memo:

ERIC PHILIP  
"1/31/2018 - Feng - Duty Desk. 2:30pm. Spoke to HAZMAT Eric Philip (347-203-6886). A north bound truck try to avoid another car and tripped to the side. The truck ruptured its fuel tank. About 60 gallons of diesel on the roadway, 5 gallons to the sewage. FDNY emptied out the tank and put the remaining oil into a drum and doing clean up. NYCDEP was notified (reference # 186-502-389). There is small amount of engine/motor oil contaminated the soil in the grassy area. FDNY is still on scene and will be leaving in 30 minutes. The truck is still there. Nobody hurts. Discussed with Andre Obligado and Ryan Piper to see if site inspection necessary. The situation is under control and FDNY is doing the cleanup, no need for DEC response. Need to make sure they sweep up the sands with a sweeper. 2:40pm. Spill 17-09936 at Roadway, 11 Ave and West 20th Street, Manhattan, was reported in. Spill 17-09936 was later determined to be the same one as 17-09935. 2:50pm. Spoke to Jonathan Homard of ERTS (440-349-2700 x513, JHomard@ERTSonline.com, ERTS@ERTSonline.com). One of their driver involved in a traffic accident. He hit the pole, fence and ruptured the fuel tank. The accident occurred about 12:30pm. It is 38 gallons of oil. The driver noticed that there was 1 quarter of the tank left. The oil was on the asphalt. He did not see any drain/soil impacts. Emergency responders, i.e. FDNY and NYPD were on scene. No fire. Mr. Homard has contracted First Call Environment to go and respond. The ETA is 2 hours or 4:40pm to be there. 3:10pm. Spoke to HAZMAT Eric Philip. FDNY has left the scene 5 minute after we talked earlier. The truck and the drum that holds the remaining oil were left in place, and expecting the towing company to pick up. the diesel on the roadway was cleaned up by Sanitation. They used sweeper to sweep the sands. The south bound traffic are now running. The truck company is Barlow Truck Line Company, located in Missouri. Email to Jonathan Homard Hi Mr. Homard, Thank you for providing information regarding the above referenced spill. Below please find my contact information. As discussed, please update me with the status of the cleanup effort when your contractor arrives to the scene. Could you provide the truck company information? I just spoke to the FDNY for spill 17-09935 at 11th Ave and West 22nd Street, the one that I mentioned probably the same spill, is Barlow Truck Line Company. Is the same as yours? Email reply from J. Homard The truck company involved with my report is the Barlow Truck Line company. another email from J. Homard First call environmental has arrived to the scene and confirmed that the address of the release is at W 22nd and 11th ave. Email from DEC J. Feng to J. Homard Mr. Hamard, With that information, we can confirm that s the one same spill incident. As I talked to FDNY HAZMAT around 3:10pm just right after we talked, FDNY left the scene already. The truck and the drum with the remaining oil were still in place. The diesel on the roadway has been cleaned up by Sanitation. But the soil contaminated with the engine/motor oil in the grass area has NOT been taken care of yet. Please have your contractor to check everything and make sure everything has been cleaned up. I am leaving for the day. In case you need assistance, please call our off hour duty officer Tim DeMeo at 347-739-0392. He is copied in this email too. 2/1/2018 - Feng - email from J. Homard with pictures of the site attached. The pictures show that the curb side of the roadway with damaged light pole, damaged fence, oil on the concrete curb and soil of the grassy area. The roadway has been cleaned up. The area was then covered with plastic sheeting. The wrecker service that took the tractor away was

Universal trucking. Attached are some of the pictures that First call environmental took while they were there. Nat Simonetti is the person taking care of the remediation for this project; his email is nsimonetti@ertsonline.com. Phone # 4407084511 ext 323 Please feel free to call, I will try to assist you the best I can. 2/6/2018 - Feng - Received a call from Ray Bell of First Call Environmental. First Call Environmental is the contractor who is doing the cleanup for ERTS (ERTS is the broker/environmental consultant for Barlow Truck Line) on behalf of Barlow Truck Line. He said that due to the location of the spill, it may not be possible to close the lane and bring equipment in to do excavation. He is proposing to hand clean the area in between the guard rail and the concrete curb, hand excavate the contaminated soil in the grassy area and then apply remedial solution on the residual soil. Depending on how hard the soil is, hand excavation might go down to 3-4 inches. I responded that if they can't bring equipment in, then hand cleaning, hand excavation might be the best option. Requested him to send me an email with finalized work plan. email from Ray Bell We would be using Biosolve. I estimate we will apply 5 gallons each time. Since the area is pretty well seperated from areas where there may be foot traffic I plan to leave it open and secure the area with snow fencing or something similar. Discussed with Andre Obligado regarding the concern of using BioSolve. Instead of using BioSolve, suggested to do the excavation down to the extent of feasible, and collect endpoint samples, and backfill with clean soil. 2/7/2018 - Spoke to Ray Bell. He said the spill was 30-40 gallons, some on roadway, some on the grassy area. It might be that more of the 40 gallons on the grassy area. But He saw that absorbent pads were used to catch the leak, so the spill shall still be small amount. Groundwater investigation is not necessary as he believed that the contamination would not reach to groundwater. I explained the concern regarding the BioSolve might wash down the contamination to groundwater and hydraulic control issue. I suggested that excavation to the extent feasible, then collect endpoint samples, then determine the next step. "

Remarks:

"loss to roadway and storm. FD on scene, Dept of Sanitation en rte"

| Name:<br>Address:<br>City,State,Zip:<br>Program:<br>Site Code:<br>Acres:<br>HW Code:<br>SWIS:<br>Town:<br>Record Added Date:<br>Record Updated Date:<br>Update By:<br>Site Description: | FORMER WEST 41ST STREET CAR DEALERSHIP SITE<br>536 WEST 41ST STREET<br>NEW YORK, NY<br>BCP<br>460494<br>2.109<br>C231077<br>3101<br>New York City<br>01/31/2012<br>01/26/2016<br>SXDEWES<br>Site Location: The site is located at 536 West 41st Street in New York City, New York County and consists of one tax parcel. Historically this was a number of lots which were recently consolidated into one lot which is 2.109 acres in size. The site is located in the Hell's Kitchen neighborhood. Site Features: The site is currently vacant and excavated down to bedrock approximately 5 to 40 feet below local ground surface. A concrete slab forming a roof over the Amtrak tunnels cut into bedrock in the Amtrak right-of-way running beneath the site is the only remaining structure on the site. The Amtrak tunnels and the No.7 train extension tunnels are located approximately 25 to 30 feet beneath the ground surface. It is bordered by a utility building to the north, a church and abandoned gas station to the east, bus parking to the south, and a NYC Transit Authority bus depot to the west. Current Zoning and Land Use: The site is currently vacant. The site is zoned C6-4 which is a mixed commercial/residential zone. Mixed use residential/commercial sites are located to the west of the site. Commercial buildings are located to the north while to the east are two churches and an abandoned commercial site. North east of the site are condominiums and a police station. Past Use of the Site: The site uses have included a new car dealership, a bottling company and warehouse, an auto repair station, and a filling station in the past. Site Geology and Hydrogeology: The local surface topography slopes down to the east and is approximately 20 feet above mean sea level. Due to the topography, it is expected that groundwater flows from the southwest towards the Hudson River. However, the groundwater flow can be affected by factors such as bedrock, fill and other factors. Depth to groundwater ranges from 13 to 19 feet below ground surface prior to the excavation of the site. Post-excavation the site has not required dewatering due to groundwater infiltration. The only dewatering required has been after rain events. Depth to bedrock ranges from 5 feet on the south side of the site to 40 feet on the north side. Bedrock consists of schist with granite intrusions.<br><br>Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene and lead in soil. Remedial actions have achieved unrestricted use soil cleanup objectives. Nature and Extent of Contamination - There have been three reported spills on the Site since 1996, including diesel and hydraulic oil. Soil - All soil has now been removed from the site. During the BCP investigation soil sampling results indicated seven |

semi-volatile organic compounds (SVOCs) exceeded the NYSDEC unrestricted soil cleanup objectives (SCOs). Most notable of the SVOCs was benzo(a) pyrene, which slightly exceeded the commercial SCO of 1 part per million (ppm) at two locations with a maximum concentration of 1.33 ppm. Metals exceeding unrestricted SCOs were detected in 10 of 11 locations sampled during the RI. The primary metal contaminant was lead, found above unrestricted SCOs in 8 of the original 11 samples and all 14 supplemental lead samples. Maximum lead concentration was 6590 ppm, which exceeded both the unrestricted SCO of 63 ppm as well as the commercial SCO of 1000 ppm. PCBs also exceed the unrestricted SCO of 0.1 ppm at two locations, with a maximum concentration of 0.348 ppm. The pesticide 4,4'-DDT exceeded the unrestricted SCO of 0.0033 ppm at 6 locations with a maximum concentration of 0.0826 ppm. 4,4'-DDD and 4,4' DDE also exceeded unrestricted SCOs in one location. No VOCs exceeded the unrestricted SCOs, although exceedances are suspected due to the presence of tetrachloroethene in the soil vapor. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Groundwater slightly exceeded groundwater standards for one SVOC (2,4-dichlorophenol at a concentration of 8 parts per billion (ppb) compared to the standard of 5 ppb) and several common metals. PCBs, pesticides, and VOCs did not exceed groundwater standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Tetrachloroethene (PCE) was detected at a maximum concentration of 120 ug/m3 in one location near the site boundary. Data does not indicate any off-site soil vapor impacts related to this site.

Health Problem:

The site is currently vacant and entirely covered with building foundations. Therefore, contact with contaminated soil or groundwater is not expected. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compound in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion as a result of this site is not a concern for off-site buildings.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL e2mis no. 152285: Cable crew chief reports that while on location a cable pulling truck spilled 15 gallons of hydraulic fluid. The cause is unknown at this time transportation has been called. The fluid landed onto the asphalt. the cleanup is in progress using diapers, absorbant granuales, & pigs. He reports that the cleanup should take about an hour. R. Legrand called back to report that the cleanup was completed at this time 05:49. As stated before they used absorbant, pads, pigs. The debris will be brought into W. 28 st yard. After further investigating they found that a hose blew, since all fluid is lost a bag was put over hose & taped & the truck is being brought into the yard - no more fluid is leaking out."

Remarks: "Working on location and realized that 15 gal of hydraulic fluid had leaked from a cable pulling truck. It is unknown where on the truck the leak is coming from. Cleanup in progress. Con Ed #152285."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL CON ED E2 MIS REPORT 4/13/00 While excavation ro a new transformer...discovered a black unknown solid at approx. 8-9' depth...Chem -Lab to take PCB & ID samples, #9 is enroute to deliver oil and sign...There is no lease to sewer, no fire or smoke. There is 1 gallon of water in excavation,possibly water table... This is a third party spill, cleanup pending lab results. The amount of solid is 3 cubic yds. 6/3/00 As per Mr. Anello form Energy Services and Joe Fleigner of M&C EHS, this is an old Gas Manufacturing Plant Site. The soil was encapsulated by injecting slurry and then vault was field constructed. All excavated soil was put in lined roll-off's and shipped by Waste Management at Waste Management Site in PA. Water was stored in frack tanks and was disposed of by Allstate Powervac. This incident is closed. ~~~~~ DEC INSPECTOR NOTES CON ED installing trnsformer vault for new service at construction site(Silvestein property- formerly MGP site). Found black substance, tested for oil, ID, TPH, BTEX, PCB's. Told CON ED to backfill, characterize waste for disposal. Start new excavation elsewhere. Consultant for property owner did on site investigation. Told CON ED they did not find anything. Got consultant's phone # will call for further information."

Remarks: "CALLER HAS CREW ON SITE EXCAVATING AND CAME ACROSS A 3 CUBIC YARDS OF A BLACK SOLID MATERIAL - NO CLEAN UP - CON ED 130874"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL APPENDIX B SITE NO. 19 07/30/12 This spill is part of Appendix B Site 19. Feeder is located along east side walk of 12th Avenue; spill location reportedly between W. 41st and W. 42nd Streets. The work plan was reviewed and a comment letter was sent dated 07/27/12. Con Edison was requested to verify whether the spill location is within the site limits of Site V00531 - the W. 42nd Street Gas Works. (JOC) 7/21/15 - reviewed letter from Langan dated 8/5/14 in response to the 7/27/12 letter referenced above. Sent

comment letter in response dated today. The spill was reported to the Department as required by the terms of an Order on Consent for reporting spills which were previously unreported. The information reported included the release amount of 10,000 gallons of dielectric fluid, with the location as 12th Avenue between W. 40th and W. 42nd Streets in Manhattan. Additional records from Con Edison indicate that the leak was from the 5 inch oil line associated with feeder M54, that cleanup activities including removal of oil soaked sand by a contractor was completed and the feeder was returned to service on July 19, 1991. The exact location is not provided in the records. The records provide an estimate of 8,600 gallons of dielectric fluid. No information has been provided to explain the discrepancy between the reported locations and volumes. Based on various agreements between Con Edison and the Department regarding the investigation scope for the Appendix B spills, most of the Department's initial comments have been resolved. Specifically for this spill, the Department's comment is that each of the proposed borings on the downgradient side of the feeder should be completed as a monitoring well. For the purposes of keeping track of electronic documents (e.g., .pdf files) for this spill case, refer to records for spill 9113335.(JOC) 3/21/16 - received response from Langan for Con Edison on 2/26/15 which included proposed revised sampling locations; sent email today with items to discuss and had telecom among Elana Seelman (Langan), Angel Chang and Matt Madsen (Con Edison). Agree that revised scope with include two borings on west side of feeder to be installed initially as groundwater monitoring wells (-1, and -3), and if soil results show impacts in excess of 13,000 mg/kg at other locations then additional wells will be required. (JOC) 10/26/2016 - V. Brevdo Due to Project Manager Joe O'Connell's promotion to the DMM, and per discussions between Chiefs of Spill Prevention and Response and Remediation Section B, this spill case is re-assigned to Remediation Section B. VB 8/3/2017 - V. Brevdo Con Edison Appendix B Site 19, 12th Ave near 42nd Street, Manhattan (Spills No. 9113332 & 1011599) Con Edison is in the process of addressing two overlapping historic leaks of dielectric fluid from electric feeders M54 and M55. The first spill (# 9113332) occurred in 1991 and leaked 8,600 gallons of dielectric fluid. This spill is identified in and is being managed by Con Edison s EH&S Remediation group under Appendix B of a Consent Order that address legacy spills. The second spill (#1011599) occurred in 2010 and entailed the release of an estimated 9,367 gallons. The latter, more recent spill, is being managed by Con Edison s Transmission Operations Department (TO). None of the dielectric fluids released contained PCBs. The feeders are oriented in a north-south alignment beneath the eastern-most lane of the north-bound West Side Highway. As of August 2017, Con Edison s TO Department was preparing to perform an excavation to remove soil containing residual dielectric fluid related to the 2010 spill from a small area as shown in the map provided by Con Edison. In a tandem manner, Con Edison EH&S Remediation group was planning to conduct a soil sampling program along the section of feeder between W. 40th and W. 42nd Streets to determine if residual dielectric fluid from the 1991 spill is present in the subsurface soil. The investigation initially planned for advancement of several soil borings and collection of soil samples from the west and east sides of the feeders. In light of the foregoing and the permitting issues for intrusive work in West Side Highway, Con Edison s Remediation group proposed to the Department on August 3, 2017 to modify the soil

sampling program as currently outlined in the SIWP. Specifically, Con Edison proposed to: 1) implement soil borings currently located within and or immediately adjacent to the footprint of the TO excavation, and 2) to re-align and / or eliminate several borings in the remaining investigation area. The Department reviewed the Con Edison s SIWP modification proposal and determined that the modified scope of work will still adequately cover the area of concern and shall provide sufficient investigative data to determine the scope of remediation. The Department advised Con Edison on August 3, 2017 that we concur with the SIWP modification proposal. VB 10/5/2017 - V. Brevdo Con Edison submitted the revised site investigation plan. Con Edison revised original work plan on Site 19-2 due to the DOT restrictions and extensive site restoration. Department approved SIWP revisions on October 5, 2017. VB 09/18/2018 - V. Brevdo Con Edison Appendix B Site 19-2, 12th Ave near 42nd Street, Manhattan (Spill No. 9113332) On September 14, 2018, Con Edison submitted Proposed Amendment to Site Investigation Work Plan for Site 19-2, which is located on 12th Avenue (West Side Highway-Route 9A, between West 41st Street and West 42nd Street. The spill at Site 19-2 occurred and was reported on June 20, 1991 and entailed release of 8,600 gallons of dielectric fluid from an oil return line for Manhattan 345 KV transmission feeder M-54. The proposed investigation will consist of advancement of five soil borings within the sidewalk adjoining the east side of 12th Avenue. The proposed borings will be aligned with the boring locations previously proposed to be in the 12th Avenue roadway and parallel to Feeder M54 to a depth of 20 feet bgs. Soil samples will be collected from the intervals representing likely pathways for contamination (i.e. utility bedding and other coarse-grained soils), and the most impacted interval detected. If no evidence of impact is observed, a sample will be collected immediately above the water table or from the bottom of the boring if no water is present. The Department reviewed and approved Amendment to Site Investigation Work Plan on September 18, 2018. VB "

Remarks: "Reported by Con Ed as required under Consent Order."

DEC Memo: "09/16/15: J.Kann - spoke with Daniel Tarrus of Langan Engineering. He informed me that the site is under a Brownfield cleanup, C231077 and is being managed by Robert Filkins (518)402-9768. Daniel said that he informed Robert of what occurred. The site is being excavated as a part of development. During excavation at 275 gallon tank was originally not noticed and was ruptured. Approx. 7-10 gallons of oil spilled onto soil. The tank and affected soils were staged on plastic for removal. A Langan field representative was onsite to screen and instruct the contractor to separate stained/impacted soils. I contacted Robert and he requested the spill be placed in his name since he is handling the site."  
Remarks: "While uncovering a buried tank, NY Concrete ruptured the tank. Clean up is complete."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**S104507609**

THE AFFECTED BLUESTONE WAS REMOVED. A 4 FOOT X 1 FOOT, 6 DEEP WAS REMOVED AND PLACED IN BARRELS FOR DISPOSAL. THE CEMENT PAD WAS SCRUBBED WITH SIMPLE GREEN. THE SIDE OF THE TRANSFORMER WAS ALSO CLEANED. AN OUTAGE IS REQUIRED TO CLEAN THE TOP OF THE TRANSFORMER. AT THAT TIME, THE TRANSFORMER GROUP WILL DETERMINE IF ANY REPAIRS ARE REQUIRED. IT APPEARS THAT THE SPILL OCCURRED DUE TO THE PRESSURE RELIEF DEVICE OPERATING WHEN THE OIL PRESSURE INCREASED DUE TO EXCESSIVE HEAT. SAMPLES WERE TAKEN. LAB SEQUENCE NUMBER 99-07045. RESULTS TO FOLLOW. -001 SAMPLE TYPE: OIL None <1.00 PPM EQUIPMENT : TR #9 MAIN BODY NITRO GAS QAQC ID : 06-199907061720 Station Supervisor G. Toto performed an inspection on 29-NOV-2000 and returned the following with regards to this transformer: 119254 TR6 No Leak Observed - TR6 was taken out last year to repair all Leaks on it. 124769 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. 126171 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. The incident status will be changed to closed. 02-15-02 This incident has been closed and sent to NYS DEC for final approval. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident."

Remarks: "TRANSFORMER FAILED CAUSING SPILL/HAS BEEN CONTAINED/CLEAN UP WILL BEGIN ASAP"

DEC Memo: "10.11.05 SR//Sharif spoke with Bill Simmons, they are removing five 4000-gal tanks and found contamination. Apparently, there are no holes in tank. I suggested to dig out as much as possible and take end point sample, send result to DEC. If problem is major i.e., ground water affected, needs long term remediation, then it goes to Koon Tang. 01/26/05 Sharif//Rec'd UST cosure report prepared by ECS. Five 4000 gallon gasoline single-wall USTs and associated piping were removed. Ground water was encountered during excavation at 6 to 7 feet below grade. Petroleum-impacted soils were encountered within UST grave and beneath former dispenser islands. Dewatering activities were performed in UST grave area to remove impacted soil to 13 ft below ground. Twenty-three post excavation soil samples out of 44 had VOC concentrations above TAGM. Level of remaining soil contamination below groundwater level warrants delineation of groundwater contamination and may require additional long-term remedial efforts. Case has been transferred to Koon Tang for reassignment. 02/03/06: Spill transferred from S. Rahman to J. Kolleeny. Spoke with Bill Simmons of ECS; site had wells put in years ago after soil contam was found, but was closed by J. Rommel of DEC after BTEX levels in GW showed decreasing trend and sensitive receptor survey showed no SR's (see spill 9912838). Cumberland Farms sold site, but retain responsibility for env'tal investigation and cleanup. Current owner plans to develop site with 15-story residential building, involving further excavation of soil and possibly dewatering. Owner's consultant is currently doing Phase II investigation and preparing a report. ECS will forward this report, when available, to DEC with their recommendations for further action. - J. Kolleeny 04/06/06: Spoke with Bill Simmons of ECS, he sent an email on 3/30/06 with outline of draft RAP and attached data tables and site plans from upcoming Phase II report being prepared by Impact Env'tal. ECS's draft remedial plan involves soil excavation during site re-development activities, plus mitigation measures like sealing basement of planned residential building with moisture barrier (basement likely to extend into water table, 6-8 feet bg). ECS is pushing RP to do more, rather than less, soil excavation to remove as much potential source material as possible and help GW quality improve. I agreed with this, and suggested applying ORC to open excavation. I also stated that plume is not delineated and add'l wells are needed, plus after soil excavation there will likely be need for follow-up GW monitoring. GW data from Impact, collected in Jan. '06, showed worst GW along southeastern and northwestern edges of site. I also suggested that another round of GW sampling be conducted soon, approx. 3 mos. (one quarter) after last round. Bill Simmons agreed with these suggestions/statements and indicated that RAP would be submitted in several weeks. - J. Kolleeny 07/26/06: Reviewed Remedial Action Plan (received April 24, 2006), plus diagrams I requested from Bill Simmons of ECS, sent by email on 7/26/06, showing site with historic soil sampling locations, excavated areas, and proposed post-remedial monitoring wells (in eDocs Image Folder). RAP involves excavation of petroleum-contaminated soil encountered during site re-development, de-watering during construction activities, post-excavation soil sampling, and application of ORC to open excavation. In addition, ECS proposes quarterly GW monitoring of existing wells prior to

S107415886

re-development, and installation of 5 new wells (existing wells will be destroyed during construction) for post-remediation monitoring. I sent approval letter (by email and hard copy to Angela Pimental of CFI and Bill Simmons) requesting two more post-remediation monitoring wells, stating that number and locations of post-remediation wells may need to be adjusted based on results of post-ex soil samples, and asking that soil screening and sampling be performed during installation of post-remediation wells. - J. Kolleeny 06/14/07: Spoke with Bill Simmons of ECS, mentioned that approved RAP included implementing quarterly GW monitoring prior to site remediation by excavation, asked if any quarterly monitoring has been done. He indicated that current owner/developer has been unwilling to undertake sampling, and it's unclear which consultant (ECS, Langan or other), should be doing it (site remediation apparently not being done by CFI). I said DEC was being cooperative by allowing remediation to be linked with site re-development, but that it's not acceptable for all work on spill case to be stalled. Bill said he is attending big meeting regarding project today and will bring up this issue, also said excavation is projected to start in late July; I said in that case it's even more important that baseline GW sampling be performed. He agreed and said he would mention this at meeting and let me know result. I said if RP is not cooperative, he should give me contact info and I will pursue them directly. - J. Kolleeny 06/19/07: Sent email to Bill Simmons of ECS to follow up on 6/14/07 conversation: We spoke last week about site, where quarterly GW monitoring is to be done while awaiting implementation of approved RAP. You mentioned you were going to meet with parties involved and would bring this up. Can you let me know outcome of meeting? Has anyone agreed to do GW monitoring? Please let me know. Got email from Bill saying: Owner & developers allowed us access, went to Site on June 15, found 2 wells in vicinity of former USTs on northern and NE portions of Site. We sampled them, should have results next week. I reviewed DEC notes and RAP, sent back reply: Thanks for sampling wells. However, I looked back over my notes and RAP and have some concerns. Worst contamination has historically been in well MW-4, which doesn't exist anymore. When sampled by Impact Env'tal in Jan. '06, well had > 35,000 ppb total VOCs! Other well which had significant contam was MW-5, east of former tanks/dispensers, which also doesn't exist anymore. GW flow direction at site has varied, but has at times been to south and/or east. This warrants further delin to evaluate potential off-site migration. When I reviewed/approved RAP in July '06, I thought remedial action would be implemented in near future, and that post-remediated monitoring wells would be installed to evaluate residual GW contam. However, given that nothing has been done for almost a year, I don't think sampling of 2 existing wells on north and NE portions of site is sufficient to determine baseline, pre-remediation GW conditions. I think it's important to install minimum of 2 new wells, either along SE and eastern boundaries of site (in sidewalk along 10th Ave.), or across street to south and SE. Got reply from Bill: Site is currently under development. Plans, to begin next week and continue thru Oct., include install'n of sheet piling, install'n of dewatering treatment system that will operate for 2-3 months, potentially removing millions of gals of water, excavation of petroleum-impacted soil, collection of post-ex soil samples, and mixing of ORC in excavation. RAP details what is to occur at site after development and includes install'n of post-remediated monitoring wells to evaluate potential off-site plume and effects RAP and

S107415886

construction activities have on GW. We were told last year that plans were moving quickly and also thought project would have started several months ago if not late last year. DEP is also involved with reviewing/approving all documents due to Site having E-Designation. Further, access to sidewalks around site will be blocked for construction. Due to logistics involved with installing wells at this time in project (i.e.: lack of access, construction traffic) and certain destruction of any wells installed due to construction and RAP activities that will be performed (i.e.: removal of millions of gals of water, soil excavation and ORC mixing) that will have significant positive effect on subsurface conditions at site, we do not believe install'n of monitoring wells at this time is feasible or warranted. Add'l'y, historical GW data (Nov.'00 thru May'04) & data from Jan.'06 sampling event provide adequate baseline info for evaluating pre- & post-remedial impacts. I've attached results of 2 GW samples collected in March '07 for waste characteriz'n data for dewatering and DEP discharge permit criteria by Langan Engrg & Env'tal Svcs on behalf of developer plus Site Plan showing location of samples [in eDocs]. We look forward to discussing further, hear your comments. I reviewed GW waste charact. sample data, wrote back: Thanks for waste charact. GW data. Your arguments are reasonable & persuasive; I withdraw request for install'n of add'l delin wells at this time. As you stated, post-remed wells will have to be installed to evaluate on- & off-site subsurface conditions after remediation and development at site. Please send lab results of 2 wells ECS recently sampled when available, and let me know when soil excavation and de-watering activities have been scheduled; I'd like to come to site to observe. - J. Kolleeny 06/22/07: Received/reviewed copy of Langan Engrg Supplemental Site Invest Rpt dated 6/19/07, and on 6/21/07 sent email to Bill Simmons of ECS: Yesterday I received copy of a Supplemental Site Invest Rpt dated 6/19/07, prepared by Langan Engrg & Env't'l Svcs, addressed to Gary Heath of NYCDEP. This rpt has caused me some concern. Rpt summarizes excavation of 10 test pits across site in March '07, with collection of soil samples. Rpt concludes that there is widespread soil contam at site, but mainly below 8 feet bgs. GW was encountered in test pits, but no free product or sheen was observed. Based on these observations, Langan suggests that removal of contam soil from much of site, in accordance with approved remedial plan, will require unnecessary removal of upper 8 feet of relatively uncontaminated fill material, and that since planned site building will only have small cellar and will have on-grade slab over rest of site, with vapor barrier & sub-slab depressuriz'n system, excavation of contam soil should only be performed in proposed cellar area and petroleum-impacted soil identified elsewhere on site should be left in place. Langan's recommendation seems to be based on premise that only relevant concern posed by petroleum contam is its potential impact on building occupants via vapor intrusion. In fact, there is significant GW contaminant plume beneath site (which may extend off-site) which must be addressed under NYS Env't'l Conserv Law. Based on most recent GW data available to me (Jan. '06), very high levels of GW contam were found outside of planned cellar area (former well MW-4). GW contam at site must be addressed to resolve open spill 0508226. Best way to accomplish this, in light of fact that site is undergoing redevelopment, is to excavate as much contam soil as possible, since soil contam acts as source material for GW contam. This was recognized by ECS in April '06 Remedial Action Plan, which stated ECS

EXXON (Continued)

S107415886

proposes performance of exploratory test pits...Any petroleum-impacted soil that is discovered will be excavated and disposed of off-site. This remedial action will remove source areas and ultimately improve GW quality. RAP further proposed application of ORC to open excavation(s), to enhance biodegradation processes which reduce dissolved petroleum contam. DEC has approved April '06 RAP; any change in remedial plan must be submitted to NYSDEC in writing and approved by DEC. This may require collection and submission of up-to-date GW quality data to support revised remedial proposal. Again, I express my concern over Langan's suggestion that soil known to be petroleum contaminated be left in place at site, which contradicts RAP. Please let me know your thoughts on this. - JK 06/27/07: Received call from Bill Simmons of ECS, discussing recent Langan Engrng rpt and my email of 6/22/07. I stated that either impacted soil in southern areas of site (i.e., outside of planned cellar area) must be excavated, or alternative remedial plan must be proposed, which may require add'l supporting data. Bill sent email summarizing conversation, with attached results for GW samples collected 6/15/07 from two wells in north, NE portions of site. Results (in eDocs) showed no petroleum-related compounds detected. Bill's email stated: Please find attached analytical results of GW sampling of wells MW-7 and MW-8 on 6/15/07. Data indicate no VOCs besides chloroform. As follow-up to our phone conversation this a.m. regarding your email: I will discuss with all parties involved need for soil excavation to remove source of GW contam and further migration off site, specifically in vicinity of former well MW-4 located on SE part of site, of which most recent data collected in Jan. '06 by Impact Emt'l indicated total VOCs at 36,901 ppb. We specifically discussed Grids 7, 13, 14, 15, 19 & 20 (per Langan Engrg Site Plan in Suppl'l Site Invest Rpt dated 6/19/07) with depths from 5 fbg to minimally 10 fbg. Note that excavation of southern parts of Grids 7, 13 & 19 will be limited due to presence of abutting building and its structural integrity. If soil excavation is not performed, Revised RAP will be required with new GW data from SE, southern and eastern parts of site with proposal of alternative remedial methods to treat identified soil impact. I will keep you updated on progress. - J. Kolleeny 06/29/07: Received email from Bill Simmons of ECS: We are all in process of determining best strategy for excavation of petroleum-impacted soils in grids discussed along southern and eastern portions of Site. Developer has involved a structural engineering firm to provide geotechnical input specifically about abutting building to south and structural integrity concerns of getting too close to building without likely collapse. We request that you visit property to meet with certain people so an on-site discussion and meeting can better relate all site concerns. I have cc'd Joel Landes of Langan Engineering as he will be heading this issue. I was unable to attend site meeting on July 11, 2007. - J. Kolleeny 07/12/07: Received email from Bill Simmons: I want to provide you with update and status on project site meeting we had on Wednesday July 11. We determined that excavation of petroleum-impacted soils up to 10-12 feet in Grids along southern portions of Site(7,13 and 19) can be completed safely by coming no closer than 10 feet to building benching out 5 feet and using a 1 to 1 slope. As for eastern sidewalk portion (Grids 20, 21 and 22), we can likely get closer to sidewalk property border using a 1 to 1 slope. We will also excavate soils where we see impact in Grids 14 and 15 in addition to already proposed cellar area. ORC will be

EXXON (Continued)

S107415886

placed in all completed excavation areas. We anticipate this work will begin week of July 23. - JK 08/02/07: On 7/31/07, received letter from Bill Simmons of ECS dated 7/30/07 (in eDocs), informing DEC of progress at site and addressing my recent concerns. Letter restates comments in his 7/12/07 email regarding depth of excav in various grids with sloping reqmnts to protect struct integrity of abutting bldg, says excavation is expected to begin week of 8/6/07. - JK 01/02/08: Sent email to Bill Simmons of ECS requesting remediation update: I was going through my spills and noticed I haven't had an update on this case since August. Can you send an update on progress of soil excavation? Has de-watering been performed, or application of ORC to excavation? Has end-point soil sampling been performed, and if so, are any lab results available? I think it would be advisable to have DEC review end-point sampling data prior to backfilling excavation. Also, has any additional GW sampling been done? I remind you that RAP I approved for Cumberland Farms - who are, to my knowledge, Responsible Party for this spill - included quarterly GW monitoring prior to remediation. If CFI no longer considers themselves responsible for addressing this spill (which would be news to me), please let me know right away. I re-read my notes on this site, including comments in an email from you which gave impression that there may be more than one RAP for site. In other words, I sense that some parties involved (i.e., Langan) are operating under RAP that was not submitted to, reviewed and approved by DEC. If property owner and/or responsible party wish to achieve closure of this spill, we all need to be on same page. Got email reply from Bill: Project is progressing. We are all operating under same RAP so I do not know what you are referring to. Impact Environmental operates dewatering system for CFI and developer and performs daily on-site Health & Safety Monitoring per DEP requirements. Langan is not doing anything except overseeing that things are being performed per all requirements on behalf of developer. 1. From Aug. 27 - Sept. 22, 2007, 1,213.71 tons of soil were removed from GRIDS 7, 10, 11, 13, 14, 15, 19 & 20, up to 12'-13' feet below grade. ORC was added to GRIDS 7, 13, 14, 19 and 20 - See Attached Plan. Post-Ex data from these GRIDS is attached in Table [in eDocs]. 2. Dewatering system was started on 12/12/07. Soil excavation within cellar area down to 15'-17' feet in GRIDS 10, 11, 12, 16, 17, 18, 22, 23 & 24 began on 12/19/07, and is on-going. 3. As we discussed in June '07 it was not possible to do any GW monitoring prior to soil excavation other than what I sent you on 6/19/07, because all wells had been destroyed. 4. I expect cellar soil excavation, post-excavation sampling and ORC application to be completed in next few weeks, but lagging construction for sidewalks for sidewalks will determine this schedule. I sent email to Bill: Thanks for update and soil data. I'm glad end-points look pretty good so far. I guess I got impression there may be more than one remedial plan (besides April '06 ECS plan I approved) because in my notes I've written that Langan mentioned installation of a vapor barrier and sub-slab depressurization system. I recall that RAP I approved mentioned installation of moisture barrier, with presumption that there would be basement extending into water table, and only mentioned passive sub-slab venting system as a possibility. I thought maybe Langan had submitted a more detailed proposal for sub-slab system to NYCDEP because of e-designation - I know they've been submitting reports to DEP and I'm not sure if I'm copied on all of them. Do you have any sampling data for de-watering discharge? I know this is regulated by DEP, not DEC, but I figured if

EXXON (Continued)

S107415886

you have data, it could provide some clue as to GW conditions at site. and sent another email: P.S. to my last email, you're right that we discussed GW sampling in June and agreed GW sampling is not possible because wells are destroyed (your item #3 below). Please let me know when you think it might be possible to begin installing some perimeter wells to do follow-up GW monitoring - can this be done once excavation, dewatering, and sidewalk construction are completed, or will it have to wait until site re-development (i.e., new building) is fully complete? Bill wrote back: Wells will not be able to be installed until after development likely - utilities have been moved and sidewalk will be closed until then, and there are site trailers on sidewalks etc... Then Bill sent another email with attachments, stating: I want us all to be clear on all of this. DEP did require installation of vapor barrier and sub-slab depressurization system for building due to e-designation and Langan did previously submit plans to DEP which were approved for developer. I thought you were referring to RAP for Soil and GW issues only. Documents are attached for SSDS and waterproofing. I will forward anything else I can find from Langan regarding this. As for de-watering - I have not seen any data but I can and will request this from Impact - which I will receive eventually anyways in their discharge report/documentation. Attachments (in eDocs) were specs, product info & site plans for waterproofing, vapor barrier and sub-slab depressurization system, plus NYCDEP approval letter of same, and DEP Notice To Proceed letter. I sent another email to Bill: I had a chance to look more closely at post-excavation soil data (I didn't initially see there were multiple sheets to Excel file), and noticed there was one sample that had some significant exceedances of TAGM 4046 recommended cleanup objectives - GRID 13 Eastbase 12'-13' sample. Is excavation still open in area where this sample was collected, and would it be feasible to dig a little more soil out in this area? - J. Kolleeny 01/03/08: Received email reply from Bill Simmons of ECS to my 1/2/08 query about excavating add'l contam soil: Could not dig any further or deeper in that area. Abutting building structure began to be compromised with sidewall cave-ins exposing foundation which was original brick, and GW was not helping - they had to backfill immediately after sample was collected and ORC was added. This is only very small area (less than 5x5 feet) of this sample that exceeded and we dosed it with ORC extremely well. Also, received emails from Bill with attached documents: an 8/1/07 letter rpt from Langan Engrg to NYCDEP, modifying and providing details of their earlier conceptual proposal for waterproofing/vapor barrier system for planned site building, and 12/6/06 letter rpt by Langan to DEP, serving as an addendum to ECS's April '06 RAP; Langan's addendum provides info regarding: (1) capping open areas of site with clean fill/top soil, (2) providing construction health & safety plan, (3) vapor barrier, and (4) active sub-slab venting system. Both Langan documents are in eDocs. I sent email to Bill Simmons: Thanks for providing these documents. I'm satisfied that remediation of subsurf petroleum contam at site is being performed in accordance with April '06 Remedial Action Plan by ECS which I reviewed & approved. Issues addressed in various documents Langan submitted to NYCDEP, including waterproof membrane, vapor barrier, sub-slab depressuriz'n system, and capping of open areas of site with 2 feet of certified clean fill material, are issues that I do get involved with at some of my sites. In most of those cases, I also request involvement of NYS Dept. of Health in reviewing & commenting on such plans. However, in this

Map ID  
Direction  
Distance  
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number  
EPA ID Number

EXXON (Continued)

S107415886

case, since NYCDEP is taking such an active oversight role because of property's e-designation, I do not feel need to be directly involved in reviewing and evaluating various engineering controls and vapor mitigation measures planned for site, or to request involvement of NYSDOH. Nevertheless, I would appreciate being copied on correspondence regarding such issues between Langan and DEP. - J. Kolleeny 03/16/09: Sent email to Bill Simmons of ECS: I don't think I've heard anything about this site in long while. Can you provide an update? Bill sent reply: No envt'l or construction work has been done at Site since Oct.'08, we think developer has some financial issue which has put project on hold. We have occasionally tried to contact them for their plans, but no response yet. However, here is an envt'l RAP summary so far: We believe that all petroleum-impacted soil excavation has been completed that has generated approx 5,555 tons of soil for off-site recycling -unless developer plans to excavate other areas of site in future and it is discovered - but remaining plans we know of now only consist of removal of top 4 feet of urban fill to be replaced. > 100 post-excitation soils samples were collected from completed excavation areas for lab analysis. ORC (Chemical treatment) in base limits of soil excavation has also been completed. Over 10 million gals of GW were de-watered, treated and discharged until system was shut down last week of Aug.'08. GW samples collected just prior to shutting down system on 8/27/08 from INFLUENT before bag filters had 6 VOCs at low levels but still above DEC standards (7 ppb toluene, 6.7 ppb ethylbenzene, 30 ppb xylenes, 11.3 ppb MtBE, 11.5 ppb 1,2,4-Trimethylbenzene, and 5.2 ppb 1,3,5-Trimethylbenzene) and sample collected after bag filters only had MtBE at 10.6 ppb (DEC standard of 10 ppb). Moisture/chemical barrier was installed in basement part of bldg, which has been constructed and formed to grade. Once development resumes, we will know timetable for install'n of off-site post-construction GW monitoring wells and sampling program. Let me know if you have any other questions. I sent back reply: Thanks for update. Will rpt be coming at some point summarizing work done to date, with end-pt soil sample results, details on amount of ORC applied to excavation, and recommendations for install'n of wells and post-remedial GW monitoring? - J. Kolleeny 09/10/09: On 9/9/09, received email from Bill Simmons of ECS: There is some action with this site. Developers are working on selling assets to new developer and they want to push forward install'n of wells in sidewalks soon, before any more work begins in future. To do so, driller (Zebra) need letter to DOT from NYSDEC authorizing access under Spill # to do this work in sidewalks of 10th Ave and 23rd Ave [Street]. Can you provide one asap? We want to try and install 2 wells in each sidewalk (total of 4) but this will be determined once utilities are located and access is available to those locations. We will also install 2 on-site along downgradient western boundary since building is not up yet. I sent sidewalk opening permit request letter (in eDocs) to Bill, cc to Chris Johnson of Cumberland Farms. - J. Kolleeny 12/14/09: Reviewed Remedial Action Plan Closure Rpt by ECS, dated 11/4/09 (parts in eDocs). Rpt summarizes all site invest & remed performed (including excavation of > 5,700 tons of soil, dewatering, and application of RegenOx & ORC Advanced), and presents results of post-remed soil & GW sampling that shows residual contaminant in several areas of site. Based on substantial remedial work done to remove contaminant materials from site and fact that post-remed samples show decreased levels of contaminant compared with pre-remed samples, ECS recommended spill closure. I sent letter (in eDocs) to Chris Johnson

Map ID  
Direction  
Distance  
Elevation

Site

Database(s)

EDR ID Number  
EPA ID Number

EXXON (Continued)

S107415886

of CFI, cc to Bill Simmons of ECS, saying DEC cannot close spill yet, because of need to monitor residual contam. I asked for quarterly GW monitoring, install'n of one new well NW of most contam well (MW-2) when site conditions permit, surveying of wells to determine up-to-date GW flow direction, submission of quarterly mon rpts. Also said if contam levels stay elevated, site may need add'l remediation. Changed priority ranking to P2, since site is in monitoring phase. - J. Kolleeny 02/09/10: Reviewed Groundwater Monitoring Report & Work Plan by ECS, dated 2/5/10 (in eDocs). Rpt presents results of Jan. 2010 GW sampling of 6 on-site wells and work plan for install'n of add'l well as I requested in 12/14/09 letter. GW results show total VOCs in worst well MW-2 decreased from 2,434 ug/L in Oct.'09 to 99 ug/L in Jan. 2010; 2nd worst well City MW-6 had 522 ug/L in Jan. 2010, down slightly from 550 ug/L tVOCs in Oct.'09. Work plan proposes new well in sidewalk along W. 23rd St. (west of SW corner of W. 23rd St. & 10th Ave.). I sent approval letter (in eDocs) to Chris Johnson of CFI, cc to Bill Simmons of ECS, saying new and existing wells should be surveyed to determine up-to-date GW flow direction. - J. Kolleeny 02/10/10: Received email from Bill Simmons of ECS: New wrinkle to discuss. DOT plans to install an elevator to High Tran that abuts Site to west. Elevator will be installed in sidewalk along West 23rd St in NW portion of sidewalk. Attached is their plan [in eDocs] depicting where they plan on digging etc., which is to start week of Feb. 22. Our monitoring well MW-1 and their well CITY-MW-6 are in this area and will likely be destroyed but I'll find out next week. Newly proposed well MW-7 is east of this area and should be ok. I'll be meeting with them next week to discuss their plan including likelihood that if they dig to 15 -17 they will find petroleum-impacted soil since we only excavated up to these edges. We will plan on being there to cooperate management of this and collect closure samples. My question is this: We have to survey wells to get GW flow. These are options: 1. Survey all 6 wells before this works starts and use gauging data to get flow direction now. However, 2 wells will be destroyed in next few weeks so we will not have any more data from them and do not know if we will be able to install any replacement wells in this area. 2. Wait until this work is done, then install MW-7 and survey 5 existing wells. Maybe we will know once elevator project is done if any replacement wells can go in this zone and we could install it and survey it also. Please advise. I wrote back: I prefer option 2 - wait until DOT finishes installing elevator, then install MW-7 and see if it's possible to install one replacement well for 2 destroyed wells (since well CITY-MW-6 had moderately elevated contamination), and survey wells at that point. Thanks for keeping me posted. - J. Kolleeny 05/03/10: Reviewed GW Mon Update Rpt dated 4/28/10, by ECS (in eDocs). Rpt summarizes March 2010 post-remediation GW sampling event. Worst well, MW-2, had total VOCs of 558.5 ug/L, up from 99 ug/L in Jan. 2010 (but down from 2,395 ug/L in Oct.'09). Well City MW-6 had tVOCs of 39 ug/L, down from 349 ug/L in Jan. 2010; well MW-3 had 67 ug/L tVOCs, about same as 59 ug/L in Jan. 2010. Wells MW-1, MW-4 & MW-5 were ND for VOCs. Rpt states that DOT sidewalk elevator project is anticipated to start in May 2010. Future Work section of rpt states that ECS will notify DEC when DOT provides start date for elevator work, and will be on-site during soil excavation to collect post-ex samples; once DOT work is complete, ECS will install well I requested near NE corner of W. 23rd St & 10th Ave., and if applicable, replacement well in elevator area. These events and data from next qtrly GW event will be in next rpt. -

EXXON (Continued)

S107415886

JK 06/15/10: On 6/14/10, received email from Bill Simmons of ECS: An update: Due to ongoing delay on start of elevator sidewalk project (any day now for past 3 months) we plan to install proposed monitoring well MW-7 in sidewalk on June 16. On May 27, 2010 a construction crew discovered an abandoned 250 gal oil tank during pile cap excavation on SW portion of Site. Tank was partly filled with soil & concrete, was removed from ground and is currently stored at site covered in plastic tarp; it will be removed soon, as access to this area is now blocked. We collected soil samples from beneath tank that field-screened at Zero and submitted some samples for lab analysis. This will be summarized in next rpt. On 6/15/10 I replied: Thanks for update, glad you're proceeding with install'n of MW-7, and thanks for taking necessary steps with discovered 250-gallon tank. Keep me posted on progress. - JK 11/10/10: Reviewed GW Mon Update Rpt by ECS, dated 8/18/10, rcvd at DEC on 9/7/10 (in eDocs). Rpt summarizes install'n of addtl well MW-7 in sidewalk along W. 23rd St. north of MW-2, as requested by DEC, in June 2010, and sampling of wells MW-1, MW-2, MW-3, CITY MW-6 and MW-7, also in June 2010. Worst well was CITY MW-6, with 660 ug/L total VOCs. In June & July 2010, 483 tons of soil was excavated/removed from site for construction. Rpt states, for Future Work, that DEC will be notified when High Line Park elevator sidewalk construction project will start; once project is completed, need for replacement wells will be evaluated. - JK 12/10/10: Sent email to Bill Simmons of ECS: Any update on Highline Park elevator constructn project? Has any GW monitoring been performed since June 2010 event, which was summarized in update rpt dated 8/18/10? Bill wrote back: City began elevator project ~Aug. 23 by installing shoring in 44 x20 area in sidewalk. Between then and Sept. 7 they removed soil - 22 trucks, which equates to somewhere around 550-650 tons or so removed from surface to 17 ft deep. They dewatered and treated via carbon from around Sept. 7 through sometime around end of Oct. or early Nov., reportedly at around at least 8,500/GPD. June 2010 GW sampling event was last. All site wells have been destroyed, even wells in east sidewalk along 10th Ave. Building is going up and taking up every inch of space they have to street edges. We were on-site during portions of this work but no post-ex soil samples could be collected due to shoring walls and base at 17 was all mud. We are trying to get any soil disposal manifests and dewatering backup, but I can't promise. I will at least try to get specifics #s on any of tonnage and gallons if I can. I sent back response: Thanks for update. Do you know if City did any sampling of untreated and/or treated dewatering water, and if so, if it's possible to get hold of any of sampling results? He wrote back: That is what we are looking to get. They told us prior to installing dewatering pump and setting up system that they were planning on collecting an influent untreated sample and they were discharging to sewer so they must have been sampling that according to whatever permit they had but they have not provided us any info. I will try again and let you know they are very evasive. - JK 05/02/13: Reviewed Spill Closure Rqst rpt by ECS, dated 4/22/13 (in eDocs). Rpt summarizes all investigative & remedial actions performed at site. In particular, rpt notes that in Oct. 2005, ~1,565 tons of petroleum-impacted soil were removed from former UST area on northern portion of site and 5,741 gals of GW were pumped during dewatering activities; between July & Aug. of 2007, ~1,924 tons of soil classed as clean fill were excavated from top 5 ft of entire site; between Aug. 2007 and Oct. 2008, 5,712 tons of soil were excavated at depths

ranging from 8-18 ft, from 70% of site (some end-point samples showed residual soil impacts); RegenOx and ORC Advanced were applied to excavation; and ~ 9,158,400 gals of GW were pumped out, treated and discharged to DEP combined sewer as part of construction- and excavation-related dewatering. Also, in Aug.-Oct. 2010, as part of construction activities for NYCEDC elevator (along west 23rd St) to High Line Park, ~850-950 tons of petroleum-impacted soil were excavated to depth of 17-18 ft (9-10 ft below water table) from 44' x 20' area of sidewalk along 23rd St., along NE site boundary, and a GW dewatering system operated for 6 weeks pumping ~8,500 gals/day, for total of ~380,000 gals recovered, treated & discharged (ECS was not able to obtain actual data on soil or GW from NYCEDC). In addition to these remedial actions, a vapor barrier membrane and active sub-membrane depressurization system were installed beneath bldg (except cellar area which extends into GW and has waterproofing); these engineering controls will mitigate potential vapor intrusion from any residual soil & GW impacts. Last available post-remedial GW data, from June 2010, showed worst result was 660 ug/L total VOCs in well CITY MW-6; this well & several others were destroyed during NYCEDC's High Line elevator install'n project, but presumably soil excavated and GW dewatered during project would have helped reduce residual GW contaminant levels and promote further natural attenuation of any remaining impacts. Based on all remedial actions performed and engineering controls implemented, ECS concludes that no further action is warranted at site and requests spill closure. I concur. I closed spill, sent closure letter (in eDocs) to Chris Johnson of Cumberland-Gulf Group of Companies, cc to Bill Simmons of ECS. - J. Kolleeny "

Remarks:

"Caller reports removing five 4000 gallon tanks. There is contamination at the site. Caller reports no holes in the tanks. Cumberland Farms will be contacting a company for cleanup. Contractor on the site removing the tanks is: Tyree Organization Roland Fisher 631.300.6753."

Contact Name: BILL KLEIN  
DEC Memo: "This site is already an active longterm remediation site - Spill #9512583 As part of this remediation effort, there are existing monitoring wells on the site that are tested periodically. Today, the geologist found 4 ft of gasoline product floating on the water table in a well that previously had nothing. The manway was checked and found to be full of gasoline as well. This was clearly an overfill from a recent delivery. Franklin and/or URS is working the long term cleanup of the site and has arranged for a vac truck to clear out whatever is possible right now. On a long term basis, the existing remediation system will be used to skim the free product from the water table and remove it from the site. This problem will now be addressed by the contractor through the existing long term spill number on file."  
Remarks: "MATERIAL IS CONTAINED IN SUMP: POSSIBLY DUE TO OVERFILL, BUT UNCONFIRMED AT THIS TIME:"

DEC Memo: "Part of a long term recovery operation at the site. See also spill nos. 0702185 and 0702402. 08/16/07: Notified of this spill by Ryan Piper of spill response staff on 8/15/07; sent email to Jane Staten and Harvey Roberts of URS (DDC consultant handling long-term remediation of this site under DDC consent order), with cc to Afsar Samani of DDC, stating: I've been informed by our Spill Response staff that spills are continuing to occur related to damaged fill line to gasoline UST at Midtown South. Intitial spill (0613411) occurred in March '07 when gasoline was found in tank sump and nearby monitoring well. According to URS's system performance reports, Franklin Co. determined that tank's fill line was damaged, and they installed direct fill to tank to bypass damaged line. Do you know if Franklin plugged up old fill port when they installed direct fill? It appears that fuel deliveries continue to be made to old fill line, and product keeps showing up in tank sump and monitoring wells. On May 23rd, spill 0702185 was reported by NYPD because sump was filled with gasoline and Veeder Root alarm was going off. Today, another spill was called in (0705553) because of product in sump. Please take necessary steps to have old fill port blocked so it cannot be used anymore (or repaired so it won't leak) as soon as possible, and please also check out entire tank system to make certain it is damaged fill line that's problem, and that there are no other leaks in system. Please get back to me on this and let me know what actions have been taken to address this situation. Afterwards, spoke again with Ryan Piper, who suggested tank be taken out of service and emptied until problem is solved. Sent email to Afsar Samani of DDC, cc's to Jane Staten & Harvey Roberts of URS: In light of ongoing problems with gasoline UST at Midtown South Precinct, I strongly suggest that tank be taken out of service and emptied until problem(s) with tank and piping has/have been addressed. If this is not practical because police have no alternative location to fuel their vehicles, then please take whatever steps are necessary to immediately rectify problem(s) with tank system. NYCDDC is conducting remediation at this site using SVE and groundwater extraction & treatment systems, and these ongoing spills of fresh gasoline to subsurface will set back remedial efforts for months, or more likely, years, so it is in DDC's interest to resolve this situation promptly. In addition, these releases are a violation of Environmental Conservation Law, as you are aware, and if they continue to occur, our spill responders may be inclined to call Environmental Conservation Officers to site to issue summons. On 8/16/07, received email from Afsar Samani of DDC: Harvey informed me that vac-truck is scheduled to remove product from sump today. Also, NYPD subcontractor is going to be scheduled to repair fill line. URS is looking into this and will make all necessary action to make sure tank and fill port is tight. Then, received email from Jane Staten of URS: I just spoke with Lt. Pete Polanco for an update on problems with gasoline tank at Midtown South Precinct. According to Lt. Polanco, NYPD tank

**S105054624**

contractor inspected fuel fill line this morning and found no problems with integrity of line. Therefore, Lt. Polanco believes that product in tank sump was caused by fuel delivery vendor. NYPD are expecting fuel delivery vendor at site this afternoon to discuss problem and also to remove gasoline currently in sump. I will keep you posted. I then sent email to Afsar Samani, with cc's to Jane Staten & Harvey Roberts of URS, Jerry Aliberti of DDC and Lt. Peter Polanco of NYPD: Thank you for your response. Please be advised that no fuel deliveries should be made to gasoline tank at Midtown South until tank system has been tested to insure integrity of all elements of system. Documentation of tightness test results, and of any repairs made to fill line since problem was discovered in March 2007, must be submitted to NYSDEC before fuel deliveries can resume. This situation is high priority and NYPD should arrange for tightness testing immediately. Then, received phone call from Lt. Polanco of NYPD, who said repairs to damaged fill line were done in June and fill line was tightness tested and passed, and he believes current problem is due to fuel delivery vendor not hooking up vapor recovery line (truck is parked in street long distance from fill port, so there's long length of delivery hose). He said product will be removed from sump and fill line will be tested again. I asked him to submit documentation of repair work and tightness testing, and sent him email with my address. Then, I was cc'd on email from Afsar Samani of DDC to Lt. Polanco of NYPD: We were informed by following correspondence from NYSDEC that gasoline tank over at Midtown South Police Precinct should not receive any more deliveries until a tightness test has been scheduled. Please let DDC know when you can arrange for your subcontractor to perform a tightness test on this tank. This is very crucial to remedial effort that URS is performing to clean up site on behalf of DDC. - J. Kolleeny 08/21/07: Received fax on 8/20/07 from Lt. Polanco of NYPD fuel control unit, with letter from Energy Tank & Environmental Services dated 7/16/07 describing repairs to and pressure testing of fill line to gasoline UST (in eDocs). Sent same-day email response to Lt. Polanco, cc's to Afsar Samani & Jerry Aliberti (DDC), Jane Staten & Harvey Roberts (URS): Thank you for faxed description of repair work to fill line of gasoline UST at Midtown South and diagram of site, tank and fill port, provided by Energy Tank & Environmental Services, Inc. However, these items do not completely satisfy my request for documentation of tank repairs and testing of fill line, and they raise additional questions. Page that describes repairs and subsequent pressure testing of line is dated 7/16/07. Is that date when repairs were done? I would like to see dated invoice for repair work in addition to this description. Description states that problem was with primary fill line, and that secondary line was intact, which allowed product to go into containment sump and not into ground. However, in March when this problem was first discovered, URS field personnel reported 5 feet of fresh gasoline in groundwater extraction well that had never had gasoline in it before, so somehow product did get into ground. If repairs were done on 7/16/07, why was gasoline again reported in containment sump on top of tank on August 15th (spill number 0705553)? You mentioned that this was caused by delivery person not hooking up vapor recovery line, yet our Petroleum Bulk Storage staff say this would not result in product appearing in sump. I would greatly appreciate it if you could provide additional documentation of repair work, and if NYPD would schedule a tightness test of all lines going into and out of tank, as well as a

hydrostatic test of tank's containment sump. I would like to be informed in advance when these tests have been scheduled, so that I can attend. - J. Kolleeny 09/14/07: Visited site 9/10/07 to observe hydrostatic test of tank sump and tightness test of fill line. Mike Suppe of Fenley & Nichol on hand, said sump held water, more or less (slight drip along electric conduit extending from this sump to next sump at end of tank), for over 2 hours. He said no way to test fill line (it's about 2-3 feet long from remote fill port) without physically removing it, but he will test entire tank system. In discussions of how product could turn up in sump, I mentioned that Lt. Polanco said it had to do with delivery person not hooking up vapor recovery line. Mike wasn't clear on how that would cause product to appear in sump. I called Lt. Polanco, who said by not hooking up vapor recovery during delivery, excessive back pressure was created, so when delivery hose was disconnected, product would back up and spill into overflow bucket, then drain to sump. Mike Suppe said this isn't possible, since any fuel spilled into spill bucket would drain back into fill line, then into tank (not sump). Mike suggested that temporary fill, which was used while remote fill line was awaiting repair, had not been properly capped once NYPD switched back to using remote fill, and poor threading on top of direct fill extension cylinder and improperly screwed-on cap for this extension, may have resulted in product spilling out capped off temporary fill, again related to back pressure from not hooking up vapor recovery (see photos in eDocs image folder). NYPD now has on-site a long hose to be used for vapor recovery, and reportedly there have not been any more problems with product appearing in sump after deliveries. Spoke with Mike Suppe on 9/11/07, who said tank system passed test. I discussed whole situation with Jane Staten of URS, who forwarded to me email from Harvey Roberts of URS (in eDocs) indicating temporary direct fill was installed by NYPD, not Franklin Co. as stated in URS's system performance reports for site. While this may explain why product was appearing in sump, none of this adequately explains how product escaped into ground and turned up in groundwater extraction wells and monitoring wells (for site cleanup under spill no. 9512583). Mike Suppe indicated if damaged fill line was unknown for a long time, sump could've filled up with gas during deliveries and overtopped inner rim of sump, and from there it could seep into ground. URS will continue to gauge nearby wells for product levels, and see if they continue to decrease. Harvey Roberts email also calls into question when exactly NYPD had repairs done to fill line. I contact Lt. Polanco again and asked for more detailed documentation of repair work, indicating date(s) and nature of work done. He said he would work on getting me that info. - J. Kolleeny 09/17/07: Received fax from Lt. Polanco, a revised version of earlier fax with statement by Energy Tank & Environmental Services regarding repair work on fuel fill line. Statement is still dated 7/16/07; it now states that they uncovered line on 7/5/07, reconnected and tested line on 7/6/07, reporting that line held pressure during backfilling, they then witnessed a fuel delivery on 7/9/07 with no leaks observed, so they re-surfaced area. - J. Kolleeny 01/04/08: On 12/19/07, sent email to Jane Staten of URS: I recently asked you to ask your field personnel to check if gasoline is still showing up in tank-top sump after fuel deliveries at this site. Do you know if they've checked on this? On 12/26/07, received email reply from Jane: Our field technician checked tank sumps at Midtown South on 11/29/07. One sump was dry and other contained a little water. There was no evidence of

DEC Memo: "02/19/08: This spill case transferred from V. Zhune of Spill Response staff to J. Kolleeny. On Feb. 13, URS (Franklin?) personnel at site noted 10 ft. of fresh free product in a groundwater extraction well (GEW-1), and several ft. of product in nearby monitoring wells. Product was bailed down to less than a foot. On

**MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued)**

**S105054624**

Feb. 15th, URS returned to site and measured 5 ft. of product in GEW-1, and noted that spill buster in well was not operating. Nearby well MW-6 had 3 ft. of product. I instructed Jane Staten of URS to call in a new spill. Contacted Lt. Pete Polanco of NYPD who said they had arranged for Fenley & Nicol to perform a tank system tightness test on Saturday, Feb. 16th. I asked that the results be faxed to me when available. On Tuesday Feb. 19th, received test results by fax from Lt. Polanco, tank system tested tight (results in eDocs). Contacted Jane Staten of URS, who said their field staff visited site on Monday Feb. 18th, found no product in GEW-1, 3 ft. of product in MW-6, and 0.02 ft. in MW-7. She suggested I ask NYPD to look into their inventory records, especially delivery versus tank volume records, for deliveries between Feb. 6 and Feb. 13. I sent email to Lt. Polanco asking him to look into these records and let me know. - J. Kolleeny 02/21/08: Received email reply from Lt. Polanco of NYPD: We did an analysis with the last few deliveries. We determined that during the period of Feb 6 through Feb 13, 3167 gallons was used and we were able to account for 3146 gallons. Therefore we have an unaccounted loss of less than 1%. We passed the tank tightness test. So the question still remains where is this product coming from? Obviously it is not from my fuel site. As of today MTS Precinct is empty and will not be having a delivery for 1 week. Can URS check their wells tomorrow and see if any product appears in the next 7 days? Let me know what you want us to do. I also received email from Jane Staten of URS with detailed timeline of events, in response to my request: Following is a timeline of events concerning the new spill at Midtown South: Feb 13 (Wednesday) Franklin visits site to perform weekly O&M and verbally reports that there is 10 feet of product in well GEW-01; there was a reported kink in the GEW-01 Spill Buster discharge line and when it was fixed, the pump evacuated the product in the well URS visits site to perform monthly product recovery using a vacuum truck and records free product in MW-06 (3 ft), MW-07 (2 ft), and IW-15 (couple of inches); all product evacuated from wells Feb 15 (Friday) URS visits site to gauge wells and finds product in GEW-01 (4.2 ft), MW-06 (2.6 ft), and MW-07 (0.3 ft) URS calls in spill to NYSDEC Spill Hotline; assigned #0712091 Received email from Franklin that product storage tank in GW treatment shed is full and that they scheduled a vacuum truck to remove product Feb 16 (Saturday) NYPD performs tightness test on tank system Feb 18 (Monday) URS visits site with vacuum truck and measures product in MW-06 (3 ft) and MW-07 (0.02 ft); no product detected in GEW wells; all product evacuated from wells; 35 gal product removed from product storage drum in GW treatment shed I do not understand what happened to the 4 feet of product in GEW-01 between Friday and Monday. I asked Franklin if they sent a vacuum truck to the site during that time to remove product from the product storage drum and the answer was 'no.' So that means that the Spill Buster pump in GEW-01 would have remained idle over the weekend. While that is a mystery, the bigger mystery is the source of the gasoline since the tank system tested tight and NYPD records indicate less than a 1% discrepancy in fuel inventory records. - J. Kolleeny 03/20/08: On 2/26/08, sent email to Jane Staten of URS, asking if their field personnel have been back to site and gauged wells for product levels? Jane wrote back: We were at site on Monday with vacuum truck and there was 2.4 feet of product in MW-06, 0.3 feet in MW-07, 0.03 feet in MW-08, and 3.18 feet in GEW-01. Spill buster pump in GEW-01 did not appear to be working so we contacted Franklin. Franklin's regular

O&M day for Midtown South is Wednesday, so I'll probably receive their report tomorrow or Thursday. URS will continue to bring vacuum truck to site to remove product until it appears that situation is under control. I'll keep you posted. On 3/20/08, I sent email to Jane Staten asking for updated info on product in wells and status of spill buster pump in GEW-01. - J. Kolleeny 03/28/08: Received email from Jane Staten of URS on 3/27/08, with attached table showing well gauging data from 1/17/08 to 3/14/08 (in eDocs). Data show product in GEW-01 has decreased, from 3.18 ft. on 2/25/08 to 0.0 ft. on 3/3/08, to 0/15 ft. on 3/14/08; however, product in MW-6 seems not to be going away, with 3.75 ft. on 3/14/08; MW-7 went from 0.30 ft. on 2/25/08 to 0.07 ft. on 3/3/08 to 0.44 ft. on 3/14/08. Jane also reported that spill buster pump in GEW-01 is operating and URS has instructed contractor to restart GW extraction pumps. - J. Kolleeny 06/11/08: At direction of my supervisor, Vadim Brevdo, I closed this spill to consolidate with open spill no. 9512583, under which remediation of subsurface petroleum contamination at this site is being tracked. - J. Kolleeny "

Remarks: "unknown amount spilled; released from an underground tank; released into the ground; it is an on going remediating site"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was KOLLEENY URS did site investigations and initially proposed installing a dual-phase extraction system to address soil and GW contamination. However, site facility had inadequate electrical service to support a high-vacuum DPE system, so in early 2000 they proposed installing an SVE system for soil and ORC injection for dissolved-phase GW contamination. DEC approved plan in May 2000; work begun on SVE system in late 2000. However, when ORC injection wells were installed in Feb. 2001, free product was found in injection wells (under building, which is on pillars). URS performed IRM on wells. SVE system started up in Oct. 2001 and operated until June 2002, when it was shut down due to break in conveyance piping. URS did add'l investigation to delineate free product, and in April 2003 they proposed installing a GW recovery system to address free product and dissolved-phase GW contamination, and expanding SVE system. DEC approved this plan in July 2003. URS submitted a Design Analysis Rpt for remedial plan in Feb. 2004; DEC approved DAR in June 2004. 7/21/05: DEC reviewed Documentation for Letter of Agreement submitted by URS with SVE/Air Stripper Data Sheets and supporting calculations, and issued a letter on 7/21/05 authorizing discharges of treated vapors from the expanded SVE system and treated air stripper off-gas from the groundwater recovery system. - J. Kolleeny 03/14/07: Reviewed System Performance Monitoring Report for October 2006 through January 2007 by URS Corp., dated Feb. 12, 2007. Soil vapor extraction (SVE) and groundwater extraction & treatment (GWET) systems were started up on Oct. 25, 2006. SVE system consists of one horizontal extraction well and two horizontal ventilation trenches; GWET consists of 3 groundwater extraction wells. Franklin Co. is contractor operating/maintaining the systems. Performance monitoring data indicate that contaminants are being extracted from soil and groundwater and the systems should continue to operate. GW monitoring event in June 2006 showed free product in two wells (injection wells IW-6 and IW-12), and dissolved-phase contamination in two wells (IW-10, with 8,843 ppb, and IW-13, with 5,872 ppb total VOCs, resp.). In Jan. 2007 GW event, only two wells were sampled, BW-4 and MW-4, both ND; other wells were dry or inaccessible. Changed spill priority status to P2. - J. Kolleeny On 3/14/07, new gasoline spill was reported (#0613411). Delivery overfill event, 4 ft. of product found in well (extraction well GEW-01, according to Jane Staten of URS), and UST manway was full of gasoline also. Franklin Co., who reported spill, have arranged for vac truck to pump out manway and well. Any residual impacts will be addressed by remedial systems and tracked under this spill number. - J. Kolleeny 07/23/07: Reviewed System Performance Monitoring Report for Feb. thru April '07 by URS, dated 6/8/07 (in eDocs). Report summarizes performance data for on-site SVE and GW treatment systems, plus GW monitoring data. PID monitoring of

SVE vapor effluent gave reading of 621 ppm on 4/18/07, corresponding to benzene concentration of 12.4 ppm - above discharge limit in Stip Agreement. System was shut down and carbon was changed out, system re-started on 5/4/07. Vapor effluent sampling of GW system air stripper was in compliance. GW was sampled on Jan. 4, 2007; only two wells in sampling program were sampled, others were either inaccessible or dry. Results showed were ND for two wells sampled, however, this was before result spill 0613411, which report states was caused by a break in gasoline fill line; Franklin Co. installed a direct fill on tank, by-passing damaged fill line. Sampling of GW extractions wells in Feb. and March '07 showed big increased in recovered contaminants in March: GEW-1 went from 210 ug/L total VOCs to 30,900 ug/L; GEW-2 went from 20 ug/L to 800 ug/L, and GEW-3 went from 985 ug/L to 32,070 ug/L total VOCs, suggesting impacts from fill line break, and indicating system is recovering elevated levels of contaminants from GW. Report concludes SVE and GWE systems must continue to operate. - J. Kolleeny 08/17/07: Reviewed System Performance Monitoring Report for May-July '07 by URS, dated 8/7/07 (in eDocs). Report notes that benzene concentrations in SVE system effluent have increased, due to recent spill(s) of fresh gasoline from damaged fill line to active UST; even though benzene level has not exceeded discharge limit, as precaution Franklin Co. will change out the vapor phase carbon. Report also notes that due to presence of free product in GW recovery wells, they've had to shut down GWET system so product doesn't foul carbon. I sent email to Afsar Samani of DDC, cc's to Jerry Aliberti of DDC, Jane Staten & Harvey Roberts of URS, stating: I have reviewed System Performance Monitoring Report for May-July 2007, dated August 7, 2007. Report notes that, due to presence of large quantities of free product in on-site groundwater extraction wells (from recent spills related to damaged fill line to active gasoline UST), groundwater extraction and treatment (GWET) system has been shut down. I am concerned that without GWET system operating to exert hydraulic control over local groundwater flow, dissolved-phase groundwater contaminant plume, and perhaps free product as well, may migrate off-site, potentially impacting neighboring property. Therefore, I request that DDC and URS take whatever steps are feasible to expedite recovery of free product at site, so that GWET system can be re-activated as soon as possible. Also, discussed this in email exchange with Jane Staten, who stated: URS is scheduled to visit site with vac truck this coming Tuesday. If we feel effort is successful, we will continue with weekly visits until it is determined they are no longer necessary or effective. - J. Kolleeny 11/19/07: Reviewed URS's System Performance Monitoring Report for August-October 2007, dated 11/12/07 (in eDocs). Report states that GWET system had been shut down because free product was getting into system and causing discharge to sewer to exceed NYCDEP standards, but now they've restarted system just using GEW-2 and GEW-3, since GEW-1 seems to be well that's pulling in product. Report states that benzene vapor discharge from SVE system is in compliance, but effluent had high PID reading on 10/30/07, so they changed out carbon. GW samples were collected from several monitoring, vent & injection wells on 8/2/07, and from GWET wells on 8/31/07; results show high levels of VOCs in several wells, including extraction wells and MW-6. Well gauging consistently shows 3+ feet of product in MW-7, small amts. of product in several other wells. URS is conducting vac truck visits every 2 weeks to recover product. I called Jane Staten of URS and asked why wells MW-3 & MW-5 weren't sampled, she thinks

one or both are under an emergency generator; she'll look into it and get back to me. I asked if MW-6 can be used as a GW extraction well; she said it's only a 1-inch diameter well because it was installed by Geoprobe, under elevated part of building. I asked if spill buster pump could be installed in MW-7, she said she would look into it. Also asked if URS field personnel could check sump on top of new UST to see if it's still collecting product during fuel deliveries, Jane said she'd ask them to check. - J. Kolleeny 12/26/07: On 12/19/07, sent email to Jane Staten of URS asking if their field personnel had checked tank top sump for presence of product; on 12/26/07 Jane replied: Our field technician checked tank sumps at Midtown South on 11/29/07. One sump was dry and other contained a little water. There was no evidence of gasoline. Based on this, I closed spill case 0705553. - J. Kolleeny 03/20/08: Reviewed System Performance Monitoring Report for Nov. '07 through Jan. '08 by URS, dated 2/8/08 (in eDocs). Report presents O&M data for SVE & GWET systems, concluding that systems are removing elevated levels of contaminants from soil and GW, and will continue operating. Also notes that product levels from spill involving new UST's sump and/or fill port in March '07 (sp. nos. 0705553, 0702185, 0702402) are decreasing, showing effectiveness of GWET and periodic vac truck visits. However, report was submitted prior to new reported spill 0712091 (2/15/08), where large product thicknesses were suddenly and inexplicably observed in well GEW-01 and several monitoring wells, which caused temp. disruption in operation of GWET system, since product was getting into air stripper. (Tracking of that spill is ongoing.) Report states that SVE system was shut down for 2 weeks during monitoring period to change out vapor phase carbon. GW sampling was performed on 11/5/07, but samples were only collected from BW-5, MW-3, MW-4, VW-2 and VW-4; VW-4 had total VOCs of 737 ug/L, up from 44 ug/L in Aug. '07; some wells with hi TVOCs in Aug. weren't sampled in Nov. (like IW-13); plume fig. for Nov. '07 shows free product in GEW-01, MW-7 and MW-8, not clear why MW-6 wasn't sampled (gauging table indicates it had 0.05 ft. of product on 11/15/07, but wasn't gauged on 11/05/07. All product data is made irrelevant by spill 0712091. - J. Kolleeny 03/28/08: Received email from Jane Staten of URS on 3/27/08, with attached table showing well gauging data from 1/17/08 to 3/14/08 (in eDocs). Data show product in GEW-01 has decreased, from 3.18 ft. on 2/25/08 to 0.0 ft. on 3/3/08, to 0/15 ft. on 3/14/08; however, product in MW-6 seems not to be going away, with 3.75 ft. on 3/14/08; MW-7 went from 0.30 ft. on 2/25/08 to 0.07 ft. on 3/3/08 to 0.44 ft. on 3/14/08. Jane also reported that spill buster pump in GEW-01 is operating and URS has instructed contractor to restart GW extraction pumps. - J. Kolleeny 06/11/08: At direction of my supervisor Vadim Brevdo, closed spill 0712091 at this site (for free product [gasoline] detected in GW extraction well and monitoring wells) to consolidate with this spill (9512583), under which remediation of subsurface petroleum contamination at this site is being tracked. See Caller Remarks, DEC Remarks and documents in eDocs in spill no. 0712091 for further info about that spill and response actions. - J. Kolleeny 09/11/08: Reviewed System Performance Monitoring Reports for Feb.-April '08 and May-July '08 (both in eDocs). Both reports state that SVE and GWET systems at site are removing elevated levels of contaminants from soil and GW, and that free product thickness msmts continue to decrease, showing effectiveness of GWET system and periodic vac truck visits. Worst wells for free product have been GWE-1, MW-6 and MW-7; as of last

**S105054624**

gauging event on 7/22/08, GWET had no measurable product, MW-6 had 0.04 ft., and MW-7 had 0.18 ft. As of 7/29/08 GW sampling event, worst wells for dissolved phase contam are GEW-2 with 960 ug/L total VOCs (mostly BTEX) and VW-04 with 936 ug/L total VOCs (mostly MTBE). - J. Kolleeny 01/20/09: Reviewed System Performance Monitoring Report for Aug. - Oct. 2008, dated 12/5/08 (in eDocs). Rpt states that SVE and GWET systems at site are removing elevated levels of contaminants from soil & GW. As of Oct. '08 sampling event, worst dissolved-phase well was GEW-1, which had 14,455 ug/L total VOCs (last reporting period, had free product); 2nd worst dissolved-phase in GEW-2, with 634 ug/L total VOCs. Rpt also states that product thickness msmts continue to decrease, showing effectiveness of GWET system and vac truck visits, but data do not support this. Six wells had free product in Oct. '08, with worst wells being MW-6 and MW-7; those wells started August with almost no product (0.04 ft. and 0.13 ft., resp.) but on 8/29/08 jumped up to 1.96 ft. and 1.06 ft., resp., and stayed around these thicknesses for rest of reporting period, ending with 1.96 ft. and 1.44 ft., resp., on 10/20/08. Rpt states that URS visited site 8 times during period to recover free product with peristaltic pump, recovering about 12.5 gallons of product. I sent email to Jane Staten of URS: I've been looking through Midtown South monitoring report for Aug.-Oct. '08 (dated 12/5/08), and noticed that Table 9 - GW Elevation/Product Thickness Measurements seems to show significant rebound of product thicknesses in MW-6 and MW-7 starting on 8/29/08. Do you have any thoughts or ideas about what could have caused this? Were thicknesses in these two wells steadily decreasing before this reporting period, or do these appear to be typical fluctuations for these wells? Also, have we already discussed why URS is using peristaltic pump to recover product rather than vac truck - is it primarily for cost considerations, or does it have to do with recharge rates for wells or something along those lines? - J. Kolleeny 01/22/09: Received email from Jane Staten of URS responding to my email of 1/20/09: Based on water/product levels we have recorded, product thickness appears to be affected by water levels, i.e., lower the water, greater the product thickness. We are using peristaltic pump for couple of reasons. First, there is access problem at site. Vac truck is too big to use driveway so it sits on street and hose runs up driveway. According to our field personnel, it is difficult for truck to find spot to 'sit' and when hose runs up driveway, it causes police grief because they have to drive around it. Second, wells are only 1-inch in diameter. Vac truck uses small hose which is lowered into well and well is almost immediately evacuated. Same process occurs with peristaltic pump, i.e., small tube is lowered into well and well is evacuated, so vac truck really provides no advantages. Cost was not a consideration. - JK 03/24/09: Reviewed System Perf Monitoring Rpt for Nov.'08 - Jan.'09 by URS, dated 3/4/09 (in eDocs). Rpt states that effluent of GWET system exceeded NYCDEP limits for discharge to sanitary sewer, system was shut down. Franklin Co. will install liquid-phase carbon unit to polish GW prior to discharge to sewer, sometime in 2nd Quarter '09. Rpt further states that GW and SVE systems removed elevated contam concentrations from soil and GW, and that approx. 6 gals of product was recovered from 5 on-site wells using peristaltic pump. GW samples were collected from wells VW-04, GEW-01, GEW-02 and GEW-03 on Jan. 5, '09; remaining wells were not sampled because they were dry or exhibited free product or had an obstruction. Of wells sampled, worst contam was in GEW-01 with 17,140 ug/L total VOCs (up from 14,455 ug/L

in Oct.'08) and GEW-03 with 12,244 ug/L total VOCs (had free product in Oct.'08). Free product thickness continued to increase in MW-7, with 2.73 ft. on 1/5/09 and 2.64 ft. on 11609.- JK 08/11/09: Reviewed Syst Perf Mon Rpt for Feb.-April '09 by URS, dated 5/27/09 (in eDocs). Rpt states GWET system was shut down during rpt period due to effluent exceeding NYCDEP discharge stds; rpt says Franklin Co. has installed activated carbon units to polish GW prior to discharge, and GWET system will be re-started in June '09. SVE system operated without interruption during rpt period, removing elevated contam concentrations from vadose zone. Approx. 7 gals of free product were recovered via peristaltic pump. GW samples were collected from 14 wells in April '09; hottest wells were GEW-1 with 24,980 ug/L total VOCs, MW-8 with 24,454 ug/L TVOCs, GEW-3 with 7,735 ug/L TVOCs, and IW-15 with 3,334 ug/L TVOCs. Free product thickness fluctuated ranging from 0 to 0.56 ft in MW-06, from 0.91 to 3.53 ft in MW-07, and from 0.01 to 0.68 ft in MW-09. Four other wells showed traces of product. - JK 12/16/09: Reviewed Syst Perf Mon Rpt for May-July '09 by URS, dated 9/9/09 (in eDocs). Rpt states GWET system was re-started on 6/3/09 and removed elevated levels of contaminants. SVE system operated without interruption during rpt period, but removed fewer contaminants from vadose zone during this rpt period. URS attributes this to construction activities related to removal/replacement of 4,000-gal gasoline UST. System's vapor discharge was in compliance. Approx. 5 gals of free product were recovered via peristaltic pump. GW sample was collected from GWET-1 on 7/9/09, result showed 151 ug/L total VOCs; other wells either had product or were obstructed by construction activities, so were not sampled. Wells MW-6 and MW-7 had most free product, averaging 0.28 ft and 0.69 ft, resp. during rpt period. - J. Kolleeny 12/17/09: Reviewed Syst Perf Mon Rpt for Aug.-Oct.'09 by URS, dated 11/24/09 (in eDocs). Rpt states SVE system operated throughout rpt period, removing more contaminants from vadose zone since construction activities associated with removal/replacement of 4k gasoline UST were completed. Vapor discharge was in compliance. GWET system removed elevated contam levels during this rpt period. Approx. 3 gals of free product were recovered via peristaltic pump from wells MW-7 and MW-9; overall product levels seem to be decreasing. GW samples were collected from 3 wells on 10/19/09; other wells either had product or were dry, so were not sampled. Well MW-6 had 38,573 ug/L total VOCs, and IW-15 had 25,628 ug/L TVOCs. - J. Kolleeny 04/13/10: Reviewed Syst Perf Mon Rpt for Nov.'09 - Jan.'10 by URS, dated 3/3/10 (in eDocs). Rpt states SVE and GWET systems operated throughout rpt period, removing contaminants from subsurface and GW. Vapor discharges were in compliance. GWET system removed elevated contam levels during this rpt period. Approx. 2.4 gals of free product were recovered by peristaltic pump from wells MW-7 and MW-9; MW-7 had 0.19 ft of product on 1/6/10 and 0.22 ft product on 1/19/10. Influent to GWET system from 3 extraction wells was sampled on Nov. 4 & Dec. 2, 2009 and on Jan. 16, 2010: GEW-01 had total VOCs of 8,946 ug/L, 5,537 ug/L and 54,490 ug/L, resp; GEW-02 had tVOCs of 130 ug/L, 122 ug/L and 1,530 ug/L, resp.; and GEW-03 had 7,263 ug/L, 5,710 ug/L and 2,729 ug/L, resp. GW sample taken from IW-15 on 1/6/10 had 12,885 ug/L tVOCs (down from 25,628 ug/L in Oct.'09) and sample from MW-6 had 29,410 ug/L tVOCs (down from 38,645 ug/L in Oct.'09). Other wells either had product or were dry, so weren't sampled. - JK 09/23/10: Reviewed Syst Perf Mon Rpt for Feb.-April 2010 by URS, dated 6/23/10 (in eDocs). Rpt states that SVE system operated throughout rpt period;

GWET system was off briefly on two occasions but restarted immediately during maintenance visits. Both systems removed elevated levels of VOCs from subsurface, and vapor discharges were in compliance. Well gauging showed only traces of product (0.01 ft) in wells GEW-01 and GEW-03; no measurable product was collected by system. GW samples collected in April 2010 showed decreases in extraction wells vs. Jan. 2010 event (tho still elevated, in 1,000-2,000 ug/L total VOC range), but 2 mon wells that haven't been sampled in a while had high levels of VOCs: MW-6 had 9,051 ug/L tVOCs, MW-8 had 5,731 ug/L tVOCs. System operation and GW Mon will continue. - J. Kolleeny 01/10/11: Reviewed Syst Perf Mon Rpt for May-July 2010 by URS, dated 9/1/10 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface; treated water and vapor discharges were in compliance with stds. Well MW-07 saw rebound in free product thickness, with 0.94 ft on 6/10/10 and 0.32 ft on 7/26/10; well MW-09 had trace of product in early May 2010, no product detected in June or July. About 2 gals of free product were removed from wells MW-07 and MW-09 using a peristaltic pump. GW sampling on 8/10/10 showed worst dissolved contam in well MW-06, which had 46,126 ug/L total VOCs (up from 9,051 ug/L in April 2010, extraction well GEW-1, which had 4,168.5 ug/L tVOCs (up from 1,634 ug/L in April 2010), and extraction well GEW-3, which had 1,399 ug/L tVOCs (down from 1,533 ug/L in April 2010); well MW-08 was obstructed and was not sampled. System operation and GW monitoring will continue. - J. Kolleeny 05/30/11: Reviewed Syst Perf Mon Rpt for August-October 2010 by URS, dated 2/16/11 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface; treated water and vapor discharges were in compliance with stds. Rpt also states that URS is implementing several system modifications to improve performance, including conversion of existing horizontal ventilation well (VW-10 thru VW-13) to also function as an extraction well, and conversion of existing extraction well SVE-01A to also function as a ventilation well, to allow for increased flexibility in configuring system to extract from one or both sides of contaminated area. Well MW-07 had less free product during August & September, but rebounded to 1.63 ft on 10/21/10; well MW-09 had no measurable product during most of monitoring period but had 0.01 ft on 10/21/10. About 1.5 gals of free product were removed from wells MW-07 and MW-09 using a peristaltic pump. GW sampling on 10/21/10 showed worst contam in well MW-06 with 23,516 ug/L total VOCs (down from 46,126 ug/L in Aug. 2010) and well MW-08 with 2,677 ug/L tVOCs (was not sampled in Aug. 2010, but had 5,731 ug/L in April 2010); extraction wells GEW-1 had 870 ug/L tVOCs (down from 4,169 ug/L in Aug. 2010) and GEW-3 had 329 ug/L tVOCs (down from 1,399 ug/L in Aug. 2010). System operation and GW monitoring will continue. - J. Kolleeny 08/25/11: Reviewed Syst Perf Mon Rpt for November 2010 thru January 2011 by URS, dated 6/18/11 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface, and that URS has completed several system modifications to improve contaminant recovery and system operation. Treated GW and recovered soil vapor discharges were in compliance with stds. Only well MW-07 had measurable free product, with 1.62 ft on 1/5/11 and 0.12 ft on 1/19/11; approx 1.5 gals of product were removed by peristaltic pump. GW sampling on 1/5/11 showed worst wells were MW-06 with 23,062 ug/L total VOCs (down a little from 23,516 ug/L in Oct. 2010), MW-8 with 5,083 ug/L tVOCs (up from 2,677 ug/L in Oct. 2010) and IW-10 with 3,368 ug/L tVOCs (was

**S105054624**

not sampled in Oct. 2010). System operation and GW monitoring will continue. - J. Kolleeny 12/02/11: Reviewed Syst Perf Mon Rpt for Feb.-April 2011 by URS, dated 9/7/11 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface; treated GW and recovered vapor discharges were in compliance with stds. Only well MW-07 had measurable LNAPL, with 0.60 ft on 4/4/11 and 0.21 ft on 4/27/11; approx 1.75 gals of product were removed by peristaltic pump. GW sampling on 4/4/11 showed decreases in contam in worst wells: MW-06 had 9,198 ug/L total VOCs (down from 23,062 ug/L in Jan. 2011), MW-8 had 2,923 ug/L tVOCs (down from 5,083 ug/L in Jan. 2011); however, GEW-1 had 1,591 ug/L tVOCs (was not sampled in Jan. 2011 but had 870 ug/L in Oct. 2010). Rpt includes tank inventory / comparison with DEC PBS records; these show that four 550-gal gasoline USTs were removed in mid-1990s or earlier, but location of these USTs is unknown. URS will continue to evaluate UST history and how it may have impacted on-site soil & GW. System operation and GW mon will continue. - JK 03/14/12: Reviewed Syst Perf Mon Rpt for 3rd Quarter 2011 by URS, dated 12/20/11 (in eDocs). Rpt states that on-site GWET & SVE systems continue to remove contam from subsurface. Only well had measurable LNAPL, but levels increased, with 0.78 ft on 6/6/11 and 0.65 ft on 7/18/11; approx 1.5 gals of product were removed by peristaltic pump. GW sampling on 7/18/12 showed worst contam in MW-6 with 12,569 ug/L total VOCs (up from 9,198 ug/L in April 2011), and MW-8 with 3,513 ug/L tVOCs (up from 2,923 ug/L in April 2012); well GEW-1 had 107 ug/L tVOCs, down significantly from 1,591 ug/L in April 2011. Rpt includes tank inventory and states that URS will continue to evaluate UST history and how it may have impacted on-site soil & GW. System operation and GW mon will continue. - J. Kolleeny 07/06/12: Received email from Kevin Shanahan of URS Corp: Jon, Next week we will be sending you/posting a rpt for Midtown South site which contains a work plan to collect soil samples at site. Purpose of soil sampling is to determine if SVE system was successful in remediating unsaturated soil. When you review rpt you may want to look at photo DSC05412 (attached) [in eDocs image folder as UST\_AreaAfterBackfilling ] to better understand limitations with drilling near new tank system. We are calling for 12 boring locations beneath building and one south of tank (foreground). - J. Kolleeny 07/12/12: Reviewed Syst Perf Mon Rpt for 4th Quarter 2011 by URS, dated 3/22/12 (in eDocs). Rpt states that treated GW and recovered soil vapor discharges were in compliance with stds. Free product was detected in well MW-7 at thicknesses ranging from 0.15 ft to 0.24 ft, and on one occasion in well MW-9 at 0.01 ft; approx 1.25 gals of product were removed by peristaltic pump. GW sampling on 10/10/11 showed worst contam in MW-6 with 7,294 ug/L total VOCs (down from 12,569 ug/L in July 2011), and MW-8 with 3,822 ug/L tVOCs (up a little from 3,513 ug/L in July 2011); injection well IW-15 had 932 ug/L tVOCs (had not been sampled since Jan. 2011, when it had 156 ug/L tVOCs), and GEW-1 had 114 ug/L tVOCs (up slightly from 107 ug/L in July 2011). Rpt includes UST inventory, states that URS will continue to evaluate UST history and how it may have impacted on-site soil & GW. System operation & GW mon will continue. Rpt seems to be missing several data tables (e.g., GW data table, well gauging data table). I sent email to Kevin Shanahan of URS requesting that rpt be re-issued with missing tables. - JK 07/17/12: Received email from Leng Ung of URS with attached pdf of revised 4th Quarter 2011 system performance monitoring rpt, with all data tables included (in eDocs). - J. Kolleeny 07/17/12: Reviewed

Syst Perf Mon Rpt - 1st Quarter 2012 by URS, dated 7/11/12 (in eDocs). Rpt states that vapor and water discharges from SVE and GWET systems were in compliance with discharge limits. Free product was detected in one well, MW-7, at thicknesses up to 0.36 ft; 1.25 gals of product were recovered by peristaltic pump. GW sampling on 1/9/12 showed worst dissolved contam in wells MW-6, with 7,160 ug/L total VOCs (down a little from 7,294 ug/L in Oct. 2011) and MW-8, with 2,060 ug/L tVOCs (down from 3,822 ug/L in Oct. 2011). Rpt states that URS will continue to operate SVE and GWET systems, but that systems are starting to show reduced benefit, with contam concentrations in recovered media reaching asymptotic conditions. Based on low vapor recovery by SVE system, URS recommends collecting confirmation soil samples from treatment area to determine if further soil remediation is needed. Rpt includes work plan for confirmation soil borings, proposing 13 borings laid out in a grid. I contacted Kevin Shanahan of URS and asked that work plan be revised to include historical soil data and that boring locations be modified to target specific areas where soil contam was detected in past; asked that confirmation soil boring work plan be revised and re-submitted as brief, separate document (rather than revising and re-submitting as part of 1st quarter 2012 monitoring rpt). He agreed to revise and re-submit work plan as requested. - JK 08/06/12: On 8/3/12, received revised Proposed Work Plan for Confirmation Soil Sampling by URS, dated 7/31/12 (in eDocs). Plan proposes 7 soil borings in area of known vadose zone soil impacts, to evaluate remedial progress by SVE system and need for continued operation of SVE system. I sent letter (in eDocs) to Afsar Samani of DDC, cc's to Mehrzad Asbagh of DDC, Kevin Shanahan & Harvey Roberts of URS, approving plan but requesting two add'l soil borings and drilling of one proposed boring as close as possible to former boring SB-10. - J. Kolleeny 09/10/12: Reviewed System Performance Monitoring Rpt - 2nd Quarter 2012 by URS, dated 8/30/12 (in eDocs). Rpt states that SVE and GWET systems operated continuously thru quarter, and that vapor & water discharges from SVE and GWET systems were in compliance with discharge limits. Free product was detected in well MW-7, at thicknesses up to 0.34 ft; 1.5 gals of product were recovered by peristaltic pump. GW sampling on 4/23/12 showed MW-6 had 6,835 ug/L total VOCs (down from 7,160 ug/L in Jan. 2012), MW-8 had 2,497 ug/L tVOCs (up from 2,060 ug/L in Jan. 2012), GEW-1 had 133 ug/L tVOCs (up from 60 ug/L in Jan. 2012). Rpt concludes that URS will continue to operate remedial systems; however, systems are showing indications of reduced benefit, with concentrations of recovered soil vapors and GW sampling results reaching asymptotic conditions. Rpt notes that DEC approved confirmation soil sampling plan in Aug. 2012 and that sampling is scheduled for 3rd quarter 2012. - J. Kolleeny 06/06/13: Reviewed System Performance Monitoring Rpt - 3rd & 4th Quarters 2012 by URS, dated 1/16/13 (in eDocs). Rpt states that SVE system was found off on arrival on 7/6/12 because the electrical switch had been turned off; system was restarted during same visit; and GWET system was off on arrival on 8/29/12 due to an air stripper alarm; air stripper was cleaned, alarm re-set and system re-started. Vapor discharges from both systems were in compliance with discharge limits. Free product was detected in well MW-7, from 0.05 ft to 0.42 ft; product was recovered with peristaltic pump on 12 visits, URS will continue product recovery at least monthly. GW sampling on 7/16/12 and 10/10/12 showed significant dissolved impacts persist in wells MW-6 and MW-8: MW-6 had 8,675 ug/L total VOCs in July 2012 (up from 6,835

**S105054624**

ug/L in April 2012) and increased to 9,795 ug/L in Oct. 2012; MW-8 had 4,007 ug/L tVOCs in July 2012 (up from 2,497 ug/L in April 2012) and increased to 6,944 ug/L in Oct. 2012. Soil sampling in Oct. 2012 showed significant residual vadose zone soil contam in boring S-09 near north end of easternmost horizontal SVE well, with 151,920 ug/kg total VOCs; two other borings had significant contam in saturated zone (S-04 with 218,380 ug/kg tVOCs and S-05 with 194,330 ug/kg tVOCs). Rpt states that URS will investigate whether SVE system can be modified to more effectively target remaining area of soil contam. URS will continue to operate both SVE and GWET systems, and will evaluate options to improve systems' effectiveness; twice monthly product recovery and quarterly GW sampling will continue. - J. Kolleeny 09/25/13: Reviewed System Performance Monitoring Rpt - 1st & 2nd Quarters 2013 by URS, dated 7/17/13 (in eDocs). SVE and GWET systems operated throughout rpt period, and vapor discharges were in compliance with discharge limits. Free product was detected in well MW-7 from 0.04 to 0.6 ft; product was recovered with peristaltic pump on 8 visits. GW sampling on 1/8/13 and 4/3/13 showed MW-6 had 58 ug/L total VOCs in Jan. 2013 (anomalous decrease from 9,795 ug/L in Oct. 2012) and rebounded to 7,156 ug/L in April 2013, while MW-8 had 6,656 ug/L tVOCs in Jan. 2013 (down from 6,944 ug/L in Oct. 2012), and decreased to 1,025 ug/L tVOCs in April 2013. Rpt concludes that soil & GW impacts at site are decreasing but remain high enough to warrant further remedial actions. URS will continue quarterly GW sampling, manual product recovery and operation of SVE & GWET systems, and will continue to evaluate options to improve and/or replace remedial systems to more effectively address remaining areas of contam. - J. Kolleeny 01/30/14: Reviewed System Performance Monitoring Rpt for 3rd & 4th Quarter 2013 by URS, dated 1/17/14, rcvd on 1/28/14. SVE & GWET systems operated throughout rpt period; vapor discharges were in compliance with discharge limits. Well gauging on 8 visits during rpt period showed up to 0.21 ft of LNAPL in well MW-7 and up to 0.04 ft in MW-9; ~1.75 gals of product were recovered from MW-7 and ~1.25 gals were recovered from MW-9, using a peristaltic pump. GW sampling in July 2013 showed well MW-6 had 10,623 ug/L total VOCs (up from 7,156 in April 2013) and well MW-8 had 6,044 ug/L tVOCs (up from 1,025 ug/L in April 2013). GW sampling in Oct. 2013 showed well MW-6 had 4,621 ug/L tVOCs and well MW-8 had 1,708 ug/L tVOCs. Based on persistence of product and high VOC levels at site, rpt makes proposals to better evaluate site conditions and improve effectiveness of on-site remedial systems. Specifically, URS recommends: (1) advance 3 new soil borings to evaluate current soil conditions, (2) over-drill existing monitoring wells MW-6, MW-7, MW-8 and MW-9 (1 diameter wells) and replace with 4 diameter wells for improved product recovery and to allow for future remedial actions (e.g., placement of absorbent or ORC socks, extraction by vac truck, and/or surfactant injections to desorb contaminants from soil), (3) install 5 new 4 diameter mon wells to better delineate areas of product and dissolved contam, (4) install addtl 6 diameter GW extraction well in area of greatest contam, (5) redevelop 3 existing extraction wells to improve GW recovery, and (6) possibly inject surfactants to enhance soil remediation. Based on results of 3 new soil borings, URS may implement proposed modifications to on-site SVE system. Once product in wells MW-7 & MW-9 has been addressed, URS proposes to shut down existing GW extraction wells GEW-1, GEW-2 & GEW-3 and operate only new extraction well GEW-4 to determine its radius of influence; after review of resulting data, addtl

**MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued)**

**S105054624**

extraction wells will be brought on-line. After speaking with Kevin Shanahan of URS about proposals, I sent letter (in eDocs) approving proposals to Afsar Samani of DDC, cc's to Marcy Asbagh of DDC, Kevin Shanahan and Harvey Roberts of URS, noting that before doing any surfactant injections, work plan must be submitted for DEC review/approval. - J. Kolleeney 09/29/14: Reviewed System Performance Mon Rpt for 1st & 2nd Quarter 2014 by URS, dated 6/25/14 (in DecDocs). Rpt states that SVE system vapor discharge and air stripper off-gas were in compliance during mon period, based on both PID screening and sample analysis by lab. GW recovery wells GEW-1, GEW-2 & GEW-3 continue to operate and recover GW. In addition, URS visited site 10 times during rpt period to gauge wells and recover LNAPL; well MW-7 had product every visit except 4/23/14, with thicknesses up to 0.21 ft, and they recovered ~2.25 gals during period. Rpt states that, as proposed by URS and approved by DEC, URS will overdrill existing one-inch wells MW-6, MW-7, MW-8 & MW-9 and replace with 4-inch wells, plus they will install five addt'l wells in this area to better delineate product plume. GW sampling was performed in January and April 2014. Jan. 2014 results showed well MW-6 had 5,142 ug/L total VOCs (up from 4,621 ug/L in Oct. 2013) and MW-8 had 5,908 ug/L tVOCs (up from 1,708 ug/L in Oct. 2014). April 2014 results showed well MW-6 declined to 4,453 ug/L tVOCs; MW-8 was not sampled due to vehicle parked over well. Operation of SVE and GWET systems, GW sampling and LNAPL recovery will continue at site. - J. Kolleeney 09/30/14: Reviewed Request for Soil Vapor Extraction System Shutdown by URS, dated 9/10/14 (in DecDocs). Rpt notes that monitoring of on-site SVE system s vapor influent indicates that system has reached limit of effectiveness and is no longer recovering measurable quantities of HC vapors. Rpt also notes that soil data indicate system has effectively treated vadose zone soil contamination and that remaining soil impacts at site are located mainly in saturated soil zone, which is not targeted by SVE system. Ergo, URS requests approval to suspend operation of SVE system and prepare system for long-term shutdown. System will remain on-site and URS will evaluate future site data to determine if resuming system operation is warranted. In meantime, other remedial activities at site operation & modification of GWET system, product recovery, GWET system performance monitoring, and quarterly GW sampling will continue. I sent letter (in DecDocs) approving system shutdown to Afsar Samani of DDC, cc's to Merhzad Asbagh of DDC, Kevin Shanahan and Harvey Roberts of URS. - J. Kolleeney 03/12/15: Reviewed System Performance Monitoring Rpt for 3rd & 4th Quarter 2014 by URS, dated 1/9/15 (in DecDocs). Rpt states that operation of on-site SVE system terminated on 10/1/14. As for GWET system, results of PID monitoring of air-stripper vapor effluent were ND during rpt period, and lab analysis of effluent air sample was ND for benzene, so system vapor discharge was in compliance. Sampling of GWET system GW influent showed system is recovering low levels of dissolved VOCs (up to 90 ug/L total VOCs). Well gauging and product recovery were performed 8 times during rpt period; product was detected in well MW-7 each time, with greatest thickness of 0.36 ft; about 2 gals total product recovered. GW sampling was performed in July and Oct. 2014; results showed well MW-6 had 3,234 ug/L tVOCs in July 2014 (down from 4,453 ug/L in April 2014) and increased to 4,406 ug/L tVOCs in Oct. 2014; well MW-8 had 4,264 ug/L tVOCs in July 2014 (not sampled in April 2014; had 5,908 ug/L tVOCs in Jan. 2014) and decreased to 1,046 ug/L tVOCs in Oct. 2014. Rpt states that URS will over-drill existing

1-inch wells MW-6, MW-7, MW-8 & MW-9 and replace with 4-inch wells, and will install 5 add'l mon wells in this area to better delineate LNAPL plume. Also, an add'l GW extraction well will be installed within dissolved-phase plume, existing extraction wells will be re-developed, and URS may apply surfactants to subsurface to enhance soil remediation. Qtrly GW monitoring, GWET system operation and manual product recovery efforts will continue, and URS will evaluate need for surfactant applications or other remedial actions; they will prepare/submit work plan prior to doing any add'l remedial actions.

- JK 03/12/15: I emailed Kevin Shanahan of AECOM to note that 3rd & 4th quarter 2014 rpt does not include any SVE system monitoring data for 3rd quarter (system was permanently shut down on Oct. 1st, 2014). He sent table with SVE monitoring data for Aug.-Sept. 2014 (July 2014 data were included in System Shutdown Request Letter rpt). Table in DecDocs as brief. - JK 05/21/15: Reviewed System Performance Monitoring Rpt for First Quarter 2015 by URS, dated 4/10/15 (in DecDocs). Rpt states that URS is planning to add a 4th GW extraction well to GWET system, install add'l monitoring wells, and re-install some wells with larger diameter casings to enhance remediation and monitoring at site. PID screening and lab sampling of GWET system's air stripper vapor effluent showed air discharge is in compliance. Recovery of free product from well MW-7 with peristaltic pump was performed 4 times during quarter, for total of ~1 gal removed; highest product thickness measured was 0.18 ft. During GW sampling in Jan. 2015, well MW-8 was not sampled because access to well was obstructed. Sampling results for 1/13/15 showed well MW-6 had 2,665 ug/L total VOCs (down from 4,406 ug/L in Oct. 2014), well MW-9 had 11,316 ug/L tVOCs (not sampled in April, July or Oct. 2014), and extraction well GEW-1 had 148 ug/L tVOCs (up from 47 ug/L in Oct. 2014). Sampling of influent to GW treatment system on 1/7/15 showed influent from GEW-1 had 165 ug/L tVOCs, GEW-2 had 6 ug/L tVOCs, and GEW-3 had 56 ug/L tVOCs. Rpt states that URS will continue quarterly GW monitoring/sampling, continue manual LNAPL recovery, continue operation of GWET system & proceed with enhancements to system (install'n of new extraction well and re-development of existing extraction wells), proceed with installing new mon wells and replacing several narrow-diameter wells, and continue to evaluate need for surfactant injections or other remedial actions to address residual free product and saturated soil zone contamination. - J. Kolleeny 07/23/15: Reviewed System Performance Monitoring Rpt for 2nd Quarter 2015 by URS dated 6/2/15 (in DecDocs). Rpt covers period 1/29/15 to 4/29/15 as 2nd qtr 2015. Rpt states that URS plans to add a 4th GW extraction well to GWET system, install add'l monitoring wells, and re-install some wells with larger diameter casings to enhance remediation & monitoring at site. PID screening and lab sampling of GWET system's air stripper vapor effluent showed air discharge is in compliance. LNAPL was removed from well MW-7 3 times during quarter using a peristaltic pump; well had up to 0.32 ft of LNAPL; ~0.75 gals were recovered. GW influent samples from GWET system extraction wells show system is recovering low levels of VOCs. GW sampling in April 2015 showed well MW-6 had 3,445 ug/L total VOCs (up from 2,665 ug/L in Jan. 2015), well MW-8 had 248 ug/L tVOCs (up from 148 ug/L in Jan. 2015), well MW-9 had only 0.8 ug/L tVOCs (down from 11,316 ug/L in Jan. 2015; this well has periodically had LNAPL, most recently in March 2014). URS will continue quarterly GW monitoring & sampling, manual LNAPL recovery, and operation of GWET system (proceeding with system enhancements in 3rd quarter 2015); in

addition, URS will proceed with installing new mon wells and replacing several narrow wells, and will continue to evaluate need for surfactant injections or other remedial actions to address residual free product and saturated soil zone contamination. - J. Kolley 10/30/15: Received email from Kevin Shanahan of URS/AECOM: Jon, Envirotrac is performing routine O&M for existing GW pump & treat system. They are also constructing system enhancements over next few months. Today we were informed that GW extraction pump in GEW-02 is broken. GEW-02 is lowest producing well at site, is located outside of plume and is being replaced by new extraction well GEW-04 in November. We wanted to make you aware that GW extraction at GEW-02 is no longer happening and that new extraction well should be drilled and functional by end of year. I sent email reply: Kevin, Thanks for letting me know. I agree it doesn't make sense to try to repair or replace pump in GEW-02, considering its location outside plume and its historically low yield. Please continue to keep me posted and let me know when new extraction well GEW-04 has been installed. - J. Kolley 11/23/15: During quarterly DDC Consent Order Status Meeting on 11/19/15, Harvey Roberts of URS related that a local citizen had contacted NYPD and URS to complain about noise generated by on-site GW recovery system. URS had modifications made to system, resulting in decrease of ~15 decibels (a significant noise decrease); however, citizen continued to make complaints. Mr. Roberts conducted a test in which he turned off system and asked citizen if there was any difference in noise, citizen said no difference, suggesting system may not be source of noise perceived as bothersome. When Roberts pointed out that system had been off when he had asked for noise evaluation, citizen remained skeptical and continued to maintain that system is source of noise problem. At meeting, I asked if system GW influent contains significant levels of dissolved contaminants. Kevin Shannahan of URS/AECOM responded that VOC levels in system influent are very low. I suggested shutting down GWET system until new recovery well is installed in heart of plume, since system is currently recovering minimal hydrocarbons and shutting it temporarily might resolve noise complaints. URS/AECOM said they would look into shutting down system. On 11/23/15, I received email from Harvey Roberts: Jon, Per your suggestion at last week's Quarterly Status Meeting, URS has instructed Envirotrac, Midtown South Pct remediation system operator, to shut treatment system while they modify system. Envirotrac plans to shut system tomorrow during its regularly scheduled O&M visit. System operation will resume in late Jan. 2016 when modifications have been completed. I sent email reply: Harvey, Thanks for letting me know. I'm assuming that latest GW data show contaminant plume confined to site. If there is a sampling event before system modifications have been completed in Jan. 2016 and GW data show that plume is migrating off site, it may be necessary to re-start system before mods are completed, to re-establish hydraulic control. - JK 12/10/15: Reviewed System Performance Monitoring Rpt for 3rd Quarter 2015 by URS, dated 9/1/15 (in DecDocs). Rpt seems to cover period from 4/29/15 thru 7/29/15 as 3rd qtr of 2015. Rpt states that URS will add a 4th GW extraction well to GWET system, install add'l monitoring wells, reinstall several existing wells with larger diameter casings, and take steps to reduce noise emanating from system. PID screening & lab sampling of system's vapor discharge showed compliance with DEC stds. URS visited site 4 times during rpt period, detecting LNAPL in well MW-7 each time, at thicknesses up to 0.83 ft. ~1 gal of LNAPI was recovered. GW sampling on 7/20/15 showed

**MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued)**

**S105054624**

well MW-6 had 3,178 ug/L total VOCs (down from 3,445 ug/L in April 2015), well MW-8 had 1,665 ug/L tVOCs (up from 248 ug/L in April 2015), well MW-9 had 2,398 ug/L tVOCs (up from 0.8 ug/L in April 2015). Rpt notes that well MW-9 last had LNAPL in March 2014, and that GW samples from MW-9 have shown highly fluctuating tVOCs. Rpt states that, in addition to system mods & well install'ns mentioned above, URS will continue to evaluate need for surfactant injections or other remedial actions to address saturated soil contam. URS will continue quarterly GW monitoring & LNAPL recovery efforts. - JK 03/21/16: Reviewed System Performance Monitoring Rpt for 4th Quarter 2015 by URS, dated 12/2/15 (in DecDocs). Rpt covers period from 7/30/15 to 10/28/15 as 4th qtr 2015. PID screening & lab sampling of GWET system's vapor discharge showed compliance with DEC stds. URS visited site 3 times during rpt period, detecting LNAPL in well MW-7 each time, up to 0.94 ft in thickness; ~1 gal of LNAPL was recovered. GW sampling on 10/7/15 showed well MW-6 had 3,378 ug/L total VOCs (up from 3,178 ug/L in July 2015), well MW-8 had 1,222 ug/L tVOCs (down from 1,665 ug/L in July 2015), well MW-9 had 5,541 ug/L tVOCs (up from 2,398 ug/L in July 2015). Rpt states that on 10/28/15, GW pump in extraction well GEW-02 malfunctioned; URS contacted DEC and it was agreed that since well is outside main plume and has historically had low yield, it would not be worth repairing or replacing pump; system continues to operate with two recovery wells, GEW-01 and GEW-03, until new recovery well GEW-04 is installed and brought on line. URS will install 4th recovery well, install add'l monitoring wells and replace several existing 1-inch wells with 4-inch wells (according to approved plan). They will also continue to evaluate need for surfactant injections, and will continue quarterly GW monitoring & LNAPL recovery efforts. - J. Kolleeny 05/31/16: Reviewed System Performance Monitoring Rpt for 1st Quarter 2016 by URS, dated 4/7/16 (in DecDocs). Rpt covers period from 10/29/15 to 1/18/16 as 1st qtr 2016. Based on PID screening of GWET system's vapor influent/effluent, it appears system discharge complied with DEC stds (system was shut down on 11/24/15, prior to quarterly air sampling, in prep for reinstall'n of wells and modifications to GWET system). In Nov. 2015, well MW-7 had 0.28 ft of LNAPL; during Dec. 2015 & Jan. 2016, well was not gauged as access to well was obstructed at those times. Approx 0.25 gal of LNAPI was recovered from MW-7. GW sampling was performed on 1/18/16; wells MW-6, MW-7 & MW-8 were not sampled because they were in process of being reinstalled as larger wells. Well MW-9 had 3,988 ug/L total VOCs (down from 5,541 ug/L in Oct. 2015); well GEW-1 had 53 ug/L tVOCs (up from 40 ug/L in Oct. 2015). Rpt states that subcontractor EnviroTrac is in process of implementing remedial system modifications approved by DEC, including install'n of add'l delin wells and an add'l GW extraction well; this work is expected to be completed in early 2016, at which point operation of GWET system will resume. URS will continue quarterly GW sampling and manual product recovery. - J. Kolleeny 09/07/16: Reviewed System Performance Monitoring Rpt for 2nd & 3rd Quarters 2016 by URS, dated 8/11/16 (in DecDocs). Rpt covers period from Jan. 19 thru July 22, 2016 as 2nd & 3rd quarters of 2016.) Rpt summarizes recent modifications at site that were proposed by URS and approved by DEC in Jan. 2014 - they over-drilled & replaced 1-inch wells MW-6, MW-7 & MW-8 with 4-inch wells (MW-9 could not be over-drilled as planned, so new well MW-15 was installed nearby), installed four new wells MW-10, MW-11, MW-13 & MW-14 (proposed well MW-12 was not installed due to subsurface obstruction, MW-13 was moved to west to

**S105054624**

compensate), installed add'l extraction well GEW-4; in addition, they plan to redevelop extraction wells GEW-1 and GEW-3 to ensure proper functioning (GEW-2 consistently show no contam, so it won't be redeveloped.) GWET, shut down since 11/24/15, was re-started with new extraction well on 8/3/16. During rpt period, free product was detected in well MW-7/7R (0.03 ft in MW-7 in March, 0.08 ft in MW-7R in April 2016) and in well MW-15 (0.02 ft in April 2016). Absorbent socks were placed in MW-7R and MW-15 in April, and were replaced in June 2016 as both socks were 100% saturated. GW sampling in April 2016 showed well MW-6R had 18,434 ug/L total VOCs, well MW-8R had 1,981 ug/L tVOCs, well MW-10 had 1,410 ug/L tVOCs, and well MW-11 had 8,359 ug/L tVOCs. GW sampling in July 2016 showed MW-6R decreased to 7,150 ug/L tVOCs, MW-8R decreased to 1,591 ug/L tVOCs, MW-10 increased to 1,959 ug/L tVOCs, and MW-11 decreased to 2,892 ug/L tVOCs. URS will continue manual product recovery, quarterly GW sampling, and operation/monitoring of GWET system; they'll also continue to evaluate need for surfactant injections or other actions to address residual LNAPL and saturated soil contam, and will submit a work plan for DEC approval before implementing any add'l remedial actions. - JK 03/24/17: Reviewed System Performance Monitoring Rpt for 4th Quarter 2016 by URS, dated 12/22/16 (in DecDocs). Rpt discusses 2016 modifications to GW extraction & treatment system at site (mainly install'n & operation of add'l extraction well GEW-4). URS estimates total gals of GW collected by each well during rpt period as: GEW-1 ~9,233 gals, GEW-3 182 gals, GEW-4 3,840 gals. Extraction wells GEW-1 and GEW-3 operated from 9/27 thru 10/6, and were then shut off to determine influence of GEW-4 when pumping on its own. GW samples from extraction wells taken by EnviroTrac (subcontractor) on 10/11/16 showed GEW-1 had 240 ug/L total VOCs, GEW-3 had 5,725 ug/L tVOCs, GEW-4 had 5,917 ug/L tVOCs. Samples collected by URS on 10/5/16 showed GEW-1 had 224 ug/L tVOCs, GEW-3 had 60 ug/L tVOCs, and GEW-4 had 23,293 ug/L tVOCs. Rpt states these data indicate that new well GEW-4 was installed in area with highest dissolved impacts as intended. Samples of vapor effluent from air stripper and GW discharge to NYC sewer were in compliance. No free product was detected in 3 site visits this quarter, but absorbent socks in wells MW-7R & MW-15 were replaced on each visit. GW sampling on 10/5/16 showed well MW-6R had 4,581 ug/L tVOCs (down from 7,150 ug/L in July 2016), well MW-8R had 1,201 ug/L tVOCs (down from 1,591 ug/L in July 2016), well MW-10 had 2,819 ug/L tVOCs (up from 1,959 ug/L in July 2016), well MW-11 had 348 ug/L tVOCs (down from 2,892 ug/L in July 2016). Rpt states that GW & soil contam in saturated & smear zones remain high enough to warrant continued remediation, and small amts of free product remain in a small area of site. URS concludes that data from newly installed wells have better delineated GW impacts, showing plume is limited to 40 ft by 50 ft area. URS will continue quarterly GW monitoring, continue manual product recovery, optimize GWET system ops, and continue to evaluate need for surfactant injections or other remedial action. They also propose to remove wells that are consistently dry from GW monitoring program (IW-3, IW-10, IW-13, IW-15, VW-02 & VW-04), and to decommission a number of 1-inch injection wells (IW-1 thru IW-5A, IW-11, IW-12, IW-14, IW-16 thru IW-18), which are often dry and/or are located near existing monitoring wells. I sent email (in DecDocs) to Jerry Aliberti of DDC, cc's to March Asbagh of DDC, Kevin Shanahan and Harvey Roberts of URS/AECOM, approving these recommendation. - J. Kolley 06/15/17: Reviewed System Performance Monitoring Rpt for

MAP FINDINGS

**S105054624**

First Quarter 2017 by URS, dated 3/30/17 (in DecDocs). Rpt covers period from Oct. 2016 thru Jan. 2017. During this period, extraction wells GEW-1 & GEW-3 were not operating & did not recovery any GW; GEW-4 recovered 15,320 gals (155 gpd). Sampling of influent to GWET system in Nov. & Dec. 2016 and Jan. 2017 showed total VOCs ranged from 726 ug/L to 2,3339 ug/L in GEW-1, from 1,029 ug/L to 3,285 ug/L in GEW-3, and from 1,441 ug/L to 3,282 ug/L in GEW-4. Sampling of system discharge to NYC sewer system showed effluent was in compliance with NYCDEP discharge criteria. GW samples collected from extraction wells on 1/17/17 showed no VOCs in GEW-1 or GEW-2, GEW-3 had 9.5 ug/L of MTBE, and GEW-4 had 8,147 ug/L tVOCs. URS visited site 3 times during quarter to gauge wells & recover LNAPL, but no LNAPL was detected in any wells; however, absorbent socks in MW-7R & MW-15 continue to collect LNAPL. Socks were replaced in Nov. 2016. GW sampling on 1/17/17 showed well GEW-4 had 8,147 ug/L tVOCs (down from 23,293 ug/L in Oct. 2016), well MW-6R had 104 ug/L tVOCs (down from 4,581 ug/L in Oct. 2016), well MW-10 had 289 ug/L tVOCs (down from 2,819 ug/L in Oct. 2016), well MW-11 had 257 ug/L tVOCs (down from 348 ug/L in Oct. 2016); wells MW-8R & MW-15 were not sampled due to vehicles parked over wells. URS will continue quarterly GW monitoring, product recovery by absorbent socks (or other methods as appropriate), operation of GWET system, evaluation of need for surfactant injections or other remedial actions to address residual LNAPL and saturated zone soil impacts, and will decommission 11 injection wells DEC approved for removal from GW monitoring program.

- JK 07/24/17: Reviewed System Performance Monitoring Rpt for Second Quarter 2017 by URS, dated 6/13/17 (in DecDocs). Rpt covers period from 1/19/17 thru 4/27/17. Rpt states that GWET system operated in compliance with benzene air emission limit, based on weekly PID screening of sir stripper influent & effluent showing no detections and on quarterly samples of vapor influent & effluent showing no VOCs detected. During this quarter, system operated using only new extraction well GEW-4, which recovered 14,130 gals of GW (143 gpd). Monthly GW samples from extraction wells showed that on Feb. 23, 2017, GEW-1 had 924 ug/L total VOCs, GEW-3 had 1,621 ug/L tVOCs, GEW-4 had 1,862 ug/L tVOCs; on March 29, 2017, GEW-1 had 852 ug/L tVOCs, GEW-3 had 1,517 ug/L tVOCs, GEW-4 had 1,906 ug/L tVOCs; on April 27, 2017, GEW-1 had 698 ug/L tVOCs, GEW-3 had 1,458 ug/L tVOCs, GEW-4 had 1,929 ug/L tVOCs. Monthly samples of effluent from GWET showed system discharge was in compliance with NYCDEP criteria. Quarterly GW sampling on 4/13/17 showed well GEW-4 had 9,799 ug/L tVOCs (up from 8,147 ug/L in Jan. 2017), well MW-6R had 130 ug/L tVOCs (up from 104 ug/L in Jan. 2017), well MW-10 had 115 ug/L tVOCs (down from 289 ug/L in Jan. 2017), well MW-11 had 509 ug/L tVOCs (up from 257 ug/L in Jan. 2017). No measurable LNAPL was reported for this quarter, but LNAPL continued to be recovered by absorbent socks installed in wells MW-7R and MW-15; socks in MW-15 were replaced each month during this quarter. URS will: continue quarterly GW monitoring, continue product recovery by absorbent socks and/or other methods as appropriate, optimize GWET system for more continuous pumping to maintain/increase GW capture zone, evaluate need for surfactant injections or other actions to address residual LNAPL & saturated zone soil impacts, decommission eleven injection wells, repair leak in carbon vessel T-501 or replace unit, heat trace & insulate exposed section of discharge pipe from GWET to DEP sewer system.

- J. Kolleeny 01/08/18: Reviewed System Performance Monitoring Rpt for Third Quarter 2017 by URS, dated 9/15/17 (in

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued)

S105054624

DecDocs). Rpt covers period from 4/28/17 to 7/26/17. Based on PID readings and air sampling data, on-site GWET system operated in compliance with benzene air discharge limit. During quarter, extraction well GEW-1 recovered 5 gals, GEW-3 recovered 0 gals, GEW-4 recovered 10,523 gals (117 gpd). GW influent samples from extraction wells showed that on 5/26/17, GEW-1 had 94 ug/L total VOCs, GEW-3 had 349 ug/L tVOCs, GEW-4 had 1,770 ug/L tVOCs; on 6/30/17, GEW-1 had 77 ug/L tVOCs, GEW-3 had 857 ug/L tVOCs, GEW-4 had 1,835 ug/L tVOCs; on 7/26/17, GEW-1 had 164 ug/L tVOCs, GEW-3 had 672 ug/L tVOCs, GEW-4 had 1,452 ug/L tVOCs. Treated GW discharge from GWET system complied with NYCDEP criteria. There were no system shutdowns this quarter. Three well gauging events showed no LNAPL detected in any wells this quarter (absorbent socks were removed from MW-7R & MW-15 on 5/24/17 to see if LNAPL would collect, but no measurable product was observed). GW sampling on 7/26/17 showed well GEW-4 had 11,327 ug/L tVOCs (up from 9,799 ug/L in April 2017), well MW-6R had 384 ug/L tVOCs (up from 131 ug/L in April 2017), well MW-7R had 16,886 ug/L tVOCs (not sampled in April 2017, Jan. 2017 or Oct. 2016 due to LNAPL in well), well MW-9 had 2,540 ug/L tVOCs (not sampled previous 3 quarters), well MW-10 had 151 ug/L tVOCs (up from 115 ug/L in April 2017), well MW-11 had 316 ug/L tVOCs (down from 509 ug/L in April 2017), well MW-15 had 65,257 ug/L tVOCs (not sampled due to LNAPL in Jan. & April 2017, or Oct. 2016), well GEW-1 had 92 ug/L tVOCs (up from 10 ug/L in April 2017). URS will continue quarterly GW monitoring, use absorbent socks for LNAPL recovery from affected wells, optimize GWET system, evaluate need for surfactant injections, turn on pump in well GEW-1, decommission 11 injection wells, replace liquid-phase carbon adsorbers, insulate exposed section of discharge pipe from GWET to DEP sewer system. - JK 04/05/18: Reviewed System Performance Monitoring Rpt for Fourth Quarter 2017 by URS, dated 1/23/18 (in DecDocs). PID monitoring & lab sampling of GWET system air stripper's vapor influent & effluent showed no VOCs detected in either, so system's benzene discharge is in compliance. Monthly sampling of GWET system's treated water discharge showed compliance with NYCDEP discharge criteria. GWET system recovered 37,950 gals of GW during rpt period (7/26 - 10/31/17). Monthly sampling of GW influent from each extraction well (on 8/31, 9/28 & 10/31/17) showed total VOCs ranged from 13 ug/L to 607 ug/L in GEW-1, from 16 ug/L to 886 ug/L in GEW-3, and from 149 ug/L to 1,309 ug/L in GEW-4; highest VOC levels were seen in Aug. 2017, with decreases in Sept. & Oct. 2017 partly attributable to increased capture zone after bringing GEW-1 back on line. Well gauging showed no LNAPL detected in any wells this quarter. GW sampling on 10/30/17 showed well GEW-1 had 143 ug/L tVOCs (up from 92 ug/L in July 2017), well GEW-3 had 8 ug/L tVOCs (up from 6 ug/L in July 2017), well GEW-4 had 5,736 ug/L tVOCs (down from 11,327 ug/L in July 2017), well MW-6R had 191 ug/L tVOCs (down from 384 ug/L in July 2017), well MW-7R had 11,243 ug/L tVOCs (down from 16,886 ug/L in July 2017), well MW-8R had 220 ug/L tVOCs (not sampled in July 2017, had 5 ug/L tVOCs in April 2017), well MW-9 had 78 ug/L tVOCs (down from 2,540 ug/L in July 2017), well MW-10 had 1,346 ug/L tVOCs (up from 151 ug/L in July 2017), well MW-11 had 3,693 ug/L tVOCs (up from 316 ug/L in July 2017), well MW-15 had 57,704 ug/L tVOCs (down from 65,257 ug/L in July 2017). Rpt states that following DEC's 3/24/17 approval, 7 injection wells were decommissioned on 10/2/17 (4 other injection wells approved for decommissioning could not be located & are presumed paved over during past construction work). Rpt states that URS will continue quarterly

GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, continue to evaluate need for surfactant injections or other actions to address product & saturated soil contam, and will repair flow meters/totalizers for GEW-1 & GEW-4. - J. Kolleeny 06/05/18: Reviewed System Performance Monitoring Rpt for First Quarter 2018 by URS, dated 3/13/18 (in DecDocs). Rpt covers period from 11/01/17 thru 1/31/18. PID screening & lab sampling of GWET system air stripper discharge showed virtually no VOCs detected in vapor stream, no benzene in effluent, so discharge was in compliance with DEC stds. Monthly sampling of GWET system's treated water discharge showed compliance with NYCDEP discharge criteria. GWET system (extraction wells GEW-1 & GEW-4) recovered total of 80,692 gals of GW during rpt period, going by summing flows from extraction wells, or going by discharge flow meter, system recovered 61,786 gals of GW; URS states that discharge flow meter is more likely accurate, and speculates that mineral deposition in piping from extraction wells or in flow meters could cause erroneous readings; contractor (EnviroTrac) is scheduled to disassemble and clean piping system in Feb. 2018. Monthly sampling of GW influent from each extraction well showed total VOCs ranged from 6 ug/L to 20 ug/L in GEW-1, from 9 ug/L to 51 ug/L in GEW-3, and from 123 ug/L to 683 ug/L in GEW-4; highest tVOCs for each extraction well were from Jan. 2018 sampling event. Gauging of wells showed a sheen in MW-7R on 1/31/18 (absorbent sock was replaced), and MW-15 had 0.03 ft of LNAPL on 12/28/17 and 0.01 ft on 1/31/18; socks were replaced both times. GW sampling on 1/31/18 & 2/1/18 showed well GEW-3 had 14 ug/L tVOCs (had 8 ug/L in Oct. 2017), well GEW-4 had 6,829 ug/L tVOCs (up from 5,736 ug/L in Oct. 2017), well MW-6R had 119 ug/L tVOCs (down from 191 ug/L in Oct. 2017), well MW-8R had 103 ug/L tVOCs (down from 220 ug/L in Oct. 2017), well MW-9 had 93 ug/L tVOCs (up from 78 ug/L in Oct. 2017), well MW-10 had 1,028 ug/L tVOCs (down from 1,346 ug/L in Oct. 2017), well MW-11 had 17,814 ug/L tVOCs (up from 3,693 ug/L in Oct. 2017). Wells MW-7R & MW-15 were not sampled due to LNAPL; well GEW-1 could not be accessed. Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. - J. Kolleeny 10/11/18: Reviewed System Performance Monitoring Rpt for 2nd Quarter 2018 by URS dated 7/31/18 (in DecDocs). Rpt covers 2/1/18 thru 4/25/18. Rpt states that screening of air stripper vapor discharge showed no PID readings, and lab sampling of vapor influent & effluent on 4/11/18 showed no benzene (or other VOCs) detected, so GWET system was in compliance with air stds. Sampling of system's treated GW discharge showed compliance with NYCDEP criteria. Only extraction wells GEW-1 and GEW-4 operated this quarter. Monthly sampling of GW influent from each extraction well showed total VOCs ranged from 18 to 29 ug/L in GEW-1, from 29 to 147 ug/L in GEW-3, and from 30 to 2,522 ug/L in GEW-4. Well gauging on 4/6/18 showed a petroleum sheen in wells MW-7R and MW-15; both wells contain absorbent socks which are not yet fully saturated. GW sampling on 4/16 & 4/15/18 showed well GEW-1 had 452 ug/L total VOCs (not sampled in Jan. 2018 due to obstruction; had 143 ug/L tVOCs in Oct. 2017), well GEW-3 had 6 ug/L tVOCs (down from 14 ug/L in Jan. 2018), well GEW-4 had 15,533 ug/L tVOCs (up from 6,829 ug/L in Jan. 2018), well MW-6R had 3 ug/L tVOCs (down from 119 ug/L in Jan. 2018), well MW-8R was ND (had 103 ug/L tVOCs in Jan. 2018),

well MW-9 had 15 ug/L tVOCs (down from 93 ug/L in Jan. 2018), well MW-10 had 3,079 ug/L tVOCs (up from 1,028 ug/L in Jan. 2018), well MW-11 had 12,695 ug/L tVOCs (down from 17,814 ug/L in Jan. 2018); wells MW-7R and MW-15 were not sampled due to presence of sheen (~0.001 ft of LNAPL). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. - J. Kolleeny 12/20/18: Reviewed System Performance Monitoring Rpt for Third Quarter 2018 by URS dated 11/5/18 (in DecDocs). Rpt covers 4/26/18 thru 7/26/18. Rpt states that system air stripper vapor influent & effluent PID readings were all zero, except on 7/20/18 when effluent measured 0.10 ppmv; 2% estimated benzene concentration would be 0.002 ppmv, which is well below emission limit of 2.0 ppmv. Lab analysis of vapor influent/effluent collected on 8/15/18 showed no benzene or other VOCs detected, so GWET system was in compliance with air stds. Sampling of system's treated GW discharge showed compliance with NYCDEP criteria. Only extraction wells GEW-1 and GEW-4 operated this quarter; GEW-1 recovered 72,207 gals of GW, GEW-4 recovered 3,941 gals. Rpt states that no measurable LNAPL or sheen was observed in any wells this quarter; absorbent socks in wells MW-7R & MW-15 were 75% saturated and replaced on 7/30/18. GW sampling on 7/30/18 showed well GEW-1 had 230 ug/L total VOCs (down from 452 ug/L in April 2018), well GEW-3 had 16 ug/L tVOCs (up from 6 ug/L in April 2018), well GEW-4 had 20,027 ug/L tVOCs (up from 15,553 ug/L in April 2018), well MW-6R was ND (had 3 ug/L tVOCs in April 2018), well MW-8R had 59 ug/L tVOCs (was ND in April 2018), well MW-9 had 64 ug/L tVOCs (up from 15 ug/L in April 2018), well MW-10 had 3,732 ug/L tVOCs (up from 3,079 ug/L in April 2018), well MW-11 had 9,378 ug/L tVOCs (down from 12,695 ug/L in April 2018). Rpt states that wells MW-7R and MW-15 were not sampled due to product (?). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, evaluate need for addt'l wells to south of MW-10 & MW-11 to better delineate plume, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. - J. Kolleeny 03/07/19: Reviewed System Performance Monitoring Rpt for Fourth Quarter 2018 by URS dated 1/16/19 (in DecDocs). Rpt covers 7/27/18 thru 10/23/18. On-site GWET system air stripper vapor influent & effluent PID readings were all zero this quarter. Lab analysis of system vapor influent & effluent samples collected on 10/23/18 showed influent had 57 ppbv total volatiles (all MTBE), and effluent was ND; no benzene was detected, system was in compliance with DEC air stds. System's treated GW discharge was in compliance with NYCDEP criteria. Extraction wells GEW-1 and GEW-4 operated this quarter; GEW-1 collected 59,684 gals, GEW-4 collected 4,473 gals. Gauging of wells showed product sheen in well MW-15 in Oct. 2018; absorbent socks have been placed in MW-15 and MW-7R. GW sampling on 10/10/18 showed well MW-7R had 2,921 ug/L total VOCs (was not sampled for past several quarters due to LNAPL), well MW-9 had 92 ug/L tVOCs (up from 64 ug/L in July 2018), well MW-10 had 3,176 ug/L tVOCs (down from 3,732 ug/L in July 2018), well MW-11 had 2,758 ug/L tVOCs (down from 9,378 ug/L in July 2018), well GEW-1 had 160 ug/L tVOCs (down from 230 ug/L in July 2018), well GEW-4 had 19,134 ug/L tVOCs (down from 20,027 ug/L in July 2018). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery

from affected wells using absorbent socks, continue to optimize GWET system, evaluate need for add'l wells to south of MW-10 & MW-11 to better delineate plume, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. Also, URS will lower pump on set-point for P-104 in extraction well GEW-4 from 12 ft to 14 ft bgs, and will monitor & record pump cycle frequencies and durations before and after adjusting set-point. - J. Kolleeny 06/17/19: Reviewed System Performance Monitoring Rpt for First Quarter 2019 by URS dated 5/2/19 (in DecDocs). Rpt covers 10/24/18 thru 1/31/19. On-site GWET system air stripper vapor influent & effluent PID readings were all zero this quarter, and no VOCs were detected in lab samples of system vapor influent & effluent samples, so system vapor discharge was in compliance with DEC air standards. System's GW effluent was in compliance with NYCDEP criteria. During rpt period, GW extraction well GEW-1 recovered 48,419 gals and GEW-4 recovered 4,712 gals, which is less than previous quarter due to frequent high water alarm shutdowns. EnviroTrac cleaned air stripper influent strainer and reduced flow from EQ tank to air stripper. Problem seems to be resolved, as system operated without shutting down from 1/3/19 to 1/31/19 (end of rpt period). No measurable LNAPL was detected this quarter, but sheen was observed in MW-15 in Jan. 2019 and absorbent socks in both MW-15 and MW-7R were partly saturated with LNAPL. GW sampling on 1/14/19 showed well MW-7R had 1,168 ug/L total VOCs (down from 2,921 ug/L in Oct. 2018), well MW-10 had 1,149 ug/L tVOCs (down from 3,176 ug/L in Oct. 2018), well MW-11 had 70 ug/L tVOCs (down from 2,758 ug/L in Oct. 2018), well GEW-1 had 185 ug/L tVOCs (up from 160 ug/L in Oct. 2018), well GEW-4 had 3,242 ug/L tVOCs (down from 19,134 ug/L in Oct. 2018). Rpt notes that all wells have shown significant decrease in tVOCs over last several quarters. Based on data, URS will continue: quarterly GW monitoring, manual product recovery from affected wells using absorbent socks, optimizing GWET system, performing scheduled quarterly & semiannual system maintenance, and evaluating need for surfactant injections or other actions to address product & saturated soil contamination. - JK 08/21/19: Reviewed System Performance Monitoring Rpt for Second Quarter 2019 by URS dated 8/1/19 (in DecDocs). Rpt covers 2/1/19 thru 4/23/19. On-site GWET system air stripper vapor influent & effluent PID readings were zero this quarter except on 3/6/19, when influent was 0.1 ppmv and effluent was 0.2 ppmv. Based on PID reading and assumption that benzene is 2% of effluent, benzene was well below air discharge standard. Lab sampling of GWET air influent/effluent showed influent had 67 ppbv total volatiles, including 34 ppbv of benzene, but effluent air was ND. System's GW effluent was in compliance with NYCDEP criteria. Due to problems with flow meter on one GWE pump, gals of GW recovered/treated this period is estimated to be ~75,045 gals; NYCDEP flow meter showed 79,656 gals during rpt period. Well gauging data table indicates well MW-15 had 0.001 ft of LNAPL (trace or sheen) on 2/14/19 and on 4/17/19; absorbent sock was 75% saturated on 4/17/19 and was replaced. GW sampling on 4/16-17/19 showed well GEW-1 had 335 ug/L tVOCs (up from 185 ug/L in Jan. 2019), well GEW-4 had 3,545 ug/L tVOCs (up from 3,232 ug/L in Jan. 2019), well MW-6R had 9 ug/L tVOCs (was ND in Jan. 2019), well MW-7R had 2,315 ug/L tVOCs (up from 1,168 ug/L in Jan. 2019), well MW-9 had 123 ug/L tVOCs (up from 4 ug/L in Jan. 2019), well MW-10 had 2,340 ug/L tVOCs (up from 1,149 ug/L in Jan. 2019), well MW-11 had 3,427 ug/L tVOCs (up from 70 ug/L in Jan. 2019). Rpt notes that water table was 1 ft lower

in April than in Jan. 2019, suggesting that increases in tVOCs in GW were due to release of contaminants trapped in soil pore spaces. Based on data, URS will repair & recalibrate flow meters in GWE wells or replace units, and will continue: quarterly GW monitoring, manual product recovery from affected wells using absorbent socks, optimizing GWET system, performing scheduled quarterly & semiannual system maintenance, and evaluating need for surfactant injections or other actions to address product & saturated soil contamination. - JK 11/12/19: Received phone call from Kevin Shanahan of URS/AECOM, who reported that subcontractor at site discovered a hole in side of vapor-phase carbon unit that treats air stripper off-gas; system has been shut down. Kevin said options are to repair unit, replace unit, or discharge directly to atmosphere without vapor treatment. I said if they choose to go with no treatment, I would need to see a proposal with supporting data showing that system's untreated vapor influent meets air discharge standards. Kevin agreed with this. - J. Kolleeny 11/13/19: Received email from Kevin Shanahan of URS/AECOM: Jonathan, As we discussed yesterday, GWET remediation system at Midtown South Police Precinct was turned off on Nov. 11, 2019 during a routine O&M inspection. Our subcontractor EnviroTrac turned system off after observing a hole in side of vapor-phase granular activated carbon (VGAC) tank and carbon discharged to floor of treatment system enclosure. Attached photo illustrates hole in VGAC tank. URS and EnviroTrac are currently evaluating actions necessary to return remediation system to operation. These actions may include repairing VGAC unit, replacing VGAC unit, or removing unit from air stripper emission flow. URS is reviewing historical system data and if it seems that best option is to eliminate VGAC unit from air stripper emission flow, we will send you a letter with that recommendation and request your approval. Please contact me if you have any comments or questions. - J. Kolleeny 11/26/19: Reviewed Request to Discontinue Air Emissions Treatment (Revised) by URS, dated 11/25/19 (in DecDocs). Rpt states that on 11/12/19 VGAC unit that treats air stripper off-gas for on-site GWET system was found to be damaged (has a hole in side, black carbon has apparently been spewed from hole). URS evaluated options: repair VGAC unit, replace unit, or discharge untreated system off-gas directly to atmosphere. URS recommends last option, proposing to connect air stripper directly to system s discharge stack and discontinue air emissions treatment. In support of this proposal, URS provided lab analytical data for system vapor samples showing both benzene and total VOC concentrations in system influent (i.e., untreated air stripper off-gas) to be below benzene discharge standard (2,000 ppbv at 200 cfm air flow) since at least 2009. URS states that when remedial system is reactivated, air emissions will be monitored weekly with a PID and sampled quarterly for lab analysis to ensure compliance with regulatory limit. I sent letter (in DecDocs) to Jerry Aliberti of DDC, cc's to Carlos Maldonado of DDC, Kevin Shanahan & Harvey Roberts of URS, approving this proposal, but requiring that after system has been reactivated and running for several hours, a vapor discharge sample should be collected for lab analysis to confirm compliance with air discharge standard, and that even if discharge meets standard, if any nuisance odors are reported, system should be shut down and refitted with air emissions treatment. - J. Kolleeny 12/10/19: Reviewed System Performance Monitoring Rpt for Third Quarter 2019 by URS, dated 11/5/19 (in DecDocs). Rpt covers period from 4/24/19 to 7/31/19. PID screening of air stripper off-gas (effluent after vapor phase carbon

adsorption treatment) gave readings of 0.0 ppm; air samples collected on 7/18/19 had benzene at 40.3 ppbv in influent and 0.97 ppbv in effluent, well below benzene discharge std., so GWET is in compliance. NYCDEP discharge flow totalizer showed 98,084 gals of GW pumped during 99-day period; flow meters for individual extraction wells totaled 70,530 gals during this period. One system shutdown occurred during rpt period: system was off when EnviroTrac (O&M contractor) arrived at site on 7/18/19, apparently due to power outage caused by thunderstorm on previous day. Rpt states that no measurable product or sheen was observed in wells during 3rd quarter 2019; absorbent sock in well MW-7R was last replaced in Aug. 2018, sock in well MW-15 was last replaced in April 2019. GW sampling on 7/17/19 showed well GEW-1 had 147 ug/L total VOCs (down from 335 ug/L in April 2019), well GEW-4 had 2,049 ug/L tVOCs (down from 3,545 ug/L in April 2019), well MW-6R had 37 ug/L tVOCs (up from 9 ug/L in April 2019), well MW-7R had 1,962 ug/L tVOCs (down from 2,315 ug/L plus sheen in April 2019), well MW-9 had 79 ug/L tVOCs (down from 123 ug/L in April 2019), well MW-10 had 600 ug/L tVOCs (down from 2,340 ug/L in April 2019), well MW-11 had 7,913 ug/L tVOCs (up from 3,427 ug/L in April 2019), well MW-15 had 33,749 ug/L tVOCs (had 0.001 ft of product in April 2019 so was not sampled; same in Jan. 2019 and Oct. 2018). URS will continue quarterly GW monitoring, continue product recovery using socks or other appropriate methods, optimize GWET system to maintain/increase GW capture zone, perform scheduled quarterly & semiannual maintenance tasks, and continue to evaluate need for surfactant injections or other actions to address residual product and saturated zone soil contamination. - J. Kolleeny 02/03/20: Reviewed System Performance Monitoring Rpt for Fourth Quarter 2019 by URS, dated 1/13/20 (in DecDocs). Rpt covers Aug. 1st thru Oct. 31st, 2019. Rpt states that PID screening and lab sampling of GWET system's air effluent (from air stripper) showed it was in compliance with DEC air discharge stds (PID screening was 0.0 ppm; lab analysis on 10/25/19 showed air influent was ND for all VOCs, effluent had 0.483 ppbv of benzene and 3.562 ppbv of tVOCs). NYCDEP discharge flow totalizer showed 59,388 gals of GW were pumped during 92-day period; this is lower than previous quarter, which URS attributes to issues with high-level alarms in EQ tank and air stripper sump, which shut down pumping operations. Rpt states that system was off upon arrival on O&M visits numerous times this quarter due to high-level alarms. Sampling of GWET system water effluent showed it was in compliance with NYCDEP discharge criteria. Rpt states that well gauging on 10/16/19 showed 0.18 ft of LNAPL in well GEW-1; product was sampled for fingerprint analysis, which indicated it most closely resembled motor oil. There are no motor oil tanks at site and no known releases of motor oil at site. GW sampling on 10/16 and 10/17/19 showed well GEW-4 had 4,804 ug/L total VOCs (up from 2,049 ug/L in July 2019), well MW-6R had 67 ug/L tVOCs (up from 37 ug/L in July 2019), well MW-7R had 1,214 ug/L tVOCs (down from 1,962 ug/L in July 2019), well MW-8R had 483 ug/L tVOCs (not sampled in Jan., April or July 2019), well MW-9 had 108 ug/L tVOCs (up from 79 ug/L in July 2019), well MW-10 had 759 ug/L tVOCs (up from 600 ug/L in July 2019), well MW-11 had 6,936 ug/L tVOCs (down from 7,913 ug/L in July 2019), well MW-15 had 45,067 ug/L tVOCs (up from 33,749 ug/L in July 2019). Rpt concludes that soil & GW contamination remain sufficiently high to warrant continued remediation; minor quantities of free product are still present in a limited area. Extent of dissolved plume is ~50 x 35 ft. URS will continue quarterly GW

monitoring, activate spill buster in GEW-1 or install absorbent sock to address LNAPL, continue product recovery from affected wells using socks or other appropriate methods, optimize GWET system to maintain/increase GW capture zone, perform scheduled quarterly & semiannual maintenance tasks, and continue to evaluate need for surfactant injections or other actions to address residual product and saturated zone soil contamination. Rpt states that shutdown of GWET system in Nov. 2019 due to hole found in vapor-phase carbon treatment unit, and DEC approval of system operation w/o vapor treatment, will be discussed in next quarterly rpt. - J. Kolleeny  
04/14/20: Reviewed System Performance Monitoring Rpt for First Quarter 2020 by URS, dated 3/31/20. Rpt covers period from Nov. 2019 thru Jan. 2020. Rpt notes that in Nov. 2019, on-site system's GAC unit (treating air stripper off-gas) was found to be damaged. System was shut down, and URS proposed to modify system to discharge to atmosphere without treatment, providing supporting data showing vapor stream meets DEC standards. DEC approved this proposal in Nov. 2019. EnviroTrac completed system modifications and system was re-started on 2/25/20. Info regarding system modifications and re-start will be in next quarterly rpt. A system vapor discharge sample was collected after re-start on 2/26/20, as required by DEC, and benzene was in compliance with discharge standard. Rpt notes that no monthly GW samples were collected from GWET wells and no system water discharge sample was collected this quarter because system was shut down. Rpt states that free product was detected in well GWET-1 in Nov. 2019 (0.34 ft) and Dec. 2019 (0.12 ft); product was ID'ed as resembling motor oil; active tanks at site store gasoline & fuel oil, there are no known releases of motor oil at site. On 3/4/20, EnviroTrac initiated product recovery from GWET-1 using a Spill Buster pump. URS speculates that presence of product in GWET-1 may be related to change in water table elevations due to system shutdown (altho product was first detected in GWET-1 in Oct. 2019, prior to shutdown). GW sampling on Jan. 20 & 21, 2020 showed well MW-6R had 3 ug/L total VOCs (down from 67 ug/L in Oct. 2019), well MW-7R had 643 ug/L tVOCs (down from 1,214 ug/L in Oct. 2019), well MW-8R had 5 ug/L tVOCs (down from 483 ug/L in Oct. 2019), well MW-9 had 2 ug/L tVOCs (down from 108 ug/L in Oct. 2019), well MW-10 had 29 ug/L tVOCs (down from 759 ug/L in Oct. 2019), well MW-11 had 55 ug/L tVOCs (down from 6,936 ug/L in Oct. 2019), well MW-15 could not be sampled (blocked by vehicle), well GWET-3 had 5 ug/L tVOCs (down from 6 ug/L in Oct. 2019), well GWET-4 had 151 ug/L tVOCs (down from 4,804 ug/L in Oct. 2019). Rpt states that decreases in contam levels in 1st quarter 2020 are likely related to shutdown of GWET system (?). URS will continue quarterly GW monitoring, continue product recovery from well GWET-1 using Spill Buster (or absorbent socks, depending on thickness), and continue system O&M & optimization. - J. Kolleeny "

DEC Memo: "05/23/07-Vought-Duty desk officer. Vought spoke to Bob Laga(Fax 718-359-7865) and SVE and three groundwater wells onsite with SpillBusters installed and Franklin geologist performing weekly inspections of well and system. Franklin was contacted by NYPD that sump of UST was full of product and alarm for Veeder Root was going off. Franklin performed site visit and approximately 20-50 gallons of gasoline present in sump. Vacuum truck estimated time of arrival in two hours to recover gasoline. As per Franklin field geologist level of product in sump has remained constant (may indicate no loss to subsurface). No product in groundwater monitoring well immediately adjacent to tank with product in sump. Vought discussed site with DEC Krimgold and tightness test letter prepared by Vought and submitted to DEC Falvey for signature. Letter sent with one month due date to owner on PBS and cc to Franklin: NYCPD Building Maintenance Section 59-06 Brooklyn Queens Expressway Queens, NY 11377 05/29/07-Vought-See also new closed spill #0702402 for spill caused by delivery to broken fill despite instructions by Franklin to not deliver until fill was repaired. Vought called Franklin and spoke to Bill. Franklin reiterated requirement for no more deliveries. Klein still seeking bids for work. 07/08/08: This spill case transferred from J. Vought to J. Kolleeny. Problems with fill port and fuel deliveries have been rectified, any product released to environment will be addressed by remedial system on-site, as there is ongoing remediation under DDC consent order spill 9512583. This spill is closed, see also remarks

DEC Memo: "Rec'd report of investigation, will review it shortly.(sr) 10/27/08  
The site had a 5,000 gal UST closed in place in 1990. Petroleum like substance was found during a geotechnical investigation in september 2008. Sample results showed the characteristics of diesel fuel and No.2 fuel oils with an estimated age of 19.8. Langan proposed for delineation of contamination via ten soil borings and four temporary monitoring wells installation on site. The plan is approved verbally to Langan(Sue Bianchetti).Phase I and Work Plan in file cabinet.(sr) 01/12/09 Rec'd investigation summary report prepared by Langan Engineering. The site is presently occupied by a four story building.A 5,000 gallon UST was closed in place in 1990.A total of 18 soil borings were installed at the site.Ground water was encountered at 6-7 ft bgs.Six ground water samples were taken from seven of the wells.VOCs were not detected in soil/ground water samples. PAHs were detected in soil and ground water. A free petroleum product sample was collected from EB-4/GW-3.Results of the finger print analysis of the free product from EB-4/GW-3 confirms that a spill of fuel oil exists in that area.EB-4/GW-3 is located directly downgradient and adjacent to the test pit that contained oil during the original geotechnical study.Though analyticals were below applicable standards for soil samples, petroleum odors and/or staining were noted in the soil samples from few borings.Free product was encountered in five wells.Langan recommends that a RAP and CHASP be prepared to address proposed remediation work at the site.(sr) 05/07/09 Spoke with Susan Bianchetti of Langan Engineering today. RAP has been prepared, currently under review by the client,will be forwarded to DEC in two weeks for approval.(sr) 05/27/10 Hydro Tech performed site assessment. GPR survey identified one anomaly to the east of the boiler room.Free product plume was identified to the southwestern portion of the site. Four monitoring wells(MW-2 to MW-5) contained free product.Product thickness ranged from 0.01 ft to 0.26 ft.No dissolve VOCs or SVOCs were detected in ground water samples. Two test pits were installed at the site to confirm the anomaly. No UST

or pipings were found in the test pit.No petroleum related contamination identified within the test pit.Ten soil probes were installed at the site.Five of the soil samples were converted into monitoring wells. Site specific ground water flow direction was determined to be toward west.MWs containing free product were not sampled.No free product found in MW-1.Enhanced Fluid Recovery(EFR) on a weekly basis is proposed.(sr) 08/10/10 EFR event was conducted on July 23, 2010. Eight monitoring wells on site.No free product was observed in MW-1, MW-6, MW-7 & MW-8. Free product observed in MW-2, MW-3,MW-4 and MW-5.(sr) 01/20/11 Vacuum recovery of free product was performed three times in Dec 2010.Free product was detected in MW-2 through MW-5.(sr) 04/11/13 Rec'd revised RAP that includes installation of absorbents socks in MW 2, MW 3, MW4, MW5 and PIT. Plan approved.(sr) 6/7/13-Vought-Received call from Paul Proulx (PH:212-883-4944) and who is counsel for the property owner and was seeking spill closure to due refinancing and he sent in closure request dated 5/15/13. Bank would like letter of satisfaction (eg Stipulation) or RAP approval letter. Closing date on 6/29 so response from Rahman needed ASAP. Vought emailed Roulx copy of Stipulation and told him to follow up with Rahman. 6/12/13-Vought-Received call from and spoke to Proulx who has teleconference today with himself and his client the property owner (Tony Cole) to discuss letters of satisfaction that will may be able to be produced and he requested and Vought approved DEC participation as well. Teleconference today at 11:30am. Teleconference with Proulx, Cole, Terry (Merridian Capital-finance group) and HydroTech (Ataman). No free product as of two months ago in wells and a recovery pit without machinery was installed next to MW2 to recover oil and pads in pit still show a trace amounts of oil. No UST found to date and was possibly removed but not documented as GPR survey and tests pits did not find tank or system. Development plans include that building will remain intact for next 7-10 years and ground floor will be used for galleries and remaining four stories will be used for commercial space. Cole noted that he agreed to additional quarterly groundwater monitoring and sampling. Hydrrotech will submit RAP to Vought including quarterly groundwater sampling for monitored natural attenuation including sensitive receptor survey to Vought and Vought to issue approval letter pending review and approval. Vought also discussed possible issuance of Stipulation Agreement as well if need by the finance institution. 6/14/13-Vought-Received call from and spoke to Carlos at HydroTech and he will be sending in documents. 06/27/13 RAP approved,letter in edocs.(sr) 11/25/13-Vought-Received email from Hydrotech (Ataman) that Hi. We have received the first round of groundwater sampling back. The results look very positive and we will be sending you a report early next week. Would it be possible for you to discuss the project with a potential buyer? They want to hear from the NYSDEC that the site would be considered for closure when dissolved levels decrease over the next three quarters (as is discussed in the RAWP). Please let me know if either of you would be available for a conference call some time tomorrow. Thank you. This spill transferred to DEC Mahat. Vought sent email to Ataman with cc to Mahat that Rachel, Due to holidays, loss of staff and training we are extremely short staffed and cannot participate in the call you requested below. Shariff is no longer in the Unit and the spill case has been transferred to Santosh Mahat (718-482-4038) who is cc'd above but will be out on training for the next few weeks. I examined E-docs and the only RAP (3/26/13) on file has no mention of dissolved

**548 WEST 22ND ST (Continued)**

**S109371584**

sampling for three quarters. Please keep in mind that not only do we need to see a decrease but the overall levels have to be relatively low concentrations as well. Please either re-submit a RAP including this to Santosh or draft a RAP Addendum noting such for his approval (and the DEC approval letter will provide written assurance to the potential buyer). Thanks for your patience and feel free to forward this email onto the potential buyer as well. Vought received email from Erick Karmitz that Mr. Vought, I have been working with my client to purchase, 548 West 22nd Street for a while now. I understand you are extremely short on staff due to the holidays and don't have much time. However, I am 24 years old and this will be my first deal in the industry. The only thing that is holding us back from signing a contract is a 5 minute conversation with you. I have been putting my blood, sweat and tears into this deal and would hate to see it die at the finish line. If you could please find 5 minutes to speak with my party, I would be forever grateful and appreciative. It would really mean so much! I hope to hear back from you soon. Vought returned call and left message with both parties to return call. Vought sent email to all parties that Mr. Karmitz, I am quite disappointed that Hydro Tech did not convey the nature of our workload or my requirement email to you via submission of a RAP Addendum including the proposal for continuing groundwater monitoring and qualifications for consideration spill closure. If your client is looking for an assurance that we will close the spill after three consecutive groundwater sampling events, we CANNOT provide this until we see the groundwater analyticals and if they are in acceptable concentration ranges compared to Groundwater Standards. Furthermore, I am hoping that Hydro Tech with their many years of experience working with the DEC and availability could explain further. Moreover, we have not received any formal development plans for the site in writing which may also change cause additional remedial requirements. I tried to call both you and Rachel and left messages on both as I will be out of office till Friday. Please also keep in mind that the Department rarely works with potential buyers on spill sites and only works with Responsible Parties. The potential buyer may want to hire a consultant on their own behalf to provide them the assurances they need. Thanks. 12/31/13-Vought. On 12/13/13 spoke with OGC Oliva who noted that he received inquiry from Mike Berlin, Esq regarding site status. Berlin noted that he received his inquiry from his client Adam Goldstein (Ph:212-801-6471). Vought left note for DEC Mahat to call Goldstein with results of review and cc him on DEC correspondence as well. 12/31/13: Mahat DEC Made an attempt to call Mr. Goldstein regarding the progress of the spill report evaluation. He was away from his desk, left him a voice message to call back. 1/2/14: Mahat Contacted Mr. Carlos (Project manager: Phone :631.462.5866 Cell:631.828.0234) for more information about the site and its progress. For data trending, he is making another visit on 1/6/14. He is keeping DEC posted about every visit he makes to the site. 3/18/14: Mahat T/C : A return call was received from the Mr. Carlos informing that he is monitoring the well monthly basis. Petroleum product were non detected on every MW. Mr. Carlos will get back to the Department once the trending is done .i.e data compilation of three quarters for trending. 6/23/14: Mahat E/C : A quarterly report of laboratory analytical data was submitted to the Department and it is uploaded on D2 for reference. 12/09/14: Mahat t/c: DEC Mahat received a call from Carlos mentioning that the closure report has been ready and it will be mailed shortly.

12/19/14-Vought-Received email from DEC Rahman that contained forwarded email from HydroTech (Carlos) on 11/18/14 that Hello Sharif, Please find attached the final report for the groundwater monitoring and sampling program. This is the report that contains the fourth quarterly sampling event which is consistent with the previous sampling events to be free of contaminants. Please review the report and let me know if you have any questions or comments. We look forward to be able to get your approval for the spill closure letter. Thank you, Carlos Quionez. Attached to email was Quarterly Report dated 11/7/14. Vought forwarded email to DEC Mahat as current Project Manager. 12/24/14: Mahat e/c: DEC Mahat received a closure report and it is uploaded on D2. A closure report is under review. Below is the VOC trending on the monitoring well for three quaters. Well # Date Total VOCs MW-3Nov - 20130 Feb - 20140 May - 20140 MW-4Nov - 20130 Feb - 20140 May - 20140 MW-5Nov - 20130 Feb - 20140 May - 20140 MW-6Nov - 20131.7 Feb - 20140 May - 20140 MW-8Nov - 20130 Feb - 201421 May - 20140 PITNov - 20130 Feb - 201456 May - 20140 Based on the SVOC and VOC, the Department does not required any further investigation on the site. The contamination has been removed from the site and MW data trending verify the point. No further actions is warranted by the Department. Hence, the spill case will be closed on the database and it will be reopen if any MW show any indication of contamination. Mean time the spill case will be closed. "

Remarks:

"During test borings callers company found pre product sitting on the water table."

Mr. Bicho will call back by end of 08/14/09. 09/24/09-Hiralkumar Patel. 3:17 PM:- left message for Ms. Bicho. 12/01/09-Hiralkumar Patel. 3:31 PM:- spoke with Ms. Bicho. she mentioned that they forwarded documents to their attorney and will ask them to submit to the department. 12/17/09-Hiralkumar Patel. 12:01 PM:- left message for Mr. O'Sickey to respond by end of 12/18/09. 12/18/09-Hiralkumar Patel. 9:12 AM:- received message from Joe from Sol Goldman. Joe ??? PH. (212) 506-0417 12/21/09-Hiralkumar Patel. 9:08 AM:- left message for Joe. 05/17/10-Hiralkumar Patel. 3:30 PM:- spoke with Maria at Solil Management. she mentioned that site has been leased to another party and she asked to contact Ms. Shen. 3:36 PM:- left message for Mr. Nitu. Sorin Nitu \*\*new property manager\*\* Solil Management Ph. (212) 265-1577/78/79 email: sorinn@solil.com 3:41 PM:- spoke with Ms. Chen. she mentioned that City of NY leased this property and they work with NYC EDC. Dena Linn Chen Hudson Yard Development Corp. PH. (212) 971-5609 email: dchen@hydc.org 4:20 PM:- sent letter to Mr. Nitu requiring to submit Phase I and Phase II reports, according to the letter dated 09/19/08, by the end of 07/02/10. informed him that if these reports are not available by 07/02/10, then case will be referred to legal. letter emailed to Mr. Nitu and Ms. Chen. 06/29/10-Hiralkumar Patel. 11:03 AM:- left message for Mr. Nitu reminding that reports are due on 07/02/10. 07/20/10-Hiralkumar Patel. received email from Mr. Kelly (at 5:23 PM on 05/19/10) from Atlantic Environmental Solutions, Inc. they have been hired by Solil management and currently preparing Phase I which will be submitted by end of 07/23/10. Mr. Kelly has reviewed a Phase II report prepared by Parson Brinkerhoff on behalf of the MTA. the Phase II report shows low levels of semi volatile organic compounds and metals in the site soils, consistent with historic fill materials used to raise the elevation of the property in the past. no gasoline constituents were identified in the soil samples collected. three temporary groundwater samples were collected during the Parsons Phase II. one of these samples contained low levels of benzene, slightly in excess of the groundwater standard. it is not clear if this is due to the former use of the property as a gas station, or is coming from off site. a more in depth Phase II

S101658388

- PB Team (MTA's environmental consultant) did Phase II in 2005 abstract of Phase II done by MTA's contractor: - investigation done in 2005 - installed total of ten borings (GP-1 to GP-10) to the refusal - installed boring to 20 ft at GP-1, 32 ft at GP-2, 27.5 ft at GP-3, 24 ft at GP-4, 16 ft at GP-5, 28 ft at GP-6, 16 ft at GP-7, 24.5 ft at GP-8, 30 ft at GP-9 and 28 ft at GP-10 - collected one composite sample (for entire boring length) from each boring - as per boring logs, a structural fill material (building debris, bricks and cinders) found upto 16 ft bg in almost all borings - no visual evidence of contamination observed in soil from borings - found petroleum odors from 10-20 ft in GP-1, 16-24 ft in GP-2, 8-27 ft in GP-3 and 10-20 ft in GP-4 - found maximum PID of 14 ppm at 12-16 ft in GP-1, 1.5 ppm at 16-20 ft in GP-2, 15.9 ppm at 12-16 ft in GP-3 and 3 ppm at 10-12 ft in GP-4 - oily sheen observed at 16-20 ft depth in GP-3, but only 9 ppm recorded on PID - as per sanborn map from 1950, four gasoline tanks were located in northern portion of the site in area where borings GP-1 to GP-4 were installed  
----- - collected three water samples: two from temporary groundwater monitoring points (at GP-2 and GP-9) and one from existing monitoring well (FD-303W) - groundwater beneath the site is expected to flow to the west, towards the Hudson River - no VOC contamination found in any soil or groundwater samples - found some SVOC contamination in almost all samples (which could be result of fill material) - the northern section of the site would be excavated approx. 75 ft bg for a new systems building to support the proposed tenth ave station of the No. 7 subway extension - these construction activities would occur primarily below grade through mining (drill and blasting) and excavation (cut-and-cover) - the No. 7 subway extension running tunnel under W 41st street, just north of the site, would be mined by Tunnel Boring Machine 09/03/10-Hiralkumar Patel. 4:44 PM:- sent letter to Mr. Nitu requiring scaled site map (including former/current tank systems and well/boring locations), soil investigation in the area of hydraulic lifts and soil/groundwater delineation via installation of monitoring wells around former gasoline tank systems. asked Mr. Nitu to submit site map and results of soil investigation in the area of hydraulic lifts by end of 10/15/10 and a work plan for soil/groundwater investigation around former gasoline tank systems by end of 10/29/10. letter emailed to Mr. Nitu, Ms. Chen (at Hudson Yard development) and Mr. Kelly. 09/28/10-Hiralkumar Patel. 3:43 PM:- received call from Mr. Kelly requesting time extension to submit results of soil investigation in area of hydraulic lifts. instead of 10/15/10, he proposed to submit report and work plan on 10/29/10. approved Mr. Kelly's request. 10/13/10-Hiralkumar Patel. 1:16 PM:- received email from Mr. Kelly including work plan for soil/gw investigation. Mr. Kelly proposed to install three monitoring wells within the vicinity of the former tank field. wells will be installed to a depth of 30 ft bg. Mr. Kelly proposed to submit investigation report by the end of 12/20/10. Mr. Kelly also mentioned that they have conducted soil investigation in hydraulic lifts area and waiting for lab results. 10/15/10-Hiralkumar Patel. 1:23 PM:- left message for (and sent email to) Mr. Kelly. informed him that work plan is not approved as doesn't include information regarding former dispenser islands and remote fill ports. asked him to submit site map with these locations. informed him that the department may require additional borings/wells around former dispenser island/remote fill ports. 10/29/10-Hiralkumar Patel. 4:44 PM:- received email from Mr. Kelly including revised work

plan. he included a site map with former dispenser islands. as per site map, dispenser islands were in same area as tanks. Mr. Kelly propose to install four monitoring wells: three in former tank field area and one adjacent to the southern perimeter wall of the former auto shop. this fourth well will be installed to investigate groundwater contamination identified in temporary well points installed during the hydraulic lift investigation. each well will be installed to a depth of 30 ft bg. Mr. Kelly propose to submit report by the end of 01/28/11. 11/01/10-Hiralkumar Patel. 9:22 AM:- received report for investigation done around hydraulic lifts. abstract: - two hydraulic lifts and associated underground hydraulic oil tank - hydraulic oil tank was found adjacent to northern-most lift and has product in it - installed four borings around two lifts - boring SB-1 was installed to 6 ft bg and boring SB-3 was installed to 7 ft depth where refusal encountered; no petroleum odors or PID were detected - boring SB-2 (adjacent to hydraulic oil cylinder) and SB-4 were installed to 20 ft depth - groundwater was found at 13-14 ft bg in borings SB-2 and SB-4 ----- - no odors or PID readings noted upto 12 ft depth in borings SB-2 and SB-4 - high PID readings found below 13 ft depth in borings SB-2 and SB-4 - collected total of four soil samples: two from SB-2 (5 ft and 12 ft) from two from SB-4 (5 ft and 13 ft) - collected two water samples: one from SB-2 and one from SB-4 - staining and petroleum odor extended to 20 ft bg in borings SB-2 and SB-4 - no contamination found in soil samples - found minor VOC contamination in groundwater samples groundwater analyticals: -----SB-2W-----SB-4W  
Benzene-----9-----76  
Toluene-----2-----7  
Ethylbenzene-----7  
Xylene-----4-----30 PID readings:  
depth-----SB-2-----SB-4 (ft) (ppm) (ppm)  
12-----372 13-----560  
16-----589 20-----560 as  
staining/petroleum odors/PID readings found below water table in SB-2 and SB-4, further investigation is needed in area around hydraulic lifts. also, samples were not analyzed for MTBE. 11:51 AM:- spoke with Mr. Kelly. informed him that the department requires complete delineation of contamination. as high PID readings were found to 20 ft depth, asked Mr. Kelly to continue borings, during well installation, until hit clean soil. Mr. Kelly mentioned that MTA's contractor found refusal at 30 ft depth. informed him that if there is no refusal at 30 ft depth and soil shows sign of contamination, then boring must be continued until finds clean soil or refusal, whichever comes first. aksed Mr. Kelly to collect soil samples from deepest dry, highest PID and deepest clean zone. also aksed him to analyze samples for MTBE as it wasn't included in recent investigation. informed him that as no soil contamination found during investigation around lifts, the department does not require any investigation inside the shop at this time, but may require additional investigation inside the shop based on results of investigation around tank field. 11/22/10-Hiralkumar Patel. 3:24 PM:- spoke with Mr. Kelly. they are waiting for driller's schedule. they are planning to do well installation by 12/09/10. Mr. Kelly mentioned that lab did analyzed previous samples for MTBE, but did not reported. so lab is analyzing samples again (which are out of its holding time) and will send results. 11/30/10-Hiralkumar Patel. 2:49 PM:- received email from Mr. Kelly including revised lab report which

MTBE-----11-----153-----23 high PID  
readings observed under water table: 190 ppm at 22 ft in MW-3 and 840 ppm at 15 ft in MW-4. but found less than 25 ppm below these high PID depths. also found organic decomposition or peat layer at 27 ft depth. also as per Phase I, in 1995, eight USTs, 83 tons of contaminated soils and 434 gallons of contaminated water were removed from the site. discussed with DEC Austin. as gasoline tank systems were removed in 1995, soil contamination found below 12 ft and only MTBE and based on level of contamination in groundwater samples,

MAP FINDINGS

547 10TH AVENUE (Continued)

S101658388

Austin asked for quarterly monitoring of groundwater for two more rounds including wells survey and tidal survey. 04/22/11-Hiralkumar Patel. 11:50 AM:- sent letter to Mr. Nitu requiring tidal survey and quarterly groundwater monitoring (including well survey each quarter) and sampling. letter emailed to Mr. Nitu, Mr. Kelly and Joe Grabowski (jgrabowski@solil.com) at Solil. 05/20/11-Hiralkumar Patel. 12:25 PM:- received email from Jeff Anderson from Atlantic environmental including a letter requesting 90 days extension for submission of tidal survey and quarterly monitoring report. he mentioned that property owner is currently negotiating property sale agreement with a brownfield developer. 05/26/11-Hiralkumar Patel. 11:14 AM:- left message for Jeff at Atlantic. 11:36 AM:- received call from Jeff. Jeff mentioned that property owner doesn't want to have anymore new data during sale negotiation as it could change anything. informed him that as property sale is only in negotiation phase and no confirmed schedule available for site redevelopment, the department does not approve 90 day extension and requires to submit tidal survey result by end of 06/24/11. also informed him that the first quarterly report is due on 07/22/11 (three months from 04/22/11 when letter was sent out). 11:42 AM:- sent email to Mr. Nitu and informed him that the 90 day extension can not be approved. asked him to submit tidal survey by 06/24/11 and first quarterly groundwater monitoring report by 07/22/11. email copied to Jeff and Mr. Kelly at Atlantic.

06/07/11-Hiralkumar Patel. received message from Mr. Kelly (at 1:43 PM on 06/02/11). 11:00 AM:- spoke with Mr. Kelly. he mentioned that well tidal survey has been scheduled on 06/27/11. a preliminary tidal survey data will be submitted by 07/01/11. wells will be sampled on 06/28/11 and a combined first quarter GW monitoring report (including tidal survey and sample results) will be submitted by 07/29/11.

07/29/11-Hiralkumar Patel. 3:16 PM:- received tidal survey result and first quarterly groundwater monitoring report from Mr. Kelly.

abstract: - wells MW-1, MW-2 and MW-3 were used for tidal survey and were sampled - well MW-4 was neither used in tidal survey nor a sample collected due to free product in well - water level elevation did not change significantly during the survey period - maximum elevation change was 0.2 ft and did not correspond to the tidal cycle - it is assumed that the water elevation change is associated with the traffic flow on 10th ave, adjacent to the site less than ----????

- groundwater samples were analyzed for VOCs and SVOCs - product sample was collected from MW-4 for fingerprint analysis - fingerprint analysis indicate that the product in well MW-4 closely approximates #2 fuel oil and may have been degraded through weathering - recommends product removal via vacuum extraction - found minor contamination in water samples groundwater analyticals:

| (TBA)-----132                        |

08/04/11-Hiralkumar Patel. 3:08 PM:- spoke with Mr. Kelly and asked him about product removal from MW-4. Mr. Kelly mentioned that he is waiting for approval from property manager. 3:10 PM:- spoke with Mr. Nitu. he mentioned that Joe Grabowski from his office is handling this project. 3:13 PM:- left message for Mr. Grabowski and informed him that product from well MW-4 must be removed by 08/10/11. also informed him that the department requires further delineation of contamination around MW-4 to find out source of the plume. Joe Grabowski \*\*project incharge in

management office.\*\* Solil Management Ph. (212) 265-1577 Ext. 417 email: jgrabowski@solil.com 3:54 PM:- sent email to Mr. Grabowski requiring to gauge and remove product from well MW-4 by the end of 08/10/11. also asked him to conduct bi-weekly gauging/product removal for next three months and to submit gauging event report, alongwith second quarterly groundwater sampling report, by the end of 10/31/11. informed him that the department may requires additional investigation after reviewing the report. email copied to Mr. Kelly, Mr. Anderson (Atlantic) and Mr. Nitu. 08/05/11-Hiralkumar Patel. 1:41 PM:- received call from Mr. Kelly. as he is out of office next week, he requested one week extension to pump out product from well MW-4. approved his request and informed him that well must be gauged and product must be removed by 08/17/11. 09/13/11-Hiralkumar Patel. received message from Michelle (at 2:11 PM on 09/12/11) from AKRF. Michelle Lapin AKRF, Inc. Ph. (646) 388-9520 email: mlapin@akrf.com 11:23 AM:- left message for Mr. Kelly inquiring updates. 11:25 AM:- spoke with Michelle. she mentioned that AKRF has been hired by a leasee who is planning to construct a residential building with either 1 or 2 story basement. as property owner and leasee are still negotiating their contract, Michelle was not allowed to release their client's information. but she mentioned that the site has e-designation and AKRF is preparing a work plan (for Phase II investigation) to submit to NYC DEP. she will submit copy of work plan to DEC also and will send their client's information at that time. she mentioned that their client will do required remediation. informed her that as contract (between owner and leasee) is still under negotiation, the department requires to continue well gauging and monitoring as planned earlier. 2:07 PM:- received message from Mr. Kelly. 09/14/11-Hiralkumar Patel. 12:38 PM:- left message for Mr. Kelly. 2:56 PM:- received call from Michelle with their client's information. she mentioned that construction will start most probably in mid 2012. Michelle will submit a work plan for Phase II investigation, within two weeks. she mentioned that product found in well MW-4 during recent gauging. she asked to suspend quarterly groundwater monitoring and reduce frequency of well gauging/product removal as they will install boring throughout the site. asked Michelle to include these in work plan for review, until then well gauging and quarterly monitoring is in effect. Axtell 4110 LLC. \*\*leasee and developer\*\* 805 3rd Ave, 7th Floor New York, NY 10022 Attn.: Matthew Lobron Ph. (646) 519-6031 email: mlobron@extelldev.com 3:08 PM:- left message for Mr. Lobron. 09/15/11-Hiralkumar Patel. 2:57 PM:- received message from Mr. Lobron. he confirmed that they are going to develop the site. 10/31/11-Hiralkumar Patel. 4:43 PM:- received email from Mr. Kelly including well gauging report. abstract: - all four wells were gauged for five times from 08/16/11 to 10/28/11 and everytime, product found only in well MW-4 product thickness in MW-4 date-----thickness (in ft)  
08/16/11-----0.4 08/30/11-----0.5 09/12/11-----0.6  
10/11/11-----0.3 10/28/11-----0.4 - during vacuum extraction, removed total of 362 gal oil/mix on 08/16/11, 2,370 gal oil/mix on 09/12/11 and 942 gal oil/water mix on 10/28/11 Mr. Kelly recommends that the gauging continue as a monthly event for the next quarter as the product level appears to be diminishing, but the product level is the same. 11/14/11-Hiralkumar Patel. 4:32 PM:- sent email to Mr. Kelly and asked him to submit result of quarterly groundwater sampling. email copied to Jeffrey Anderson (Atlantic Env), Joe Grabowski (Solil Management), Mr. Lobron, Mike Novak

S101658388

(Atlantic Env) and Ms. Lapin. 4:34 PM:- received call from Mr. Kelly. he mentioned that the site has been leased to developer and he was told that developer's consultant (AKRF) will do groundwater sampling. 4:36 PM:- spoke with Ms. Lapin. she mentioned that due to change in development plans, she had to change investigation work plan, which is now almost ready. she mentioned that they need to submit work plan to NYC OER also. informed her that based on consistent product level in well MW-4, the Department requires additional groundwater investigation upgradient of well MW-4. so to avoid duplicate work, informed her that the investigation work plan must be submitted by the end of 11/18/11. 4:47 PM:- sent email to Ms. Lapin and asked her to submit work plan by the end of 11/18/11. informed her that the bi-weekly well gauging/product removal must be continued until a remedial action plan is approved. email copied to Jeffrey Anderson, Joe Grabowski, Mr. Lobron, Mike Novak and Mr. Kelly. 11/15/11-Hiralkumar Patel. 4:37 PM:- received email from Mr. Lapin including a work plan. abstract: - Extell entered into a long-term lease for the site and plans to redevelop the site with a 45-story building containing approx. 600 residential units and ground level retail - development of the site will include soil excavation for the cellar level and for foundation - the majority of the cellar level will be excavated to 13 ft bg, with a small pile cap areas excavated to a depth of 16 ft; the remaining area of the cellar level (including the electric switch gear room and elevator pits) will be excavated to 18 ft with small pile cap area to a depth of 21 ft - Extell plans to initiate redevelopment in the first half of 2012 - Extell will be taking the lead to address and resolve the open spill less than ----- - site also has NYC E-designation - as boring/temporary wells will be installed during investigation, requests to suspend quarterly groundwater sampling requirement - proposes to install up to 14 soil borings to a depth of 21 ft bg - proposes to install either a test pit or soil borings, depending on the result of GPR survey, at/around well location MW-4 - test pit will extend to the water table, or deeper, if possible - existing monitoring wells will be sampled - an organic peat layer was reported approx. 27 ft bg, which may generate methane, therefore, methane will be monitored during subsurface investigation - two soil samples will be collected from each sampling location from above the water table based on field observations or PID readings - temporary well points will be installed in five of the soil borings and groundwater samples will be collected from temporary well points and existing monitoring wells - soil and groundwater samples will be analyzed for full list VOCs and full list SVOCs the proposed work plan is unacceptable for following reasons: - as per the work plan, it is 'assumed' that product recovery efforts for MW-4 will continue as stipulated by NYSDEC. need to know who is going to do bi-weekly well gauging and product removal - no boring/well is proposed southwest of the well MW-4 which is upgradient area. need at least one boring/well southwest of MW-4 for delineation of free product found in MW-4 - proposes to collect two soil samples from borings from above water table. the department requires collection of three soil samples: highest PID, deepest dry and deepest clean if contamination extends below water table 11/16/11-Hiralkumar Patel. 10:33 AM:- sent email to Ms. Lapin and asked her about who is going to perform bi-weekly well gauging and product removal. also asked her to add boring/well in area southwest of the well MW-4, which is upgradient from the well. informed her that the department requires collection of three soil

S101658388

samples from boring where contamination extends below water table: highest PID, deepest dry and deepest clean. asked her to submit a revised work plan. email copied to Mr. Lobron. 12:39 PM:- received email from Ms. Lapin. she mentioned that AKRF is taking over well gauging/product removal. they will go to site tomorrow. Ms. Lapin will send revised work plan once they get comments on proposed work plan from NYC OER. 11/18/11-Hiralkumar Patel. 4:13 PM:- received email from Ms. Lapin. they gauged wells and found 1/4 inch product in well MW-4 only. 11/22/11-Hiralkumar Patel. 3:40 PM:- received email from Ms. Lapin including well gauging table and site map including additional boring location. during gauging, AKRF found three additional wells (W1, W1-40 and W2) which were installed in 2007 as part of the geotechnical investigation for the No. 7 line extension project. as these wells were installed for geotechnical investigation, no information data collected. as only 0.02 ft product found in well MW-4, Ms. Lapin proposed to install an absorbent sock instead of vacuum pumping. she proposed to change socks bi-weekly. 11/25/11-Hiralkumar Patel. 1:15 PM:- sent email to Ms. Lapin. informed her that as per the site map, only four soil borings and four temporary wells will be installed, but as per text in the work plan, she proposed to install total of 14 borings. asked her to clarify this. also asked her about boring locations GP-1 to GP-10 as don't know when those were installed. 11/29/11-Hiralkumar Patel. 11:14 AM:- received email from Ms. Lapin. she mentioned that the proposed soil borings and temporary wells are in blue and not numbered. the discrepancy in the number is: - one boring/well was left off the southwestern corner of the site, which has been added - the shaded area surrounding MW-4 comprises either test pits or up to 6 borings, depending on the results of the GPR survey. Up to 14 borings/wells includes 6 borings at this location. this number is now up to 15 with the additional boring/well location requested on southwest of MW-4 - GP-1 to GP-10 are the previous borings advanced by PB in 2005. the figure had incorrectly shown them as GB in the legend. that has been corrected. 12/06/11-Hiralkumar Patel. 3:44 PM:- received email from Ms. Lapin including a revised work plan and a well gauging data. well MW-4 was gauged on 12/02/11 and found 0.07 ft product. an absorbent sock was installed in well MW-4 and will be replaced during a geophysical survey scheduled for early next week. revised work plan addresses previous concerns and includes installation of five soil-gas borings (soil-gas samples will be collected from approx. 5 to 6 ft bg) and fifteen soil borings. 12/09/11-Hiralkumar Patel. 4:24 PM:- sent work plan approval letter to Mr. Grabowski and Mr. Lobron. informed them the department no longer requires quarterly gw monitoring/sampling, but requires continuation of bi-weekly monitoring and product removal. letter emailed to Mr. Grabowski, Mr. Lobron and Ms. Lapin. 01/31/12-Hiralkumar Patel. 4:34 PM:- received investigation report from Ms. Lapin. abstract: - US geological survey reports indicate that bedrock beneath the site is expected at a depth of approx. 30 ft bg - soil beneath the site was observed consist of fill material comprised sand and silt with concrete, gravel, brick, asphalt, wood and ash to depths of approx. 12 ft bg - groundwater gauging was conducted from existing on-site wells MW-1 through MW-4, FD-303W, W1, W1-40 and W2 on a weekly to bi-weekly basis - due to presence of free product previously identified in well MW-4, an absorbent sock was added to the well on 12/06/11 - gauging events subsequent to adding the absorbent sock to well MW-4 have not identified any measurable free

547 10TH AVENUE (Continued)

S101658388

product - absorber socks removed from well MW-4 have shown approx. 3 to 6 inches of an oily sheen absorbed into the hydrophobic material - a geophysical survey was performed - two small square-shaped anomalies were identified in the southern portion of the site approx. 15 ft from the southern property line (Anomaly 1 & 2) - approx. 30 ft north of the first set of anomalies along southern line, a trench-shaped anomaly was identified in an east-west direction toward 10th Ave (Anomaly 3) - similar trench-shaped anomaly was identified in the same east-west direction approx. 15 ft south of the automotive repair building (Anomaly 4) - a large anomaly measuring approx. 15 ft long by 6 ft wide was identified in the central portion of the site in the vicinity of the suspected vault location (Anomaly 5) - additional anomalies identified included two small square-shaped anomalies on the eastern side of the site - one in line with the trench-shaped anomaly south of the repair building (Anomaly 6), and one in the northeastern corner of the site (Anomaly 7) - the area immediately north of the repair building in the northwestern corner of the site was identified to consist of reinforced concrete. in the center of the reinforced concrete, the survey identified a square-shaped anomaly indicative of a former excavation area. the vent pipe located on the west-adjacent building was traced to this excavation area, which indicated a possible former UST area (Anomaly 8) - in the interior of the repair building could not identify the hydraulic fluid reservoir associated with the hydraulic lifts due to interference from the metallic legs of the lifts and the density and make up of the reinforced concrete floor within the building - found an unknown reservoir in the central portion of the repair building (Anomaly 9) - test pits were excavated in all anomaly locations - Anomaly 1: southernmost anomaly identified as a suspected buried boiler tank. the metallic tank was buried 3 ft bg, measured approx. 9 ft long by 3 ft wide and was concave at one end. tank was not removed during investigation. asbestos insulation identified along the side of the tank - Anomaly 2: identified as buried scrap metal at approx. 2 ft bg - Anomaly 3 & 4: identified as buried former brick building foundation wall. brick walls extended to depths of at least 5 ft bg - Anomaly 5: identified as an 8 inch thick concrete pad overlying buried former building debris including bricks, wood, pulverized concrete and ash. test pit in the vicinity of this anomaly identified former building debris to termination depths of approx. 6 ft bg - Anomaly 6: former metallic drain and a few ft of associated piping were identified - Anomaly 7: test pits attempted in the vicinity were unsuccessful due to the strength and thickness of asphalt in this area - investigated the unknown reservoir inside the repair building - the opening of the reservoir was approx. 4 inches in diameter and was composed of an approx. 2 ft metallic pipe, which extended into a 1 ft void before encountering approx. 2 ft of petroleum mixture - soft, soil-like bottom encountered at approx. 5 ft below the concrete building slab appeared to be the termination point of the reservoir - liquid in reservoir was separated into two phases - one dark brown and one light green - sample collected from reservoir - results indicated that the reservoir contained a heavier degraded gasoline and waste oil mixture floating on top of a lighter, water-based lubricating oil or motor oil - approx. 210 gal of petroleum mixture removed from the reservoir - small amount of residual oil left at the bottom which could not be removed due to debris - 13 soil borings were advanced: SB-1 through SB-11, SB-11A, SB-12 and SB-13 - five delineation soil borings (SB-11, SB-11A

02/02/12-Hiralkumar Patel. 10:53 AM:- spoke with Ms. Lapin. asked her about further investigation of the waste pit inside the repair shop. informed her that if excavation happens soon (within couple of months), then further investigation can be done after on-site building is demolished, otherwise requires further investigation of the waste pit. asked her to find out work schedule for on-site building demolition and excavation. also asked to find out whether site will be excavated to the property line. 11:34 AM:- sent email to Ms. Lapin and asked to submit update (about redevelopment) by 02/08/12. email copied to Mr. Lobron. 02/08/12-Hiralkumar Patel. 11:44 AM:- received call from Ms. Lapin. she is in contact with Mr. Lobron and his attorney regarding investigation/remediation of waste pit in repair shop. as owner's attorney is out of office today, she will call back tomorrow with more updates. 02/10/12-Hiralkumar Patel. received email from Ms. Lapin (at 4:59 PM on 02/09/12) including a response regarding waste oil pit investigation. Ms. Lapin mentioned that waste oil pit was likely last used in approx. 1995 when the gasoline station/automobile repair facility ceased operations. she does not suspect any leak from the oil pit as only BTEX found in groundwater sample from the closet sample location TW-9 and no SVOCs found. she has gauged all wells on 02/06/12 and found no free phase product in any well. they replaced absorbent sock in MW-4. she proposes to monitor on-site wells monthly until the site redevelopment occurs. as per her, construction is scheduled to commence in the Fall of 2012 at which time, the former repair building will be demolished and waste pit will be excavated. she proposes to remove product from wells, if any, via vac truck. 02/24/12-Hiralkumar Patel. 1:11 PM:- sent letter to Mr. Grabowski and Mr. Lobron. informed them the department agrees with the recommendation of monthly monitoring and removal of free product (if applicable) from existing wells until site redevelopment occurs. also informed them that the department does not require

excavation of waste oil pit at this time. asked them to submit a monthly monitoring report. informed them the department may require additional investigation/remediation after reviewing the reports. letter emailed to Mr. Grabowski, Mr. Lobron and Ms. Lapin. 07/19/12-Hiralkumar Patel. 3:01 PM:- spoke with Ms. Lapin and inquired about monthly gauging report. she mentioned that they gauged existing well monthly and found nothing. she will send data by tomorrow morning. 3:19 PM:- received email from Ms. Lapin including monthly gauging report. wells gauged monthly and found oily sheen on absorbent sock (between 0.5 inch and 7 inches) from well MW-4. 07/20/12-Hiralkumar Patel. met with Shaminder Chawla (NYC OER) in DEC office. he mentioned that AKRF has submitted soil-vapor investigation results and RAP. he will ask OER project manager to forward available documents, for review. 07/23/12-Hiralkumar Patel. 4:43 PM:- sent email to Mr. Chawla and asked to submit available documents for review. 07/30/12-Hiralkumar Patel. 4:32 PM:- left message for Mr. Chawla. 08/03/12-Hiralkumar Patel. 8:28 AM:- received email from Mr. Chawla including copy of remedial investigation work plan dated Dec. 2011. Mr. Chawla asked to contact Breanna Gribble, project manager in NYC OER. Breanna Gribble NYC OER Ph. (212) 442-7126 email: BGribble@dep.nyc.gov work plan, that Mr. Chawla sent, was previously submitted to DEC. 08/24/12-Hiralkumar Patel. 3:21 PM:- received email from Ms. Lapin including monthly gauging report. wells gauged on 08/16/12 and found 6 inches of oily sheen on absorbent sock from well MW-4. 10/01/12-Hiralkumar Patel. received email from Ms. Lapin (at 5:08 PM on 09/28/12) including monthly gauging report. wells gauged on 09/20/12 and found 3 inches of oily sheen on absorbent sock from well MW-4. 11/20/12-Hiralkumar Patel. 12:15 PM:- received email from Ms. Lapin including monthly gauging report. wells were gauged on 10/17/12 and 11/15/12. on 10/17/12, the absorbent sock in MW-4 was found to have not been in touch with the water table. on 11/15/12, found 3 inches of oily sheen on absorbent sock from well MW-4. 12/26/12-Hiralkumar Patel. received email from Ms. Lapin (at 5:26 PM on 12/13/12) including monthly gauging report. wells were gauged on 12/13/12. found 5 inches of oily sheen on absorbent sock from well MW-4. Ms. Lapin mentioned that they got approval for NYC BCP program and have sent RIR and RAP and awaiting comments to the RAP. once approved from city, she will submit copy to DEC. 01/16/13-Hiralkumar Patel. 1:27 PM:- received email from Michelle including well gauging report. wells were gauged on 12/13/12 and 01/14/13. during both monitoring events, approx. 5 inches of sheen observed when the absorbent sock in MW-4 was removed and replaced. 02/01/13-Hiralkumar Patel. received draft remedial action work plan, including construction health and safety plan, from AKRF. abstract: - site is identified as Block 1069, Lots 29 and 34 - following redevelopment, the site will also occupy Block 1069, Lot 9136, which is an air volume lot over the west-adjacent property - proposed future use of the site will consists of a 52 story, approx. 727,000 gross sq. ft. residential building with one sub-grade level that will include utility rooms, storage space, the superintendent's office, a possible management/leasing office and possible tenant amenities and ground floor retail space - the proposed building footprint will occupy the entirety of the site - the majority of the cellar level will be excavated to 13 ft below existing grade, with small pile cap areas excavated to a depth of 16 ft - the elevator pits located in the cellar level will be excavated to approx. 24 ft with small pile cap areas to a depth of 31 ft - additional excavation will be conducted

in the vicinity of soil boring SB-8 to remove the lead hotspot, and in the vicinity of borings SB-11 and SB-11A to address petroleum and PAH contaminated soil - each of the planned hotspot removals will be completed as 10 ft long by 10 ft wide excavations centered on the boring locations and extending to 16 ft bg - will collect endpoint samples - will install a vapor/waterproofing barrier system beneath the building slab and outside of foundation walls - the base of the building will be below the water table and there is no potential for migration and accumulation of soil vapors beneath the building slab - will collect product sample, if detected, for fingerprint analysis - approx. 8 month remediation period is anticipated less than -----

02/06/13-Hiralkumar Patel. 1:31 PM:- left message for Dustin at AKRF. informed him that all documents must be submitted to DEC (not only NYC OER) for review and approval. asked him to submit final RAWP and work schedule. 02/07/13-Hiralkumar Patel. 1:35 PM:- received call from Ms. Gribble from NYC OER. discussed about the RAWP. she mentioned that work plan is in public review stage. they are still waiting for documents for e designation for noise. if there is no comments from public, OER will issue notice to proceed. she will call once this notice ready. 02/21/13-Hiralkumar Patel. 4:06 PM:- received message from Shaminder Chawla from NYC OER. 02/25/13-Hiralkumar Patel. 2:01 PM:- spoke with Mr. Chawla at OER. discussed about DEC requirements of endpoint samples (as per DER-10) and sample analytical methods (8260/8270). he will include this in comment to RAWP review. 03/07/13-Hiralkumar Patel. 2:15 PM:- received email from Ms. Gribble requesting call back regarding endpoint sampling. 03/08/13-Hiralkumar Patel. 11:08 AM:- spoke with Ms. Gribble. she mentioned that there will be shoring at property boundaries and all soils will be removed within shoring, to 15 ft bg. so no endpoint sidewall samples are possible. informed her that endpoint bottom samples must be collected as per DER-10. 03/12/13-Hiralkumar Patel. 10:03 AM:- received email from Dustin inquiring about endpoint sample frequency. 03/19/13-Hiralkumar Patel. 9:51 AM:- left message for Dustin. informed him that endpoint samples must be collected as per DER-10. also asked him to submit final work plan. 04/05/13-Hiralkumar Patel. received final remedial action work plan from Dustin. 04/22/13-Hiralkumar Patel. 1:37 PM:- sent email to Dustin and asked to inform once project begins. email copied to Michelle and Ms. Gribble. 07/03/13-Hiralkumar Patel. 3:46 PM:- received email from Dustin including gauging data. since Jan. 2013, about 4 inches of light oily sheen observed on absorbent sock in well MW-4. no product found in any well. Dustin stated that waste classification sampling was done recently. they are coordinating with NYC OER to obtain excavation and foundation permits from NYC DOB. pre-construction meeting will be scheduled once permits received. 08/22/13-Hiralkumar Patel. 11:46 AM:- received email from Shaminder Chawla from NYC OER, including meeting roster and summary of yesterday's pre-construction meeting. - developer is ready to start work at this site within next two weeks. - still waiting on DEP dewatering permit. - work will be performed in stages. - initial cut will be removal of soil from top 7 to eight feet, then contractor will install caissons (two months). - total soil removal is 16 to 17,000 cubic yards. - all soils will be shipped to NJ and PA. - AKRF will provide continuous VOC and dust monitoring. - end point sampling in accordance with DER-10 around waste fuel oil tank. - AKRF has been directed to send a copy of daily reports 09/06/13-Hiralkumar Patel. received email from Dustin (at 4:03 PM on 09/05/13) including well gauging report, which is last

547 10TH AVENUE (Continued)

S101658388

gauging report prior to site construction. Dustin mentioned that earth work is set to begin middle to late next week (pending permits). they will start from suspected waste oil pit area. he will submit weekly report, at end of each week. 09/16/13-Hiralkumar Patel. 1:27 PM:- received email from Dustin. he mentioned that excavation of suspected waste oil pit will begin tomorrow. 09/17/13-Hiralkumar Patel. 2:17 PM:- received email from Dustin. during test pit excavation this morning, they found a 550 gal steel waste oil UST in where where suspected waste oil pit located. no evidence of holes or pitting noted on tank. tank collected some rain water from an opening on top of the tank. no former piping runs were connected to the tank. due to the product storage, this tank will be registered. no evidence of a historic release from this tank was identified beneath or adjacent to tank's location and total of five end point samples will be submitted for VOCs, SVOCs, and PCBs. two additional hydraulic lifts were also identified and removed from beneath the slab. the lifts were also in good physical condition and no evidence of a historic release from either of the lifts was identified. one end point sample was collected from beneath each of the lift locations for VOCs, SVOCs, and PCBs. 09/18/13-Hiralkumar Patel. received email from Dustin (at 8:43 PM on 09/17/13) including daily report for 09/17/13 summarizing removal of 550 gal waste oil USTs and two hydraulic lifts. 09/19/13-Hiralkumar Patel. received email from Dustin (at 6:11 PM on 09/18/13) including daily report for 09/18/13. contractor removed approx. 276 gal of oil-water mixture from UST and hydraulic lifts. 09/26/13-Hiralkumar Patel. received email from Dustin (at 4:10 PM on 09/25/13). during excavation activities in the northwestern corner of the Site, an additional approximately 550-gallon steel suspected waste oil UST was encountered north of the former automotive repair building. the tank was fully intact (no evidence of holes, pitting, etc.), and contained some oily water. no former piping runs were connected to the tank and no evidence of soil contamination was observed beneath the location of the tank. during excavation activities immediately south of the former automotive repair building, an approximately 550-gallon steel heating oil UST was also encountered. the tank was empty but was observed to contain thin, spotty streaks of degraded heating oil inside of the tank carcass. no evidence of contamination was observed in the soil beneath the location of the tank. endpoint soil samples were collected after removal of tanks. due to possibility of finding more tanks, Dustin mentioned that PBS application will be submitted after an approximately five foot cut is completed throughout the site (to avoid too many or any confusing submittals). 10/01/13-Hiralkumar Patel. 10:13 AM:- received email from Dustin including daily report. they removed both 550 gal tanks. they also excavated test pits to investigate the existing foundation wall next to the west-adjacent church building (for underpinning) and along the eastern site boundary. no evidence of contamination noted in test pits. 10/03/13-Hiralkumar Patel. 10:34 AM:- received email from Dustin including daily report for 10/02/13. 10/08/13-Hiralkumar Patel. 7:57 AM:- received email from Dustin including daily report for 10/03/13, 10/04/13 and 10/07/13. on 10/04/13, investigative excavation activities were performed in WC-9 up to a depth of 13 ft bg. petroleum-like odor was detected in soil at the groundwater interface (approx. 13 ft bg). petroleum-impacted material was placed back into the excavation at its originating depth and backfilled with overburden material. 10/10/13-Hiralkumar Patel. 4:48 PM:- received

S101658388

email from Dustin. they found additional approx. 1,500 gal suspected fuel oil UST, located south of the former automotive repair building. this is fourth tank found at the site. 10/15/13-Hiralkumar Patel. received email from Dustin (at 9:51 AM on 10/14/13) including daily status report for Oct. 8, 9, 10 and 11. on 10/08/13, crew found previously unknown, approx. 1,500 gal steel fuel oil UST in northern portion of grid WC-4. the tank measured approx. 15 ft long by 4 ft wide and was discovered approx. 7.5 ft bg. the tank was approx. 9 ft south of the existing church building wall. bottom of the tank was located in close proximity to the groundwater table at the site. evidence of petroleum contaminated soil was encountered immediately south of the tank and a small hole was observed on the south side of the tank. approx. 6 inches of oil-water mixture was present in the bottom of the tank. the 1,500 gal UST was removed on 10/11/13. soil was not excavated from beneath the former UST location due to the need to maintain the site grade to allow for the drilling of caissons along the western property boundary (to prevent any potential undermining of the west-adjacent church building during excavation activities). 10/22/13-Hiralkumar Patel. received email from Dustin (at 4:40 PM on 10/21/13) including daily reports from 10/14/13 to 10/18/13. contaminated soil noted in grids WC-4, WC-5&7 and WC-8, during underpinning of existing church building to the west. 10/29/13-Hiralkumar Patel. 4:10 AM:- received email from Dustin including daily reports from 10/21/13 to 10/25/13. 11/06/13-Hiralkumar Patel. received email from Dustin (at 1:20 PM on 11/05/13) including daily reports from 10/28/13 to 11/02/13. 11/12/13-Hiralkumar Patel. 9:39 AM:- received email from Dustin including daily reports from 11/04/13 to 11/08/13. 11/26/13-Hiralkumar Patel. received email from Dustin (at 5:26 PM on 11/21/13) including daily reports from 11/11/13 to 11/15/13. 11/27/13-Hiralkumar Patel. 7:32 AM:- received email from Dustin including daily reports from 11/18/13 to 11/22/13. 12/05/13-Hiralkumar Patel. received email from Dustin (at 5:27 PM on 12/04/13) including daily reports from 11/25/13 to 11/29/13. during excavation for installation of corrugated metal piles along the adjacent church site to the west, petroleum odors were noted in soil; however, area was backfilled and no stockpile was generated. impacted soil will be excavated for off-site disposal at a later stage for pile cap construction. 12/12/13-Hiralkumar Patel. 3:54 PM:- received email from Dustin including daily reports from 12/02/13 to 12/06/13. 12/20/13-Hiralkumar Patel. 8:04 AM:- received email from Dustin including daily reports from 12/09/13 to 12/13/13. 12/24/13-Hiralkumar Patel. 11:49 AM:- received email from Dustin including daily reports from 12/16/13 to 12/20/13. 01/02/14-Hiralkumar Patel. received email from Dustin (at 12:04 PM on 12/31/13) including daily reports from 12/23/13 to 12/27/13. 01/09/14-Hiralkumar Patel. received email from Dustin (at 5:12 PM on 01/08/14) including daily reports from 12/30/13 to 01/04/14. 01/15/14-Hiralkumar Patel. 9:40 PM:- received email from Dustin including daily reports from 01/06/14 to 01/11/14. 01/24/14-Hiralkumar Patel. received email from Dustin (at 5:09 PM on 01/23/14) including daily reports from 01/13/14 to 01/18/14. some of the excavated soil from grids WC-4 and WC-9 exhibited evidence of petroleum odors and staining and no or low-level PID readings. impacted soil was segregated for off-site disposal. 01/29/14-Hiralkumar Patel. 6:56 AM:- received email from Dustin including daily reports from 01/20/14 to 01/25/14. some of the

excavated soil from grids WC-4, WC-5&7 and WC-9 exhibited evidence of petroleum odors and/or staining and low-level PID readings. impacted soil was segregated for off-site disposal. 01/30/14-Hiralkumar Patel. received email from Dustin (at 6:14 PM on 01/29/14). he mentioned that after proper stabilization, they can now excavate to 16 ft bg in area of former borings SB-11 and SB-11A where some deeper SVOC contamination was noted. he also mentioned that during field work in Oct. 2013, they found a 1,500 gal fuel oil UST in the vicinity of these borings. after removing contaminated soil, endpoint samples will be collected as per DER-10 for 8260/8270 analyses. 10:04 AM:- received call from Dustin to discuss sampling approach in western area where former borings SB-11/11A were located and where a 1,500 gal UST was found. informed him that based on available information, the proposed approach looks fine. AKRF is planning to collect endpoint samples tomorrow. asked Dustin about excavation in area of well MW-4 where free phase product found last year. he mentioned that area of MW-4 is currently used as ramp to get access to other parts of the site. Ashutosh Sharma AKRF Ph. (917) 842-6781 02/04/14-Hiralkumar Patel. 10:53 AM:- received email from Dustin including daily reports from 01/27/14 to 02/01/14. some of the excavated soil from grids WC-4, WC-5&7 and WC-9 exhibited evidence of petroleum odors and/or staining and low-level PID readings. impacted soil was segregated for off-site disposal. a hydraulic hose connected to one of the excavator ruptured during the sheeting work within grid WC-3. less than 5 gal of hydraulic fluid sprayed/leaked on to the metal sheeting and the whalers. spill was contained and cleaned up. Dustin mentioned that endpoint samples will be collected from western boundary of the site (beneath the fuel oil tank discovered in Oct. 2013 and in the vicinity of former borings SB-11 and SB-11A) in next day or two. 02/07/14-Hiralkumar Patel. 12:51 PM:- received email from Dustin including summary of results for endpoint samples collected in area where UST was found in Oct. 2013 and in vicinity of former well MW-4. no contamination found in samples. 02/18/14-Hiralkumar Patel. received email from Dustin (at 4:14 PM on 02/17/14) including daily status reports from 02/03/14 to 02/08/14. 02/26/14-Hiralkumar Patel. 8:25 AM:- received email from Dustin including daily status report from 02/15/14 to 02/22/14. 03/04/14-Hiralkumar Patel. 12:41 PM:- received email from Dustin including daily status report from 02/24/14 to 03/01/14. 03/18/14-Hiralkumar Patel. 7:26 AM:- received email from Dustin including daily status report from 03/03/14 to 03/08/14. 7:28 AM:- received email from Dustin including daily status report from 03/10/14 to 03/15/14. 03/26/14-Hiralkumar Patel. 8:39 AM:- received email from Dustin including daily status report from 03/17/14 to 03/22/14. 04/03/14-Hiralkumar Patel. 12:55 PM:- received email from Dustin including daily status report from 03/24/14 to 03/31/14. 04/09/14-Hiralkumar Patel. 8:01 AM:- received email from Dustin including daily status report from 04/01/14 to 04/07/14. 04/24/14-Hiralkumar Patel. 12:40 PM:- received email from Dustin including daily status report from 04/08/14 to 04/12/14. 12:40 PM:- received another email from Dustin including daily status report from 04/14/14 to 04/19/14. 05/05/14-Hiralkumar Patel. 9:23 AM:- received email from Dustin including daily status report from 04/21/14 to 04/25/14. 05/09/14-Hiralkumar Patel. received email from Dustin (at 9:56 AM on 09/07/14) including daily status report from 04/28/14 to 05/02/14. 05/15/14-Hiralkumar Patel. 3:56 AM:- received email from Dustin including daily status report from 05/05/14 to 05/09/14. 05/19/14-Hiralkumar Patel. 10:02 AM:- received email from Dustin

including daily status report from 05/12/14 to 05/16/14.  
05/28/14-Hiralkumar Patel. 11:52 AM:- received email from Dustin including daily status report from 05/19/14 to 05/23/14.  
06/09/14-Hiralkumar Patel. 4:18 PM:- received email from Dustin including hand sketch with three proposed well locations for groundwater monitoring. 06/16/14-Hiralkumar Patel. 2:20 PM:- received emails from Dustin including daily status report from 05/27/14 to 06/06/14 and from 06/09/14 to 06/13/14. 06/23/14-Hiralkumar Patel. received message from Dustin (at 1:26 PM on 06/20/14). 12:01 PM:- spoke with Dustin. asked him about possibility of fourth well along W 41st Street. Dustin mentioned that due to subway extension project (7-line), they could not install well along 41st street. informed Dustin that based on available information, three proposed well locations looks fine. 08/20/14-Hiralkumar Patel. received email from Dustin (at 8:29 AM on 07/08/14) including daily status report from 06/16/14 to 06/20/14. received email from Dustin (at 5:24 PM on 07/24/14) including daily status report for 07/23/14. he mentioned that two of the three proposed wells (MW-1 and MW-2) were installed on the eastern side of the site along 10th Ave. groundwater was encountered at depths of approx. 12-13 ft bg. both wells were installed to a depth of approx. 26 ft bg. no petroleum odors or PID readings were encountered on any of the soil samples/drill cuttings during installation activities. no soil samples were collected for lab analysis. received email from Dustin (at 6:13 PM on 07/28/14) including daily status report for 07/25/14 and 07/28/14. on 07/28/14, the third proposed well was installed along W 40th Street, immediately southwest of the property. refusal encountered at 17 to 18 ft bg in three borings. the 2-inch well was installed to a depth of approx. 18 ft bg. no petroleum odors or PID readings were encountered on any of the soil samples/drill cuttings during installation activities. no soil samples were collected for lab analysis. 09/30/14-Hiralkumar Patel. 10:10 AM:- received call from Dustin inquiring about any record of registration of old motor fuel tanks that were removed in 1995. as there is no record for those tanks, asked Dustin to include old tank's information on PBS application. Dustin mentioned that NYC OER is currently reviewing draft remedial action report. he will submit final report, once he has comments from OER. he has collected first quarterly groundwater samples from three new wells and will submit that report also. asked Dustin to collect minimum of three quarterly rounds of groundwater samples. 11/04/14-Hiralkumar Patel. received email from Dustin (at 6:31 PM on 11/03/14) including first quarterly gw monitoring report. abstract: - three (3) 2-inch monitoring wells (MW-1 through MW-3) were installed - well MW-1 was completed to a depth of approx. 26 ft bg with screen from 11 to 26 ft bg - well MW-2 was completed to a depth of approx. 26.5 ft bg with screen from 11.5 to 26.5 ft bg - well MW-3 was completed to a depth of approx. 18 ft bg with screen from 8 to 18 ft bg - groundwater was found between 12 and 13 ft bg - first round of quarterly groundwater sampling was conducted on 08/07/14 - no free-phase product was detected in any of the three wells - localized groundwater flow direction to the northeast ----- - minor VOC contamination noted in groundwater samples (max: 102 ppb xylene in MW-2) 12/04/14-Hiralkumar Patel. received email from Shaminder (at 4:23 PM on 12/03/14) from NYC OER, including sampling result summary table for groundwater sampling on 11/11/14. low level of VOCs detected in groundwater sample (max: 38 ppb Xylene in MW-1). Shaminder asked about additional work needed to close the

S101658388

spill. 12/05/14-Hiralkumar Patel. 8:33 AM:- sent email to Shaminder at NYC OER. informed him that the department has asked for minimum of three quarterly groundwater sampling and has received only 1st quarterly sampling report in Nov 2014 (for sampling occurred in Aug 2014). email copied to Dustin. 1:43 PM:- received email from Dustin including link to final remedial action report. - excavated and removed historic fill and other contaminated soils - excavation was completed to a depth of at least 13 ft bg across the site. additional excavation was conducted in the northern portion of the site to depths upto 20 ft bg - removed one (1) 1,500 gal fuel oil UST, two (2) 550 gal fuel oil USTs, one (1) 550 gal waste oil UST and two underground hydraulic lifts that were encountered in the northwestern portion of the site during excavation - collected and analyzed endpoint samples - installed a vapor barrier/waterproofing system beneath the footprint of the building and behind the foundation walls - no contamination noted in endpoint samples 12/17/14-Hiralkumar Patel. 3:45 PM:- received email from Dustin including 2nd quarterly groundwater sampling report. groundwater samples were collected from three wells on 11/11/14. no free phase product found in wells. minor VOCs detected (maximum 32 ppb Toluene in MW-1) in groundwater samples. Dustin recommended spill closure based on remedial actions taken at the site and results of groundwater monitoring. 12/19/14-Hiralkumar Patel. based on available information, case closed. 1:01 PM:- sent spill closure letter to Extell Development. letter emailed to Dustin, Joseph Montano (JMontano@extelldev.com), Laura Kirschbaum (LKirschbaum@extelldev.com), Ryan Masters (RMasters@extelldev.com) and Mr. Chawla. 02/03/15-Hiralkumar Patel. received email from Dustin (at 5:07 PM on 02/02/15) including well closure letter. \*\*e-designation\*\*\*

gas and the 10,000 gal tank will be abandoned in place. Tank is below the basement floor under an electrical utility room. They cleaned out the tank and found holes in the top 1/3 of the tank. They will take borings through the bottom of the tank to determine if the area is contaminated. 12/4/2003 e-mail message from Maria Ramirez said the soil borings through the bottom of the tank would take place around 12/12/03. 12/11/2003 Sangesland reviewed a submittal from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the the work discussed above and stated that 4 holes will be drilled through the bottom of the tank and samples will be collected for testing (if possible-it may be in cement). If the samples are clean, the tank will be abandoned in place with foam. 12/22/2003 Sangesland spoke with Fran Schultz of GZA about this site. They made 4 holes in the bottom and sides of this tank and hit cement. Water is entering the tank. To date approx 700 gal of water has entered the tank. They believe the water is from a broken water main. Sangesland asked GZA to test the water for VOC and SVOC. GZA said they would also test for Floride and Clorine to determine if this water is city tap water or groundwater. If the water samples come back clean, then GZA will prepare an arguement that the tank is in a subbasement vault. All records of the building (blueprints) are gone (they were in 7 World Trade Center). There are lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number. 3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the description of the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride & Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure. 11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed."

Remarks:

"failed a tightness test but could not isolate a specific pipe - test was performed as part of a closure."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was VOUGHT 11/26/02 - The amount of spill is about 300 to 400 gal which calculated from tank contains and delivery. Nothing visible on street. RP assuming that product seeped in the building wall to soil. Ken's Marine is hired. DEP and Con Ed were notified. DEC Vought went on scene. jz side fill line broke. nothing visible outside street assuming product seeped into building wall to the soil. 11/27/2002-Vought-Spoke with Maria Ramirez (GZA). Sidewalk has been removed and excavated to a depth of 4'. Fill line was cut and plugged. Small pinholes found in fill line. Excavation dimensions are 15'x9'x8'. Six endpoint samples collected for analysis. Impacted material still present against building. Water line 8' deep and 6' away from building wall running parallel to wall. GZA will remove impacted material from under water line on 12/2/02. Fill line will be replaced Tues 12/3/02 and NYSDEC will receive report by 1/15/03. Gerry Marzano 212 615-9915 cell 646-296-0538 7/24/2003-Vought-File review by Vought: Remedial Action Report-Jan 2003-GZA-Report requests No Further Action. Spill occurred during oil delivery on 11/26/2002 during which oil was observed seeping up through seam between sidewalk and building. Spill cleaned using speedy dry and sorbent pads. Several hours later oil was observed seeping through basement wall near fill line. Based on petrometer readings and estimated 300-400 gallons of oil was discharged. Fill line was removed and

replaced and endpoint samples indicated residual fuel oil impacts in soil. Groundwater estimated at a depth of 20' and flows towards the west. Excavation initially took place to a depth of 7' and was backfilled. On 12/8/02 fill line was replaced. Endpoint samples from initial excavation did not pass TAGM 4046. On-site structural engineer advised that excavation depth not exceed 12'. After 12' depth was reached two additional endpoints were taken. Excavation was backfilled and repaved. No sewers or drains affected. The final area of the excavation measured 8 feet wide(north to south) and 12 feet long (east to west) with the additional area measuring 2 feet wide and 4 feet long on the northern portion of the excavation. Fill line was rusted with corrosion holes. Groundwater was not encountered. A total of eight endpoint soil samples were taken. Bottom endpoint soil samples had minor PAH exceedances due to fill nature of material. Southern sidewall had 47200ppb naphthalene and 13000ppb xylene however further excavation was performed and only minor PAH exceedances were detected from subsequent endpoint samples. A total of 53 tons of impacted soil was removed from the Site (disposal manifest provided). Spill closed by Vought."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL Still awaiting info requested 6-22, reply on 7-02 indicated awaiting update from station manager NOTE: This is the Master Spill Number for Transformer #6. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/23/06) 8/4/08: Cleanup completed. As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. Repairs to be tracked and completed under Con Ed s MAXIMO Work Order. See eDocs for final emis report. Close out. (JHO) ~~~~~ CON ED E2MIS #124769 (master) 5-10-99 14:30 Approx. 1 gal. transformer oil from transformer #6 FDR-38M44, in vault #6. Spill is contained on concrete pad in metal enclosure around transformer, pads installed to contain spill, no impact to waterway or sewer, sign placed. Chem Lab to take sample. MR. Pitre reports unable to determine where leak is located. TRANSFORMER GROUP SUPERVISOR A. CHASE REPORTS THAT SEVERAL LEAKS WERE FOUND IN THIS TRANSFORMERS. THEY HAVE REPLACED ALL SECONDARY BUSHINGS ON IT AND THE WORK IS ONGOING TO REPAIR ALL OTHER LEAKS. Station Supervisor G. Toto performed an inspection on 29-NOV-2000 and returned the following with regards to this transformer: 119254 TR6 No Leak Observed - TR6 was taken out last year to repair all Leaks on it. 124769 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. 126171 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. During a station inspection on 04-APR-2001 Sr. Env. Specialist observed a leak from underneath the sound enclosure. The leak is a result of a leaking valve inside of the sound enclosure. The incident status has been changed to CLERE, and the transformer group has been notified, and asked to complete the repairs. Spill tag number 000768 has been hung near the enclosure. -001 SAMPLE TYPE: OIL None <1.00 PPM EQUIPMENT : TR # 6 - MAIN BODY -002 SAMPLE TYPE: OIL 1260 3. PPM EQUIPMENT : TR # 6 - SELECTOR -003 SAMPLE TYPE: OIL None <1.00 PPM EQUIPMENT : TR # 6 - CONTACTOR On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had not been repaired. This continues to leak into containment. ~~~~~ e2mis no. 147046 (sub): ON 04-FEB-2003 AT

DEC Memo:

"On 2/12/04 at 10:16 F. Versaggi # 11945 of Substations called to report that he found a spill of blue gue (dielectric fluid) at 10:10. This was at 5 W. 41 St. (W42 St Substation). He reports that 4 oz. of fluid came from the B phase pothead on feeder 16M81 (41 north position). The substance is on the metal floor and contained in the cubicle. He found it while doing maintenance on the feeder. He hung a tag # S-01293. He is going to turn this into the I&A dept. for repairs & a cleanup. He states that as per generated knowledge it is a non-pcb substance. No sewers or waterways were affected. 3/4/04 I&A crew arrived on the 4-12 shift and repaired pothead and cleaned up spill used pads and simple green. Leak is no longer active. Spill can be closed amd"

Remarks: "4 OUNCES SPILLED FROM B PHASE POT HEAD, PENDING CLEAN UP, CONTAINED ON A METAL FLOOR: NO SMOKE OR FIRE WATERWAYS"

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL Con Ed e2mis #131318: May 9, 2000 15:35 hrs. Steven Tercovich #12959 Substation Operator reports that on May 9, 2000 @ 15:30 hrs he found approx. 2 gallons of dielectric transformer oil that leaked from the top of transformer #7 fdr.# 38m43 @ W 42 St Substation #2 @ 521 W 41 St while making an inspection. The oil is leaking from the top of the transformer down the main body between the body and the radiator onto the concrete pad. The oil is leaking at a rate of 15 drops per min. The spill did not enter waterways or sewers and no other impact reported. He installed oil absorbant to contain the spill. Sample history shows less than1 PPM, and the lab seq.# 00-00240 dated 01/07/00. Cleanup is pending deenergizing equipment. Substation Operations Transformer Group has been notified. C.I.G. Mike Cesare was notified @ 16:13 hrs by T. Russo #45348. This

Reports: ----Original Message----- From: Kennedy, Bobby A. Sent: Thursday, December 07, 2000 12:38 PM To: Hanebuth, Stuart Cc: Wurzburg, Charles; Haufler, John; Alvarado, Frank; Toto, Gerard Subject: 42nd Street S/S Bank 7 Hitachi SN 720035-1, Oil Migration Problem Stu: We have replaced the seals between the diverter and selector compartments of transformer # 7 at W.42nd St. S/S to address the oil migration that resulted in an oil leak earlier this year. We performed leak checks after our repairs and no signs of migration were observed between the two compartments. The repairs are now complete and the bank will be returned to System today. You may close out this leak. Bobby Kennedy Transformer Group - Manhattan Substations Consolidated Edison of New York, Inc. 212.977.2309 212.977.2349 917.556.4172 pager 917.440.2108 mobile 775.587.4088 fax

-----Original Message----- From: Sandstrom, John Sent: Wednesday, May 10, 2000 6:01 AM To: Buckley, Patrick; Kennedy, Bobby A.; Alvarado, Frank Cc: Isecke, John C.; Haufler, John; Wurzburg, Charles; Tercovich, Steven Subject: 42nd Street S/S Bank 7 Hitachi SN 720035-1, Oil Migration Problem I was requested to look at 42nd Street Bank 7, at 17:08 last night, due to a pool of oil on top of the transformer sound enclosure, by the TMG Supervisor. It appeared the oil was coming from the Diverter Switch Breather. Observation of Vital signs: The transformer was energized carrying 2050 Amps, Oil Levels; Main Body; \ Hi, Sel; / Low, Div.; Full High, Neutral Reactor; 25\ Temperatures WT 92 C, Max. 98 C, LT 62 C, Max. 64 C, Note: One Winding Temperature Gauge missing. LTC Position; 1 Lower Gas Pressures; Main Body, 4 psig., Selector, 1.7 psig., Reactor, 2.5 psig Alarms: TR 7 trouble Note: It was reported the alarm was up for a while and previously reported by the Operator. Problem: The Diverter Compartment oil level was at full high and the Selector Compartment was at full low. It appears there is migration from the selector to the diverter compartments due to defective seals. Recommendations: Remove the transformer from service and clean up the pool of oil on top of the sound enclosure, to prevent an environmental spill. Correct the oil levels in the Selector and Diverter compartments. Take oil samples from the Selector and Main tank Compartments. Test for dissolved gas in oil. If there are any questions please contact me on pager, 1.917.448.7692. John E. Sandstrom On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident. "

Remarks:

"transformer failed causing the spill.a main leaking body of the transformer failed.less than 1 ppm pcb.dated jan 7 2000. clean up will be done when transformer is denergized. "

Remarks: reported to me that at w 42 St Substation while refilling Transformer #4 a spill from the refill hose occurred at 13:15. Approx 5 ounces of dielectric fluid spilled onto the concrete pad and into the Bluestone. No sample will be taken because this is new oil. The cleanup started at 13:15 and was completed at 13:20. The absorbent pads used to soak up on the concrete pad and the affected bluestone was shovelled up and disposed of properly."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL See spill # 9900735. ~~~~~ Con Ed e2mis #129283: 12/13/99 09:50 S. Tercovich(Station Opr)reports contractors working at w. 42 station in transformer vault # 3 on feeder 38m 43 found unknown oily sludge while excavating bluestone. There was no signs of oil on top of bluestone before digging. Substance was found after (2)4'x4'x3' deep excavation was dug. Have 1/2 yard of sludge with 2-pts water...Substance in bluestone...Did not enter waterway or sewer...Sample taken for pcb & id...Spill tag #s-01142 installed...Pads installed...Clean up pending lab results. 15-DEC-1999 The reason for the excavation of the bluestone is for the inatallation of conduit and grounding wires for future equipment (circuit switchers). The contractor was directed to excavate to a depth of approximately 5 feet. The excavation work has continued. The bluestone is being accumulated for disposal as oily waste. A representative from our Remediation group and the Env. Specialist will meet the DEC at the station to look at this incident and determine the extent of the cleanup. Lab Sequence Number: 99-12780-001 SAMPLE TYPE: OIL PCB 5 PPM EQUIPMENT : SW TEST PIT -002 SAMPLE TYPE: OIL PCB 7 PPM EQUIPMENT : NE TEST PIT We have also identified the substance as some type of dielectric fluid. Lab Sequence Number: 99-12781-001 See also LSNs: 00-01913 Oil ID Similar to Dielectric 99-12781 Oil ID Similar to Dielectric 00-00558 TRPH <2.33 PPM (TR #3 Vault) 00-00559 TCLP Benzene <0.0046 PPM On December 16, 1999 David Conendale (NYSDEC), Eddy DeLaHoz (ConEd) and Chrisine Kovari (ConEd) inspected the site. DEC gave ok to backfill excavation. "

DEC Memo: "07/15/19 - Lakhani emis\_273581 ConEd initially reported this spill as a 100 gallon loss from a transformer to bluestone. ConEd claimed that the transformer was moated. The transformer leak was coincidentally called in during the blackout in NYC in midtown west. ConEd would not confirm is this transformer caused the outage. Upon further investigation, ConEd updated the amount loss to approx. 1300 gallons of dielectric fluid: 300 gallons to the bluestone, 1000 gallons in another structure at the substation, and in manholes outside of the station. ConEd Chris Foschino (646-772-7904) was on site. Specialist, Christopher A Foschino (83856) of EHS Operations for Substations Operations reported environmental contractor Triumvirate is on site and staged to conduct cleanup. The manufacture

DEC Memo: "e2mis no 159461 J.Pitre#12477 reported the can on Capacitor Bank#1 had blown up, there was a spill of 16 oz. total, 12 oz. were in the metal compartment of the Capacitor Bank#1 and 4 oz. went in to a drain. J.Pitre#12477 does not know where the drain leads to, he is in the process of trying to find out. There was a release into a drain. A yellow environmental tag numbered #005428 was hung on Capacitor Bank#1. J.Pitre#12477 states that a drain block was put in place to prevent any further release into the drain and containment devices are in place to prevent leakage from the metal compartment. The cleanup is pending equipment deenergization and repair or replacement of the can. 06/28/05 10:17. J.Pitre#12477, notified the control center on 06/28/05 at 10:15hrs. to report that the drain is connected to a combined sewer. Logger : M.Casalta#12684. 6/28/05. As per my inspection. The operator noticed a sheen on the rainwater that went into the combined sewer drain. He put a drain blocker on the drain and put absorbent pads on the oil. The leaking capacitors were replaced with new ones and the oil was cleaned with pads and simple green. I inspected the drains and found no sign of oil. P.Keelan Closed. 9-1-05. George Breen "

DEC Memo: "e2mis no 159444 J.Pitre found 16 oz. of dielectric fluid on asphalt that leaked from Capacitor Bank#5. The spill is contained on the asphalt. There was no sewers or waterways were affected. The source and cause of the spill is a leak from the can on Capacitor Bank#5. A yellow environmental tag numbered #0005427, was hung on Capacitor Bank #5. There was no initial cleanup action taken. The cleanup is pending feeder deenergization and repair of the leak by Substation Maintenance. 6/28/05. On the 11-7 shift last night, substation maintenance removed the leaking capacitor and replaced it with a new unit. the oil was cleaned up using simple green and oil pads. P. Keelan. Closed. 8-31-05. GB"

DEC Memo: "Joe Pitre #12477 reported to W. Lee at 09:29 hrs. that he found at 09:20 hrs. approx. one (1) gallon of transformer oil had spilled onto the concrete pad and bluestone from a 55 gallon drum located at the West 42nd Street Substation. The street address of the substation is 521 W. 42nd Street. The drum was in place as an engineering control collecting oil leaking from the secondary throat of Transformer #5. There was water and oil in the 55 gal drum. The water froze in the drum causing the drum to crack, which in turn spilled the water and oil onto the concrete pad and bluestone. Only approx. 1 quart of oil spilled onto the bluestone and the remainder spilled onto the concrete pad. The source of the spill is the oil from transformer #5 and the cause is a leak from a cracked steel drum. No sewer or waterway was affected. No samples taken since there is generator knowledge of the spill. Prior PCB historical data is less than 1.0 ppm as per lab sequence #03-05654, dated 7/8/200. The initial cleanup action was started at 09:20 hrs. Maintenance will use Citrus Clean to clean up the spill and they will put the cracked drum into another containment drum. The affected bluestone will be removed and disposed of properly. The S/S Operator will call back when the cleanup is completed. 13:08 hrs. that the cleanup was completed at 11:20 hrs. The active spill will remain open under the original incident. This spill from the secondary containment can be closed out. amd"  
Remarks: "A DRUM WAS BEING USED AS AN ENGINEERING TOOL COLLECTING OIL THAT WAS LEAKING TRANSFORMER #5 WATER IN DRUM FROZE CRACKING THE DRUM. SPILLED UNTO BLUESTONE AND CONCRET PCB IS LESS THAN 1PART PER MILLION, NO SMOKE, FIRE, WATERWAYSOR [PRIVATE PROPERTY.. CON ED #151982 "

RODRIGUEZ Con Ed e2mis #140357: Efrain Alvarado #18791, Substation Operator, reported at 10:38 hrs. that he found at 10:10 hrs. approx. 6 ounces of dielectric fluid had leaked from A phase pothead of Feeder 38M44 located in Transformer #4 vault at the West 42nd Street Substation. The street address of the substation is 521 West 41st Street. He was performing a station inspection when he discovered the spill. The dielectric fluid spilled onto the bluestone. The source of the spill is the transmission feeder 38M44 and the cause is a leak from A phase pothead. No private property affected. There was no fire involved. There was no sewer or waterway affected. There is oil filled equipment in the structure - transformer #4 and a dielectric-filled feeder in the structure or vault. There is no standing water and no sewer connection. Environmental Spill tag #S-00825 was installed. No samples taken. Prior PCB historical data for transmission feeder dielectric fluid is < 1.0 ppm. S/S Operator Alvarado placed absorbent pads down, removed the wet bluestone and placed a drip pan under the leak to contain it. The pothead is not presently leaking. An outage is required to make the necessary repairs. The cleanup was started at 10:15 hrs. and was completed at 10:33 hrs. by Efrain Alvarado #18791. CIG Mark Schlagel #18276 notified at 12:05 hrs. -POTHEAD GASKET A PHASE- LEAK REPAIRED OIL CONTAINED ON POTHEAD STRUCTURE- RE-TORQUED 3 PHASES. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident."

Remarks: "on bluestone cleanup complete 10-30 am 140357"

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL NOTE: This is the Master Spill Number for Transformer #3. It is to remain open until all repairs on this equipment are completed. (JHO, 3/10/06) 8/4/08: Cleanup completed. As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. Repairs to be tracked and completed under Con Ed s MAXIMO Work Order. See eDocs for final emis report. Close out. (JHO) ~~~~~ Con Ed e2mis #124334 (master): 04/20/99 07:35 C.JAWORSKY #47705 REPORTED THAT HE FOUND TRANSFORMER #3 ON FDR 38M43 LEAKING TRANSFORMER OIL FROM THE FINNS ONTO BLUESTONE ITS CONTAINED AND HE PUT A PAN UNDER THE LEAK TO CONTROL SAME AND PIGS AROUND THE PAN NO IMPACT TO WATERWAY OR SEWER THE IS 1-DROP PER MIN. HE TOOK A SAMPLE AND FOUND A SIGN HUNG #SOO285. THE CLEANUP WAS INITIATED BY THE TRANSFORMER GROUP. THEY REMOVED THE AFFECTED BLUESTONE UNDER THE LEAK. SAMPLES OF THE SOURCE AND THE BLUESTONE WERE TAKEN. LAB RESULTS SHOW THE OILS CONTAINS <1 PPM PCBs Lab Sequence Number: 99-04026 BLUESTONE-TR # 3 M/B AREA : W.42ND ST. S/S. 28-MAY-1999 AFTER 4-20 GALLON DRUMS OF BLUESTONE WERE REMOVED, THE BLUESTONE UNDERNEATH STILL APPEARS STAINED. CONTAINMENT WAS SET UP UNDER THE LEAK IN THE FORM OF TRAYS AND ABSORBENT PADS. THE CLEANUP OF ALL STAINED BLUESTONE WILL BE MORE EXTENSIVE. THE TRANSFORMER GROUP WILL MAKE ARRANGEMENTS TO COMPLETE IT. THE LEAK REPAIR WILL REQUIRE AN OUTAGE. NO SCHEDULED DATE IS AVAILABLE AT THIS TIME. Station Supervisor G. Toto performed an inspection on 29-NOV-2000 and returned the following with regards to this transformer: 124334 TR3 No Leaks Observed. The incident status will be changed to closed. During a station inspection on 04-APR-2001 it was evident that the plug near the pump had begun to leak again. Containment was placed under the pump box and tag 000769 was hung near the leak. The leak was onto the concrete pad. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had not been repaired. This continues to leak into containment. ~~~~~ e2mis no. 135489 (sub): 02/12/01 12:57 hrs Sub-Station operator Angelo Amato #20384 of W.41 ST.sub-station on routine inspection of transformer #3 discovered an oil spill of transformer fluid in transformer pad. 04-APR-2001 the spill appeared to have been cleaned up, and is leaking into containment. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had not been repaired. This continues to leak into containment. 10/22/03 P.Keelan inspected this leak and found that the leak had not been repaired. This continues to leak into

#4 521 W41ST ST LEAK FOUND WHILE ON ROUTINE INSTECTION OF W42ND ST SUBSTATION #1 HUNG SIGN #130467. NO SAMPLE REQUIRED NO PCB AS PER RECORDS LEAK FROM BREAKERS ON SECONDARY TROAT PLATES. PLACED MARRIAGE BLANKET AND PAN UNDER PLATES.DRIP RATE 1 DROP PER HOUR. CLEANUP IN PROGRESS. 03/20/00 1307 HRS CIG MR LOPEZ NOTIFIED The exact clean-up date is unknown, but on 04-APR-2001, it appears that the spill was cleaned up and is leaking into containment. Spill Tag number S01590 is in place. The tag was replaced with Tag # S01272, the original tag was not readable. This transformer failed electrically on 4/21/2002 and will be removed from the station by 5/6/2002 to make room for a replacement. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL NOTE: This is the Master Spill Number for Transformer #10. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/24/06) 8/1/08: As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. See eDocs for final emis report. Close out. (JHO) ~~~~~ Con Ed e2mis #137021 (master): Frank Versaggi #11945, Substation Operator found at 13:50 hrs. approx. 1/2 gallon of transformer oil had leaked from the selector compartment of transformer #10 onto the concrete pad and bluestone at the West 42nd Street Substation. It appears that the leak is coming from the selector compartment door. No samples taken due to generator knowledge and previous PCB history which indicates < 1.0 ppm as per lab sequence #99-09978. Substation maintenance on location and started the cleanup at 14:00 hrs. All State Power Vac was called in to remove the contaminated bluestone. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had not been repaired. This continues to leak into containment. ~~~~~ e2mis no. 151992 (sub): 2/5/04 @ 11:45 hrs. Joe Pitre #12477, Senior Substation Operator found at 10:00 hrs. approx. 2 1/2 gallons of transformer oil leaked from the selector compartment of Transformer #10. He discovered the leak coming from one of the steel cover plates on the Selector compartment. He believes that the plate is loose. The oil leaked onto the concrete pad and the bluestone. Approx. 1/2 gallon leaked onto the bluestone. Prior PCB historical data indicated less than 1.0 ppm as per lab sequence #03-05654, dated 7/8/03. The cleanup was started at 10:15 hrs. by Substation maintenance personnel. Update: 2/5/04 Joe Pitre #12477 reported at 13:08 hrs. that the cleanup was completed at 12:10 hrs. Substation maintenance is presently investigating how to repair the leak."

DEC Region: 2  
DER Facility ID: 536578  
DEC Memo: "3/12/19 - Obligado - Desk Duty - Called Riteway. Left message.  
3/13/19 - Obligado - Tank test was performed after a tank cleaning.  
Not holding pressure. The tank had a hole on the tank of the tank. A  
temp tank has been set up. TTF Letter Sent. 03/20/19 - Lakhani  
Riteway Paul informed that the 3000 gallons AST was emptied.  
Contaminated debris surrounds the tank. A proposal is being sent to  
the owner. 07/10/19 - Lakhani DEC Lakhani inspected the tank on  
05/17/19 and required Riteway to install four (4) boring in the tank  
room: one (1) in each corner of the tank. Borings should extend to  
either groundwater, bedrock or the first depth where no further  
impact is noticed; whichever comes first. Samples should be collected  
and analyzed. On 07/09/19, Paul informed that the tank has been  
removed. 07/11/19 - Lakhani Sample results: 1,2,4-trimethylbenzene  
4600 ppb(sample 1). DEC Lakhani inspected the site on 07/10/19. The  
tank was removed. Four (4) test pits were dug using a hand auger.  
Results from the samples collected in each corner of the tank room.  
The sample collected from the southwest corner showed a few minor  
hits slightly above UUSCOs. Due to the proximity of foundation of the  
building, DEC Lakhani authorized backfill. Riteway will complete the  
concrete slab and encapsulate. 08/22/19 - Lakhani The slab was  
restored in the tank room. The spill has been addressed. Spill is  
closed."

DEC Memo: "Employee reported approx 1 gallon of insulatum on the concrete floor. no sewer/waterway affected. The source of the spill is a cable joint and the cause is a Blown 3W \* 1W lead joint. Environmental tag # 41241 was hung. Two samples for PCB and ID will be taken and Chain of Custody form number is pending. Diapers were used to contain the insulatum to prevent environmental impact. No other cleanup actions taken at this time. Pending Crew availability Cleanup set for 15:00 on 10/10. Lab Sequence Number: 04-08211-001 - PCBs < 1 ppm 10/10/04 20:45 J.Velez#27098, Underground supervisor notified the control center on 10/10/04 at 20:30hrs. that the cleanup in M43095 was completed. This was a final cleanup. There were three barrels of solids removed and approx.150 gallons of water and oil mixed removed via tanker from M43095. The method used to clean was double washed with slix. The yellow environmental tag #41241 was removed from M43095. The source of the spill, a blown 3w1w joint has not been repaired yet, but J.Velez#27098 reports that the joint is empty and he stuffed it with rags and wrapped it up in plastic and taped it until the joint can be removed and replaced. The cleanup was completed on 10/10/04 at 20:20hrs. Lab Sequence Number: 04-08212-001 - analysis indicates the presence of a lubricating grease."

DEC Memo: "02/26/15- Ahmed - DEC demeo responded to the site. 2/26/15 TJD Site inspection. Tank overflow during delivery by Approved Oil - no discharge from vent pipe. All product discharged out of manway inside tank vault. Tank is a 15K AST and lacks proper secondary containment. Product flowed from tank vault through weep holes and vault seepage onto boiler room floor and into building sumps. DEC required building personnel to turn off sump pumps and report impacts to NYCDEP. PTC was initially retained for cleanup but were dismissed from job by property owner due to inoperable equipment. All Boro was retained to complete cleanup. Tank vault was found to have an illegal sump with float operated pump which discharged to a second sump pit - also disconnected upon discovery. Ventilation equipment was installed to address nuisance petroleum odors from affecting residential/commercial properties. Tank was found to be bulging and DeMeo required tank be emptied pending further investigation including a required 10 year internal inspection. PBS NOV was issued. Inspection photos & NOV uploaded to DECDOCS. NYCDEP (Andrew Kelly) reported to have inspected property and issued a Commissioner's Order to clean affected sewers. 2/27/15 TJD Chris from All Boro called with update. Cleanup was completed - his crews are onsite today and product (10 inches) has re-emerged into previously cleaned building sumps from unknown pathway. Remaining product has been transferred to a temp tank in roadway. DeMeo has required a full drainage and sub-surface investigation. 2/28/15: Mahat DEC Mahat received an email from Chris mentioning that he is performing sub-surface investigation. He is drilling the concrete floor and pumping the pits that flooded back with product. DEC is waiting on full delienation report. 3/1/18 TJD File review. Financial dispute between Property Management Company and AllBoro Tank resulted in a significant delay in obtaining required closure report. Once dispute was resolved, a closure report was submitted by All Boro Tank in July 2017. The

Remarks: report was reviewed and deemed incomplete, as no groundwater monitoring data was provided. The management company retained a second contractor (PW Grosser) to document GW monitoring results - a report addendum was submitted in October 2017. Upon review of both documents, all required remedial/investigative work has been completed. A review of the laboratory reports for both soil/groundwater reveals concentrations of target analytes are within acceptable concentrations. No further action is required. All documentation has been uploaded to DECDOCS. Spill closed. "14,000 gal tank/spill contained to basement area and tank room/ unknown drain impacts at this time/investigation underway"

Contact Name: MS JEFFREY  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TIBBE 10/10/03 1030 Hrs - Sawyer - I called the Lewis Berger Group and Katie Jefferies advised me that they were subcontractors for the Jersey Boring and Drilling. The drilling was done for investigation for NYCTMA mapping for and addition to the 7 train. This spill will be given to Mark Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/28/11 - Obligado - Spill re-assigned from O'Connell to Obligado 4/10/13 - Raphael Ketani. I researched this spill case. The only site in the vicinity of the above spill that could generate contamination is spill number 9503865. This is a former gas station at 543-551 10th Avenue, Manhattan at the intersection of 10th Avenue and West 41st Street. They were removing tanks from the old gas station and found contaminated soil. Groundwater monitoring is ongoing. Development plans are in the works. The DEC project manager is Kumar Patel in the Region 2 Spills Unit. 4/11/13 - Raphael Ketani. I made an unannounced site visit. The location is a fenced in lot with an old, one story service building on it. The site was an old gas station. Except for the service building, there was nothing left above ground. I saw the tops of two groundwater monitoring wells. I took some pictures and left the site. 4/16/13 - Raphael Ketani. I contacted Toni Watts of NYCT by e-mail and asked her for any information that NYCT would have regarding the site. 4/25/13 - Raphael Ketani. I spoke to Ms. Watts today. She said that she had researched the spill number in the NYCT records, but did not find any information. 4/26/13 - Raphael Ketani. As there was no evidence of a spill on the sidewalk, and as the gas station site is being monitored as an active spill through a DEC case manager, I am closing spill case #0307082 effective today."

Remarks: "diesel spill occurred on sidewalk at location"

| DEC Memo:                 | "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 152263: found approx. 125 gallons of green unknown fluid mixed with water. Two samples taken, Clean up pending lab results. Lab Sequence Number: 04-01457-001 PCB <1 ppm Lab Sequence Number: 04-01463-001 The sample does not match any current Con Ed standard. Lab Sequence Number: 04-01465-001 Flash Point, PMCC >140 deg F Clean Harbors reported that the manhole has approx. 1500 gallons of fluid and not the 125 gallons originally reported. They stated that they would not be able to pump the liquid into drums. They would have to pump the liquid into their truck. They stated that they would hold the truck until Monday, 3/1/04 when the results of the antifreeze test is expected. Lab Sequence Number: 04-01482-002 Propylene Glycol < 6.08 ppm EPA 805 Ethylene Glycol < 7.18 ppm EPA 8015 Closure of this incident is pending results of the T-Clip analysis and details of the cleanup from Clean Harbors. Lab Sequence Number: 04-01482-001 Arsenic as As 5.0 0.13 ppm Barium as Ba 100.0 0.38 ppm Cadmium as Cd 1.0 0.0080 ppm Chromium as Cr 5.0 < 0.016 ppm Lead as Pb 5.0 0.085 ppm Mercury as Hg 0.2 0.00095 ppm Selenium as Se 1.0 0.057 ppm Silver as Ag 5.0 < 0.010 ppm" |

DEC Memo: "e2mis no 159872 A. Cohen #08224 discovered a possible transformer leak, V8453 Feeder 13M62. Located at 325 W. 29 St. 5 gallons of dielectric fluid on 15 gallons of water. No sewer/waterways affected. Source /cause, possible transformer leak. There is a sewer connection, sump pump is unplugged, not running. No concrete sump. Environmental tag # 38813. 2-samples taken 1-pcb and 1-oil id."  
Remarks: "ON WATER: NO TO 5 QUESTIONS!: CONED # 159872:"

DEC Memo: "while redevelopment, 550 gal ust found. tank will be pumped and removed, overexcavated. report to follow. Site to be dug 18- 25' bgs depending on locale. 09/25/13-Hiralkumar Patel. 1:54 PM:- spoke with Chris. they found one 550 gal UST containing oily water during excavation for foundation of new building. they are currently removing any impacted soil from tank location area. Chris will submit letter report by 10/11/13. 09/30/13-Hiralkumar Patel. 3:27 PM:- received call from Chris. they found another 1,100 gal UST. he has collected endpoint samples from both tank excavations. 10/10/13-Hiralkumar Patel. 3:30 PM:- visited site. met with site supervisor and Pragnesh from Langan Engineering. Pragnesh mentioned that Langan is handling geotechnical work for the site and Roux Associates is handling environmental work. site supervisor showed location of two tanks: one tank was found in northcentral portion (along property line) of the site and another tank was found in southeast corner of the site. southeast area has been backfilled to facilitate other activities at the site. found crew removing dark soil (which had no signs of spill) from southwest corner of the site. Pragnesh mentioned that the bedrock under the site is at around 50-60 ft bg and groundwater is at around 13 ft bg. found groundwater in excavation in southwest corner. 11/13/13-Hiralkumar Patel. received email from Chris (at 6:01 PM on 11/12/13) including report. abstract: - site consists of two contiguous properties that are currently being redeveloped into a 21-story residential building - properties were formerly occupied by a six-story and one-story commercial buildings - NYC OER (VCP # 13CVP107M) approved work plan dated 02/20/13 required excavation of the site to approx. 17 ft bg - two USTs found: one 750 gal single-walled steel UST was discovered on the north central portion of the site and one 1,100 gal single-walled steel UST was discovered near the southeast corner of the site - both USTs contained oily water and most likely had been used to store heating oil - petroleum impacted soil was observed in the excavations for both USTs - approx. 687 tons of soil were excavated - collected total 11 endpoint soil samples: five samples from 750 gal UST area and 6 samples from 1,100 gal UST area summary table of sample result shows no detection of VOCs in any sample, but detection limit for some samples are higher than cleanup standard. report is missing excavation dimensions, endpoint sampling depth and lab package. 10:18 AM:- left message for Chris. 10:38 AM:- sent email to Chris and asked to submit a revised report including following: - final dimension of each tank excavation - depth of each endpoint sample - laboratory package 11/14/13-Hiralkumar Patel. 10:59 AM:- received call from Chris. discussed about higher detection limit for samples. Chris mentioned that the endpoint samples from tank's excavation were collected at around 10-12 ft bg, but the entire site has been excavated to 18 ft bg as part of redevelopment. he collected endpoint samples from 18 ft depth which shows clean. asked Chris to submit revised report, including sampling data from 18 ft depth. 12:12 PM:- received email from Chris including revised spill closure report. - area around the 750 gal UST was excavated to approx. 12 ft in depth,

DEC Memo: "11/05/14-Hiralkumar Patel. alternate address: 314-322 West 30th Street no other spills found. PBS #: 2-332607. as per PBS record, the site has one 6,000 gal #6 oil AST in vault, in-service, installed in Jan. 1965. as per NYC DOB record, a permit application was approved on 01/23/14 for replacement of oil burner with gas/oil burner and change of fuel oil grade from #6 to #2 oil. Chelsea Town LLC. \*\*property owner\*\* c/o Hoffman Management 300 West 55th Street, Suite 2S New York, NY 10019 Attn.: Mark Hoffman PH. (212) 247-4975 email: mhoffman@hoffmgt.com 11/06/14-Hiralkumar Patel. 9:20 AM:- spoke with Chris at All Boro. the tank was emptied out and cleaned as part of grade conversion from #6 to #2 oil. prior to filling up the tank with #2 oil, tank system was tested which failed. immediately, technician conducted an isolation test of tank only and it failed. technician found crack in epoxy coating inside the tank. All Boro will do further investigation. Chris mentioned that 15% of the tank is in contact with surface. 9:42 AM:- sent TTF letter to Mr. Hoffman requiring report submission by the end of 12/19/14. letter emailed to Mr. Hoffman and Chris. 12/18/14-Hiralkumar Patel. 2:18 PM:- spoke with Chris. he will call back. 3:22 PM:- received call from Chris. currently the tank is empty and owner has decided to remove the tank system once a new natural gas heating system is installed. the new gas system may be installed by the end of Jan. 2015. 3:50 PM:- received email from Chris including above discussion about gas system installation and tank system removal. 04/16/15-Hiralkumar Patel. 10:09 AM:- left message for Mr. Hoffman inquiring update. 12:57 PM:- received call from Chris. he mentioned that a new gas line was installed two weeks ago and he got approval to remove the tank. he will provide work schedule soon. 10/26/15-Hiralkumar Patel. 1:22 PM:- received email from Chris including pics of tank room. he mentioned that tank has been removed. he will remove residual contamination noted underneath the tank and will collect endpoint samples. 12/28/15-Hiralkumar Patel. 10:49 AM:- received email from Chris including result of three soil samples. based on chain-of-custody, three soil samples were collected. found VOC contamination in all three samples. Chris asked if further remediation needed. soil sample results: -----2 ft Front Head----2 ft Rear Head----Center

Naphthalene-----440-----4,000-----1,  
200 10:58 AM:- sent email to Chris. informed him that based on  
submitted lab report, the department requires further remediation, if  
practical. 12/30/15-Hiralkumar Patel. received email from Chris (at  
6:00 PM on 12/29/15). they will begin remediation on 01/04/16.  
01/08/16-Hiralkumar Patel. 2:25 PM:- spoke with Chris at All Boro.  
they started remediation of remaining contamination on 01/04/16 and  
will finish work by next week. 01/20/16-Hiralkumar Patel. 10:57 AM:-  
received email from Chris including some site pics.  
02/16/16-Hiralkumar Patel. 11:17 AM:- received email from Chris  
including some site pics. 03/01/16-Hiralkumar Patel. received email  
from Chris (at 10:31 PM on 02/29/16) including results of five soil  
samples. out of five samples, minor VOC contamination noted in  
samples #1 (Head 36 inches deep) and #3 (60 inches deep center).  
found higher VOC contamination in sample # 5. soil analyticals:  
-----# 5 Head 85 inches deep  
Toluene-----530  
Ethylbenzene-----2,200  
Xylene-----19,500  
1,2,4-Trimethylbenzene-----38,000  
1,3,5-Trimethylbenzene-----11,000  
Naphthalene-----6,400 10:11 AM:- sent email to Chris  
and asked him to submit scaled site map with sample locations. 10:18  
AM:- received call from Chris. he is going for site meeting at 11 AM  
today and get measurements to prepare scaled site map. he mentioned  
that sample # 5 was taken from bottom of the excavation, towards  
north end (towards W 30th St) near the building foundation wall. he  
stated that the most recent tank was located on 12 inches thick  
concrete pad, so contamination noted below the concrete pad is  
possibly a result of historical spill at the site which was confirmed  
by one of the board member. Chris confirmed there are no odor  
complaints from on-site occupants as tank location is in garage area.  
as excavation is inside the building and closer to the foundation  
wall, asked him not to conduct any further excavation. asked him to  
delineate remaining contamination prior to finalizing remediation  
action plan. also suggested him to have an inspection by a structural  
engineer prior to any further excavation. 10:29 AM:- spoke with John  
at Hoffman Management. informed him that based on available  
information, the department requires further delineation of  
contaminated material prior to finalizing a remediation action work  
plan. suggested him to have a structural engineer inspect the site  
prior to any further remediation via excavation. John Throumoulos  
Hoffman Management email: johnt@hoffmgt.com 10:56 AM:- sent email to  
John and informed him that the department requires further  
delineation prior to finalizing a remedial action plan. suggested him  
to have a site inspection done by a structural engineer prior to any  
further excavation. asked him to submit schedule for further  
investigation and submission of results. email copied to Mr. Hoffman  
and Chris. 04/06/16-Hiralkumar Patel. received email from Chris (at  
10:40 PM on 04/05/16) including result of two soil and one

                  Updated By:     LSZINOMA  
                  Site Description:     Location: The River Place I site is located in Manhattan. It is bounded by 12th Ave., 41st and 42nd Streets, and the River Place II Apartments. Site Features: The 2.6 acre site is completely covered by a multi-story apartment building. Current Zoning/Uses: The site is currently in use as an apartment building with commercial space on the ground floor. Historical Uses: The site was used, from the 1860's to the 1920's, as a manufactured gas plant (MGP). Gas was produced through the heating of coal and some petroleum products. This activity led to the contamination of the site. Source areas were the main components of the MGP, including the gas holders. This site was originally to be addressed under the multi-site voluntary cleanup agreement with Con Edison (Site No. V00531) The remaining off-site impacts are being addressed in this manner. Site Geology/ Hydrogeology: The site is underlain by a thick layer of fill, with thin layers of silty and sand underneath that. Bedrock is found as shallow as 20 feet below the ground surface. Groundwater at the site is encountered roughly 7 feet below the ground and generally flows to the south and east.

Env Problem:     Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation the contaminants of concern were benzene, toluene, ethylbenzene, xylene, and polycyclic aromatic hydrocarbons in the soil and groundwater.

Health Problem:     Currently direct contact exposure are prevented since the site is covered with a building, pavement and landscaped areas. The proposed remedy calls for the removal of waste from landscaped areas and the continued maintenance of the building and paved areas. Soil gas and indoor air sampling showed no evidence of soil vapor intrusion. Public water is provided to the area, thereby preventing exposures to groundwater.

a multi-story apartment building. Current Zoning/Uses: The site is currently in use as an apartment building with commercial space on the ground floor. Historical Uses: The site was used, from the 1860's to the 1920's, as a manufactured gas plant (MGP). Gas was produced through the heating of coal and some petroleum products. This activity led to the contamination of the site. Source areas were the main components of the MGP, including the gas holders. This site was originally to be addressed under the multi-site voluntary cleanup agreement with Con Edison (Site No. V00531) The remaining off-site impacts are being addressed in this manner. Site Geology/Hydrogeology: The site is underlain by a thick layer of fill, with thin layers of silty and sand underneath that. Bedrock is found as shallow as 20 feet below the ground surface. Groundwater at the site is encountered roughly 7 feet below the ground and generally flows to the south and east.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation the contaminants of concern were benzene, toluene, ethylbenzene, xylene, and polycyclic aromatic hydrocarbons in the soil and groundwater.

Health Problem: Currently direct contact exposure are prevented since the site is covered with a building, pavement and landscaped areas. The proposed remedy calls for the removal of waste from landscaped areas and the continued maintenance of the building and paved areas. Soil gas and indoor air sampling showed no evidence of soil vapor intrusion. Public water is provided to the area, thereby preventing exposures to groundwater.

Site Description:

Location: The West 42nd Street Former MGP site is located in an urban area along the west side of Manhattan, New York County. The site is bounded on the north and south by 42nd Street and 41st Street, respectively, and extends westward from 11th Avenue to the Hudson River beyond 12th Avenue. When it was operating, the former plant also extended west into what is now the Hudson River. A large portion of the site, bounded by 11th and 12th Avenues, has already been remediated and redeveloped under the Department's Brownfield Cleanup Program as two separate sites known as Riverplace 1 and Riverplace 2 (site numbers C231012 and C231024). The remaining portion that was not addressed under the Brownfield Cleanup Program consists of property currently beneath 12th Avenue, 41st Street, and 42nd Street. Contamination from the MGP has spread beneath an adjacent property south of 41st Street. This off-site parcel is currently in use as a bus maintenance depot, operated by the Metropolitan Transit Authority (MTA). Site Features: The site is nearly flat and paved with asphalt and concrete. The off-site area is covered with a bus depot. Current Zoning/Uses: The portion of the site not addressed under the Brownfield Cleanup Program is not zoned, since it is a right-of-way and is currently in use as city streets. The off-site area to the south is an MTA bus depot and is zoned M1-5, for manufacturing. Historical Uses: The site was used, from the 1860s to the 1920s, as a manufactured gas plant (MGP). Gas was produced through the heating of coal and some petroleum products. This activity led to the contamination of the site. Source areas were the main components of the MGP, including the gas holders. The remaining off-site impacts are also being addressed under this site. Site Geology/ Hydrogeology: The site is underlain by a thick layer of fill, with thin layers of silt and sand underneath that. Bedrock is found as shallow as 20 feet below the ground surface. Groundwater at the site is encountered approximately seven feet below the ground and generally flows to the south and east.

Env Problem: Nature and Extent of Contamination: The active remediation for the site is complete. Remedial investigations indicates that the area is suitable for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the site is contaminated with coal tar and its constituents. These constituents include benzene, toluene, ethylbenzene, and xylene (BTEX), and polycyclic aromatic hydrocarbons (PAHs). The coal tar is found at depths of 10 feet or more below ground surface. It is found at the eastern edge of 12th Avenue and sheens are found at the

**S106906463**

western edge, implying that coal tar is under the bulk of 12th avenue, between W.41st and W.42nd Streets. Coal tar has also been found under the eastern edge of the building on the south side of W.41st Street. In soil, the PAH and BTEX contamination is co-located with the coal tar with the highest concentrations reaching 49,000 parts per million (ppm) for total PAHs and 1,340 ppm for total BTEX. The groundwater plume is mainly confined to the site itself with onsite concentrations as high as 450 parts per billion (ppb) for total BTEX and 1,850 ppb for total PAHs.

Health Problem: People may contact contaminated soil or groundwater if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by the contamination. Volatile organic compounds in the soil vapor may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions are not needed to address the potential for soil vapor intrusion given the current use of the site for streets, parking, and MTA operations. However, if the site is redeveloped or the use changes, the potential for soil vapor intrusion will be re-evaluated. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

DEC Memo: ""Found old PBS for the site Five 550 gal gasoline UST's were closed/removed on 10/1/97 No other PBS at this address (sometimes a site has more than one address?) CSL sent to: Chelsea Operating Inc 521 West 21 Street New York, NY 10011 Attn: Guy Roberts 11.08.05 Sharif- David from Delta Environmental called to say he believes the high SVOC level in the soil is because of the former 550 gal UST's those were removed couple of years ago. He has the site assesment report and will send it to DEC. Remedial work might be needed depending on the level of contamination. 11/23/05 - David Greffenius, 914-765-8172 called. Working on this case, need a PM to work with. - KST 11/29/05 - Obligado - Spill transferred from Tang to Obligado. Called David Greffenius, left message. 11/29/05 - Obligado - Received phone call from Tanya (917)257-7707, tenant on second floor who just signed a lease on the garage on the first floor. Plans to do construction to turn the garage into an art gallery. 1st floor is 10,000 square feet of space and 1/2 of it is already a gallery leased by a different tenant, Tanya wants to do construction on other half. Plans to pour concrete floor. Owner is Guy Roberts (above). 11/29/05 - Obigado - review PBS records. PBS #2-601593 - 5 550 gallon

gasoline USTS removed in 1997. 1 1500 gallon #4 fuel oil UST abandoned in place on 11/9/05. Site was formally of trucking/transportation/fleet operation garage called Chelsea Operating Inc. Removed tanks were single wall steel with no leak detection. 11/30/05 - Obligado - spoke to D. Greffinius. He said he will send the reports related to this site. Geoprobe borings were conducted in september, resulting in the spill number being called in. Delta plans to conduct more borings next week. David inquired about 510 w.21st street. INformed him that the spill was related to fuel oil release. 11/30/05 - Obligado - received analytical results from soil borings performed by Protest on 9/30/05. Total of seven samples collected from 4 boring locations. Soil borings at N2 (8-10') show 3500 ppb benzene, 52300 ppb toluene, 26000 ppb ethylbenzene, 52300 ppb xylenes, 42000 ppb MTBE; at S6 (4-8') show 13000 ppb benzene, 170000 ppb toluene, 140000 ppb ethylbenzene, 840000 ppb xylenes, 12000 ppb MTBE; at SE1 (8-10') show 740 ppb benzene, 8500 ppb xylenes, 850 ppb MTBE; at NE4 (4-8') show 540 ppb benzene, 2200 ppb xylenes, 660 ppb MTBE. 12/1/05 - Obligado - Call D.Greffinius, left message. Call Tanya, left message. 12/1/05 - Obligado - Received call from Tanya. Informed her that additional investigation is needed due to very high concentrations of soil contamination. Advise her not to proceed with any construction on the lower level before investigation is completed. 12/1/05 - Obligado - Received call from Tanya. Said she plans to install vapor barrier under slab. 12/2/05 - Obligado - Called D. Greffinius, left message. 12/8/05 - Obligado - PPhone conversation with D. Greffinius. Soil and ground water investigation conducted on 12/6/05. 5 borings, product encountered in 3 of the gw samplin locations. Delta plans to put in a vent well beneath the foundation that will attach to a blower in the boiler room. Also plans to put a well in the sidewalk for monitoring and possible future VAC events to recover product. Approve of tentative plans. Delta will submit a report with findings. 12/12/05 - Obligado - phone call from Adam Sax, contractor wanting information about vapor barriers. Said will get back to him. 12/14/05 - Obligado - called back Adam Sax, left message with some vapor barrier brands, and that the DEC would like to see a vapor barrier with at least 20 ml thickness. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Describes site meeting between Delta and Earthtek regarding venting system. Will install piezometers to measure vacuum influence. Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/28/05 - Obligado - site meeting with D. Greffinius. Installed two temporary wells to remove product from beneath the buiding foundation. Approximately 20 gallons of product have been removed. Installed a vent well which will be attached to a blower in the boiler room to vent soil vapor. The boiler room was flooded with water (~18 inches) due to a malfunction with sump system. Plumbers came to site to pump out water. Once all water is pumped out, Delta will return to site next day to connect the vent well to a blower in the boiler room. DEC require two 4 wells to be installed in sidewalk which will be used for EFR to remove additional product. 12/29/05 - Obligado - faxed sidewalk permit letter to Delta. Completed vent well installation and piping to boiler room. Received phone call from Delta. He will fax results of Delta's investigation. 1/3/05 - Obligado - received phone call from Tanya. Told her I was working with Delta to determine if anything else needs to be done beneath foundation. When area is ready for construction will send a letter. Received soil and ground water

analyticals from Delta investigation: GW results in ppb: MW sidewalk-benzene 1540, ethylbenzene 453, toluene 80.6, xylene 590, MTBE 3530 sb5 - benzene 11.2, ethylbenzene 65.2, toluene 5.6, xylene 180, MTBE 39.5 sb1 - benzene 992, toluene 43.6, ethylbenzene 410, xylene 225, MTBE 2440 Soil results in ppb: SB5 (7.5-8) - no exceedences SB5 (2.4-4) - no exceedences SB4 (7.5) - benzene 78, MTBE 384, xylene 4960 sb4 (3.5) - no exceedences sb3 (1.5-2) - benzene 339 sb2 (7.5) - benzene 3870, ethylbenzene 8750, toluene 1040, xylene 13500 sb2 (3.5) - benzene 119, xylene 1360, MTBE 287 sb1 (7.5) - benzene 95.5, MTBE 1790, xylene 1350 SB1 (3.5) - MTBE 1080 Received phone call from Tanya, requested Soil Analyticals so she could give to vapor barrier company to develop appropriate vapor barrier. Faxed her soil analyticals. 1/5/05 - Obligado - Conference call with D. Greffinius and Gordon Hinshalwood at Delta. Decide to go ahead with plan to install VEFR/Monitoring wells in sidewalk to pull product from under building. Will give Tanya go ahead to install vapor barrier and floor. Emailed approval letter to Tanya and Dave, will send hard copy in mail to Tanya and Guy. 1/6/05 - Obligado - Call from Ben Mollina, will be doing construction work at site. Wanted to know if building is ready for construction. Said ok to go ahead. 2/16/06 - Obligado - PHone call from D. Greffinius, said vapor barrier installation begins today, he will be there to oversee and take photos. 3/28/06 - Obligado - Spoke with D.Greffinius. He has been visiting site to oversee vapor barrier installation. He has sampled new wells in sidewalk. He will send a RAP by the end of this week. 3/5/06 - Obligado - Spoke with D. Greffinius, he will fax diagram for sub slab system. Also said he will send RAP. Inquired about Vac Truck vs EFR trailer for recovery events. Also about permitting requirements. Told him I would get back to him. 3/6/06 - Obligado - Called D. Greffinius to inquire about RAP, left message. 4/26/06 - Obligado - Spoke with D. Greffinius. He will turn on sub-slab ventilation system. 5/4/06 - Obligado - Sent STIP agreement to Guy Roberts, ccd D. Greffinius. Due date 5/25/06. 5/23/06 - Obligado - spoke to attorney for Guy Roberts. Wanted to alter Stip agreement to reflect the fact that some work has already been done at the site. Talked to John Urda, he said that we don't modify the STIP but we can alter the CAP. 5/24/06 - Obligado - Sent a revised CAP to Robert Walters via email. Dave Greffinius cell: 914-522-6344 Guy Roberts cell: 646-217-2441 5/25/06 - Obligado - Stip implemented by Oliva. 7/10/06 - Call Dave Greffinius - left message 7/27/06 - Obligado - spoke to DAve greffinius. He said they planned to to EFR pilot next week. 8/3/06 - Obligado - Review Remedial Action Plan, Submitted by Delta Environmental, dated July6,2006. IN 1997, six 550 gallon gasoline USTs were removed. The site has been redeveloped as a Gallery. Prior to redevelopment a subslab ventilation system and vapor barrier were installed. Site underlain by brown silt and clayey silt with very fine sand and small gravel. GW approximately 6 to 8 ft. GW probably flows to SW. Soil analytical results from 12/9/06 show petroleum impacted soil The hotspots are SB2 (155,900 ppb total VOCs) and SB4 (39,590 ppb Total VOCs). GW hot spot at SB1 5197 ppb VOCs and existing sidewalk well with 6698 ppb Total VOCs. Delta installed 2 additional sidewalk wells in January 31, 2006. MW1 had 358 BTEX and 3110 MTBE and MW2 had 836 BTEX and 2170 MTBE. The existing sidewalk well had 3339 BTEX and 7820 MTBE. 4 Remedial alternatives have been proposed. MNA, MPE, periodic VEFR, and SVE. Ongoing and Proposed Remedial Activities - A subslab Soil system has been installed with 1 4 diameter SVE well attached to a Blower. The SVE system will operate continuously for 3 to 5 years to

prevent vapor migration into the building. VOC readings measured at the sampling port will be collected on a quarterly basis and compared to Benzene Emission Limits. A Pilot VEFR event will be performed to try to removed LNAPL. If affective periodic VEFR events will be performed. 3 existing wells on north side of sidewalk and one existing well on south side of sidewalk (MW3) will be monitored on a quarterly basis. Call D. Greffinius to discuss plan. Left message to call DEC. 8/31/06 - Obligado - Call D. Greffinius to discuss the RAP and the pilot test. He said they recovered approximately 5 gallons of product during the pilot test. He will submit a pilot test summary letter shortly. 9/12/06 - Obligado - Email from Greffinius. He will send a Pilot Test Summary Leter report 10/13/06 - Obligado - Emailed Greffinius inquiring as to status of Pilot Test Summary Letter. 12/8/06 - Obligado - Sent email to Greffinius requiring VEFR summary report submitted as a RAP Addendum by December 29, 2006. 1/25/07 - Obligado - Reviewed RAP Addendum. VEFR event removed 390 gallons of impacted water and 56.5 pounds of LNAPL and combustibile gas. Approximately 5 gallons of product were removed. Monitoring subsequent to the event found 0.9 ft of product in the sidewalk well suggesting VEFR successful in moving product from under building. Sent letter approving RAP for VEFR and requiring product fingerprint to compare product in sidewalk well to previously found product, additional 3 monitoring wells, and schedule for future VEFR events. 7/9/07 - Obligado - Sent letter to Mr. Roberts requiring overdue well installations and VEFR schedule. Called Dave Greffinius to discuss. 9/27/07 - Obligado - Email from D.Greffinius : The six MWs at 521 W. 21st Street are being sampled today, from around 10:30 a.m. to 2:30 p.m. The attached diagram shows the 6 wells; we will also be taking a few measurements to make any minor corrections to the site plan. I'll let you know if we have measurable LNAPL today. 8/25/08 - Obligado - Email from Greffinius. They need to relocate MW6 due to utility work in the sidewalk. I sent a letter approving a relocation of MW6. 9/3/08 - Obligado - Cover letter for 1Q08 and 2Q08 monitoring reports. Delta is monitoring vapors from SVE ssystem. Concentrations decreasing in effluent. Review 2/19/08 monitoring report. 6 monitoring wells were sampled on January 18, 2008. GW is at 6.65 to 7.89 ft. Impacts found at MW2 - 9,380 ug/l BTEX. Proposes continued monitoring. Reevew May 16, 2008 monitoring rpeort. LNAPL not detected High BTEX in MW2, 6200 ug/l. Proposes continued monitoring. 7/3/09 - Obligado - Sent email to Dave requiring submission of overdue monitoring reports. 8/18/09 - Obligado - Quarterly reports submitted. 1/12/09 - Obligado - Review of quarterly reports. The most recent report for 3Q09 shows BTEX concentration of 2996 for MW2. No LNAPL present. Monitoring wells MW1-MW6 were gauged and sampled. A request for decreasing monitoring to Semi-Annual was also submitted based on fluctuating but generally decreasing concentration trends and the lack of free product since July 2007 in monitoring well MW-Sidewalk. I sent a letter to Guy Roberts cc to Delta rejecting the request and requiring 1) continued quarterly monitoring, 2) addition of MWSidewalk to monitoring network 3) monitoring well survey and contour maps 4) hydrographs 5) documentation of SSDS operation. Required submission of next monitoring report within 90 days 3-28-16 - Obligado - I received a call from Guy Roberts, requesting the site status. I told him the case was still open. He requested I sent him a letter with DEC requirements. Guy Roberts Chelsea Operating Inc 415 West 127th stret Ny NY 10027 5-13-16 - Obligado - Letter sent to Guy Roberts requiring a full round of groundwater sampling, sampling of

the SSDS, submission of a groundwater sampling report with recommendations. 2/9/17 - Obligado - I received a Monitoring Report which requests spill closure. I reviewed the report. MW-1 had 78 ug/L total VOCs and 50 ug/L total BTEX. MW-2 had 332 ug/L total VOCs and 95 ug/L BTEX. NO VOCs were detected in SVE-1 effluent vapor sample for the 3rd consecutive quarter. Based on the data submitted and review of the case file, this spill meets internal closure guidance. The spill has been delineated and remediate to the extent feasible given the existing structures. 6 550 gasoline UST were reportedly removed in 1997. One fuel oil UST was abandoned in place in 2005. Free product has been removed to the extent feasible using Vacuum Enhanced Recovery. Based on Non Detections of VOCS during vapor sampling there is no apparent threat of vapor intrusion. As an added layer of protection a vapor barrier was installed beneath the floor of the gallery as a conservative measure. While there is limited residual soil contamination beneath the building, ground water concentrations are decreasing and the plume appears to be attenuating. According to Jim DeMartinis the current use of the site is still an art gallery. Based on the documentation and the current site use as an art gallery this spill no longer poses a threat to human health or the environment and the spill closed. A Spill Closure Letter sent to Guy Roberts and Jim DeMartinis. Due to residual soil contamination beneath the site, the Spill Closure letter states: Please note the following concerns for the possible future use of this site. If subsurface contamination is encountered during excavation, construction, or any other on-site activity, appropriate remedial and vapor mitigation efforts may be needed to be taken to prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the site owner, developer or any responsible party from compliance with any applicable laws and regulations. "

DEC Memo: "2004 spill next door (fill pipe on tank???) Bovis Developers is gutting the building. In basement pump room they broke under the floor and found an oil water mix. They think the oil may be coming from a building next door. Also a possibility of an old, old gas station on the site. Covenant House (Youth shelter non-for-profit) owns both buildings. 3/13/07 - Raphael Ketani. According to Property Shark, the site is part of a large property with the address 456-464 W. 41 Street, block and lot 01050/0001. The official address is 538 10 Avenue. Covenant House owns the entire property. There is no PBS case for the site. There was a spill case for the site from 2004, #0404424. It was opened on 7/24/04 and closed on 10/6/05. It involved soil sampling by the NYCTA for a #7 train extension and the discovery of contaminated soil. The soil was removed. 3/14/07 - Raphael Ketani. I made a scheduled site visit and met Gerald Tiss V.P. of JLC Environmental Consultants (212) 420-8119. He showed me the site. I saw the fill port, vent pipe, and stick port for the UST. There is a UST under the sidewalk that serves the site's building and one next to the tank. The stick port is in the driveway that runs to the back of 460 W. 41 Street. The fuel line from the tank to the boiler also

**COVENANT HOUSE (Continued)**

**S108466647**

runs under the driveway. Mr. Tiss pointed out where the tank was located under the sidewalk. He said that the tank was replaced in 2004 (this doesn't match the information from case #0404424). We went inside and down the stairs. The ppb Ray PID meter detected 115 ppb of vapors, but they were working with all kinds of materials throughout the building. I looked at a groundwater location under some plywood boards that was situated about mid-way down a hallway in the basement and another groundwater location near the landing to the basement stairs. Both locations looked like they had just groundwater. The engineer from Bovis Developers told me that the water level goes up and down with the tides (the building also fronts on 10th Avenue and they are a few blocks from the Hudson River). Lastly, we looked at a section of open floor in a pump room. There were several pools of black oil floating on top of the groundwater. The pools were no larger than about 18 inches long and were not connected to each other. The engineer from Bovis told me that the groundwater here doesn't move with the tides. Mr. Tiss asked what should be done. I told him that the oil should be recovered and then the hole should be monitored for more oil. I added that if the oil keeps coming back, then the source will have to be found. He said he understood this. I also told him that if the oil keeps coming back, then I would be suspicious of the tank system and that it should be tested to see if it is leaking. He agreed to do this. 3/26/07 - Raphael Ketani. Mr. Tiss called to say that they will begin pumping the pit where the small pools of oil showed up and see what follows. I told him that the tank was never tightness tested. He said he knows this and will address the tank system if the oil keeps returning. 3/28/07 - Raphael Ketani. Mr. Tiss called to say that they started the recovery pump and have already collected a little oil. He said that they will keep an eye on things and keep me informed. 4/3/07 - Raphael Ketani. I spoke to Mr. Tiss (cell (917) 617-3894). He told me that now there are only occasional dime size spots of oil in the water. I asked him whether the tank system had ever been registered. He said he wasn't aware that it had. I told him to have the tank system tested and to register the tank. I told him that DEC needed a copy of the tank system results. He said he would have the testing done and register the tank. 4/10/07 - Raphael Ketani. Mr. Tiss called to say that they don't see any more oil spots on the water in the hole. I told him they can close the hole up and set a date to test the tank system and register the tank. He said he will do this. 4/27/07 - Raphael Ketani. Today I received a letter from Gerald Tiss of JLC Environmental regarding the site. The letter discussed the oil in the trench in the pump room, the collection of the oil with groundwater (approx. 3000 gals.), permission granted from DEC to backfill the trench after no more oil was visible, and a request by DEC to test the tank system. The letter also states that a manifest was attached for the liquids that were collected, but it was not included. 7/13/07 - Raphael Ketani. I made contact with Mr. Tiss. He said that the tank system passed once they replaced the vent pipe. However, Covenant House has not paid him for his work. So he wont submit the passing test report to DEC. Also, Covenant House has not registered the tank with the DEC. 10/4/07 - Raphael Ketani. I tried to get ahold of Mr. Tiss, but could only leave a voice mail on his cell phone. I checked the PBS database, but the tank wasn't registered. Mr. Tiss called back and said he still hasn't been paid. He said that all of the paperwork is ready to go. He will call them again. 11/29/07 - Raphael Ketani. I spoke to Mr. Tiss. He said that his client finally paid most of the

**COVENANT HOUSE (Continued)**

**S108466647**

money he was owed and so he released the paperwork to them. He said they are reviewing the documentation right now. Once they have determined that everything is satisfactory, then he will send me the paperwork. 1/9/08 - Raphael Ketani. I spoke to Mr. Tiss (cell (917) 617-3894). He said that Covenant House had received the document for their review months ago and he hasn't heard anything from them. He said he will call them again and ask what is happening. 1/25/08 - Raphael Ketani. Mr. Tiss called again. He said that he hasn't heard anything from Covenant House and they haven't paid him. I told him that I will send another letter to them with stronger language. 1/28/08 - Raphael Ketani. I sent a standard CSL with a 2 week due date to Bruce Henry, Executive Director, Covenant House (212) 613-0300. 2/12/08 - Raphael Ketani. To date, I have not received a response from Mr. Henry or anyone else at Covenant House by mail, e-mail, or phone. Therefore, I am sending out a stronger worded letter with a return receipt. I will give a due date of 3/3/08. The letter will state that legal action will be taken if there is no response by the due date. Randall Austin, Chief of the Spills Unit at Region 2, came up to me and told me to hold off sending the letter. He asked that I talk to Mr. Henry and try to find out why Covenant House is not responding. Mr. Austin said that if Mr. Henry doesn't cooperate, then I should contact our Div. of Legal Affairs. I tried to get the phone number to Mr. Henry by contacting Mr. Tiss, but he said to contact Shawn at his office. Shawn told me he will find the number and give it to me. 2/13/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/15/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/19/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/21/08 - Raphael Ketani. Today, I received a call from Ryan Quinn and a colleague of his from BOVIS Lend Lease. He said that he was responding to a request by David Gregorio (212) 613-0377 of Covenant House to resolve the matter of the missing documentation that DEC needs. He asked what the missing documentation was. I told him that DEC needed a report regarding the removal of the oil contaminated water with a disposal manifest, a timed tank system pressure or vacuum test report, and a PBS registration form with a copy of the deed and a check. They said that they will talk to JLC, their subcontractor, and try to straighten the matter out. I told them there still is the matter of the unregistered tank and that I will have to act on this violation. They said they understood. 2/22/08 - Raphael Ketani. As per a meeting between Lou Oliva, Regional Attorney for Region 2, Randall Austin, head of the Spills Unit, and myself on 2/20/08, I am submitting a Case Initiation Form to Mr. Austin for his approval and signature. 2/26/08 - Raphael Ketani. Mr. Ryan Quinn of BOVIS called to inquire as to whether DEC had received any documentation from JLC. I told him No. He said he will talk to JLC. 4/8/08 - Raphael Ketani. I spoke to Mr. Tiss. He said that the PBS registration was sent to Albany with a check. He said the report was sent there, too. I told him that Region 2 needed a copy of the report. He said that he will send it to me. He said that the tank system passed the test. I asked him whether he had the phone number to BOVIS. He said that I would be better off calling Manhattan Demo and speaking to Mike at (917) 578-3874. He said that BOVIS hired Manhattan Demo and Manhattan Demo hired JLC. 7/23/08 - Raphael Ketani. I spoke to Mr. Tiss (917) 617-3894. I asked him where the investigation report was. I told him DEC still had an open spill case. He responded and sounded surprised. I told him that we needed a

tank test report, a manifest for the contaminated water that was removed, and a PBS registration for the tank. He said that it was sent. I told him that the report and the PBS were sent to Albany. He said that the PBS was kicked back, but he resent it to Albany. He said he will send a copy of the investigation report and tank test results. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The DEC needs to receive the investigation/remediation report and the revised PBS registration. 10/29/09- Zhune. JLC sent a report dated 04/23/07 discribing the oil remediation process that took place at Covenant House-460 W 41st street. At the conclusion of the remediation, approximately 3000 gallons of contaminated groundwater was removed from the subject property. The UST and line were pressure test and passed the test. A waste manifest for liquid collected is included in this report. Spill closed "

Remarks: "DURING A PARTIAL DEMO JOB - AND WHILE DIGGING UP BASEMENT FLOOR FOUND WATER AND OIL:"

DEC Memo: "1/19/16-Zhune spoke to Nicole Rice from Langan. Nicole said a leaking valve of the oil tank caused the spill. The maintenance engineers stopped the leak. The oil impacted the sidewalk and the courtyard. PAL will go tomorrow to remove the impacted soil. Langan will oversee the remediation work and will be monitoring the air. 1/19/16-Nicole Rice sent the following email. I just spoke with one of the facilities engineers at the building, about 15 gallons of No. 2 fuel oil leaked from a pump valve in small maintenance garage located on the northern side of the building. The leak has been stopped and speedy dry was placed around the valve. Some No. 2 fuel oil spilled onto the adjoining sidewalk and courtyard area. PAL will be on-site to remediate the spill and Langan will observe, perform air monitoring, and collect endpoint samples. I will send you an update tomorrow afternoon on the progress of the remediation. Also please note that there are no apparent odors in the occupied areas of the building. Nicole Rice 724-601-2196 Cell 1/21/16-Nicole Rice sent the following email. Yesterday, January 20, 2016, PAL began remediation of the No.2 fuel oil spill that occurred in the pump room located on the southeast corner of the building. A 9.5-ft wide paver pathway adjoins the building to the east followed by a playground with turf surface. Langan observed an about 25-ft (north to south) by 12-ft (east to west) impacted area outside of the pump room. The impacts extended about four feet onto the playground; however, further delineation is required. The impacted area is taped off to restrict access. Below is a summary of remedial activities performed yesterday: " PAL lifted the pavers in the impacted area and placed them in 55-gal drums filled with water and degreasing solution, in an attempt to clean them. The central tiles will be disposed of. All

tiles were placed on and covered with poly sheeting. " PAL used a jackhammer to break up the impacted 4 to 5-inch sandy cement layer beneath the former paver pathway. Petroleum like staining and odors were observed and PID readings ranged from 40 to 80 ppm. Sand free of staining and odors was observed beneath the sandy cement layer. PID readings were between 0.0 and 0.5 ppm. " PAL lifted the edge of the playground turf to further delineate impacts. Impacts were observed along an about 20-ft long portion of a sponge-like base layer beneath the playground turf. The extent of impacts in the playground area have not yet been delineated. Petroleum like odors and staining were observed and PID readings ranged from 40 to 80 ppm. Staining was observed on the underlying concrete; however, the concrete was free of fractures (i.e. preferential pathway). " CAMP was conducted downwind and upwind of the impacted area and included air monitoring for particulate matter, with particles less than 10 m in diameter (PM10) and volatile organic compounds (VOC). In addition, ambient VOC concentrations were measured using a handheld PID. No exceedances in VOCs action levels were recorded. No exceedances in particulate action levels were recorded. Today PAL will continue to remove impacted turf within the playground area and power wash the concrete. Endpoint samples will be collected from the sand layer beneath the paver sandy cement base layer. CAMP will be performed. 4/22/16-Nicole Rice emailed the spill closure report. The report stated that maintenance personal observed a release of # 2 fuel oil on the floor of the pump room located in the southeast portion of River Place I. The Pump is connected to an active 2,000 gallon aboveground storage tank (AST) located in an adjoining room. Impacts were also observed along a paving stone walkway southeast of the pump room and within the eastern adjoining playground. The leak was due to a failed vibration eliminator located on the discharge side of the pump. The vibrator eliminator was replaced and the leaking pump was repaired. On January 20 and 21, 2016, pal excavated an about 25 feet (north to south) and 9 feet (east to west) area of the paving stone walkway outside of the pump room and a portion of the adjoining playground. Impacted material was removed from depths ranging from 6 to 12 inches below surface grade. Langan collected two confirmatory soil samples. One from the walkway area (EP01) and one from the playground area EP02). The endpoint samples analytical result detected concentrations of VOCs and SVOCs below thie respective SoilCLaeleanup levels. Based on the information in the report this spill is closed."

Remarks: "spill to sidewalk and courtyard. will send a crew out tomorrow to clean up"

INST. Reassigned from Sigona to Tipple on June 21, 2004.  
8/19/05-Vought-Received call from Lin Jian (Chinese consulate) regarding reception of fax from Tipple. Vought called back and left message to refax. Vought received fax from Jian I would like to remind you that the metal covers of the manholes on 43rd Street have got uneven after years of service.... So we request your department to take immediate action to replace them with new covers.... Vought called Bruce and left message to return call to DEC. Vought spoke to Bruce, Bruce will send someone out and repair. Bruce will send email after site visit. Vought called Lin and informed him of upcoming National site visit and manhole repair. 8/23/05 - Raphael Ketani. Case transferred to Jeff Vought. 9/20/05-Vought-Contract Payment Package (National)-Biweekly well monitoring and gauging. 10/3/05-Vought-File review by Vought: Letter from DEC Tomasello to Milro (Milici)-4/21/94. Milro contacted by DEC to perform emergency oil recovery. In doing so approximately 400 gallons of oil was collected. This yard specifically in respect to this 400 gallons of oil shall be exempt from part 360 and 373 storage requirements... Note from DEC Sigona-4/24/94. 3rd week in May determined consulate as source.. Note from DEC Sigona-4/28/94. Consulate tank #2 (10000-gallon #6 fuel oil) failed tightness test. DEC took over cleanup of sewer with Fenley and Nicol (F&N). Three monitoring wells installed in 5/2/94. Meeting held with consulate on 5/8/94 and consulate agreed to installation of recovery system in sidewalk. Analyticals from H2M Labs-Analytical of oil sample from sewer shows 10800ppm fuel oil. Letter from H2M Labs (Hopkins)-6/23/94. Enclosed please find copies of the chromatograms you requested.. from sewer manhole and tank excavation. The petroleum fingerprints obtained from the above samples most closely resemble that of a #4 fuel oil. Samples sewer manhole and well FN-2 appear to be most closely related, as each sample contains just the #4 fuel oil. Haz Waste Disposal Manifests from Milro-6/30/94. Monitoring Report (F&N)-June thru July 1994. Weekly monitoring, bailing of free product. Recovery system is total fluid ejectors, oil water separator and 275-gallon holding tank. Total recovered to date is 1460 gallons of product. Letter from Clean Venture-8/26/94. Please be advised that United Parcel Service Inc of 643 West 43rd Street, New York, New York has paid us in full for labor, equipment, materials and other costs incurred during the 4/26, 4/27 and 4/28/94 spill cleanup. Monitoring Report (F&N)-August 1994 thru September 1994. Same recovery system as above. Total recovery to date is 765 gallons. Subsurface Investigation Report (F&N)-9/1/94. This investigation is being conducted as a result of the detection of petroleum hydrocarbons in the basement of United Parcel Service building across 43rd Street from the site. The recovery system currently consists of three total fluid ejectors installed in monitoring wells FN2, FN3 and FN4, an air compressor to power the ejectors and a 250-gallon oil water separator and a 150-gallon holding tank. Groundwater at 8-10' below grade. Pressure test was performed and leaking stick and suction lines were found. Tops and sides of tank were heavily rusted. On 6/23/94 the cleaning of the USTs was completed and they were ready for abandonment by filling with concrete slurry. A total of five monitoring wells were installed. Floating product was also recovered from sewer on 43rd Street. Groundwater flow to the north. Report recommends continuation of OM&M. Revised Subsurface Investigation Report (F&N)-9/1/94. The report of #6 fuel oil by the NYDEP prompted an emergency response by the NYSDEC. The NYSDEC requested that UPS

**CHINESE CONSULATE (Continued)**

**S101103245**

provide a contractor to investigate the condition of the sewer in an attempt to determine the source of oil. The investigation by UPS determined that the oil was entering the sewer between 11th and 12th Avenues. F&N then performed an extensive investigation of the fuel oil tanks in the basement of the Consulate General in the Peoples Republic of China. Letter from F&N (Porsche)-9/22/94. As you requested F&N has attempted to make a determination of the point at which oil is entering the 43rd Street sewer at the above referenced site. Field crews have determined that the point of entry is approximately 40' feet east of the sewer manhole located at the intersection of 43rd Street and 12th Avenue. F&N believes that the installation of two additional ejectors are warranted. Letter from F&N (Porsche)-9/30/94. F&N is prepared to begin the following work: 1) Two additional wells will be installed at the Chinese Consulate site. One well will be upgradient and the other downgradient of the ejectors. Letter from OSC to Chinese Consulate-10/25/94. An application for damage compensation has been filed by United Parcel Service. Instructions attached to letter. Monitoring Report (F&N)-October 1994 thru December 1994. Same recovery system as above with a total recovery of 958 gallons of free product. Letter from F&N (Sehamy)-1/5/99. The following is a summary of the discussions during the meeting: Install 4 monitoring wells in the vicinity of the wells containing ejectors. Install heater to expedite the removal of #6 fuel oil. Discontinue use of adsorbent pads in sewer area. Letter from OSC to Chen Yong Kang (Consulate)-2/10/95. We requested that NYSDEC determine the nature and location of the work performed by the United Parcel Services' contractor. The purpose of the investigation was to verify the costs incurred by UPS for the cleanup. If we have clearly verified that UPS's costs relate only to the offsite investigation and cleanup of the fuel oil spill originating at the Chinese Consulate. If oil spill compensation fund reimburses UPS for expensed, OSC will go after Consulate as responsible party. Monthly Monitoring Reports (F&N)-February 1995 thru December 1995. Total product recovered to date is 1791.25 gallons. Status Report (F&N)-July 1995 thru December 1995. Remediation system consists of five total fluid ejectors installed in monitoring wells FN2, FN3, FN4, FN6 and FN7, air compressor to power the ejectors, twelve monitoring wells, a 250-gallon oil water separator and a 275-gallon holding tank. OM&M consists of biweekly well monitoring and bailing of free product, monthly collection of wastewater effluent samples. Report recommends continuation of OM&M. Monthly Monitoring Reports (F&N) Jan 1996 thru June 1996. Total product recovered to date is 2616.75 gallons. Status Report (F&N)-Dec 1995 thru June 1996. Five fluid ejectors, twelve monitoring wells onsite. Report recommends: Site visit with vacuum truck to recover free product found well FN-9a and any other well detected with free product at the time of monitoring. Status Report (F&N)-December 1996. Same recovery system as above. At the end of the period covered by this report, a total of 2890.75 gallons of free product was recovered. Groundwater at depth of 8' below grade and flow to the northwest. Report recommends: 1) continuation of free product removal via vacuum truck 2) steam injection in wells with product. Letter from F&N (Lorthior) to DEC Tomasello-3/18/97. On 3/17/97, F&N implemented the second phase of the bioremediation program at the Chinese Consulate. Twenty five gallons of MicroBac M1000H\* bacteria was evenly distributed to wells containing free product. 35 gallons of nutrients were then also injected into each of

the six wells. Monitoring of bacterial activity at the site will begin in April of 1998. Status Report (F&N)-June 1997. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the northwest. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of June 1997, 3617 gallons of free product was recovered from site. Report contains bioremediation proposal. Concentrations for all the available months exceeded the wastewater effluent limits. Report recommends:

- 1) continuation of vacuum truck visits to recover free product
- 2) application of MicroBac and
- 3) treatment of effluent by activated carbon prior to discharge. Letter from F&N Abbasi to DEC Tomasello-8/6/97. Proposal for Micro Bac application. First bacterial application will be to reduce viscosity of easier recovery. Second bacterial application will be regular bacteria for hydrocarbon degradation. Letter from OSC to US Coast Guard-10/14/97. Your review in necessary for the Fund to document that cleanup and removal activities are consistent with the National Contingency Plan Letter from F&N Lorthior to DEC Tomasello-11/5/97. First bacterial application to take place on 11/11/97. Pump and treat system will be shut off one month after first and second application. Letter from F&N Lorthior to DEC Tomasello-11/18/97. First application performed on 11/11/97. Recovery system will be inactive until 12/15/97. Status Report (F&N)-December 1997. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the northwest. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of June 1997, 3880 gallons of free product was recovered from site. Bioremediation program has been implemented. Injectors were shut down for one month after application. Site will be monitored for bacterial activity, nutrient and DO on a monthly basis beginning in October. Report recommends continuation of OM&M and sampling of waste water for TPH. Status Report (F&N)-Jan thru June 1998. Bioremediation program currently underway onsite. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the west. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of June 1997, 4450 gallons of free product was recovered from site. Second phase of bioremediation program was implemented in March 1997. Site also being monitored for bacterial activity, nutrients and DO on a monthly basis. Wastewater influent is no longer sampled for TPH. Report recommends continuation of OM&M parameters and Biorem sampling. Letter from F&N(Lorthior) to DEC Tomasello-10/19/98. F&N recently performed a viscosity test on the petroleum present... The results of the viscosity test indicate that the viscosity of the product has been reduced by the MicroBac treatment. Injectors will be reinstalled and a bioactivity test will be performed at the site. Status Report (F&N)-July thru Dec 1998. Bioremediation program currently underway onsite. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the west. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of December 1998, 4450 gallons of free product was recovered from site. Viscosity went from that of a #6 fuel oil to that of a #4 fuel oil. Groundwater sampling show bacterial activity as excellent. Report recommends:

- 1) Continuation of OM&M efforts
- 2) installation of monitoring wells in

**S101103245**

the basement or boiler room of the building 3)use of Biosolve. Status Report (F&N) Jan 1999 thru June 1999. Bioremediation program currently underway onsite. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the west. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of December 1998, 4452 gallons of free product was recovered from site. Groundwater sampling show bacterial activity as excellent . However, F&N has analyzed the monitoring data on a monthly basis and has determined that the Bioremediation Program has had little, if any effect, on the amount of free product at the site. This data leads F&N to conclude that the Bio-remediation program at the site is not performing to expectations . Report recommends: 1)continuation of OM&M 2)use of Biosolve and the application in a limited area to study its effectiveness 3)resurveying of wells 4)installation of monitoring wells in basement or boiler room. Letter from F&N Lorthior to DEC Tomasello-8/23/99. This letter is intended to propose a work plan to utilize Oxygen Release Compounds at the above referenced property . Plan for ORC to be injected into proposed piezometers in basement. Letter from OSC to National Pollution Funds Center-10/13/99. The responsible party has been contacted and has refused to accept responsibility for this release . Email from DEC Rommel to DEC Tipple-8/4/00. Consulate would like to construct a pump room in September in the location of the existing recovery system. Decision was made to move the system to the second floor of the continuous circular ramp parking garage immediately above its current location. Letter from Miller (Silberger) to DEC Rommel-8/4/00. Recovery system not in operation during 8/3/00. Miller proposes: 1)VEFR of wells containing free product 2)VEFR recovery system 3) relocation of recovery system. On 8/7/00, approximately 700 gallons of free product was recovered. Hazardous Waste Manifests (Miller)-9/18/00. Letter from Attorney General to Consulate-7/25/03. I have been asked to provide you with additional information regarding a fuel oil spill discovered at the Chinese Consulate in 1994 . The oil recovery system is no longer in place in the consulate and the DEC is not able to determine the extent of contamination at this time... In order for the State of New York to refrain from filing suit in this matter, it will be necessary for you to execute the enclosed tolling agreement... Letter from Attorney General to Consulate-10/8/03. Enclosed is a complete set of vouchers to date for the cleanup activities at the Consulate . Hazardous Waste Manifests (Miller)-5/18/04. Site Status Monitoring Report (Miller)-Dec 1999 thru Oct 2004. In December 1999, the NYSDEC contracted MEG to take over the maintenance of the recovery system and the groundwater monitoring program . Recovery system was relocated in August 2004. The Consulate General of the People's Republic of China removed the compressor. The system has not operated since that time and access within the building has been very difficult to obtain. It is believed that the recovery system has been removed . MEG currently performing biweekly VEFR events and well gauging. Groundwater flow to the west-southwest. From Dec 1999 thru Oct 2004 approximately 10714 gallons of free product has been recovered. Report recommends establishing status of recovery system and continuation of biweekly OM&M. Fax from Consulate (Lin Jian) to DEC Tipple-10/25/04. Letter sent requesting the following info: 1)frequency of contractor site visits 2)information on consulting companies 3)Efficacy of addressing source area 4)current inspection procedures. Letter from DEC Tipple

**S101103245**

to Jin Lan-10/25/04. Answer to above questions: 1) bimonthly VEFR events, biweekly well monitoring 2) contractor list is attached 3) investigating under consulate would effectuate remediation 4) use of sonic interface probe for product levels. 10/04/05-Vought-Continued File Review by Vought: Addendum to Site Status Monitoring Report (Miller)-12/14/04. Please note that all plume maps are produced using Surfer 7.0 software. As such these plume maps should be viewed as general indicators not as a definitive resource. Fax from Lin Jian to DEC Tipple-1/10/05. I found that Miller Environmental Group provided DEC a report that covered all their activities performed from Dec 1999 to Oct 2004 and the work is still going on. Question is when all this work could be stopped? What is the criteria that the pollution had been controlled and the case could be cleared? I question the value of the report. Letter from DEC Tipple to Lin-1/20/05. Answers to above questions: 1) work can be stopped when soil and groundwater meet TAGM standards. The DEC highly recommended the Consulate retain their own consultants to complete the remedial work 2) The report value is used to track movement of the plume since the product composition is already known and the amount recovered is not an indicator of successful remediation. Site Investigation Report (GZA Geoenvironmental)-August 2005. The site is comprised of a multi-story building, which is surrounded by commercial properties. The building does not contain a basement. Facility currently heated by natural gas. Groundwater from 6-11'. The system continued to operate until at 1999 when it was shut off during a relocation of the system components. The system was never put back on line. In 1999 Miller Environmental Group began VEFR events utilizing a vacuum truck on a twice monthly basis. Over the course of the remediation program, the remediation system reportedly recovered 4452 gallons of product. 10,714 gallons of an oil/water mixture were recovered using VER methods. Historical records show and MGP facility was once present on-site. Investigation involved seven borings drilled off site and three borings performed inside building. One well was installed inside the building. Groundwater samples collected from inside well and five outside wells. Three wells contained free product. In general the upper 4 to 5 feet of the site contains fill material consisting of cinders and ash. Report recommends that: 1) remedial efforts at the site be suspended for one year to determine if free product in the wells increases 2) installation of one monitoring well west of FN6 3) monitoring of adjacent catchbasin. Fax from Consulate (Jian) to DEC Tipple-8/10/05. I would like to remind you that the metal covers of the manholes on 43rd Street have got uneven after years of service, which no doubt have become a hazard to the people walking by. So we request your Department to take immediate action to replace them with new covers in case anything more serious occurs. Fax from National Environmental-8/25/05. Wells 7A and 10A contain free product. Well monitoring performed biweekly. 10/04/05-Vought-After review DEC approves GZA report recommendations pending inclusion of: 1) biweekly product monitoring and submission of quarterly monitoring reports 2) letter also addressed former sidewalk conditions. Vought spoke with DEC Austin who confirmed that the manhole conditions are now the responsibility of the consulate. Vought also called and spoke with David Winslow to confirm that the proposed well will be located between the recovery system and the Hudson River. 10/24/05-Vought-Contract Payment Package (National)-Biweekly groundwater monitoring, report preparation. (6/1/05-7/31/05). 12/20/05-Vought-Contractor Payment Application

(Miller)-Work performed from 01/29/04-02/17/04 included liquid disposal, VEFR on monitoring wells, site summary report, well monitoring. Payment approved as per DEC Karwiel due to paid invoice not in file and check not cut as per FMIS. 12/20/05-Vought-Contractor Payment Application (Miller)-Work performed from 10/03/03 to 10/22/03 included well monitoring, VEFR on monitoring wells, liquid disposal. Payment approved as per DEC Karwiel due to paid invoice not in file and check not cut as per FMIS. 12/20/05-Vought-Contractor Payment Application (Miller)-Work performed from 11/26/03 to 01/29/04 included liquid disposal, VEFR on monitoring wells, well monitoring, site summary report. Payment approved as per DEC Karwiel due to paid invoice not in file and check not cut as per FMIS. 03/06/06 Noelle Thomas- 08/01/05-09/30/05 reviewed previous contractor's report, monitoring of fluid, data recording and prepared report. 08/09/07-Vought-Updated file report review as per request from GZA Sajida (212-594-810): Quarterly Groundwater Monitoring Report No. 2(GZA)-June 2006. Two (10000-gallon) #6 fuel oil USTs previously abandoned in place. Facility currently using natural gas. Approximately 4452 gallons of product have reportedly been recovered by the product recovery system and 10714 gallons of an oil water mizture was recovered using VER methods. As of July 2005 only .04 feet present in well FN-11. Groundwater from 6-11'bg. Biweekly well monitoring being performed. Groundwater not sampled from wells FN10a and GZA3 due to free product. Report recommends continued monitoring. As of 6/06: .10'FP(FN10A), .20'FP(GZA-3). Groundwater analyticals show: 13ppb MTBE(FN1). Quarterly Groundwater Monitoring Report No. 3(GZA)-August 2006. Groundwater from 6-11'bg. Biweekly well monitoring being performed. Free product in wells NF10a and GZA-3 but product thickness incorrectly measured. Quarterly Groundwater Monitoring Report No. 4(GZA)-January 2007. Well monitoring shows: .09'FP(FN10A), .14'FP(GZA-3). ...it is unlikely that further remdial efforts using the technologies already implemented at the Site, will achieve significant results . In addition, product levels do not appear to have increased in horizontal or vertical extent; therefore, GZA recommends no further action and closure at the Site based on the limited potential exposure pathways and recovery to the extent practical . Groundwater shows minor TOGs 1.1 exceedences for SVOCs. Vought reviewed site with DEC Austin and DEC cannot close site with free product. DEC requires further remedial action and monitoring possibly but not limited to source removal and/or soil flushing. 08/24/07-Vought-Sent letter with above requirement for further remedial action. 09/07/07-Vought-Received call from and spoke to GZA Hayes. Chinese consulate requesting meeting with DEC Vought and DEC Austin and Vought proposed dates for 7/24-7/28. 09/11/07-Vought-Meeting date set for 9/28 at 11am with DEC Austin, GZA Hayes and consulate. 09/28/07-Vought-Meeting at DEC with GZA Hayes, GZA Winslow, Consulate Zheng Xuan, Consulate Xu Hangtian and DEC Urda. Discussion of remedial history, presence of free product in two wells, lack of DEC closure due to free product and further remedial options. As per Winslow limited height boiler room and garage surrounding tank room preventing installation of wells. DEC discussed possible solutions including grout curtains, hand dug recovery trenches, biosolve. GZA will continue quarterly groundwater monitoring and will submit RAP by 11/28/07. 07/25/08-Vought-Spill reassigned from DEC Vought to DEC Ketani as per DEC Austin. 3/10/09 - Raphael Ketani. The site is the Consulate General of the People's Republic of China, 520 12 Avenue, Manhattan, 10036, (212) 244-9392,

**CHINESE CONSULATE (Continued)**

**S101103245**

ext 9012. There is a PBS case for the site #2-601887. Two 10,000 gal. tanks were closed in place (no date) and two 5,000 gal. tanks were removed on 7/1/94. There are no active tanks. They have converted to gas. The spill was discovered on 4/26/94 when the UPS facility across the street from the Consulate had #6 oil in their basement. According to an 8/26/94 letter from Clean Venture, UPS hired them to do a cleanup. Oil was found in the sewers under 43rd Street. It was entering the sewers from a point 40' east of the manhole at the intersection of 43rd Street and 12th Avenue, and was cleaned up. The oil was traced back to the Consulate during the third week in May 1994. The fuel systems for the 10,000 gal. tanks were tested and failed. The stick and suction lines had failed. A meeting took place with members of the Consulate on 5/8/94 and they agreed to the installation of an oil recovery system under the sidewalk in front of their building. The recovery system eventually consisted of 5 ejectors at FN-2 to FN-4, FN-6 and FN-7. An air compressor powered the ejectors. The recovery system also incorporated a 250 gal. oil-water separator tank, and a 150 gal. holding tank. Groundwater was found to be between 6' and 11' below grade. It flows to the north, northeast, west, and south. Twelve (12) monitoring wells were installed. On 3/17/97, Fenley & Nicol did a second bacterial treatment solution injection. Twenty five gallons in each well with product and 35 gallons in each of 6 wells without product. Monitoring of the bacteria started during April 1998. The Fenley & Nicol report for the period January 1999 to June 1999 stated that the continued use of Biosolve and the installation of wells in the basement of the Consulate was recommended. However, in a 8/4/2000 letter from Steve Miller of Spills to Jennifer Rommel of Unit B DER, it is stated that the recovery system is not operating. Mr. Miller proposed VEFRing the wells, and installing the recovery system in a different location. In a report for the period 12/99 to 10/04, Miller Environmental (state contractor) stated that the recovery system was relocated during 8/04. However, the staff at the Consulate removed the recovery system and access to the building became difficult. Miller Environmental continued to do biweekly well monitoring. As of 7/05, product was present in FN-7, FN-10A (next to remote fills), FN-11, and GZA-3 (in building). The GZA (Chinese Consulate contractor) June 2006 Quarterly Monitoring Report stated that 4452 gals. of product had been recovered and 10,714 gals. of oil and water mixture had been recovered by VEFRing. GZA's Quarterly Monitoring Report for January 2007 indicates that measureable product thickness was present only in FN-10A and GZA-3 on 12/21/06 and was no more than 0.14' thick. GZA recommended No Further Action. The report stated that the technologies that had already been used will not recover more oil. Also, the report stated that the oil is not increasing vertically, nor horizontally. The groundwater has minor TOGS exceedences for SVOCs. The DEC responded that the spill needs further remediation. A letter dated 8/24/07 from Jeff Vought of DEC to the Consulate stated that remediation of the spill was still necessary until the oil was completely removed. A meeting was held between staff from the Consulate and DEC on 9/28/07. Various remedial solutions were presented. GAZ agreed to continue monitoring the wells and will submit an RAP by 11/28/07. In a letter dated 7/25/03 from the OAG to the Consulate, the AG stated that it was necessary for the Consulate to execute the enclosed tolling agreement in order to avoid the NYS filing a law suit against them. Later in 2005, the OAG was preparing to file a Judgement against the Consulate. A 10/4/05 e-mail from Jeff

**CHINESE CONSULATE (Continued)**

**S101103245**

Vought to Bruce Beck of NEMA (state contractor) stated that a settlement was reached with the OAG. GAZ never produced the RAP. An ISR was not found in the case file. I tried to contact the OAG, but could only leave a message. I contacted the person at the Consulate who is in charge of continuing the spill cleanup, Zheng Xuan, Vice Consul, (212) 244-9392, ext 9006. He told me that the Consulate sends a message to the main Ministry in China every month, but they have never received permission to continue the cleanup. He said that they looked into doing the work, but it is very expensive. He asked whether DEC can arrange something. I told Mr. Zheng that I will contact the OAG and let them know that the cleanup hasn't continued. I contacted Mr. Locke and told him that no progress has been made and that I will let Randall Austin, Chief of the Spills Unit, know this, too. I told Mr. Locke that I will ask Mr. Austin what he wants to do.

3/19/09 - Raphael Ketani. I tried contacting David Winslow, senior project manager, and Meredith Hayes, assistant project manager, both at GZA Environmental (212) 594-8140, but could only leave messages. Mr. Winslow called me back. He said that after the 9/28/07 meeting with DEC, GZA recommended a plan to the Consulate, but they never responded back. So nothing has taken place since then. I asked Mr. Locke for the phone number to the Office of Foreign Missions. He said it's (212) 826-4500. I called the OFM and asked for Jane Sullivan, the person who had been involved in the case, but could only leave a message.

3/24/09 - Raphael Ketani. A Case Initiation package was submitted to Randall Austin, Chief of the Spills Unit, for his signature. He signed the package and it was submitted to the Office of General Counsel for Louis Oliva's signature (Regional attorney).

7/2/10 - Raphael Ketani. John Urda of the Region 2 Office of General Counsel sent out a Notice of Hearing and Complaint.

7/16/10 - Raphael Ketani. A woman from GCE Environmental called Steve Sangesland, Duty Desk Officer of the Spills Unit, to inquire as to who was the Spills case manager for the site. He told her that Raphael Ketani was the manager. Later, I received a call from an employee of the Chinese Consulate. He requested a meeting with me at the DEC office. I told him that he should contact Mr. Urda and arrange the meeting through him (as a legal process had been initiated). He said that he will.

8/18/10 - Raphael Ketani. Mr. Urda forwarded an e-mail to me which he had received from Bing Li, the attorney for the representatives from the Chinese Consulate. The e-mail contained an 8/3/10 product investigation report from GZA, an environmental company. The report showed that product was still present in well GZA-3 (0.02 feet; on the consulate grounds), and in well FN-10A (0.08 feet; outside the grounds). My comments were that oil collection must continue at these two wells.

9/27/10 - Raphael Ketani. A meeting took place between the representatives from the Chinese consulate, their consultant and representatives of the DEC. In attendance were Bing Li (attorney for the consulate), Xiao Lianqun (consul), Zhou Bin (consul and supervisor for Mr. Lianqun), Jiang Ying (vice consul, translator and colleague of Mr. Lianqun), Dave Winslow of GZA, Randy Austin, and myself (see E-docs). The subjects of the discussions were the present status of the spill and what should be done to reduce the amount of oil in the ground. It was noted that there was still a little oil at GZA-3 and at FN-10A. A proposal was put forth by DEC that GZA should attempt to VEFR FN-10A and see whether this reduces the amount of oil in the well. The members of the consulate said that this sounded like a good idea and they will have GZA submit a work plan to DEC. A deadline of November 1, 2010 was suggested by Mr. Urda for the

**CHINESE CONSULATE (Continued)**

**S101103245**

submission of the work plan. Mr. Bing said that this sounded alright. However, due to the need to go through channels, a little more time may be needed. Mr. Urda said that if they find that more time is needed, then they can request an extension of the deadline. With that, the meeting ended. 11/2/10 - Raphael Ketani. Yesterday, I received the October 2010 Remedial Action Work Plan from GZA GeoEnvironmental of New York (212) 594-8140. I reviewed the plan. It was indicated in the plan that the only wells which still had product in August 2010 were FN-10A (0.08 feet) and GZA-3 (0.02 feet). There are six (6) other wells in which LNAPL was not detected. GZA proposes to EFR FN-10A and GZA-3 on a weekly basis for the first four (4) weeks. This will be followed by monthly EFRing for two months and finally EFRing on a quarterly basis for the next three (3) quarters. After these nine EFR events, GZA will present a recommendation regarding whether further events are necessary. They expect to continue EFRing until it is no longer practical to recover the product. Groundwater monitoring for depth to groundwater and product gauging will take place twice a month for all eight wells. Quarterly groundwater sampling will take place for VOCs and SVOCs for the wells that don't have product. 11/3/10 - Raphael Ketani. I drafted a response letter for review by Randall Austin, Chief of the Spills Unit. The letter stated that staff at the Chinese embassy and GZA Environmental must have a contingency plan in place. The plan will need to be implemented after the last monthly round of EFRing if the amount of oil increases or is about the same. The letter was approved by Mr. Austin and sent out today. 11/19/10 - Raphael Ketani. I spoke to Mr. Winslow (212) 594-8140 of GZA regarding the start of the oil EFRing. He said that he had drafted a response letter to DEC's contingency plan letter of 11/3/10 and that he had sent it to Mr. Lianqun, the Chinese consul, for approval. Mr. Lianqun then had to send the draft response letter back to Beijing for approval. Then Beijing would have to send the letter back to Mr. Lianqun. Mr. Winslow said that he hoped that the response letter will be approved in a week or two. I asked Mr. Winslow whether the oil collecting could start now. Mr. Winslow said that he didn't see why not as the DEC's request was a very minor change to the overall plan. He said that he will talk to Mr. Lianqun and see whether he can get started. He will let me know. 11/29/10 - Raphael Ketani. Mr. Winslow sent me the approved Addendum to the 10/29/10 RAWP. I reviewed the Addendum and found that it incorporated the changes that the DEC had requested. 12/16/10 - Raphael Ketani. I tried to contact Mr. Winslow (212) 594-8140, but I could only leave a voice message. Mr. Winslow sent me the EFRing and gauging schedule for the wells. I reviewed the schedule and found it to be as agreed upon. 12/20/10 - Raphael Ketani. Mr. Winslow sent me an e-mail that the Chinese Consulate wanted a letter conferring approval of the sampling, gauging, and EFRing schedule. I put together a very simple letter to GZA Environmental stating the DEC had approved the schedule and sent it out today. 1/14/11 - Raphael Ketani. Mr. Winslow said that GZA did the first EFR event on 1/12/11. Things are moving forward. 3/18/11 - Raphael Ketani. Mr. Winslow sent me a draft work progress update letter. The letter described that EFR events took place from 1/1/11 to 2/1/11 at FN-10A and GZA-3, and on 3/7/11 at FN-4, FN-10A and GZA-3. From 1/6/11 to 3/3/11, the amount of product in FN-4, FN-10A and GZA-3 varied from non-detect to 0.01 feet. I responded back that they should continue the EFRing events. 4/19/11 - Raphael Ketani. I received GZA Environmental Quarterly Report No. 1 today. I began my

**CHINESE CONSULATE (Continued)**

**S101103245**

review. 4/27/11 - Raphael Ketani. I finished my review of the Quarterly Report No. 1. The field work took place from January 6 to April 4, 2011. Groundwater flow was determined to be due north towards the Hudson River. FN-1, FN-4, FN-5, FN-8A, FN-11A, GZA-7 did not contain product and were sampled for groundwater on 1/20/11. The analytical results were almost entirely non-detect for VOCs and SVOCs. Three VOCs were detected above CP-51 standards. 2-chlorotoluene at FN-8A, FN-4 and at FN-11A. The results were up to 270 ppb. Chlorobenzene was found at FN-4 at 6.2 ppb. Methylene chloride (ubiquitous at a low level and a possible lab contaminant) was also found at FN-4 at 8.0 ppb. The only SVOC hit was bis(2-ethylhexyl)phthalate and was at a very low concentration at one location. After the EFRing events during this reporting period, no measureable product returned to GZA-3. However, traces of oil can be seen. No product was observed in FN-4 after the two latest gauging events during this period. Product returned to FN-10A after four weeks without EFRing and was measured at 0.01 feet. GZA will now perform EFRing and sampling on a quarterly basis. Gauging will take place bi-weekly. The next sampling event is April 2011. I tried to contact Mr. Winslow (212) 594-8140, but I could only leave a voice message that the DEC had reviewed the Quarterly Report No. 1 and had no comments. 5/18/11 - Raphael Ketani. I tried to contact Mr. Winslow regarding the April round of groundwater sampling and the possible presence of oil in the wells. However, I could only leave a message. 5/19/11 - Raphael Ketani. Mr. Winslow responded by e-mail to my 5/18/11 message. He wrote that the April 2011 groundwater data will be submitted as a package in June, along with other data regarding the project. This will comprise the Second Quarterly Report. 7/8/11 - Raphael Ketani. I spoke to Mr. Winslow (212) 594-8140 regarding the Second Quarterly Report. He said that he had just sent the draft report over to the Chinese consulate yesterday. He will send the report to DEC by e-mail today. 7/12/11 - Raphael Ketani. Today I received the GZA Quarterly Report No. 2 dated July 2011 from Claire-Elise Orleach of GZA. Biweekly monitoring was conducted at 8 wells from 4/12/11 to 6/27/11. Depth to water and product thickness were measured. GZA-3, FN-4 and FN-10a were EFRed on 5/13/11. At different times, all three wells had product and so couldn't be gauged. Product thickness during this monitoring period varied from no product to a trace twice at GZA-3 to a trace at FN-4 a couple of times to typically 0.2 to 0.3 feet at FN-10a. FN-10a always had the most product and once had 0.08 feet. There were very few SVOC hits and concentrations were always well below CP-51 standards, except for o-chlorotoluene. In a couple of instances, the concentrations of o-chlorotoluene were high - up to 740 ppb. The source of this analyte is not explained. The next EFR and sampling event will take place during July 2011. I wrote to Ms. Orleach that due to the persistence of the oil, GZA needed to come up with a solution for recovering the oil efficiently. 8/25/11 - Raphael Ketani. I tried to contact Mr. Winslow (212) 594-8140, but I could only leave a message regarding the July sampling and EFRing and whether GZA had come up with a better way to collect the oil. 8/26/11 - Raphael Ketani. Mr. Winslow sent me an e-mail today. He said that the latest round of groundwater samples was collected in July. An EFR event will take place this quarter. The quarterly report will be submitted at the end of September. GZA will talk to the staff at the Chinese consulate to see whether they can schedule monthly EFR events and put socks in the wells. 10/13/11 - Raphael Ketani. I tried to contact Mr. Winslow

(212) 594-8140 (David) regarding the groundwater monitoring, but I could only leave a message. Mr. Winslow called me back. He said that the Chinese changed their consul again. Now Mr. Zhou (212) 244-9392 is the consul. GZA met with Mr. Zhou about 3 weeks ago in order to let him know what the environmental work is all about and where things stand. Also, GZA has not been paid. Mr. Zhou is waiting for word from China in order to arrange for payment. So GZA will not write the report even though they did EFRing in mid-August and collected groundwater samples. As the third quarter monitoring report has not been received, the Chinese Consulate is in violation of the agreed upon October 2010 Remedial Action Work Plan. 10/31/11 - Raphael Ketani. This PIN case is being transferred to Jeff Vought as per the request of Randall Austin, Chief of the Spills Unit, and as part of the caseload realignment. A synopsis of the case history is listed below: The spill was received by the DEC on 4/26/94. Oil was appearing at the UPS site which was across the street from the Chinese Consulate. The DEC contractor installed monitoring wells and performed product collection and treatment solution injection during 1998. Product collection continued over the years by GZA Environmental, the consultant for the Consulate. A Case Initiation form was submitted to the Office of General Counsel on 3/24/09. On 9/27/10, a meeting took place at the DEC between member of the Consulate, a representative from GZA and staff from the DEC. Discussions revolved around the status of the spill and what needed to be done in order to monitor the site and collect the oil. It was agreed that quarterly status report would be submitted to the DEC and quarterly EFRing would take place. GZA had been performing the reporting EFRing, but the oil kept returning. They are required to find a more efficient way of collecting the oil. GZA owes the DEC the September 2011 quarterly report. However, the consul has been changed again and so everything is on hold. John Urda is involved in this case. 11/21/11-Vought-No Work Plan submitted to date and Complaint served by OGC Urda. Chinese consulate is willing to perform remediation however Third Quarter OM&M report is overdue. GZA noted that everytime a new consul takes over, they have difficulties with continuity due to new parties needing to be informed and requested for approval. OGC Urda to amend and serve Complaint however just received letter from consulate that they are willing to settle and he will draft response to Consulate. 5/15/12-Vought-DEC Urda received acceptance of DEC settlement offer and asked for further requirements. Vought to review file and produce CAP and get back to Urda. 5/16/12-Vought-To date file review by Vought of file since Vought was last PM in 7/08. Groundwater and Product Gauging Report (GZA Orleach)-July 2010. On 9/28/07, DEC required that all LNAPL accumulating on the water table be recovered or contained and that a RAWP be submitted. To our knowledge, additional monitoring or sampling was conducted between December 2006 and July 2010. PERSONAL NOTE: Based on file, NO monitoring was conducted and statement maybe typo of missing no. Well monitoring noted: .08' FP(FN10A) and .02'FP(GZA3). Report concludes that product levels appear to be stable and the product does not appear to be migrating.. Meeting Roster-9/27/10. Remedial Action Work Plan (GZA Orleach)-10/29/10. 4,452 gallons of LNAPL recovered to date by product recovery system and 10,714 gallons of oil/water mix from VEFR events recovered to date. RAWP intended to satisfy DEC requirements set forth in 9/27/10 meeting. Proposal for interim EFR events on an interim basis including weekly for the first four weeks, then monthly for the

following two months and then quarterly for next three quarters followed by submission of recommendations by GZA. Proposal also includes quarterly groundwater sampling and well gauging and submission of results in a Quarterly Report. Letter from DEC Ketani to GZA Winslow-11/3/10. DEC finds RAWP to be acceptable pending inclusion of evaluation of EFR events to be submitted after second month and if oil is the same or has increased, an alternative workplan must be constructed and six wells that do not have product must be surveyed monitored and sampled. Schedule Diagrams from GZA to DEC Ketani-12/16/10. Letter from DEC Ketani to GZA Winslow-12/20/10. DEC finds Schedule Diagrams dated 12/16/10 acceptable. 5/17/12-Vought-Continued file review by Vought: Letter from DEC Urda to Bing Li, Esq.-1/31/11. Letter notes that enforcement action remains unresolved and note that violations that gave rise to the action have not been addressed. Offer for settlement and if client agrees to settlement a Consent Order will be sent. Quarterly Report No.1 (GZA Orleach)-4/18/11. Measured groundwater flow to the northwest which has been confirmed by a groundwater elevation survey . Biweekly gauging occurred from 1/6/11-3/31/11. Groundwater samples collected from all wells not containing free product. EFR performed on FN10a and GZA3. Well gauging was performed 24 days after EFR events and showed trace product in GZA3 and .01' in FN10a. Groundwater at 9'bg. Groundwater analyticals show no detections of dissolved petroleum constituents. Report recommends continuation of EFR events as proposed in the RAWP (quarterly EFR and biweekly gauging). Quarterly Report No.2 (GZA Orleach)-7/12/11. An EFR event was implemented once this quarter as per RAWP. Maximum product thicknesses were: .03'FP (FN10a). No LNAPL in any other wells. Groundwater analyticals show no detections of dissolved petroleum constituents. Product on probe was noted in FN4 and GZA3 but could not be measured (less than .01'). Report recommends continuation of quarterly EFR as per RAWP and continuation of biweekly gauging as per Work Plan. If only trace product are observed in GZA-3 and FN-10a, GZA recommends sampling the additional monitoring wells in the fourth quarter . Letter from Bing Li to DEC Urda-11/17/11. ...China has authorized me to state its position that it will consider a potential resolution of this matter subject to certain preconditions, set forth herein . China's payment to state subject to following terms including confidentiality of settlement agreement . Letter from DEC Urda to Li-11/21/11. Upon settlement by Order on Consent the legal case will be withdrawn and closed and as per FOIL Law settlements are public documents. Settlement amount in 1/31/11 letter is bottom line for settlement of action. 5/17/12-Vought-Called and spoke to AG Bechard and NYSOAG Gilligan spoke with Raphael who referred her to Vought. NYSOAG Riggi is project manager and Vought spoke to Riggi who noted that there were still outstanding expenditures to the Fund that were made after settlement was reached by NYSOAG. Vought spoke to RSE and due to lack of measurable product, lacked of dissolved petroleum compounds in groundwater and unfeasibility for additional cleanup, DEC will close the case pending a sewer inspection along 43rd Street from 11th to 12th Avenue (the original cause of the spill). DEC Urda, Vought and NYSOAG Riggi held conference call to discuss same and Urda to keep Riggi informed on Regional settlements. 6/5/12-Vought-Drafted and sent email to NYCDEP Cozmo Zingarapoli for sewer inspection including background summary and spill report for his reference. RSE, DEC Urda and NYSOAG Riggi also cc'd on email. 6/15/12-Vought-Received email from NYCDEP Zingarapoli that no oil was found in sewer line

based on the NYCDEP Bureau of Water and Sewer Operations, M-1, Sewer Maintenance Section (Richard Mazzella Ph:212-862-1366).

7/19/12-Vought-Meeting at DEC offices including DEC Urda, DEC Oliva, RSE, DEC Vought, Bing Li (Consulate General), Zhou Dianwen (Chinese Consulate-General), Zhang Lin(Interpreter), Xu Nanshan(Deputy Consul General) and Duan Chuntao(Chief Administrator). Ongoing negotiation of settlement. Consulate representatives to discuss settlement with Beijing and respond to DEC Urda. 12/19/14-Vought-RSE forwarded email from AG Riggi to DEC Urda requesting status of case. Vought sent email to Riggi with cc to RSE and DEC Urda with copies of 5/17/12 and 6/15/12 notes above and note that DEC is no longer requiring remedial action and was going to close spill pending no objection from OGC and NYSOAG. OAG Riggi replied to email with email to John Urda asking if DEC will close spill and whether a final ISR can be provided.

10/23/15-Vought-Settlement signing and spill closure meeting scheduled for 10/26 at NY State executive offices at 633 Third Avenue with Vought, Austin, Urda, Lannon, Deputy General Consul to China and his legal representatives. 10/26/15-Vought-Settlement conference at NYS Executive Offices aka Empire State Development including Regional Director, RSE, OGC Urda, Vought, You Weijun(Deputy Consul General), Zhou Dianwen(Consul), Cheng Jun(Consul) and Bing Li(Attorney). DEC received settlement check and also signed closure letter. Vought added Closure Letter to D2 and closed spill. Closure letter included well decommissioning clause for removal of sidewalk monitoring wells. 11/2/15-Vought-Final ISR signed by OGC Mintzer, uploaded to D2 and sent to DEC Farrar via email."

DEC Memo: "01/03/18-Hiralkumar Patel. 6:27 AM:- spoke with Joe at United Metro. during fuel delivery, approx. 20 gal #2 oil spilled onto sidewalk due to overfill. some of the spilled material has reached nearby sewer catch basin. Riteway Tank is responding for cleanup. DEC Zhune responded. 1/3/17-Zhune responded to this spill. The site is a homeless Shelter (Convenant House). Joe at United Metro mentioned that during fuel delivery, approx. 20 gallons of #2 oil spilled onto sidewalk due to overfill. some of the spilled material has reached nearby sewer catch basin. Riteway cleaned the outside spill. They will come back to power wash the outside spill when temperature warm up. As per maintenance Riteway did not remove the oil form the catch basin and did not check the sump. Today morning I spoke to Anthony Lara and he will go back to the site to check both the catch basin and the sump. 8/14/18-Paul Collins from Riteway emailed the spill closure letter and pictures. The letter stated that Riteway Tank Maintenance Corp. was contacted by United Metro to address a spill at this property. Upon arrival, it was observed that the spill was due to an overfill through the vent line during a delivery. Oil spilled from the sidewalk, to the parking lot and eventually down to the

Site Description: Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for

manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site.

Site Code: 475372

Site Description: Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology

and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site.

Site Description: Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at

the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site.

PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR . No files were found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-7357 11/30/05 - Obligado - call Time Warner at number listed above. No answer. 12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contact info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obligado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 and 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertinent information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occurred. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greatest contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw sampling points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field

(TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethylbenzene, ~23500 total xylenes, 321,467 MTBE.  
8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP.  
8/31/06 - Obligado - Received delivery confirmation of Stipulation Agreement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and emailed it as a final version back to Abbas requesting signature by 12/2/06.  
11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks in front of 521 and 510 w. 21st street to do ground water sampling and gauging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additionally, Jessica said I should expect a report by May 31 and UST excavation in June. 5/9/07 - Obligado - Received a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations. 5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map. 5/18/07 - Obligado - Received a progress report letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street facility by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the

**U003074535**

report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled Investigation Summary Report , dated February 27, 2007, Update on CAP s Milestone and Monitoring Well Survey Report , dated June 11, 2007, and Monitoring Well Survey and Tidal Study , dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abbas Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewalk. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back

**U003074535**

of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any UST. From the 550 UST they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday. 1/28/08 - Obligado - Email update from Woodel - LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent source zone above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasoline UST excavation had MTBE above TAGM. The waste oil UST excavation indicated residual SVOCs and chromium typical of urban fill throughout the city. Test pits TP1 and TP2 were excavated and 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of the buildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4 diameter slotted screen set 3 ft into water. 1120

lbs of RegenOx and 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of sampling will be completed March 10, 2008. Review 1Q08 Monitoring Report - 5 wells were gauged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summer of 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of RegenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide meaningful data. Sent letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using RegenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010. 11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and representatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer Levin (attorney). We discussed the pending injections and the planned purchase and redevelopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The

injections are scheduled to begin tomorrow (11/10/11). 11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December. 1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additional remedial actions if not effective. 1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediately down gradient of footers in TP2 to monitor effects of residual source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches. 1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2) evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals. 3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks. 7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods. 7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deferring requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program(511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site, Site ID C231080) Remedial Action Work Plan (RAWP) have been approved. 04/03/2016 - Field work in connection the approved RAWP ongoing. (Perez) 03/30/2017 - Construction of the on-site BCP remedy completed on October 2016 and CoC issued on December 2016. Post-remedy groundwater sampling event scheduled for the first quarter of 2017.

(Perez) 10/02/2018 - The vast majority of the source of groundwater contamination (soil with contamination levels above protection groundwater soil cleanup objectives) has been removed. On- and off-site groundwater will be monitor under the Brownfield Cleanup Program project 511 West 21th Street (C231080). There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. NFA letter sent to RP. "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL 12/9/03 TJD Reassigned Demeo greater than greater than greater than Rommel. 11/23/05- Obligado - Spill transferred from Tang to Obligado 11/29/05 - Obligado - From Caller Remarks: UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR . No files were found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-7357 11/30/05 - Obligado - call Time Warner at number listed above. No answer. 12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contact info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obligado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 and 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertinent information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occurred. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greatest contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado

- Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw sampling points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethylbenzene, ~23500 total xylenes, 321,467 MTBE.

8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week.

8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP.

8/31/06 - Obligado - Received delivery confirmaiton of Stip Agreement.

10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss.

11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions.

11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and and emailed it as a final version back to Abbas requesting signature by 12/2/06.

11/27/06 - Obligado - Signed STIP received by Department.

12/4/06 - Obligado - Stipulation Agreement executed by Oliva

1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request.

2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report.

3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks in front of 521 and 510 w. 21st street to do ground water sampling and gauging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work.

4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results.

4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanlly, Jessica said I should expect a report by May 31 and UST excavation in June.

5/9/07 - Obligado - Recevied a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations.

5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map.

5/18/07 - Obligado - Received a progress

reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street faciility by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled Investigation Summary Report , dated February 27, 2007, Update on CAP s Milestone and Monitoring Well Survey Report , dated June 11, 2007, and Monitoring Well Survey and Tidal Study , dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abass Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the

U003074535

bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any USt. From the 550 USt they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday. 1/28/08 - Obligado - Email update from Woodel - LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent source zone above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasline UST excavation had MTBE above TAGM. The waste oil UST excavation idicated residual SVOCs adn chromium typical of urban fill throughout the city. Test pits TP1 adn TP2 were excavated adn 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited

**U003074535**

free-phase product appears to have accumulated around the buried concrete and structural components of the buildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4 diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx and 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of sampling will be completed March 10, 2008. Review 1Q08 Monitoring Report - 5 wells were gauged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summer of 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of RegenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide meaningful data. Sent letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using RegenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010. 11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and representatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer Levin (attorney). We discussed the pending injections and the planned purchase and redevelopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the

**511 WEST 21ST STREET (Continued)**

**U003074535**

existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The injections are scheduled to begin tomorrow (11/10/11). 11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December. 1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additional remedial actions if not effective. 1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediately down gradient of footers in TP2 to monitor effects of residual source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches. 1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2) evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals. 3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks. 7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods. 7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deferring requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program(511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site,

Site ID C231080) Remedial Action Work Plan (RAWP) have been approved. 04/03/2016 - Field work in connection the approved RAWP ongoing. (Perez) 03/30/2017 - Construction of the on-site BCP remedy completed on October 2016 and CoC issued on December 2016. Post-remedy groundwater sampling event scheduled for the first quarter of 2017. (Perez) 10/02/2018 - The vast majority of the source of groundwater contamination (soil with contamination levels above protection groundwater soil cleanup objectives) has been removed. On- and off-site groundwater will be monitor under the Brownfield Cleanup Program project 511 West 21th Street (C231080). There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. NFA letter sent to RP. "

DEC Memo: "08/27/08 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ENGELHARDT Saccacio notes: R. Austin was informed of the spill and he said the conditions didn't require DEC response. The manhole has another manhole connected to it. Spill # 9808285. This other spill was called in 1.5 hours earlier. Before this spill was called in, ConEd was asked if the earlier spills manhole was isolated and they answered yes. General Info: 10 gallons of water. Historical PCB concentration is 18 ppm. How spill was discovered: During cleanup of the spill in the adjacent manhole. Containment: There is a sewer connection via a sump pump but ConEd claims that there was not enough water in the sump to run activate the pump. Oil containing equipment in manhole: Transformer. Cleanup Plan: Sample taken. Cleanup pending sample results 21:20 - 22:00 DEP's Mary Barsoun examined the sewer connection and found it to be clean. -sps  
~~~~~ Con Ed e2mis #120326 replaced voided #120330."  
Remarks: "10 gallons leaked out of a transformer vault.spill will be cleaned up "

approximately 0.82 acres in size. The site was formerly used for a variety of residential and commercial uses. Currently, 627 West 42nd Street is vacant and 647 West 42nd Street is used for commercial purposes. The proposed redevelopment for future use includes a mix of residential and retail uses with parking. Known or suspected contaminants listed are petroleum, chlorinated solvents and other VOCs. These contaminants are impacting the soil and soil gas. This BCP Application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health. After careful review, the Department determined that this site was not eligible for the BCP. The site had already been developed including soil excavation and remediation prior to submittal of the application.

Env Problem: Not reported
 Information submitted with the BCP application regarding the environmental conditions at the site are currently under review and will be revised as additional information becomes available. After careful review, the Department determined that this site was not eligible for the BCP. The site had already been developed including soil excavation and remediation prior to submittal of the application.

Spiller Company: 999
 Contact Name: TONYA GIBBS
 DEC Memo: "3/29/2018 - Feng - Duty Desk. Spoke to Tonya Gibbs, property manager of Eureka Realty. Oil delivery was made last week. They found small amount of oil under the tank. The oil company, United Metro, put absorbent pads under the tank and told her that it will stop shortly. But it has been a week and it is still leaking. That's why she called the spill hotline. She said it is not a major oil spill, but it is continuously leaking with small amount. Contact info: Phone: 212-643-2978 Fax: 212-868-1292 Discussed with Veronica Zhune, the runner. She said she talked to DEC Randy Austin for the site inspection. She will conduct a site inspection. Called Tonya Gibbs to inform that V. Zhune's inspection. Spill is assigned to V. Zhune. 3/29/18-Zhune inspected the site. The tank is a 3000-gallon #4 fuel oil UST. The tank is leaking. There are oil with speedy-dry outside the tank. There are strong oil odors at the entrance of the building in the hallway and in the basement. I checked the 2nd, 3rd and 4th floor and there was no odors in the hallways. I spoke to the super who resides in the 4th floor he said there is no oil odors in his apartment. Riteway is on the way to pumped out the tank and cleaned the spill 8/2/18-Zhune inspected the site. I received a call from Eastern Environmental they wanted me to inspect the excavation before backfill. During my inspection Tonya told me that Riteway removed the tank and the concrete floor. She has issue with Riteway and hired Eastern Environmental to remove the soil impacted beneath the basement floor in the former fuel oil tank area. Eastern collected samples from each sidewall and base of the excavation. The results were sent to DEC via email. I reviewed them and samples did not have concentrations of VOCs and SVOCs above CP-51 SCLs. 1/23/19- James Mulvey from Eastern Environmental emailed the report dated August 31, 2018. Based on the information on the report this spill is closed. "
 Remarks: "unknown. tank in basement. concrete floor."

Spiller Company: 999
Contact Name: ERICA JONSTON
DEC Memo: "4/22/16-Zhune spoke to Erica Jonston from Hydro tech Environmental 631-462-5866. Erica said The site is ongoing a construction. A 22-story building is being constructed. During excavation they uncovered a 300-gallon tank with gasoline. They checked the tank and found it in good condition, however when they pulled out the tank they found soil contaminated underneath the tank. They collected five samples of soil and the soil analytical results indicate couple of VOCs exceeding the NYSDEC CP-51 unrestricted residential soil cleanup guidance. They excavated the soil contaminated to bedrock. 5/3/16-Erica sent the following email. Last week, additional soil staining was encountered at the soil at this Site. The staining went down to bedrock, which drops off in the back of the Site. Due to structural constraints and safety issues, it is not possible for the developer to dig out the backyard area to the bedrock, as they would be below the footings of the adjacent buildings, and the Site is only 25 feet wide. I had the contractor dig out what he could safely access, and it was stockpiled on plastic and covered. The staining and odor were minor. I am proposing to take an endpoint sample from the backyard area to ascertain the remaining soil quality. This area will be covered with a vapor barrier and concrete slab during site development. Please confirm this is acceptable, and call me with any concerns you may have. 7/15/16-Please find our tank/spill closure letter for 337 West 36th Street attached to this email. Please confirm receipt of the report, and let me know if you have any questions or comments. 8/9/16-Zhune sent the following email to Nathan from NYSDOH. I am working on a site that Jeff suggested we email you about in case NYSDOH may have further requirements. The

EXCAVATION SITE (Continued)

S118637983

site is being developed with a 22-story building currently. We are currently trying to reach out the consultant to determine the current status of the developed but we believe the foundation may be installed already. During excavation of the site they uncovered a 300-gallon tank with gasoline. They checked the tank and found it in good condition, however when they pulled out the tank they found soil contaminated underneath the tank. Following the tank removal, all accessible petroleum contaminated soil was removed. They collected five endpoint samples of soil and the soil analytical results indicate five VOCS detected in endpoint EP-1 at concentrations exceeding CP-51 Unrestricted SCOs and two VOCs in endpoint EP-2 at concentrations exceeding CP-51 Unrestricted SCOs. There were no VOCs detected in EP-3, EP-4 or EP-5 at concentrations exceeding CP-51 Unrestricted SCOs. The consultant noted that they removed all the contaminated soil to bedrock, however the endpoint sample they collected at the bedrock interface still shows petroleum contamination. Development plans include the installation of a basement slab directly on top of bedrock with a vapor barrier, however, there does not appear to be any vertical space for the installation of an SSDS under the foundation. Jeff, who edited this email, was thinking that NYSDOH may require the collection of indoor air samples during the heating season. Attached is the report and we would much appreciate if you could review it and let us know your comments. As always you can call me at 718-482-7305 if you wish to discuss. 8/10/16-Nathan sent the following email. Given the fact that residual contaminated material exists below the currently installed slab, I recommend the following: " Collect a groundwater sample to determine if there is contamination in that media as well; " Collect indoor air samples from within the basement of the finished building during the heating season, while the heating system is operating under normal occupied conditions; " Depending on the indoor air levels and groundwater results sub-slab soil vapor samples may need to be collected to further verify whether there is the potential for vapor intrusion to occur and mitigation is warranted. 12/19/16-Erica Johnston email to Veronica-Please find the revised letter for this spill case attached. As we discussed on 12/15/16, the soil was removed below EP-2 to bedrock. The collection of a groundwater sample would require a bedrock well. We are requesting that this requirement be removed from the DEC s September 2016 Letter. Please give me a call with any questions you may have. 12/19/16-Erica Johnston sent a letter dated 12/19/16. The letter stated the following. Hydro Tech is requesting that the previously referenced letter be modified by removing the requirement of the collection of the groundwater sample (which will require a bedrock well). Currently the site is being developed with a 24 story hotel, The future building will be protected by a vapor barrier system as well as a concrete building slab. These engineering controls will be documented in the New York City Office of Environmental Remediation Closure Report. The buildings plans and work plan regarding the future ambient air sampling will be provided to the department. 1/3/18- Copy of the letter sent to Erica and the original to Patrick Jones. The New York State Department of Environmental Conservation (the Department) has received and reviewed the letter dated December 19, 2016 (the letter) submitted by Hydro Tech Environmental Corp. for the above referenced site. The Department concurs the collection of groundwater at former

EXCAVATION SITE (Continued)

S118637983

location EP-2 is not feasible. The Department looks forward for the submission of the building plans and work plan regarding the future ambient air sampling. 1/5/18-Nathan email to Veronica-My recommendation is that since they don t want to install a bedrock well then we would request that a soil vapor sample be collected at the same time as the indoor and outdoor air samples. This will give us an understanding of what the potential is for soil vapor intrusion to occur. Also can you find out what the redevelopment plan calls for regarding what the lowest level/basement floor will be used for. 5/25/18 - Obligado - I received a request from Hydrotech to perform the air sampling prior to heating system. I discussed issue with DOH Nathan Walz. Per Walz's comments, I sent an email to Ms. Aliu with the following: 1)Submission of an indoor air sampling work plan which details the sampling and analysis to be performed for review and comment. 2)In order to simulate winter conditions the windows will need to remain closed and the heating system operational 3)The Indoor Air investigation should include 2 basement air samples, 2 1st floor samples, and 1 ambient air sample. 6/6/18- Dorina Aliu email to Obligado-Following up on our recent correspondence, Hydro Tech has prepared an Indoor Air Sampling Work Plan for your review. The file can be accessed via the link below:
<https://netorgft3589676.sharepoint.com/:f:/s/htefileshare/EgOuZLU0ZNKoTa1Nphn2g8BeYwMz0lcG9xD98pISyJaSA> As per your guidance, the proposed sampling plan includes measures to simulate winter conditions during the collection of 2 basement air samples, 2 first floor samples, and 1 ambient air sample. We hope you will find the work plan complete and acceptable. I look forward to your response. 6/7/18 - Obligado - The DEC and DOH reviewed the indoor air sampling plan and found it to be acceptable. I emailed Hydrotech to proceed. 6/26/18- Dorina email to Obligado-Following your approval of the IAAWP for this site, we went ahead and implemented the work plan on June 15th. As per your guidance and in accordance with the work plan, we simulated winter conditions 24 hours prior to, and during sampling, and collected four (4) indoor air samples and one (1) outdoor air sample. Our findings are enclosed in the letter report addressed to the client and attached in this email for your review. The analytical data indicated no detections of petroleum related compounds in relation to the open spill. Trace concentrations of chlorinated compounds were detected at concentrations that are below the action levels provided in the NYSDOH Vapor Intrusion Guidance. Based on these findings, we recommend closure of the open spill case (#1600781) associated with this site. We hope you will find the report complete and acceptable and look forward to your response. 6/26/18- Nathan email to Obligado-I reviewed the Indoor Air Assessment Report for the above referenced spill. Based on that review, concentrations of VOCs in the indoor air that are above background can be attributed to products being used for cleaning and recent painting and carpet/flooring installation. I concur with the conclusion that no further action is necessary and believe that the Spill can be closed. Spill Closed."
Remarks: "300 gallon gasoline storage tank discovered during excavation. Soil remediation is complete. Request call back in regards to contaminated soil disposal."

| DEC Memo: | "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN Transferred from Miller to Sun on 10/24/2003. 11/7/2003-Sun-File Review by Sun: -Closure Report for Underground Storage Tank, by Woodward-Clyde Consultants, Inc.-Three (3) groundwater wells (MW1, MW2 and MW3) were installed in order to identify possible impacts to soil and groundwater that may have resulted from the three (3) USTs. MW1 and MW2 were installed west of the tanks. These wells were installed in the area assumed to be downgradient of the tanks in relation to groundwater flow. MW3 was installed east of the tanks in an area assumed to be upgradient of the tanks in relation to groundwater flow. One soil sample was obtained at the approximate groundwater interface in each of the three well locations. The samples were identified as MW-1A, MW-2A and MW-3A. The results of soil sample tests are summarized as follows: 1). Soil Sample MW1A identified a TPH concentration of 169 ppm. No BTEX compounds were detected in the sample within method limit, and 34.12 ppm of BNA compound. 2) Soil Sample MW2A identified no detectable TPH, 0.002 ppm of Benzene, 0.002 ppm of Toluene, 0.008 ppm of Ethylbenzene and 0.016 ppm of total Xylenes. BNA compounds were not analyzed. 3)Soil Sample MW3A identified TPH concentration of 306 ppm, 0.086 ppm of Benzene, 0.057 ppm of Toluene, 0.4 ppm Ethylbenzene, and 0.84 ppm of total Xylene, and BNA compound total 32,43 ppm. The results of the groundwater samples (MW1, MW2 and MW3) are summarized below: 1)Water Sample MW1 identified no detectable levels of TPH, no detectable levels of BTEX, 0.006 ppm of BNA compounds, and lead content of 2.43 ppm. 2) Water Sample MW2 identified 1 ppm of TPH, 0.190 ppm of Benzene, 0.031 ppm of Toluene. 0.002 ppm of total Xylene, no detectable of Ethylbenzene, Lead content of 28.2 ppm, 0.106 ppm of SVOC. 3)Water Sample MW3 identified TPH concentrations of 2.6 ppm, 0.200 ppm of Benzene, 0.130 ppm Toluene, 0.450 ppm Ethylbenzene, and total Xylene of 0.570 ppm. During the original exploratory excavations, PID readings from soil around a piping joint near the sub-level dispenser pump were found to be between 50 and 600 ppm. In addition to the PID readings, the smell of gasoline was strong. As a result of these findings, four soil samples (P1 thru P4) were obtained from within the excavation, which measured approximately 3 ft by 4 ft. Sample P1 was obtained from directly under the piping; Sample P2 was west of the piping; Sample P3, east of the piping; and Sample P4 at the point at which the pipes are closest to the dispenser pump. The results of four samples are summarized below: 1)Sample P1 identified TPH concentrations of 1530 ppm, 7.3 ppm Benzene, 0.650 ppm Toluene, 6.6 ppm Ethylbenzene, 55 ppm |

S102141260

total Xylene, 29.28 ppm SVOC, and total Lead 418 ppm. 2)Sample P2 identified TPH concentrations of 904 ppm, 1.4 ppm Benzene, 6.4 ppm Toluene, 24.0 ppm Ethylbenze, 22.0 ppm total Xylene, and total Lead 288 ppm. 3)Sample P3 identified TPH concentrations of 1580 ppm, 0.002 ppm Benzene, 0.003 ppm Toluene, 0.045 ppm Ethylbenze, 0.150 ppm total Xylene, and total Lead 273 ppm. 4)Sample P4 identified TPH concentrations of 1729 ppm, 2.9 ppm Benzene, 11.0 ppm Toluene, 5.8 ppm Ethylbenze, 32.0 ppm total Xylene, and 11.0 ppm of SVOCs.. In order to remove the material spilled from the piping leak, NYSDEC case manager requested the excavation and disposal of contaminated soils associated the piping leak. On the week of 3/8/1992 approximately 5 cubic yards of soil from the excavation. The PID readings were recorded between 200 and 300 ppm. The area of excavation was measured approximately 4 ft x 10 ft, with the greatest evidence of contamination west of the piping. In response to the analytical results, the NYSDEC requested that the monitoring wells be sampled and analyzed twice in the next year to confirm that the source of contaminants in the monitoring wells has been removed by closure of the USTs. During the week of 3/9/1992, Verizon's contractor, GMC purged and closed in-place the three 550-gallon USTs. The tanks were closed by filling each tank with concrete slurry. GMC reported that all fills, vents and any other openings were removed and/or filled with concrete. -Attachment to Closure Report for Underground Storage Tanks, by Woodward-Clyde Consultants, Inc, dated 10/29/1992: This attachment reported the summary of water sample analysis conducted on 10/20/1992. The results are summarized below: 1)Water Sample MW1 identified less than 1.0 ppm of TPH, no detectable levels of BTEX. 2) Water Sample MW2 identified 3.8 ppm of TPH, 0.28 ppm of Benzene, 0.005 ppm of Toluene. 0.014 ppm of total Xylene, 0.01 ppm of Ethylbenze. 3)Water Sample MW3 identified TPH concentrations of 7.7 ppm, 0.27 ppm of Benzene, 0.5 ppm Toluene, 0.065 ppm Ethylbenze, and total Xylene of 0.55 ppm. -Attachment to Closure Report for Underground Storage Tanks by Woodward-Clyde Consultants, Inc, dated 6/25/1993: This attachment reported the summary of water sample analysis conducted on 4/15/1993. The results are summarized below: 1)Water Sample MW1 identified less than 1.0 ppm of TPH, no detectable levels of BTEX. 2) Water Sample MW2 identified less than 1.0 ppm of TPH, 0.3 ppm of Benzene, 0.029 ppm of Toluene. 0.338 ppm of total Xylene, 0.791 ppm of Ethylbenze. 3)Water Sample MW3 identified less than 1.0 ppm of TPH, 0.082 ppm of Benzene, 0.018 ppm Toluene, 0.26 ppm Ethylbenze, and total Xylene of 0.48 ppm. -Letter from M. Godick of Lexicon to S. Miller of NYSDEC, dated 6/5/1997: This letter reported the summary of water sample analysis conducted on 4/23/1997. The results are summarized below: 1)Water Sample MW1 identified no detectable levels of BTEX. Lead Content is 0.0129 ppm. 2) Water Sample MW2 identified 420 ppb of Benzene, 19 ppb of Toluene. 18 ppb of total Xylene, 19 ppb of Ethylbenze. Lead Content is 0.0034 ppm. 3)Water Sample MW3 identified 160 ppb of Benzene, 16 ppb Toluene, 21 ppb Ethylbenze, and total Xylene of 30 ppb. Lead content is 0.0505 ppm. As shown on 4/23/1997 groundwater sampling data, BTEX concentrations were not detected in Monitoring well MW-1. However, elevated BTEX concentrations were observed in Monitoring wells MW-2 and MW-3. In addition, a slightly elevated lead concentration was detected in MW-3. The BTEX concentrations in Mw-2 and MW-3, and the lead concentration in MW-3, exceeded the NYSDEC groundwater quality standards for the respective compounds. -On 10/24/2003, Joe Sun of NYSDEC sent a letter to Jerome Kung of Verizon, requesting to install

a minimum of three (3) boringd/wells to further delineate the extent of petroleum contamination both on-site and off-site, and provide a surrounding property sketch. 05/28/04-File Update by Sun- Limited Subsurface Investigsation,prepared by EnviroTrac dated April 7, 2004: Based on laboratory analysis, VOCs and SVOCs were detected in soil samples collected at soil boring MW-4 (0 to 2 feet below grade) and at MW-5 (2 to 4 feet below grade) at concentrations exceeding the NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives. The soil sample collected from soil boring MW-6 was below the NYSDEC Recommended Soil Cleanup Objectives.VOCs and SVOCs were detected in groundwater samples collected from monitoring well MW-4, MW-5, and MW-6 at concentrations above the NYSDEC Groundwater Standards. The hot spot is in WM-5, which has BTEX concentration of 9,780 ug/l, including 3,000 ug/l for Benzene concentration, 1,000 ug/l for Toluene concentration, 980 ug/l for Ethylbenze concentration and 4,800 ug/l for total Xylene. MTBE concentration for MW-5 is 66 ug/l. 05/28/04- File Update by Sun: On 05/28/04 Sun sent a letter to Jerome Kung of Verizon requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of June 15, 2004 for signing the Stipulation Agreement. 01/06/05 File Update by Sun: -Additional Subsurface Investigation Report, prepared by EnviroTrac, dated December 1, 2004: On September 23 and 24, seven additional monitoring wells (MW-7 through MW-13) were installed at the site. Based on laboratory analysis, VOCs were detected above NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives in soil samples collected from the locations of MW-7, MW-8 and MW-13. SVOCs were detected above Soil Cleanup Objectives in soil collected from locations of MW-9, MW-10 and MW-13. Based on laboratory analysis, VOCs were detected above NYSDEC Groundwater Quality Standards in ground-water samples collected from MW-5, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12 and MW-13. SVOCs were detected above NYSDEC Groundwater Quality Standards in ground-water samples collected from MW-4 and MW-6. Based on the report, elevated concentrations of VOCs in soil and groundwater samples were within the vicinity of the closed in place USTs and former gasoline dispenser. - On January 5, 2005, Sun sent a letter to Jerome Kung of Verizon informing that the Department has reviewed the Additional Subsurface Investigation report dated 12/1/04 and the contamination has been delineated to the extent possible. The Department approves this report and the report can be considered as an Investigation Summary Report. Pursuant to the Stipulation Agreement signed and dated effective July 20, 2004, the Department requires a Remedial Action Plan be submitted within 120 days of receipt of approval of the Investigation Summary Report. 03/11/05 File Update by Sun: The Remedial Action Plan is approved by the Department on 03/11/05. (WJS) 1/5/06: Case reassigned to Andersen. Reviewed quarterly report for June-August 2005. Samples taken on August 25, 2005. Max BTEX 151 ppb (MW-8), max MTBE 26 ppb (MW-12). Quarterly monitoring is taking place until mid-2006 when the building will be razed and the ground excavated. 4/21/06: Reviewed the December 05 - February 06 quarterly report. Wells samples on February 24, 2006. Product found in MW5 at a thickness of 0.75 ft. Max BTEX 55ppb in MW6, max MTBE 35ppb in MW12. Depth to water 2-10 feet. Source removal will occur following the buildings demolition in 2006. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. The site is just being monitored until the new owner demolishes it in early 2007. The new owner applied for BCP funding. Additional

delineation downgradient failed due to refusal. The adjacent site downgradient is under construction and may have done a phase 2 assessment. 6/29/06: Received March - May 2006 update report. Samples collected May 12, 2006. Product at a depth of 0.84 feet found in MW-5. Product was hand bailed. Minimal contamination in other wells. Depth to water 6.65 ft. Building demolition has not been scheduled. Sent an email to Jerome Kung requiring monthly bailing of product from MW-5 until building demolition begins. 10/30/06: Sent email to Jerome Kung to followup on overdue quarterly report. 11/17/06: Received update report November 13, 2006. Wells sampled on August 16, 2006. Product in MW5 at a thickness of 0.16ft. Product was hand bailed. Max BTEX 140 ppb in MW8, max MTBE 29 in MW12. Source removal as outlined in the RAP will occur following the building's demolition. Until that time, groundwater will continue to be sampled quarterly with the next round of sampling scheduled for November 2006 . 2/7/07: Reviewed update report. Wells sampled on 11/20/06. Max BTEX 140 ppb (MW8) and max MTBE 48 ppb (MW12). 0.61 ft of product on MW5. Excavation will occur following building demolition. Case reassigned to DEC Bollers, who is managing the BCP cleanup at this site. See BCP site no. C231051. 12/17/2010: Certificate of completion for BCP issued 12/17/2010 - Track 1 unrestricted use achieved through excavation to bedrock at 20' bgs, and removal of USTs"

Remarks:

DEC Memo: "10/08/08- Zhune spoke to Pete Mirabile from ABC tank (718) 272-2800. they cleaned the tank and put everything in drums. Nothing leaking. He said called Donna tomorrow. 10/09/08- Zhune called Donna. She said I am going to be in a meeting I will call you back. 10/10/08-Donna called. They picked up all contaminated debris put them in 70 drums. They are going through the Insurance Company. They need to get the approval. The tank is going to be removed. A new tank will be install. 10/20/08-Hiralkumar Patel. received another complaint. spill #: 0808124. visited site. met Carlos Platero, building super. inspected basement. found 13 55-gal drums with contaminated soil in it. contaminated soil removed from old 7500 gal UST in basement behind wall. site currently has another 7500 gal UST and that is empty as found leaking. tanks are located along building foundation wall. and there is another wall in front of tanks towards boiler. found free product on floor from where previously closed tank removed. as per super, second tank is empty currently. during site inspection, found fill port un-plugged. asked super to plug fill port with cement. PBS #: 2-189502. as per PBS record, only one tank at the site which has been closed in-place in Jan. 2008. 10/21/08-Hiralkumar Patel. spoke with Donna (718-272-2800) at ABC tank. she mentioned that site originally had two 7500 gal #4 oil USTs at the site, in basement. in Jan. 2008 they abandoned one tank with foam as no longer needed. ABC tank found #4 oil in this first tank before abandonment (means was in service before Jan. 2008). then building manager noticed some water seeping through wall into basement. so management decided to remove abandoned tank to repair any water leak into the building. after removing first tank, they noticed oil on floor nearby second in-service tank. so ABC tank pumped out oil from second tank and noticed heavily corroded bottom after cleaning from inside. as per Donna, wall between tanks and boiler is non-supporting wall and owner has decided to demolish that wall and to remove second tank also. Donna mentioned that they will install temporary tanks this week and will remove second tank probably next week. asked Donna to remove oil/water from tank excavation area immediately. also asked to plug

(212) 519-2015 Fax (212) 519-2098 email: kbonal@winokerrealty.com DEC requires: 1) immediate removal of free product from tank location, 2) PBS registration for both tanks and upates (as removing), 3) removal of contaminated debris, 4) soil/groundwater delienation 04/08- Zhune spoke to John Diffranchesco 212-519-2015 building manager. He said he will find what they have and will call back. Owner Saeed Amidiam 212-967-1110 516-413-7573 saeed50@Aol.com Fax 212-5609751 Ext, 14 02/23/11- ABC Tank sent the report dated 02/23/11 ABC tank broke vault to expose and remove (1)7500-gallon fuel oil storage tank (tank A) that was filled with foam and abandoned in place on january 1,2008. All debris was removed from the premises Tank A was removed in order to gain access to tank B which was leaking. ABC tank broke the vault to expose clean and remove tank B from premises. All contaminated debris was placed in drums & removed. A total of 56 drums were removed from the premises. ABC tank obtained(4)soil samples from along tank B area approximately 3' deep. A soil samples taken from each end of the tank head and 1 mid-point sample was obtained. A soil sample was taken from middle of the floor where tank A was located. The soil analytical results show no VOCs and SVOCs above the Recommended soil cleanup objectives for fuel oil. Spill closed. "

-***** Landmark Realty LLC. / Run 178 LLC. **owners of building 321-325** c/o Raber Enterprises LLC. 175 Canal Street, 2nd Floor New York, NY 10013 Tom Sadlowski **owner's representative** Senior Project Manager Allied / CMS, Inc. 675 Third Avenue, 25th Floor New York, NY 10017-5700 PH. (646) 385-8333 (O) (917) 751-5108 (C) Fax (646) 385-8334 email: tsadlowski@alliedcms.com 12:54 PM:- spoke with Mr. Caraccio, person-in-charge for building 327-331. he mentioned that the three buildings (# 327, 329 and 331) use a single tank/boiler set which is located in building 329. he mentioned that they are using #4 oil. based on available information, asked Mr.

CONSTRUCTION SITE (Continued)

S116155462

Caraccio to conduct tightness test of the 1,500 gal tank system. also asked him to update PBS registration (from #6 to #4 oil). 1:29 PM:- sent letter to Mr. Caraccio requiring tightness testing of the 1,500 gal tank system at 327-331. asked him to submit test result by the end of 12/27/13. letter emailed to Mr. Caraccio. 1:35 PM:- sent email to Theresa and asked to submit appendices of Phase I. also asked her to collect and analyze endpoint soil samples and product sample. email copied to Paul Stewart (pauls@actenvirons.com). 1:43 PM:- left message for Mr. Sadlowski. 2:19 PM:- received call from Mr. Sadlowski. informed him that the department requires collection and analysis of soil and product sample. informed him that sample results must be submitted for review, prior to any foundation work in impacted areas. 2:40 PM:- sent email to Mr. Sadlowski, including copy of email sent to Theresa at 1:35 PM. asked Mr. Sadlowski to submit sample results for review, prior to foundation work in area where contamination is noted. email copied to Theresa. 12/13/13-Hiralkumar Patel. 10:12 AM:- received email from Paul including email that he received from Mr. Sadlowski. yesterday afternoon, Mr. Sadlowski, Anne Gallagher (Allied / CMS, Inc.), Lance Steinberg (developer) and Julie Requarth (project executive with Flintlock Construction Services, LLC.) visited site 327-331 W 35th Street and met with building super Crystal Lugo. the boiler and tank are located in rear basement of building 329. as per Mr. Sadlowski, no sign of spill noted in boiler/tank rooms. the tank is completely encased and tank sides/bottom are not visible. they found fill/vent lines running along basement ceiling. they inspected front part of basement, where fill/vent lines goes under the sidewalk, and noted oil stains on floor. Ms. Lugo mentioned that there was an oil spill from fill line that is under the sidewalk. currently, site has fill and vent at the building's foundation wall, but old fill port is visible near the curb. Ms. Lugo mentioned that after noticing the spill, fill line under the sidewalk was abandoned and a new fill port was installed at the wall, by All American Mechanical, Inc. Anne Gallagher Assistant Project Manager ALLIED/CMS, Inc. PH. (646) 560-8935 (O) (917) 270-0680 (C) Fax (646) 385-8334 email: agallagher@alliedcms.com Lance Steinberg email: lance@raberenterprises.com 10:45 AM:- received call from Mr. Sadlowski. he inquired about investigation process. informed him that the department has asked for tank tightness test of the existing tank system at building 329. asked him about construction details. he mentioned that soil will be removed to about 1-2 ft below water table from entire footprint of the site and the new basement floor will be under water table. he confirmed that there will be no french drain or sump in the basement, but building basement and sub-grade walls will be covered with waterproofing membrane. informed him that contaminated soil and groundwater removed from the site, as part of redevelopment, must be disposed off properly. asked him to collect endpoint soil samples to confirm soil quality underneath new building. Crystal Lugo **super for building 327-331** PH. (917) 334-3804 11:22 AM:- spoke with Ms. Lugo. she confirmed that there was leak in remote fill line at building 329. she asked to contact building management for further details. 11:24 AM:- spoke with Mr. Caraccio and asked him to provide information about when was fill line leak was noted, actions taken to correct it and company who performed the work. he will call back. 11:45 AM:- left message for Paul. informed him that the department requires fingerprint analysis of product sample, collection/analysis of endpoint soil samples and proper disposal of contaminated soil and groundwater removed as part

CONSTRUCTION SITE (Continued)

S116155462

of redevelopment of the site. 11:52 AM:- received call from Paul. he mentioned that product sample has been submitted to lab for fingerprint analysis. asked him to collect endpoint soil sample from depth of proposed excavation for redevelopment. Paul mentioned that as part of redevelopment, developer is going to install fifty-two (52) 2-inch dewatering wells throughout the site, to lower the water table to 20 ft bg. all these wells will be connected to a frac tank and water will be collected into this frac tank prior to discharge to city sewer system. well installation will start probably next week. due to findings of free product on water table in southwest corner, discussed with Paul about installing well in southwest corner first and implement intrim remedial measures, instead of dragging contaminated water in entire site. Paul will discuss with property owner/developer and will submit a work plan. Paul asked for copy of letter sent to Mr. Caraccio. 12:22 PM:- sent email to Paul including letter that was sent to Mr. Caraccio. email copied to Ms. Gallagher, Mr. Steinberg, Shaminder Chawla (NYC OER) and William Wong (NYC OER, WiWong@dep.nyc.gov) 12:25 PM:- spoke with Mr. Caraccio. he is looking for more information about fill line leak. informed him that as per Ms. Lugo, there was leak in remote fill line at building 329. asked Mr. Caraccio to excavate along the abandoned fill line to investigate and remediate any petroleum contamination. he will call back once get more information about fill line leak issue. 2:12 PM:- received email from Paul. he mentioned that site owner and developer have agreed to install a 2 inch well in the southwest corner of the site, which is part of dewatering needed for site development. Paul mentioned that well drilling will begin sometime next week. 12/16/13-Hiralkumar Patel. 9:45 AM:- visited site. met Ms. Lugo and inspected oil tank system in building 329. building 329 has one 1,500 gal tank, completely wrapped in concrete. the tank and boiler are located in rear of the basement. inspected front part of basement, where fill/vent lines are entering into building. new set of piping noted near basement ceiling. an old capped pipe noted at middle of the wall. found black stains underneath the capped pipe. a sewer trap pit located near the front foundation wall. observed black liquid from pit wall towards the sidewalk. Ms. Lugo showed location of old fill port, which is near a tree area on sidewalk. inspected excavation pit at building 325. no petroleum odors noted in area, as pit near the southwest corner was partially backfilled after collection of samples. 11:54 PM:- spoke with Mr. Caraccio. informed him that based on observations during the site visit, the department requires delineation and remediation of any petroleum contamination due to possible leak in former fill line. Mr. Caraccio mentioned that contractor testing tank system on 12/13/13 and it passed. he will submit test result, once available. based on observations during site visit, a spill number (1309186) is generated for building 327-331. 1:05 PM:- received email from Mr. Caraccio including result of tank tightness test. as per test result, All Boro Tank Testing tested the tank on 12/13/13 and found tight. the result shows tight tank, but it is unclear whether it is tank only test or tank system test. 1:11 PM:- sent email to Mr. Caraccio and asked him to confirm whether it is tank only test or system test. 1:13 PM:- sent letter to Mr. Caraccio requiring subsurface investigation along formerly abandoned fill line and at sewer trap pit. asked him to submit report by the end of 02/28/14. letter emailed to Mr. Caraccio, Mr. Sadowski and Paul. 1:33 PM:- received call from Chris from All Boro Testing. he confirmed that they tested entire tank system which passed. Chris

CONSTRUCTION SITE (Continued)

S116155462

will submit revised test result. refer to spill #: 1309186 for further details about spill investigation for building 327-331 W 35th ST. 12/20/13-Hiralkumar Patel. 11:49 AM:- left message for Paul inquiring about results of fingerprint analysis and status on well installation in southwest corner of the site. 12:35 PM:- received email from Paul including lab result of fingerprint analysis. result shows presence of #4 oil. Paul mentioned that contaminated soil and water are coming up during installation of wells along W 35th St. 01/06/14-Hiralkumar Patel. 3:34 PM:- sent email to Paul and asked to submit well logs and site map with well locations. 01/08/14-Hiralkumar Patel. 11:57 AM:- received email from Paul including a site sketch. he mentioned that construction has stopped due to NYCDOB issuance of a stop work order as a result of cracking observed in the wall of the adjacent property to the west. as such, no wells installed in southwest portion of the site. no wells can be installed in southwest area until soil beneath the building to the west has been stabilized, which may take a month or more. map shows four wells installed in southeast portion of the site. some oil found in two of the four wells in southeast corner. map also shows location where floating product observed near southwest corner. Paul copied this email to William Wong at NYC DEP. William Wong NYC DEP email: WiWong@dep.nyc.gov 02/04/14-Hiralkumar Patel. 10:47 AM:- received call from Paul and Mr. Sadlowski. Paul mentioned that around 25 monitoring wells are installed at the site. they are waiting to finish compaction process in south-southwest area, along adjacent building, prior to installing wells in that area. there will be around 5 wells in southwest corner. asked Paul to send email with schedule on well installation in southwest corner. suggested them to monitor wells in southwest corner separately from other wells in dewatering system, for some time. Paul will discuss and send email with plan. 05/14/14-Hiralkumar Patel. 11:12 AM:- received call from Paul. he mentioned that dewatering well network is equipped with valve. general contractor is excavating in other area of the site and dewatering the work zone only. Paul will be on-site when excavation happens in southwest corner. currently, groundwater is stored on frac tank and disposed off-site. asked Paul to collect endpoint samples for analysis. informed him about absence of any soil contamination under the former remote fill line at building 329. 06/12/14-Hiralkumar Patel. 3:14 PM:- received message from Paul. he mentioned that bedrock excavation has begun in southwest corner of the construction site. they found film of oil and water and collecting it. 06/16/14-Hiralkumar Patel. received email from Paul (at 5:05 PM on 06/13/14) including summary of bedrock work and findings of oil in south-central portion. he included some pics. 07/02/14-Hiralkumar Patel. 1:50 PM:- received call from Paul and Mr. Steinberg. Paul mentioned that site has been dug to about 3-4 ft into bedrock in southwest corner, to the depth of proposed foundation. they noticed minor oil drops on water. bedrock cracks will be sealed and a water proofing will be installed. 3:10 PM:- visited site. met Paul, Mr. Steinberg and other members with Mr. Steinberg. noticed very minor oil seepage through bedrock crack in western side of the property. absorbent pads at the seepage location. no petroleum odors noted. found water in excavation, not more than 25 ft from the western side. no oil or sheen noted on water in excavation. Paul mentioned that water samples were collected for dewatering purpose. asked Paul to submit copy of water sample result. as all soil will be removed and water proofing membrane will be installed around the

 DEC Memo: "Remedial investigation by Langan. Potential tank in phase I. Geophysical survey conducted showed one tank. Soil samples taken. Oil/ water separator. Documentation will be sent and RAP will be drawn up soon. They will be working with OER. 10/29/15- DEC Piper spoke with PAT. The site hasn't brok ground yet and is an active art gallery still. However, the site will be razed and excavated to approx. 20'. 5/16/16- DEC Piper- In NYC OER handled by Sarah Pong(spong@dep.nyc.gov). Langan is consultant. RAWP is being prepared at this time. RAWP call for: 1.Entire property will be excavated to 15 feet below grade with dewatering. GW is at 7-9 feet below grade. 2.Waterproofing; and 3.ventilated garage. 11/14/19- DEC Piper - Spill project transferred to MD Hoque as per Vadim Brevdo. 12/19/2019-M.Hoque: Eamiled to Sarah Pong of NYC OER and Ryan Manderbach of Langan requesting to get an site update. 12/20/2019-M.Hoque: Email received from OER. Hi MD, The site is currently still under construction and we are waiting for the remedial action report. We will share that report with you once we receive it. The available reports (RIR and RAWP) can be found in the document repository link below: <https://a002-epic.nyc.gov/app/workspace/591/docrepository> I have added you as a contact to the project in EPIC if you would also like to see the daily reports. Best, Sarah "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARRINGTON This spill site has been transferred from DEC Sigona to Remedial Bureau B, on August 4, 2003. DEC (SIGONA) received database spill nos. 8806783, 9000476, 9009655 & 9108454 also exist for this site. DEC's comments regarding a proposed Work Plan for On-Site and Off-Site Investigation by Roux Associates, dated April 30, 2003. Based on the results of our site visit on March 7, 2003, and evaluation of the proposal by Roux Associates, the DEC accepts ExxonMobil's Work Plan and Schedule to evaluate the on-site and off-site contamination at this location. Exxon-Mobil must now complete the implementation of the Work Plan according to the proposed schedule. The results of this investigation must be compiled into a Subsurface Investigation Report prepared in accordance with Section No. 3, paragraph 3.14 of the Division of Environmental Remediation's Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002. A complete Remedial Investigation Report must be submitted for DEC review and approval according to the proposed implementation scheduled."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 3/9/01 TJD Spill caused by leaking suction & return lines. Two basement sumps have accumulated #2 Fuel oil resulting from release. Lines have been replaced. AL Eastmond has been retained to test tank (2000 gallon), pump out pits daily and investigate extent of sub-surface contamination. Manager in charge of project for storage USA is Carlos Gonzalez (212) 924-5111. NYCDEP notified, issued violations for discharge to city sewers (Storage USA was pumping product from pits into sewer) this discharge has been abated. Adjacent properties were canvassed to determine potential impacts, no problems found other than odor complaints @ 525 W 20th Street, odors have started to disipate since discharge to sewer was abated. Actual date of discovery was approximately one week prior to notification. 3/15/01 TJD Site visit to determine compliance with verbal directives given on 3/9/01. Storage USA has not been vacuuming sumps as directed. Only two vacuum events 3/8 & 3/9 performed by AL Eastmond. Do Work letter sent to RP today. ECO Smith visited sited today and has issued multiple summons to manager. A third impacted sump discovered in bottom of freight elevator shaft - pump in sump. Manager has been directed to disconnect and remove pump from service. 04/28/2005: DEC Lead changed from TJ DeMeo to J.M. Krimgold. 10/31/05 - OBLIGADO - file transferred from Krimgold to Obligado 11/7/05 - Obligado - Review Remedial Action Work Plan. Background - Site contaminated with #2 fuel oil as a result of a leak in a boiler supply line connected to a former 2000 gallon onsite underground storage tank. 10 Wells installed at the site. NAPL present on ground water. VEFR conducted in 2003, 15 gallons of NAPL removed. NYAPL recovery system in RW3, manual baling in RW2 and RW1. AS of June 2004, 4000 gallons of total fluids removed including 128 gallons of NAPL. DTW is 5 to 7 ft bgs. GW flow to SW. Ground water impacts due to No 2 fuel oil in mw0, mw5, and mw6. Proposal - Baseline assessment - Collect 6 to 8 soil samples for STARS VOCs and SVOCS, TPH, TOC, COD. Soil borings will be converted into monitoring wells and 6 ground water samples for STARS, TPH, natural attenuation parameters, electron acceptors will be collected. Proposes 2 PermeOx (Calcium Peroxide) injections over a 12 month period to enhance

biodegradation. Baseline, Post Injection, and quarterly monitoring proposed. 11/15/05 - Obligado - called Glenn Netuschil, at Roux to discuss RAP. Left message. 11/16/05 - Obligado - speak with Glenn (631)232-2600, approve RAP. Roux will proceed with baseline soil and ground water sampling, then ORC injection. Can expect report in 1-2 months. Sent RAP approval letter to: Gary Dorin Edison Properties 100 Washington Street Newark, NJ 07102 Fax copy to Roux at 631-232-9898 11/29/05 - Spoke with Glen, baseline investigation taking place this week, 11/28-12/2/05. 2/1/06 - Obligado - call Glenn, during geoprobe for baseline assessment, noticed product stained soils (fuel oil) in one geoprobe point. So they installed a well and found 1 foot of product. They have been recovering product and are seeing product levels decrease. Once product levels decrease to an acceptable level they will proceed with approved RAP. 3/28/06 - Obligado - called Glenn, product thicknesses are decreasing, max thickness is a few inches in one well. 6/26/06 - Obligado - Still 0.2 feet of product. Put spill buster in well with product to increase recovery. 1/3/07 - Obligado - Spoke to Glenn he said they are still removing product with a spill buster. They used a vac truck to remove the recovered product. The 55 gallon drum was about 3/4 full (~40 gallons of product removed) from tank. While the Vac truck was there they performed EFR on the wells with product. He will send me the baseline investigation results. 2/22/07 - Obligado - After discussion with Kumar about #2 fuel oil found at an adjacent site (sp0609814) sent letter to Edison Properties requiring the installation of an additional well to the east of the free product plume. Also required quarterly monitoring program implementation as per the RAP. 7/10/07 - Obligado - Called Glen to inquire about status of well installation. 10/26/07 - Obligado - Called Glen to inquire about site status. Left message to call back the DEC. 10/31/07 - Obligado - Called Glen again, left message to call DEC. Emailed glenn as well. 12/3/07 - Obligado - During November I spoke with Glen about this site. I told him I have received no documentation about the well installation or any site activities since Feb. He said a report has been prepared and it is under review and I should receive it shortly. 12/14/07 - Obligado - Reviewed Summary Report, submitted by Roux Associates, dated December 5, 2007. The report documents the remedial efforts at the site since the baseline assessment in 2005. roux has been recovering product from the injection points and RW3 using bailers and absorbant socks. The Magnum Spill buster system was then moved to RW3 and IP2. A VEFR event occurred in IP2 and RW3 in September 2006, in which 200 gallons of fluids were removed. An additional well was installed MW10 by hand in storage area to delineate the product to the southwest. 0.01 ft was encountered during April 2007, No product has been found in gauging events since then. Product levels have been decreasing in most wells. The most recent gauging data from 6/28/07 show a max product thickness of 0.25 ft in IP2. They will continue monthly product monitoring and continuous recovery via Magnum Spill buster. Ground water monitoring shows constituents characteristic of a diesel release, low levels of VOCs with the greatest constituent is Naphthalene, max naphthalene is 270 ppb in MW10. The report recommends conducting sampling event in December and continue product gauging and monitoring. They will Once product levels decrease to below 0.02 ft they will implement the PermeOx injection. 3/3/08 - Obligado - Spoke to Glenn Netuschil. He said coned was doing work in the sidewalk in the vicinity 531 w 21st street and of one of the monitoring wells is in the way of the work and he asked what site the well was

STORAGE USA (Continued)

S104953243

associated with. I told him it was 521 W. 21st street site and gave him the contact information for Delta. 9/25/08 - Obligado - Have not received any documentation for this site. Called Glenn Netuschil. He said they haven't sampled since December 07. Required monthly monitoring, quarterly sampling, and quarterly reporting. Well should be sampled in October. A quarterly report should be submitted in November. 11/25/08 - Obligado - Glen requested extension until 12/14/08 to submit report. I approved extension. 6/24/09 - Obligado - Reviewed quarterly report, submitted December 2008. Documents product removal activities. Product thickness decreased to less than 2 inches. Roux recommends going forward with PermeOx injections. I called Glenn Netuschil. They went ahead with the injections in February 2009. They will submit will submit a quarterly report by July 31, 2009. 10/16/09 - Obligado - Reviewed Spill closure request. Roux requested spill closure after one round of sampling. I rejected the spill closure petition and required 1) quarterly sampling for minimum of 1 year 2) monthly gauging and product recovery if present 3) confirmatory soil sampling prior to spill closure. Required quarterly report to be submitted within 90 days of receipt or will be referred to legal. 12/14/09 - Obligado - Spoke with Glen Netuschil. They question requirements. Glenn asked if they could do quarterly gauging. I said monthly gauging is required due to the history of free product. He also questioned need for soil sampling. I told him soil sampling is required for spill closure. Contaminated soil can act as a continuing source for ground water contamination. I told him the report must be submitted by 90 day deadline. 3/4 - Obligado - I reviewed the 4th quarter 2009 report, dated 1/29/10. The report provides analytical results from monitoring wells sampled in December 2009. The report does not contain any gauging data. I sent an email to Charlie McGuckin requiring the next report due 4/30/10 contain monthly gauging data from all monitoring wells and including the injection wells. 10/11/11 - Obligado - I reviewed an Update Report which documented the 4th quarterly monitoring event after the injections. The report requested closure based on lack of free product and low dissolved. I rejected closure. Based on the approved RAWP, verification sampling would be performed after the final quarterly monitoring event. I emailed a letter to Gary Dorin and Glenn Netuschil required verification soil sampling to confirm remediation. I required a soil sampling work plan within 30 days. 1/4/12 - Obligado - I met with Michael Bogin, Glen Netuschil, Lou Oliva. We discussed the soil sampling requirement. The location where I requested the soil sampling presented difficulties, due to a 3 foot crawl space (confined space) and associated health and safety concerns. I agreed in lieu of soil sampling they should do an additional round of ground water sampling and gauging to confirm there is no additional free product at the site. 5/8/12 - Obligado - DER Section C Staff met to discuss a closure request for the storage facility at 510 West 21st Street, Manhattan, NY Spill No. 0012876. After internal discussion, the request for spill closure was not approved based on the following: 1) The spill closure report should be revised to address soil contamination in accordance with CP-51. 6/25/12 - Obligado - On 6/7/12, DER Section C Staff met to discuss a closure request for 510 W. 21st Street, Manhattan, Spill No.0012876. After internal discussion, the request for spill closure approved based on the following: 1) The source of the spill, a 2000 gallon #2 fuel oil tank was removed 2) A product recovery system was installed and recovered 128 gallons of NAPL 3) Once product was removed,

PermeOx was injected to treat residual ground water contamination 4) Ground water is below standards in all wells except one well MW5 with 14 ug/L MTBE and 9.0 ug/L n-propylbenzene. 5) Based on baseline soil sampling from 2007, soil contamination may be present above CP-51 Unrestricted Soil Cleanup Levels but is below the CP51 Residential Soil Clean-up levels. 6) Excavation of residual soil contamination to meet Unrestricted Soil Clean-up Levels is not feasible due to location in a basement with a 4.5 foot crawlspace. This spill is closed. 12/8/17 - Austin - Con Ed discovered fuel oil contaminated soil out in the street in front of this address 510 W 21 St.)on 9/26/17, while excavating to place a new service box in the street - Con Ed removed 17 cu yds of oil contaminated soil from their street excavation and replaced it with clean fill - See document files under spill # 1706208 for further information - That spill was closed on 12/8/17, with no further action needed - end "

~~~~~ Con Ed e2mis #142641: On 05/ 03/ 02 at app.

16: 31 C. Budveit # 99902 reported that at approx. 16:00 he found approx. 4 oz. of dielectric fluid had leaked out of the insulator connector on the B phase leg from feeder 38m41 (transformer# 8) on bluestone. Oil pads were placed down to contain spill until it can be cleaned up. Spill tag # s00827 was installed. No samples taken because of prior sample history as per employee. Employee was doing a station inspection. T. Belfor, Associate Specialist, SSO, #80482, reviewed report on 5/6/02 at 12:48 p.m. E-mail sent to Supervisor of station, Michael Butchar #20259 requesting finalization and clean-up for Closure. Michael Butchar, Supervisor, SSO responded on Tuesday, May 7th, 2002 that the above spill was cleaned up on May 3th, 2002 at 1700 hours. "

Remarks:

"4 OUNCED LEAKED OUT OF INSULATOR CONNECTOR ON B PAHSE LEG FROM FEEDER 38M41 ONTO BLUE STONE. PADS PUT DOWN UNTIL IT CAN BE CLEANED . "

As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. Repairs to be tracked and completed under Con Ed s MAXIMO Work Order. See eDocs for final emis report. Close out. (JHO)"  
Remarks: "transformer # 8 involved and a feeder - spill is contained and clean up pending a crew - total spilled is 8 ounces - con ed # 149329"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY Con Ed e2mis #138519 Notes: 7-26-01 @ 08:30. This report was taken by R Pagano #48703 and was logged by J Moran #01182. S Tercovich reports that while inspecting Transformer #4 located at w 42 st sub station at 521 w 41 st , he discovered 4 gallons of dielectric fluid had leaked from a nitrogen relief valve on the transformer. Spill is on concrete transformer pad and bluestone. Structure does have oil filled equipment. There is a dielectric filled feeder in the structure. Chem lab to take samples. Historic samples show 3ppm pcb, Lab sequence # 95-05859. Cleanup is in progress. Update 7-26-01 @ 09:40 . S Tercovich #12959 reports that cleanup is complete. 4 gallons of liquid removed and 100 pounds of bluestone removed in a 20 gallon drum , 1 drum of ppe and debris. Oil absorbent pads and rags used with simple green to do cleanup. Spill is not being closed out, pending lab results. UPDATE 7/27/2001 @ 01:15 HRS Lab results for Lab sequence # 01-07713-001 Date Approved - 7/27/2001. Date Received and sampled - 7/26/2001. Transformer #4 Compartment: Main Body Aroclor 1242 - < 1.0 ppm Aroclor 1254 - < 1.0 ppm Aroclor 1248 - < 1.0 ppm Aroclor 1260 - < 1.0 ppm Total PCB - <1.0 ppm Lab results for Lab sequence # 01-07713-002 Date Approved - 7/27/2001.  Town: New York City  
 Record Added Date: 02/07/2006  
 Record Updated Date: 12/09/2011  
 Update By: SRHEIGEL

Site Description:

The site is 0.346 acres, identified as tax Block 1090, Lot 23 and located in New York County (Manhattan). The site includes 605 West 42nd Street and 615 West 42nd Street and lies on the north side of West 42nd Street between 11th and 12th Avenues. The site included in the application consists of a three-story garage which is presently abandoned. It is now owned by the volunteer 605 West 42nd Owner LLC who acquired it from Verizon. Prior uses of the site were a coal and coke yard, a can manufacturer and a metal manufacturer. The Sanitary Automatic Candy Corporation and the New York Telephone Company have also occupied the current buildings. The surrounding parcels are currently used for a combination of commercial and residential purposes, such as United Parcel Service (UPS), the Riverbank West Apartment Tower, Mobil filling station (now closed), street-level parking lot and a New York City mounted patrol unit building. Contaminants which are known or suspected to affect soil, groundwater and/or soil gas are petroleum, petroleum related VOCs, SVOCs and metals. This site poses a significant threat to the public health as determined by NYSDOH. The Remedial Action Work Plan (RAWP) with Stipulations was approved by the Department on November 5, 2007. Remedial Construction started on December 10, 2007. Construction was halted in September 2008 due to contractual issues. Remedial Construction recommenced in October 2009 and was completed in the summer of 2010. Certificate of Completion issued December 17, 2010.

**WEST 42ND STREET REDEVELOPMENT PROJECT (Continued)**

**S108984483**

Env Problem:

Previous investigations have revealed the following contamination: Elevated levels of volatile organic compounds (VOCs) including numerous exceedances of soil cleanup objectives (SCOs) in the vicinity of three closed in place USTs and the former gasoline dispenser; Elevated levels of semi-volatile organic compounds (SVOCs) including naphthalene were detected in samples in the vicinity of the closed in place USTs; Elevated levels of other SVOCs in shallow soil were attributed to the presence of historic fill; The types and concentrations of VOCs in the groundwater are indicative of petroleum contamination in the area of the USTs. There were exceedances of groundwater standards in samples from wells in the vicinity of the former gasoline dispenser and closed in place USTs; Soil gas analytical results revealed elevated concentrations of VOCs at all 14 sampling locations. Total VOC concentrations exceeded NYSDOH's background levels by up to 4 orders of magnitude. A Track 1 unrestricted use remedy was implemented on the site beginning in December 2007 and ending in June 2010. The remedial construction conformed with the requirements of a Part 375 track 1 cleanup and consisted of: 1. Excavation and removal of soil/fill exceeding Track 1 SCOs; 2. Removal and treatment of contaminated groundwater by way of construction dewatering; 3. Appropriate off-site disposal of all material from the site (solid and liquid) in accordance with all Federal, State and Local Rules and Regulations; 4. Collection and analysis of end-point samples to ascertain achievement of Track 1 SCOs 5. Implementation of a Soil Vapor Intrusion Monitoring Plan to establish a baseline for soil vapor along the southern offsite boundary of the Site to ensure there is no potential for soil vapor intrusion into new development, and post-remedial monitoring of groundwater and soil vapor along the southern (downgradient) Site boundary to evaluate the effectiveness of the remedy as it pertains to these media; 6. Import of materials to be used for backfill in compliance with: (1) chemical limits and other specifications and (2) all Federal, State and local rules and regulations for handling and transport of material; 7. Placement of a concrete cap and waterproofing system over the entire site to prevent recontamination of the site as part of the foundation elements for the proposed structure. 8. All responsibilities associated with the Remedial Action, including permitting requirements and pretreatment requirements, will be addressed in accordance with all applicable Federal, State and local rules and regulations. The draft Final Engineering Report was submitted in June 2010 and was finalized in December 2010. A Certificate of Completion was issued December 17, 2010.

Health Problem:

Since contaminated soil at the site has been excavated down to bedrock and cleaned up to NYSDEC Part 375 Unrestricted use soil cleanup objectives, no institutional or engineering controls are necessary or will be implemented.

message from Theresa Hazel (212-229-8414) and returned call and left message to return call. 04/20/06-Vought-Received call from Theresa Hazel (See also Spill #0600524). Theresa Hazel lives at residence next door(545 and 547 West 20th Street and 120-126 11th ave) to 529 West 29th Street and soil boring was performed in basement and groundwater was observed with sheen. Hole was backfilled. Odors were noted when hole was opened. Foundation will stay in place. Approximate depth to water is six feet. Waterproofing in hole and three feet of concrete. No odors in buildings. One monitoring well was installed to do a tidal study in street that is 50 feet away from basement boring with no sheen. One groundwater sample was collected by Langan and will be analyzed by EPA Method 8260/8270. 04/28/06-Thomas- Contract Payment Package- ( Severn)- lab analysis of MW samples (12/01/05-12/31/05). 08/15/06-Vought-Received call from Bryan Schiffino (VP Valley National Bank 212-973-6641) and who is refinancing existing mortgage on 120-126 11th Avenue (property of Theresa Hazel). Langan no longer submitting report and they will not be involved in redevelopment of property. Phase I is completed by engineering company. Bryan looking for confirmation that Hazel is not source of spill. Byran may perform Phase II which may include round of groundwater samples. Bryan will contact Hazel with regards to see if Langan samples were ever collected. 11/13/06-Vought-Delivering original file to AG Buss for preparation of trial set for Jan 2006. 11/29/06-Vought-Contract Payment Package (National)-Monthly well monitoring (08/01/06-09/30/06) 2/26/07-Vought-Contract Payment Package (STL)-Groundwater sample analysis (11/01/06-11/30/06). 02/28/07-Vought-Contract Payment Package (National)-Monthly well monitoring, quarterly groundwater sampling, review of results and summary preparation (10/01/06-11/31/06). 03/01/07-Vought-Contract Payment Package (STL)-Groundwater sample analysis for samples received on 01/15/07 (01/15/07-01/30/07). 05/07/07-Vought-Contract Payment Package (National)-Preparation of summary tables, monthly well monitoring (12/01/06-03/31/07). 06/18/07-Vought-Received call and spoke to Don Middleton (Middleton Enviro 631-321-4300 fax:4349). Middleton performing Phase I for bank that may finance property for owner (Mr. Verdi). Middleton researching possible scope of work in site cleanup in reference to property financing. Vought faxed Middleton copy of spill report and instructed Middleton to file FOIL Request. 08/08/07-Vought-Received call from AG Buss that he was contacted by Fern Fladell(516-255-4160) who was looking for technical guidance. Fern represents responsible party. Vought referred her to DER-10 and TAGM 4046 on public website. 08/21/07-Vought-Received call from Josh Kardisch (516-255-4160) and his client (Bermuda Limo) settled with AGs office and trying to get financing for payment. Bank needs DEC guidelines for cleanup to release lien. Vought referred Kardisch to AG Buss to release liens. 01/14/07-Vought-Contract Payment Package (STL)- Groundwater sample analysis (10/25/07-11/14/07). 01/30/08-Vought-Spoke to AG Buss and settlement is all inclusive. Buss recommended no incurring further expense and RP taking over monitoring responsibilities. Vought to review site and contact RP to issue monitoring requirements and remedial requirements (if applicable). Vought sent email to Menegio and Beck requesting submission of latest quarterly report and cessation of all further monitoring activities. 05/13/08-Vought-Contract Payment Package (National)-Preparation of tables and reports, Monthly fluid level monitoring (11/1/07-12/31/07). 05/14/08-Vought-Contract Payment Package (National)-Review of Final Status Report (01/01/08-03/29/08).

07/25/08-Vought-Spill reassigned from DEC Vought to DEC Ketani as per DEC Austin. 10/28/08 - Raphael Ketani. I tried to call Bill Buss, attorney, at the NYS Department of Law (518) 474-8012, but I could only leave a message. Next, I contacted Josh Kardisch (516) 255-4160 (attorney for Bermuda Limo) regarding the status of the remediation. I asked him how things were going regarding remediation of the site. He said that no remediation is required and that an agreement was reached with the AG's office. He said that I should talk to the AG's office. Mr. Buss called me back and told me to talk to Bonnie Riggi. The owner is Robert Verdi at Bermuda Limo (212) 249-8400. The situation was spilled gasoline. There was about 4 feet of floating product. As of 6/1992, Bermuda Limo had three 550 gal. gas tanks and one out of service diesel tank. The three 550 gal. tanks were pressure tested and failed. After the remote fills were fixed, the tanks passed the pressure tests. Initially in the 1990s, Mr. Verdi denied DEC access to the site. DEC installed a recovery system on site and off site in order to recover the product. The oil/water separator was installed on 7/30/87. Many monitoring wells and recovery wells were installed between West 20th Street and West 21st Street. On September 3, 1987, the Consent Order was delivered to the manager of Bermuda Limo. On 11/12/87, a site meeting was held with Mr. Verdi and Mr. Hy Hornstein. They told the DEC case manager that they get 3 deliveries a week of 12,000 gals. of gasoline. All of the tanks were removed in the early 1990s. Notes from 1992 in the case file stated that the free product was cleaned up, but the dissolved phase was high in concentration in the groundwater. By 2/18/93, the vapor recovery system was running. Ejectors were installed about 9/13/94. There is a signed IISR written on 8/31/89 and signed on 11/21/89. According to the Fenley & Nicol Monitoring Reports, the last amount of oil was collected on 9/17/96, and the last visible trace of oil was seen on 9/11/97. Treatment solution injection was taking place up until 2004. According to processed bills from 2005 to 2008, the only activity that has been taking place is groundwater sampling and monitoring. The latest Site Status Monitoring Report is for the period November 2007 to January 2008. It was produced by Enviroscience Consultants, Inc. and is dated February 2008. Figure 2 depicts that the wells along West 21st Street, and 11th Avenue have all been abandoned. The wells in the R. Ferrara Moving basement have also been abandoned. A few wells along the western edge of the art gallery on West 21st Street were abandoned as well. Wells indicated as still in existence are those at Bermuda Limo and in front of the site, those at the art gallery on West 21st Street, and others in another location on West 21st Street. The wells that are monitored quarterly are: MW-1, MW-2, MW-7, MW-7A, MW-8, MW-8A, MW-9, MW-12, MW-13, MW-14, and MW-15. No product has been detected in these wells from 3/10/05 to 12/28/07. The last groundwater analytical sampling round in the summary tables (Table 2) is October 2007. High hits were detected in MW-1 (110 ppb benzene), MW-2 (110 ppb benzene, 560 ppb ethylbenzene, 120 ppb total xylenes), MW-7 (280 ppb benzene), and MW-14 (290 ppb ethylbenzene, 620 ppb total xylenes). Comments: There may be pockets of contaminated soil at the above locations. Total liquid recovery may help alleviate the contamination permanently. Additionally, it has not been explained why the wells in the art gallery property are not being monitored. It is also not known whether a BTEX or MTBE concentration map could be drawn with the additional data from the art gallery wells. 11/4/08 - Raphael Ketani. I made an unannounced visit to the area just to find the wells and to

**S104495131**

get an idea about the type of neighborhood the site is in. The site sits across from a correctional facility. To the west is the West Side Highway. Eleventh Avenue intersects the West Side Highway about two blocks to the northwest. I toured 20th Street, 21st Street, and 22nd Street. There were 6 locations on 21st Street where it looked like a well had been plugged and abandoned. There were 3 locations on 20th Street where it looked like wells had been plugged and abandoned. I located 23 wells in total. The well locations are as follows: 20th Street: 3 wells in front of Bermuda Limo at 537 W. 20th Street 1 well in front of the Anton Kern Gallery, 532 W. 20th Street 1 well in front of 545 W. 20th Street 1 well in front adjacent to Kamco Supply Corp., 507-9 W. 20th Street 21st Street: 3 wells in front of the loading docks at Manhattan Mini Storage, south side of 21st Street 4 wells across the street from Manhattan Mini Storage 3 wells in front of the Tanya Bonakdar Gallery, 521 W. 21st Street= D-MW-1, D-MW-2, R-MW-8 2 wells in front of the Gargosian Gallery, 522 W. 21st Street (south side of street) 1 well in front of the Paula Cooper Gallery, 534 W. 21st Street (former Hylan Electrical) 1 well across from the Paula Cooper Gallery 22nd Street: 1 well along the West Side Highway between 21st Street and 22nd Street 1 well in front of 542 W. 22nd Street 1 well in front of 544 W. 22nd Street 11/17/08 - Raphael Ketani. I spoke to Michelle Tipple (845) 256-3153, one of the previous case managers, about the site. She said that before she left the region, free product was discovered in the wells within the footprint of the electrical supply warehouse (former Hylan Electrical) which is now an art gallery on West 21st Street. She said that this site is diagonal from Bermuda, and that the treatment solution injection had pushed the gasoline over to this site and away from Bermuda. That is why the sample results show only dissolved phase at Bermuda. Ms. Tipple added that an access agreement will be needed from the Office of the Attorney General. I looked up the ownership of the Paula Cooper art gallery (former Hylan Electrical). Ms. Cooper bought the Hylan Electrical company site, and combined it with another adjacent site. The address is 534 to 536 21 Street. So many wells are within the footprint of the new building. The owner is 534 West 21st Street, LLC, 465 W. 23 Street, NY, 10011. Ms. Cooper's address is also listed as 465 W. 23 Street. I called Dave Lorthioir of EnviroTrac (631) 924-3001 to try and get the state contractor on board and working on this project. However, I could only leave a message. 12/18/08 - Raphael Ketani. I e-mailed Jeff Bohlen of EnviroTrac that Randy Austin, Chief of the Spills Unit, wants us to investigate the wells OUTSIDE OF the art gallery first, before trying to gain access to the gallery. I put a copy of the e-mail correspondence in the case file. I sent Mr. Bohlen some documentation by regular mail regarding the case and the signed Standby Contractor Authorization Form. 1/7/09 - Raphael Ketani. Mr. Bohlen e-mailed me a long memo with comments regarding documentation for the site and the site's history. I e-mailed him back with answers and comments. The correspondence was printed out and is in the case file. 1/23/09 - Raphael Ketani. Mr. Lorthioir sent me an e-mail today. It stated that they looked for open, useable wells along 20th Street and along 21st Street, and inside the buildings on those streets. A total of 11 wells were sampled at Bermuda Limo and in the sidewalk in front of the business. Eight well covers were identified inside of 540 W. 21 Street - I-Beam Design. There was an unknown new monitoring well installed in the sidewalk in front of the Paula Cooper Gallery and another one in the sidewalk on the south side of 20th Street. They

**S104495131**

will sample these two, also. They may be part of a Con Ed investigation for an old MGP site that is nearby. Other than the wells they found open, there are no other wells in the streets, nor any wells in the Paula Cooper Gallery. 2/9/09 - Raphael Ketani. I reviewed the 2/2/09 analytical report for TestAmerica which contained the data for wells MW-1, MW-2, MW-14, MW-15, MW-7 MW-7A, MW-8, MW-8A, MW-13, MW-9, and MW-12. These wells were sampled on 1/15/09. The only significant hits were for benzene: 340 ppb in MW-1, 130 ppb in MW-2, 260 ppb MW-7, and 370 ppb in MW-7A. All of the other hits were usually either in the single digits, or the low to middle double digits. There were two hits of 87 ppb and 97 ppb each for other analytes. These wells are all either within the property limits of Bermuda Limo or in front of the site. I tried to contact Mr. Bohlen (631) 924-3001 to ask him why the other wells weren't sampled that were mentioned in Mr. Lorthioir's 1/23/09 e-mail, but I could only leave a message. 2/10/09 - Raphael Ketani. I spoke to Mr. Bohlen and Mr. Lorthioir regarding the site. They said that there are 8 wells within the footprint of the I-Beam Design fashion business at 538-540 W. 21 Street. They have been trying to contact the manager of the gallery, but, as of late, have had no success. They asked that I send a letter to the owner of the property in order to gain access to the wells and do the water sampling. The site address is 538-540 West 21 Street, Manhattan. The block and lot are 692 and 53. The owner is listed as Michael Unger in Property Shark at 14 Fairground Road, Hamilton, NJ, 08619. However, the owner is listed as Atlantic Foundation in ACRIS at 16 Farber Road, Princeton, NJ, 08540. I drafted a letter for Randall Austin's review (Chief of the Spills Unit) that was addressed to both parties. 2/11/09 - Raphael Ketani. Mr. Austin approved the letter and I sent the it out today. 2/20/09 - Raphael Ketani. Mr. Lorthioir called me back. He said that the DEC letter did the trick. He received a call from the manager of I-Beam. They will have access to the wells at the site sometime next week. 2/23/09 - Raphael Ketani. Mr. Lorthioir e-mailed: Just to let you know, we sampled the wells in the building behind Bermuda Limo today. One well exhibited .03 +/- feet of product. All wells exhibited petroleum odor and/or rotten egg odor. Several wells exhibited a bacterial mat on top of the groundwater. I e-mailed him back as to whether they had developed the wells prior to sampling, whether they would call the oil thickness a thick or thin sheen, and any other particulars about the groundwater. I also asked him to sample the wells in front of the Paula Cooper Gallery. 2/24/09 - Raphael Ketani. Mr. Lorthioir sent me the following e-mail today: Wells were purged before sampling. We also sampled the two non-DEC wells. Unfortunately we did not have a PID to screen the odors, but they were strong. With regards to the product, there was more than a sheen in that one well. It was free product and was visible in the bailer. I responded back by telling him that they need to do an indoor air vapor survey at I-Beam, better define the free product pool extent, and collect the free product. 3/2/09 - Raphael Ketani. On 2/27/09, I received the Contractor's Payment Application/Voucher Certification from EnviroTrac, Ltd. The invoice is #01.DC2018.00-1. The pay period is from 12/17/08 to 2/1/09. The invoice date is 2/2/09. The work involved included project management, gain access to five buildings and check for existing wells, gauge all wells, sample wells, use of low value equipment, use of sonic interface probe, traveling to the site, use of light duty vehicle and low value equipment. I found the payment package to be acceptable and forwarded it to the Contracts

**S104495131**

and Payments section of Albany DER. 3/5/09 - Raphael Ketani. Mr. Bohlen left me a message that there is a UST next to a well at I Beam that has product. I left a message for Mr. Bohlen that the tank system should be tested to see whether it is the source or whether the oil in the well is from the old Bermuda Limo spill. 3/9/09 - Raphael Ketani. Mr. Bohlen called up regarding the testing of the tank at I-Beam Design, 245 W. 29 Street at 7th Avenue (212) 244-7596. I told him to make the contact and speak with the super. or maintenance person. I told him to do the tank system test if they have no records regarding the tank integrity. I checked the PBS database. The tank isn't listed, which may mean that it is too small to be under DEC jurisdiction. 3/16/09 - Raphael Ketani. I received the following e-mail from Mr. Lorthioir: I just got off the phone with the environmental manager for the building behind Bermuda Limo (540 W. 21 Street). His name is Gary Heher and can be reached at (917) 756-8241. I explained the situation to him. He reviewed a Phase I report done recently and told me that the fill I had noticed was also noted in the Phase I. The current owner has owned the building for 10 years and they have always used gas and know nothing about this tank. He is going to talk to his consultant (Roux) about investigating the tank. I gave him your name and number and suggested that he notify us before performing any work to investigate this tank. Today, I received the 3/9/09 groundwater data package from Test America. The samples were taken on 2/26/09. The wells sampled were MW-A, MW-B, MW-17 to MW-26. The results for wells MW-A to MW-18, and MW-20, and MW-24 to MW-26 were almost entirely at or below TAGM. The results for MW-19 were slightly above TAGM (to 25 ppb of naphthalene). The results for MW-21 to MW-23 were from 110 ppb to 140 ppb for only one analyte in each sample, with the rest of the analytes at or below TAGM. I had no comments regarding the results. 3/25/09 - Raphael Ketani. On 3/24/09, I received the Contractor's Payment Application/Voucher Certification from EnviroTrac, Ltd. The invoice is #01.DC2018.00-2. The pay period is from 2/2/09 to 3/1/09. The invoice date is 3/10/09. The work included investigate, purge, and samples wells, project management, evaluate data, use of sonic interface probe, use of low value equipment, traveling to the site, use of light duty vehicle. I found the payment package to be acceptable and forwarded it to the Contracts and Payments section of Albany DER. 4/2/09 - Raphael Ketani. I received the following e-mail from Mr. Lorthioir: I just wanted to keep you informed. I stopped by the site the other day to check on well MW-16, which is in the Eyebeam building. The well still exhibits 0.03 feet (3/8 inch) of product. I took a sample of the product. It smells and feels like gasoline. The suspected UST at Eyebeam (see photo) is probably fuel oil (based upon the fill). We recommend that the product sample be sent out for fingerprinting just to be sure. Let me know if you agree. Also, I found out that the mystery well outside of Eyebeam is associated with a Spill across the street and east of Eyebeam. There are several wells in the street and Delta was sampling them. Please let me know about the fingerprint analysis. I put a picture of the mystery well in the E-docs. 4/6/09 - Raphael Ketani. The 4/01/09 to 3/31/10 Standby Contractor Authorization Form was signed by Randall Austin, Chief of the Spills Unit, and sent to EnviroTrac. 4/13/09 - Raphael Ketani. I approved CAP #1 for invoice #22029237 dated 2/25/09 for the Test America payment package. The lab report was received on 2/9/09, dated 2/2/09 and the samples were collected on 1/15/09. The transmittal form was sent today to Michael Cruden of Albany DER. I

**S104495131**

e-mailed Andrea Indelicato of Albany DER that the package was approved. I approved CAP #2 for invoice #22029590 dated 2/26/09 for the Test America payment package. The lab report was received on 3/16/09, dated 3/9/09 and the samples were collected on 2/23/09. The transmittal form was sent today to Michael Cruden of Albany DER. I e-mailed Andrea Indelicato of Albany DER that the package was approved. 4/17/09 - Raphael Ketani. On 4/16/09, I received the Contractor's Payment Application/Voucher Certification from EnviroTrac, Ltd. The invoice is #01.DC2018.00-3. The pay period is from 3/2/09 to 3/31/09. The invoice date is 4/10/09. The work involved included project and data management, use of a vacuum truck, groundwater sampling, use of the sonic interface probe, scheduling EFR, traveling to the site, use of light duty vehicle and low value equipment. I found the payment package to be acceptable and forwarded it to the Contracts and Payments section of Albany DER. 4/22/09 - Raphael Ketani. Today I received an e-mail from Mr. Lorthioir regarding the analysis of an oil sample taken from well MW-16 in the building behind Bermuda Limo. The fingerprint analysis indicates that the oil is gasoline, not #2 oil or other heating oil as was expected (since a previously unknown tank was found). 4/27/09 - Raphael Ketani. Mr. Lorthioir sent me the following e-mail today: We received the fingerprint analysis for the product found in MW-16 (which is located in the building behind Bermuda Limo, 540 W. 21 Street). The analysis indicated that the product is weathered gasoline. There appears to be a UST under 540 W. 21 Street, but judging from the type of fill pipe present it appears to be an old fuel oil tank. We have asked the environmental consultant for the owner of the building (Roux) to provide us with a copy of a recent Phase I ESA (you were cc on the e-mail request). Hopefully this report will provide us with some more information. 5/14/09 - I approved CAP #3 for invoice #22030010 dated 4/30/09 for the Test America payment package. The lab report was received on 5/14/09, dated 4/22/09, and the samples were collected on 4/3/09. The transmittal form was sent today to Michael Cruden of Albany DER. I e-mailed Andrea Indelicato of Albany DER that the package was approved. 5/21/09 - Raphael Ketani. On 5/20/09, I received the Contractor's Payment Application/Voucher Certification from EnviroTrac, Ltd. The invoice is #01.DC2018.01-4. The pay period is from 4/1/09 to 5/3/09. The invoice date is 5/8/09. The work involved included project and data management, review report and correspondence with DEC staff, groundwater sampling, land surveying, drum recovered liquids, traveling to the site. I found the payment package to be acceptable and forwarded it to the Contracts and Payments section of Albany DER. 6/12/09 - Raphael Ketani. I received the 6/11/09 Test America Analytical Report for groundwater samples that were collected from 5/26/09 to 5/27/09. Twenty four wells were sampled for VOCs. Wells MW-2, MW-7, MW-7a, MW-13, MW-15, MW-22, and MW-23 had one to four hit in the hundreds of parts per billions. Wells MW-2 to MW-7a are in the footprint of the Bermuda Limo itself. Wells MW-14, MW-16, MW-21, and MW-24 had 2 to 5 hits in the thousands of parts per billions. Well MW-14 had hits up to 20,000 ppb. As there is no current map for the present well numbering system, it is not known where these hot spots are. I have again requested that EnviroTrac supply DEC with a current map. 6/30/09 - Raphael Ketani. I received the Contractor's Payment Application/Voucher Certification from EnviroTrac, Ltd. The invoice is #01.DC2018.01-4. The invoice is being resubmitted. This is the same invoice as was previously processed and submitted on 5/21/09. The Contracts Unit had sent the

first one back to EnviroTrac because they failed to include the proper form of page two, as was required by the contract. The pay period is from 4/1/09 to 5/3/09. The invoice date is 6/26/09. The work involved included project and data management, review report and correspondence with DEC staff, groundwater sampling, land surveying, drum recovered liquids, traveling to the site. I found the payment package to be acceptable and forwarded it to the Contracts and Payments section of Albany DER. 7/2/09 - Raphael Ketani. Today, I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 5/4/09 to 5/31/09. The invoice number was 01.DC2018.01-5. The invoice date is 6/30/09. The work consisted of project management, gauging, purging and sampling monitoring wells, sample management, data entry, evaluation and reporting, work plan development, purge water removal, use of low value equipment, sonic interface probe, submersible pump, and light duty vehicle. The packages were found to be acceptable and were sent to the Contracts and Payments Section of DER. 7/9/09 - Raphael Ketani. Today, I received the Contractor's Application for Payment for work performed by Test America. The invoice number was 22030509. The invoice date is 6/29/09. The work consisted of processing groundwater samples that were collected on 5/26/09 and 5/27/09. The package was found to be acceptable and Andrea Indelicato in the Contracts and Payments Section of DER was notified of the acceptance of the Pay Package. 7/16/09 - Raphael Ketani. Today, I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 6/1/09 to 6/28/09. The invoice number was 01.DC2018.01-6. The invoice date is 7/13/09. The work consisted of CADD and GIS updating, figure creation, internal meetings, project management, create status report, data evaluation, and vacuum liquid from wells. The packages were found to be acceptable and were sent to the Contracts and Payments Section of DER. I tried to contact Mr. Bohlen of EnviroTrac to discuss the case, but could only leave a message. Later, Mr. Lorthioir of EnviroTrac (631) 924-3001 called me back. We had a very long conversation regarding the site, what was actually happening in the subsurface, and what to do about the contamination. Mr. Lorthioir stated that they sampled a large number of wells, but they will not sample so many in the future as it wasn't necessary. He said that, at a couple of locations, free product appeared. At MW-14, the total BTEX contamination was about 100 ppb, but the sample from the next round had 45,000 ppb of total BTEX. He doesn't know why. I suggested that there may be some tidal influence as the site is one block east of the Hudson River bulkhead. I also suggested that the free product bubbles may be coming and going as things are sloshing around underground due to the tidal fluctuations. He said that this sounded possible. I told him to check out the tidal range. Mr. Lorthioir also added that the people at I Beam told him that they have had trouble with their sanitary sewer for some time. It gets clogged. I suggested to Mr. Lorthioir that they may be contributing water to the environment underground and that their pipes may be partially collapsed with sediment inside. He said that this, too, was possible. He said that the report for the site is almost finished and that once his assistant gets back from vacation, then she will finish it and the DEC will receive the report in a couple of weeks. I told Mr. Lorthioir to send DEC a plan for installing two additional wells across the street from I Beam on 21st Street and two wells to the west of I Beam. He said that he will do this and that there is a Well B to the east which he can also use to

**BERMUDA LIMOUSINE (Continued)**

**S104495131**

get a better handle on the subsurface conditions and whether the plume is moving. Mr. Lorthioir ended the conversation by stating that the next round of sampling will be in August. He said that after we get the results back from this round, then we can decide what the best course of action should be for resolving the contamination. I submitted a revised Standby Contractor Authorization Form for EnviroTrac to Randall Austin, Chief of the Spills Unit, for his signature. EnviroTrac has already spent over \$13,000 and the revised budget is for \$20,000. Mr. Austin signed the SCAF and it was sent out today. 8/14/09 - Raphael Ketani. Mr. Lorthioir sent me an e-mail stating that Mr. Rivera, the site manager at Bermuda Limo, was complaining of foul, septic odors coming from the groundwater in his sump. Mr. Rivera was concerned that this was an unhealthful situation. Mr. Lorthioir also wrote that there is blue coloring on the pipes to the heating system. I wrote that the odors are probably annoying, but not unhealthful. I added that the blue coloring on the pipes of the heating system is simply corrosion. I wrote Mr. Lorthioir that he should tell Mr. Rivera to get the heating system repaired so that the liquids it contains don't spill out and contaminate the groundwater. I also wrote that EnviroTrac should sample the sump water for VOCs and SVOCs each time the wells are sampled, unless there is a well nearby. 8/19/09 - Raphael Ketani. Today I received the DRAFT Site Status Monitoring Report dated 8/17/09. I began my review. When comparing Figure 6 (BTEX/MTBE/Total VOCs for February 2009) with Figure 7 (BTEX/MTBE/Total VOCs for May 2009), there are large increases for the BTEX concentrations for many wells, in particular MW-14 (36,310 ppb). Though there are also some decreases. The reason for these changes is not readily explainable. When Figure 8 (Plume Map for January/February 2009) is compared to Figure 9 (Plume Map for May 2009), one can see a four fold increase in the plume. This also is not readily explainable. In Figure 10, EnviroTrac proposes to install two (2) wells along West 21st Street and three (3) wells along 11th Avenue in order to better delineate the plume and to understand the contamination in the subsurface. It is not certain that this is necessary at this time. However, EnviroTrac recommended the following: 1) installing additional wells in the vicinity of MW-16 in order to better understand the origin and path of the free product 2) installing wells to the north and west in order to delineate the current plume characteristics 3) a vapor survey is suggested for the Eye Beam facility in order to determine whether there are any impacts from the groundwater and free product. If impacts are discovered, then a vapor mitigation system should be installed 4) the use of RegenOx is suggested in order to fully remediate the groundwater 8/20/09 - Raphael Ketani. Today I received the final version of the Site Status Monitoring Report dated 8/17/09. This final version had the same information as the DRAFT, but without the analytical package at the end. 8/25/09 - Raphael Ketani. I discussed the DRAFT Site Status Monitoring Report with Mr. Lorthioir. I told him that the DEC does not want more wells installed, nor the use of any treatment chemicals at this point in the project. However, I did tell him to do a PID meter survey of the ambient air in the Eye Beam facility. Mr. Lorthioir said that he will. I told him to let DEC know very quickly what the conditions are if he gets detections that are of concern. We discussed the rest of the case. Mr. Lorthioir said that he wasn't sure why the January/February 2009 BTEX Plume Map was so different from the May 2009 BTEX Plume Map. He had no explanation, except to say that the May groundwater samples revealed that certain

**BERMUDA LIMOUSINE (Continued)**

**S104495131**

wells had very large increases in their BTEX concentrations. He added that this affected the contouring isograds. I told Mr. Lorthioir that the case file reports from Fenley & Nicol had boring logs and that they showed the subsurface to be artificial fill with concrete over silty sand at almost every location. I told him that the subsurface seems to be pretty uniform. So this shouldn't affect the groundwater flow in such a way that a large plume would form during one period. Mr. Lorthioir pointed out that there are troughs in both maps and that this suggests that there is tidal influence. I told Mr. Lorthioir that the Fenley & Nicol reports indicated a definite tidal influence. I told him that this trough is consistently trending northwest-southeast and suggests the influence of some type of channel. I added that the same reports state that Bermuda Limo has had housekeeping issues in the past. I told Mr. Lorthioir that the sudden increase in BTEX concentration at MW-14 could be the result of something being introduced to this well by seeping past the well cover. I told him that they may have parked a car over the well and the car was leaking. Mr. Lorthioir told me that MW-14 had construction equipment parked over it because a company was adding two floors to the building next to Bermuda Limo. I told Mr. Lorthioir that this sounded like the most probable reason. Lastly, I told Mr. Lorthioir that, in the future, he has to include a current groundwater gradient map with each plume map so that the DEC can better understand what is taking place in the subsurface. 9/3/09 - Raphael Ketani. Mr. Lorthioir sent me the following e-mail today: With regard to #1 (below) BTEX in MW-15 showed a major decline while MW-14 is still over 20,000 ppb. With regard to #2, MW-16 still exhibits elevated BTEX concentrations while MW-21 has fallen. The shape of the plume has changed again, due to some of the outer wells falling below the 15 ppb threshold we are using for our outer contour line. The plume is now shaped like an hour glass. The preliminary review of the new data indicates that there is no real pattern, with BTEX in some wells falling and rising in others. This opinion may change once we finish all maps and hydrographs, but it is starting to look like this is not going to be a quick fix. 9/9/09 - Raphael Ketani. Yesterday I received the 8/31/09 Analytical Report from TestAmerica. I reviewed the report. The samples were collected on 8/13/09 and 8/14/09. They were analyzed on dates from 8/21/09 to 8/26/09. MW-14 had TEX of 23,500 ppb, with other analytes in the triple digits and one at 3100 ppb. MW-16 had BTEX of 6701 ppb, with one hit at 5400 ppb and the others at 2 and 3 digit hits. MW-B, MW-D, MW-8, MW-9, MW-15, MW-17 to MW-20, and MW-26 had one double digit hit with the rest at or below TAGM. The other groundwater samples had a number of hits in the double and triple digits. Today, I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 6/29/09 to 8/2/09. The invoice number was 01.DC2018.01-7. The invoice date is 8/28/09. The work consisted of project management, CADD updating, updating reports and figures, data evaluation, communication with DEC staff. The packages were found to be acceptable and were sent to the Contracts and Payments Section of DER. 10/8/09 - Raphael Ketani. I approved the 9/30/09 invoice for \$1767.57 for the Test America payment package. The lab report was dated 8/31/09 and the samples were collected on 8/13/09 and 8/14/09. The transmittal form was sent today to Michael Cruden of Albany DER. I e-mailed Andrea Indelicato of Albany DER that the package was approved. 10/19/09 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac

Ltd. The work period is from 8/3/09 to 8/30/09. The invoice number was 01.DC2018.01-8. The invoice date is 9/28/09. The work consisted of project management, CADD updating, updating reports and figures, data evaluation, project coordination, discussion with DEC staff regarding project, purge and sample 12 monitoring wells, collection of contaminated water, and use of low value equipment, light duty vehicle, sonic interface probe, and submersible pump. The packages were found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 10/21/09 - Raphael Ketani. I submitted a revised Standby Contractor Authorization Form to Randall Austin, Chief of the Spills Unit, for his signature. He signed it and the original was mailed to EnviroTrac. 10/29/09 - Raphael Ketani. I talked to Mr. Lorthioir today (631) 924-3001. We discussed what has been observed at the site and the analyte concentrations. We decided that a total of several wells should be installed along West 21st Street and along 11th Avenue. Mr. Lorthioir said that he will send DEC a site plan showing the location of the proposed wells. 11/3/09 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 8/31/09 to 9/27/09. The invoice number was 01.DC2018.01-9. The invoice date is 10/19/09. The work consisted of project management, CADD figure and file updating, data evaluation, perform QA/QC review and edit 9/8/09 status report, collection of contaminated water and oil, replace absorbent pigs, and survey groundwater elevations. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 12/29/09 - Raphael Ketani. Mr. Lorthioir sent me a cost estimate for installing 5 wells at the site. Three wells would be along 11th Avenue and two would be along West 21st Street. 12/31/09 - Raphael Ketani. Today I received the 12/30/09 analytical data package from TestAmerica for the 26 groundwater samples that were taken. Analyte hits were high (i.e. up to 5900 ppb of 4-isopropyltoluene) for MW-9, MW-14, and MW-16. Several samples had up to a few hits in the several hundred ppb range. MW-14 and MW-16 were by far the most contaminated samples. 1/4/10 - Raphael Ketani. Ms. Sanagorski sent me a drawing by e-mail depicting the proposed locations of 5 new groundwater monitoring wells. I responded back by e-mail that the proposed locations along 21st Street should be moved just slightly east, and that the locations along 11th Avenue should be moved a little south. 1/6/10 - Raphael Ketani. Ms. Sanagorski sent me the revised map showing the proposed locations of the 5 new wells. She also asked that I send EnviroTrac a DEC well installation letter. I sent an e-mail approving the well locations with the well installation letter attached. I sent the original letter by regular mail. 1/8/10 - Raphael Ketani. Ms. Sanagorski sent me an e-mail that the diameter of each of the 5 wells will be 2 inches. I wrote back that this will be alright. 1/11/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by TestAmerica. The work period is from 12/14/09 to 12/31/09. The invoice number was 22032439. The invoice date is 12/31/09. The work consisted of processing groundwater samples and testing them for VOCs. The package was found to be acceptable and an e-mail was sent to Andrea Indelicato in the Contracts and Payments Section of DER approving the package. 2/2/10 - Raphael Ketani. The installation of the 5 additional wells took place today as planned. There were no problems installing the wells along West 21st Street, nor along 11th Avenue. The materials encountered consisted of either

**BERMUDA LIMOUSINE (Continued)**

**S104495131**

dark gray to black historical fill or yellow brown to medium brown sand. There were no odors. All of the wells reached the local water table. There was an odor of hydrogen sulfide from the groundwater.

2/5/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 10/1/09 to 1/3/10. The invoice number was 01.DC2018.01-10. The invoice date is 1/20/10. The work consisted of project review and coordination, report review, calculate estimated costs for the installation of five new wells, e-mails to DEC case manager, enter gauging data, travel to the site, gauge 24 wells, sample 24 wells, sample management, enter gauging data into database, hire AARCO to vacuum and dispose of contaminated water and oil mix, use of light duty vehicle and low value equipment, purchase supplies. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package.

2/25/10 - Raphael Ketani. I received a call today from Kerri Folb, attorney at Kramer & Levin (212) 715-9208. She wanted to ask about the status of the site and the spill case. I asked her who she represented. She said a potential buyer. She asked a number of questions regarding whether the investigation was over and whether the remediation was completed. I told her that 5 wells were installed a few weeks ago in order to get a better idea regarding what is taking place in the subsurface. I told her that the investigation is far from over. She asked when I thought the project would end. I told her that DEC doesn't see an end to the investigation anytime soon. I added that I foresee the project continuing for more than a year. She said that she was told the remediation was completed. I told her there is still gasoline dissolved in the groundwater under Bermuda Limo and a neighboring property. I told her that DEC is still monitoring this contamination. She said that the present owner had reached an agreement with New York State. She said that she saw papers showing that the owner paid the \$2,000,000 penalty and interest. I told that the owner never did and that we have no documentation indicating that he will. I told her that if her client buys the property, then the State can and may hold both her client and the present owner liable for the costs of the investigation and remediation. After this she hung up the phone.

3/2/10 - Raphael Ketani. James Tamborlone of Murray Hill Properties (his real estate broker; (212) 763-3531) called to inquire whether Mr. Verdi had any outstanding invoices. He referred to the 8/17/09 Site Status Monitoring Report that was submitted to the DEC by EnviroTrac. I told him that EnviroTrac was the state contractor and that they will sample all of the wells in the very near future. I told Mr. Tamborlone that there is still contamination in the groundwater and the DEC needs to see the concentrations. I added that the DEC has not gained a clear idea regarding what is happening in the subsurface. So, the work will continue. I added that Mr. Verdi may be making payments to the OAG, but that he has not reached an agreement with them. He still has fines and or penalties to pay.

3/4/10 - Raphael Ketani. Hillary Semel of John Curran P.C. (212) 508-6736 called today. She said that she was the lawyer for the prospective buyer. She asked what the buyer would be responsible for regarding the site. I explained to her the present site conditions and stated that her client would be held liable by DEC for the complete remediation of the site. I added that this would entail collecting any free product, collecting the contaminated groundwater, possibly treating the contaminated groundwater, removing the contaminated sediment,

**S104495131**

abandoning all of the wells within the neighboring properties and in the sidewalks, and the replacement of about 15 sidewalk flags that have been either penetrated by well installations or damaged in the course of the investigation and remediation for this project. She said that she understood and would give the information to her client. 3/8/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 1/4/10 to 1/31/10. The invoice number was 01.DC2018.01-11. The invoice date is 2/25/10. The work consisted of project review and coordination, update CADD figures and file, permit preparation, permit management, modification of tables and figures, enter lab data, calls to driller to finalize plans, and drilling and sampling management. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 3/10/10 - Raphael Ketani. I spoke to Mr. Lorthioir today. He said that they finished up the latest round of groundwater sampling yesterday, 3/9/10. The samples are at the laboratory. They are also finishing up the next progress report to DEC. 3/17/10 - Raphael Ketani. Today I received the 3/12/10 groundwater analytical report from TestAmerica for the 18 samples that were collected on 2/23/10. I reviewed the report. A few samples had one hit each that was well above TAGM. However, the other analytes in each of these samples were either about TAGM or well below the limit. Most of the other samples had some analytes in the middle double digits with others at or below TAGM. A small number of samples were almost entirely below TAGM. 3/19/10 - Raphael Ketani. Today I received the 3/18/10 groundwater analytical report from TestAmerica for the 11 samples that were collected on 3/3/10. I reviewed the report. The sample from well MW-16 had three hits that were in the high three digit range. However, the rest of the analytes for this sample were about or below TAGM limits. The ten other samples had hits that were either non-detect, below TAGM, or a little above TAGM. 4/6/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 2/1/10 to 2/28/10. The invoice number was 01.DC2018.01-12. The invoice date is 3/22/10. The work consisted of calls to NYC DOT representative to schedule well location siting, meet DOT representative to mark prospective well installation locations, prepare for drilling at site, sample preparation, project coordination, CADD figure and file updating, figure and data table management, updating figures and report, site coordination activities, oversight for installing 5 monitoring wells, meet with DEC on site, well development, gauge and sample 18 monitoring wells, sample management, data management, travel to and from site, use of automobiles, light duty vehicle low value equipment, PID meter, submersible pump, sonic interface probe, purchasing of supplies, use of subcontractor Associated Environmental Ltd as well installer. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 4/8/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by TestAmerica. The work period is from 3/4/10 to 3/4/10. The invoice number was 22032979. The invoice date is 3/22/10. The work consisted of analyzing 29 groundwater samples for VOCs and SVOCs that were collected from 2/23/10 to 3/3/10. The package was found to be acceptable and an e-mail was sent to Andrea Indelicato in the Contracts and Payments Section of DER approving the package. 4/9/10 - Raphael Ketani. I

**BERMUDA LIMOUSINE (Continued)**

**S104495131**

checked ACRIS and found out that the site had been sold to DZ 20th Street, LLC, 525 West 19th Street, NY, 10011. The date of the new deed is 3/25/10, and it was filed on 3/31/10. The attorney for the new owner is Theodore Marx at Morris and Cohen (212) 735-8637. I tried to reach Mr. Marx, but could only leave a message. 4/13/10 - Raphael Ketani. Christine Leas (leese) (646) 378-7267 from Sive Paget and Riesel, attorney for the owner of DZ 20th Street, LLC, called regarding the site. She said that she had just been given the project. The site will be turned into a 3 story art gallery with a slab on grade. There will be no subgrade construction. She said that this is what David Zwirner (DZ 20th) wants. He has another art gallery nearby. Ms. Leas said that Mr. Marx was just the attorney who put together the sale. ROUX Associates has been contacted and they are beginning to look at the Bermuda Limo project. The contact there is Nathan Epler in the Bohemia office. She added that ROUX has another project next door. It is a separate plume that is emanating from a taxi cab company at 20th Street and 10th Avenue. I asked her to find out the spill or DER case number and who the DEC case manager is. She said that she will do this. Ms. Leas will make a FOIL request for all documents that were submitted to DEC after the last document she has on the CD that was given to her. I told her that the DEC is of the understanding that there will be excavation of the site and environmental monitoring. She said that, as far as she knows, there will be just a building with a slab on grade. I told her that, in any event, there will have to be remediation and monitoring of the contamination. She said that she understood. Ms. Leas will be in touch later. Ms. Leas sent me an e-mail today. It contained the following message: As discussed, my firm represents the new owner of this property, DZ 20th Street LLC, in connection with the open spill number. It was reassuring to hear from you that there are no pending or planned investigation activities on this spill and that we can work together to chart a path to closure. I've copied Ted Marks at Morrison Cohen who represents DZ 20th St. in connection with the purchase of this property and its planned redevelopment, along with Tracy Nolder at DZ 20th St. Here's the requested information on the site at the end of the block at 21st and 10th Ave: 510 W. 21st Street Spill No. - Spill #0012876 NYSDEC Case Mgr. - Andre Obligado 4/22/10 - Raphael Ketani. Jessica Steinberg of Sive Paget & Riesel sent a FOIL request to Fawzy Abdelsadek, the FOIL Officer of the Region 2 Office of General Counsel. 4/30/10 - Raphael Ketani. Ms. Leas (646) 378-7267 called me today. She asked for a meeting to discuss the case. She said that she would like to meet when the owner, she, and the consultants can all be present. I suggested the week of May 17 or the week of May 24. She said that sounded alright and that she will talk to all of the involved parties. I told Ms. Leas that, as far as DEC knows, the gasoline tanks have never been cleaned out and properly abandoned in place. She said that she will make sure that the tanks are abandoned properly. I added that if there is contaminated soil around the tanks, then the groundwater will never clean up and the project will not end. Therefore, any contaminated soil should be removed. Ms. Leas said that she understood. She said that this monday, May 3, Langan Engineering will conduct geotechnical soil borings in the front of the property. Ms. Leas added that staff from Roux Associates will be on hand to look at the soil cores that are recovered. There will not be an environmental investigation at this time. Roux needs to get up to speed on the project by reviewing the documentation that will be received from DEC via the FOIL

**BERMUDA LIMOUSINE (Continued)**

**S104495131**

request. She also asked that I find out for her how long the FOIL request will take to process. I told her that I will. With that, the conversation ended. I checked the PBS registration for the site. It is #2-349402 and lists 4 550 gal. gasoline USTs. The USTs were closed in place on 1/1/94. According to the case notes (10/28/08), when the tanks were tested many years ago, they initially failed. However, when the remote fills were repaired, the tanks passed. Ms. Leas sent me an e-mail that 5/17/10 at 10AM would be fine for having the case meeting. So we agreed upon this time and date. 5/17/10 - Raphael Ketani. The meeting with Ms. Leas, Nathan Epler and Chris Battista of Roux Associates, and David Zwirner, the owner, took place as scheduled. It was agreed upon that Roux would submit a work plan regarding the additional soil borings that they will conduct within the footprint of the Bermuda Limo property. They will also submit a plan for the groundwater monitoring. Mr. Battista suggested sampling only some of the wells under the Eye Beam property in order to avoid redundancy - particularly to avoid wells that consistently have results at or below TAGM. I told Mr. Batista that would be fine, but to indicate that we agreed to this in the groundwater monitoring plan. Also, I suggested doing a couple of borings in the street near MW-14 (the hot spot) and MW-2 to see whether the gasoline contamination had traveled off site. Mr. Battista agreed to do this as part of the larger boring plan. I mentioned that any contaminated water that is encountered will have to be managed appropriately. Ms. Leas, Mr. Epler and Mr. Batista assured me that it would be. I asked Mr. Zwirner whether anyone would be living at the art gallery and whether there would be a day care center or a senior center. He said that there would be apartments at the site, nor any facilities for sensitive individuals. The issue came up regarding whether there were still tanks under the site. I told Mr. Epler and Mr. Battista that the case notes aren't clear in this regard. I suggested to Mr. Batista that Roux do a geophysical survey to sense whether there are tanks below the slab. He said that he will. I stated that all of the samples should be run via methods 8260B and 8270C and that the results should be compared to TAGM 4046. Mr. Battista agreed to this. The construction of the new building was discussed and the preliminary drawings were presented by Mr. Battista. The old building will be demolished and a building that is largely one story will be constructed. It will have an L shaped section that will rise to three stories. The entire building will still be a slab on grade. It will have an elevator and footings for the three story section. Following the discussions listed above, some notification and communication issues were agreed upon and the meeting ended. Later, Mr. Lorthioir sent me an e-mail with a diagram showing the proximity of a former MGP site to Bermuda Limo (directly across the street). Mr. Lorthioir stated that he had worked on such sites and that the waste from MGP sites is usually high in benzene. Hence, this may be the source of the benzene that is seen in the samples from MW-14. 5/19/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 3/1/10 to 3/31/10. The invoice number was 01.DC2018.01-13. The invoice date is 4/21/10. The work consisted of project coordination and management, sampling and purging of 22 wells, prepare to survey wells and survey wells, work on survey results, entering gauging data and updating tables, modifying tables and entering lab data, data management and evaluation, calls to lab staff, revising figures and preparing update report and creating figures, modifying tables and figures, review

latest data and map and discuss with ES updating CADD figures and files, e-mails to DEC, travel to and from site, AARCO vacuumed liquid from wells, disposal of liquid, light duty vehicle low value equipment, submersible pump, sonic interface probe, purchasing of supplies. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 5/26/10 - Raphael Ketani. Mr. Battista sent me an e-mail recounting the issues that were discussed at the 5/17/10 meeting. 5/27/10 - Raphael Ketani. The Standby Contractor Authorization Forms for the latest budget increases for EnviroTrac and TestAmerica were approved by Randall Austin, Chief of the Spills Unit, and sent to the respective contractors. 6/8/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 4/1/10 to 5/2/10. The invoice number was 01.DC2018.01-14. The invoice date is 5/19/10. The work consisted of project coordination and management, work on the project report, update CADD figure and file, prepare updated elevation map, update groundwater gradient map, modify tables. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 6/14/10 - Raphael Ketani. I received the Supplemental Site Assessment Work Plan (soil boring work plan) dated 6/11/10 from Mr. Battista. I reviewed the plan and had no comments, except that SB-1 should be performed just south of MW-14. 6/30/10 - Raphael Ketani. Mr. Epler of Roux Associates (631) 232-2600 sent me the June 29, 2010 proposed groundwater monitoring plan. Roux plans to use 14 wells to monitor the groundwater. However, none of the wells along 11th Avenue will be used in the array. Samples from these wells have had very low analytical results. Well sampling will take place in July and October. I found the plan to be acceptable and e-mailed back that Roux should proceed as described. 7/9/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 5/3/10 to 5/30/10. The invoice number was 01.DC2018.01-15. The invoice date is 6/23/10. The work consisted of project coordination and management, work on the project report, update CADD figure and file, update tables and figures, modifying figures in report, reviewing and proofreading report. The package was found to be acceptable and an e-mail was sent to Lisa Lagasse in the Contracts and Payments Section of DER approving the package. 7/12/10 - Raphael Ketani. Mr. Austin approved the SCAF on 7/9/10 and it was sent out today. I tried to Mr. Epler of Roux Associates (631) 232-2600, but I could only leave a message. 7/14/10 - Raphael Ketani. Mr. Battista called with an update about work at the site. He said that the borings will take place sometime in August 2010. He said that they have to coordinate a number of things in order to do the work. Roux Associates will enter I-Beam on 7/26/10 in order to do the groundwater sampling. The company Bermuda Limo is concerned about the noise that will be generated by the geoprobe drilling. They believe that it will interfere with them receiving customer phone calls. Their personnel will be temporarily moved so that they can operate their business. 7/29/10 - Raphael Ketani. I received the Contractor's Application for Payment for work performed by EnviroTrac Ltd. The work period is from 5/31/10 to 7/4/10. The invoice number was 01.DC2018.01-16. The invoice date is 7/15/10. As this CAP 12 exceeded the budget for work at this site, I informed Steve Karwiel of DEC Contracts that Region 2 Spills was not going to authorize payment of this bill. 8/3/10 -

Raphael Ketani. Mr. Battista (631) 232-2600/cell (516) 250-0382 called yesterday. I spoke to him today. He said that he intends to do a GPR survey this thursday in preparation for installing the soil borings at Bermuda Limo. The borings will be done this weekend in order to minimize disruption to the business. ROUX will attempt to do groundwater sampling at I-Beam this monday or a week from this monday. Right now, ROUX has an expeditor working on obtaining the sidewalk and street opening permits for the soil boring work. 8/6/10 - Raphael Ketani. Mr. Battista sent me an e-mail stating that the GPR survey and the utility markouts were done yesterday. The additional borings will be performed this weekend. Boring B-4 can't be installed as the tanks are further south than were known to be. So, boring B-3 will substitute for B-4. 8/12/10 - Raphael Ketani. Mr. Karwiel sent me a copy of a letter informing EnviroTrac why the DEC was not going to pay certain bills. 8/16/10 - Raphael Ketani. Mr. Battista called me and left a message that most of the soil borings had been performed. There are 3 borings left to perform. However, they will be in the street. If they have the permits in place, these will be done at the end of this week. 8/31/10 - Raphael Ketani. Mr. Lorthioir sent me a pdf file containing a letter that EnviroTrac had sent to the NYC DOT. The DOT was charging EnviroTrac a fee for the inspection of an open trench along West 20th Street. However, this was not EnviroTrac's project. They have been unable to talk to anyone at the DOT in order to convince them of this, hence the letter. EnviroTrac is contesting responsibility for this project or any liability. A pdf file of the letter is in the E-docs. 9/1/10 - Raphael Ketani. Mr. Battista called me today. He said that all of the soil borings were performed. Borings SP-1 and SP-2 were moved to the sidewalk. They could not be done in the street because there were too many utilities and they were too close together. 9/23/10 - Raphael Ketani. Mr. Battista sent me the Roux Associates Supplemental Site Assessment Report dated 9/23/10 by e-mail. I reviewed the report. The highest concentrations of VOCs in the soil samples were from borings at the locations of SB-3, SB-5 to SB-7. Total VOC concentrations were in the hundreds of thousands of parts per billions. These sites were next to the USTs and the associated piping. Mr. Battista recommended pulling the tanks and the piping, and removing as much contaminated soil as is feasible under the site and the sidewalk. I sent him an e-mail stating that the DEC approved his recommendation. I also stated that the groundwater monitoring should continue. 10/7/10 - Raphael Ketani. Mr. Battista called today. He said that they have just obtained the groundwater data from the laboratory. They are presently tabulating the data and they will send it to the DEC in a week or two. There was no product in the wells. A remedial work plan will be submitted sometime about the end of October. Also, the reason the method detection limits were set so high by the laboratory was that they were encountering a lot of interference when they were running the groundwater samples. They believe that the interference was due to all of the organics from the treatment solutions that had been used and from the historical fill. They had to do lots of diluting. 10/29/10 - Raphael Ketani. Mr. Battista sent me an e-mail stating that the geotechnical soil borings will start on November 8. 11/9/10 - Raphael Ketani. Mr. Battista sent me the Remedial Action Plan dated 11/5/10 (see E-docs). I reviewed the plan and approved it. I sent him an e-mail to this effect. The present building will be demolished in early 2011. The soil will be dug out down to 8 feet below grade. All tanks and piping will be removed, along with as much contaminated

soil as is structurally feasible. 12/3/10 - Raphael Ketani. Mr. Battista called today. He said that, as part of the site remediation, the USTs and their associated piping will be excavated. However, this excavation will result in the destruction of several wells that are in the way. I told Mr. Battista that this is not a problem as long as the contaminated soil is removed and end point samples are taken. I told him that a round of groundwater samples will need to be taken once the excavating and backfilling are completed. This will tell us whether the source of the contamination has been removed. I added that, if possible, he should have the contamination hot spots at MW-14 and MW-16 removed at the same time. He said that he will look into this. 12/28/10 - Raphael Ketani. Mr. Battista sent me an e-mail which stated that they will abandon some of the wells at the site which will be affected by the building demolition. The well abandonment is expected to be finished on 12/30/10. 1/13/11 - Raphael Ketani. Mr. Battista called today. He said that they still haven't received the permits for demolition of the building from the NYC DOB. In the meantime, Mr. Battista would like to put treatment socks in the wells. I told him that this was alright to do, but that without removing the contaminated waste, the groundwater may never become clean. He said that he understood. 2/7/11 - Raphael Ketani. I received the following e-mail from Mr. Battista: As we recently discussed, we have installed oxygen release compound (ORC) socks in monitoring wells MW-1, MW-2 and MW-14. The ORC socks will remain in the wells for approximately the next two months while the building demolition and UST removal work is being performed. The former Bermuda Limo Building is currently being demolished and the demolition is anticipated to be complete by the end of this month. Also, please note that the December 2010 quarterly groundwater monitoring round has been postponed pending the completion of the demolition and UST removal/soil excavation work. Once the demolition and the UST removal/soil excavation work is complete we will remove the ORC socks and conduct the quarterly sampling event of all the remaining monitoring wells listed for sampling in the approved Groundwater Monitoring Work Plan. In regard to the UST removal/soil excavation work, the Remedial Action Plan does not include any post excavation sampling. Based on the remedial design, the Site will be excavated to the extent possible without jeopardizing the structural integrity of the adjacent buildings, roadway and underground utilities. Although, it may be possible to excavate additional soil from localized areas if gross contamination is observed (with the approval of the Geotechnical Engineer), it will not be possible to expand the excavation even if post-excavation samples indicate remaining contamination. Please let me know if you require the collection of post-excavation soil samples and if so, the requisite frequency and location. I replied that he should do 2 end points in the front of the excavation wall and 3 end points in the floor of the excavation and register the tanks as closed and removed. 2/15/11 - Raphael Ketani. Mr. Battista sent me an e-mail regarding an update about the site. He wrote that the building demolition is almost completed. After the demolition, they will remove the tanks and the piping and excavate as much as possible. They will go into the groundwater. Then they will take soil end point samples. 2/22/11 - Raphael Ketani. Mr. Battista (cell (516) 250-0382) called me today. He said that four 550 gal. USTs were discovered and removed. They had all been filled with grout. They were broken open. All were found to be clean inside. Excavation will start this week or next week. I told

Mr. Battista to have the PBS registration revised to reflect that the tanks had been removed. He said that he will do this. 3/11/11 - Raphael Ketani. Mr. Battista sent me a progress update e-mail. In essence, the e-mail stated that the building had been completely demolished and the concrete slab had been broken up and carted away. Also, the four 550 gal. USTs had been emptied of their concrete from the abandonment in place, removed and sent off as scrap metal. They are now waiting on the NYC DOB to sign off on their demolition work so that they can get permits to do the rest of the excavation and construct the new building. Later, Mr. Battista sent me a followup e-mail. He wrote: We are going to collect the next round of groundwater samples as soon as the remedial excavation is complete and then get you a report. I will include the post excavation soil sampling data in that report as well. I expect to have that all together by mid April 2011. We ve just postponed the groundwater sampling until after the remediation work is complete as it didn t make sense to collect those samples immediately prior to completing the excavation work, considering the vast amount of data we have from previous sampling events, including ours in the fall of 2010. I d like to collect them right after the remediation work is complete. We also have the ORC Socks installed which we are hoping will help reduce VOC concentrations along with the source area removal. He also stated that 6 end point samples will be taken in the sidewalls of the pit, but not in the bottom due to the presence of the groundwater. 3/28/11 - Raphael Ketani. Mr. Battista called with an update. He said that 20 truck loads of soil have been removed so far. They dug down a little deeper where the soil looked dark. They are making good progress. There were some odors and a couple of neighbors asked what was happening. However, Mr. Battista said that he explained the project to them. They appeared to be satisfied with the explanation. End point samples are expected to be taken this wednesday, 4/30/11. The samples will be sent off for a quick turnaround and the DEC will get the data. 3/30/11 - Raphael Ketani. Mr. Battista sent me an e-mail stating that the excavating had been completed. Additional soil was removed at the southwest corner where the contamination seemed to be greater. There were odor issues that were called into the NYFD. Inspectors from the NYFD, NYPD and the NYCDEP came out and determined that the site was in compliance for managing the odors. Six end point samples will be taken tomorrow and backfilling will take place next week. 4/5/11 - Raphael Ketani. Mr. Battista sent me an e-mail with attachments consisting of the raw data report, summary tables and a post excavation boring location map. The analyticals for samples from PX-1 to PX-3, PX-5 and PX-6 had low VOC and SVOC hits. However, the sample from PX-4 had very high hits. More soil will be removed from the area of PX-4, which is the area of a former pump island. 4/11/11 - Raphael Ketani. Mr. Battista (cell (516) 250-0382) called. He said that he received the soil end point analyticals. They look good. He's confident, from looking at the data, that they have removed all of the contamination. He said that they will finish backfilling this week. Then they will remove some concrete piling caps that go down about 5 feet. After this, they will sample in May 2011. I told him to wait about 4 or 5 weeks before doing the first post excavation round of groundwater sampling. This is because fines will be entrained in the groundwater as a result of the excavating. Once they settle out, then sampling can take place. Mr. Battista said that he will send the DEC the soil data and then put together a complete closure report with the soil data, groundwater data, and

**S104495131**

other information. I told him that this will be fine. 4/15/11 - Raphael Ketani. Mr. Battista sent me an e-mail with attachments. The attachments included the excavation and end point sampling map, the analytical summary table, and the full analytical report. The analytical results were almost entirely non-detect. Mr. Battista also wrote that the next round of groundwater samples will be collected about mid-May. 5/3/11 - Raphael Ketani. Mr. Battista sent me an e-mail that the next round of groundwater sampling will start tomorrow (2 days early) as an art exhibit will start at I-Beam very soon and so access to those wells will be impossible. I responded back that this was alright and to proceed. 6/20/11 - Raphael Ketani. Today I received the June 17 Spill Closure Report from ROUX Associates by e-mail. Mr. Battista wrote that appendices A to D were too large to e-mail. So they will be sent on disk. I reviewed the Spill Closure Report. Post excavation soil end point samples were taken at locations PX-1 to PX-6 (3/31/11) and at PX-7 (4/7/11). These locations were in the sloping area (1.5:1) along the edges of the site footprint. The VOCs were almost entirely non-detect for all of the samples. The SVOCs were almost entirely non-detect for all of the samples, except the one from PX-4. This sample had very high benzo series analyte hits up to 46,000 ppb of benzo(a)anthracene. Other associated combustion analytes were also very high in concentration. Additionally, flouranthene was 120,000 ppb, 110,000 ppb phenanthrene, and 98,000 ppb of pyrene. Groundwater samples were taken at MW-1, MW-2, MW-14 to 16, MW-18, MW-22, MW-26, MW-28, and MW-29 on 5/4/11. Locations MW-1, MW-2, and MW-14 were in the sidewalk in front of the site. MW-15 was in the West 20th Street sidewalk to the west of the site. MW-16, MW-18, MW-22 and MW-26 were within the footprint of the Eye-Beam gallery. MW-28 and MW-29 were in the West 21st Street sidewalk. VOCs were almost entirely non-detect for all of the samples, except BTEX for MW-14. This sample had up to 468 ppb of total xylenes. The benzo series SVOCs had low exceedences for MW-14, MW-16 and MW-26. Within the Spill Closure Report, it was stated that a passive SSD system will be installed and a vapor barrier. Also, Mr. Battista cell (516) 250-0382 sent me a followup e-mail. He stated that the soil at PX-4 did have an oily odor and staining. Because of this, the excavation was advanced 14 feet. More soil was removed in the area and end point sample PX-7 was taken. Mr Battista said that ROUX staff who were at the site during the 5/4/11 groundwater sampling, and himself, did not see any product sheen nor sense the presence of oil when MW-14 was sampled. He went on to state that once the DEC approves the Spill Closure Report results, then all of the wells will be abandoned by ROUX along West 20th Street, West 21st Street and along 11th Avenue. I responded back that the Department was approving the Spill Closure Report, but would not close the case until the four appendices and the well closure letter report are received. I checked the PBS registration #2-349402. The tanks were closed in 1994. 6/21/11 - Raphael Ketani. Mr. Battista sent me the paper copy of the Spill Closure Report with a CD containing appendices A to D and Appendix E as a set of printed photos. I sent all of the information to the E-docs. 6/24/11 - Raphael Ketani. Mr. Battista sent me an e-mail that Eye Beam is having an exhibit. So the abandonment of the wells in their gallery may not happen until mid-August, when the exhibit ends. ROUX is also working on getting the permits from the NYC DOT for abandoning the wells in the sidewalk. I wrote back that this was fine. 8/22/11 - Raphael Ketani. I tried to contact Mr. Battista cell (516) 250-0382 regarding whether

the wells at Eye Beam had been abandoned, but I could only leave a message. Mr. Battista sent me an e-mail that they will have the permission of the owners of Eye Beam and all of the permits from the DOT by next week in order to abandon the wells. So well abandonment will take place everywhere sometime next week, except for one location where the owner is not locateable. 9/1/11 - Raphael Ketani. Mr. Battista sent me an e-mail stating that the abandonment of the wells at Eye Beam had begun. He hoped to finish them by the end of the week. Then he will start abandoning the wells in the sidewalks during next week. 9/28/11 - Raphael Ketani. I spoke to Mr. Battista cell (516) 250-0382 about the well abandonment. He said that it went well and that all of the wells have been properly abandoned. He said that he gave a draft well abandonment letter to his client. It is presently under review. Mr. Battista said that he hoped to send the letter to the DEC by friday, September 30, 2011. I told him that I will keep an eye out for it. 10/4/11 - Raphael Ketani. I received the 9/28/11 Site Monitoring Well Abandonment report from Mr. Battista today. I reviewed the report and found it to have appropriately described the well abandonment. I forwarded the Final ISR to Randall Austin, Chief of the Spills Unit, for his signature. 10/6/11 - Raphael Ketani. The Final ISR was signed by Mr. Austin and Lou Oliva, Chief Counsel Region 2, and forwarded to Dennis Farrar in Albany Remediation. As the soil contamination and the defective fuel system equipment was removed, and as there was no product on the groundwater, and as the groundwater analyticals indicated that the residual dissolved contamination was at or below CP-51 standards, I have determined that the spill has been cleaned up and that the residual contamination does not pose a threat to the public or the environment. Therefore, I closed the case effective today. "

DEC Memo: "e2mis # 153525 G.Williams#78618 Senior Field Operator found approx. 10 gallons of unknown oil on approx. 200 gallons of water in M43263. The soucre and cause of the spill is unknown at this time. There was no fire or smoke involved with this spill. There were no sewers or waterways affected. There is no sewer connection or concrete sump in M43. There are no substantial cracks that are visible. There will be two samples taken, one for PCBs and one for ID. G.Williams#78618 used absorbent pads in M43263 to try to pick up some of the unknown oil. The cleanup is pending. L.Walpole#41785 FOD Supervisor changed the reported amount from 10 gallons to 5 gallons of unkown oil. Lab Sequence Number: 04-03982-001: Insufficient amount of sample extracted to perform oil identification. Lab Sequence Number: 04-03981-001: PCBs < 1 ppm On 5/24/04 at 06:05 J. Pelzer # 06470 Underground/Cleanup supervisor called to report that the cleanup was completed at 05:30. There was no visable sign of the source as per J. Pelzer."

Remarks: "10 gallons of unknown oil on 200 gallons of water. "
