

# FRA iCARE

## Collaborative Investigation Reporting Environment

The Federal Railroad Administration (FRA) developed the **Collaborative Investigation Reporting Environment (iCARE)** MS SharePoint portal as a tool stakeholders and FRA can use to collaborate and share information related to identified FRA accident investigations.

Section 22417 of the **Bipartisan Infrastructure Law** directed FRA to create a standard process for gathering information and, when appropriate, consulting with stakeholders about an accident under investigation.

The iCARE portal provides stakeholders a **standard methodology for submissions** of documentation, information, evidence, and subject-matter expert analysis related to certain FRA accident investigations. The iCARE portal also provides FRA with a standard methodology for sharing information with stakeholders during an accident investigation.

### **Collaboration is as easy as 1, 2, 3:**

- 1.** Get approval to be a stakeholder by indicating your interest to FRA's Chief Safety Officer.
- 2.** Sign and return the Terms of Service to gain access to iCARE.
- 3.** Save any documents, records, or information relevant to the FRA accident investigation in the iCARE portal.

After submission, all non-confidential records uploaded will be shared with the FRA investigation team and approved stakeholders for review and analysis.

When appropriate, FRA will share records with stakeholders using the iCARE portal.

U.S. Department of Transportation
