DEPARTMENT OF TRANSPORTATION  
FEDERAL RAILROAD ADMINISTRATION

PREFACE

This is the thirty-seventh annual statistical report on rail-highway grade crossing accidents based upon reports of rail carriers filed with the Federal Railroad Administration pursuant to the Accident Reports Act of 1910 (as amended).

The purpose of this report is to direct attention to the hazards inherent at public grade crossings, and to provide basic statistical information in support of the overall Department of Transportation program to promote the safety of both rail and highway traffic at crossings.

The 1971 figures show a 4.7 percent decrease, as compared with 1970, in the number of grade crossing accidents and a 1.8 percent decline in the number of casualties. Data in this report is not such as to identify the vast combination of factors leading to such decrease; however, the tabular information provides valuable material for use in identifying specific trends and conditions surrounding crossing accidents.

In reference to the tables shown in this report, it should be noted that only Tables A, B, and C, and Table 1 pertain to rail-highway grade crossing accidents of all kinds. All of the other tables pertain to collisions involving motor vehicles, such as automobiles, buses, motortrucks and motorcycles.

SUMMARY

Rail-Highway Grade Crossing Accidents of All Kinds

In 1971, there were 3,392 crossing accidents involving pedestrians, automobiles, motortrucks, buses, motorcycles, and other vehicles or machines. The above accidents resulted in 1,356 deaths and 3,332 injuries, and show what is hopefully a continuing decreasing trend in all three categories.

The following three tables show data for the ten-year period, 1962 - 1971.

### Grade Crossing Accidents Involving Motor Vehicles

Of the 3,392 crossing accidents of all kinds in 1971, 3,224 involved collisions between railroad movements and motor vehicles, and resulted in 1,267 deaths and 3,253 injuries. In 2,269 collisions, or 70.38 percent, trains struck motor vehicles, resulting in 980, or 77.35 percent, of the deaths and in 2,245, or 69.01 percent of the injuries. In the other 955 collisions, or 29.62 percent, motor vehicles struck the sides of train movements, resulting in 287 or 22.65 percent, of the deaths and in 1,008 or 30.99 percent, of the injuries.

The number of crossing accidents in 1971 involving collisions with motor vehicles show a decrease from 1970. In comparison with last year, there was a decrease of 95 in the number of deaths. However, the number of injuries increased by 16.

Table D. Number of crossing accidents involving motor vehicles, per million vehicles registered.

Year	Number of accidents	Number of motor vehicles registered	Number of accidents per million vehicles registered

1971	3,224	116,254	27.73

### Types of Crossing Protection Provided

Of the 3,224 collisions, 1,351, or 41.90 percent, occurred at crossings which were specially protected by one of the following: Lowered gates, trainman, watchman, audible and visual signals, audible signals, or visible signals. The other 1,873, or 58.10 percent, occurred at crossings protected by signals or signs that did not indicate the approach of trains.

The latest available statistics show a total of 210,954 rail-highway crossings at grade. Of these crossings, 46,674 or 22.13 percent, were specially protected; 164,280, or 77.87 percent, were not specially protected.

### Times and Weather Conditions Involved in Motor Vehicle Collisions

Of the 3,224, crossing collisions, 2,020 or 62.66 percent, occurred in daylight, and 1,204 or 37.34 percent, took place at night. There were 2,215 collisions, or 68.70 percent, in clear weather, and 1,009 or 31.30 percent, under cloudy or inclement weather conditions.

### Types of Motor Vehicles Involved in Crossing Accidents

Of the 3,224 collisions between trains and motor vehicles, automobiles were involved in 2,439, or 75.65 percent; buses in 9, or 0.28 percent; motortrucks in 733, or 22.74 percent, and motorcycles in 43, or 1.33 percent.

### DEFINITION OF TERMS

Classification of Accidents. A public rail-highway grade crossing accident is one which results in (a) a reportable casualty to a person or (b) in a collision or derailment of a train, locomotive, or car, or other train accident and in which there is more than \$750 damage to equipment, track, or roadbed.

Classification of Casualties. Reportable casualties are:

(a) Death of a person: A death resulting from an accident within 24 hours immediately following the accident is reportable as a fatality; if death occurs after the expiration of the 24-hour period, the casualty is reported as an injury and also as a subsequent fatality.

(b) Injury to a railroad employee if the injury is sufficient to incapacitate the injured persons from performing his or her duties for a period of more than 24 hours in the aggregate during the 10 days immediately following the accident. (Prior to January 1, 1961, the injury was not reportable unless the employee was incapacitated for a period of more than three days in the aggregate during the 10 days immediately following the accident).

(c) Injury to a person other than a railroad employee if the injury is sufficient to incapacitate the injured person from following his or her customary vocation or mode of life for a period of more than 24 hours in the aggregate during the 10 days immediately following the accident.

Classification of Crossings. A highway crossing comprises all the tracks within, or immediately adjacent to, the railroad right-of-way, owned or leased, at an intersection with the highway. Crossings with streets, avenues, and rural highways, are included. Only public crossings are covered. Highway crossings with industrial tracks only, not owned or leased by a railroad, are excluded.

The type of signaling device for restricting use of a crossing by trains, highway vehicles, or pedestrians determines whether the crossing is "specially protected" or "not specially protected." "Specially protected" crossings are those protected by: Gates operated 24 hours per day or less; trainmen; watchmen on duty 24 hours per day or less; or devices that indicate the approach of trains. Crossings "not specially protected" are those that merely indicate the proximity of a crossing by fixed signs, and those without stationary signs or other cautionary fixtures.

Classification of Persons. Persons using crossings as a continuation of a street or road are divided into two classes, "trespassers" and "non-trespassers." A person is not reported as a trespasser on a highway grade crossing unless the crossing is protected by gates, or other similar barriers, which were closed when the person went on the crossing, or unless the person attempted to pass over or under trains or cars at the crossing.

There are instances in which persons on trains may be killed or injured. Such persons may be classified as passengers, employees on duty, nontrespassers, or trespassers.
