PREFACE

This is the forty-first annual statistical report on rail-highway grade crossing accidents/incidents based upon reports of rail carriers filed with the Federal Railroad Administration pursuant to the Accident Reports Act of 1910 (as amended).

The purpose of this report is to direct attention to hazards inherent at public grade crossings, and to provide basic statistical information in support of the overall Department of Transportation program to promote the safety of both rail and highway traffic at crossings.

Data in this report is not such as to identify all factors leading to rail-highway grade crossing accidents; however, the tabular information provides valuable material for use in identifying specific conditions surrounding crossing accidents. Due to a major revision in reporting requirements, effective January 1, 1975, data for 1975 is not comparable to that tabulated in earlier years.

In reference to the tables shown in this report, it should be noted that only Tables A, B, 1 and 20A pertain to rail-highway grade crossing accidents/incidents of all kinds. All of the other tables pertaining to accidents/incidents cover only those situations where motor vehicles were involved. The source of data used in Tables 23 through 29 is the National Rail-Highway Crossing Inventory as of November 30, 1976.

SUMMARY

RAIL-HIGHWAY GRADE CROSSING ACCIDENTS OF ALL KINDS

In 1975, there were 11,354 crossing accidents involving pedestrians, automobiles, motortrucks, buses, motorcycles, and other vehicles or machines. The above accidents resulted in 978 deaths and 4,168 injuries.

The following two tables show data for the eleven year period, 1965-1975.

GRADE CROSSING ACCIDENTS INVOLVING MOTOR VEHICLES

Of the 11,354 crossing accidents of all kinds in 1975, 10,925 involved collisions between railroad movements and motor vehicles, and resulted in 788 deaths and 3,600 injuries. In 7,736 collisions, or 70.81 percent, trains struck motor vehicles, resulting in 611, or 77.54 percent, of the deaths and in 2,413, or 67.03 percent, of the injuries. In the other 3,189 collisions, or 29.19 percent, motor vehicles struck the sides of train movements resulting in 177, or 22.46 percent, of the deaths and in 1,187, or 32.97 percent, of the injuries.

TYPES OF CROSSING PROTECTION PROVIDED

Of the 10,925 collisions, 4,847, or 44.37 percent, occurred at crossings which were protected by one of the following: Gates, flashing lights, wigwags, highway traffic signals, or audible signals. The other 6,078, or 55.63 percent, occurred at crossings not protected by automatic warning devices.

The latest available statistics show a total of 219,161 public rail-highway crossings at grade. Of these crossings, 49,369 or 22.53 percent, were protected by automatic warning devices; 169,792 or 77.47 percent were not.

TIMES AND WEATHER CONDITIONS INVOLVED IN MOTOR VEHICLE COLLISIONS

Of the 10,925 crossing collisions, 6,501, or 59.51 percent, occurred in daylight, and 4,424, or 40.49 percent, took place at night. There were 6,884 collisions, or 63.01 percent, in clear weather, and 4,041, or 36.99 percent, under cloudy or inclement weather conditions.

TYPES OF MOTOR VEHICLES INVOLVED IN CROSSING ACCIDENTS

Of the 10,925 collisions between rail equipment and motor vehicles, automobiles were involved in 8,130, or 74.42 percent; buses in 22, or 0.20 percent; motortrucks in 2,693, or 24.65 percent; and motorcycles in 80, or 0.73 percent.

DEFINITION OF TERMS

CLASSIFICATION OF ACCIDENTS/INCIDENTS. A public rail-highway grade crossing accident/incident is any impact between railroad on-track equipment and an automobile, bus, truck, motorcycle, bicycle, farm vehicle, or pedestrian, regardless of whether it resulted in any casualties or damage.

CLASSIFICATION OF CASUALTIES. A reportable casualty is any event arising from the operation of a railroad which results in: (a) Death of one or more persons. (b) Injury to one or more persons other than railroad employees, that requires medical treatment. (c) Injury to one or more employees that requires medical treatment or results in restriction of work or motion for one or more days, one or more lost workdays, transfer to another job, termination of employment, or loss of consciousness. (d) Any occupational illness of a railroad employee, as diagnosed by a physician.

CLASSIFICATION OF CROSSINGS. A public rail-highway grade crossing is a location where one or more railroad tracks cross at grade a public highway, road, or street, including sidewalks and pathways at or associated with the crossing.

The type of signaling device for restricting use of a crossing by trains, highway vehicles, or pedestrians determines whether the crossing is "specially protected" or "not specially protected." "Specially protected" crossings are those protected by: Gates operated 24 hours per day or less; trainmen; watchmen on duty 24 hours per day or less; or devices that indicate the approach of trains. Crossings "not specially protected" are those that merely indicate the proximity of a crossing by fixed signs, and those without stationary signs or other cautionary fixtures.

CLASSIFICATION OF PERSONS. Persons using crossing as a continuation of a street, road, associated sidewalks, etc., other than employees, are divided into two classes, "trespassers" and "non-trespassers". A person, including an employee not on duty, is not reported as a trespasser on a highway grade crossing unless the crossing is protected by gates, or other similar barriers, which were closed when the person went on the crossing, or unless the person attempted to pass over or under trains or cars at the crossing.

There are instances in which persons on trains may be killed or injured. Such persons may be classified as passengers, employees on duty, employees not on duty, nontrespassers, or trespassers.

CROSSING MEETING MINIMUM STANDARDS. The Second Annual Report On Highway Safety Improvement Programs, (which is a report from the Secretary of Transportation to Congress), states that a program to sign and mark all crossings is a high priority under the Highway Safety Act of 1973. Further the report states that the National Rail-Highway Crossing inventory "...will allow the states to identify those crossings which are not signed and marked in accordance with the Manual On Uniform Traffic Control Devices (MUTCD)." The Federal Highway Administration has specified the following minimum standards for signing and marking to be in accordance with the MUTCD: An automatic warning device or two reflectorized crossbuck signs, advance warning signs, and pavement markings if the highway approach is paved. In this publication crossings having automatic warning devices are counted as meeting minimum standards.
