

## T.O. 1 NORTHEAST

The Northeast has had 30 projects funded under the HSIPR and TIGER Programs to date; a federal investment of \$691 million.

Projects within the region range from planning to construction; improvements to existing stations to building new stations; rehabbing existing track to installing double track; grade crossing improvements to new signal systems:

- Planning Projects – 4
- PE/NEPA – 4
- FD/Construction – 19
- Corridor Programs – 3

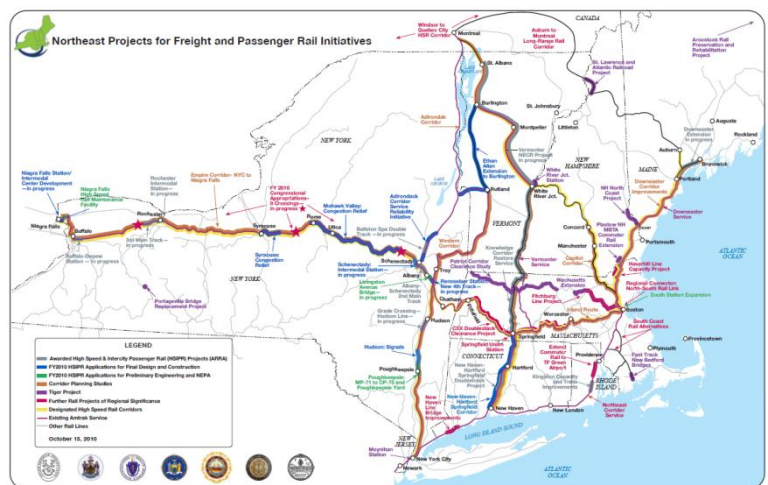

The Northeast contains 20% of the U.S. population but only makes up 5% of the country land-wise (in terms of square mileage). An effective passenger rail network is critical for such a densely populated region. These investments are strengthening the existing infrastructure and support the growing demand for passenger rail in the region.
