

*Transportation Technology Center, Inc., a subsidiary of the Association of American Railroads*

# **Railway Technology Needs a 20-year Perspective**

## **Robert Florum**

Vice President - Engineering  
and Quality Services  
Transportation Technology  
Center, Inc.

# AAR Research Priorities and the 20-year Technology Roadmap

## ◆ Objective

- Frame a comprehensive rail technology roadmap
- Include relevant technology
- Minimize duplication
- Foster coordinated efforts
- Focus related research funding on railroad needs

## ◆ Forecast technology development needs over a 20 year horizon

- Address efficiency, safety and service quality
- Respond to capacity issues, environmental challenges, increased fuel efficiency and security concerns

### ● Global Trends and Drivers translate into **Priority Technology**

#### **Directions** in 5 areas

▲ Rolling stock

▲ Track and Structures

▲ Motive Power

▲ Operations and Train Control

▲ Customer Service

## ◆ Global Trends and Drivers

- GDP growth through 2031 at 2.5% annual average
- Coal production will track electricity demand at 1% annual rate
- Environmental Protection Agency (EPA) regulations for Tier 3, Tier 4 emissions; Greenhouse Gas (GHG) legislation
- Rail passenger traffic increases
- PTC implementation
- Hazmat shipment security and spill prevention
- Continued intermodal growth
- Freight traffic growth in response to highway capacity, congestion and environmental issues
- Electronics, inspection automation, information and communication technologies will predominate
- Public-private partnerships (PPP) more challenging

# Gross Domestic Product (GDP) and Class I Revenue Ton-Miles

Chart 1: U.S. Real GDP vs. Class I Revenue Ton-Miles  
(GDP in \$ Billions, Ton -Miles in Billions)

GDP expressed in chained 2010 dollars. Source: AAR, U.S. Bureau of Economic Analysis

# Class I Revenue Ton-Miles Projection

Class I Revenue Ton-Miles, 1985-2031 (Billions)

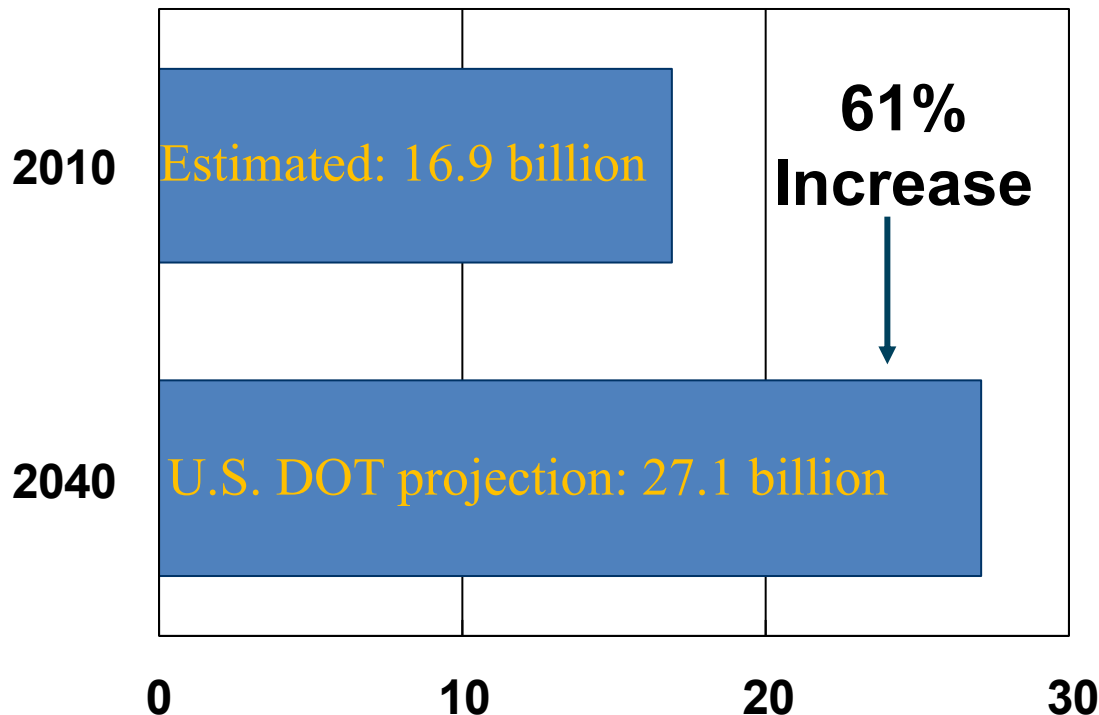

**Requires a 65% increase in capacity**

Source: AAR

# DOT Study Predicts Long-Term Demand for Freight Transportation Will Surge

## Billions of Tons of Freight Transported in the U.S.

The U.S. DOT expects total U.S. freight movements to rise from around 16.9 billion tons in 2010 to 27.1 billion tons in 2040 – a **61% increase.**

Source: FHWA - Freight Analysis Framework, version 3, October 2010

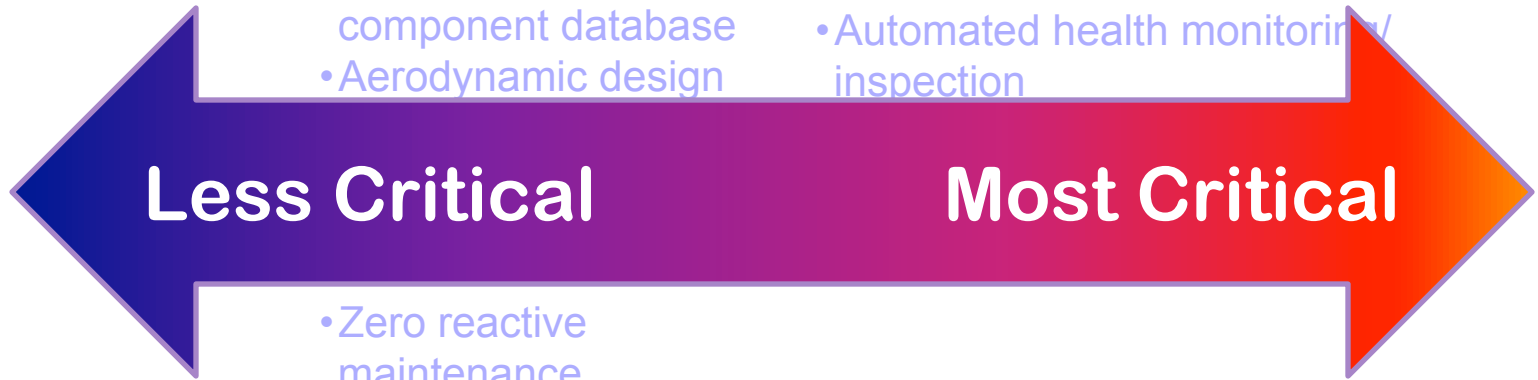

# Technology Development Priorities

Industry Role	Useful	Necessary	Essential
---------------	--------	-----------	-----------

High  
(80-100%)

- Increased rolling stock & component life
- Reduced in-service failures
- Reduced accidents
- Reduced life-cycle and total system cost
- Automated health monitoring/inspection
- Wheel/rail interface management
- Unified car & component database
- Aerodynamic design

Medium  
(60-79%)

- Zero reactive maintenance
- Improved braking capability including ECP braking
- Improved asset tracking
- Simplified car design

Low  
(<60%)

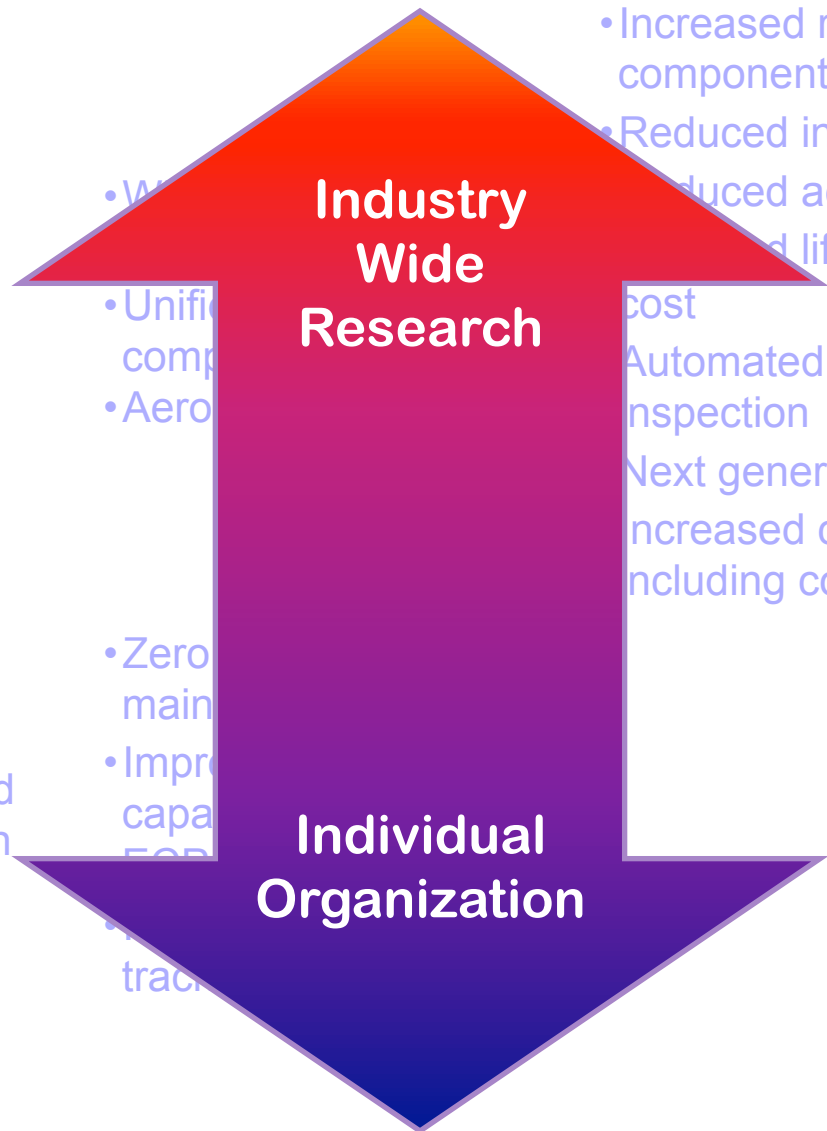

# Technology Development Priorities

Industry Role	Useful	Necessary	Essential
---------------	--------	-----------	-----------

High  
(80-100%)

Medium  
(60-79%)

Low  
(<60%)

Industry Wide Research

Individual Organization

- Increased rolling stock & component life
- Reduced in-service failures
- Reduced accidents
- Reduced life-cycle and total system cost
- Automated health monitoring/inspection
- Next generation tank car
- Increased car capacity & axle loads including components & systems

- Unified components
- Aero

- Zero maintenance
- Improved capacity

- Simplified car design

# **Impact of Technology on Safety and Efficiency**

## **◆ Increasing asset lives**

- Longer lasting track and rolling stock components
  - ▲ Increased wheel life
  - ▲ Increased rail life
  - ▲ Bridge life extension

## **◆ Reductions in maintenance requirements allowing more time for train operations**

## **◆ Proactive / predictive track and rolling stock maintenance**

## **◆ More powerful, reliable and fuel efficient locomotives**

## **◆ Integrated, automated track and train inspection systems**

# Impact of Technology on Safety and Efficiency

## ◆ Increasing train velocity

- Technologies to reduce time and distance required to start and stop trains and decrease spacing between trains
- Reductions in train delays and service disruptions through elimination of unscheduled maintenance
- Reductions in track outages and slow orders
- Reductions in derailments – unplanned outages
- Increased train speeds through special trackwork, across bridges and through terminal3

# Rolling Stock - Revised

Industry Role	Useful	Necessary	Essential
<p>High (80-100%)</p>		<ul style="list-style-type: none"> <li>• Wheel/rail interface management</li> <li>• Unified car &amp; component database</li> <li>• Aerodynamic design</li> </ul>	<ul style="list-style-type: none"> <li>• Increased rolling stock &amp; component life</li> <li>• Reduced in-service failures</li> <li>• Reduced accidents</li> <li>• Reduced life-cycle and total system cost</li> <li>• Automated health monitoring/inspection</li> <li>• Next generation tank car</li> <li>• Increased car capacity &amp; axle loads including components &amp; systems</li> </ul>
<p>Medium (60-79%)</p>	<ul style="list-style-type: none"> <li>• Simplified car design</li> </ul>	<ul style="list-style-type: none"> <li>• Zero reactive maintenance</li> <li>• Improved braking capability including ECP braking</li> <li>• Improved asset tracking</li> </ul>	
<p>Low (&lt;60%)</p>

# Roadmap Summary

## ◆ **Priority Capacity Challenge**

- Can be met with coordinated infrastructure expansion and technology-driven productivity improvements

## ◆ **Limited capital funds**

- Will provide for somewhat less than half the physical plant investments needed

## ◆ **Technology implementation and investments**

- Will be able to meet better than half the increased capacity demand

## ◆ **New plant investments**

- Will also benefit from technology-driven productivity gains

## ◆ **Coordinated / collaborative research by stakeholders**

- Will be required to realize the technology developments envisioned in the plan
